However, when the Misfortune could not be remedied, theſe Miniſters declared, that they were willing to do all that was left in their Power, which was, to repair it; and therefore Orders were given for providing a greater Fleet, and for equipping and manning thereof, as it ought to be; the Command of which was to be given to Don *Frederic de Toledo*, whoſe Reputation was remarkably high, and not without Reaſon. But, after abundance of Pains taken, it was found that nothing could be done that Seaſon, and therefore it was deferred till the next Spring; when it was reſolved to ſend ſuch a Force as ſhould put an end to the War at once; but as it is much eaſier to talk of ſuch Things, and to lay fine Schemes in the Cabinet, than to carry them into Execution; ſo, notwithſtanding this famous Admiral actually proceeded on his Voyage with a very large Fleet, every way well provided, yet he did ſo little, that none of the Authors I have met with have recorded what he did.

12. Theſe Delays, to which the *Spaniſh* Affairs have been always liable, proved extremely prejudicial to them in *Brazil*; where the *Dutch*, having the Advantage of ſeveral good Officers both by Sea and Land, made a moſt ſurpriſing Progreſs; reducing, in the Space of ſeven Years, four intire Captainſhips under their Dominions, *viz. Fernambuca*, *Tamaraca*, *Paraiba*, and *Rio Grande*; and the Importance of theſe Conqueſts very quickly appeared in the Miſchiefs done to the *Spaniards* in this and other Parts of *America*, of which we have a very exact Computation: From whence it is evident, that from the Time of the *Dutch Weſt India* Company's being erected, to the Year 1637, they had deſtroyed and taken, in Money and Merchandize, to the Value of forty-five Millions

of Florins, or four Millions and an half of our Money; and of eight hundred Ships, which the Crown of *Spain* had fitted out againſt them, they deſtroyed or took five hundred and forty-ſeven. Theſe extraordinary and unexpected Strokes of good Fortune, raiſed the Spirits of the Directors of the *Dutch* Company to ſuch a Degree, that they reſolved to put themſelves at once upon a Level with the *Eaſt-India* Company; and to do this effectually, they could think of no better Way than to make choice of ſome Perſon of great Quality and Intereſt, whom they might put at the Head of their Affairs, and whoſe Credit and Power might add a greater Strength to their own.

It was with this View that they caſt their Eyes on Count *John Maurice de Naſſau*, who was nearly related to the Prince of *Orange*, and who had ſerved the States for ſeveral Years, in their Armies, with great Abilities and Applauſe. He very readily accepted the Propoſal that was made him, and, with the Conſent of the Prince of *Orange* and the States-General, was declared Governor of *Brazil* and *South America*, with the ſame Powers given to the Governor-General of the *Eaſt Indies* in all Affairs Civil and Military. That this new Officer might take Poſſeſſion of his Dignity in a manner ſuitable to his Quality and Character, the Company reſolved to fit out a Fleet of thirty-two Sail of large Ships, and to embark a Body of two thouſand ſeven hundred Land-Forces; but as this took up a good deal of Time, and Count *Maurice* was impatient to be gone, he ſailed from the *Texel* on the 25th of *October*, 1636, with four Ships only, and no more than three hundred and fifty Soldiers on board; with which ſmall Squadron he arrived on the Coaſt of *Brazil* on the 23d of *January*, 1637, with *Adrian Vander Duſſen*, who had joined him near the Iſland of *Madeira*: He was ſoon after followed by the Captains *Selan*, *Carpenter*, and *Giſelin*, who were to ſerve under him, and very ſoon took the Field with two great Bodies of Troops, the one conſiſting of near three thouſand Men, with which he prepared to act againſt the *Portugueze* Army; and the other of ſix hundred, which was to be employed in various Expeditions, to divide and diſtract the Enemy.

On the other hand, as they could not help perceiving that their All was now at Stake, the *Portugueze* had a great Army in the Field under the Command of the Count *de Banjola*, an Officer of great Courage and Experience, who had ſerved under the Marquis *de Spinola* in *Flanders*; and another Body of light-armed Troops under one *Cameron*, who was a *Brazilian* by Birth, had raiſed himſelf by his Merit, and always ſerved them with equal Reputation and Fidelity. They had a ſtrong Garriſon at *Porto Cavallo*, with which they harraſſed the *Dutch* in the Captainſhip of *Fernambuca* extremely; and as they did not doubt this would be the firſt Place attacked, they aſſembled the Bulk of their Forces under Count *de Banjola* for the Defence of it. It very ſoon appeared, that, in this reſpect, they had formed a very right Judgment; for Count *Maurice* had no ſooner put himſelf at the Head of his Army, than he marched directly towards *Porto Cavallo*; upon which a Battle enſued, wherein, after a very obſtinate Reſiſtance, the *Portugueze* were defeated, and afterwards forced in their Camp, though it was very ſtrongly intrenched. Upon which the Count *de Banjola* retired with the Remains of his Forces under the Cannon of the Citadel of *Povacaon*; from whence however he retired on the Approach of the *Dutch*, who beſieged that Fortreſs in form: There was in it a Garriſon of ſix hundred Men, who very bravely defended the Place for a Fortnight, and were then obliged to capitulate.

Count *Maurice* purſued this Succeſs, and advanced with his Army to the Town of *Openeda* on the River of *St. Francis*, at the Diſtance of about ſix Miles from the Sea, which he took, and built a Citadel there, and another at the Mouth of the River, by which he effectually covered his new Conqueſt. He then returned to *Olinda*, and having provided for the ſettling the Civil and Military Government in the manner directed by his Commiſſion, he reſolved to fit out two Fleets; one under the Command of Admiral *Lichthart*, with Orders to attack the South-Coaſt of *Brazil*; the other under the Command of Commodore *Hanſkins*, which was deſtined to a Service of ſtill greater Importance, and of which therefore I think myſelf obliged to give an exact, though conciſe, Account. From the very Time that the *Dutch Weſt India* Company made their firſt Attempt upon *Brazil*, and were ſo ſucceſsful in taking the City of *St. Salvador*, they had meditated the bold Deſign of fixing themſelves likewiſe on the other Shore of *Africa*, ſuppoſing, that if they could once make themſelves Maſters of the two Points of the oppoſite Continent, they ſhould be able to bridle the Ocean, and, by having the Command of this Paſſage to the *Indies*, diſtreſs the *Spaniards*, *Portugueze*, *Engliſh*, and, in ſhort, all other Nations in the North. There was ſomething very wiſe and very great in this Project, ſomething equal to the Genius of a trading Nation; and, in ſhort, ſomething worthy of being imitated, which is the Reaſon that I have mentioned it.

But though, with a View to execute this Scheme, they had ſearched all the Coaſts from *Cape de Verd* to the *Cape of Good-Hope*, yet they had found no Place proper for that Purpoſe: At laſt it was agreed, that nothing could anſwer this End ſo well as the Caſtle of *St. George de la Mina*, on the Coaſt of *Guinea*, in the Poſſeſſion of the *Portugueze*. This Place accordingly they attempted in the Year 1625, but miſcarried with very great Loſs, which however did not diſcourage them. For, having a ſtrong Settlement in that Neighbourhood, their Governor, whoſe Name was *Nicholas Van Yperen*, ſent to adviſe Count *Maurice*, that now was the proper Time, and if he ſent him a ſmall Squadron, with a competent Body of Troops on board, he made no queſtion of his being able to carry this important Project into Execution.

It was with this View that Commodore *Hanſkins* was diſpatched: He joined the *Dutch* Governor on the 25th of *July*, and they attacked the Caſtle with ſuch Reſolution, that though it was one of the ſtrongeſt Places in that Part of the World, yet it ſurrendered on the 29th of *Auguſt*; ſo that Commodore *Hanſkins* returned to *Olinda* in the Month of *October* following, and was received by Count *Maurice* with all the Marks of Honour and Reſpect that the Performance of ſo important a Service deſerved. The Compaign in 1638 was equally glorious for the *Dutch*; the Count *de Banjola* had again aſſembled a very numerous Army, for the Defence of the Captainſhip of *Segerippa*, which however Count *Maurice* attacked and defeated; after which he took the Capital, and reduced the whole Province.

This great Run of Succeſs made ſuch a Noiſe in that Part of the World, that the Inhabitants, or rather the Natives, of *Siara*, one of the Northern Captainſhips, declared for the *Dutch*; and, upon a Promiſe of being left free, offered to aſſiſt them againſt the *Portugueze*. A Body of Troops was accordingly ſent to join them, under the Command of Captain *Gartman*, who, with the Help of a *Brazilian* Prince, *Algodojo*, reduced that whole Diſtrict. It is, however, to be obſerved, that it was the Infidel *Brazilians* that were Enemies to the *Portugueze*; for thoſe whom they converted remained always firm to them, and began even at this Time to raiſe Inſurrections in their Favour in the Captainſhips of *Paraiba* and *Rio Grande*, which the *Dutch* had ſubdued; and this obliged Count *Maurice* to reduce and demoliſh ſeveral of their beſt Towns; and, the better to keep them under, he likewiſe found it neceſſary to rebuild and fortify the Town of *Philipina*, which he called *Frederickſtadt*, in honour of the Prince of *Orange*.

Count *Maurice*, having been ſo fortunate in all his Undertakings, reſolved now to put in Execution the repeated Orders he had received from the *Weſt India* Company, for attacking *St. Salvador* in the Bay of *All Saints*, which was looked upon as the Capital of all *Brazil*: He embarked, for this Purpoſe, all the Troops he could draw together at *Olinda*, and he landed with them in the Bay beforementioned on the 8th of *April*, 1638, thinking to have ſurpriſed the *Portugueze*. The Count *de Banjola* was in the Neighbourhood with a ſmall Body of regular Troops, with which he immediately threw himſelf into the Place, though the Governor of it was his Enemy, and it was upon the Differences known to ſubſiſt between them, that Count *Maurice* chiefly reckoned. The *Portugueze* Governor, at firſt, diſputed the Command with Count

Banjola, but that Nobleman told him, their Quarrels could only ſerve to ruin them; whereas, if they agreed, each of them might become as great as he could wiſh. To which Propoſal the Governor anſwered: *Sir, I perceive you are a wiſer Man than I, and no Body ſhall obey your Orders more punctually.*

Count *Maurice* attacked, and, without much Reſiſtance, made himſelf Maſter of the ſtrong Fort of *Albert*, that of *St. Bartholomew*, and the famous Caſtle of *St. Philip*. This Succeſs encouraged him to erect two Batteries againſt the City of *St. Salvador*, and to attack at the ſame Time Fort *Roſes*, which covered the City on one Side; and a Hornwork, which was its principal Strength, on the other: There lay between theſe a Piece of Ground covered with Shrubs and Buſhes: Count *Banjola* adviſed the Governor to poſt himſelf there with four hundred of his own Troops, while he made a Sally with his Forces. This Scheme had the Effect he deſired, for, after an obſtinate Diſpute, the *Dutch*, endeavouring to retire through that Piece of Ground, were attacked in the Rear; and, beſides three hundred of their beſt Men, loſt four Officers of Diſtinction, and their principal Engineer. Upon which Count *Maurice* abandoned the Caſtles he had taken, and raiſed the Siege with ſome Precipitation.

This proved in many Reſpects fortunate for the *Portugueze*, who otherwiſe were in the utmoſt Danger of being totally undone. In the firſt place, it ſhewed that neither Count *Maurice* nor his *Dutch* Troops were invincible; but that if other Men did their Duty they might be overcome; in the next, it totally reconciled the *Portugueze* Generals; who perceiving that the Count de *Banjola* was far enough from depreciating other Mens Merit; and that, on the contrary, he aſcribed much of that to their Courage, which in reality was due to his own Conduct, they changed their Meaſures immediately, and, from thwarting his Councils, received and executed his Orders with the higheſt Reſpect. Laſtly, it hindered the ſavage *Brazilians* from taking Arms in favour of the *Dutch*, which was what the *Portugueze*, of all Things, feared the moſt; becauſe they knew that a little Diſcipline made them excellent Soldiers, at leaſt for that Climate.

But as Misfortunes ſeldom come alone; ſo on the very Heels of this Miſchance on Shore followed another at Sea, no leſs to the Loſs, and much more to the Diſcredit of the *Dutch* Arms. We have, in another Part of this Work, ſpoke of the Taking the *Spaniſh* Plate Fleet, by *Peter Hein*, which was the greateſt Action performed under the Auſpice of the *Dutch Weſt-India* Company; and, next to that, was their taking *St. Salvador*, which made them ſo eager to ſee both theſe great Actions repeated. We have already ſhewn what became of the Attempt to gratify them in one; and, though, we digreſs a little from our Subject, yet the Reader will probably be glad to learn what was the Fate of the latter. Thus then the Caſe ſtood. The *States General* and the *Weſt-India* Company equally approved the bold Spirit and ſage Conduct of *Cornelius Jol*; who, by mere Dint of Merit, had raiſed himſelf from the loweſt Station in the Fleet, to be thought worthy of the Command of it; and he it was that, about this Time, they pitched upon to repeat the glorious Action of *Peter Hein*, and to bring the *Spaniſh* Treaſures, once more, into the Low Countries; a Commiſſion which he readily accepted, and to which, it was thought, they had no Seaman in their Service, more equal.

He ſailed from the *Texel* the 14th of *April* 1638, and, touching at *Brazil*, communicated to Count *Maurice* the Inſtructions he had received, who thereupon furniſhed him immediately with ſix hundred good Men, and Proviſions for ſeven Months, after which he ſailed in Search of the *Spaniſh* Fleet. He fell in with them a little to the Weſt of the Iſland of *Cuba*, but eſcorted by a greater Number of Ships of War, and thoſe too large and better equipped than he expected; his Squadron conſiſted but of thirteen Sail; with which, however, he ventured to attack them, and there is little Doubt to be made, that he would have given a good Account of them too, if thoſe who ſerved under him had followed his Example; but when the Diſpute grew warm all his Squadron left him and their Vice-Admiral, except two Ships, who fought very gallantly, till their Captains were killed.

Cornelius Jol diſengaged his four Ships from thoſe of the Enemy, and, returning to his own Squadron, ſent for the Officers on board, diſmiſſed ſuch as had behaved worſt, reprimanded the reſt, and exhorted them all to do their Duty better the next Time, as he was determined to renew the Attack: He did ſo accordingly, but it was with the like Succeſs; his Captains abandoned him again, and he again diſengaged himſelf, but with more Difficulty: He ſent for his Officers the ſecond Time; and being now perſuaded, that it was not ſo much through Fear of the Enemy, as Averſion to him, that they miſbehaved; he treated them with greater Gentleneſs, diſplaced none of them, but engaged them all to ſign a Reſolution to fight the Enemy, when they ſhould be next commanded ſo to do, and to obey their commanding Officer exactly, and with Alacrity, which they did chearfully.

Highly pleaſed with this Pledge of their Fidelity, he fell upon the *Spaniards* a third Time, when they behaved a little better at firſt, but ſoon after ſhewed that they were more afraid of Danger than of Perjury; for they abandoned him again, which ſo provoked that gallant Officer, that he caſhiered five of his Captains, gave their Ships to inferior Officers, and went in ſearch of the *Spaniards* for the fourth Time. He then found his Opportunity was loſt, the *Spaniards* were ſeparated and retired into ſeveral Ports, ſo that he was able to do nothing. He then divided his Fleet into three ſmall Squadrons, ſtationed one before the *Havanna*, detached another to *Brazil*, and returned home with the third, where he was received with Honour and Reſpect; his Maſters declaring that they were entirely ſatiſfied with his Conduct, and that they did not impute the Miſcarriage to him, but to thoſe who out of Fear and Pride had diſobeyed his Orders.

13. After Count *Maurice* returned from his fruitleſs Expedition againſt *St. Salvador*, he applied himſelf with the utmoſt Diligence to the Eſtabliſhment of good Order and perfect Diſcipline in all Parts of his Government; reviewing his Troops in Perſon; appointing experienced Officers to command them; fortifying all the frontier Places; and giving all Sort of Encouragement to ſuch of the Natives as ſhewed an Inclination to aſſiſt him, and to live peaceably under the Protection of the *Dutch*; by which wiſe and prudent Meaſures he prevented the Enemy from making thoſe Advantages that might have been expected from their late Succeſs. The *Spaniſh* Government, having received an exact Account of the State of Affairs in *Brazil*, came to a ſettled Reſolution of repairing their paſt Miſtakes, by ſending thither ſuch a Fleet, and ſuch an Army, as ſhould effectually put an end to the War, by obliging the *Dutch* to abandon all their Conqueſts in that Country.

This Fleet of theirs conſiſted of twenty-ſix Galleons doubled manned, and provided with every other Neceſſary in the ſame Proportion; twenty large Men of War, and five thouſand regular Troops, under the Command of a *Portugueze* Nobleman of a great Family, and whoſe Virtues were ſtill more illuſtrious than his Birth, the famous Don *Fernandez Maſcarenhas*, Count *de la Torres*, who ſailed in the Autumn of 1639, and received conſiderable Reinforcements in his Paſſage; but, being detained by Calms upon the Coaſt of *Africa*, the exceſſive Heats produced a Plague on board his crowded Ships, which ſwept away above three thouſand Men before he reached the Bay of *All Saints*; and the reſt of his Troops were in ſo bad a Condition, that he was under a Neceſſity of putting them into Quarters of Refreſhment, which certainly ſaved the *Dutch*, who were at that time but in a low Condition, expecting with great Impatience thoſe Succours from *Holland* that ſoon after arrived, and by means of this Accident arrived in time. The Vigilance, however, of *Maſcarenhas* was ſuch, that in the Month of *January*, 1640, he put to Sea with a Fleet of ninety-three Sail great and ſmall, and twelve thouſand Men on board.

Count *Maurice*, on the other hand, was far from being negligent; and, having drawn togther forty-one Men of War, well manned and provided in every Reſpect,

ſpect, he waited within four Miles of the Port of *Olinda* for the Enemy; the Fleet being commanded under his Excellency by *William Loos*, a *Dutch* Admiral, reputed as brave a Man, and as good a Seaman, as any at that Time in the Service of the States. On the 12th of the ſame Month the Fleets met, and engaged between the Iſland of *Tamaraca* and the River *Gojana*, and fought from One in the Afternoon till it was Night. The Loſs ſuſtained by the *Dutch* was not great; for they had but four Men killed, and as many wounded, and one Ship rendered unſerviceable. Amongſt theſe four Men, however, was their Admiral *William Loos*, who might be truly ſaid to die in the Arms of Victory. He was replaced the next Day by *James Huyghens*, who engaged the *Spaniſh* Fleet a ſecond time; and, by dint of his ſuperior Skill as a Sea-Officer, obtained great Advantages. On the 14th he attacked them a third time on the Coaſt of *Paraiba*, where he had ſtill greater Advantages; but the great Victory of all was after the fourth Day's Fight, wherein they ſuffered exceſſively, and were at laſt driven where the *Dutch* durſt not follow them, that is to ſay, upon thoſe Sholes on the Coaſt, to which the *Portugueze* have given the Name of *Baxes de Rochas*; where many periſhed by Shipwreck, and more by Hunger and Thirſt. The Remainder that eſcaped endeavoured to return home; but, great Diſputes ariſing amongſt their Commanders, they ſeparated; and, of all this mighty Fleet, only four Galleons and two Men of War arrived ſafe in the Ports of *Spain*; and theſe two eſcaped with much Difficulty a *Dutch* Fleet that was ſteering for *Brazil*.

While theſe great Tranſactions happened at Sea, the *Portugueze*, being very well informed that Count *Maurice* had embarked his whole Strength on board his Fleet, aſſembled a Body of regular Troops, under the Command of Don *John Lopez Vervailho*, an Officer of great Experience and Courage, and a great Body of *Brazilians* under their Countryman Colonel *Cameron*; who, falling into the *Dutch* Settlements unexpectedly, took ſeveral Places, and did a great deal of Miſchief. It was not long, however, before *Hanſkins*, who had the Title of Colonel on Shore, as well as Commodore at Sea, put himſelf at the Head of a Body of Planters, and with them very ſoon gave a Check to theſe inſolent Invaders. A ſhort Time after, Admiral *Lichthart* and Commodore *Cornelius Jol* arrived with great Reinforcements from *Holland*; the former was immediately ſent by Count *Maurice* into the Bay of *All Saints*, to deſtroy the Country, which he did with a Barbarity not to be deſcribed, and conſequently not to be excuſed. Commodore *Jol* acted the like Part on the Country near the River *St. Francis*; and this Manner of making War appeared to the Count *de Montalvan*, at that time Viceroy of *Brazil*, ſo abominable, that he could not be brought to believe that a Perſon of Count *Maurice*'s Quality could be pleaſed with it; and therefore he ſent Deputies to repreſent to him the Barbarity of ſuch a Behaviour, and to deſire that they might ſettle a Cartel, by which the Proceedings of the War might be regulated, and ſuch horrid Scenes of Murder and Devaſtation prevented for the future, as proved equally ruinous to both Parties.

As Count *Maurice*, in giving theſe Orders, had followed the Company's Inſtructions againſt his own Inclinations, he very gladly embraced this Opportunity of ſhewing his own noble and generous Temper, which was ever averſe to ſuch kind of Proceedings. He therefore readily embraced the Propoſal, and offered to ſend Commiſſioners immediately to *St. Salvador*, to ſettle ſuch a proviſional Treaty with the Viceroy, for the common Benefit of the Subjects of both States: But, juſt as theſe Deputies were on their Departure, there arrived two Gentlemen of Diſtinction from the Viceroy; who, at an Audience they demanded and obtained from Count *Maurice*, acquainted him with the amazing Revolution that had happened in *Portugal*, which was likely to have a great Effect on the general State of Affairs, and might probably put an End to the War in *Brazil*, ſince hitherto it had not been carried on by the *Dutch* againſt the *Portugueze* Nation, but againſt the *Portugueze* as Subjects to the Crown of *Spain*; and therefore it was very natural to ſuppoſe that the *Dutch* would no longer conſider them as their Enemies, when they could be no longer conſidered as the Subjects of that Crown, but rather as an independent Nation, inclined, both by Nature and Intereſt, to cultivate a good Correſpondence with the Subjects of the *States General*. At leaſt, theſe Meſſengers from the Viceroy were charged to repreſent Things in this Light to Count *Maurice*, who gave them a very patient Hearing, and diſmiſſed them with a favourable Anſwer, though reſolved to do what was moſt for his Maſters Service.

14. It was in the Month of *December*, 1640, that *John* Duke of *Braganza* ſeated himſelf on the Throne of *Portugal*, which was that of his Anceſtors, and took the Title of *John the IVth*. This Revolution, one of the moſt ſudden and moſt ſucceſsful the World ever ſaw, put into his Hands immediately the whole Dominions of *Portugal*, the little Town of *Ceuta* in *Africa* excepted, and the Conqueſts made by the *Dutch* in *Brazil*, and elſewhere. It was not long before Count *Maurice* had a very exact Relation of the whole Affair; and, foreſeeing that this Revolution would certainly be attended, either with a Peace, or a Truce, between the *States General* and the new King, he reſolved to do all that he could in the ſhorteſt Time poſſible, that whenever the Peace or Truce was concluded, it might find the *Dutch* with their Hands full. I ſhall not pretend to juſtify this Reſolution of Count *Maurice*, or to reconcile it to the Laws of Nature, and of Nations; but we know that great Captains are ſeldom great Caſuiſts, and perhaps this might be his Caſe.

He put this Deſign of his in Execution almoſt as ſoon as he had formed it, making himſelf entirely Maſter of the Captainſhip of *Segerippa*, which the *Portugueze* had recovered; he ſent away Admiral *Jol*, with a Fleet of twenty-one Sail, and above three thouſand Men on board, to reduce the Iſland of *Laonda*, on the Coaſt of *Congo*, and that of *St. Thomas*, immediately under the Equinoctial; both which Services he performed: The latter, however, coſt him his Life; for while he was buſy in ſettling the Affairs of his new Conqueſt, a Diſtemper broke out in his Fleet, which carried off a great Number of Men, and amongſt them the Admiral and ſix of his chief Captains. He was buried with great military Pomp in the Cathedral of *Pavoaſan*, which is the Capital of that Iſland, and left behind him the Reputation of being the boldeſt, moſt reſolute, and ſtricteſt Officer of his Time; but withal, one of the rougheſt in his Behaviour that ever bore Commiſſion; yet he was a Man of ſuch nice Honour, that, in his Expedition, the Year before, on the Coaſt of *Cuba*, being driven to great Diſtreſs for Proviſions, and in no Condition to take them by Force, he ſent to the *Spaniſh* Governor for a Supply; who, out of Regard to his perſonal Merit, granted him all, and more than he deſired; upon which he immediately quitted the Coaſt, declaring, that he could no longer act againſt an Enemy who had treated him with ſuch Generoſity.

Count *Maurice*, in purſuance of his Inſtructions, which repreſented to him the Captainſhip of *Maragnan* as a Country extremely wholeſome, abounding with Sugar, Cotton, Ginger, Tobacco, and other rich Commodities, as well as very convenient from its Situation, reſolved to ſeize it likewiſe. He diſpatched, for this Purpoſe, Admiral *Lichthart* and Commodore *Hanſkins*, with a Fleet of ſix Sail of Men of War and ſix Frigates, with which they ſoon reduced the Iſland of *Maragnan*, and the Town of *St. Louis*, upon which the reſt of the Diſtricts ſubmitted without Reſiſtance; ſo that at the Cloſe of the Year 1641, the *Dutch* were actually in Poſſeſſion of ſeven of the fourteen Captainſhips, into which the Country of *Brazil* was divided.

But Things did not long remain in this State; for, partly by Revolt, and partly by Conqueſt, theſe Countries returned again to their old Maſters.

It is now neceſſary to look over into *Europe*, in order to ſee how thoſe Events came about, which furniſhed the Means of making as ſudden a Revolution in *Brazil*, as ever happened in a Country ſo well ſecured; and in the Recital of which, it will appear, that the *Dutch* themſelves taught thoſe Arts, by which they ſuffered; and firſt practiſed thoſe Frauds, that proved afterwards ſo fatal to themſelves. King *John*, deſirous of being acknowledged by as many Kingdoms and States as poſſible, in quality of rightful Poſſeſſor of the Crown of *Portugal*, as undoubtedly he was, ſent Don *Triſtan de Mandoca Hurtado*, his Embaſſador, to the *Hague*, to repreſent to the *States-General* the Reaſonableneſs of owning his Title, and the Advantages that muſt accrue from their living in a good Correſpondence together. The firſt was readily admitted by the *Dutch* Stateſmen; and, by degrees, they came likewiſe into the Second; but, as they thought themſelves Gainers by the War, and a vaſt Over-match for *Portugal*, unſupported by *Spain*, they put off the Concluſion of the Treaty as long as they could.

At laſt, on the 13th of *June* 1641, they ſigned a League offenſive and defenſive, with the Crown of *Portugal*, for what regarded the Dominions of both States in *Europe*; and a Truce for ten Years in the *Eaſt* and *Weſt Indies*: This laſt was conceived in very general Terms; for it was to comprehend all the Dominions of both Parties, and was to commence from the Day of the Publication of the Truce; it was likewiſe ſtipulated, that Commiſſioners ſhould meet in eight Months, in order to conclude a definitive Peace, and to ſettle the Pretenſions of both Parties; but, at the ſame Time, the *Dutch* took care to provide, that if this Treaty ſhould prove ineffectual, the Truce, and free Trade between the Dominions of both States ſhould ſtill continue; only the *Portugueze* ſhould not be at liberty to export any of the Commodities of *Brazil* into *Holland*; and, on the other hand, the *Dutch* were to be under the like Reſtriction, with reſpect to the Dominions of *Portugal*. It is evident, from the very Frame of this Treaty, that the States contrived every thing for their own Advantage; and that the King of *Portugal* ſubmitted to it from pure Neceſſity. Experience, however, ſoon made this more viſible. On Complaints, that ſeveral Places were taken from the *Portugueze* after the Publication of the Truce, Reſtitution was refuſed, as to ſome; and though Orders were given, as to others, agreeable to the Spirit of the Treaty, yet they were drawn up in ſuch a Manner, that moſt of the *Dutch* Governors refuſed to comply with them.

The *Portugueze* Viceroy, and the reſt of that Nation in *Brazil*, entered eaſily into the Politics of the *Dutch*; and inſtead of attempting to do themſelves Juſtice by Force, they practiſed exactly the ſame Method for their own Advantage: They magnified the Wiſdom of the *Dutch* Government, confided in the Promiſes made them, and took in good Part all the Excuſes that were made for Non-performance of them; by which means they ſo over-reached Count *Maurice*, in the two laſt Years of his Government, that he perſuaded himſelf, and eaſily engaged the Directors of the *Weſt India* Company, to believe, that their Territories were effectually ſettled, and that they had nothing to fear in *Brazil*, either from the Natives, or from the *Portugueze*; who thought themſelves happy under their Adminiſtration, and were as much attached to it as the *Dutch* themſelves.

But the Contrivances of their Enemies might probably have proved abortive, if the Managers of the *Dutch Weſt India* Company had not entered into a Conſpiracy againſt themſelves. They found that they were now poſſeſſed of what they had ſo long ſought; ſeveral ſtrong Forts on the Coaſt of *Africa*, and a very large Part of the rich Country of *Brazil*; and they were deſirous of making the greateſt immediate Profits poſſible of both. It was from this Notion, that they ſent over repeated Orders to Count *Maurice*, to take ſuch Meaſures as might increaſe their Revenue, and prove the Importance of *Brazil*, by ſending over vaſt Quantities of Sugar and other valuable Effects, and not ſuffering ſuch as were in Debt to the Company to pay in ſmall Sums, or at different Terms, but ſpeedily, and at once. Count *Maurice* obſerved to them, that the Execution of theſe Orders would be attended with many Inconveniencies; that a long War had been carried on; that the Country had been but lately reduced; that moſt of thoſe who were in Debt to the Company were *Portugueze*, who had ſettled in their Territories, and who had hitherto behaved well, and ought therefore to be kindly treated, and not driven to Extremities, which might put them upon Things that otherwiſe would not have entered into their Heads. But this was talking to the Deaf; the Company had heard that *Brazil* was very rich, they were poſſeſſed of a great Part of it, and could ſee no Reaſon why all that it produced ſhould not be immediately ſhipped for *Holland*.

There were ſome other Things alſo that gave them great Uneaſineſs. Oppoſite to the *Receif* there lay a very commodious Iſland, upon which their Governor cauſed a new Town to be built, chiefly out of the Ruins of the *Portugueze* City of *Olinda*, fortified it thoroughly, and gave it the Name of *Mauriceburgh*; which, in a ſhort Time, was grown a very conſiderable Place, and which he united to the *Receif*, which was become the Centre of the *Dutch* Commerce, by a Stone Bridge; This, firſt and laſt, coſt forty thouſand Pounds. Now, though all this was done for the Benefit and Convenience of the *Dutch* Inhabitants, and to ſecure the Company's Capital in that Country from Danger, yet they could not help grudging the Expence.

But what put them moſt out of Humour, was the Palace Count *Maurice* built for himſelf. It was indeed a very ſtately Structure, ſtanding in the moſt commodious Part of the Town, in the midſt of very fine Gardens, elegantly laid out, and curiouſly planted with Cocoas of all Sorts, as well as Lemons, Citrons, Pomegranates, Figs, and other Fruit-trees. Theſe Gardens were certainly very expenſive; and as to the Palace, it was ſaid to have coſt ſix hundred thouſand Florins; and ſo contrived, as to command the moſt admirable Proſpect both by Sea and Land. Before the Front of this noble Structure there was a Battery of Marble, riſing gradually from the River-ſide, upon which were mounted ten large Pieces of Braſs Cannon. Without the City, Count *Maurice* had alſo a moſt magnificent Villa, or Country Palace, ſurrounded with fine Gardens, and adorned with curious Fiſh-ponds, but withal encompaſſed with ſtrong Walls, and the whole ſo diſpoſed, as to ſerve at once for the Governor's Pleaſure, and for the Defence of the City, which was covered by it, as a Fort, on that Side; and it proved extremely uſeful to them when the War broke out again. He likewiſe made many other Improvements, ſuch as laying out Parks and Meadows within the Fortifications; which, while duly taken care of, produced all Things neceſſary for the Subſiſtence of the Garriſon; and were, in all reſpects, equally commodious and beautiful.

In this Manner Count *Maurice* employed thoſe Treaſures, which were the Fruits of his many Victories and extenſive Conqueſts; and which, a Man of a leſs generous Temper, would have found Means to have tranſported to *Holland*, as his private Fortune. But thoſe Marks of Greatneſs of Mind, and public Spirit, which ought to have extinguiſhed, nouriſhed that Envy, which had been conceived againſt him, and while he was labouring to extend and ſecure the Power of the Company in *Brazil*, the Directors of that Company in *Holland* were employed in cenſuring his Conduct, and in magnifying his Extravagance, in laying out ſuch vaſt Sums, while the Colony produced ſo little to the Company's Stock. Such was the Situation of Things, and ſuch the excellent Reaſons which induced the Directors to form a Deſign of recalling Count *Maurice*, as the only Means of making the Colony turn to an Account, and bring in ſuch a Revenue, as might be proportionable to the Views and Expectations of the Company; which wiſe Project of theirs they at laſt brought to bear; Count *Maurice* himſelf aſſiſting them therein, being grown to the full as weary of their Management, as they were of his; ſo that on the 11th of *May* 1644 he took leave of the Council, quitted the Government, when he had held it eight Years, and returned into *Holland*, on board a Fleet of thirteen Sail of large Ships, with near three thouſand Soldiers on board; eighteen Companies only being left for the Defence of the *Dutch* Settlements, agreeable to the Inſtructions he had received, and to that Scheme of frugal Management, which was now to take place, and by which they hoped to repair that Extravagance and Profuſion, with which they charged Count *Maurice*.

I have taken as much Care as it was poſſible, to inform myſelf fully as to theſe Particulars, and have repreſented this whole Tranſaction to the Reader exactly in the Light it appeared to me, and I flatter myſelf it will give him as great Satisfaction as I have felt in writing it; by ſhewing him how the moſt dangerous Miſtakes ariſe from Narrowneſs of thinking, how eaſily the beſt Deſigns of the very beſt Men may be miſrepreſented, and with what an Appearance of Wiſdom, Diſintereſtedneſs, and public Spirit, ſuch Meaſures may be cloathed, as in reality are big with public Ruin.

After Count *Maurice*'s Return, the Government of *Brazil* was put into the Hands of ſuch great and able Men as the *Weſt India* Company could *confide* in; for that, at this Time, was the Phraſe in more Parts of the World than one; and perhaps it will not diſpleaſe the inquiſitive Peruſer, to have a ſhort Account of the illuſtrious Perſons who were the Succeſſors of the great Count *Maurice* of *Naſſau*, one of the ableſt, braveſt, and moſt worthy Men of that Family, ſo famous for producing Heroes: The Chief of them then were, Mr. *Hamel*, a Merchant of *Amſterdam*; Mr. *de Baſſis*, a Goldſmith of *Haerlem*; and Mr. *Bulleſtraat*, a Carpenter of *Middleburgh*; all Men of very good Senſe, and great Fidelity to the Company; whoſe Diligence and Activity in its Service, we find greatly commended by ſome *Dutch* Writers, who certainly meant as honeſtly as they did; but unfortunately for the Service of the Republic, as well as of their Maſters, they miſtook their Talents, and by wading out of their Depth, became the Authors of a thouſand Miſchiefs, which to be ſure they never intended.

They were bred to Trade, and underſtood it thoroughly; but this kind of Underſtanding did not ſo well anſwer the Purpoſe as a Governor's. They forced the *Portugueze* that lived under them, to pay what they owed the Company in a ſhort time; but by the Methods they took to do this, they loſt their Hearts for ever. They furniſhed theſe very *Portugueze* with Fire-arms and Powder, but they ſold both very dear; ſo that the Company were great Gainers by the Bargain. They ſent over to *Holland* the Produce of thoſe Lands which Count *Maurice* had aſſigned for maintaining the Fortifications, which, in the mean time, ran to ruin. They gave Licences upon very eaſy Terms to the Soldiers to return home; which leſſened the Expence of the Army. In ſhort, they brought the whole Charges of the Government into a narrower Compaſs than could be expected; but by doing this they brought the Government itſelf into ſuch a Degree of Danger, as invited thoſe to rebel, who by this very Management were oppreſſed in their Perſons; and the Proprietors of moſt of their Plantations were ſo intangled by their Debts to the Company, that very few of them were worth a Groat. A very ſober *Dutch* Writer, who was there upon the Spot, tells us, That in 1645 there was a greater Quantity of Sugar ſent to *Holland* than at any time before, which he attributes to this wiſe and frugal Adminiſtration, and which, to ſpeak the Truth fairly and in plain *Engliſh*, was not either more or leſs than ſelling all *Dutch Brazil* for one Year's Purchaſe.

15. The *Portugueze* Viceroy at that Time was Don *Antonio Tellez de Silva*, a Man who ſeem'd formed by Nature for the Execution of that Employment at this Juncture: He had great Parts, but greater Prudence; much Penetration, more Sagacity; but excelled moſt in diſſembling to Perfection. In private Life, and in all common Occurrences, a Man of ſtrict Honour, humane, eaſy of Acceſs, familiar with all Sorts of People, but without loſing his Dignity. As ſoon as he was informed that Count *Maurice* was gone, and had carried with him two Thirds of the Force of *Brazil*, he formed a Deſign of getting rid of the *Dutch* intirely; but this he never communicated to his Friends, to the Enemy he always denied it.

He inſinuated to the *Portugueze* that were Subjects to the *Dutch*, that they were only labouring for Strangers, and Strangers of another Religion; whereas they might be Maſters of all they now farmed at a high Rent, and enjoy good Employments beſides, if their King was reſtored to his juſt Rights. Theſe Suggeſtions had their Effect, and thoſe who heard them could not avoid being moved by them.

But the Perſon who undertook to manage this whole Affair was one *John Fernandez Viera*, a very extraordinary Man, and of whom I ſhall give a very ſhort Account: He was originally a Butcher's Boy, from whence he was raiſed to the Rank of a Page to one of the Magiſtrates of *Olinda*, while in the Hands of the *Portugueze*. He became a kind of Factor, or Manager for the *Dutch*, and, by his Induſtry and Art, grew exceſſively rich, being Maſter of four Sugar Plantations, and intruſted with the Management of many more.

He had an excellent Head, laid the whole of the Conſpiracy himſelf, and ſent it over to *Portugal* by a Perſon who was not at all acquainted with the Deſign; after which he ſent a Relation of his to Court, with a Letter, recommending him to the King of *Portugal*, by which he got a Troop of Horſe, and acted there as Agent for the Conſpirators. He foreſaw that this muſt reach the Ears of the *Dutch*; and when it did ſo, he went directly to the Council, owned the Thing, produced his Letter, and offered to give Security for his good Behaviour, which he did without much Trouble; two of the richeſt *Portugueze* in the *Dutch* Territories becoming bound for him, who were as deep in the Conſpiracy as himſelf.

It may be juſtly wondered that, in ſuch Circumſtances, this was accepted; but the Wonder will ceaſe, when it is known that he owed the chief Perſons in the Adminiſtration upwards of two hundred thouſand Florins, which rendered it adviſeable for them not to ſee him ruined. By this adroit Contrivance he moſt effectually ſecured his Liberty, which he made uſe of to carry on this great Deſign, with all the Dexterity imaginable; in which he was aſſiſted by two Perſons, who made a great Figure in the Province, *Antonio Cavalcante*, and *Amador Aragouſa*, equally deep in the Management of the *Dutch* Affairs; and determined, like him, to raiſe their Fortune upon the Deſtruction of thoſe who truſted them.

The Day fixed for the Execution of this Plot was the 24th of *June*, 1645; when one of the Daughters of *Antonio Cavalcante* was to be married, and a great Feaſt given at the Houſe of *Viera*, to which moſt of the Officers and principal Perſons in the Company's Service were invited, and where, without doubt, they would have been all ſeized, if not murdered, if the Deſign had not been diſcovered the very Evening before it was executed. A Ship that arrived from *Amſterdam*, brought Letters from the Directors of the *Weſt India* Company; with an Account, that the Miniſter from the *States General* at the Court of *Portugal* had diſcovered, that a great Conſpiracy was carrying on in *Brazil*; and that they would do well to enquire what Supplies had been lately ſent from *Liſbon* to the *Portugueze* in thoſe Parts.

This Enquiry produced ſuch Diſcoveries as ſtruck the *Dutch* with univerſal Conſternation; which gave *Viera* and his Aſſociates Time to make their Eſcape into the neighbouring Woods, where they took up Arms. There *John Fernandez Viera* aſſumed the Character of General and Commander in chief, aſſiſted by Colonel *Diaz*, with a few *Portugueze* Troops, and Colonel *Cameron* at the Head of a much more numerous Body of *Brazilians*. With this ſmall Army he fixed his Head Quarters at *Pojug*, a Town between the *Receif* and Cape *St. Auguſtine*; ſo that the *Dutch* had the Misfortune of ſeeing the War break out, not only unexpectedly, but in the very Heart of their Dominions. At the ſame time *Antonio Cavalcante* raiſed another Part of the Country; and *Amador Aragouſa*, at the Head of a flying Party, was burning and deſtroying all the *Dutch* Plantations without Mercy. In this dreadful Situation the Council aſſembled all the Troops they could; and, at the ſame time, publiſhed a Proclamation, whereby they promiſed Pardon and Peace to all who ſhould ſubmit, and return to their Duty, excepting only *Viera*, *Cavalcante*, and *Aragouſa*. The Perſon they made choice of to command their Forces was Lieutenant-Colonel *Huys*, to whom they gave the Title of General; but it would have been better if they could have given him an Army, ſince the Troops he got together were few in Number, and very ill provided.

But beſide this, the Council had a mind to negociate, and therefore they ſent two Captains, *Vander Voord*, and *Dirch*

Dirch de Hoogſtrate, to the Viceroy, at the Bay of *All Saints*, to complain of the Infraction of the Truce between the Crown of *Portugal* and the States General, which had ſtill four Years to come. The Viceroy received them with great Civility, and anſwered them with much Prudence. He ſaid, that he was reſponſible for the Conduct of the Inhabitants of that Part of *Brazil* ſubject to the Crown of *Portugal*; and, if they had broke the Truce, he would give them what Satisfaction they could deſire; but, with reſpect to the *Portugueze* ſettled in the *Dutch* Dominions, if provoked by Oppreſſions they had taken Arms, it was what he could not help, and for which it was very unjuſt to make him anſwerable.

This was what he ſaid in public; but in a private Conference he had with Captain *Hoogſtrate*, he drew him over to his Intereſt, and prevailed upon him to reſolve upon giving up the important Poſt of Cape *St. Auguſtine*, of which he was Governor. In the mean time, General *Huys* attacked Colonel *Cameron*, but had the Misfortune to be beat, with the Loſs of one hundred Men. Soon after this, the *Portugueze* Fleet, under the Command of Admiral *Salvador Correa de Banavides*, appeared on the Coaſt; and, though it was very numerous, yet the *Dutch* Admiral, *Lichthart*, offered them Battle, though he had but five Men of War; but the *Portugueze* Commander refuſed it, pretending he had no Orders to act againſt the *Dutch*; and that all his Buſineſs was to land a Body of Men in his Maſter's Dominions, which he accordingly did; but thoſe Men, without any Ceremony, entered the *Dutch* Territories, and made themſelves Maſters of all the Places that fell in their Way.

The *Dutch* Council, upon this, ſent Orders to their General *Huys* to retreat; but he, ſtaying for one Captain *Black*, whom he had ſent away for ſeveral Ladies and rich Effects out of the Country, had the Misfortune to be ſurrounded by the *Portugueze*, beaten, and taken Priſoner; which the beſt *Dutch* Accounts that I have met with attribute to his Want of Conduct and Courage.

Upon this, Orders were ſent to Admiral *Lichthart* to attack the *Portugueze* Ships whenever he had an Opportunity, and he exerted upon this Occaſion the ſame Spirit and Courage which he had ſo often ſhewn upon others; for, with four Ships, a Frigate, and a Bark, he attacked the *Portugueze* Fleet of ſeventeen Sail, took three of the largeſt Ships, together with the Admiral, killed ſeven hundred Men, and burnt and ſunk almoſt all the other Veſſels; which raiſed the Hopes of his Countrymen not a little, and they began to flatter themſelves they ſhould have better Succeſs for the future, than they had hitherto had from the Beginning.

But theſe Hopes were very ſoon daſhed, by their receiving the unexpected News of the Loſs of *St. Auguſtine*, which was given up by Captain *Hoogſtrate*, in conſequence of the Agreement which, as we have before mentioned, he had made with the Viceroy, when ſent to treat with him by the *Dutch* Council as their Miniſter. He received for this infamous Action the Sum of 18000 Florins, which Sum he employed in raiſing a Regiment of ſix hundred and fifty *Brazilians*, of which he was made Colonel by the *Portugueze*, and wanted not Impudence enough to appear at the Head of it, againſt his Country; and, which was ſtill more aſtoniſhing, behaved bravely and with great Fidelity in the Service of his new Maſter.

Their great Superiority enabled them to make a quick Diſpatch in moſt of the Expeditions they undertook; ſo that, in a ſhort time, almoſt all the ſtrong Places in the Captainſhip of *Fernambuca* ſurrendered to them. At laſt they blocked up the *Receif*, always the ſtrongeſt, and now the only ſtrong Place the *Dutch* had left; and reduced thoſe who were in it to ſuch Hardſhips, that they muſt have been ſtarved out, if they had not been relieved by the Arrival of a Fleet from *Holland*. When the News of theſe Proceedings arrived in *Holland*, the Mob was exceſſively irritated, and, in their firſt Fury, ſurrounded the Houſe of the *Portugueſe* Embaſſador; which, but for the prudent Interpoſition of the Prince of *Orange*, they had certainly pulled down. That Miniſter, however, endeavoured to perſuade the *States General* that his Maſter had no Concern in this Rebellion; that he abſolutely diſapproved it; and that the Viceroy had never given any kind of Countenance to *Viera*. But the *Dutch* Stateſmen were too wiſe to give any Credit to him: On the contrary, they equipped a Fleet of fifty-two Sail of Men of War, under the Command of Mr. *Bankert*, Admiral of *Zealand*, whom they declared Admiral of *Brazil*, *Guinea*, and *Angola*; with him they ſent Colonel *Schuppen*, and Colonel *Henderſon*, who had ſerved under Count *Maurice* with great Reputation; and thus an open War began between *Portugal* and *Holland*, on the other Side the Line.

But never any Fleet met with ſo many unfortunate Accidents as this did; for, within two Days after they ſailed from the *Texel*, they were forced to anchor in the *Downs*, where they loſt two Ships in a Storm: They ſailed again, and were forced into the *Iſle of Wight*; where the firſt Sight they ſaw was the Wreck of a great Ship, which proved a *Dutch* Merchantman from *Brazil*, with a Cargo of the Value of two Millions, which was entirely loſt; and, out of three hundred Perſons, only thirty ſaved: In the Port of *St. Helen*'s they remained wind-bound ſeven Weeks, and at laſt met with a Storm on their putting again to Sea, by which they ſuffered extremely: Many more ſuch Checks they met with, before they arrived at the *Receif*; where the People were reduced to ſuch Extremity, that they were on the Point of throwing themſelves upon the Enemy, to ſeek a certain Death by the Sword, rather than expect a lingering one by Famine.

By the Help of theſe Reinforcements the War was ſtill kept on Foot, and ſome ſmall Advantages gained; but, in the Beginning of the Year 1647, they were again blocked up in the *Receif*, where their whole Force conſiſted but of one thouſand eight hundred Men, with which they made a gallant Defence; but at length, on the 16th of *May*, they reſolved to ſally with their whole Strength, and to attack the Enemy in the Field; which they did, at firſt, with ſome degree of Succeſs; but, being overpowered by Numbers, were at length beaten; and, in their Fight and Flight, loſt one thouſand one hundred Men, moſt of their Officers, nineteen Colours, and all the Artillery and Ammunition they had carried with them. This great Misfortune hindered them, indeed, from making any more Sallies; but, by leſſening their Numbers ſo much, enabled them to make a longer Defence, ſince their Proviſions ſufficed now for ſeven Months, which would otherwiſe have laſted them but three.

I have dwelt the longer upon this Part of the Story, becauſe I conceive it cannot be conſidered as either unpleaſant or uſeleſs; and I have obſerved, with ſome Degree of Amazement, that this kind of Hiſtory is very little known here in *England*; where the being able to diſcourſe pertinently of *Greek* and *Roman* Hiſtory, paſſes for Learning; and an Acquaintance with the Story of *Italy* in the middle Ag[illegible] has its Admirers amongſt the Virtuoſi; both which I hold equally laudable and ſenſible; but ſtill I am perſuaded, that this kind of Hiſtory is of more Conſequence than both, to the Inhabitants of a Country flouriſhing by Trade; and therefore I have taken ſo much Pains to reduce theſe Matters into Method and Order, that the Study of maritime Hiſtory might become more pleaſant and eaſy, and conſequently grow more into Repute and Faſhion, amongſt a Nation that ſo deſervedly value themſelves upon the glorious Title of a maritime Power. The true Meaning and real Importance of which Title, can only be learned by the Peruſal of Works like theſe. But to return from Reflections to the Current of our Hiſtory.

The Progreſs of the *Portugueze* was ſo great, and ſo irreſiſtible, and the Diſaſters that attended the *Dutch* followed ſo cloſe on each other, that nothing ſeemed capable of preventing the total Ruin of the *Dutch* Affairs in that Part of the World. This naturally might, and indeed did, produce a kind of national Deſpair; which haſtened, though I think it did not cauſe, that Ruin which it foreſaw. The Province of *Zealand* recalled their Admiral *Bankert*, with whom came home moſt of the Officers they had ſent with him, heartily diſguſted with the Service.

vice. The Difficulties they met with in their Paſſage, when outward-bound, were repeated in that which brought them home; ſo that *Bankert* died before the Fleet arrived in *Holland*, and ſo did ſeveral of his Officers almoſt as ſoon as they came aſhore; but the Sieur *Shuk*, who was ſent home by the Adminiſtration in *Brazil*, ſurvived; and upon his Application to the *States*, and his moſt particular and affecting Account of the Poſture of Things in that Country, they reſolved to make one general and great Effort for the Preſervation of ſo valuable an Acquiſition; and accordingly gave Orders for equipping a ſtrong Fleet of fifty Sail of large Men of War, and embarking therein ſix thouſand regular Troops, the Command of which they gave to Admiral *Witte-Wittezen*, at that Time eſteemed the ableſt Officer in their Service.

This Armament alarmed the Crown of *Portugal* to ſuch a degree, that Orders were ſent to the Embaſſador then reſident in *Holland*, to promiſe the *States* any thing that might prevent their proſecuting this Deſign, which, at firſt, had ſome Effect; but the *Dutch*, receiving at this Time the melancholy Account of what had happened at the *Receif*, determined not to be the Dupes of ſuch a Negotiation; and therefore, towards the End of the Year 1650, they not only diſpatched Admiral *Witte-Wittezen* with his Fleet, but likewiſe projected the ſending another Fleet after him, with an additional Supply of between five and ſix thouſand Men more. One would have imagined, Succours like theſe, exceeding, if I am not miſtaken, any thing that has been done by other Maritime Powers, in Support of any ſingle Colony, would have anſwered the End effectually, more eſpecially as *Portugal* did not arm in any Proportion, or ſend over any regular Troops, at this Time, to *Brazil*: But, however, all proved vain and ineffectual; for the Elements declared as fierce and as inflexible a War againſt the *Dutch* Fleets and Armies, as the *Portugueze*, the *Negroes*, and the *Brazilians*. The Climate, which ſeemed natural to all theſe, proved abſolutely mortal to the *Dutch*. The former living there on the natural Produce of the Country, were healthy, hearty, and robuſt; intermarrying with the Natives, they multiplied apace, and had but one common Intereſt; whereas the latter ſubſiſting intirely on the Proviſions ſent them from *Europe*, grew pale, wan, and feeble, and died in great Numbers.

Hence it came to paſs, that when the great Fleets before mentioned, after ſuffering much by Storms and Tempeſts in their Paſſage, arrived at length on the Coaſt of *Fernambuca*, they found, inſtead of a Colony, a mere Hoſpital of ſick, maimed, and infirm People; and, in the room of thoſe Fortreſſes they were to have relieved, a Collection of Church-yards filled with the Bodies of thoſe who had been before ſent on the ſame Errand; the Sight of which affected the Admiral in ſuch a manner, that, notwithſtanding the preciſe Orders he had received, he determined with himſelf not to bury the Remainder of his People there, which from his firſt Arrival he began to do apace, but to return home without Delay, which he accordingly did, leaving Things in a much worſe Condition than he found them; and the *Weſt India* Company, beſides all the reſt of its Misfortunes, oppreſſed by a very heavy Debt, contracted on the Score of his unfortunate Expedition. We need not wonder, therefore, that upon his Return there was a dreadful Outcry ſet up againſt him; to allay which, the *States* were obliged to commit him to Priſon; but he very ſoon juſtified himſelf to their Satiſfaction, and indeed to the Satiſfaction of every body but the Proprietors of the *Weſt India* Company, on whoſe Directors at home, and in *Brazil*, he laid the Blame of all theſe Miſcarriages.

It would be needleſs to purſue this Subject more particularly from this Time to the total Excluſion of the *Dutch*, becauſe it would contain only a Repetition of the ſame kind of Facts, and conſequently prove far enough from being entertaining or inſtructing. It may therefore ſuffice to ſay, that towards the Cloſe of the Year 1653, the *Portugueze*, who now publickly owned the Cauſe of *John Fernandez Viera*, ſent a Fleet of ſixteen large Men of War to attack the *Receif* by Sea, and to blow up Part of its Fortifications; which ſo terrified the *Dutch* Garriſon, that they abſolutely refuſed to fight; ſo that the next Year they ſurrendered every Thing they poſſeſſed; and, in 1655, they returned to *Holland*. It is inconceivable what an Uproar this raiſed in that Country, and with what Heat and Fury the People demanded Juſtice againſt General *Sigiſmond Schuppen*, who had commanded in Chief for many Years, and who was Governor of the *Receif* when it ſurrendered. The *States*, perhaps, out of Favour to him and his Officers, ſent them to Priſon; and they could not, in reſpect to Juſtice, refuſe him the only Grace he aſked, which was to make a public Defence; wherein he laid open, ſo clearly, his own long and faithful Services to the *Dutch* Nation, recapitulated all the Succeſſes they had under the Adminiſtration of Count *Maurice*, and gave ſo true a Picture of the Miſeries and Misfortunes they had ſuffered ſince he went thither laſt, that the People wept, and the Judges acquitted him.

There is ſomething ſo ſtrange, ſomething ſo unaccountable in this Tranſaction, from the Beginning to the End of it, that I cannot think it will be looked upon as either tedious or impertinent, if I point out clearly, and in a narrow Compaſs, the Cauſes of this extraordinary Revolution, which I take to have been principally three. The firſt, and indeed the principal one, was recalling Count *Maurice* of *Naſſau*, and changing the Government; which I muſt beg Leave to explain, for the Sake of ſuch of our Countrymen as may not fully apprehend it. Count *Maurice* was a great Captain, and a true Politician; he very well knew, that in a conquered Country a military Adminiſtration was as requiſite as a civil one; and ſo contrived his own, that it was a proper Mixture of both. His firſt Care was to extend the Dominions of his Countrymen, that they might have Room enough to fix a potent Colony, and a fertile Territory ſufficient to maintain it. On the Frontiers he built ſtrong Fortreſſes, brought the native *Brazilians* to reliſh living according to their own Manner, under the *Dutch* Protection, and to be willing to work for Wages; he likewiſe filled the Country with Negroes, from his Conqueſts in *Africa*; and, when he had thus ſecured a large, pleaſant, and fruitful Country, and People enough to ſubſiſt in it, he began to build his new City of *Mauriceburgh*, to raiſe his admirable Palace, to lay out his fine Gardens, and to do every thing that might encourage Art and Induſtry; and, by adorning and enriching the Country, fix ſuch People as came to get Eſtates there to their Eſtates, when got. By this Policy of his, it muſt be allowed, that he did not fill the Company's Coffers; but he ſerved his Country, and the Company too, very effectually, by putting the Colony upon a right Eſtabliſhment, and giving it ſuch a Force within itſelf, as all the Power of his Enemies could not have overthrown: This he was able to do from the extenſive Authority lodged in his Hands, by his Commiſſion from the *States*; and yet the Extent of his Power could only reach to what was good; had he endeavoured to carry it farther, his Council might, and would, have interpoſed: But it was quite otherwiſe with the Government that ſucceeded him; for they had a boundleſs Power of doing Miſchief, and very little Capacity of doing Good, as appeared very clearly from their whole Adminiſtration, and indeed it could not well be otherwiſe; for, whereas Count *Maurice* came naturally from commanding at home to a Government abroad, theſe Men were fetched from behind Counters to act the Part of Soldiers, Seamen, and Stateſmen. I do not ſay this to diſparage Trade, but to ſhew the Folly of ſuppoſing that the greateſt Maſters of Trade ſhould be able, by Inſtinct, to manage thoſe Trades they were not bred up to, and conſequently, upon their own Principles, cannot underſtand. They were of excellent Uſe to Count *Maurice*, as his Council, and I firmly believe he could not have done without them; but then I hope I ſhall eſcape Cenſure for affirming, that they knew as little how to do without him.

The ſecond Cauſe of the Declenſion of the *Dutch* Affairs, was the too haſty Deſire of the Company to draw a great Revenue from this Colony, which put them upon moſt unreaſonable Reductions of their Expence. The firſt

Point was, that of a Governor General, who, by keeping a kind of a Court, ſeemed to be an intolerable Burden upon ſuch as were at the Expence of it ; but if they had conſidered that this Governor, who kept this Court, acquired for them the beſt Part of that Colony, and put the reſt of it into ſo good a Situation, they would have judged the Services of ſuch an Officer a ſufficient Recompence for the keeping Him. Their next Reformation was in the Military Eſtabliſhment, which in 1641 Count *Maurice* had fixed at upwards of ſeven thouſand Men, and which, immediately upon his Removal, they very frugally reduced to two thouſand ſeven hundred, and even allowed ſuch of theſe Soldiers as would pay for it, to go home: The Magazines, that were always well filled in the Time of Count *Maurice*, and from which, as we have ſeen, he furniſhed ſeveral Fleets for diſtant Expeditions, they emptied, to raiſe Money by the Sale of their Contents, and very fooliſhly ſuffered their Servants and Soldiers to live upon *European* Proviſions, inſtead of accuſtoming themſelves to live upon the Produce of the *Brazilian* Territories. It was likewiſe a great Fault that they laid high Taxes upon the great Manufacture of the Country, Sugar, which threw it entirely into the Hands of the *Portugueze*, their own Subjects being afraid to meddle with a Trade in which the firſt Miſcarriage was attended with total Ruin. Another notorious Blunder was, their ſending over a vaſt Number of *Jews*, who, finding the People ſinking under heavy Taxes, brought in that excellent Cordial of high Uſury, to keep up their Spirits. By theſe, and ſuch like Methods, they, in the Space of a few Months, brought all Things into Confuſion ; and, from that Time forward, never took one ſenſible Step towards bringing them out.

The third Cauſe of the Ruin of this Colony was, that the States did not interpoſe in Time, and take the Care of the *Dutch Brazil* into their own Hands, inſtead of leaving it to a Company which had ſhewn themſelves ſo unequal to what they had undertaken ; and therefore for their own Good, as well as for that of the Public, this very important Concern ſhould have been taken out of their Hands. But by continuing the ſame Government, the States and the Company pinned down the unhappy People that were left there, labouring under Miſeries and Misfortunes of all kinds, without Remedy and without Hope! If they had ſent over in time a new Governor-General, Things might have been reſtored; but for want of this, they ran continually from bad to worſe, as it was very natural for them to do ; ſo that after ten Years Struggle, as well againſt their own Weakneſs and ill Management, as the ſuperior Force of their Enemies, they ſuffered the Colony to expire ; but, when they found their Malady incurable, they had better have taken the *Brazilian* Method, and, without waiting Extremities, knocked it on the head at once.

But to conclude this Subject with a ſhort State of both Adminiſtrations : When Count *Maurice*, after eight Years reſiding in *Brazil*, quitted the Government, he left them ſeven Captainſhips, one City, thirty great Towns, forty-five regular Fortreſſes, ninety Sail of good Ships, three thouſand regular Troops, twenty thouſand *Dutch* of all Ages and Sexes, ſixty thouſand Negroes, and above twice as many *Brazilians* : At that Time the Colony yielded twenty-five thouſand Cheſts of Sugar annually, and a Carpenter, Cooper, or Smith, could earn five or ſix Guilders a-day, and live very comfortably upon one: And, after expending Millions upon this Colony, for ten Years together, and the Loſs of ſeveral thouſands ſent thither from time to time, there returned to *Holland*, in 1655, between ſix and ſeven hundred Perſons, of all ſorts, not worth a Groat.

Upon this the States declared War againſt *Portugal*, by which their *Eaſt-India* Company were great Gainers, but the *Dutch* Nation ſtill Loſers ; ſo that, after five Years, they were glad to make a Peace, under the Mediation of our King *Charles* II. which was ſigned the 6th of *Auguſt*, 1660, in which the principal Articles relating to our Subject are theſe that follow: That the Crown of *Portugal* ſhall be obliged to pay to the States the Sum of eighty Tons of Gold, either in ready Money or Sugar, Tobacco or Salt, or elſe aſſign the ſaid ready Money upon the *Portugueze* Cuſtoms : That the Places taken on each Side ſhould remain to thoſe who were then in Poſſeſſion of them : And that a free Trade ſhould be allowed to the *Dutch* in *Portugal*, *Africa*, and *Brazil*, without paying any more Cuſtoms than the native *Portugueze*.

16. The *Portugueze* have, ſince this time, remained in quiet Poſſeſſion of all this vaſt Country, which is the Reaſon that it is very difficult, if not impoſſible, to give any diſtinct Account of what has paſſed there ſince this Time: For the *Portugueze* are, in the firſt place, not much addicted to Writing ; and in the next, they are not extremely willing that the World ſhould be acquainted, farther than they muſt be from Facts, with the State of their Colonies in *Brazil* ; and it is for this Reaſon, that they ſuffer no Ships to trade thither but their own ; a Point in which they are extremely preciſe, inſomuch that they have made it a kind of capital Maxim in their Policy. But it is with them as it is with all other Nations of this Stamp ; they flatter themſelves that this Rule which they lay down is inviolably adhered to ; yet it is certain that the Fact is otherwiſe, and that ſometimes *Engliſh* Interlopers, and now and then *French* and *Dutch*, ſell their Cargoes in *Brazil*, eſpecially in time of War ; and in time of Peace, when there is not an Opportunity of carrying on a clandeſtine Trade in this manner, they find out another, which is, ſending thither Goods, under the Name of ſome *Portugueze* Merchant, in the very ſame manner that the Goods are ſent to the *Spaniſh* Colonies, under the Name of *Spaniſh* Merchants.

In both Caſes they are no more than Brokers ; but, to their immortal Credit, the faireſt and the moſt honourable in the World; for they are never known to break their Faith, or to injure thoſe who truſt them. As to the Trade which the *Portugueze* themſelves carry on to this Colony of theirs, it has for theſe laſt hundred Years been ſo great, that it is thought to have been the principal Cauſe why they have ſlighted that of the *Indies*, as we have ſhewn in its proper Place ; tho' formerly it conſiſted principally in Sugar, Tobacco, *Brazil* Wood, and other Commodities of great Value ; yet within theſe laſt forty Years they have received from thence Commodities of ſtill greater Value, or rather, to ſpeak in the Language of our Times, of the greateſt Value, ſuch as Diamonds, and Gold ; and of this precious Metal we have been thought to have ſo large a Share, that without it we could ſcarce have carried on the laſt general War, and the expenſive Meaſures that have ſucceeded it ; and though this may not be ſtrictly true, yet there is certainly ſo much of Truth in it, that it ought to make us curious in the inquiring after, and obtaining the beſt Account we can of theſe Plantations, which is ſo much the more neceſſary, becauſe hitherto the Accounts we have had are as far from being ſatisfactory as Accounts well can be. The Pains I have taken upon this Subject have not indeed enabled me to give the Reader ſo exact a View of all the *Portugueze* Settlements in *Brazil* as I could wiſh ; but, however, as I ſhall have no Occaſion to treat of this Country again, I will take this Opportunity of giving him the moſt particular and ſatisfactory Accounts I have met with, till ſomething better ſhall be publiſhed upon the Subject.

All the Trade of the five northern Captainſhips of *Brazil*, *viz.* *Paria*, *Maragnan*, *Siara*, *Rio Grande*, and *Paraiba*, is carried on in the laſt-mentioned Port, which lies on a River of the ſame Name, at the Diſtance of about five Leagues from the Sea ; it is a fair and populous Town for that Country; and there are annually about ſeven or eight Ships ſent hither from *Liſbon* and *Oporto*, of the Burden of two hundred and fifty Tons each. Their Lading conſiſts chiefly in Sugar, of which they make more in theſe northern Captainſhips, than in the South ; eſpecially ſince the Diſcovery of the Gold Mines, which has made the Inhabitants of thoſe Parts of the Country negligent. There was a Time when the Trade of *Brazil*, in this Commodity, was ſuperior to any in the World ; for the Sugar of *Brazil* was the firſt that was known in *Europe* ; and the *Portugueze* are ſaid to have ſet up their Works in this Country, about the Year 1580; and their being ſo long in Poſſeſſion has made them more careful and exact in it, than any other Nation; ſo that even now the clayed Sugars from *Brazil*, are whiter and finer than ours; and yet the Method they take of doing this, is neither a Secret, ſo as not to be known, nor difficult, ſo as not to be attained; for in plain *Engliſh* it is no more than this:

When their Sugar is put into their Pots, and, by the draining out of the Moloſſes, they are ſunk two or three Inches below the Brim; they ſcrape off that thin hard Cruſt that is found on the Top of the Sugar; and then they pour in their Mixture for refining it; it is nothing more than a fine ſoft white Clay, beat and mixed with Water, till of the Conſiſtency of Cream, with which they fill up the Pan. The white Water in ten or twelve Days paſſes quite through, and whitens the Sugar as it paſſes; the thick Body of the Clay lodges on the Top of the Sugar, and is eaſily taken off with a Knife. Beſides Sugar in this State, they bring likewiſe dying Woods, ſeveral Sorts of Drugs, and other valuable Commodities from *Paraiba*; which, however, is the leaſt frequented Port in *Brazil*, though it is generally allowed that theſe northern Captainſhips are the beſt peopled; and that the Inhabitants are very eaſy in their Circumſtances, though there have not as yet been any Mines found, or at leaſt wrought, in theſe Parts. Though ſome *Spaniſh* Writers affirm, that, from the Appearance of the Soil on the Sides of their Mountains, it is highly probable they are rich in Silver; which, perhaps, they are reſtrained from ſearching for by the Orders of the Viceroy; or at leaſt this was the Caſe forty Years ago, when ſome *Spaniſh* Deſerters made a Propoſal of this kind to the *Portugueze* Governor of this Captainſhip.

Tamarca, which lies next to *Paraiba* and the Captainſhip of *Fernambuca*, carry on their Trade from the City of *Olinda*, which we have mentioned before. It is ſeated on a Hill not far from the Sea; and this Situation renders the Streets very uneven and very incommodious. The Port too is but narrow, and the Entry into it extremely difficult; yet there is a conſiderable Reſort thither of Ships from the other Parts of *Brazil*, and from the *Canaries*; and the annual Fleet from *Liſbon* conſiſts generally of about thirty Sail, eſcorted by a Man of War. Theſe Merchantmen are generally about the ſame Size with thoſe ſent to *Paraiba*, and their Cargoes are compoſed chiefly of Sugar and *Brazil* Wood; which laſt is ſuppoſed to be the beſt of its kind in the World; and therefore we ſhall ſpeak of it ſomewhat more particularly: Many, otherwiſe correct Writers, having fallen into very groſs Miſtakes upon this Subject.

It is an Opinion commonly received, that the Country of which we are ſpeaking gave its Name to this Wood, and that it was called *Brazil* becauſe it came from thence; nay, we are told ſo in the very laſt Edition of the *Dictionary of Commerce*, and in one of the new Articles; but, however, the Fact is directly otherwiſe; and, as we have ſaid elſewhere, the Colony was ſo far from giving its Name to the Wood, that, on the contrary, the Country was firſt called the Land of the *Holy Ghoſt*; and from its abounding with this kind of Tree, loſt the Name impoſed upon it by its firſt Diſcoverers, and took that of *Brazil*. If the Proof of this is demanded againſt the Authority of abundance of Books, which ſay directly the contrary, we may cite *John de Barros*, the famous *Portugueze* Hiſtorian; who, ſays expreſly what we do, and was likely to know as much of this Matter as any Man. But that learned Prelate of *France*, *Peter Huet*, Biſhop of *Avranches*, has put the Matter entirely out of doubt; for he aſſures us, that the famous Rabbi, *David Kimchi*, in his *Commentary on the Chronicles*, affirms, that the *Hebrew* Word *Algummim*, ought to be tranſlated *Brazil*; now it is certain that this learned *Jew* wrote before the Country of *Brazil* was diſcovered, and conſequently the Wood was ſo called before any of it came from thence.

There are alſo different Sorts of this Wood; ſuch as the Brazil of *Japon*, Brazil of *Lamon*, Brazil of *St. Martha*, and Braziletto from *Jamaica* and the *Leeward Iſlands*; but the very beſt comes from this Country, and the beſt in this Country from *Fernambuca*. The Brazil-Tree grows generally in dry barren Places, and amongſt Rocks; it is very thick and large, and the Timber uſually crooked and knotty; the Flowers it bears are of a moſt beautiful bright red, have a very fragrant Smell, and, inſtead of hurting, as moſt Perfumes do, they cheriſh and ſtrengthen the Brain: Though the Tree is very large, it is covered with ſo thick a Bark, that when the *Brazilians* have taken it off, a Tree as big as a Man's Body is left no thicker than the Calf of his Leg. The Wood is very heavy, dry, and hard; it crackles much in the Fire, and ſcarce raiſes any Smoak when it is burned, becauſe it has ſo little Moiſture; there is no Pith in it, except in what comes from *Japon*; and therefore it may be doubted whether this be really the ſame kind of Wood or not.

That is held to be the beſt which is thickeſt, ſoundeſt, hardeſt, and without any Bark ſticking to it; it ought likewiſe upon ſplitting to turn from a pale to a deep red; and laſtly, upon chewing the Chips of it, the beſt Sort yields a ſweet ſugary Flavour. This Wood is put to various Uſes by the Turners, and takes a very good Poliſh; but it is principally employed in dying, in which it yields a very fine bright Red. It is from the *Brazil* Wood that one kind of Carmine is made, by beating it in a Mortar with Leaf-Gold, and ſteeping it in White-Wine-Vinegar, and afterwards boiling it; when it yields a thick Scum, which, carefully taken off and dried, becomes, when reduced to a Powder, Carmine, but very far inferior to what is made by another Method, from Cochineal.

The next Captainſhip of *Brazil*, is that of the Bay *Bahia*, as the *Portugueze* call it, or Bay of *All Saints*; which is about twelve Leagues over, but in ſeveral Places is ſcarce navigable, on account of Sand-Banks and Sholes: There are in it ſeveral ſmall Iſlands, on which the *Portugueze* have Tobacco and Sugar Plantations, and they have likewiſe very good Fiſheries on the Coaſt of theſe Iſlands, and on the Banks. I have an Account of a Voyage to *Brazil* by a *French* Gentleman, in the Year 1717, which is very curious, and from which I ſhall give the Reader ſome very entertaining Particulars, which I do not remember to have met with any where elſe, or at leaſt not in our Language; and becauſe I am not able to put them in a better Dreſs, I will give them exactly in his Words.

“ There is not a Place in the World, *China* only excepted, from whence I came, where there is ſo much Trouble to get on Shore, or to know how to act when one is on Shore, as in *Brazil*. We came into this Bay on the 16th of *November*; and when we were within a League of the City of *St. Salvador*, we were reſtrained from proceeding any farther, by a Gun fired from a little Fort; upon which we came to an Anchor, and ſent our Supercargo aſhore in our Boat. He was a very ſenſible Man, and withal had a great deal of Gravity, a Quality of all others the moſt neceſſary, for one who has any Buſineſs to tranſact with the *Portugueze*: As ſoon as he came aſhore, he was conducted to an Audience of the Viceroy, who received him with a great deal of State; and yet ſhewed him, at the ſame Time, as much Civility as he could expect. He told his Excellency that he came on behalf of three *French* Ships homeward bound from the *Eaſt Indies*, that were in many reſpects greatly diſtreſſed, and had no Hopes of performing their Voyage, but from his affording them his Protection and Relief

“ The Viceroy continued for ſome Minutes ſilent, and then gave him his Anſwer to this Effect: That he was very ſorry for their Misfortune, becauſe his Maſter's Orders were very preciſe againſt admitting any foreign Veſſels into the Port; and that he was the more concerned to hear that they were *French*, becauſe it was chiefly on their Account that theſe Orders were given; becauſe ſeveral Veſſels of their Nation, that had been admitted into the Ports of that Country upon the very ſame Pretences, had carried on an illegal Trade, directly contrary to the King's Orders, and had ſhipped great Quantities of Tobacco. He told them farther, that the King's Orders were to ſeize and confiſcate without Diſtinction, whatever

THE CITY OF St SALVADOR AND ITS HARBOUR

foreign Veſſels entered that Port, unleſs it plainly appeared they were in ſuch a Condition as not to be able to keep at Sea; that therefore they were to have twenty-four Hours given them to conſider whether they would come and anchor under the Guns of the Fort in order to be examined, or to put to Sea without receiving any Relief at all. He added, that if the Caſe was ſuch as our Agent repreſented it, he might very freely enter the Port; and, upon Examination, all the Care ſhould be taken to aſſiſt and ſupply him, that he could deſire; but that he would do well to remember that the *Portugueze* were not to be impoſed upon.

“ As our Ship was really in ſuch a Condition that we had no Reaſon to fear any Examination, we made Sail immediately on the Return of our Supercargo, and came to an Anchor under the Fort. The next Day the Judge came on board, attended by ſeveral Secretaries and other Officers, all of them very grave ſober-looking People, who examined every thing with all the Nicety and Strictneſs of an Inquiſition. They called for our Journals, queſtioned our Pilots, Mariners, and even the Cabbin-Boys, particularly as to this Point, Whether we had not formed a Deſign of touching at *Brazil* before we were in ſuch Diſtreſs? They all anſwered in the Negative; but ſtill we had ſo little Hopes, that every one in the Ship, who had it in his Power, made them ſome Preſent or other, which they took indeed, but ſcarce gave us Thanks. At laſt they took their Leaves, and ſent ſome Carpenters on board, to whom our Captains made ſuch an Application, that they reported our Leaks to be ſo dangerous, that the Crew were very much alarmed, and were afraid of ſinking before they got out of the Ship.

“ As ſoon as this Report was made, we had Leave to go on Shore, which was refuſed us before; and we had alſo Leave given us to take Lodgings where we thought fit in the City, but with ſtrict Caution not to attempt any kind of Trade on Pain of forfeiting both Ship and Cargo. The Officers put on board the Veſſel talked the ſame Language at firſt, but ſeeing the Impreſſion it made, and that our People were very exact in that Particular, they were ſo kind as to explain themſelves the third Day, telling us that this was all a Farce; that the Judges themſelves knew it; that they underſtood by our Preſents, we were a good ſort of People, and, that we ſhould have, every Night, Boats come off with all ſorts of Merchandize; and that they would take care we ſhould run no ſort of Riſk, either in buying or ſelling. The Boats came accordingly, and though at firſt we were a little ſuſpicious, yet in one Week's Time their Language was perfectly underſtood, and Trade went on briſkly every Evening, as ſoon as it was dark.

“ We imagined there would be no Difficulty in procuring Carpenters and other Workmen, if we gave them good Wages, but we were miſtaken; for none of theſe People durſt take our Money till they had Leave, and that Leave was not to be had but by dint of Preſents; which being properly beſtowed the Carpenters came on board, and went to work. It is literally true in *Brazil*, that Money will do all Things, and that nothing is to be done without Money. We ſtaid there four Months, and found few honeſt Men except the Viceroy.

“ He was the firſt that ever had that Title, all the former Governors being called Captains-General; and his Title was not only higher, but his Power much greater than theirs; which was intended to redreſs the many Corruptions and Iniquities that had crept into the Government. The Nobleman graced with theſe Honours, was the Count *de Villaverda*, one of the greateſt Families in *Portugal*, who had ſerved as General of Horſe in the laſt War, and was in every reſpect a Man of as much Worth and Honour as his own, or any other Country, could boaſt. He found it very difficult to execute his Inſtructions, but he certainly ſet all his People a good Example; for in the corrupteſt Country in the World he behaved with the greateſt Probity Man could do, and laboured all that was in his Power to prevent the bad Effects of a contrary Conduct in others. But it may be naturally expected, that I ſhould give ſome Account of this great City, and I ſhall accordingly do it as exactly as I can: *St. Salvador* is ſituated at the Entrance of the Bay of *All Saints*, and has a very fine Port, which might be made ſtill more commodious than it is, if Art and Induſtry gave a little Aſſiſtance to Nature: The preſent Viceroy has attempted this, and it is moſt certain that if they execute his Deſign in its full Extent, the Harbour of *St. Salvador* will become the beſt in *America*.

“ The City is divided into the Upper and the Lower: We will begin with the ſecond, in which live all the Merchants, and People of Buſineſs; and perhaps there is not in the World a Place, for its Size, of greater Hurry or greater Trade: It lies at the Foot of a Hill which is not very high, but exceſſively ſteep. There is in it a royal Arſenal, beſides the King's Warehouſes and Magazines; which are large, well filled, and kept in excellent Order. There is likewiſe a very fine Yard for building Ships; and it is very wonderful, that the Policy of the *Portugueze*, in this reſpect, is not imitated by other Nations that have Colonies in *America*; for Ships are not only built here, at a much eaſier Rate than in *Europe*, but are likewiſe better, and more ſerviceable, becauſe the Timber is excellent in its Kind, and incorruptible in its Nature, ſo that the Worms, which in the *Mediterranean* and the *Weſt Indies*, make a ſwift and certain Deſtruction in all our Veſſels, how well ſoever they may be ſheathed, are not able to penetrate theſe. The ſame Thing is practiſed in almoſt all the other Parts of *Brazil*, which is certainly a very wiſe, and a very profitable Regulation. And as, on the one hand, we may be very well ſurprized, that other Nations have not imitated the *Portugueze* in this reſpect, ſo, on the other hand, there is no leſs Reaſon to be aſtoniſhed, that a Nation ſo prudent and politic in this Particular, ſcarce acts with common Senſe in any other.

“ The upper Town is ſeated on the Summit of the Mountain; the Houſes are large enough, and ſome are pretty convenient; but the Inequality of the Ground on which they ſtand ſpoils their Appearance, and renders the Streets very diſagreeable: The grand Place, or great Square, is in the Middle of the Town; and the Viceroy's Palace, the Town-houſe, the Mint, and other public Buildings, occupy four Sides, which are handſome enough, but have only this ſingular in them, that they are built of Stone brought from *Portugal*, for in all this Country they have none fit for the Purpoſe: The *Jeſuits* College is, beyond all Diſpute, the largeſt, faireſt, and moſt finiſhed Building in the City, more eſpecially the Sacriſty, which is lined throughout with the moſt beautiful Tortoiſe-ſhell, wrought and fixed together in the moſt elegant manner, ſo that nothing can be conceived more agreeable to the Eye, or more ſatisfactory even to the niceſt Taſte: There are ſeveral other fine Churches; and that of the *Benedictine* Abbey, which is now building, will rival, if not exceed, the Church of the *Jeſuits*; but the Cathedral, which without doubt ought to be the nobleſt Structure, and which really ſeems to be ſo at a Diſtance, is however far from appearing either neat or regular when one comes to examine it; yet, if the Richneſs of Gilding may entitle a Church to be thought fine, this muſt be acknowledged to ſurpaſs not only all the Churches here, but throughout the greateſt Part of *America*.

“ There is alſo amongſt the Convents in this Capital, one very remarkable of the Order of *St. Clare*, and another, deſtined to the Uſe of ſuch young Girls as are expoſed and abandoned by their Parents. It is amazing to ſee how much theſe Foundlings are conſidered in this Country; the King adopts them all, and the Ladies of the firſt Quality frequently take them Home, when at a proper Age, and breed them up as their own; which is certainly a very laudable Charity; but is, in ſome Caſes, attended with great Inconveniencies. The City of *St. Salvador* is the Seat of an Archbiſhopric, which is uſually filled by ſome Eccleſiaſtic of the beſt Family in *Portugal*, as well on account of its large Revenue, as becauſe of the Share that Prelate has of the Government. The City is much longer than it is broad, and, if we ſpeak of it only within the Walls, it is but ſmall; but if we take in the Suburbs, it may paſs for a pretty large Place; the Number of Houſes having been computed at two thouſand, and that Computation is, perhaps, rather below than above their real Number.

“ The Viceroy has two Councils, one of Criminal, the other of Civil Affairs, in which he preſides; but Juſtice goes on very ſlowly, and there is not a Country in the World where ſo much Paper is blotted by the Lawyers as here, before any final Judgment is obtained. In former times it was here as in the *Spaniſh* Governments, the Captain-General durſt not puniſh, much leſs put to Death, any Native of his Maſter's Dominions in *Europe*; but the preſent Viceroy has broke through this, and ventures to condemn Murderers and ſuch like Criminals, to ſuffer the Puniſhments they deſerve; but the Proceedings are ſtill ſo ſlow, and the Precautions taken ſo many, that there is no ſort of Danger of any Man's being ſent to the Gallows there, before he very richly deſerves it; and the only Scandal to the Government is, that the Road thither is not quite ſo much beaten as it ought to be; for it would be certainly much better that five were hanged every Year, than ten murdered with Impunity.

“ The Commerce of *Brazil* is very conſiderable, and the Luxury of the Inhabitants as great as can well be imagined. There is an annual Fleet comes from *Portugal* with *European* Goods, conſigned by the Merchants of *Liſbon* to their Factors here, where they never wait long for their Cargoes, which conſiſt of Sugar, Tobacco, and Gold Duſt, all of which are commonly laid up in their Magazines ready againſt the Arrival of the Fleet, with the Contents of which they are alſo perfectly well acquainted; ſo that to land the Commodities of *Europe*, and to ſhip thoſe of the Country, is almoſt all they have to do. The Inhabitants may be divided properly enough into three Sorts of People, *viz.* Planters, Factors, and Mariners. The former buy as many Slaves as they can employ in their Sugar and Tobacco Works, or in the Mines; and when the *Liſbon* Fleet comes they ſhip their Commodities on board it, and receive an Equivalent in *European* Goods and Manufactures by the next Year's Fleet. The Factors keep Magazines of all Sorts of Goods that come from *Portugal*, with which they purchaſe Sugar, Tobacco, and Gold, of ſuch Planters as want an immediate Supply of the Things they deal in, without waiting for next Year's Fleet. As for the ſea-faring People, the chief of their Buſineſs conſiſts in making frequent Trips to the Coaſt of *Guinea* to purchaſe Slaves. I do not ſpeak here either of the Lawyers or the Soldiers; and my Reaſon for it is, they being generally either Planters or Merchants.

“ The *Guinea* Trade is very conſiderable; thoſe employed in it from this City or Bay, bringing over uſually twenty, or five and twenty thouſand Negroes every Year; and of theſe, fifteen thouſand, at leaſt, are diſpoſed of amongſt the Inhabitants of *St. Salvador*. There is not a *Portugueze* there, who has not, at leaſt, a dozen Blacks in his Service, and they very often employ them in ſuch Offices as are equally contrary to the Intereſt of Religion, and of the State. They arm, for Inſtance, ſuch of them as are clean-limbed well-made Fellows, each with his Sword and Dagger; and as they have a Sort of brutal Fierceneſs, which ſome miſcall Courage, they are capable of doing any thing they are commanded, of what Kind ſoever; and, by this Means, they acquire ſuch a Habit of doing Miſchief, that they very frequently do it without any Commands at all. There are alſo Abundance of theſe Fellows that are free; that is to ſay, have either obtained their Liberty, as a Reward of their Services, or have purchaſed it with Money. It is really aſtoniſhing, all Things conſidered, that ſome dreadful Revolution has not happened to the *Portugueze* in this Country, from their weak and ill-judged Indulgence for theſe Negroes, who are much more numerous, as well armed, and, if it be poſſible, more wicked than themſelves.

“ It may ſeem ſtrange that I ſay this, but it will ſurely appear ſtranger, when I affirm, that in ſaying this, I do not at all exceed the Truth. In ſhort, the far greater Part of the *Portugueze* ſettled here, are Hypocrites in Point of Religion, and totally deſtitute of Morals; Thieves and Sharpers by Profeſſion; and very frequently Murderers from Reſentment. There is no Order, no Decency, no Obedience known amongſt them; every Barber, Shoemaker, and Taylor, ſtruts with his Sword and Dagger, and looks upon himſelf as equal to any Officer in the Colony, becauſe his Face is of the ſame Complexion. The preſent Viceroy is ſenſible of, and deteſts, this Conduct. When he firſt came over he laboured to reform it; but Cuſtom has ſo ſtrongly eſtabliſhed it, that hitherto his Labours have proved vain.

“ Of late Years, and ſince the Diſcovery of the Mines, they have formed a kind of new Syſtem of living, which ſome Time or other will prove fatal to them; for, inſtead of cultivating their Plantations, they ſend moſt of their Slaves to the Mines, upon theſe Conditions: Their Maſter finds them a Pound of Meal a Day, and if they eat any thing elſe they buy it themſelves; in return, the Slave is bound to pay his Maſter daily ſuch a Quantity of Gold; if he happens to get more, he lays it by, to make up for Deficiencies, or, by living hard, he ſaves enough to purchaſe his Freedom. Thus the Maſters are at a kind of Certainty, with reſpect to the Eſtates; for ſo many Slaves produce ſo much Money certain: But, in the mean Time, their Sugar and Tobacco is decaying; and, which is much worſe, they are in Danger of wanting neceſſary Subſiſtence; for which they now depend chiefly upon the Fleets from *Portugal*; and perhaps at *Liſbon* this may be looked upon as an Advantage, becauſe it is a very ſtrong Tie upon the Colony; ſince, if they do not continue good Subjects, they muſt be content not to eat. As it is indeed, few People live worſe, ſince the greateſt Part of their Victuals is ſalt Meat, or dried Fiſh, and all the Bread they have is made of a powdered Root, ſo that there is ſcarce a Country in *Europe* where a Man cannot live better upon Half a Crown a Day, than he can in *Brazil* for twenty Shillings.

“ The Truth of the Matter is, that the People of *Brazil* love Shew and Magnificence, fine Cloaths, Jewels, and a large Train of Servants, better than what we call Good-Living. Yet ſome Feaſts they have, but Feaſts that bring after them a long Train of Faſts; for every Man has his Guardian Saint, upon whoſe Anniverſary, perhaps, he ſpends his whole Year's Revenue, or, at leaſt, the beſt Part of it, and never has a good Dinner afterwards, except at his Neighbour's, upon the like Occaſion. Yet there are prodigious Sums of Gold paſs through theſe Peoples Hands, though undoubtedly they were much happier before the Mines were diſcovered, and would be ſo again, if there was not a Grain of Gold Duſt in the Colony. The Plate Fleet, this Year, from *Rio Janeiro*, was ſaid to be worth thirty Millions, that is, about a Million and a half of *Engliſh* Money; but the Fleet from the Bay carried but twenty-four thouſand Arobes of Sugar, whereas they had formerly made ſixty thouſand, and their Tobacco Trade decays in Proportion: Yet, I believe, it may be doubted whether *Portugal* is much the richer for all this Gold, ſince the *Engliſh* and *Dutch* furniſh all the Manufactures, or, at leaſt, the greateſt Part of them that are ſent to *Brazil*; whereas, when they brought over only Sugar, Tobacco, Brazil-Wood, and other ſuch-like

Commodities; they had conſiderable Returns made them in Money.

“They ſeem to be ſtill under great Apprehenſions of being, ſome time or other, attacked in this Country, againſt which they are provided pretty effectually, ſince there are very few Colonies better fortified, in all Reſpects, than this, as will appear from the Account I am going to give you of their Works for the Security of the Bay. In the firſt Place, they have at Point *St. Antonio* a great ſquare Fort, and below it a ſmaller, with ten large Pieces of Cannon; which two Fortreſſes command the Mouth of the Bay. They are likewiſe tracing Ground for a new Fort, which is to be called *The Caſtle of St. Peter*, and, when built, wiill be very ſtrong. In the Middle of the Harbour they have a large Fortreſs, which of late they have repaired, and have now augmented. The Arſenal is flanked by two ſtrong Baſtions, which command the whole Port. On the other Side, between *Monſerat* and this City, they have erected a fine Citadel, which is a regular Square, admirably fortified in every Reſpect, and well furniſhed with Braſs Artillery. At the Point of *Monſerat* again, they have a ſmall, but ſtrong Fort, with twelve Pieces of heavy Cannon. There are yet two other Fortreſſes to be mentioned, one between *St. Antonio* and the City, where they make their Gunpowder, and the other the Powder Warehouſe, which lies on the other Side of the City, and commands a large artificial Lake made by the *Dutch*; ſo that the City of *St. Salvador* is covered by the Sea on one Side, and by the Lake on the other. The Garriſon conſiſts of two Regiments of Foot, three Regiments of Militia, and a Regiment of free Negroes, beſides ſome Cavalry, which the Viceroy keeps up to reſtrain the *Banditti*, who are very troubleſome, and do a great deal of Miſchief in the diſtant Parts of the Colony.

“After having thus related to you the principal Things I have ſeen here, though with little Method, yet with much Truth, I ought now to conclude; but as there are ſtill ſome Things that have eſcaped my Pen, though not my Obſervation, I think it may not be amiſs to add them here, though without much Order, rather than omit them entirely; the rather as they will contribute to explain ſome Paſſages that have gone before, and render the whole of my Account more perfect. The better Sort of People in *St. Salvador* very much reſemble the *Chineſe*, that is to ſay, they are exceſſively civil and complaiſant to Strangers, with a View to obtain from them Preſents and Gratifications of much higher Value than the Trifles they beſtow; and, if their Expectations on this Head are not anſwered, they never fail to give Strangers as ſtrong Proofs of Reſentment, at the End of their Acquaintance, as they did of their Politeneſs at the Beginning. Their Forces in *Brazil* are, at preſent, much ſuperior to any thing that can be ſent againſt them; and what I take to be the chief of their Strength is, their being uſed and ſeaſoned to the Country; ſo that I am fully perſuaded that an Attempt to diſpoſſeſs them by any Nation, except one, would be vain and fruitleſs, and ſerve only to create a vaſt Expence of Blood and Treaſure to no End or Purpoſe: But for all this, it is very certain, that either Privateers or ſmall Squadrons of Men of War might diſtreſs them very much upon their Coaſts, and, perhaps, enrich themſelves conſiderably, by taking ſome of their Maritime Places.

“At the very Time I was there, a Pirate did a great deal of Miſchief, and took abundance of Ships with Impunity. The Crew, as is uſual in ſuch Veſſels, was compoſed of People of all Nations; and it was commanded by a *Spaniard* from the Iſland of *St. Domingo*. The Force of this Ship was far from being great; for, according to the Accounts the *Portugueze* gave of her, ſhe carried but thirty Guns, and her Crew conſiſted but of three hundred Men; yet the whole City of *St. Salvador* was alarmed at the Report; and though the Viceroy immediately equipped a fine new Frigate, which he had cauſed to be built there, yet ſhe was manned ſo ſlowly, that the Pirate had time enough to bear away with her Prizes. In a Word, there is nothing of the old Spirit and Bravery of the *Portugueze* Nation to be ſeen here; but, on the contrary, the People are all lazy, indolent, and quite given up to their Pleaſures: This I take to be owing to their being ſerved by Negroe Slaves; for the Servility of theſe poor Creatures makes their Maſters inſolent; and moſt of them keeping Seraglios of black Women, become enervate in their Bodies, and loſe all Firmneſs and Grandeur of Mind; a Thing, which as it occurred to me from Experience, ſo I believe it will appear very natural to you, from your own good Senſe, and thorough Knowledge of human Nature.

“Upon the Whole, therefore, I am inclined to believe that, unleſs by a conſtant Succeſſion of wiſe and good Governors, the Manners of the Inhabitants are changed, and their ill Cuſtoms aboliſhed, there will, ſome time or other, either from their Want of Proviſions, the Inſolence of the Negroes, or ſome ſuch like Cauſe, happen an Inſurrection or Revolution, which will change the Face of Affairs here; for that a Country, where the Inhabitants are plunged into Luxury and Corruption, ſhould enjoy, for a long Series of Years, uninterrupted Tranquillity, is contrary to all Maxims of Policy; and, indeed, that private Crimes and public Peace ſhould conſtantly dwell together, is not very reconcileable to Common Senſe.” Thus far my Author, to whoſe Account I ſhall preſume to add a few Particulars that I have collected elſewhere.

The City of *St. Salvador* lies in the Latitude of 14° South, and is at preſent the Centre of the *Portugueze* Trade in this Part of the World. Authors differ very much in the Accounts they give us of the Fleets ſent hither annually from *Liſbon*; for ſome make them double what others report them; but the Reaſon of this is, that the one ſpeak of the whole *Brazil* Fleet, which generally aſſemble in the Bay of *All Saints*, in order to return together to *Europe*; and the other of the Fleet from *Liſbon*, expreſly deſtined for the Bay, which may be about thirty Sail, eſcorted by two Men of War, and which uſually ſail about *March*.

The Commodities they carry are Wine, Brandies, Meal, or Flour; Oil, Cheeſe, Cloths, Stuffs, Linnen, Iron rough and wrought, Paper, all kinds of Kitchen Utenſils, Laces, and moſt kinds of Apparel. On the other hand, they bring from thence the beſt Tobacco in *Brazil*, which is ſo much eſteemed in *Europe*; Sugar, Indigo, Balſam Copahu, or Copaiva, Ipecacuanha, Pareira Brava, Cinnamon, long Pepper, Ginger, Woods for dying, and ſome for inlaying; Ambergreaſe, and other rich Drugs and Perfumes; beſides theſe, they alſo export from hence raw Hides, Train-Oil, and Whale-Fins, abundance of theſe Creatures being taken upon this Coaſt; and, for this forty Years laſt paſt, Gold, Amethyſts, and Diamonds. There are likewiſe ſome Silver Mines in *Brazil*, which, though not wrought to ſuch Profit as to allow the exporting much of this Metal to *Portugal*, yet furniſhed ſufficient for home Circulation; and of this Silver that Money is coined at *St. Salvador*, which is current through the whole Colony; and which bears on one Side the Arms of *Portugal*, and on the other a Croſs charged with a Sphere, with the following Motto: *Under this Sign will I ſtand.*

All the reſt of the Captainſhips which lie farther to the South, carry on their Trade by the *Rio Janeiro*, ſo called for its having been diſcovered in the Month of *January* 1515; and which, from being ſcarce known to, is at preſent become one of the moſt famous and conſiderable Rivers in, the World. The Banks of it are as beautiful and pleaſant as can be imagined; the Climate fine, the Soil extremely fertile, producing Sugar, Indigo, Tobacco, and Cotton, all in very great Perfection. It has been likewiſe found, that *European* Corn will grow here with very little Trouble, and to great Perfection; but, for the Reaſons already aſſigned, this and all other Improvements have been diſregarded, tho', independent of the Gold Mines which have been diſcovered in this and the neighbouring Captainſhip of *St. Vincent*,

Vincent, this might be conſidered as the very richeſt Part of *Brazil*. The *Portugueze* that are ſettled here are quite a different Sort of People from thoſe in the Bay of *All Saints*; for they are active, induſtrious, well inclined to Foreigners, and ſuffer the *Indians*, who live amongſt them, to enjoy as much Freedom as themſelves, which renders the Country a perfect Paradiſe; and it is not eaſy to imagine what vaſt Cargoes were brought from the *Rio Janeiro*, before the Gold Mines in that Country were diſcovered.

The City of *St. Sebaſtian*, which is the Capital of this Country, ſtands very commodiouſly in 23 Degrees of South Latitude, on the Weſt Side of the River, about two Leagues from the Sea. This City, which is very well fortified, is the Seat of a *Portugueze* Governor, and a Biſhop's See, Suffragan to the Archbiſhop of *St. Salvador*; there are likewiſe ſeveral other conſiderable Towns on the *Rio Janeiro*, all of which have a large Share of Trade, as may appear from the Number of Ships which compoſe the Fleet ſent hither annually from *Portugal*, which conſiſts of between twenty and thirty Sail of Veſſels, of 500 Tons Burthen, which are uſually eſcorted by two Men of War. The Commodities brought from hence are, generally ſpeaking, the ſame with thoſe brought from the Bay of *All Saints*, Diamonds only excepted. After ſaying this, it may be naturally expected that we ſhould give the Reader ſome Account of the Diamond Mines here; which, however, is a Thing very difficult to do, there being very little known of them, with any degree of Certainty; but the few Circumſtances that we have been able to draw together, in relation to this important Article, are theſe.

It is about forty Years ago, that ſome precious Stones were brought to the City of *St. Sebaſtian*, taken out of a ſmall River lying weſtward of that City, which were, at firſt, judged to be very fine Pebbles; but it was not ſo ſoon that they were brought over to *Europe*. About the Cloſe of the laſt general War theſe fine Pebbles were found in greater Quantities; and we are told, that ſome rich Planters began to employ their Slaves in digging the black heavy Earth, on the Sides of the Mountain, from whence this River deſcended, and then theſe Stones were found in greater Plenty; ſome of them were very large, but moſt of them of a black or yellowiſh Caſt, which hurt their Luſtre, and ſunk their Value; yet, notwithſtanding this, many of the yellow Stones were brought to *Liſbon*, and ſold for Topazes.

Afterwards the Crown of *Portugal* interpoſed, and the working of theſe Mines was forbidden; which, however, did not hinder their coming in conſiderable Quantities; for ſometimes it was ſaid, they were found in this or that River, and not dug out of any Mine; ſometimes they had other Names given them, and many of them were ſent to *St. Salvador*, and from thence exported to *Europe*, under a Notion of their coming by the *Goa* Fleet from the *Eaſt Indies*. This involuntary Fraud raiſed their Value; and, at laſt, the Crown of *Portugal* became convinced, that ſuch as pretended to great Skill in Stones had deceived them; and that ſome of theſe *Brazil* Diamonds were ſcarce to be diſtinguiſhed from Oriental Stones: Upon this they altered their Meaſures, and it was permitted to ſend over rough Diamonds in the *Rio Janeiro* Fleet, under certain Reſtrictions; which Licence making the Value of theſe Jewels ſtill more and more apparent, the King of *Portugal* reſolved to put this Trade under a new Regulation; which, as far as I know, has ſubſiſted ever ſince. This new Order took place in the Year 1740, when his *Portugueze* Majeſty lett theſe Mines to a Company at *Rio Janeiro*, for an annual Rent of one hundred thirty-eight thouſand Cruſades, which is twenty-ſix thouſand Pounds of our Money, upon Condition, that they employed no more than ſix hundred Slaves at theſe Mines; which Condition plainly proves, that they are far greater and more conſiderable than they have generally been eſteemed to be.

It is very probable, that the coming of theſe Stones into *Europe* may ſink the Price of Diamonds conſiderably; but it muſt, at the ſame Time, be allowed, that it cannot but prove highly advantageous to the *Portugueze*, ſince it will operate very effectually in their Favour, in regard to the Balance of Trade; for if they diſpoſe of theſe Stones to any Nation, upon whom they have already a Balance, they muſt bring Money into the Kingdom; and if, on the other hand, they can find a way to ſell them, either to us, or to the *Dutch*, this will leſſen the Balance in our Favour, and prevent the Exportation of Gold, which muſt have been otherwiſe ſent abroad, to pay that Balance; ſo that, take it either Way, the Diſcovery of theſe Diamond Mines is of very high Conſequence, and, if wiſely managed, may prove of prodigious Advantage to this Nation.

But let us now proceed to what little remains of the Hiſtory of this valuable Colony. Southward from the Captainſhip of *Rio Janeiro* lies the Captainſhip of *St. Vincent*, which I take to be the richeſt Country in *Brazil*, perhaps in all *South America*; and therefore I ſhall deſcribe it more particularly. It is bounded on the North by the Captainſhip of *Rio Janeiro*; on the Eaſt by the Ocean; on the South by the new Captainſhip, or that ſtiled *Del Rey*; and on the Weſt by the Mountains of *la Plata*, and Countries inhabited by various ſavage Nations: It extends from the Latitude of 22 Degrees to 27 Degrees South; and is in Length, from North to South, about three hundred Miles; and in Breadth, from Eaſt to Weſt, in ſome Places, near one hundred and eighty Miles; but the greateſt Part of it is not above half ſo broad.

The Town of *St. Vincent* is ſituated on a very fine Bay of the *Atlantic* Ocean, or, as ſome of the beſt Maps I have ſeen repreſent it, on a kind of Peninſula, very well fortified: A little to the North-weſt lies the Town of *Santos*, which ſome look upon to be the Capital of the Province; and which, as I have found, in the Memoirs of a *Spaniſh* Traveller, has as fine a Port as any in the *Weſt Indies*, capable of holding the largeſt Ships, and which might be fortified in ſuch a manner, as to be able to reſiſt any Strength, that, either in this Part of the World, or from *Europe*, could be brought againſt it. The ſame Writer, who was in theſe Parts, towards the End of the laſt Century, has given us a very full Account of them, with which I was furniſhed by an ingenious Gentleman, who thought it might be of uſe to me in the Hiſtory of *Spaniſh America*, which I was then writing, and which I ſhall inſert here, as in its proper Place; the rather, becauſe I think there is no Part of the World leſs known, or which, therefore, it can be more agreeable to the inquiſitive Peruſer to find accurately deſcribed.

“ The *Portugueze*, ſays my Author, had not ſhewn any great Concern, either for extending or improving their Territories in *Brazil*, after the Expulſion of the *Dutch*, till a certain Stateſman adviſed Don *Pedro*, about the Year 1685, to think of improving his *American* Dominions; and more eſpecially, the two Extremities of *Brazil*. That Miniſter ſuggeſted, that the Climate, at the Bay of *All Saints*, would fruſtrate whatever Endeavours might be uſed to render the People active and induſtrious; but that it was otherwiſe, both with the northern and ſouthern Extremities of *Brazil*; where a wiſe Government, and a little Encouragement, might render the Country of much greater Advantage to the Crown of *Portugal*, than hitherto it had been. This Advice was received and followed; which gave Birth, on one hand, to the eſtabliſhing the *Portugueze* Forts and Settlements towards the River of *Amazons*; and, on the other, to the Improvement of the new Colony at *Santos*, which was then but very ſmall.

“ The Method taken for this Purpoſe was ſingular enough; moſt of the Perſons made choice of were of the mixed Herd, or, as the *Portugueze* call them, Meſtices, who married *Brazilian* Women; and the Perſons intruſted with the Government of theſe new Planters, were Prieſts and Monks; but they were ſent expreſly from *Portugal*, and Care was taken that they ſhould be fit for the Purpoſe. The Captain-General of *Brazil*, and all the Officers in the ſouthern Captainſhips, had Orders to treat theſe People kindly, and to give them no Diſturbance in their Meaſures. It very ſoon appeared, by the Effects, that this Plan was very wiſely concerted; for they multiplied prodigiouſly, and, in the Space of about fifteen Years, the Prieſts added ſeveral hundreds of Families to their Colony; extending Weſtward fourſcore, or one hundred, Miles farther than the *Portugueze* had any Settlements before that Time. By degrees they purchaſed Slaves, more eſpecially the Eccleſiaſtics, whom they employed in the Silver Mines; and, treating the Negroes better than moſt of their Neighbours, they ſoon became very rich; ſo that ſeveral Pariſh Prieſts, in the Captainſhip of *St. Vincent*, were worth from ten to fifty thouſand Cruſades; that is, from fifteen hundred to eight thouſand Pounds a-piece.

“ They paid the King's Fifth very regularly, and this was the Beginning of the Riches drawn from this Part of the World. But when it was once known, that ſo much Wealth was to be had in theſe hitherto uncultivated Regions, there began very ſoon to reſort thither Abundance of Adventurers, of all Countries, and of all Characters; when I ſay of all Countries, I mean *Spaniards*, as well as *Portugueze*, free Negroes, *Mulattoes*, and all the different Mixtures that are to be met with in *Brazil*, down to the *Carribocos*, who are the Offspring of *Brazilian* Savages, by Negroe Women; and by different Characters, I mean Monks as well as Laymen, Soldiers, Mechanics, broken Planters; and, in ſhort, all that Sort of Men, who are ready to go any where, or to do any thing, to get a Living. As theſe were quite a different Race from thoſe of the new Colony before-mentioned, it is not to be ſuppoſed that they could dwell together, more eſpecially as the former were the quieteſt, and moſt ſimple; the latter the moſt riotous and turbulent People in the World.

“ Theſe Adventurers, therefore, took care to look out for a new Settlement, and they found one of the propereſt Places in the World for their Reception, at no great Diſtance. This was the thick and vaſt Foreſt of *Pornabaccaba*, which overſpread all the Mountains at the Back of this Captainſhip, and in which hitherto none but wild Beaſts took up their Dwelling. They ſoon cleared a Part of this Wilderneſs for their Habitation, in which they eſtabliſhed not only a new Town, which they called *San Paulo*, but a new Republic alſo, in which they lived after the Manner they liked beſt. At firſt this was overlooked, becauſe the Country was judged of no great Value, and the adjacent Captainſhips were very well pleaſed to be rid of thoſe Sort of Folk who reſorted thither. In the Space, however, of a very few Years, they grew too ſtrong to be dealt with; for, receiving, as they did, all Sorts of People, they quickly increaſed from two or three hundred, to as many thouſand, Men; and being a bold, hardy, enterpriſing, and daring Crew, the Governors knew not how to deal with them. In the firſt Place, they took care to fortify the Avenues to their Territory, which were naturally ſtrong; and they ſeldom ventured abroad, but in Bodies of fourſcore, or one hundred, Men, and in ſuch Parties they frequently traverſed the whole Extent of *Brazil*. Theſe were the People who firſt diſcovered and wrought the Gold Mines, which muſt be exceſſively rich, ſince they were able to obtain ſuch vaſt Quantities of Metal, without any of thoſe Aſſiſtances which the *Spaniards* have in their Settlements in *Chili*. As this required, however, a great Number of Hands, they ſeized upon all the ſtraggling *Indians* and Negroes they could meet with, and compelled them to undergo ſuch Fatigues as they thought proper.

“ This new and extraordinary Commonwealth was denominated, from the Place of their Denomination, *Pauliſts*, and they would not ſuffer any of the *Portugueze* Officers to enter their Territories; yet they acknowledged the Sovereignty of the Crown of *Portugal*, and paid regularly what they ſaid was the Fifth of the Gold they obtained; which, in the Year 1691, amounted to one thouſand Marks, or eight thouſand Ounces; which ſhews, that at that Time they drew annually from the Rivers and Mountains in their Poſſeſſion, forty thouſand Ounces of Gold; they took care, however, every Time they paid the Tribute, to declare, they did it freely, and of their own Accord, out of Reſpect to the Crown of *Portugal*, and not from any ſort of Fear or Senſe of Obligation. The Tyranny of the Governors of *Brazil*, and the Oppreſſion of the *Spaniſh* Governors in the adjacent Provinces, furniſhed this new State with Abundance of Members, ſo that laſt it became a very difficult thing to get Admittance amongſt them, and the Method in this Reſpect was ſingular enough to deſerve Notice.

“ They obliged ſuch as preſented themſelves upon their Frontiers, which they never ſuffered any Stranger to enter, to ſubmit to a very ſtrict Examination, that they might know whether they were fit for their Community, and be ſure they were not Spies, or Perſons who intended to betray them; upon the bare Suſpicion of which they made no Scruple of beating their Brains out: But if, upon this Examination, they judged they might prove uſeful Members, they obliged them to bring in two Slaves for their Support; aſſigning them a Dwelling and Plantation, by which they commenced *Pauliſts*, and were to continue ſo to the End of their Lives; for any Attempt to deſert was puniſhed with Death without Mercy. They made no Exception of Country or Complexion; a Savage was as welcome to them as a *European*; and every Man after his Admiſſion was at Liberty to lead what kind of Life he liked beſt, provided he did not diſturb the Peace of the Society. The Jeſuits of *Paraguay*, either out of Concern for the Souls of theſe People, or moved by the Report of their great Riches, made ſeveral Attempts to gain Admittance amongſt them, but to no ſort of Purpoſe; yet they lived upon very fair Terms with this ſtrange Society; and the *Portugueſe* ſhrewdly ſuſpected, that the reverend Fathers furniſhed them with Fire-Arms and Ammunition, becauſe they knew not how they could be furniſhed any other way.”

Our Author proceeds no farther, and therefore it is impoſſible to ſay when or how this little Republic was ſubverted; but it is certain, that all this Country is now in the Hands of the *Portugueze*, and as much under the Obedience of the King of *Portugal* as any other Part of *Brazil*; but the City of *St. Paul* is ſtill looked upon as the Centre of the Mines, and a Garriſon is maintained there, for their Security. We know not, however, in what manner the Gold is wrought or refined there; but, in all Probability, their chief Works are *Lavadero's*, which have been largely deſcribed in the firſt Volume, ſince we do not hear of their uſing Quickſilver, as the *Spaniards* do; but it is very certain, that they are much increaſed in Value, ſince the King of *Portugal*'s Fifth amounts very commonly to one hundred and fifty thouſand Pounds *per Annum*: And it appears by the lateſt Accounts, that theſe Mines are continually improving.

The only Captainſhip to the Southward of that of *St. Vincent*, is that of *del Rey*, extending from the Latitude of 28 to 34 Degrees, 30 Minutes, South, being about four hundred Miles in Length, but not above one hundred broad in any Part of it. The Country is fruitful and pleaſant; but the *Portugueze* abſolutely neglected it till the Diſcovery of the Mines of *St. Vincent* put them upon planting and ſecuring it, by erecting ſeveral Forts on the North-ſide the River *la Plata*, to which the *Spaniards* formerly pretended, and upon which they are ſtill ſuppoſed to caſt a jealous Eye. The Country in this Province is as pleaſant and fruitful as any in *Brazil*, and as capable of Improvement; but as it has not been ſo long inhabited as the other Captainſhips, it is far from being thoroughly peopled. There are only a few Villages upon the Sea-coaſt, and ſome Fortreſſes on the River of *Plate*.

The chief Advantage which the *Portugueze* draw at preſent from this Province, is a kind of ſmuggling Trade, which they carry on with the *Spaniards*, whom they furniſh with Rum and Tobacco of their own Growth, and with Wines, Brandy, Cloths, Silks, and Linnens from *Europe*, which occaſions Quarrels and Diſputes between the two Nations, though in reality the true Ground of their

Contentions, is the Thirſt of Gold in both Parties, and the Deſire that each has of becoming ſole Poſſeſſors of that large Ridge of Mountains which are the Weſtern Boundaries of this Province and that of *St. Vincent*, and are ſuppoſed to be full of Mines. Some ſpeculative Politicians have inſinuated, that it is not impoſſible that the *Spaniards* may, ſome Time or other, carry their Point; but if they do they muſt begin with reducing the *Paraguay Indians*, who are at preſent ſubject only to the *Jeſuits*; for otherwiſe it is very certain, that they cannot raiſe Men enough to give the *Portugueze* any Uneaſineſs, who, though they have not People to ſpare for ſettling this laſt Diſtrict in *Brazil*, have however ſuch Numbers in the adjacent Captainſhip of *St. Vincent*, as would very ſoon repel any Invaſion from their Neighbours, who, after all, it is very certain, are on this Side rather weaker than themſelves. So that Struggles of this Nature if ever this ſhould happen, may be reputed at a great Diſtance, and if the *Portugueze* were as free from any Apprehenſions of inteſtine Diſorders, it might be affirmed that ſcarce any Colony is more ſecure than that of *Brazil*.

17. Thus we have given the Reader, according to our Promiſe, a full and methodical Hiſtory of this Country, from the very firſt Diſcovery thereof to this Day; that is, for upwards of two hundred Years; and have ſhewn by what Methods it was firſt peopled, from a Country ſcarce equal in extent to one of its Captainſhips; how the new Planters grew exceſſively rich; and how the Envy of the *French* brought them to attempt an Eſtabliſhment on the ſame Coaſt, with all other Tranſactions relative to this Colony; ſo that, what we have to ſay by way of Remarks, will be but very ſhort; but we hope, notwithſtanding that, they will afford the Reader both Pleaſure and Profit. When the Spirit of Trade and Diſcovery, which exerted itſelf in *Portugal* in the fifteenth Century, firſt appeared, the Crown made no other uſe of its Prerogative, than to point out, proportion, and procure, ſuitable Rewards for ſuch as diſtinguiſhed themſelves in promoting the public Intereſt; and then every Enterprize was carried on with Vigour, every Expedition was attended with Succeſs. The little Country of *Portugal*, which had hitherto made ſo inconſiderable a Figure among the Kingdoms of *Europe*, began to take the Lead of them all; and, from creeping along the Coaſts of *Africa* with a few little Veſſels, her Fleets began to ſtretch to the *Eaſt Indies*, and to embrace that Trade which was the Object of *Alexander's* Ambition. The *Eaſt Indies*, by the Rout of the Cape of *Good Hope*, was their proper Diſcovery; and, though *Columbus* had a little the Start of them, yet the finding and ſettling of *Brazil* plainly proves that *America* could not have lain long hid from their Reſearches. The Fruit of theſe great Diſcoveries and Conqueſts, was a prodigious Trade, immenſe Riches, and an amazing naval Power, all deduced from a right Turn in the Government, which eſtabliſhed its Power in the Extention of that of its Subjects, without exerting a tyrannical Authority over them. This created Fleets, Armies, and a Dominion ſuperior to any thing the *Europeans* had enjoyed, from the Deſtruction of the *Roman* Empire. But as a true and laudable Ambition raiſed the *Portugueze* to ſuch a Height, a falſe and baſtard Ambition made way for their Ruin. *Sebaſtian* King of *Portugal* was a Hero, he had all the Virtues incident to that Character; but they took a wrong Turn: He embarked the whole Force of *Portugal* in a War upon the Continent for his own Glory, and to ſerve no national Purpoſe whatſoever; there he periſhed, and all his Army with him; which, in itſelf, was a great Misfortune to his Subjects, but in its Conſequences a much greater; for this threw them under the Dominion of *Spain*, which, as we have abundantly ſhewn in the foregoing Section, was the greateſt Miſchief that could befal them; for after this, there appeared no publick Spirit in the Government; all their Conqueſts in the *Eaſt-Indies* were either given to Men who had an Intereſt at the Court of *Spain*, or to ſuch as that Court deſired to get out of their Way.

There was no longer any Spirit of Virtue, Generoſity, or Concern for public Good, either left or encouraged; the enriching of private Families took place of this; and, while a few of theſe carried their Point, the *Dutch* ſtript them of their Empire in the *Eaſt-Indies*, and bid fair for making themſelves Maſters of *Brazil*; which, if they had, *Portugal* had remained a Province of *Spain*, and not a very conſiderable Province neither. When the *Portugueze* recovered their former Government, we ſee they recovered Spirit enough to preſerve *Brazil*; but, ſince that Time the Court has been infected with the *Spaniſh* Policy; and, the Deſire of extending their royal Power has, in a great meaſure, extinguiſhed that Spirit which once made them a great People. But, to confine our Reflections to *Brazil*, the great Point in the *Portugueze* Councils at preſent is, to ſecure this Trade, or at leaſt the Profits of it, to the Crown; in order to which the ſeveral Fleets deſtined for *Paraiba*, *Fernambuca*, the Bay of *All Saints*, and *Rio Janeiro*, ſail as regularly as the *Spaniſh* Galleons, and in the very ſame Manner. If this Trade had been left more open, the Number of Ships would have been vaſtly greater, and there would have been no need of Men of War to eſcort them, or of another Squadron being ſent to look out for, and bring them home, as is at preſent the Caſe every Year, and yet the *Algerines* frequently pick up ſome. This Method is the laſt dying Effort of a maritime Power; Convoys and Eſcorts are pitiful Things; the Flag of a maritime Power ought to be a ſufficient Protection, and no Nation ought to be eſteemed ſo that ſuffers another to inſult a Cock-boat.

Yet all this Policy is far from producing mighty things, as we ſhall ſee from a few Examples; *Brazil* Wood is now a royal Commodity, that is to ſay, it is ſold for the Advantage of the Crown only; and it produces about 100000 Cruſades, which is ſomething better than 15000 Pound, annually. We have already ſeen what the Diamond-Farm brings in; and take the whole of the King's Fifth from the Gold Mines, and it will never be found to exceed half a Million of our Money. To remedy theſe Miſchiefs, they had Recourſe to Methods to increaſe them; for they have ſet up ſeveral Companies for the doing what might be better done without any Company at all: For inſtance, they have an *African* Company for ſupplying Slaves at *Rio Janeiro*, a Company to manage the Mines, and an *Eaſt-India* Company, now they have almoſt loſt the Trade to the *Eaſt-Indies*. But if, inſtead of theſe Schemes, they would redreſs the Grievances of their Subjects in *Brazil*, encourage Plantations rather than Mines, open their Ports to all Nations, and allow of a free Trade thither from *Portugal*; inſtead of fewer than one hundred Ships that are now annually employed in that Trade, they would very ſoon have many hundreds, and *Brazil* would quickly have ten times as many Inhabitants as at preſent; conſequently the Country would be better cultivated, and their Dominions more extended; which would produce a much larger Revenue to the Crown than it enjoys at preſent.

There was, indeed, a Project of quite another kind ſet on foot for the Improvement, as they call it, of this Trade in *Portugal*, of which I ſhall give a very ſhort Account. In the Year 1709 the King of *Portugal*, perceiving that the vaſt Quantities of Gold that came from *Brazil* did but juſt touch at *Liſbon*, and then travelled over all the Countries of *Europe*, directed this Matter to be very ſeriouſly examined in his Council: Suppoſing that if a Method could be found out to prevent this Gold from ſtraying, the Buſineſs would be done, and himſelf become, at once, the richeſt Prince in *Europe*. His Council accordingly examined this Point very carefully, and they reported that the *Engliſh* and *Dutch* ran away with all the Gold, in conſequence of their furniſhing the Goods and Manufactures that were ſent to *Brazil*; they therefore propoſed, that the uſing theſe Goods, and the wearing theſe Manufactures, ſhould be prohibited in that Colony; and that the People ſhould be content with what could be ſent them from *Portugal*. This was conſidered as a great Stroke of Policy, and was on the very Point of being put in Execution, when it was prevented by the following Method:

The famous Lord *Galway* was then there on behalf of this Nation, and had the Confidence of the King, of whom he demanded a particular Audience upon this Occaſion, at which he delivered himſelf in the following Manner: “ Your Majeſty cannot be ſufficiently commended for that ſteady Attention which you have always ſhewn to the Affairs of your Government; and the Pains you have lately beſtowed in examining into the Ballance of Trade, is a new Proof of that Merit which would entitle you to the Crown, had it not deſcended to you from a long and glorious Line of Royal Anceſtors. But permit me, Sire, to obſerve that there is a greater King, one by whom all Kings reign, and whoſe Providence is over all his Works. According to his Diſtribution of Things, Riches belong to ſome Nations, and Induſtry to others; and by this Means the Liberality of Heaven is made equal to all. Vain, Sire, are all human Councils when oppoſed to his Wiſdom, and feeble the Efforts even of royal Power, when directed to croſs his Will. You have forbid Gold to be exported out of your Dominions, and you would willingly enforce this Prohibition, but the Thing is impracticable. You may reſtrain your Subjects, it is true, but you cannot ſet Bounds to their Neceſſities. But ſay that this was poſſible; ſuppoſe you could defeat the Induſtry of the northern Nations, what would be the Conſequence? Their Huſbandmen, Graſiers, Weavers, and all that infinite Train of Manufacturers, that now labour quietly at home to cloath and feed your Subjects, would then turn Soldiers; and, inſtead of ſeeing their Merchantmen in the River of *Liſbon*, you would hear of their Fleets conveying them to *Brazil*, to fetch much more of that Gold than you now fetch for them. Beſides, Sire, if they are Gainers by your Trade, they become thereby the natural Guarantees of your Dominions: It is not their Treaties only, but their Intereſts that bind them to your Service. You have potent Enemies, and you require powerful Friends. The Ambition of *France* knows no Bounds: The Pride of *Spain* will teach her to keep up a perpetual Claim to your Territories and Crown: You can have no Recourſe to fruſtrate the Views, and to defeat the Endeavours, of thoſe Potentates, but to the maritime Powers; and therefore let me beſeech your Majeſty to conſider, that every Project to diſtreſs them, is in effect a Scheme to deſtroy yourſelf.” This Speech had the deſired Effect; the intended Prohibition was laid aſide, and the *Engliſh* Nation has reaped the Benefit of this Trade ever ſince. I came to the Knowledge of this Fact, which is very imperfectly related by a *French* Author, by an Accident; and I thought it my Duty, and a Piece of Juſtice owing to his Lordſhip's Memory, to relate it fully and fairly, as I have done; and now I ſhall take leave of this Subject, in order to give a ſhort, but diſtinct Account of our own Diſcoveries in *America*, according to what I propoſed at the Beginning of this Chapter.

The Labour of collecting theſe is great; that of digeſting them into Order ſtill greater; and the reducing the Subſtance of large Books into ſmall Sections greateſt of all: But the Encouragement I have hitherto received by the kind Entertainment of my Writings, and the many friendly Communications that I have met with, and to which their Merit is chiefly owing, will enable me, I doubt not, to go through the reſt of this large Taſk, with as much Succeſs as I have hitherto done. The Reputation of doing this is the chief Reward I have in View, becauſe I am ſatisfied that a *Collection of Voyages* like theſe, where things are regularly connected, and the Subjects treated in their full Extent, will be of conſtant Service, as they have been hitherto one of the chief Things wanting towards forming a Complete Body of Hiſtory. We have, indeed, very large Collections of Materials in ſeveral Languages; but then, almoſt all Nations have produced Writers extremely partial to themſelves, and our own amongſt the reſt; but the Buſineſs is to purge theſe partial Relations, to free them from trivial Circumſtances and needleſs Particulars, ſo as to bring the Knowledge they convey within a reaſonable Compaſs, that it may be both eaſily read and eaſily underſtood, which is what we have endeavoured in the former Sections, and ſhall ſtudy to perform in what follows. As for large and entire Hiſtories of Colonies, they are not to be expected here, as being frequent enough already, and therefore the leſs neceſſary, and requiring, beſides, much more Room than we can ſpare. But in the laſt Book of this Collection, we ſhall inſert ſome curious *Engliſh* Voyages, which will ſupply the Reader with a full Account of the Actions of thoſe great Men of this Iſland, whom we are now to compare with thoſe Heroes of other Climates, that have been already recorded; and when we have paid that juſt Tribute of Praiſe that is due to their Memories, we ſhall proceed in like manner to a ſuccinct Hiſtory of the *French* and *Dutch* Settlements, which will effectually compleate the View we promiſed to give of *America*, and make the *Weſt-Indies*, as well known as the *Eaſt*.

SECTION XVII.

The Diſcoveries and Settlements made by the ENGLISH *in different Parts of* America, *from the Reign of* Henry VII. *to the Cloſe of that of Queen* Elizabeth; *interſperſed with various Remarks on the Progreſs of our Trade and naval Power, and the Difficulties which the Nation had to ſtruggle with in their firſt Attempts.*

1. *The Hiſtory of* Madoc, *one of the Princes of* Wales, *and his ſuppoſed Diſcovery of* America *ſet in a true Light, and vindicated from ſome groundleſs Reflections made thereon by foreign Writers.* 2. *The generous Diſpoſition of King* Henry VII. *with reſpect to encouraging Diſcoveries; and the Voyages of* John *and* Sebaſtian Cabot, *in his Service, who firſt viſited the Continent of* America. 3. *The Voyage of* Sebaſtian Cabot, *for the Diſcovery of a North-weſt Paſſage, in which he ſailed along the Coaſt of that Part of* North America, *to which the* Spaniards *afterwards gave the Name of* Florida. 4. *The Voyage of Sir* Thomas Pert, *Vice-Admiral of* England, *and* Sebaſtian Cabot, *to* Brazil, *and other Parts of the* Weſt-Indies. 5. *The firſt Attempt of Mr.* Hore, *Merchant of* London, *to eſtabliſh a Colony in* Newfoundland; *the ſtrange Misfortunes he met with, and a memorable Inſtance of the Juſtice and Generoſity of King* Henry VIII. 6. *The ſeveral Voyages of Captain* William Hawkins *to* Brazil, *and a ſingular Proof of his Abilities and Integrity.* 7. *A ſuccinct Account of the Diſcoveries and maritime Expeditions to* America, *under the Reign of King* Edward VI. *That Hiſtory continued during the Reign of Queen* Mary, *and her Conſort, King* Philip. 9. *The Methods taken for extending our Trade, and making Settlements in the Reign of Queen* Elizabeth. 10. *An Account of Sir* Francis Drake's *giving the Name of* New Albion, *to a Country lying in the northern Part of* California, *and the Importance of that Diſcovery.* 11. *The firſt Settlement of* Newfoundland, *with a ſhort Account of the Nature thereof, and the Advantages*

which have accrued from the Fiſhery upon its Coaſts to this Nation. 12. *The firſt Attempts to ſettle* Virginia, *under the Direction of Sir* Walter Raleigh, *with an Account of that Colony.* 13. *The ſeveral Voyages of Captain* John Davis, *and the great Diſcoveries made by him in* North America. 14. *Sir* Walter Raleigh's *Expedition to* Guiana; *the Conſequences of that Expedition, and Remarks thereupon.* 15. *Other remarkable naval Tranſactions, within the Compaſs of that Reign, relating to this Subject.* 16. *A ſuccinct View of the State of our Trade to* America, *at the Time of the Death of Queen* Elizabeth. 17. *Remarks and Obſervations on the principal Events mentioned in the foregoing Section.*

1. THE Glory of having firſt diſcovered far diſtant Countries, and adding thereby to the Knowledge and Commerce of Mankind, has always had Charms ſufficient to invite different Nations to put in their Claims, even though they have not been extremely well founded. When *America* was firſt made known, it occaſioned abundance of Enquiries; and, as it was natural, recalled to many Peoples Remembrances and Conſiderations, Stories which had before been deemed ſcarce worthy of Notice: Amongſt the reſt our Nation put in; and the Tale told in favour of us, as it is the earlieſt in Point of Time, ſeems to merit a Relation as well or better than any other. In ſhort, this Story aſſerts that *Madoc*, Prince of *Wales*, was the firſt Diſcoverer of *America*, and the Detail of his Expedition runs thus: He flouriſhed in the twelfth Century, and was Son of *Owen Guyneth*, Prince of *North Wales*; his Brethren raiſing a civil War about the Diviſion of his Father's Dominions, he choſe rather to go to Sea with a few of his Friends, and ſeek out new Habitations, than run the Hazard of what might happen in this Diſpute. Accordingly, about the Year 1170, ſteering due Weſt, and leaving *Ireland* on the North, he came to an unknown Country, where he ſettled a Colony; and, returning thence into *Wales*, carried a ſecond Supply of People, but was never heard of more.

That the Country he went to was really *America*, is more, I think, than can be thoroughly proved; but that this Tale was invented after the Diſcovery of that Country, on purpoſe to ſet up a prior Title, is moſt certainly falſe. *Meredith ap Rees*, who died in 1477, and was a famous *Welch* Poet, compoſed an Ode in Honour of this *Madoc*, wherein was contained an Account of his Diſcoveries. Now as this was ſeveral Years before *Columbus* made his firſt Voyage, we may be ſure that this was really a *Britiſh* Tradition, and no Tale of late Contrivance. Some foreign Writers, indeed, have ſuggeſted that this was a pure Invention, deſigned to prejudice the Reputation of the great Diſcovery made by *Columbus*; but in this they rather ſhew their Malice to us, than diſcover ours; for beyond all doubt, the *Welch* had, and have ſtill, ſuch a Tradition, and therefore ſome wiſer and better informed Critics have endeavoured to prove that it was not *America*, but *Groenland*, to which our *Welch* Prince ſailed. In Proof of which they have obſerved that this Country was well known in the ninth and tenth Centuries, though it was afterwards loſt.

But with Submiſſion to theſe great Men, this Story does not at all anſwer their Purpoſe; for, it is evident, the Courſe does by no means agree; ſince, if he had ſailed to that Country, he could not have left *Ireland* to the North. I have ſeen a very ingenious Diſcourſe upon this Subject, in which is ſuggeſted, that Prince *Madoc* landed in ſome Part of *Florida*; that, in proceſs of Time, the Colony he planted there proceeded round by Land, and reached the northern Parts of *Mexico*, which Country they conquered, and were thoſe foreign Anceſtors of the *Mexicans*, of whom we have heard ſo much from the *Spaniſh* Writers that have recorded the Adventures of *Cortes*, and with which the Reader is ſo well acquainted, that there is no need of our ſaying any thing more of them here, except it be this, that ſeveral *Britiſh* Words have been diſcovered in the old *Mexican* Tongue, and that no other *European* Nation can ſhew a better founded Tradition than this; for the Truth of which, however, I am very far from contending.

2. If there had been really any Deſire in the *Engliſh* Nation to conteſt the Title of the Crown of *Spain* to the Country of *America*, it might have been undoubtedly fixed upon a much better Foundation; for, in the Life of Don *Chriſtopher Colon*, written by his Son in the reign of our King *Henry* the VIIIth, it is expreſly ſaid, that this great Man ſent his Brother *Bartholemew* into *England*, to offer his Diſcovery to King *Henry* VII. and he did accordingly preſent a Map, dated the 13th of *February* 1488, to that Monarch; and having explained to him his Brother's Deſign, and what he propoſed thereby, it was readily accepted; and Don *Bartholemew* was ſent to invite his Brother into *England*, with an Aſſurance that the King would grant him all he deſired. This Agreement was four Years before the Voyage of *Columbus* in the Service of their Catholic Majeſties, and therefore had we been ſo much inclined to hunt for Titles to this new found Country, here had been a fair Pretence. But King *Henry* the VIIth was of another Diſpoſition; and, though he was a Prince much addicted to encourage ſuch kind of uſeful Undertakings, he ſcorned to aim at reaping the Fruits of other Princes Adventures; and therefore he contented himſelf, after miſſing by mere Accident *Columbus*'s Diſcovery, with inviting other Seamen of known Reputation, to enter into his Service for like Purpoſes.

Amongſt theſe was *John Cabot*, Citizen of *Venice*, who had been long ſettled at *Briſtol*, and who thought himſelf capable of performing as a Seaman, things little, if at all ſhort of what *Columbus* had done. He accordingly applied himſelf to the King, who, by Patent inrolled, dated the 5th of *March*, in the eleventh Year of his Reign, and in the Year of our Lord 1495, granted to the ſaid *John Cabot*, and his three Sons, *Lewis*, *Sebaſtian*, and *Sancias*, Authority to ſail with five Ships of what Burthen and Strength they thought fit, upon Diſcoveries to the Eaſt, Weſt, and North; giving them the full Property of ſuch Country or Countries as they ſhould diſcover, with this Reſervation only, that they ſhould return to *Briſtol*, and that they ſhould pay him the Fifth Part of the neat Profits of their Voyage; in Conſideration of which, they were to have the excluſive Right to the Countries ſo diſcovered, to which no other *Engliſh* Subjects were to trade, but by their Leave and Licence. But the Year before that Patent was granted, that is in 1494, *John Cabot*, with his Son *Sebaſtian*, had ſailed from *Briſtol* upon Diſcovery, and had actually ſeen the Continent of *Newfoundland*, to which they gave the Name of *Prima Viſta*, or *Firſt Seen*. And on the 24th of *June* the ſame Year he went aſhore on an Iſland, which, becauſe it was diſcovered on that Day, he called *St. John*'s; and of this Iſland he reported very truly, that the Soil was barren, that it yielded little, and that the People wore Bear-Skin Cloaths, and were armed with Bows, Arrows, Pikes, Darts, Wooden Clubs, and Slings; but that the Coaſt abounded with Fiſh; and upon this Report of his, the beforementioned Patent was granted.

3. The next Voyage made for Diſcovery was by *Sebaſtian Cabot*, the Son of *John*, concerning which all our Writers have fallen into great Miſtakes, for want of comparing the ſeveral Accounts we have of this Voyage, and making proper Allowances for the Manner in which they were written; ſince I cannot find there was ever any diſtinct and clear Account of this Voyage publiſhed, though it was of ſo great Conſequence. On the contrary, I believe that *Cabot* himſelf kept no Journal of it by him; ſince in a Letter he wrote on this Subject, he ſpeaks doubtfully of the very Year in which it was undertaken, though from the Circumſtances he relates, that may be very certainly fixed. On the 3d of *February*, in the 13th Year of the Reign of King *Henry* VII. a new Grant was made to *John Cabot*, by which he had Leave given him to take Ships out of any of the Ports of *England*, of the Burden of two hundred Tons, to ſail upon Diſcoveries; but before this could be effected, *John Cabot* died; and *Se-*

baſtian, his Son, applied himſelf to the King, propoſing to diſcover a North-weſt Paſſage, as he himſelf tells us; and for this Purpoſe he had a Ship manned and victualled at the King's Expence at *Briſtol*, and three or four other Ships were fitted out at the Expence of ſome Merchants of that City, particularly Mr. *Thorne* and Mr. *Hugh Elliot*. But whereas *Sebaſtian Cabot* himſelf ſays, that he made this Voyage in the Summer of 1496, he muſt be miſtaken, and he very well might, ſpeaking from his Memory only; and to prove this I need only obſerve, that this Date will not at all agree even with his own Account of the Voyage; for he ſays expreſly, it was undertaken after his Father's Death; who, as we have ſhewn, was alive in the *February* following; ſo that it was the Summer of the Year 1497, in which he made this Voyage; and what he afterwards relates of his Return, proves this likewiſe.

But we have a direct and clear Authority as to this Fact, which is, that of *Robert Fabian*, who fixes this Voyage of of *Sebaſtian Cabot*'s to the Month of *May*, 1497. And on the 11th of *June*, the ſame Year, he ſailed as high as 67° 30′ finding the Sea ſtill open, and he thought that he might this Way have paſſed through into the *South Seas*; but his Crew mutinied, which forced him to return into the Latitude of 56°, and from thence he ran down to 38°, along the Coaſt of the Continent of *America*, which, as he expreſly ſays, was afterwards called *Florida*, where Proviſions growing ſhort, he returned into *England*, touching by the way at *Newfoundland*. On his return, he ſays, he found the Nation in much Confuſion, and great Preparations making for a War in *Scotland*; which agrees exactly with *Grafton*'s Chronicle, who places theſe Preparations under the Mayoralty of *William Purchaſe*, that is, to the Year beforementioned; and *Robert Fabian* ſays farther, that in the 14th Year of King *Henry* VII. there were three Men brought to the King, taken in the new-found Iſland, which he before mentioned, who were cloathed in Beaſt-Skins, eat raw Fleſh, ſpoke a ſtrange uncouth Tongue, and were very brutiſh in their Behaviour; but he farther adds, that he ſaw theſe People himſelf two Years afterwards, and that they were then cloathed like *Engliſhmen*; and he could not have known them to be otherwiſe, if he had not been informed that theſe were the Men brought over by *Sebaſtian Cabot*.

Thus, with the utmoſt Exactneſs I could uſe, I have ſet this Matter in its true Light, and have thereby ſhewn, that he was not only the firſt Perſon who attempted a North-weſt Paſſage; and ſhewed thereby, that he underſtood *Columbus*'s Principles, but was likewiſe the firſt Diſcoverer of the Continent of *America*, which *Columbus* did not ſee till a Year after, as well as the firſt Diſcoverer of *Florida*, which Country was not ſo called till the Year 1512; when, as we have before ſhewn, it was viſited by *John Ponce de Leon*, who took Poſſeſſion of it for the King of *Spain*, and uſually paſſes for the firſt Diſcoverer. It may not be amiſs to obſerve, that *Sebaſtian Cabot* clearly affirms, that his Voyage was made to diſcover a North-weſt Paſſage; which Notion of his gave Light, as is acknowledged even by foreign Authors, to *Ferdinand Magellan*; and induced him confidently to affirm, that ſuch a Paſſage might be found by the South, which he happily effected twenty-two Years after this Attempt made to the North by *Sebaſtian Cabot*.

I cannot ſay that any great Uſe can be made of this kind of Knowledge; but there ſeems to be no Reaſon why we ſhould not pique ourſelves upon knowing theſe Matters with as much Exactneſs as Strangers; who, by dipping into our Accounts, pretend to great Knowledge in theſe Matters, and very often impoſe upon ſuch as will not rake into their own old muſty Antiquities, but pay an implicit Regard to the bold Aſſertions of modern Authors; by taking the contrary Method, and reſolving to be ſatisfied, even in Trifles, we come to judge accurately, and truly, of the Deſerts both of our own and of foreign Nations; ſo as to yield the Preference to ſome, and maintain our juſt Rights againſt others. As for Inſtance, though we cannot diſpute with the *Spaniards* the actual Diſcovery of *America*; yet we may fairly deny what the preſent Geographer of his Catholic Majeſty aſſerts, that we rejected *Columbus*'s Propoſal; and we may likewiſe call him to a ſevere Account, for placing the Voyages of *Sebaſtian Cabot* to *Florida* twenty-ſix Years later than he ſhould have placed them, from the Accounts given by *Ramuſio*, *Gomara*, *Peter Martyr*, and other Authors, whom he either had read, or ought to have read, before he took upon him to write on this Subject; of which though he writes ſenſibly, yet this will not excuſe his writing Untruths.

Sebaſtian Cabot is by many of our Writers poſitively affirmed to be an *Engliſhman*, born at *Briſtol*; but the *Italians* as poſitively claim him for their Countryman, and ſay he was born at *Venice*; which, to ſpeak impartially, I believe is the Truth; for he ſays himſelf, that when his Father was invited over to *England*, he brought him with him, though he was then very young. His Voyage for the Diſcovery of the North-weſt Paſſage gained him ſo great a Reputation, that he was invited into *Spain*, and employed by their Catholic Majeſties, *Ferdinand* and *Iſabella*, in a Voyage for the Diſcovery of the Coaſts of *Brazil*, in which he had much better Succeſs than *Americus Veſpucius*, who miſſed the River of *Plate*; whereas *Cabot* found it, and ſailed up it three hundred and ſixty Miles, which gained him ſuch a Character at the Court of their Catholic Majeſties, that, on his Return, he was declared *Piloto Maggiore*, or Grand Pilot of *Spain*; and reſided ſeveral Years at *Seville* with that Character, and had the Examination and Approbation of all the Pilots intruſted by that Government.

4. Yet, after ſome Years, he thought fit to return into *England*, and was employed by King *Henry* the VIIIth, in Conjunction with Sir *Thomas Pert*, who was Vice-Admiral of *England*; and built a fine Houſe near *Blackwall*, called *Poplar*; which Name ſtill remains, though the Houſe is long ago decayed. This Voyage of his was in 1516, on board a Ship of two hundred and fifty Tons, with another of the like Size, in which he proceeded to the Coaſt of *Brazil*, and afterwards viſited the *Spaniſh* Iſlands of *St. Domingo*, and *St. John de Porto Rico*; in the latter of which they traded, and paid for what they had by the Exchange of Veſſels, made of Pewter, as we learn from *Oviedo*; who, notwithſtanding, aſſerts that this Veſſel was a Privateer; whereas, in Fact, ſhe was a Frigate fitted out at King *Henry* the VIIIth's Expence for Diſcovery.

It is a very great Misfortune that we have not a clearer and more diſtinct Account of this Expedition; ſince it very plainly appears, from the Writers of thoſe Times, that great Expectations were raiſed by it, and that the Miſcarriage occaſioned a good deal of Noiſe and ſome Reflections; but they did not fall upon *Cabot*, as appears from the following Note, taken from a Book, publiſhed by Mr. *Richard Eden*, whoſe Collections led the way to thoſe of Mr. *Hackluit*, and which Book was publiſhed in 1553. “ If manly Courage, ſaith he, (like unto that “ which hath been ſeen in your Grace as well in foreign “ Realms, as alſo in this our Country,) had not been “ wanting in others, in theſe our Days, at ſuch Time “ our Sovereign Lord of noble Memory, King *Henry* “ VIII. about the ſame Year of his Reign, furniſhed, “ and ſent out certain Ships, under the Governance of “ *Sebaſtian Cabot*, yet living, and one Sir *Thomas Pert*, “ whoſe faint Heart was the Cauſe that the Voyage took “ none Effect; if, I ſay, ſuch manly Courage, whereof “ we have ſpoken, had not at that Time been wanting, “ it might happily have come to paſs, that that rich “ Treaſury called *Perularia*, which is now in *Spain*, in “ the City of *Seville*, and ſo named, for that in it is kept “ the infinite Riches brought thither from the new-found “ Land of *Peru*, might long ſince have been in the “ Tower of *London*, to the King's great Honour and “ Wealth of this Realm.” I do not find that this worthy Gentleman left *England* after this; but, on the contrary, remained here, and promoted, to the utmoſt of his Power, whatever Deſigns were ſet on foot for the Encouragement and Extention of our Commerce; ſo that, as I ſhall have Occaſion to ſhew hereafter, he may be truly reputed the great Maſter of *Engliſh* Seamen, and the Father of our Colonies and Commerce.

It was this great Man that ſtill kept up an Opinion, which he had himſelf firſt entertained, that ſome Paſſage there was into the *South Seas* by the North-weſt; and upon this Subject he wrote with ſo much good Senſe and Strength of Reaſon, that if the Ships, which, while I am writing this Paragraph, have ſailed in Search of this Paſſage, ſhould ſucceed, the Honour of the Diſcovery will redound to him; and therefore it is but juſt to take this Opportunity of reviving his Reputation. His Diſcourſes had ſuch an Effect on King *Henry* VIII. a Prince of vaſt natural Parts, great Learning, and ſtrongly inclined to heroic Undertakings, that he reſolved to ſend another Ship, or more, on the Diſcovery, which he did in the nineteenth Year of his Reign. Both *Hall* and *Grafton*, in their Chronicles, ſpeak of this; and tell us, that on mature Deliberation, the King fitted out two fair Ships, which ſailed from the Port of *London* on the 20th of *May*, 1527; but not a Word of the Captain's Name, or of the Strength of theſe Ships; the only Particular we have is, that the King ſent ſeveral cunning Men on board them. We are to underſtand, by *cunning Men*, Perſons ſkilled in the Mathematics; who, with the common Sort of People, paſſed now, and long after, for cunning Men and Conjurers.

The worthy Mr. *Hackluit* has taken abundance of Pains to ſupply us with ſome Circumſtances of this Expedition, but to very little Purpoſe; and, notwithſtanding all his Inquiries from Perſons who lived in and near thoſe Times, could obtain no other Satisfaction than this, that a Canon of *St. Paul*'s, who was reputed a great Mathematician, was one of the principal Perſons concerned, and actually had took a Share in the Voyage; but to this reverend Perſon's Name both Sir *Martin Frobiſher* and Sir *Richard Allien*, who were Mr. *Hackluit*'s Authors, were Strangers; one of them, however, remembered the Name of the biggeſt Ship, which was *Dominus Vobiſcum*, or the Lord with them, which agrees very well with the other Part of the Story, that the chief Promoter of this Voyage was a Prieſt. Theſe Ships ſailing very far to the North-weſt, the largeſt of them was caſt away in the Mouth of a very large Gulph, very probably in the Entrance to *Hudſon*'s *Bay*, and there periſhed; the other, having coaſted along the Iſland of *Cape Britton* (ſo they wrote it then) returned in *October* following, and brought a large Account of the Places they had ſeen, and of the Hardſhips they had undergone.

It appears from thence, that theſe early Attempts to diſcover new Countries, and extend our Commerce, were attended with great Difficulties, much beyond thoſe that were met with by the *Spaniards* and *Portugueze*, which may be attributed to ſeveral different Cauſes, and amongſt others theſe: Our Shipping was then but mean, though both the Kings whom *Cabot* ſerved appeared to be very deſirous of having a naval Force, ſince *Henry* VII. had ſpent fourteen thouſand Pounds in building one large Ship, and his Son *Henry* VIII. added ſeveral others to the Navy; yet I think our Ships were, generally ſpeaking, larger than thoſe of moſt of our Neighbours; but very probably they were built abroad, and neither in Form nor in Materials were fit for thoſe Seas to which they were navigated. The Skill of our Seamen could not be very great at this Time; for as in all other practical Caſes, ſo in this, nothing advances People ſo faſt as Experience; and therefore I reckon, that the Want of this was a great Deficiency in theſe Times; we may add, that we purſued, with incredible Diligence, thoſe Diſcoveries that carried us into dangerous and diſagreeable Climates, which was directly contrary to the Practice of the *Spaniards* and *Portugueze*; beſides, thoſe Voyages produced little or no Advantage, ſo there was nothing to provoke the common, or even the trading, ſort of People to engage in them: And laſtly, King *Henry* VIII. was bent upon finding a North-weſt Paſſage, that he might have a Way of his own to the *Eaſt Indies*, and not be obliged to follow the Rout either of the *Spaniards* or of the *Portugueze*.

5. It was this Inclination of the King's that produced a Spirit in the Nation of diſcovering and ſettling in theſe Northern Parts, let the Dangers be what they would, or the Difficulties to be overcome ever ſo many or apparent; a very ſtrong Inſtance of which occurred in the twenty-eighth Year of his Reign, and is the moſt remarkable Paſſage in it to our Purpoſe: One Mr. *Hore*, a Merchant of *London*, a Man of good Family, conſiderable Fortune, great Courage, and very well verſed in moſt of the Branches of the Mathematics, was reſolved to undertake a Voyage, and attempt a Settlement on *Newfoundland*, and to go thither himſelf. He no ſooner made this Intention of his known, than he received all the Countenance and Encouragement from the Crown that he could expect; and as this gave much Credit to the Expedition, ſo, in a ſhort time, abundance of young Gentlemen, of good Fortunes and diſtinguiſhed Families, offered to ſhare both the Expence and Danger of the Undertaking.

Amongſt theſe were Mr. *Wickes*, a Weſt-country Gentleman of five hundred Marks a Year; Mr. *Tuck*, a *Kentiſh* Gentleman of Fortune; Mr. *Tuckfield*, Mr. *Thomas Butts*, Son of Sir *William Butts*, the King's firſt Phyſician; Mr. *Hardy*, Mr. *Biron*, Mr. *Carter*, Mr. *Raſtal*, Brother to Serjeant *Raſtal*, and ſeveral others; who went with Mr. *Hore* in the largeſt of his two Ships, the *Trinity*, of the Burden of one hundred and forty Tons: In the leſſer Ship went Mr. *Armigall Wade*, a young Gentleman of great Hopes, and much Learning; Mr. *Oliver Dawebney* of *London*, Merchant; and other Perſons of Character, to the Number of thirty, in both Veſſels. About the End of *April*, 1536, all Things were ready; the *Trinity* and *Minion* fit to ſail, and the Whole of both Ships Company, to the Number of one hundred and twenty, muſtered at *Graveſend*; after which they went with much Ceremony on board.

They ſoon after ſailed, and arrived in the Space of two Months at *Cape Breton*; from whence they ſailed round a great Part of *Newfoundland* to *Penguin* Iſland, in the Latitude of about 50 Degrees, as they computed; but which lies, truly, in 50 Degrees 40 Minutes; where they found great Plenty of thoſe Fowls, from whence the Iſland takes its Name: They afterwards went on ſhore upon the Eaſt-ſide of *Newfoundland*, and had an accidental View of a Boat full of the Savages that inhabited that Country, whom they purſued both by Sea and Land, but were not able to overtake them. They ſtaid here till their Victuals began to grow very ſhort; and being then afraid to truſt themſelves at Sea in ſuch a Condition, they delayed going on board till they were in ſuch Diſtreſs, that they actually eat one another; that is to ſay, ſome killed their Companions privately in the Woods, hid them, and then roaſted and eat their Fleſh ſecretly; till this horrid Practice coming to the Knowledge of their Captain, he, by a moſt judicious and pathetic Speech, brought them to reſolve rather to live upon Graſs and Herbs than ſubſiſt by this deteſtable Method any longer.

But it fell out ſoon after, that a *French* Ship put in there, well manned and well victualled, of which our Countrymen reſolved to take Advantage, being weary of a Country in which they had endured ſuch Miſeries; and therefore, watching a fair Opportunity, they poſſeſſed themſelves of the *French* Ship, and, leaving their own, ſailed directly for the Coaſt of *England*. They returned ſafely, and arrived at *St. Ives* in *Cornwall* about the End of *October*; and then the Gentlemen, diſperſing themſelves, returned to *London*; but ſo much altered by their Fatigues, that Sir *William Butts* and his Wife could not know their Son, but by a particular Mark upon his Knee. We had never known a Word of this ſtrange Adventure, if it had not been for Mr. *Richard Hackluit*, who rode two hundred Miles to gain theſe Particulars from the Mouth of Mr. *Thomas Butts*, the only Perſon then living, who had a Share in that Expedition; and no wonder, ſince it was fifty-three Years afterwards that he obtained this Communication: There is another Circumſtance relating to this unfortunate Enterprize, which muſt by no means be omitted.

Some Months after, the *Frenchmen* came to *England*, with a dreadful Complaint, that the *Engliſh* had run away with their Ship, and had left them to ſtarve, if they had not ſupported themſelves by fiſhing. King *Henry* examined very cloſely into the Affair; and finding that extreme Want was the ſole Cauſe of an Action, otherwiſe inexcuſable, he ſatisfied the *French*, to the full Extent of their Demands, out of his own Coffers; and pardoned, in his own Subjects, that Wrong which Neceſſity forced them to commit. Theſe were very hard Beginnings; and yet to theſe we owe our *Newfoundland* Trade; and, I think, it is much to the Honour of the *Engliſh* Nation, that without having any of thoſe Encouragements, which the *Spaniards* met with from the very Beginning, they continued to purſue thoſe Expeditions for Diſcovery; till, in the End, they met with thoſe Rewards which they ſo well deſerved.

6. Within this dark Period of Time, for the Accounts of our riſing Navigation have been moſt imperfectly tranſmitted to Poſterity, there were Numbers of *Engliſhmen*, who, with very little Proſpect of private Advantages, ſpread themſelves, by the Help of foreign Shipping, into all Parts of the World; that, by their Enquiries and Obſervations, they might be able to underſtand how Trade was managed, and Maritime Affairs conducted, in other Countries; that, in time, by their Informations, the like Advantages might accrue to their own, of which Voyages and Travels there are many ſhort Notes collected in *Hackluit*; which do great Honour to theſe Times, and ought to perpetuate the Memory of the worthy Perſons, who, with ſo much Labour and Hazard, laid the Foundation of our naval Strength and Glory.

Theſe Notices ſoon rouſed active and induſtrious Perſons to try what Uſe could be made of ſuch Helps, and perhaps the Reader will not think his Time miſpent in reading an Inſtance of this Kind. Mr. *William Hawkins*, the Father of the famous Sir *John Hawkins*, and the Grandfather of Sir *Richard Hawkins*, both eminent Seamen, was himſelf an Officer in the Navy of King *Henry* the VIIth, and for his Merit much eſteemed by that Prince, made, about the Middle of his Reign, three proſperous Voyages to *Guinea* and *Brazil*; in the laſt of theſe, having ſome Dealings with a Prince or Chief of the *Brazilians*, he expreſſed a Deſire of ſeeing *England*; but, at the ſame Time, ſhewed a Suſpicion of his not obtaining Leave to come home again; to cure which, Captain *Hawkins* very readily offered to leave Mr. *Martin Cockram*, of *Plymouth*, who ſtood next to himſelf in Eſteem with the *Indians*, as a Hoſtage, which Offer was readily accepted.

This *Brazilian* Chief he brought over, and preſented to his Maſter King *Henry*, who received him kindly, entertained him courteouſly, and diſmiſſed him generouſly, after a Year's ſtay in *England*. But it ſo fell out, in his Paſſage home, that, either through Change of Air, Shortneſs of Proviſions, or ſome other Misfortune, the *Indian* Chief died; which threw the *Engliſh* into great Concern, from an Apprehenſion that Mr. *Cockram* would be either puniſhed with Death, or detained during Life, upon account of this Accident: But the thing fell out better; for upon hearing what the *Engliſh* had to alledge, the Savages readily obſerving, that it was far from being likely that they would return to their Country if they had treated their King amiſs, and that it was not in their Power to preſerve his Life, if attacked by Sickneſs, they freely ſet their Hoſtage at Liberty, kindly entertained the Men, and furniſhed the Ship with a ſufficient Cargo for *England*, which encouraged other Merchants to trade to the unſettled Ports of *Brazil*, (by which I mean the Ports not yet in the Poſſeſſion of the *Portugueze*) and this from ſeveral Places, *viz. Briſtol*, *Southampton*, and *London*, during all the latter Part of this Monarch's Reign, who muſt be allowed to have had a very public Spirit with regard to maritime Concerns, for the Improvement of which he ſpared neither Pains nor Treaſure.

7. In the Time of King *Edward* the VIth the Court was ſplit into Factions, which neceſſarily occaſioned Diſputes and Diviſions among the People; ſo that the Times were by no means favourable for new and great Undertakings, or even for the Improvement of thoſe Branches of Commerce, which were but newly opened; on the contrary, it ſeems that ſeveral Perſons, who were intruſted with Offices by the Lord High Admiral, and ſuch as had the Care and Direction of the Cuſtoms, laid heavy Burdens upon thoſe that engaged in the *Iceland* and *Newfoundland* Fiſheries; and took ſuch large Sums for Licences, and under other Pretences, as had like to have ruined the former, which was an old Trade, and greatly diſcouraged the latter, which was a new one.

Upon Complaint of this to Parliament, the Matter fell under a cloſe Examination, as appears from ſome Papers of Sir *William Cecil*, which are yet in Being; for there are no Journals of the Proceedings of the *Houſe of Commons* ſo early as this Time preſerved: But from the Papers before-mentioned, we are informed, that this Complaint was made by the Weſt-country Members, and by a Burgeſs from *Yarmouth*, in *Norfolk*; and thereupon a Law was made in the Year 1548, and the ſecond of that Prince's Reign; by which it was enacted, that every Officer, who ſhould, for the Time to come, extort, procure, or receive any Sum of Money from a Merchant, Maſter of a Ship, Factor, or Fiſherman, for, or under Colour of, granting him Leave or Licence to fiſh in the North Seas, on the Coaſts of *Iceland*, or on the Banks of *Newfoundland*, ſhould, for the firſt Offence, forfeit treble the Sum ſo extorted; and for the ſecond, ſhould ſuffer Fine and Ranſom at the King's Pleaſure.

The ſame Year the King was pleaſed to grant to *Sebaſtian Cabot*, his old Servant, by the Advice and Council of his Uncle, *Edward* Duke of *Somerſet*, the Office of Grand Pilot of *England*, with a Fee of one hundred ſixty-ſix Pounds thirteen and four Pence, to be paid him quarterly at the Exchequer; which ſhews, that theſe kind of Services were ſtill regarded; and that in ſuch Intervals of Peace, as the Miniſtry then had, they were mindful of the Intereſt of their Country, and inclined to do what lay in their Power to promote Navigation and Commerce. But they were ſtill hurt by a too earneſt Deſire to graſp at the whole Trade of the *Indies*, which induced them to liſten to all the Propoſals made for diſcovering either a North-eaſt or a North-weſt Paſſage; and by bending all their Strength that Way, neglected thoſe Undertakings that were eaſier, and which might have been carried into Execution at a much lighter Expence. This was owing to Mr. *Sebaſtian Cabot*, who firſt ſtarted the Notion of a Paſſage into the *South Seas* by the North-weſt, and who fell very readily into the other Project of finding a Paſſage into the *Indian* Ocean by the North-eaſt.

He was at that time Maſter of the great Company erected for the Benefit of Commerce, under the Title of *Merchant-Adventurers for the Diſcovery of New Lands*, and the great Oracle, as he deſerved to be, of all the ſea-faring People; and this gave him an Opportunity of puſhing that Point which he had moſt at Heart, the Importance of which he underſtood better than any Man, and in the Execution of which no body had gone farther, or managed an Expedition with greater Diſcretion. But this Turn diverted the whole Attention of the State to this Point, and this alone, as if nothing had been worth diſcovering but a Paſſage to the *Spice Iſlands*; while, in the mean time, the *Spaniards* attacked and ſubdued a very great Part of both the Continents of *America*. If, inſtead of this, the Endeavours of the Seamen in that Reign had been applied to the proſecuting what *Cabot* had ſo well begun, I mean the intire Diſcovery of *Florida*, and the Countries adjacent, it muſt have ended in a Settlement on the Gulph of *Mexico*, which might probably have been attended with very great Advantages.

It cannot however be denied, that the Schemes which were proſecuted had a very fair Appearance of Succeſs; and I think it may be allowed alſo, by ſuch as take the Pains to peruſe Mr. *Cabot*'s Inſtructions to Sir *Hugh Willoughby*, that no Man ever conceived with greater Strength of Judgment, or expreſſed himſelf in clearer Terms, than he did. I might, to prove this, give an Extract of theſe Inſtructions; but it would be beſide my preſent Purpoſe, and giving the Reader no more than what he may already find in *Hackluit*; whereas I aim at affording him new Lights, without tranſcribing other People's Labours, except where I am under a Neceſſity of doing it. It muſt be admitted, that tho' the Proſecution of theſe Projects, for finding a North-eaſt and a North-weſt Paſſage, were not either of them attended with Succeſs, and tho' they conſumed a great Treaſure, and, which is much more to be regretted, were attended with the Loſs of ſeveral excellent Captains and many able Seamen, the Profits which the Nation reaped might be truly ſaid to countervail, in ſome meaſure, even the vaſt Expences theſe Voyages occaſioned.

As for Inſtance: We opened, by our Attempts to find a North-eaſt Paſſage, the Trade to *Archangel*; and, for ſome time, engroſſed the valuable Commerce of the *Ruſſian* Empire: And even to the North-weſt our Diſcoveries were of great Conſequence, and led us to a more diſtinct Knowledge of that Part of the World than any other Nation has attained, inſomuch that I think it may be truly ſaid, it is of all our Labours that which has ſhewn our Excellency in point of Seamanſhip moſt; and, if our preſent Attempt for diſcovering a Paſſage through *Hudſon*'s *Bay* ſhould prove ſucceſsful, as I ſincerely believe it will, we ſhall have no Reaſon to blame thoſe who, from time to time, have puſhed this Deſign with ſo much Vigour; becauſe I am thoroughly perſuaded, that whenever it is attended with Succeſs, it will, in a very few Years, repay this Nation all that ſhe has expended for Ages upon this Account.

We may from hence ſee, how much theſe Expeditions for Diſcovery are preferable to much more expenſive Expeditions in purſuit of Projects dictated by political Views; for in theſe laſt we waſte Ships, Men, Treaſure, and all to little or no Purpoſe; whereas, with reſpect to the former, whether we ſucceed or not in our main Point, we are ſure of making ſuch incidental Advantages as, ſooner or later, make us ample Amends for the Pains we take; ſo that a maritime Power cannot follow a wiſer Courſe than to encourage all ſuch Projects, or employ her naval Force better, than in attempting ſuch of them as have a probable Appearance; becauſe this nouriſhes and keeps alive that active, penetrating, enterpriſing Spirit, which is ſo neceſſary to a State like ours, and which will always be attended with Advantages upon the Whole, tho' in many particular Inſtances it may not be attended with Succeſs. But it is now time to proceed from theſe Reflections, which naturally flow from the Conſideration of what was done by our Stateſmen in the Reign of King *Edward*, to thoſe of the like kind that occupied the Thoughts both of our Politicians and People, in the Reign of his Siſter and Succeſſor; in ſpeaking of which, tho' a beaten Topic, I hope to ſtrike out ſeveral Things that are new.

8. As there were ſeveral of King *Edward*'s Miniſters employed by Queen *Mary*, ſo we find that in the Reign of this Princeſs the ſame Meaſures were purſued, and the ſame Attention ſhewn for new Diſcoveries, and for giving all the Aſſiſtance that was in the Power of the Crown, to ſuch as engaged in theſe Undertakings. But after the Marriage between the Queen and King *Philip* of *Spain* took place, we began to grow much better acquainted with all Circumſtances relating to the *Weſt Indies*, than in former Times; and it became faſhionable at Court to read and underſtand whatever had been publiſhed in any Language, relating to the Conqueſts and Diſcoveries of the *Spaniards*; but becauſe the Number was not great of ſuch as could peruſe and underſtand thoſe Works in the original Languages, ſeveral Perſons took Pains to tranſlate them into *Engliſh*, and to epitomiſe them, that they might be read with the greater Facility; amongſt theſe were Mr. *Richard Eden*, who compoſed one of the firſt Collections of Travels that was ever publiſhed in our Language, and which was afterwards reviſed, corrected, and augmented, by Mr. *Edward Willes*. Several other Pieces of the ſame kind came abroad; and ſeveral of the *Spaniſh* Officers, that attended their King hither, took a great deal of Pains to ſet forth the Exploits of their Nation in the *Weſt Indies*; and our Sea-Officers, with whom they converſed, did not fail to make their Advantage of theſe Diſcourſes, and to gain ſuch Knowledge of the Situation Things were in throughout all their Dominions in *America*, as afterwards coſt the *Spaniards* very dear.

This Intercourſe with that Nation, alſo furniſhed many *Engliſhmen* with Opportunities of going to their Settlements, and of obtaining ſuch Lights, with reſpect to their Navigation and Commerce, as proved afterwards of the higheſt Uſe. But, notwithſtanding all this, our Trade and Naval Power ſuffered deeply by this Connection between the two Nations, which not only hindered, during that Reign, thoſe Voyages we had formerly made to *America* from being purſued, but involved us likewiſe in a tedious, dangerous, and unneceſſary War with *France*; by which we not only loſt the important Fortreſs of *Calais*, but alſo ſuffered deeply in our Shipping; ſo that it appears, by ſome Fragments which ſtill remain of Speeches made in the Houſe of Commons, that loud Complaints were made on this Subject in Parliament by the Citizens of *London* eſpecially, whoſe Loſſes were greater than thoſe of the reſt of the Kingdom by thoſe miſtaken Meaſures.

Yet ſuch Branches of our Commerce as did not immediately interfere with that of *Spain*, were greatly favoured in this Reign, in which the *Ruſſian* Merchants were incorporated, and *Sebaſtian Cabot* appointed their Governor for Life; and a *Ruſſian* Embaſſador, who came over hither, was treated with great Diſtinction, both by the King and Queen; which procured us ſuitable Returns, by the granting extraordinary Privileges to ſuch Merchants, and Subjects of *England*, as traded in any Part of that extenſive Empire. The Trade to *Guinea*, likewiſe, met with ſome Countenance from the Court, by which Means the Shipping engaged therein was increaſed, and many more Traders drawn to be concerned therein; ſo that as great a Spirit, in this Reſpect, appeared as could well be expected; while the trading Corporations throughout the Kingdom were expoſed to great Inconveniencies, by taking their Ships for the public Service; for ſo, at that Time, aſſiſting King *Philip* was called, tho' it was evidently againſt the Intereſt of the Nation; and it was our want of Succeſs in that War which ſaved the Balance of *Europe*, which muſt have been totally loſt, if he had compaſſed his Deſign, and ruined the Power of *France*; ſo that, in Fact, our naval Force was employed againſt itſelf, of which the Queen's Miniſters were ſenſible; but as for the Queen herſelf, ſhe was governed by an odd Principle, which was that of making the beſt Wife in the World, to one of the worſt of Huſbands; but, very luckily for the Nation, ſhe was ſo ſenſible of the Misfortunes that attended this injudicious War, and particularly of the Loſs of *Calais*, that it broke her Heart, and thereby made way for that great and glorious Reign which reſtored the Face of our Affairs, revived our languiſhing Commerce, re-eſtabliſhed our naval Power, and, by the happy Iſſue of a long and bloody, but neceſſary and proſperous, War againſt *Spain*, ſecured our own Liberties and preſerved thoſe of *Europe*.

9. Queen *Elizabeth* ſucceeded to the Crown by the Death of her Siſter, in the Month of *November*, 1558; and, from the very Beginning of her Reign, made the naval Power of this Nation her peculiar Care: She began with putting the ſmall Remains of the Navy into the beſt Condition poſſible; provided a ſafe Harbour in the River *Medway* for their Reception, and erected a new Caſtle for their Protection. She likewiſe took care to have a ſmall Squadron at Sea as ſoon as poſſible; and knowing that, by a haſty Breach with *Spain*, ſhe might, and indeed muſt, expoſe her Naval Strength to the Danger of being cruſhed by a ſuperior Force, ſhe very wiſely choſe to diſſemble her Reſentments againſt that Crown, and to provide for the Increaſe of the Seamen and Shipping of her Kingdom, before ſhe diſcovered thoſe Reſolutions which ſhe carried afterwards into Execution with ſo much Honour to herſelf, and ſo much Advantage to her People. I the rather take notice of this, becauſe it is the only Stroke of the Queen's Policy which has eſcaped our Hiſtorians, who either overlooked or miſunderſtood it, and therefore, as it very nearly concerns my Subject, I ſhall ſet it in a full and clear Light.

At the Beginning of her Reign the Queen had ſeveral Enemies to deal with; ſome who declared openly againſt her; and others who ſecretly ſought her Ruin: Among the former were the *French*, to whom at that Time *Scotland*, in Virtue of a Marriage between Queen *Mary* and the *French* King, in ſome meaſure belonged. At the Head of the latter was King *Philip* of *Spain*, one of the greateſt Politicians that ever ſat upon a Throne, who knew the Value of *England*, had in ſome meaſure poſſeſſed it, and which was not at all wonderful, had no mind to loſe it. His firſt Project for keeping it was, by marrying *Elizabeth*, as he had done her Siſter, in which finding himſelf deceived, his next Project was to conquer it, from which he never departed. The Queen, when ſhe rejected the firſt, foreſaw the laſt, and reſolved to provide againſt it, which ſhe knew could no other way be done but by obtaining a great naval Force.

To arrive at this, ſhe firſt of all contrived to amuſe *Spain* by carrying on the War with *France*, in which ſhe did the ſame thing her Siſter did; and yet, the one was the worſt, the other the wiſeſt Meaſure that ever was taken. Queen *Mary* really meant to ruin and diſtreſs the *French*, and was above all things deſirous of recovering *Calais*; and this from a miſtaken Zeal for the Intereſt of the Nation. Queen *Elizabeth* made an artificial War againſt *France* to increaſe her own naval Strength, by encouraging her Subjects to take Prizes, and that ſhe might have an Opportunity of ſecuring *Scotland*; but, though exceſſively provoked, ſhe never thought of hurting *France*, and when offered *Calais*, ſhe refuſed it; and all this, becauſe ſhe knew the true Intereſt of the Nation. She knew, that while ſhe continued to act againſt the *French*, ſhe ſhould have the *Spaniards* for ſeeming Friends; that this War was not againſt the Humour of her People, or againſt Juſtice; that it would raiſe a vaſt Number of Seamen, becauſe every Port in *England* fitted out Privateers; and that it would raiſe the Reputation of her naval Power, by reducing *Scotland*; for all which Ends, as ſhe wiſely provided, ſo ſhe met in them all the Succeſs ſhe could deſire. She knew, however, that *France* was not her natural Enemy; that from the Diſputes about Religion, which ran high in that Kingdom, ſhe was in no Danger from its Power; and that whenever ſhe came to declare againſt *Spain*, ſhe ſhould ſtand in need of its Aſſiſtance; for which Reaſon ſhe made a very harmleſs War, and gave ſuch broad Intimations of her being willing to compoſe all Differences, as in due Time produced a Peace. She likewiſe knew that the Poſſeſſion of *Calais* was a mere popular Advantage; that, in reality, it was attended with an Expence which could not well be afforded; that if ſhe was poſſeſſed of it, it would be a continual Bone of Contention with *France*, and that, how much ſoever it might be afterwards her Intereſt to part with it, it would be an unpopular, and therefore an improper, and an imprudent, Thing to give it up. This that great Princeſs knew, and therefore ſhe wiſely refuſed it: but upon making a Peace ſhe reſerved her Rights to it, and procured ſuch Conceſſions from the *French*, as proved a continual Check upon them, and were oftentimes of more Uſe than the Fortreſs itſelf.

In the mean time ſhe continued her Care of the Navy, and neglected nothing that might keep up and promote a maritime Spirit among her People; ſhe ſought out and diſtinguiſhed the Sea-Officers that had ſerved under her Father; ſhe was continually fitting out, on one Pretence or other, little Squadrons, at a ſmall Expence; ſhe gave the Command of them to different Officers, that ſhe might excite a Spirit of Emulation, but what principally conduced to aggrandize her Power was the Pleaſure ſhe ſhewed, whenever any Occaſion offered of rewarding her Subjects, who undertook, at their own Expence, ſuch Expeditions as contributed to extend their Commerce, and open new Branches of Trade. We have a ſtrong Inſtance of this, in the Countenance ſhe ſhewed to Capt. *John Hawkins*, who between the Years 1562 and 1568 made three Voyages into the *Weſt Indies*, and in all but the laſt had very great Succeſs, though he carried on his Trade partly by Force. She promoted the Trade to *Ruſſia*, and through that Empire to *Perſia* and the *Indies*, to the utmoſt of her Power, and managed it with ſuch Prudence and Dexterity, that the Reputation of her Government was very high, in that, and in other Countries, in which the reſt of the Kingdoms and the States of *Europe* were hardly known. The Trade to *Guinea* was likewiſe ſo much her Care, that, finding the *Portugueze* gave her Subjects much Diſturbance, ſhe enquired into the Cauſes of thoſe Diſputes, and took care to remedy them by a Treaty with that Crown.

All this time her Differences with *Spain* ſubſiſted, and though there was no open War between the two Crowns, yet there could ſcarce be ſaid to be either Friendſhip or Peace between their Subjects; and the Queen, perhaps, was not very ſollicitous that there ſhould; for having now attained what ſhe aimed at, a very conſiderable Naval Force, and being willing to let the *Spaniards* ſee that though ſhe declined a War, ſhe had no Reaſon to be afraid of it, ſhe took Advantage of the King of *Spain*'s Marriage with *Anne* of *Auſtria*, his Niece, to give ſuch an Inſtance of her Generoſity and Power, as did great Honour to her Adminiſtration; for ſhe cauſed that Princeſs to be conducted to *Spain* by an *Engliſh* Navy; this was a plain Demonſtration, that her Sparingneſs, upon other Occaſions, was not the Effects of any Nearneſs of Temper; but that, by a conſtant Frugality, ſhe might have it always in her Power to be royally magnificent upon proper Occaſions.

But this extraordinary Mark of Civility was far enough from meeting a proper Return, and the *Spaniards* went on in diſturbing the Trade, and diſtreſſing the Navigation, of her Subjects, which induced the Queen to ſuffer her Subjects to uſe the beſt Meaſures they could for redreſſing themſelves; in which they were not wanting. In the Year 1572, Capt. *Francis Drake* made his famous Expedition into the *Weſt-Indies*, with two Ships, one called the *Dragon*, of ſeventy-five Tons, the other the *Swan*, of twenty-five Tons, and on board them both he had no more than ſeventy-three Men; and yet, with this Force, he ventured to declare War againſt the King of *Spain*, for the Injuries he had received in his Voyage with Capt. *Hawkins* to the *Weſt-Indies*. In this Voyage he performed wonderful Things; for, beſides taking ſeveral large Ships, he fairly took the Town of *Nombre de Dios*, by Storm, gained an immenſe Treaſure, and had a Sight of the *South Seas*; after which he returned ſafely to *Plymouth*, and made a fair Diſtribution of the Profits of his Voyage among his Owners.

This glorious Event encouraged others to follow his Example; ſo that, in a very ſhort Time, the *Engliſh* Privateers made various Voyages into all Parts of *America*, and every little Port in *England* ſwarmed with Seamen, who were perfect Maſters of their Profeſſion; and Pilots capable of navigating Ships to any Part of the known World, became ſo numerous, that there were daily new Projects ſet on foot, which in the former Age would have been thought impracticable; but in this were carried into Execution at the Charge of private Perſons, without any Expence to, or Aſſiſtance from the Crown, though they had all the Countenance and Encouragement they could deſire: But amongſt all theſe, there was none ſo conſiderable in itſelf, ſo clear a Proof of maritime Skill, and ſo honourable, in every reſpect, to the Nation, as the next Expedition of Capt. *Francis Drake* in 1577, in which he ſailed round the Globe, as we have ſhewn at large in the firſt Part of this Work, and therefore need not repeat here. But one Part, however, of that Voyage ſo immediately concerns the Subject of this Section, and relates to ſo conſiderable a Diſcovery, that, as we then promiſed, we ſhall, as in its proper Place, ſpeak of and explain it more particularly here.

10. Capt. *Drake* ſailed from *Plymouth*, with five ſmall Ships, the biggeſt but of one hundred Tons, on the 13th of *December* 1577, and it was the 5th of *September* following before he entered the *South Seas*, where having performed ſeveral glorious Actions, and gained prodigious Riches, he proceeded to the moſt Northern of the *Spaniſh* Settlements; with a View to diſcover, if poſſible, that Paſſage which had been ſo much talked of from our *Northern* into the *South Seas*, by a Strait like that of *Magellan*'s to the North-weſt. This was certainly a very wiſe and great Undertaking, and a prodigious Improvement upon the Deſign of his Voyage; for, as yet, no *Engliſhman* had had the Opportunity, and perhaps it never entered into any Man's Head, to ſearch for ſuch a Paſſage on this Side; tho' it is moſt likely, that by this Method it may be

found. Our Author's Endeavours, however, were ſtrangely croſſed by the unexpected Severity of the Weather, of which the Rev. Mr. *Francis Fletcher*, who was Chaplain in this Voyage, gives a large Account; and, as it relates to a Subject of great Importance, and contains a Multitude of curious Circumſtances, though not delivered in the moſt poliſhed Stile, we ſhall give it the Reader, for the ſake of Exactneſs, in his own Words.

“ From *Guatulco* we departed the Day following, *viz.* *April* the 16th, ſetting our Courſe directly into the Sea, whereupon we ſailed five hundred Leagues in Longitude to get a Wind, and between that and *June* the 3d, 1400 Leagues in all, till we came into 42 Degrees of North Latitude, wherein the Night following we found ſuch an Alteration of Heat into extreme and nipping Cold, that our Men, in general, did grievouſly complain thereof, ſome of them feeling their Healths much impaired thereby; neither was it that this chanced in the Night alone, but the Day following carried with it not only the Marks, but the Stings and Force, of the Night going before, to the great Admiration of us all; for beſides that the pinching and biting Air was nothing altered, the very Ropes of our Ship were ſtiff, and the Rain which fell was an unnatural and frozen Subſtance; ſo that we ſeemed rather to be in the frozen Zone, than any way ſo near unto the Sun, or theſe hotter Climates.

“ Neither did this happen for the Time only, or by ſome ſudden Accident, but rather ſeemed, indeed, to proceed from ſome ordinary Cauſe, againſt the which the Heat of the Sun prevails not; for it came to that Extremity in ſailing but 2° farther to the Northward in our Courſe, that tho' the Seamen lacked not good Stomachs, yet it ſeemed a Queſtion to many amongſt us, whether their Hands ſhould feed their Mouths, or rather keep themſelves within Coverts, from the pinching Cold that did benumb them? Neither could we impute it to the Tenderneſs of our Bodies, though we came lately from the Extremity of Heat, by reaſon whereof we might be more ſenſible of the preſent Cold, inſomuch that the dead and ſenſeleſs Creatures were as well affected with it as ourſelves. Our Meat, as ſoon as it was removed from the Fire, would preſently, in a manner, become frozen up; and our Ropes and Tackling, in a few Days, were grown to that Stiffneſs, that what three Men before were able with them to perform, now ſix Men, with their beſt Strength and utmoſt Endeavours, were hardly able to accompliſh; whereby a ſudden and great Diſcouragement ſeized upon the Minds of our Men, and they were poſſeſſed with a great Miſlike, and doubting of any good to be done that Way; yet would not our General be diſcouraged, but as well by comfortable Speeches of the divine Providence, and of God's loving Care over his Children, out of the Scriptures, as alſo by giving other good and profitable Perſuaſions, adding thereto his own chearful Example, he ſo ſtirred them up to put on a good Courage, and to acquit themſelves like Men, to endure ſome ſhort Extremity; to have the ſpeedier Comfort, and a little Trouble to obtain the greater Glory; that every man was thoroughly armed with Willingneſs, and reſolved to ſee the uttermoſt, if it were poſſible, of what Good was to be done that Way.

“ The Land in that Part of *America* bearing farther out into the Weſt than we before imagined, we were nearer on it than we were aware, and yet the nearer ſtill we came unto it, the more Extremity of Cold did ſeize upon us. The 5th Day of *June* we were forced by contrary Winds to run in with the Shore, which we then firſt deſcried, and to caſt Anchor in a bad Bay, the beſt Road we could for the preſent meet with, where we were not without ſome Danger, by reaſon of the many extreme Guſts and Flaws that beat upon us; which if they ceaſed and were ſtill at any time, immediately upon their Intermiſſion there followed moſt vile, thick, and ſtinking Fogs, againſt which the Sea prevailed nothing, till the Guſts of Wind again removed them, which brought with them ſuch Extremity and Violence when they came, that there was no dealing or reſiſting againſt them. In this Place was no abiding for us, and to go farther North the Extremity of the Cold (which had now utterly diſcouraged all our Men) would not permit us, and the Winds, being directly againſt us, having once gotten us under ſail again, commanded us to the Southward, whether we would or no; from the Height of 48°, in which now we were, to 38°, we found the Land by coaſting it to be but low, and reſonably plain; every Hill (whereof we ſaw many, but none very high) though it were in *June*, and the Sun in the neareſt Approach unto them, being covered with Snow.

“ In 38° 30′ we fell in with a convenient and fit Harbour, and *June* the 17th came to an Anchor therein, where we continued to the 23d of *July* following; during all which Time, notwithſtanding it was in the height of Summer, and ſo near the Sun, yet we were continually viſited with like nipping Colds as we had felt before; inſomuch, that if violent Exerciſes of our Bodies, and buſy Employment about our neceſſary Labours, had not ſometimes compelled us to the contrary, we could very well have been contented to have kept about us, ſtill, our Winter Cloaths; yea, (had our Neceſſity ſuffered us) to have kept our Beds; neither could we at any Time, in the whole Fourteen Days together, find the Air ſo clear as to be able to take the Height of Sun or Star.

“ And here, having ſo fit Occaſion (notwithſtanding it may ſeem to be beſides the Purpoſe of writing the Hiſtory of this our Voyage) we will a little more diligently enquire into the Cauſes of the Continuance of the extreme Cold in theſe Parts; as alſo into the Probabilities or Unlikelihoods of a Paſſage to be found that way. Neither was it (as hath formerly been touched) the Tenderneſs of our Bodies coming ſo lately out of the Heat, whereby the Pores were opened, that made us ſo ſenſible of the Colds we here felt. In this reſpect, as in many others, we found our God a provident Father and careful Phyſician to us; we lacked no outward Helps nor inward Comforts to reſtore and fortify Nature, had it been decayed or weakened in us; neither was there wanting unto us the great Experience of our General, who had often himſelf proved the Force of the burning Zone, whoſe Advice always prevailed much to the preſerving of a moderate Temper in our Conſtitutions; ſo that even after our Departure from the Heat, we always found our Bodies not as Sponges, but ſtrong and hard, more able to bear out Cold, though we came out of Exceſs of Heat, than a Number of Chamber-Companions could have been, who lie on their Feather-beds till they go to Sea, or rather, whoſe Teeth in a temperate Air do beat in their Heads at a Cup of cold Sack and Sugar by the Fire.

“ And that it was not our Tenderneſs, but the very Extremity of the Cold itſelf, that cauſed this Senſibleneſs in us, may the rather appear in that the natural Inhabitants of the Place (with whom we had for a long Seaſon familiar Intercourſe, as is to be related) who had never been acquainted with ſuch Heat, to whom the Country Air and Climate was proper, and in whom Cuſtom of Cold was as it were a ſecond Nature, yet uſed to come ſhivering to us in their warm Furs, crowding cloſe together, Body to Body, to receive Heat one of another, and ſheltering themſelves under a Lee Bank if it were poſſible; and as often as they could, labouring to ſhrowd themſelves under our Garments to keep them warm: Beſides, how unhandſome and deformed appeared the Face of the Earth itſelf? ſhewing Trees without Leaves, and the Ground without Greenneſs in thoſe Months of *June* and *July*. The poor Birds and Fowls not daring (as we had great Experience to obſerve it) ſo much as once to riſe from their Neſts after the firſt Egg laid, till it, with all the reſt, be hatched, and brought to ſome Strength of Nature able to help itſelf: Only this Recompence has Nature afforded them, that the Heat of their own Bodies being exceeding great, it perfecteth the Creature with great Expedition, and in ſhorter Time than is to be found in any other Places. As for the Cauſes of this Extremity, they ſeem not to be ſo deeply hidden, but that they may, at leaſt in Part, be gueſſed at; the chiefeſt of which we conceive to be the large ſpreading of the *Aſian* and *American* Continents, which (ſomewhat Northward of theſe Parts) if they be not fully joined, yet ſeem they to come very near one to the other; from whoſe high and Snow-covered Mountains the North and North-weſt Winds (the conſtant Viſitants of theſe Coaſts) ſend abroad their frozen Nymphs to the infecting of the whole Air with this inſufferable Sharpneſs; not permitting the Sun, no not in the Pride of his Heat, to diſſolve that congealed Matter and Snow which they have breathed out ſo nigh the Sun, and ſo many Degrees diſtant from themſelves. And that the North and North-weſt Winds are here conſtant in *June* and *July*, as the North Wind is alone in *Auguſt*, and *September*, we not only found it by our own Experience, but were fully confirmed in the Opinion thereof by continual Obſervations of the *Spaniards*.

“Hence comes the Squalidneſs and Barrenneſs of the Country; hence comes it, that in the midſt of their Summer the Snow hardly departeth even from their Doors, but is never taken away from their Hills at all; hence come thoſe thick Miſts and moſt ſtinking Fogs, which increaſe ſo much the more by how much higher the Pole is raiſed, wherein a blind Pilot is as good as the beſt Director of a Courſe; for the Sun ſtriving to perform his natural Office in elevating the Vapours out of theſe inferior Bodies, draws neceſſarily abundance of Moiſture out of the Sea; but the nipping Cold (from the former Cauſes) meeting and oppoſing the Sun's Endeavours, force him to give over his Work imperfect, and inſtead of higher Elevation, to leave, in the loweſt Regions wandering upon the Face of the Earth and Waters, as it were a ſecond Sea, through which its own Beams cannot poſſibly pierce, unleſs ſometimes when the ſudden Violence of the Winds doth help to ſcatter and break thro' it, which thing happeneth very ſeldom, and when it happeneth is of no Continuance. Some of our Mariners in this Voyage had formerly been at *Wardhouſe*, in 72 Degrees of North Latitude, who yet affirmed that they felt no ſuch nipping Cold there in the end of Summer, when they departed thence, as they did now in theſe hotteſt Months of *June* and *July*. And alſo from theſe Reaſons we conjecture, that either there is no Paſſage at all through thoſe Northern Coaſts (which is moſt likely) or, if there be, yet it is unnavigable. Add hereunto, that though we ſearched the Coaſt diligently, even unto the forty-eighth Degree, yet found we not the Land to trend ſo much as one Point, in any Place, towards the Eaſt; but rather running on continually North-weſt, as if it went directly to meet with *Aſia*; and even in that Height, when we had a frank Wind to have carried us through, had there been a Paſſage, yet we had a ſmooth and calm Sea, with ordinary flowing and reflowing, which could not have been, had there been an Opening, of which we rather infallibly concluded than conjectured that there was none.”

This ſhews us clearly Mr. *Fletcher's* Opinion, and he gives us likewiſe a very large and full, to ſay the Truth, a very tedious and trifling Account of their Landing and Stay here; of their being taken for Gods by the Natives, and of their attempting to offer Sacrifices to them, with which, I ſuppoſe, the Reader will eaſily diſpenſe; but after this he comes to the Point, and tells us, That theſe People behaved extremely well during their Stay; and that their King, in teſtimony of his Reſpect for, and Submiſſion to, Captain *Drake*, preſented him with the Enſigns of his Regal Dignity; which he received as a Reſignation of his Kingdom to the Queen his Miſtreſs, in whoſe Name, and on whoſe Behalf, he took Poſſeſſion of it, and ſet up a wooden Croſs, with a Braſs Plate and a proper Inſcription, in Teſtimony thereof. This Country he called *New Albion*, and this for two Reaſons; the firſt was, becauſe of its white Cliffs; the other, that it might have ſome Affinity, as Mr. *Fletcher* expreſſes it, in Name with our own Country, which was ſome time ſo called.

He afterwards acknowledges, that upon taking a View of the Inland Parts, they found them very rich and fertile, contrary to their Expectations; but as to the People, he allows, that, both on the Coaſt and within Land, their Behaviour was perfectly uniform, and they had no Reaſon to complain of them, but rather to commend and applaud them. It is very true, that Mr. *Fletcher's* Account of Sir *Francis Drake's* Voyage is by much the largeſt, but I am far from eſteeming it the beſt: I inſerted ſo long a Paſſage from it, that the Reader might be able to judge of his Performance as well as my Sentiments. He has given us a very extraordinary Deſcription of the exceſſive Cold they met with both at Sea and on Shore, and diſcourſes on it more largely, to ſhew his Capacity and Judgment; yet I do not find that Experience has at all confirmed this, as the Reader will perceive by turning to the other Voyages of *Candiſh*, and thoſe who followed him, and who went to *California* as well as Sir *Francis Drake*.

I mention this the rather, becauſe *Candiſh* was there ſo ſoon after Sir *Francis Drake*; for I find by the original Account of his Expedition, that he was there in *November* 1587, but do not find that he ſaid one Word of its being cold; and tho' it may be objected, that he was in the Southern Part of *California* only, yet the Difference is ſo inconſiderable, that it is impoſſible to reconcile the two Accounts, ſuppoſing them both to be exact. Again, in Sir *Francis Drake's* Voyage, printed by *Hackluit*, it is only ſaid, That in the Latitude of 42 Degrees the Men were extremely pinched with Cold; and finding it increaſe as they ſailed farther North, it was reſolved to alter their Courſe, and ſtand in for the Land more to the South; where they found a good Bay, and a very gentle, friendly, and honeſt People; yet the Truth of the Matter is, that the *Spaniards* had, thirty-ſeven Years before, ſailed along this Coaſt to the Heighth of 44 Degrees, as far as *Cape Mendocino*; and they afterwards diſcovered *Cape Blanco* beyond that, which is a plain Proof that the Cold is not ſo intolerable as Mr. *Fletcher* would make it. But the real Deſign of all his Remarks is, to diſcourage all Hopes of finding a Paſſage this Way into the North Seas, which however was not Sir *Francis Drake's* Opinion, if we may credit what other Writers have told us; and indeed ſo many Abſurdities have been diſcovered in Mr. *Fletcher's* Deſcription of *New Albion*, that Father *Charlevoix* makes no Scruple of calling it a fabulous Country, and from hence takes Occaſion to make ſome Reflections upon Sir *Francis Drake*, which that Gentleman did not at all deſerve.

But to ſhew the Reader the true Deſign of dwelling ſo long upon this Subject I muſt obſerve, that his Account diſcredits *Drake's* Diſcovery extremely, which not only turns to the Prejudice of that great Man's Character, but may likewiſe prove diſadvantageous to this Nation, by giving them a very mean Opinion of what ought to be conſidered as a very noble Acquiſition. The Diſcovery, as I conceive, conſiſted chiefly in his marching up into the Country, which before that Time, it is probable, the *Spaniards* had never done; and with reſpect to our Title to this Country, I conceive it to ariſe from the Good-will and voluntary Submiſſion of the People, Facts as well proved as in the Nature of Things we can expect, and which certainly give us as good (if not a better) Claim to *New Albion*, as the *Spaniards* can ſhew for any Part of their Poſſeſſions.

The Country too, if we might depend upon what Sir *Francis Drake* or his Chaplain ſays, may appear worth the ſeeking and the keeping, ſince they aſſert that the Land is ſo rich in Gold and Silver, that upon the ſlighteſt turning it up with a Spade or Pick-ax, thoſe rich Metals plainly appear mixed with the Mould. It may be objected that this looks a little fabulous; but to this, two ſatisfactory Anſwers may be given; the firſt is, That later Diſcoveries on the ſame Coaſt confirm the Truth of it, which, for any thing I can ſee, ought to put the Fact out of queſtion; but if any Doubts ſhould remain, my ſecond Anſwer will overturn theſe. For I ſay next; That the Country of *New Mexico* lies directly behind *New Albion*, on the other Side of a narrow Bay, and in that Country are the Mines of *Santo Fe*, which are allowed to be the richeſt Silver-Mines in *North America*: Here then is a very valuable Country, to which we have a very fair Title.

But perhaps it may be aſked, How ſhall we come at it, ſince, as Things ſtand at preſent, it ſeems to be the Country in the World moſt out of our Reach? But if it had been ſo, I would not have given myſelf or the Reader ſo much Trouble about it; and therefore I am next to tell him, that if Mr. *Arthur Dobbs*'s Expedition for diſcovering a North-weſt Paſſage ſucceeds, *New Albion* will be a Country very much within our Reach, and, I dare ſay, prove to the full as habitable as the Coaſt of *Hudſon*'s *Bay*; and therefore I hope that this Example will fully ſhew the Uſe and Value of good Collections of Voyages, becauſe it is impoſſible to foreſee all the Advantages that may ariſe from any Diſcovery or Settlement at once, nor is it eaſy to pronounce, that any Diſcovery, how unpromiſing ſoever in its firſt Appearance, is abſolutely uſeleſs, and not worth minding.

This is a Caution of a very ſerious Nature, ſince there is nothing eaſier than for Men of quick Wits and tolerable Learning in other Reſpects, to ridicule Voyages to cold, barren, deſart Countries, and to repreſent that as Folly and Madneſs, which is in truth a moſt noble kind of public Spirit, which, if puſhed ſtill farther than it has ever been, would be attended with Conſequences of ſtill greater Advantage to Mankind, than thoſe that have flowed from it already; and yet theſe have been very beneficial to this and other Nations, as any judicious Man will very eaſily and clearly diſcern, by comparing the State of thoſe Nations, before they addicted themſelves to Commerce, and ſince they have reaped the Profits of it.

11. We have already ſhewn the Right this Nation has to *Newfoundland*; which is an Iſland of a triangular Figure, about the Size of *Ireland*; and, according to the beſt Computation that can be made, about eight or nine hundred Leagues in Circumference: On the North it is ſeparated from the Continent by the narrow Straits of *Belliſle*; on the Weſt it has the Bay of *St. Laurence*; on the South, *Cape Breton* and the Banks; and on the Eaſt it has the Ocean. It lies about ſix hundred Leagues from the *Land's-end* in *England*, and the great Bank is generally looked upon as half way to *Virginia*. There is no Country in the World better furniſhed with Harbours, and it is abundantly ſupplied with freſh Water. The Climate is very hot in Summer, and very cold in Winter, ſo that the Snow lies upon the Ground for four or five Months at leaſt. This is the beſt Account that we are able to give with Certainty about it; for if we read the different Relations written of this Country, by Perſons who ought to have been beſt acquainted with it, we ſhall find them ſo oppoſite and contradictory, that it will be very hard to judge from them, whether it be one of the beſt or worſt Countries in the World.

But by conſidering the Views with which theſe ſeveral Accounts were written, and adverting to the Situation of this Country, between 47 and 52 Degrees of Northern Latitude, we may be eaſily perſuaded that it is no Paradiſe; and yet it is more to the South than our own Iſland; but lying off a Continent very little better than frozen, the Winds which blow over muſt bring along with them Weather very different from ours. It is, however, very certain, that Filberds, Strawberries, ſome Kinds of Cherries, and other ſuch-like Fruits, grow here; and, though Corn and Hay ſucceed but indifferently, yet there is great Plenty of Veniſon, wild Fowl and Fiſh; ſo that with dry Food in plenty from *Europe*, People may live here very comfortably even in Winter, ſince the Country produces Fuel of ſeveral Kinds in abundance.

The great Advantage, however, reſulting from our Poſſeſſion of the Place never depended much upon its Produce; ſo far from it, that one of the beſt Writers upon the Trade of this Nation gave his Opinion clearly, that it was more for our Intereſt there ſhould be no Settlements upon it at all; which, in my Judgment, he has by unanſwerable Arguments made good; but the Value of *Newfoundland* to this Crown and Country reſults from the Fiſhery upon its Coaſts, and upon the Banks near it, which has been, and ſtill is, of ineſtimable Benefit, for Reaſons that ſhall be preſently given. It is very certain, that we did not proſecute our Diſcoveries in and about this Iſland, or attend to the Advantages that might be made from the Fiſhery, in many Years after *Cabot* had taken Poſſeſſion of it; but I do not however believe, that we ever left or deſerted it, as ſome Writers would have us believe, and that we did not claim it again till the Reign of Queen *Elizabeth*. I am, on the contrary, perſuaded, that ſome of our fiſhing Veſſels reſorted yearly to this Coaſt, though perhaps not many; and this, for two Reaſons; firſt, becauſe the unſettled State of our Affairs kept the beſt part of our Seamen one way or other in the public Service; and next, becauſe we had a great Fiſhery, at that time, on the Coaſt of *Iceland*.

But that we really kept Poſſeſſion of the *Newfoundland* Fiſhery all that time may, I think, be undeniably proved by two Arguments likewiſe: The one taken from the Act of Parliament before-mentioned, in the ſecond Year of the Reign of *Edward* the VIth, which would have been needleſs, if this Fiſhery had not ſubſiſted; and the other from the Account given us of the State of this Fiſhery in 1578, by Mr. *Parkhurſt*, which is very curious, and yet little taken Notice of. He tells us, that in this Year there were about fifty Sail of *Engliſh* Ships employed upon that Coaſt; but he tells us likewiſe, that there were one hundred Sail of *Spaniards*, beſides twenty or thirty Sail of *Biſcayneers*, fifty of *Portugueze*, and one hundred and fifty *French*. He adds another Circumſtance, which is ſtill more to our Purpoſe; and it is this, that wherever the *Engliſh* fiſhed, they were reputed Lords of the Harbour, and exerciſed an Authority over other Nations, by making uſe of their Boats when they had Occaſion for them; which makes it plain to me, that we conſtantly kept up our Title, for otherwiſe it is impoſſible to give any Reaſon why we ſhould have exerciſed this Dominion, where we were ſo far from being the moſt powerful. An immemorial Cuſtom was Foundation enough for ſuch a Practice, and nothing but this could be eſteemed ſo.

He tells us alſo, that our own Ships were the ſtrongeſt, largeſt, and beſt equipped; and that, by this Means, we protected our own Trade and the Trade of other Nations, which is a Confirmation of what I have obſerved; he ſays, that next to ours the *Spaniards* were the beſt equipped, and he computes the Tonnage of theſe Veſſels at about ſix thouſand, and the *French* at about ſeven thouſand, Ton; but the *Portugueze*, he ſays, were the worſt equipped of all. As for the *Biſcayneers*, they were chiefly employed in Whale-Fiſhing, and in making Train-Oil. The great Conſequence of this Trade to our Nation aroſe from hence; that, in the firſt Place, it raiſed a vaſt Number of Seamen, and thoſe the beſt and ableſt that were any where bred, ſo that, even at this time, there could not be fewer than two thouſand employed therein. Next, it gave Bread to a vaſt Number of Manufacturers and Mechanics, ſuch as Ship and Boat-Builders, &c. Thirdly, it produced a great deal of Money from the Sale of the Fiſh. Fourthly, almoſt all the Proviſions conſumed in *Newfoundland*, ſuch as Bread, Beef, Pork, Butter, Cheeſe, Linnen, and Woollen, Cloths, Nets, Hooks, and Lines, were all furniſhed from *England*; to which we may add, that theſe Veſſels being fitted out in *March*, and returning in *September*, they not only brought Home a Number of People full of Money, which they ſpent in *England*, but they alſo left us a certain Proportion of ſtout able Seamen, freſh Men going out in their room, and becoming in a Voyage or two as good Mariners as themſelves.

Thus it clearly appears, how this bleak, barren, and inhoſpitable Country came to be of ſuch Conſequence; which was very ſoon diſcerned by the wiſe Miniſtry of Queen *Elizabeth*, towards the Cloſe of whoſe Reign it grew to ſuch a Height that we employed yearly two hundred Sail and upwards of Fiſhing Veſſels, and on board them upwards of eight thouſand Seamen, a clear Proof of the Improvements that were then made in the Space of twenty Years; and which confirms, beyond Queſtion, what I remarked at the Cloſe of the preceding Paragraph, that all Diſcoveries are of uſe, and every Branch of Navigation worth looking after, and keeping. If the Reader conſult other Accounts of *Newfoundland*, within this Period of Time, he will ſee that I have not been much aſſiſted by them, but that I have ſet the Subject in a new Light, from Facts of which they have taken little or no Notice.

But I come now to ſpeak of thoſe that are more generally known, and of the famous Patent of Sir *Humphrey Gilbert*, which is one of the firſt of them. This Gentleman was a Native of *Devonſhire*, had a good Fortune, was well allied, had a competent Knowledge both of military and maritime Affairs, and a generous Deſire to raiſe his private Fortune by the Purſuit of the public Service. It was with this View that he repreſented to Queen *Elizabeth* the Expediency of ſettling all thoſe Countries upon the Continent of *America*, which had been formerly diſcovered by *John* and *Sebaſtian Cabot*, becauſe, otherwiſe, it was not at all unlikely that the *French*, who had often reviewed theſe Places, would be deſirous of ſupplanting the *Engliſh*, and becauſe it was very far from being improbable that thoſe Countries abounded with very rich Minerals. Upon theſe Suggeſtions very full Letters Patents were granted by the Queen to Sir *H. Gilbert*, his Heirs and Aſſigns, with free Leave, not only to diſcover, but to plant and ſettle, and even to fortify and build Caſtles, in any of theſe northern Countries, not then in the Poſſeſſion of any Chriſtian Prince, with Authority to govern ſuch Colonies, according to the known Laws of the Land, with ſeveral other Clauſes, equally well contrived for ſecuring this Grant from becoming any way injurious to the Public.

After obtaining this Favour from the Queen, our worthy Knight applied himſelf to his Relations and Friends, in order to frame a Society capable of carrying this Deſign into Execution; and he met with ſuch Succeſs therein, that he thought himſelf very ſoon in a Condition to undertake a Voyage for this Purpoſe; yet, when it came to the Point, Things fell out very croſly; for ſome of his Aſſociates began to form particular Projects inconſiſtent with his general Scheme, and others abſolutely failed in performing their Engagements; which, however, did not hinder this gallant Gentleman from putting to Sea, with ſuch of his Friends as had ſtuck cloſe to their Promiſes; but the Voyage proved very unfortunate, and was attended with the Loſs of one of his beſt Ships, in which was Mr. *Miles Morgan*, whom he much eſteemed, and ſeveral other Perſons of Worth and Figure. This was a ſevere Blow, which he was the leſs able to ſuſtain, as having already ſuffered extremely in his Fortune, by the Money he had been obliged to advance to ſupply other Mens Deficiencies; and therefore he was conſtrained to aſſign Part of his Patent to other Perſons, who were to make Settlements in the northern Parts of *America* about the River of *Canada*; but theſe People proving likewiſe very dilatory, he found himſelf obliged to think of another Expedition, in Perſon; becauſe his Patent was to expire, if within the Space of ſix Years he had not actually gained Poſſeſſions under it.

In the Spring of the Year 1583 he had again brought this Deſign into ſome Order, and to furniſh the neceſſary Expences thereof he was obliged to ſell his Eſtate, though he had great Aſſiſtance from his Friends; and ſeveral Gentlemen of Rank and Fortune agreed to go with him in Perſon; with this View a ſmall Squadron was fitted out, conſiſting of the following Veſſels, *viz.* the *Delight* (or *George*), of one hundred and twenty Tons, Admiral, in which went Sir *Humphrey* himſelf, as General, *William Winter*, Captain, and part Owner, and *Richard Clark*, Maſter; the Bark *Raleigh*, fitted out by Mr. *Walter Raleigh*, of two hundred Tons, Vice-Admiral, Mr. *Butler*, Captain, and *Robert Davis* of *Briſtol*, Maſter; the *Golden Hind* of forty Tons, Rear-Admiral, Capt. *Edward Hayes*, Commander and Owner, and *William Cox*, of *Limehouſe*, Maſter; the *Swallow*, of forty Tons, *Maurice Brown*, Captain; the *Squirrel*, of ten Tons, *William Andrews*, Captain, and one *Cade*, Maſter. In all theſe Veſſels were ſhipped about two hundred and ſixty Men, among whom were many Shipwrights, Maſons, Carpenters, Smiths, Miners, and Refiners. The Reſolution of the Proprietors was, that the Fleet ſhould begin its Courſe northerly, and follow as directly as they could the Trade-way to *Newfoundland*, from whence, after having refreſhed and ſupplied themſelves with all Neceſſaries, their Intent was to proceed into the South, and not to paſs by any River or Bay, which, in all that large Tract of Land, ſhould appear worthy their looking into; they likewiſe agreed upon the Manner of their Courſe, and the Orders to be obſerved in their Voyage, which were delivered to the Captains and Maſters of every Ship in writing.

The 11th of *June* they ſet ſail from *Cauſet Bay*, near *Plymouth*; but, on the 13th, their large Ship the *Raleigh*, under Pretence that her Captain and a great Number of her Men were ſuddenly taken ill of a contagious Diſeaſe, left the Fleet and returned to *Plymouth*; ſome ſay in great Diſtreſs, but others, that it was done with a Deſign to break the Voyage. After her Departure the *Golden Hind* ſucceeded her in Place as Vice Admiral. The 30th of *July* they had the firſt Sight of Land, as they computed it about 51°, but with ſuch foggy Weather, that they could not poſſibly perceive the Land, nor take the Sun's Heighth: From thence they followed the Coaſt to the South, with clear Weather, till they came to the Iſland called *Baccaloas*; here they met with the *Swallow*, which had been ſeparated from them in the Fog, but were ſurprized to ſee her Men in a different Garb from what they had on when they left them; upon Enquiry, they found they had met a *Newlander* fiſhing Bark returning homewards, which they had rifled of Tackle, Sails, Cables, and Proviſions, and the Men of their Apparel. Continuing the ſame Courſe Southward, they came the ſame Day, being the third of *Auguſt*, to the Harbour of *St. John*; where they found the *Squirrel*, which had likewiſe been ſeparated from them, riding at Anchor at the Mouth of the Harbour; having been refuſed Entrance by the Veſſels which were fiſhing within, to the Number of thirty-ſix ſail of all Nations. Sir *Humphrey* was preparing to make good his Paſſage by force of Arms; but having firſt ſent in his Boat to inform the Maſters of the fiſhing Barks, that he had a Commiſſion from the Queen to take Poſſeſſion of theſe Lands for the Crown of *England*, they were ſatisfied, and ſubmitted to the levying a Tax of Proviſions from each Ship, for ſupplying the Wants of Sir *Humphrey*'s ſmall Squadron. Going into the Harbour, the Admiral's Ship was by the Careleſſneſs of the Men run upon a Rock, which lay viſible above Water: But, by the Aſſiſtance of the Fiſhermens Boats, ſhe was got off again, with little or no Damage.

On the 4th Sir *Humphrey*, whom they called the General, and his Company were conducted on Shore by the Maſters of the *Engliſh* fiſhing Veſſels, and their Owners or Merchants who were with them. On the fifth the General, having cauſed a Tent to be ſet up in View of all the Ships in the Harbour, to the Number of between thirty and forty Sail, and being accompanied by all his Captains, Maſters, Gentlemen, and Soldiers, ſummoned all the Merchants and Maſters, both *Engliſh* and Foreigners, to be preſent at his taking a formal, and ſolemn Poſſeſſion of theſe Territories. Being aſſembled he cauſed his Commiſſion, under the great Seal of *England*, to be openly read before them, and to be interpreted to thoſe who were Strangers to the *Engliſh* Tongue.

By Virtue of this Commiſſion, he declared that he took Poſſeſſion of the Harbour of *St. John*, and two hundred Leagues every way, inveſted her Majeſty with the Title and Dignity thereof; and having had (according to Cuſtom) a Rod, and Turf of Soil delivered to him, entered Poſſeſſion alſo for himſelf, his Heirs, and Aſſigns, for ever. He ſignified to thoſe who were preſent, and through them to all Men, that from thenceforward they ſhould look upon thoſe Territories as appertaining

taining to the Queen of *England*, and himſelf, authorized under her Majeſty to poſſeſs and enjoy them, with Power to ordain Laws for the Government thereof, agreeable (as near as conveniently could be) to the Laws of *England*; under which, all People coming thither for the future, either to inhabit, or by way of Traffic, ſhould ſubmit and be governed. Some Writers have attributed all this Solemnity, which, however, was attended with many other Ceremonies, to a high Degree of Vanity, in our Weſt-country Knight; and have ridiculed ſeverely his Pretences to improve the Trade of this Kingdom and enlarge the Queen's Dominions, by cutting a Turf; in which, however, they injure this poor Gentleman's Memory extremely, and ſhew how little they are qualified to give their Readers a true Account of Things of this Nature.

The plain Reaſon of Sir *Humphrey*'s Conduct throughout this Affair, was his Concern for his Grant, which was perpetual to him and his Heirs, in caſe he took Poſſeſſion of any Countries within ſix Years, and otherwiſe it was void: There were now but a few Months to come. He had ſold his Eſtate in *England*, and it concerned him very nearly to ſecure an Eſtate ſomewhere elſe; and therefore it was not from any Principle of Vanity, but rather of Prudence and good Oeconomy, that he did this; as appears by his granting ſeveral Parcels of Land to Perſons, who covenanted to pay a certain Rent to him and his Heirs, and to maintain Poſſeſſion by themſelves and their Aſſigns.

There now remained only to gather in the Tax of Proviſions granted by every Ship which fiſhed upon the Coaſt adjoining; and while ſome of the Men were doing this, others were ſet to repair and trim the Ships; and the Remainder the General ſent to enquire into the Commodities and Singularities of the Country, which were to be found by Sea or Land. They found no Inhabitants in the South Parts, which probably the Natives had abandoned, upon their being ſo much frequented by *Europeans*. In the North there were Savages of a very harmleſs Diſpoſition; among other Inquiries, the General had, in a particular Manner, recommended a Search after Metals. They had in their Company a *Saxon* Miner, who at firſt brought a ſort of Ore to the General, which had more the Reſemblance of Iron than of any other Metal. Soon after he found another Sort of Ore, which he delivered with a Shew of great Satisfaction to Sir *Humphrey*, and aſſured him, upon the Peril of his Life, that if Silver was what he and his Companions ſought, there it was, and they need ſeek no farther. We learn all theſe Circumſtances from Captain *Edward Hayes*, who ſeems, by his Writing, to have been a very intelligent Perſon; and therefore he enquired very ſtrictly about this Silver-Mine, which procured him ſuch an Anſwer from the General, as ſhewed that he was abſolutely ſatisfied on that Head; and I muſt own I ſee no Reaſon to doubt there being Silver-Mines in this Country, ſince we know they are generally found in cold Climates, and in a hungry barren Soil; and, as to the northern Situation, we are certain that there are rich Silver-Mines in *New-Mexico*, a Country not far to the Southward of *Newfoundland*; and Silver Ore has been found in *Scotland* ſeveral Degrees further to the North than it is ſuppoſed to have been found here.

But though Sir *Humphrey* was very well ſatisfied with the Account his *Saxon* gave him, yet he thought himſelf obliged to proceed in his Diſcoveries Southward; for which while he was providing ſome of his Men fell ſick, ſome deſerted, ſome died, and ſome fell to plundering and Piracy: In ſhort, the Number of his People was ſo leſſened, that he was conſtrained to leave the *Swallow* behind him. The Captain of his Admiral going home, Captain *Brown* of the *Swallow* took the Command of the Admiral, and the Captain of the *Squirrel* deſerting likewiſe the Expedition, Sir *Humphrey* went on board that little Veſſel himſelf; as thinking her the fitteſt for obſerving and diſcovering the Coaſt, becauſe ſhe could run into every Creek, which a larger Ship could not do. All Things being now ready, and Plenty of Proviſions of all Sorts being put on board, they ſailed on the 20th of *Auguſt* from the Harbour of *St. John*, with three Ships, the *Delight*, the *Golden Hind*, and the *Squirrel*, and proper Boats and Pinnaces for Diſcovery. Before their Departure they made an exact Obſervation of *St. John*'s Harbour, and found it to be in the Latitude of 47° 40′ North. The next Night they reached *Cape Race*, which is twenty-five Leagues diſtant; and from thence ſailed about eighty-ſeven Leagues towards *Cape Breton*.

All this Time they had the Wind indifferently good, but never could get Sight of the Land, being hindered by the Currents; at laſt they unhappily fell into thoſe Flats and Sholes in which moſt of them periſhed. On the 27th the General ordered his Men in the Frigate to ſound, and found thirty five Fathom white Sand, in the Latitude of 44°. The Wind coming South, the next Evening they bore in with the Land, all the Night Weſt North-weſt, contrary to the Advice of Mr. *Cox*, Maſter of the *Golden Hind*. On the 29th the Wind blew vehemently at South and by Eaſt, with Rain, and ſo thick a Miſt, that they could not ſee a Cable's-length before them. Early in the Morning they found themſelves in the midſt of Shoals and Sands, among which they found ſometimes deep, ſometimes ſhole Water, every three or four Ship's-length. After they began to ſound, a Signal was immediately given to the *Delight* to caſt about to the ſeaward, but it was too late; for ſhe ſtruck immediately, and her Stern and Hind-Quarters preſently beat to Pieces. Upon which the *Golden Hind* and the Frigate caſt about Eaſt South-eaſt, bearing to the South, which carried them to the ſeaward, and with much Difficulty got clear of the Sholes.

In the *Delight* periſhed Captain *Maurice Brown*, with near one hundred Perſons: The Captain might probably have ſaved his Life, if he would have left the Ship when ſhe firſt ſtruck, but he would not be the firſt to ſet an ill Example. In the mean time fourteen Perſons leaped into a ſmall Pinnace of a Ton and a half Burden, no bigger than a Thames-Barge. They looked out ſome time for the Captain, but not ſeeing him took in Mr. *Clark*, the Maſter of the *Delight*, and one more: Being now ſixteen in Number, they cut the Rope and committed themſelves to the Mercy of the Waves, without any Proviſions, or a Drop of freſh Water, and nothing to work with but one ſingle Oar. The Boat ſeeming to be over-loaded, one *Edward Headly*, thinking it was better for ſome to periſh than all, propoſed to caſt Lots, and that four of the Number, upon whom the Lot might fall, ſhould be thrown over-board to lighten the Boat: But he was over-ruled by Mr. *Clark*; who though it was propoſed that he ſhould be excepted from the Number, perſuaded his Comrades rather to ſubmit to Providence. The Boat was driven before the Wind ſix Days and ſix Nights, during which time theſe poor Wretches had no other Suſtenance than their own Urine, and ſome Weeds which ſwam on the Surface of the Water; and in this Extremity of Cold, Wet, Hunger, and Thirſt, only *Headly* and one more periſhed the fifth Day; but the other fourteen lived till they were driven the Seventh Day on Shore, on the Coaſt of *Newfoundland*; whence they got in a *French* Ship to *France*, and ſo to *England*, before the Year's End. During their ſeven Day's dangerous Courſe they had the Wind always at South, which ſaved their Lives; and it is very remarkable, that in half an Hour after they were on Shore it came about and blew full North.

After the Loſs of the Admiral the Men being generally diſcouraged, and in want of Neceſſaries, Sir *Humphrey Gilbert* propoſed returning to *England*, having, in his Judgment, made Diſcoveries ſufficient to procure Aſſiſtance enough for a new Voyage in the Spring. His People, when he made this Propoſal, were at firſt a little backward, but, upon hearing his Reaſons, they ſubmitted; and, according to his Advice, on the laſt of *Auguſt* they altered their Courſe, and returned back for *England*. On the ſecond of *September* they paſſed in Sight of *Cape Race*, and had afterwards frequently very bad Weather, with ſuch high Seas, that they in the *Hind* often expected to ſee the *Squirrel* ſwallowed up; notwithſtanding which, Sir *Humphrey* would by no means be perſuaded to leave her. On the 9th, the Storms and Swelling of the Seas increaſing,

creaſing, he was again preſſed to leave the Frigate, but his Anſwer his, *We are as near to Heaven by Sea as by Land.* About Midnight the Squirrel being a-head of the *Golden Hind*, her Lights were at once extinguiſhed, which thoſe in the *Hind* ſeeing, cried out, *Our General is loſt!* and it was ſuppoſed ſhe ſunk that inſtant, for ſhe was never more heard of.

The *Golden Hind* arrived in Safety at *Falmouth*, on the 22d of *September*, more fortunate than her Companions; not only as ſhe returned, but as ſhe loſt but one Man during the whole Courſe of this unfortunate Undertaking. Such was the End of this Expedition, very diſaſtrous to its Author; who loſt firſt his Fortune, and then his Life, by it; to which, if the Sallies of ſome diſtempered Mens untimely Wit could effect it, we might add his Reputation alſo. Yet to this Expedition I make no Scruple of imputing all our ſucceeding Colonies in *America*; and the Grounds of this Opinion of mine, which I muſt confeſs is new, I lay down thus:

12. We have before ſhewn that Sir *Humphrey Gilbert* was a Man of great Intereſt and Alliances: For, beſides his eldeſt Brother Sir *John Gilbert*, and his younger Brother Sir *Adrian Gilbert*, who were of the whole Blood, he was, by the Mother's Side, Brother alſo to Sir *Walter Raleigh*, who had a great Concern in this Undertaking; and who is on good Grounds allowed to have been one of thoſe true, brave, and ſteady Friends, who went to Sea with him in his firſt Attempt, which there is juſt Reaſon to believe was in 1579. This great Man, after Sir *Humphrey Gilbert*'s Miſcarriage and Loſs in his laſt Voyage, procured his Patent to be renewed to himſelf, which was dated the 25th of *March* 1584, and he reſolved immediately to carry it into Execution; to which Purpoſe he made choice of two very able Sea Officers, Captain *Philip Amadas*, and Captain *Arthur Burlow*; who, in two ſmall Barks fit for Diſcovery, ſailed from the Weſt of *England* upon the 27th of *April* following, ſhaping their Courſe for the *Canaries*, which they paſſed on the 10th of *June*, and proceeding from thence to the Iſlands of *America*, they croſſed the Gulph of *Mexico*, and ſoon after diſcovered the Coaſt of *Florida*. Some Authors who have written of this Expedition, and who are pleaſed to ſpeak in very high Terms of Sir *Walter Raleigh*'s Skill in maritime Affairs, venture nevertheleſs to affirm, that the Perſons he employed were ſo ignorant of Navigation, that, by the Computation of able Seamen, they went above two thouſand Leagues out of their Way; but as I am very well ſatisfied they purſued Sir *Walter*'s Inſtructions, ſo I cannot help thinking this Imputation of Ignorance ought to be wiped away; and this may be very eaſily done, by ſhewing the true Cauſe why this great and knowing Seaman directed this Courſe: He had obſerved that all the Attempts hitherto had failed, by the Adventurers purſuing their Diſcoveries from the North, which was one Reaſon why he choſe another Rout; beſides which, he had a better and ſtronger Motive; for, conſidering all the Lands on the Continent of *America*, from the laſt Settlements of the *Spaniards* to 60° North, as lying within his Grant, he very prudently choſe to ſettle thoſe firſt, which lay neareſt thoſe *Spaniſh* Settlements; and this was the clear and certain Cauſe of his directing his Servants to take this Courſe; which was ſo far from being a Proof of their Ignorance, that it is a full and fair Teſtimony of their Maſter's extenſive Knowledge.

It was on the 2d of *July* they fell in with the Coaſt of *Florida*, in ſhoal Water, where they ſmelled a moſt delightful Odour, as if they had been in the midſt of a Garden, abounding with the moſt fragrant Flowers, by which they ſuppoſed they were near, though they ſaw no Land. On the 4th they diſcovered the Continent, and ſailed along the Coaſt forty Leagues, till they came on the 13th to a River, where they anchored, and, going on Shore, took Poſſeſſion in Right of the Queen, and for the Uſe of the Proprietors. This Place they afterwards found to be the Iſland of *Wokoken*, on the Coaſt of the Country ſince called *Virginia*, in 34° Latitude; and in it they found Deer, Rabbits, Hares, Fowls, Vines, Cedars, Pines, Saſſafras, Cypreſs, and Maſtic Trees. The Author of the Hiſtory of *Virginia* ſays, that they anchored at the Inlet of *Roenocke*; at preſent under the Government of *North Carolina*. They went to the Tops of the Hills which were neareſt the Shore, from whence, though they were not high, they diſcovered the Sea on all Sides, and found it to be an Iſland of twenty Miles in Length, and ſix in Breadth. It was the third Day before they ſaw any of the Natives; but then, a little Boat, with three of them, appeared: One of them going aſhore, they rowed up to him, and he not only waited their coming without any Signs of Fear, but went on board, where they gave him a Shirt and Hat, with ſome Wine and Meat, which he expreſſed a liking to. After he had, with a ſeeming Satisfaction, narrowly viewed the Barks with all that were in them, he went in his own Boat to above a Quarter of a Mile's Diſtance, where he fiſhed, and in Half an Hour loaded his Boat with Fiſh, as deep as it could ſwim, and came again to the Point of Land; where, to ſhew his Gratitude, he divided it into two Parts; and, making Signs that he deſigned it for the two Ships equally, he departed.

The Natives from the Continent, after this, repaired to their Ships frequently, and exchanged ſeveral Sorts of Skins, white Coral, and ſome Pearls, for ſome Tin things, and other Baubles of inconſiderable Value. The very next Day after they ſaw the three *Indians*, ſeveral Boats appeared in view; in one of which was the King of the Country's Brother, attended by forty or fifty Men of a tolerable good Appearance. They made him, and four of his Chiefs, Preſents of ſeveral Toys, which he accepted of very kindly; but he took all himſelf, and gave them to underſtand that none there had a Right to any thing but himſelf; two Days afterwards they let him ſee their Merchandize, of which nothing ſeemed to pleaſe him more than a Pewter Diſh, for which he gave twenty Deer-ſkins; and, making a Hole in the Rim of it, hung it over his Neck for a Breaſt-plate, making Signs that it would defend him againſt the Enemies Arrows. The next Thing he bought was a Copper Kettle, for which he gave fifty Skins. As long as he thought fit to traffic with them, none, but ſuch as like himſelf wore Plates of Gold or Copper on their Heads were allowed either to buy or ſell; but as ſoon as they had done every Man had his Liberty. They offered very good Exchange for Hatchets, Axes, and Knives, and would have given any Thing in Truck for Swords, but the *Engliſh* would not part with any. The King's Brother came afterwards frequently on board, and would eat, drink, and be merry with them; and once he brought his Wife and Children with him, who afterwards came frequently with their Followers only.

They often truſted the King's Brother with Goods upon his Word, to bring the Value at a certain Time, which he never failed of doing. He had a ſtrong Inclination to have a Suit of Armour and a Sword, which he ſaw in one of the Ships; and would have left a large Box of Pearls in pawn for them, but they refuſed it; that he might not know they ſet a Value upon them, till they could diſcover whence he got them. They underſtood from the Natives, that their Country, which they found to be very fruitful and productive of all Things, in ſo very ſhort a Time as is hardly credible, was called by the Name of *Wingandacoa*, and their King *Wingina*. When they went on Shore they were entertained with extraordinary Civility, and once in particular by the King's Brother's Wife, at a little Village in *Roenocke*. They were told of a great City where the King reſided, ſix Days Journey on the Continent, which, however, they did not ſee; they made no long Stay, nor proceeded any farther on Diſcovery, only juſt to the neighbouring Parts, in their Boats; and, being ſatisfied with what they had ſeen, returned to *England* about the Middle of *September*, pleaſed with the Advantage they had made in this ſhort and proſperous Voyage; and, with the Hopes of the future Advantages they ſhould make, eſpecially as they found all Things here entirely new and ſurprizing.

They gave a very advantageous Account of Matters, by repreſenting the Country ſo delightful and deſireable, ſo pleaſant, and abounding with all the Neceſſaries of Life; the Climate and Air ſo temperate, good and wholeſome, the Woods and Soil ſo charming and fruitful, and all other Things ſo agreeable, that Paradiſe itſelf ſeemed to be there in its native Luſtre. They gave particular Accounts of the Variety of good Fruits, ſome whereof they had never ſeen before; eſpecially, that there were Grapes in ſuch Abundance as were never any where known; ſtately tall large Oaks, and other Timber; red Cedar, Cypreſs, Pines, and other Ever-greens and ſweet Woods, for Tallneſs and Largeneſs exceeding all they had ever heard of. Wild Fowl, Deer, Fiſh, and other Game, in ſuch Plenty and Variety that no Epicure could deſire more than this new World ſeemed naturally to afford. To make it yet more deſireable they reported that the native *Indians*, who were then the only Inhabitants, were ſo affable, kind and good-natured; ſo tractable in learning Trades and Faſhions; ſo innocent and ignorant in all manner of Tricks and Cunning, and ſo deſirous of the *Engliſh*, that they rather ſeemed ready to take any Impreſſion, than any ways like to oppoſe the ſettling of the *Engliſh* near them.

Upon this fair Repreſentation of the Effects of their Voyage, and of the noble Diſcovery that had attended it, Queen *Elizabeth* was pleaſed to promiſe what Aſſiſtance it ſhould be neceſſary for the Crown to give for promoting and perfecting this Settlement; and ſhe was likewiſe pleaſed to beſtow the Name of *Virginia* upon this new found Country; but whether, as is commonly believed, in regard to its being diſcovered under a Virgin Queen, or in Alluſion to the uncorrupted State of the Land and its Inhabitants, is a Queſtion I will not pretend to decide; but perhaps the former was the Senſe impoſed by Sir *Walter*, the compleateſt Courtier ſhall I ſay, or rather the compleateſt Man, of his Time; and the latter the Senſe in which the Queen would have had it underſtood: But howev that matter be, we muſt not confound the *Virginia* of Sir *Walter Raleigh* with the Province now ſo called; for, without all queſtion, it was in thoſe Days a very different Thing, and comprehended the whole Country claimed by the Crown of *England*, from the Southern Limits of the new Province of *Georgia*, to the utmoſt Extent of our Diſcoveries Northwards, agreeable to the two Patents granted to Sir *Humphrey Gilbert*, and to his Brother Sir *Walter Raleigh*.

It was not long before the Proprietors reſolved to fit out a much more conſiderable Fleet than had hitherto been employed in ſuch Undertakings, that ſomething might be done worthy of the Nation, on whoſe Behalf this Settlement was to be made, of the powerful Queen who had protected it, and of himſelf, who was the Author and Patron of this Scheme; Sir *Walter* intended to have commanded in this Expedition himſelf, and to have carried with him a ſufficient Number of Forces to have compleated this Deſign of making a Settlement there; but being at that Time jealous that his Abſence might be prejudicial to his Intereſt at Court, which the Earl of *Leiceſter* ſought all Occaſions to leſſen, he committed the Conduct of this ſecond Enterprize to to his Lieutenant, Sir *Richard Greenville*, who on the 8th of *April*, ſet ſail from *Plymouth* with ſeven Ships fitted out by the Company, of which himſelf and ſeveral Gentlemen were Members; and this Company was the firſt of that kind that was eſtabliſhed in *Europe*: Theſe King *James* incorporated by the Name of the *Governor and Company of the* Weſt-Indies; which, for their Mal-adminiſtration, was diſſolved by his Son King *Charles* I.

On the 26th of *June*, 1585, Sir *Richard Greenville* anchored at *Wokoken*, and in *Auguſt* following they began to plant on the Iſland of *Roenocke*, five Miles diſtant from the Continent, where Sir *Richard* landed one hundred and eight Men, under Governor *Ralph Lane*, and Captain *Philip Amadas*, who was conſtituted Admiral of the new Colony, tho' I do not find he had ſo much as a Bark left with him.

Sir *Richard* did not remain above three Weeks longer in thoſe Seas; but having made ſome Diſcoveries to the Southward, and having traded with the *Indians* for Skins, Furs, Pearls, and other Commodities, he ſailed on the 25th of *Auguſt* on his Return to *England*, in which he took a very rich Prize; ſo that this Voyage appeared to the Eyes of the Nation no leſs proſperous than the former, and the new *Virginia* Company began to entertain very ſanguine Hopes of their Undertaking. Let us now return to the firſt Planters in *Virginia*, and give an Account of what happened to the firſt Colony the *Engliſh* eſtabliſhed there, or in any Part of *America*. Sir *Richard Greenville* was no ſooner ſailed, than the People whom he left behind applied themſelves with Diligence to what had been recommended to them by Sir *Walter Raleigh*, which was the diſcovering the Continent, and with this View they travelled eighty Miles South, and one hundred and thirty North from that Part of the Main oppoſite to their Iſland; but in theſe Expeditions, venturing indiſcreetly too high up the Rivers, and too far into the Country, the *Indian* Governors grew jealous of their Deſigns, and began firſt to be weary of their Company, and then to cut off their Stragglers when they fell into their Hands; and they alſo formed a Conſpiracy to deſtroy the reſt, but were happily prevented.

The Journals of the Colonies Proceedings were duly entered, and afterwards delivered to the Company in *England*, who were not ſo careful as they ſhould have been to ſend them Supplies of Proviſions, and the *Engliſh*, not underſtanding the Nature of the Climate, neglected to gather Food in Seaſon as the *Indians* did, by which means they were reduced to great Straits. The Natives never after kept Faith with them, but watched all Opportunities to cut them off. And as this obliged them to be more wary in their Enterprizes on the Main, ſo it hindered them from having any Supply from thence; however, they endured all with incredible Reſolution, and extended their Diſcoveries near a hundred Miles along the Sea-coaſts. They kept the *Indians* in awe by threatening them with the Return of their Companions and the Reinforcement of Men; but no Ships coming from *England* all that Winter, nor in the Spring following, nor in Summer, they deſpaired of being able to ſupport themſelves any longer, the Natives beginning to deſpiſe them, when they ſaw them as it were abandoned by their Countrymen; and the *Engliſh* expected every Day to be ſacrificed to their Cruelty. In this Diſtreſs their chief Employment was to look out to Sea, in hopes of finding ſome means of Eſcape, or Recruit; and, when they were almoſt ſpent with Want and Watching, Hunger and Cold, in *Auguſt* they diſcovered Sir *Francis Drake*'s Fleet, who was returning from an Expedition againſt the *Spaniards* in *North America*, and had been commanded by the Queen to viſit this Plantation in his Way, and ſee what Encouragement or Aſſiſtance they wanted.

The Sight of Sir *Francis*'s Fleet was moſt joyful to theſe poor People: Their firſt Petition to him was to grant them a Supply of Men and Proviſions, with a ſmall Ship or Bark to attend them, that, in caſe they could not maintain themſelves where they were, they might embark in it for *England*. Sir *Francis* granted their Requeſt; and they ſet all Hands to work to fit the Ship he had given them, and furniſh her with all manner of Stores for a long Stay; but a Storm ariſing, which drove the Veſſel from her Anchor to Sea, and the Ship ſuffering ſo much in it that ſhe was not fit for their Uſe, they were ſo diſcouraged, that, notwithſtanding Sir *Francis* offered them another Ship, they were afraid to ſtay, and earneſtly entreated him to take them with him, which he did: And this put an end to the firſt Settlement.

It was not at all owing to any Negligence in Sir *Walter Raleigh* that this Misfortune happened; for he continually preſſed the Company to reflect on the Neceſſity of ſupporting the Colony in time, and ſo ſollicitous he was in this Buſineſs, that, finding the Fleet which was preparing under the Command of Sir *Richard Greenville* went on but ſlowly, he propoſed that the firſt Ship that was completely manned and equipped, ſhould be ſent, without ſtaying for the reſt, which was done; but when ſhe arrived at the Iſland *Roenocke*, ſhe found it deſerted. A few Days after came Sir *Richard Greenville* with his Squadron of three ſmall Veſſels, and found not a Man upon the Place, to his great Diſappointment; however, he reſolved to ſettle again, and therefore left behind him fifty Men, with Directions to build a Houſe, or rather

Fort, for their own Security, furniſhing them beſides with all Neceſſaries for two Years, and giving them the ſtrongeſt Aſſurances, that they ſhould be conſtantly and regularly ſupplied.

This ſecond Colony had no better Fortune than the firſt; for the *Indians*, taking Advantage of the Smallneſs of their Number, and the Difficulties they had to ſtruggle with, attacked and cut them off; ſo that when Mr. *John White* came thither with three Ships, and conſiderable Supplies, on the 22d of *June*, 1587, he found their Fort demoliſhed, ſome Huts they had erected near it deſtroyed, and not far from them the Bones of a dead Man. In all theſe Revolutions *Manteo*, the *Indian*, remained firm to the *Engliſh* Intereſt, and it was from his Information that Mr. *White* learned what was become of this laſt Colony.

The Misfortunes that had attended theſe two Settlements, would certainly have diſcouraged a Man of leſs Conſtancy and Fortitude than Mr. *White*; but he had a Commiſſion to be Governor, and Sir *Walter* had ſtrongly recommended to him the keeping Poſſeſſion of the Place. He therefore erected a new Habitation, and, chuſing eleven of the moſt capable Perſons that came along with him, conſtituted a regular Society, to which he gave the Title of the *Governor and Court of Aſſiſtants of the City of* Raleigh *in* Virginia, hoping they might be able to retrieve the Credit of this Undertaking, and conduce to the Improvement of the Commerce and Navigation of his Country, and thereby anſwer the Expectations of his honourable Patron, whoſe Name he had given to his new Plantation. On the 13th of *Auguſt Manteo*, the faithful *Indian*, was chriſtened, and created by the Governor *Lord of Daſſumonpeak*, an *Indian* Nation ſo called, as a Reward of his Fidelity and Service to the *Engliſh*; and on the 18th of the ſame Month was born the firſt Child that was the Iſſue of Chriſtian Parents in that Place, being the Daughter of Mr. *Ananias Dare*: She was, after the Name of the Country, chriſtened *Virginia*. Good Government and Induſtry ſoon rendered Mr. *White* and his Men formidable to the *Indians*, who courted their Friendſhip, and made Leagues with the Corporation, which they kept or broke as they thought themſelves too weak or too ſtrong for the *Engliſh*, who, as much as they ſeemed to thrive, underwent ſo many Hardſhips for want of due Supplies from *Europe*, that nothing but the invincible Conſtancy, which is the diſtinguiſhing Character of their Nation, could have ſupported them in the midſt of ſo much Miſery.

Yet ſo far were they from repenting of their Undertaking, or deſiring to return, that they diſputed for the Liberty of remaining at *Roenocke*, and obliged Mr. *White* their Governor to return for *England*, and ſollicit the Company to ſend them Recruits of Men and Proviſions. Mr. *White* undertook to negociate their Affairs; and, leaving 150 Men in the Corporation, ſet ſail for *England*, where he arrived in Safety, and was two Years there before he could obtain a Grant of the neceſſary Supplies. At laſt he had three Ships fitted out for him, with Proviſions and more Men for the Colony. And on the 15th of *Auguſt* he arrived at *Cape Hatteras*; and, landing on the Iſland *Roenocke*, found by Letters cut on Trees, in large Roman Characters, that the *Engliſh* were removed, but he could not tell where. They ſaw the Letters C. R. O. on ſeveral Trees; and, ſearching farther, on one of the Paliſadoes of the Fort which they had quitted, they found cut in large Capital Letters the Word *Croatan*, one of the Iſlands forming the South, about twenty Leagues ſouthward of *Roenocke*. On this Advice, they embarked in queſt of their Fellows at *Croatan*; but they were ſcarce all of them aboard, before a dreadful Storm aroſe, which ſeparated the Ships one from another. They loſt their Anchors and Cables, and durſt not venture in with the Shore, ſo they all ſhifted for themſelves, and, with various Fortunes, arrived in *England* and *Ireland*.

This dreadful Blow proved the Ruin of the third Settlement, of which I do not find that the Company took any farther Care, or that any new Attempt was made for preſerving the Poſſeſſion of this Country to the Crown of *England*, which had been ſo highly magnified, and the Advantages thereof painted in ſuch ſtrong Colours at the Beginning. Some have attributed this to Sir *Walter Raleigh*'s Troubles; but ſurely they were but indifferently acquainted with his Hiſtory, ſince it was during the latter Part of Queen *Elizabeth*'s Reign that he ſtood in the higheſt Credit at Court, and was moſt capable of procuring Favour from it. But that I may not leave this Subject altogether dark and imperfect, I ſhall venture to ſuggeſt what appears to me to be the true Reaſon why there was no more Care taken of ſo promiſing a Scheme as this was of which we are writing. Sir *Walter Raleigh*, as very clearly appears from his manner of conducting it, had the public Service alone in View, which induced him to throw the Concerns of this Colony into the Hands of a Company, in which, no doubt, he thought he had provided for them effectually, and therefore turned his own Thoughts and moſt vigorous Endeavours to other Purpoſes, in which he was ſo entangled, that he found it impoſſible to diſengage himſelf, when he ſaw their Negligence, and foreſaw the Conſequences of it, which were fatal to a Settlement that coſt him ſo much Pains, and of which he had once ſo great Hopes.

13. But neither the Buſineſs of Planting, nor the Profits reſulting from military Expeditions, could hinder ſuch as were addicted to the Study of Maritime Affairs from wiſhing to ſee the new Paſſage to the *Indies* fairly opened. And notwithſtanding many Attempts had been made to very little Purpoſe, yet no conſiderable Mariner, no Man of Reputation for Coſmographical Learning, could propoſe any reaſonable Scheme for this Purpoſe; but there were Merchants enough ready to lend their Aſſiſtance, and to lay down whatever Money was requiſite for carrying it into Execution. This Freedom and Readineſs of venturing their private Fortunes for the Public Service, was certainly very honourable and commendable; but they did ſtill more; for they did not only proſecute ſuch Attempts like Merchants, but adhered to them with a philoſophic Firmneſs; ſo that when a Man returned without Succeſs, and plainly ſhewed that he had done his Duty, and that there were ſtill Hopes, they encouraged, they rewarded, they fitted him out again and again: But this was an Age of public Spirit; the People went eagerly into whatever great Miniſters propoſed; moſt of thoſe Miniſters had only the Service of their Miſtreſs at Heart; and the Queen herſelf was truly the Mother of her People.

In ſuch a Reign it was natural that Wonders ſhould be done, and it happens very luckily for thoſe who celebrate theſe Wonders, that they are able to maintain all that they aſſert, by inconteſtable Evidence; an Inſtance of which we ſhall give in a ſuccinct Account of the Voyages of Capt. *John Davis*, for the Diſcovery of the North-weſt Paſſage; which, however, ſhould not have been brought in here, but have been referred to another Section, if we had not found them neceſſary to ſhew the Limits of our Diſcoveries in the northern Parts of *America*; and having thus opened the true Deſign of his Attempts, we ſhall proceed to the Narrative of them, in ſuch a manner, as to render the Nature and Succeſs of his Enterprizes as clear as it is poſſible. In order to this, it is requiſite to obſerve, that before his firſt Voyage was undertaken, there was a Deſign of attempting to diſcover a North-weſt Paſſage formed by ſome Traders of the Weſt of *England*; who, when they underſtood that the like Project had been ſet on foot at *London*, propoſed joining their Forces, which was accepted; and Mr. *William Sanderſon*, Merchant of *London*, who was both a principal Man in the Undertaking, and a large Contributor towards the Expence, recommended Capt. *John Davis* as a proper Perſon to have the Direction of this Enterprize; and he was accordingly appointed Commander of the *Sun-ſhine* of *London*, a Bark of 50 Tons, on board of which were three and twenty Perſons, and, in Conjunction with the *Moon-ſhine* of *Dartmouth*, a Veſſel of thirty-five Tons, with nineteen Perſons on board, they ſailed from the laſt mentioned Port on their Voyage for Diſcovery, *June* 7, 1585.

On the 14th of the ſame Month they were forced into one of the *Sylley*, or, as it is now written, the *Scilly Iſlands*, where being detained for a Fortnight, Capt. *Davis* ſhewed his active and indefatigable Genius, by making an accurate Chart of them, which was a thing, at that time, very much wanted. On the 28th they ſailed from thence, and continued their Courſe to the North-weſt, till on the 19th of *July* they came into a whirling Tide, which ſet Northwards, and ſailing about half a League into a very calm Sea, which bent South-ſouth-weſt, they heard a mighty Roaring, as if it had been the Breach of ſome Shore, which could not but be very terrible, ſince the Weather was ſo foggy that they could not ſee from one Ship to another, though at a very ſmall Diſtance. Upon this the *Moon-ſhine* was ordered to hoiſt her Boat out to ſound; but they could find no Ground in three hundred Fathoms and better: Then the Captain, the Maſter, and Mr. *Jane*, who wrote this Account, went towards the Beach to ſee what it was, and it proved to be ſeveral Iſlands of Ice which were broke looſe, and floating in the Sea; they got out upon theſe, and walked upon them, and when they went back into their Boat, they carried ſeveral large Pieces of Ice, which melted into very good freſh Water.

On the 20th, the Fog breaking up, they diſcovered the Land, which looked like a Sugar-loaf, and made ſo uncomfortable, or rather ſo horrid an Appearance, that Capt. *Davis* called it the *Land of Deſolation*. On the 21ſt they were forced to bend their Courſe South again, to clear themſelves of the Ice, which they did, and then ran along the Shore. On the 22d the Captain endeavoured to go aſhore, but was hindered by the Ice; the Water on the Coaſt was very black, and though the Seamen made uſe of their Lines, they could catch no Fiſh. On the 24th the Captain cauſed the Mens Allowance to be increaſed, to encourage them; but it is very remarkable, that he aſſures us the Weather was far from being cold, but like ours in *April*, very ſharp, when the Wind blew from the Shore; and on the contrary, very hot, when it blew from the Sea.

On the 25th they bore away North-weſt, and continued their Courſe for four Days. On the 29th they diſcovered Land in the Latitude 64° 15′ North, the Sea quite free from Ice, and the Weather very temperate. Upon viewing the Coaſt they found many pleaſant Bays and commodious Ports; but judged it not a continued Land, but rather an Archipelago, and therefore they reſolved to go aſhore on one of theſe ſmall Iſlands, in order to ſearch for Wood and Water, and to gain a better Knowledge of the Country: They were no ſooner on Shore, than they found evident Marks of the Country's being inhabited, by there lying upon the Ground a ſmall Shoe, ſeveral Pieces of Leather ſewed with Sinews, a Piece of Firr and Wool, like Beaver. They went next upon another Iſland, where, getting upon a high Rock, they were ſeen by the People of the Country, who ſet up thereupon a moſt hideous Howling; when they perceived this, the *Engliſh* likewiſe made a Noiſe, to give Notice of what had happened to their own People; upon which Capt. *Bruton*, of the *Moon-ſhine*, preſently came to their Aſſiſtance, with a good Number of his Seamen; and preſently after their Arrival there appeared ten Boats full of the Natives coming from a neighbouring Iſland, and two of theſe Canoes advanced ſo near the Shore, that they could eaſily talk with thoſe that were in them; their Language was much in the Throat, and their Pronunciation harſh and unpleaſant; one of them, however, ſeemed inclined to come on Shore; but firſt pointed to the Sun, and then ſtruck his Breaſt ſo hard, that they could hear the Blow; upon which, Mr. *John Ellis*, Maſter of the *Moon-ſhine*, was appointed to treat with him; and he going to the Sea-ſide, pointing to the Sun, and ſtriking his Breaſt, as the Savage had done, he at length ventured on Shore, and they threw him Caps, Stockings, Gloves, and what elſe they thought might pleaſe him; but the Night drawing on, they took their Leaves on both Sides.

The next Morning there came thirty-ſeven Canoes rowing by their Ships, calling them to come aſhore. The *Engliſh*, however, did not make great Haſte; upon which one of the Savages leaped on Shore, and went to the Top of a Rock, where he danced and beat a Drum, to ſhew his Joy. The *Engliſh* then manned their Boats, and came to them to the Water-ſide, where they waited in their Canoes; and after the formal Ceremony of ſwearing by the Sun, the Savages made no Scruple of truſting them; but, on the contrary, ſhewed all poſſible Signs of Kindneſs, and even of Politeneſs; for when the Author of this Voyage offered to ſhake Hands with one of them, he firſt took his Hand and kiſſed it. They readily parted with any thing they were aſked for, and were content with whatever was given them, ſhewing no Signs of Greedineſs, much leſs of Treachery or Infidelity. They bought of them five of their Canoes, and ſeveral of their Stockings and Gowns, which were made ſome of Seal and others of Bird Skins, all of them well dreſſed, and neatly made; ſo that it plainly appeared they had various Trades amongſt them. They had plenty of Furs; and when they ſaw that the *Engliſh* admired them, they gave them to underſtand, by Signs, that they would go up into their Country, and come down and bring them more; but the Wind proving fair in the Night, Capt. *Davis*, deſpiſing Profit, on the 1ſt of *Auguſt* ſailed ſtill farther to the North-weſt; and on the 6th of the ſame Month they entered into a very fair Road, free from Ice, in the Latitude of 66° 40′, where they landed under a high Mountain, the Cliffs of which ſhone like Gold.

Captain *Davis*, having taken a View of every Thing, began to think of beſtowing Names on the Places he had diſcovered. He gave to the Hill the Name of *Mount Raleigh*; the Road where the Ship lay he called *Totneſs Road*; the Sound, at the Foot of the Mountain, *Exeter Sound*; the North-foreland, *Diers Cape*; and the South-foreland, *Walſhingham*. Here they diſcovered four white Bears of a prodigious Bigneſs, two of which they killed and brought on board; the Fore-paw of one of which meaſured fourteen Inches. They ſaw a Raven upon *Mount Raleigh*, and at the Bottom of the Hill they found ſome Shrubs and Flowers like Primroſes; the Coaſt, however, was very mountainous, and altogether barren, affording neither Wood nor Graſs, nor ſo much as Earth; the Mountains being all of Stone, but the braveſt Stone, ſays our Author, that ever we ſaw. Yet this Account concludes nothing againſt the Fruitfulneſs of the inland Part of the Country, which might be very good for all that, and, indeed, probably was ſo, ſince the Bears were very fat; and yet it appeared, upon opening their Stomachs, and upon viewing their Dung, that they were not ravenous, but fed upon Graſs.

They weighed on the 8th from *Mount Raleigh*, ſailing ſtill along the Coaſt, which lay South-ſouth-weſt, and Eaſt-north-eaſt. On the 11th they came to the moſt ſoutherly Point of this Land, which they called the *Cape of God's Mercy*, and here they were ſurpriſed with a very thick Fog; upon the breaking up of which, they found that they were ſhut into a very Strait, or Paſſage, in ſome Places ſixty Miles broad, in others ninety; the Weather very fine and temperate, and the Water of the ſame Colour with that of the Ocean, which filled them with Hopes. They ſailed through this Strait for ſixty Leagues, and then diſcovered ſeveral fair Iſlands in the midſt of it, with an open Paſſage on both Sides, through which they ſailed, one Bark taking the North, the other the South Side; but the Wind changing, and the Weather growing foggy and foul, they were forced to lye-by for five Days, in thoſe which have been ever ſince called *Davis's Straits*. On the 14th they went aſhore, and ſaw evident Marks of the Country's being inhabited; for they found Part of a Stone-wall and a human Skull. On the 15th they heard a great Howling on ſhore, which they ſuppoſed to be Wolves, and therefore went aſhore to kill them; when they came to Land, they found the Creatures they had taken for Wolves were Dogs, and they came inſtantly running to the Boat to meet them, wagging their Tails, and ſhewing other Signs of Joy, as it is uſual for thoſe Animals to do at the Sight of Men. There were twenty of them in all, and as they were of the Size of Maſtiffs, with ſhort Ears and long buſhy Tails, the Seamen being afraid of them, fired and killed two, one of which had a Leather Collar on. They found likewiſe there two Sledges, one made of ſeveral kinds of Boards that were ſawed, and the other of Whalebone. They likewiſe ſaw

Larks, Ravens, and Partriges. On the 17th they went aſhore again, and, in an Oven built with Stones, they found a ſmall Canoe made of Wood, an Image, a Bird made of Bone, Beads for Necklaces, and other Trifles. The Coaſt made no very promiſing Appearance, as having neither Wood nor Graſs; but the Rocks were of a fine bright Stone, like Marble beautified with Veins of different Colours. Upon the Shore they found a Seal or Sea-Calf juſt flead and thrown under a heap of Stones.

Captain *Davis* and his Maſter were extremely well pleaſed with the Appearance of this Strait, though they began to doubt whether the Seaſon would permit them to continue long in it; which nevertheleſs they took for the very Channel into the South Seas, in ſearch of which they came, and reſolved to report ſo much upon their Return to *England*. The Reaſons which confirmed the Probability of there being a Paſſage in this Strait, and upon which they grounded their Hopes of future Succeſs, were, 1ſt. That this Place was all Iſlands, with great Sounds between them. 2d. That the Water remained all of the ſame Colour with the main Ocean, without altering; whereas they never came into any Bay before nor after, but the Colour of the Water was altered very blackiſh. 3d. Becauſe they ſaw to the Weſt of thoſe Iſlands three or four Whales in a Skull, which they imagined came from the Weſtern Sea, becauſe to the Eaſtward they had ſeen no Whales. 4th. Becauſe as they were rowing into a very great Sound lying South-weſt, from whence thoſe Whales came, there came ſuddenly a violent Counter-check of a Tide from the Southward, againſt the Flood which they came in with, not knowing from whence it received its Source. 5th. Becauſe in ſailing twenty Leagues within the Mouth of this Entrance, they had ſounding in ninety Fathoms on a grey and ouſy Sand; and the farther they ran into the Weſtward, the deeper was the Water: So that among the Iſlands they had near the Shore no Ground in three hundred and thirty Fathom. 6th. Becauſe it ebbed and flowed ſix or ſeven Fathom, the Flood coming from divers Parts, ſo that they could not with any Certainty diſcern the chief Source of it.

On the 19th it was reſolved by the Officers to continue the Proſecution of their Diſcoveries; but the Wind changing on the 20th, they were obliged to remain at Anchor; and the Weather growing very foul, they, on the 24th, hoiſted Sail for *England*. On the 10th of *September* they fell in with the *Land of Deſolation*; on the 27th they had Sight of the *Engliſh* Coaſt, and in a Storm loſt the *Moonſhine* that Night. On the 30th Captain *Davis* came ſafely into *Dartmouth*, where he found the *Moonſhine*, which arrived about two Hours before. Upon his Return to *London*, Captain *Davis* gave a very clear Account to his Owners, of his Expedition, and of what he had done; obſerving, that at the Time he put to Sea, he had only general Inſtructions to ſearch for a Paſſage to North-weſt, without any Intimation where that Paſſage was moſt likely to be found; that he had accordingly entered a Strait which he thought might poſſibly be that Paſſage; but the Weather changing, and the Seaſon of the Year being too far advanced, he judged it requiſite to return home.

His Owners were ſo well ſatisfied, that they procured him an Audience of Secretary *Walſingham*; who approved very much of the Enterprize, and of the Manner in which he had conducted it; but at the ſame Time recommended it to him to complete this Diſcovery, to which he was alſo preſſed by thoſe who were concerned in his former Undertaking, and by ſome Merchants of *Exeter*, who deſired to join in the Expences neceſſary for a ſecond Expedition; to which he willingly conſented, and accordingly undertook it; and as he has written himſelf an Account of this Voyage, which was a very remarkable one, I ſhall give it the Reader, as near as may be, in his own Words.

“ On the 7th of *May*, 1586, I ſet out from *Dartmouth* with four Sail, *viz.* The *Mermaid* of 120 Tons, the *Sunſhine* of 60 Tons, the *Moonſhine* of 35 Tons, and a Pinnace of 13 Tuns, called the *North Star*. We coaſted the South-ſide of *Ireland*, and on the 13th ſteered away North-weſt, till we came to the Latitude of 60°. At which Time I divided my Fleet, and ordered the *Sunſhine*, and the *North Star*, to ſeek a Paſſage Northward, between *Groenland* and *Iceland*, to the Latitude of 80°, if Land did not hinder them. I departed from them the 7th of *June*, and on the 15th diſcovered Land in 60° Latitude, and in Longitude from the Meridian of *London* Weſtward 47°. The Ice lay, in ſome ten, in ſome twenty, in ſome fifty, Leagues off the Shore; ſo that we were conſtrained to bear into 57° to double the ſame, and to get a free Sea, which through God's favourable Mercy we at length obtained.

“ On the 29th, after many Storms, we again diſcovered Land, in Longitude from the Meridian of *London* 58° 30′, and in Latitude 64°, being Eaſt from us, into which ſince it pleaſed God by contrary Winds to force us, I thought fit to bear in with it, and to ſet up our Pinnace, which we had provided in the *Mermaid* to be our Scout for this Diſcovery, and ſo much the rather, becauſe the Year before I had been in the ſame Place, and found it very convenient for ſuch a Purpoſe, being inhabited by a People of tractable Converſation, and the Sea void of Ice. The Ships being within the Sounds, we ſent our Boats to ſearch for Shole-water, where we might anchor, which in this Place is very hard to find. The People of the Country, eſpying them, came in their Canoes towards them with Shouts and Cries; but when they ſaw in the Boats ſome of our Company that were there the laſt Year, they rowed to the Boat, and, taking hold of the Oar, hung about the Boat, expreſſing a great deal of Joy; and making Signs that they knew all thoſe that had been there the Year before. I went aſhore with others of the Company, and took with me twenty Knives. We had had no ſooner landed but they leaped out of their Canoes and came running to us, and embraced us with many Signs of hearty Welcome; there were eighteen of them, and I gave to each of them a Knife, and they offered me Skins for a Reward; but I made Signs that they were not ſold, but freely given to them; and ſo diſmiſſed them for that Time, with Signs that they ſhould return after certain Hours.

“ The next Day, with all poſſible Speed, the Pinnace was landed upon an Iſland, there to be finiſhed; and while it was ſetting up the People came continually to us, ſometimes a hundred Canoes at a time, bringing Seal-ſkins, Stag-ſkins, White Hares, Seals, Salmon-Peal, ſmall Cod, dry Caplin, with other Fiſh, and ſome Birds. I ſent one of the Boats to ſearch one Part of the Land, while I went to another Part, with ſtrict Command that there ſhould be no Injury offered to any of the People, nor any Gun ſhot. They formed Tents made of Seal-ſkins, wherein was Store of dried Caplin, being a ſmall Fiſh, no bigger than a Pilchard, ſome Bags of Train-Oil, many little Images cut in Wood, and Seal-ſkins in Tan-Tubs, whereof they diminiſhed nothing. When they had paſſed ten Miles within the ſnowy Mountains, they came to a plain champaign Country with Earth and Graſs, like to our moory and waſte Grounds in *England*; they went ten Leagues up into a River, which in the narroweſt Place was two Leagues over, finding it ſtill to continue they knew not how far. But I with my Company took another River, which, although at firſt it afforded a large Inlet, yet it proved but a deep Bay, the End whereof I attained in four Hours; and there leaving the Boat well manned, went with the reſt of the Company three or four Miles into the Country, but found nothing, nor ſaw any thing but Gripes, Ravens, and ſmall Birds, as Larks and Linnets. The third of *July* I manned my Boat, and went with fifty Canoes attending upon me into another Sound, where the People, by Signs, willed me to go, hoping to find their Habitation. At laſt they made Signs that I ſhould go into a warm Place to ſleep; at which Place I went on Shore, and deſired they would leap with our Men, which they agreed to, but ours did over-leap them; from leaping they went to wreſtling; we found them

“ ſtrong and nimble, and to have Skill in wreſtling, for they caſt ſome of our Men that were good Wreſtlers.

“ On the 4th the Maſter of the *Mermaid* went to certain Iſlands to ſtore himſelf with Wood, where he found a Grave with divers buried in it, covered with Seal-Skins only, and a Croſs laid over them. The People are of good Stature, well proportioned, with ſmall ſlender Hands and Feet, broad Viſages, ſmall Eyes, wide Mouths, the moſt Part unbearded, great Lips and cloſe-toothed; they are much given to bleed, and therefore ſtop their Noſes with Deers Hair, or that of an Elan. One of them kindled a Fire after this Manner; He took a Piece of a Board wherein was a Hole half through; then he put into the Hole the End of a round Stick like a Bed-ſtaff, wetting the End thereof with Train-oil, and (as your Turners do) with a piece of Leather by the violent Motion he ſpeedily produced Fire; this done he made a Fire with Turfs, into which, with many Words and ſtrange Geſtures, he put divers things, which we ſuppoſed to be a Sacrifice; they deſired me to go into the Smoak, and I willed them likewiſe to ſtand in the Smoak, which they would by no means do; I then thruſt one of them into the Smoak, and commanded one of my Men to tread out the Fire and ſpurn it into the Sea, to ſhew them that we did contemn their Sorcery. They are very ſimple in their Converſation, but marvelouſly thieviſh, eſpecially of Iron, which they have in great eſteem. They cut away the *Moon-ſhine*'s Boat from her Stem; they cut our Cables and our Cloth where it lay to air, though we did carefully look to it; they ſtole our Oars, a Caliver, a Boat, a Spear, a Sword, with divers other things, which ſo grieved the Company, that they deſired me to diſſolve this new Friendſhip; whereupon I ordered a Caliver to be ſhot among them, and immediately upon the ſame a Falcon; which ſtrange Noiſe did ſo amaze them, that they departed with all Speed; but within ten Hours they returned and intreated a Peace, which being granted, they brought us Seal-Skins and Salmon-Peal, but when they ſaw Iron they could not forbear ſtealing; which when I perceived, I commanded that in no Caſe they ſhould be any more hardly uſed, but that our own People ſhould be more vigilant to keep their things.

“ They eat all their Meat raw; they live moſt upon Fiſh, drink Salt-water, and eat Graſs and Ice with Delight; they make Fiſhing-nets with Whale-Fins; 'tis probable they have Wars with thoſe on the main Land, many of them being ſore wounded, which Wounds they received upon the main Land, as by Signs they gave us to underſtand. The 17th of *July* I went aſhore in our new Pinnace, and with the moſt Part of my Company went to the Top of an high Mountain, hoping from thence to ſee into the Country; but the Mountains were ſo many and ſo lofty that we could not ſee far; we returned to our Pinnace and ſaw a ſtrange Sight, which was a mighty Whirlwind, continuing three Hours with little Intermiſſion, which taking up the Water in great Quantities, furiouſly mounted it into the Air. The next Morning, the Storm being over, we ſailed into a mighty great River, directly into the Body of the Land, and found it to be no firm Land, but huge, vaſt, and deſert Iſlands, with mighty Sounds and Inlets paſſing between Sea and Sea. On the 9th we returned to our Ships, where our Mariners complained heavily againſt the People, that they had ſtolen an Anchor from us, had cut one of our Cables very dangerouſly, and ſpared not to fling Stones at us of half a pound Weight: The next Day I went aſhore and uſed them with much Courteſy, and when I returned they followed me in their Canoes; I gave ſome of them Bracelets, and ſeven or eight of them came on Board, whom I uſed kindly, and let them depart; as ſoon as Sun was ſet they began to practiſe their deviliſh Nature, and with Slings threw Stones very fiercely into the *Sun-ſhine*, and knocked down the Boatſwain; whereupon we purſued them with our Boats, and ſhot at them; but they rowed ſo ſwiftly, that we could not reach them.

“ On the 11th five of them came to make a new Truce; the Maſter acquainted me with their coming, and deſired they might be kept Priſoners until we had our Anchor again; but when he ſaw the chief Ring-leader and Maſter of Miſchief was one of the five, he was then very urgent to have him ſeized, and ſo it was determined to take him; he came crying *Iliaout*, and, ſtriking his Breaſt, offered a Pair of Gloves to ſell; the Maſter offered him a Knife for them: So two of them came to us, one we diſmiſſed, but the other was ſoon made Captive among us; then we pointed to him and his Fellows for our Anchor, which being had, we made Signs to him he ſhould be ſet at Liberty; about an Hour after the Wind came fair, and we ſet ſail and brought him away with us. One of his Companions, following our Ship in his Canoe, talked with him, and ſeemed to lament his Condition; we ſtill uſing him well, and ſaying to him *Iliaout*, *i. e.* we mean no harm, at laſt he aboard ſpake four or five Words to the other, and clapped both his Hands on his Face, the other did the like, and ſo parted; we judged the covering his Face, and bowing down his Body, ſignified his Death; after ſome Time he became a pleaſant Companion among us; I gave him a new ſuit of Frize of the *Engliſh* Faſhion, of which he was very fond; he trimmed up his Darts and all his fiſhing Tools, and would make Okam, and ſet his Hand to the Rope's-end; he fed upon Caplin and dry *Newland* Fiſh. The 17th, being in Latitude of 63° 8′, we fell in with a mighty Maſs of Ice, very high, like Land, with Bays and Capes; and, ſuppoſing it to be Land, we ſent our Pinnace to diſcover it; but, on her Return, we were aſſured that it was only Ice, which cauſed great Admiration to us all, and the rather, becauſe in this Place we had very tickle and ſtrong Currents. We coaſted this Maſs of Ice till the 30th, finding it a great Bar to our Purpoſe. The Air was now ſo foggy, and the Sea ſo peſtered with Ice, that all Hopes of proceeding was baniſhed; for on the 24th of *July* our Shrouds, Ropes, and Sails, were ſo frozen and compaſſed with Ice, only by a groſs Fog, as ſeemed to us very ſtrange, who the laſt Year found this Sea free and navigable without Impediments.

“ Our Men, through this Extremity, began to grow ſick and feeble, and withal hopeleſs of good Succeſs; whereupon, very orderly and diſcreetly, they intreated me to regard onr preſent State, and withal adviſed me, that in conſcience I ought to preſerve my own Life and theirs; and that I ſhould not, through my own Boldneſs, leave their Widows and fatherleſs Children to give me bitter Curſes. This did move me to commiſerate their Condition, yet conſidering the Importance of this Diſcovery if it could be accompliſhed, the great Hopes of a Paſſage by what we had ſeen the laſt Voyage, and that there was yet a third Way to be attempted, I thought it would turn to my Diſcredit if the Action ſhould fail through my Neglect, therefore reſolved to proſecute it; and conſidering the *Mermaid*, by reaſon of her Burden, was not ſo nimble and convenient for this Purpoſe as a ſmaller Bark, and was 100 *l.* a Month Charge to the Adventurers; I determined to revictual the *Moon-ſhine*, and proceed as God ſhould direct me: Whereupon I altered my Courſe to recover the next Shore, where this might be performed; and the 1ſt of *Auguſt* diſcovered Land without Snow or Ice, in Latitude 66° 33′, and in Longitude, from the Meridian of *London*, 70°.

“ On the 2d we anchored in a very good Road, where, with all Speed, we graved and re-victualled the *Moon-ſhine*; we found it here very hot, and we were very much troubled with Muſkitos, which did ſting grievouſly. The People of the Country caught a Seal, and, with Bladders faſt tyed to him, ſent him to us with the Flood, ſo as he came right with our Ship, which we took as a friendly Preſent from them. On the

"5th I went on Top of a Hill, and eſpying three Canoes under a Rock, went to them, and found in them Skins, Darts, &c. whereof we diminiſhed nothing; but left upon every Boat a Silk Point, a Bullet of Lead, and a Pin. The next Day the People came to us without Fear, and bartered with us for Skins; our Savage kept Cloſe, and made Shew that he would fain have another Companion. Being thus provided, I departed on the 12th, leaving the *Mermaid* at Anchor; her Crew finding many Occaſions of Diſcontent, and being unwilling to proceed, here forſook me.

"The 14th, ſailing Weſt fifty Leagues, we diſcovered Land, in Latitude 66 Degrees 19 Minutes; and the next Day we ſtood to the South; and on the 18th diſcovered a very fair Promontory North-weſt from us, in 65 Degrees, having no Land on the South, which gave us great Hopes of a Paſſage. The 20th I went to the Top of a high Hill, whence I perceived that this Land was all Iſlands; we coaſted this Iſland towards the South, from 67 to 57 Degrees. The 28th having great Diſtruſt of the Weather, we arrived in a fair Harbour, and ſailed ten Leagues into the ſame, being two Leagues broad, with fair Woods on both Sides; Here we continued to the 1ſt of *September*, in which Time we had two very great Storms; I went ſix Miles into the Country, and found the Woods were Fir, Pine-apple, Elder, Yew, Withey, and Birch. Here we ſaw a black Bear, and Store of Birds, as Pheaſants, Partridges, wild Geeſe, Bucks, Blackbirds, Jays, Thruſhes, and other ſmall Birds. The 1ſt we ſet ſail, and coaſted the Shore with fair Weather. The 4th we anchored in a good Road, among many Iſlands. Eight Leagues to the North of this Place we had ſtrong Hopes of a Paſſage, by reaſon of a mighty Sea paſſing between the two Lands, Weſt; we greatly deſired to go into this Sea, but the Wind was directly againſt us.

"The 6th we ſent five young Men aſhore to an Iſland, to fetch ſome Fiſh which we had left there covered all Night. The Savages who lurked in the Woods ſuddenly aſſaulted our Men, which we perceiving let ſlip our Cable, and, under our Fore-ſail, bore in to the Shore, and diſcharged a double Muſket upon them twice; at the Noiſe of which they fled, having killed two of our Men with their Arrows, and grievouſly wounded two more; the other eſcaped by ſwimming, with an Arrow ſhot through his Arm.

"This Evening it pleaſed God further to increaſe our Sorrows with a furious Storm at North-north-eaſt, which laſted to the 10th: We unrigged our Ship, and intended to cut down our Maſts; the Cable of our Sheet-Anchor broke, ſo that we expected to be driven on Shore, and become a Prey to the Cannibals; yet, in this deep Diſtreſs, God gave us Succour, and ſent us a fair Sea, ſo that we recovered our Anchor again, and new moored our Ship; where we ſaw that God had manifeſtly delivered us, for two Strands of our Cable were broken. The 11th, the Wind coming fair at Weſt-north-weſt, we departed with Truſt in God's Mercy, ſhaping our Courſe for *England*, and arrived in the Weſt-country the Beginning of *October*, where the *Sunſhine* arrived a few Days before us; ſhe had been at *Iceland*, and from thence to *Groenland*, and ſo to *Eſtotilan*, and thence to *Deſolation*, where ſhe trafficked with the People, ſtaying in the Country twenty Days. They loſt Sight of the Pinnace, called the *North-Star*, on the 3d of *September*, in a very great Storm, and lay a-hull to tarry for her all the next Day; but ſaw her no more: The ſaid Pinnace never returned home."

We find annexed to this Account of Capt. *Davis*'s ſecond Voyage, a Letter of his to Mr. *William Sanderſon*, who ſeems to have been his Patron; in which he excuſes his Want of Succeſs in this Voyage, declares his confident Hope, that ſuch a Paſſage might yet be found, the Improvement of his Knowledge by this laſt Voyage, and his Reſolution to proſecute this Diſcovery to the utmoſt, though it ſhould coſt him the little paternal Fortune he had in the Weſt; and concludes with an Aſſurance, that he would communicate to him a fair and clear Chart of his Voyage, which would give him a perfect Comprehenſion of the Arguments he had to offer in Support of his Notion, that this Paſſage, ſo often attempted in vain, might ſtill be found. This Letter is dated from *Exeter*, the 14th of *October*, 1586; and it had all the good Effects that Capt. *Davis* could expect from it, ſince his Friend ſtill continued to have as good an Opinion of him as ever, and ſo it appears the reſt of his Owners had; but it went no farther than the Approbation of his Conduct in his laſt Voyage, for when he came to propoſe a third Expedition, the Weſt-Country Merchants, and moſt of thoſe in *London*, grew weary of the Expence, and would be concerned no longer. He propoſed, however, to the reſt of the Adventurers, a new Scheme, which took Effect, and it was this: That they ſhould fit out three Veſſels, one of which only ſhould be employed on the Diſcovery, and the other two in Fiſhing; by which he propoſed to defray all, or at leaſt the beſt Part, of the Expence. It is very remarkable that Mr. *Bruton*, who ſerved with Capt *Davis* in his firſt Voyage, accompanied him alſo in this, and ſo did Mr. *John Jane*, who had been his Merchant or Supercargo, and many of his old Seamen; which ſhews the Confidence they had in his Skill, and how ſenſible they were of his Care and good Uſage.

The Veſſels provided for this laſt Voyage were the *Elizabeth* of *Dartmouth*, the *Sunſhine* of *London*, and the *Ellen* which was but very ſmall. As for the Hiſtory of the Voyage, which is but ſhort, we ſhall give it as we did the former, in the Words of the Author. "We departed from *Dartmouth* the 10th of *May*, and diſcovered Land on the 14th of *June*. On the 16th we anchored among many low Iſlands which lay before the high Land; the People came to us crying, *Iliaout*; and ſhewing us Seal-Skins. On the 20th I left the two Ships to follow their Fiſhing, taking their faithful Promiſe not to depart till I returned unto them, which ſhould be in the End of *Auguſt*; but they, finiſhing their Voyage in ſixteen Days, preſently returned for *England*, without regarding their Promiſe, whilſt I not diſtruſting any ſuch hard Meaſure, proceeded on the Diſcovery. On the 24th, in Latitude 67 Degrees, 40 Minutes, the Weather was very hot, thirty Savages came to us in their Canoes, twenty Leagues from the Land, intreating us to go aſhore. I coaſted the Shore of *Groenland*, from the 21ſt to the 30th, having the Sea all open towards the Weſt, and the Land on the Starboard-ſide, Eaſt from me, the Weather extremely hot and very calm. The Sun was five Degrees above the Horizon at Midnight, Latitude 72 Degrees 12 Minutes; the Compaſs in this Place varied 28 Degrees towards the Weſt. The 3d of *July* we fell in again with Ice; and on the 6th put our Bark through it, ſeeing the Sea free on the Weſt ſide; and when we had ſailed five Leagues Weſt we fell in with another mighty Bank of Ice which we could not paſs; therefore returning again, we got clear on the 8th at Midnight, and recovered the open Sea through God's Favour, by giving us fair Winds and calm Weather. On the 15th, in Latitude 67 Degrees 45 Minutes, a great Current ſet us to the Weſt ſix Points from our Courſe.

"On the 19th we had Sight of *Mount Raleigh*. On the 30th we croſſed over a great Inlet or Paſſage, being twenty Leagues broad, and ſituate between 62 and 63 Degrees, in which Place we had eight or nine great Races, Currents, or Over-falls, like the Water under *London-bridge*, and bending their Courſe into the Inlet. The 31ſt, in Latitude 62 Degrees, coming cloſe by a Foreland, we fell into a mighty Race, where an Iſland of Ice was carried by the Force of the Current as faſt as our Bark could ſail with all Sails bearing. This Cape, as it was the Southern Limits of the Gulph we paſſed over Yeſterday, ſo was it the North Promontory, or Beginning of another great Inlet which we paſſed over this Night, where we ſaw the Sea falling down towards the Inlet with a mighty Over-fall, and circular Motion, like Whirlpools, in the ſame manner as forceable Streams force through the Arches of Bridges. On the 10th of *Auguſt*, as we were ſeeking

" our Ship, that went to fiſh, being among many Iſlands " we ſtruck on a Rock, and had a great Leak: The " next Day we ſtopped our Leak, in a Storm; and on " the 15th, being in Latitude 62 Degrees 12 Minutes, " and not finding our Ships, nor (according to their " Promiſe) any Mark or Beacon which I willed them " to ſet up, and they promiſed to do, upon every " Headland or Cape within twenty Leagues every Way " from their Fiſhing-place, and we having but little " Wood in our Ship, and but half a Hogſhead of freſh " Water, I ſhaped my Courſe for *England*, and arrived " at *Dartmouth* the 15th of *September*:"

Upon his Return from this, as after his ſecond Voyage, he wrote a Letter to Mr. *Sanderſon*, dated from *Sandridge*, *September* 16, 1587; wherein he tells him, That he had returned ſafe with all his Company: That he had ſailed ſixty Leagues farther than he intended at his Departure: That he had reached the Latitude of 73 Degrees North, finding the Sea all open, and the Strait forty Leagues broad; concluding from thence, that the Paſſage was moſt certain, and the Execution moſt eaſy; but, as we ſhall ſee hereafter, he was in this miſtaken, which however, does not at all leſſen his Merit or the great Diſcoveries he made, by which he entitled his Country to all this Coaſt of *North America*, the Value of which may hereafter prove as great as any Diſcovery made in this Reign. Neither ought we to eſteem it any Diminution of his Merit, that he was ſo confident of finding a Paſſage this Way to the very laſt; becauſe as far as he, or any Man, could judge, there was indeed great Probability of the Thing, and nothing but ſuch a Spirit as his will ever be able to effect this Diſcovery whenever it ſhall be made.

But he was not only an able Officer and a moſt ſkilful Seaman, but had likewiſe a Head perfectly well turned for making all poſſible Advantages of the Service in which he was employed; as appears from the Minutes of a Memorial of his which I have ſeen, addreſſed to Secretary *Walſingham*; wherein he tells him, That he found many ignorant and malicious People had a very mean Opinion of what he had done, becauſe his Voyages had not anſwered the Expence; but he perſuaded himſelf that ſo wiſe and honourable a Stateſman, would think in a manner different from the Vulgar, and eſteem his Services capable of producing great Advantages to the Nation, even ſuppoſing that no ſuch Paſſage as he expected ſhould be found; in ſupport of which he laid down the five following Points.

I. That it would redound very much to the Honour of the Queen and her Subjects, if the People in theſe Northern Regions were converted to the Chriſtian Faith; in which pious Work many of thoſe buſy and fiery Spirits might be profitably employed, that, by their factious Stirrings at Home, ſerved only to create Confuſion in Church and State: For if theſe People, who ſeemed neither deſtitute of Wit, Induſtry, or valuable Commodities, were once brought over to the Chriſtian Faith, they might ſoon be brought to reliſh a more civilized kind of Life, and be thereby induced to take off great Quantities of our coarſer Woollen Manufactures; which would employ the Poor at Home, increaſe our Shipping, and augment the Number of our Seamen.

II. That in the Judgment of ſuch as were beſt acquainted with the Fiſhing Trade, the Cod he caught were the fatteſt and fineſt that were ever ſeen; and that the Plenty of theſe Fiſh was ſo great as might well encourage the eſtabliſhing an annual Fiſhery at the Mouth of the *Straits*, which would afford immediate Profit, and might lead to future Diſcoveries of greater Importance.

III. That notwithſtanding the Shores of the Countries he had ſeen were bleak and barren, yet the inner Part of the Country might, notwithſtanding, be very rich and fertile: That as the People he had converſed with had ſome of them Utenſils of different Metals, it might be preſumed there were Mines of Value in theſe Countries; and that how little Profit ſoever theſe People might make of them, they might be wrought to great Advantage by ſuch as underſtood them better.

IV. That it was very evident from the ſeveral Voyages he had made, that there was nothing intolerable in theſe northern Climates, and that it would be of great Service to the Nation to keep up a conſtant Succeſſion of Enterprizes on this Side, ſince it might be done with very little Expence at firſt; would contribute to make theſe Parts of the World better known, and ſecure the Advantages derived from them to the *Engliſh*; whereas, if they were diſcontinued or abandoned, other Nations would not fail to make Attempts of the like kind, and ſo come in proceſs of Time to reap the Fruits of other Mens Labour.

V. That the Furs brought from thence were much eſteemed, and allowed to be richer and more valuable than any that came from *Muſcovy*; and that if the Faſhion of wearing them at Court were encouraged, it might prove a means, when all others failed, of promoting this Commerce; for you know right well, moſt honourable Sir, concludes he, that it is a great Secret in Policy to make the Follies of the Extravagant, and the Vanity of the Ambitious, contribute to the Maintenance of Induſtry; ſo that even the Vicious and the Lazy, may of their own Accord furniſh the Rewards of Labour and Virtue.

I ſhall, hereafter, take Occaſion to ſhew, that he has very wiſely and ſenſibly recommended the propagating the Chriſtian Religion, as the moſt proper Means for extending, as well as eſtabliſhing, our Colonies, and rendering them highly beneficial. There is no Queſtion that the ſending a few Preachers to convert any of theſe Nations to Chriſtianity, would be a Thing of greater Conſequence to this Nation, than building many Forts to ſecure our Commerce with *Savages*; for theſe People would then live in Towns, wear Cloaths, cultivate their Lands, and, inſtead of deſtroying and extirpating each other, as at preſent, they would live peaceably, and conſequently grow daily more numerous; which would occaſion ſuch a Conſumption of our Manufactures of all kinds, and ſuch a Return of their Commodities, which is the only true and juſt Standard of Trade, as neither Fraud nor Force can any other way attain. His Reflections, with reſpect to the Expediency of keeping up this northern Navigation, are highly ſenſible, and it would have been much for our Intereſt, if, even at the public Expence, they had been continued; for then Sir *Joſiah Child* would not have ſet down this North Fiſhery among the Number of our loſt Trades, as he does with juſt Reaſon. That our Neighbours would be wiſer in this reſpect than ourſelves, was in itſelf a very ſhrewd, and in Fact has proved a prophetic Obſervation; for the *Dutch* and other Nations ſtill frequent *Davis*'s *Straits*, which we have in a manner deſerted, and employ thereby a vaſt Number of People at home, beſides raiſing annually freſh Supplies of ſkilful and well ſeaſoned Seamen, which a maritime Power ought to regard as a Point of the higheſt Conſequence, and in that View ought to favour moſt ſuch Branches of Commerce as are known to contribute thereto, eſpecially if they are not at a great Diſtance. With theſe Remarks we ſhall diſmiſs this Subject for the preſent, and, as the Nature of our Plan directs, proceed from theſe Diſcoveries in the moſt northern Parts of *America*, to the Attempt made for fixing a Settlement more to the South than any we have yet obtained.

14. The ſpeaking of this Southern Settlement brings us back to Sir *Walter Raleigh*, a Gentleman whoſe Name muſt often occur in all Books that any way relate to *Engliſh* Hiſtory, and whoſe Memory will be ever celebrated by ſuch as can diſtinguiſh any kind of Worth; for he had all and excelled in all. Amongſt the reſt, the compleateſt Courtier of his Time, which perhaps drew upon him more Envy than all his other great Qualities; and I am induced to think ſo from the Nature of thoſe Calumnies by which he was moſt hurt; for though deeply malicious, they were ſo indifferently forged, that they could not bear the leaſt Inſpection; ſo that notwithſtanding they coſt him his Favour often, and his Life at laſt, from the Credulity of Princes, yet they never had any Effect upon his Reputation with wiſe Men in his Life-time, nor have injured his Reputation in the leaſt with Poſterity.

He was always uſeful to his Country, but moſt ſo when he had leaſt Credit at Court. At ſuch Times he did not relinquiſh Buſineſs to go and hide himſelf in Country Retreats, and thence write pitiful Letters and Poems to ſcrew himſelf again into the Affections of the Queen his Miſtreſs, as ſome other of her great Men did, and which he could have done better than any of them; nor did he form Intrigues againſt her Miniſters, and force himſelf into Power and his Sovereign's Preſence; but he took another Road peculiar to, and worthy of, Sir *Walter Raleigh:* He applied himſelf to contrive, and not to contrive only, but to execute, ſuch great and glorious Enterprizes, as raiſed his Fame ſo high, that the Whiſpers of Envy could be no longer heard; and, when the Queen recalled him to her Favour, it never appeared as an Act of Grace, but as a Stroke of Juſtice; ſo that after theſe Receſſes, he ſhone at Court with double Luſtre, and his Miſtreſs, haughty as ſhe was, could not help appearing upon theſe Occaſions proud of the Poſſeſſion of ſuch a Man, and aſhamed of his Abſence.

It was in one of theſe voluntary Exiles that Sir *Walter Raleigh* executed a Deſign he had long meditated, I mean his Expedition to *Guiana*, an Expedition great in itſelf, though unfortunate in its Conſequences; formed upon the moſt noble Principles, and performed with equal Valour and Prudence, and in a Word every way equal to the Genius of its Author, and, Experience has ſince fatally ſhewn, ſuperior to every Genius but his. He ſaw, with Regret, the Plantation of *Virginia* abandoned, and he ſaw that the Want of immediate Profit was the Cauſe; he reſolved therefore to ſtrike out the Means of ſettling a new Colony in another Part of *America*, which ſhould be free from this Inconvenience, and which ſhould transfer the richeſt Products of that Country to the *Engliſh*, if they had but Courage and Conduct enough to fetch them. In order to this he enquired, with the greateſt Diligence, into the State of the Country before mentioned; he ſought from Books and Papers all the Aſſiſtance that could be had of that kind; he drew from perſonal Informations, which were more in his Power than perhaps they ever were in any other Man's, all the Notices that they could give; but he drew the greateſt Lights from his own profound Knowledge and extenſive Experience.

He was undoubtedly as well verſed in all Parts of Philoſophy and natural Hiſtory, as any Man of his Time, and perhaps much better; for, beſides all the Knowledge which reſults from Reading, he had likewiſe a great practical Skill, whence, without doubt, aroſe his confident Belief, that this Country of *Guiana* was the richeſt in *America*, and by conſequence, according to the Opinion of thoſe Times, and indeed of theſe, the richeſt in the World. He did not go thither therefore to ſatisfy his own Mind upon that head, but that he might furniſh himſelf with the Means of ſatisfying others; for he very well knew that it would have been an idle and ridiculous thing in him to think of moving People to attempt a Plantation meerly by a rational and philoſophical Argument, which he knew few would be able to underſtand, and of thoſe that did, many would oppoſe his Sentiments from Pride, and more from Prejudice. He choſe therefore to treat the Riches and Value of this noble Country in the plaineſt way, and as a Point of fact; and foreſeeing that it would be objected, that if it were ſo, and the Facts ſo notorious as he repreſented it, the *Spaniards* would certainly have ſettled there, and not have left it to fall into the Hands of any other Nation; this induced him to draw up a very clear and ſuccinct Account of the ſeveral Methods uſed by the *Spaniards* to diſcover and gain this Country, which at once anſwered the Objection, and proved to ſuch as had an high Opinion of the Judgment formed by the *Spaniards* of the Wealth and Importance of theſe Countries, that *Guiana* was one that deſerved the higheſt Commendations.

Theſe Accounts of his are diſperſed through various Pieces written by him upon this Subject; but, for the Eaſe of the Reader, we ſhall collect and range them in their natural Order, by which means they will become a kind of Supplement to what has already been delivered of the *Spaniſh* Diſcoveries and Conqueſts; this being the ſole Reaſon of our omitting them there, becauſe we foreſaw the Neceſſity of repeating, or at leaſt of recapitulating, them here, for the ſake of explaining Sir *Walter Raleigh*'s Expeditions. We have ſhewn in that Chapter how the Marquis *Pizarro* overthrew the Empire of the Inca's, and made himſelf Maſter of all their Territories, and of a great Part of their Treaſures; and we have likewiſe ſhewn that this was ſo far from ſatisfying his Avarice and Ambition, that he propoſed to extend his Conqueſts beyond the Limits of *Peru*, in order to penetrate into the Heart of *South America*, from the Hopes he had conceived of finding richer Countries there than any he had yet met with.

It was with this View that he ordered his Brother *Gonzalo*, after he had taken Poſſeſſion of *Quito*, which was the laſt Conqueſt of the Inca's, to continue his Expeditions on that Side, though he was ſenſible that he could receive little or no Aſſiſtance from the Informations of the Natives; his Brother accordingly entered the Province of *Los Quitos*; and, after making himſelf Maſter of that Country, the People of which were downright Barbarians in compariſon of thoſe of *Peru*, he determined to paſs the high Mountains which bound that Province on the North, and aſſembled a great many *Indians*, and a good quantity of Cattle for that Purpoſe; but, when he had aſcended half way up theſe Mountains, he found that he had taken his Meaſures wrong, and that the Cold was ſo intenſe, that it would be impoſſible for him to proſecute his March in that Manner. He therefore quitted his Cattle and the beſt Part of his Baggage, reſolving to make all the haſte he could into the plain Countries on the other Side, and truſt to the Proviſions he might meet with there.

Accordingly he deſcended into the Valley of *Zumaque*, which he found very plentiful, and in which therefore he refreſhed his Forces for two Months, endeavouring then to continue his March Northward; but, finding the Road extremely rough and mountainous, he turned directly Eaſt, in hopes of meeting with an eaſier Paſſage; this opened a Way into a new Province well peopled and very rich; the Inhabitants of which were dreadfully amazed at the coming of the *Spaniards* amongſt them, and indeed they very well might, for they behaved towards them in a Manner barbarous beyond Expreſſion; for *Gonzalo Pizarro* exerciſed the greateſt Cruelty imaginable on the Inhabitants of theſe Regions, inſomuch that he gave Men to be eaten alive by his Dogs. This engaged all the Natives to put themſelves in Arms againſt him, ſo that he was obliged to encamp himſelf as in an Enemy's Country; and his Cruelties, together with the Deſpair he was in of ever being able to find what he was ſeeking after, had like to have put an End to his Enterprize at once. He was encamped on the Bank of a River, which ſwelled ſo much in one Night, that if the Sentinels, who perceived the Water was a-pace getting Ground, had not warned them of their Danger, they had been all drowned; but at the Alarm they ſoon ſecured themſelves, by making towards the Cottages of the wild People; and *Pizarro* reſolved to return to *Zumaque*, not knowing what other Courſe to take. From thence he proceeded again with all his Men, and after a March of four Leagues he met with a great Village called *Ampua*, governed by a Cazique, and found a great Number of the Inhabitants in a Poſture of Defence, expecting their Enemy; but there was another and greater Obſtacle in his Way than this Cazique and all his Troops, and that was a River ſo wide and deep that he could have no Thought of venturing to ſwim over it. He could therefore find no better Expedient than to enter into a Treaty with the People of the Country, and to deſire the Help of their Canoes to croſs this River.

The Cazique received this Propoſal with great Civility, offered them what they aſked, and gave them as many of theſe little Boats as they deſired; and on this, *Pizarro* made him a Return of a great many little *Spaniſh* Toys, by way of requital. This Cazique having received Advice of the ill Treatment many of his Neighbours had received from the *Spaniards*, thought of nothing more than how to get rid of them, and to deliver

liver himſelf from the Danger of ſuch bad Gueſts, endeavoured to make them believe there were great Riches to be found among the People that dwelt upon the River, ſome Days Journey lower. *Pizarro*, by his Actions and by his Guides, who were his Interpreters, returned him Thanks for his Courteſy; but, finding no Appearance of thoſe pretended Riches, he returned to *Zumaque* very much diſſatisfied with his Expedition; however, he had too much Courage to retire back to *Quito* juſt as he came. He had a mind therefore to attempt ſome great Exploit, and, by the Diſcovery of ſome other Part, to render himſelf as conſiderable as the Marquis *Pizarro*, his elder Brother: He opened his Mind to *Francis Orellana*, a Gentleman of *Truxillo* in *Spain*, who was come to join him in the Valley of *Zumaque*; and, having taken one hundred effective Soldiers, and ſome *Indians* for Guides and to carry Proviſions, he marched directly to the Eaſt.

Either the Ignorance of his Guides, or the Hatred they bore him, engaged him in a Country all full of Mountains, Foreſts, and Torrents, ſo that he was conſtrained to make Ways where he found none, and to open himſelf a Paſſage through the Woods with Hatchets, where none had ever gone before. At length, after many Days March, he pierced through as far as the Province of *Coca*; the Cazique of which Province came to meet him, and offered him all the Accommodations the Country afforded for his Refreſhment; *Gonzalo* promiſed himſelf much from this kind Entertainment, and by the Aſſiſtance of his Guides entered into Converſation with the Cazique: He informed him, that the Country through which he had paſſed, which was ſo full of Mountains, Foreſts, and Brooks, was the only Paſſage he could have taken to come thither, that, it was extremely difficult to get thro' it; but that if he was willing to embark on the River he ſaw before him, or to follow it by Land, he might aſſure himſelf, that, along the Banks of another River much greater than this, he ſhould find a Country abounding with all Things, whoſe Inhabitants were covered with Plates of Gold. There was no need of ſaying any thing more to *Pizarro*, to incite him to any kind of Enterprize, who preſently ſent two of his Guides to *Zumaque*, with Orders to his Officers to come and join him, who marched immediately; and, ſurmounting all the Difficulties of the Way, arrived, much fatigued, at the Town of *Coca*.

Pizarro having reſted ſome few Days, afterwards put them in Battalia before the Cazique, who was ſo much terrified with them, that he amaſſed almoſt all the Proviſions of his whole Province to make a Preſent of them to *Pizarro*, that by this Magnificence he might civilly acquit himſelf of his new Acquaintance, who was more impatient of his Stay than the other; and the next Morning, having filed his Troops along the River, he took his Leave of the Cazique, preſenting him with a fine Sword, and put himſelf at the Head of his Cavalry, and followed the pleaſant Courſe of the River. This good Way did not laſt long, but they had Rivulets to ſwim over, and were forced to march in uneven Ways, and for forty-three Days, without finding any Proviſions, or any Fords, or Canoes by which to paſs the River. This long March having mightily fatigued our Travellers, they were ſtopped by a very ſurpriſing Sight; the River was preſſed by two Rocks, and on each Side its Paſſage, at no more than twenty Feet Diſtance from one another; and the Water going through this Strait precipitated itſelf into a Valley, and made a Leap of two hundred Fathoms: Here it was that *Pizarro* cauſed that famous Bridge to be made for his Troops to paſs over, which is ſo much boaſted of by the *Spaniſh* Hiſtorians.

But finding the Way not at all better on the other Side, and the Proviſion growing more and more ſcarce every Day, *Pizarro* reſolved to make a Brigantine, to carry by Water all his ſick Men, Proviſions, Baggage, and the Gold which they had got amongſt them. This was no ſmall Difficulty; but Induſtry and Neceſſity ſurmounted it, and the Veſſel being finiſhed, *Pizarro* embarked all in it that hindered his March, and gave the Command of it to *Francis Orellana*, with fifty Soldiers; giving him expreſs Order not to part far from him, but to come every Night to the Camp. He obſerved this Order exactly, till his General, ſeeing all his Men much pinched with Hunger, commanded him to go and ſeek ſome Proviſions and Cottages, where his Men might be refreſhed. *Orellana* had no ſooner received his Orders, but he launched out into the Middle of the River, and the Rapidity of the Stream carried him as faſt as he could wiſh, for he made above one hundred Leagues in three Days, without the Uſe of either Sails or Oars.

The Current of *Coca* carried him into another River which was much larger, but not near ſo ſwift: He made his Obſervations of it one whole Day, and ſeeing that the farther he went down, the more the River widened; he made no doubt but this was that great River which had been ſo often, and in vain ſought after. The Joy he conceived at his good Fortune ſo tranſported him, that it made him quite forget himſelf, ſo that, dreaming only of the Enjoyment of this good Succeſs, and trampling upon his Duty, Oath, Fidelity, and Gratitude, he had now nothing in View but to bring about the Enterprize he was contriving. To this End he perſuaded his Companions, that the Country was not the ſame with that which their General had deſcribed; that it had not that Plenty the Cazique had told him he ſhould find at the joining of the two Rivers; that they muſt certainly float along farther, to find that pleaſant and fertile Country, where they might ſtore themſelves with Proviſions; and beſides, that they all ſaw there was no likelihood of getting up this River again which they came down in three Days, but, as he believed, could not make the ſame Way back again in the Space of a whole Year; that it was much more reaſonable to wait for their Company on this new River; and that, in the mean time, it was neceſſary for them to go and ſeek Proviſions.

Thus concealing his Deſign, he hoiſted Sail; and, abandoning himſelf to the Wind, to his Fortune, and to his Reſolution, he thought of nothing but purſuing the Courſe of the River, till he ſhould diſcover it quite to the Sea. His Companions were amazed at the Manner of his putting in execution the Deſign he had been propoſing to them, and thought themſelves obliged to tell him, that he went beyond the Orders of his General; and that in the extreme Want he was in, they ought to carry him the little Proviſions they could find; and that he had given ſufficient Evidence he had ſome ill Deſign, becauſe he had neglected to leave two Canoes at the Bank of the two Rivers, as the General had appointed him, for his Army to paſs over in. Theſe Remonſtrances were made chiefly by a *Dominican* Friar named *Gaſpar de Carvajal*, and by a young Gentleman of *Badajos* in *Spain*, called *Fernand Sanches de Vargas*. The Conſideration they had for theſe two Perſons, occaſioned a Diviſion in the Company, in this little Veſſel, into two Parties; and from Words they were like to have fallen to Blows, but that *Orellana*, ſtifling their Gratitude by his Diſſimulation, by fair Proteſtations, and great Promiſes, appeaſed this Diſorder.

By means of his Friend he had in the Veſſel, he gained moſt of the Soldiers that were againſt him to his Side; and ſeeing the two Heads of the other Party left almoſt alone, he cauſed *Fernand Sanches de Vargas* to be ſet aſhore, leaving him quite alone, without Victuals and without Arms, in a diſmal Wilderneſs; bounded, on one Side, with high Mountains, and with a River on the other. He had more Prudence than to treat the Friar after the ſame manner, yet he gave him to underſtand, that it was not for him to penetrate any more into the Intentions of his Commander, unleſs he had a mind to be ſeverely chaſtiſed. After this he continued his Voyage; and the next Day, being willing to know if he might depend upon all that were with him for the Succeſs of his Reſolutions, he let them know that he aſpired to a much higher Pitch of Dignity than what he might have obtained in the Service of *Pizarro*: That he owed every thing to himſelf and to his King; and that his Fortune having, as it were, led him by the Hand to the greateſt and moſt deſirable Diſcovery that was ever made in the *Indies*, namely, the great River upon which they were ſailing; which coming out of *Peru*, and running from Weſt to Eaſt, was the fineſt Channel in the new World, through which they might paſs from the Southern to the Northern Sea ; that he could not, without betraying them all, and without raviſhing from them the Fruits of their Voyage and Induſtry, make others ſhare in a Favour which Heaven had reſolved for them alone. By this means he eaſily quieted theſe Murmurs, and brought his Men to have a Share of that Ambition which flamed in his own Breaſt. His Neceſſities forced him aſhore for Proviſions, and, as he did not take theſe with that Gentleneſs and Prudence that became him in a ſtrange Country ; the Natives, unanimouſly took up Arms, and with great Boldneſs fell upon the *Spaniards*, who defended themſelves with much Courage, and killed many of their Antagoniſts with their Croſs-bows ; and upon inſpecting their Bodies, found that ſeveral of them were Women ; as indeed it was no uncommon thing for the *Indian* Women, in that Country, to fight by the Sides of their Huſbands ; but our *Spaniard*, having a romantic Head, improved this ſlight Incident into a formal Hiſtory of a great Nation of *Amazons*, ſettled upon this River : By which Fable he overturned his great Deſign of beſtowing his own Name upon it, and thereby perpetuating the Memory of his Paſſage ; for from this Story of his it received the Name which it ſtill bears, and will always bear, of the River of *Amazons*.

He took care, in the remaining Part of his Paſſage, to behave with more Prudence and Mildneſs to the People he met with, among whom were many gentle, and even polite Nations, as well as others fierce and warlike. In fine, he paſſed quite down the River to the Sea ; and having coaſted about a Cape, now called the *North Cape*, which by the way is the Name the *French* have beſtowed on the Country of *Guiana*, two hundred Leagues from the Iſland of *Trinidada*, he ſailed directly thither, and there bought a Ship to carry him to *Spain* ; where he made ſuch a Report of the Countries he had ſeen, to the Emperor *Charles* V. that he obtained as ample a Commiſſion as he could deſire ; and, in the Year 1549, ſailed with three Ships for the River of *Amazons* ; but this ſecond Expedition was the very reverſe of the firſt, as being unfortunate from the very Beginning ; for a contagious Diſtemper ſpreading among his Men, obliged him to quit two of his three Ships, and afterwards his Company was ſo reduced as to ſail in a ſmall Bark, with which he propoſed to proſecute his Diſcovery ; but being ſhipwrecked on the Coaſt of the *Caraccas*, he there loſt the reſt of his Men, and ſoon after died himſelf on the Iſland of *St. Margaret*, of downright Deſpair.

The ill Succeſs of *Orellana*'s Voyage cooled the ardent Deſire the *Spaniards* had for the Diſcovery of the River of *Amazons*, and it ſeemed quite extinguiſhed by the civil Wars of *Peru*, till the Marquis *de Caguete*, being Viceroy of that Kingdom, a Gentleman of *Navarre*, named *Peter de Orſua*, who had always entertained Thoughts worthy of his great Courage, turned his Deſigns on this great River, and believed he ſhould be more fortunate than *Orellana*. He preſented himſelf to the Viceroy, and propoſed his Deſigns to him, who being well acquainted with his Merit, commended his Reſolution ; and was perſuaded that if ſo difficult a Matter ſhould ſucceed, it muſt be by the Conduct of ſo wiſe and brave a Commander. Moſt of the Gentry came to offer their Service to *Orſua*, who was ſo much in every one's Eſteem, that there was no Soldier ſo old but would leave his Retirement with Pleaſure, to ſerve under ſo excellent a General ; he made choice of ſuch amongſt them as were fit for his Purpoſe ; and to carry on the famous Conqueſt he deſigned he made all neceſſary Proviſions, to which all the Lords and Inhabitants of the Towns contributed with a great deal of Liberality, being well perſuaded that *Orſua* had Qualities that well deſerved to be obliged.

He departed from *Cuſco* in 1560, with the Acclamations and good Wiſhes of all the Inhabitants of that Place : He was attended with above ſeven hundred good Soldiers, and with a conſiderable Number of good Horſes. Being well verſed in the Map of *Peru*, and having been for ſome time laying the Scheme of his Journey, he marched directly to the Province of *Moſilones* firſt, to meet the River *Moyabamba*, by which he was ſure of entering into the River of *Amazons*. One would have hoped, an Attempt ſo wiſely laid, and ſo univerſally approved, ſhould have had an happy Iſſue, yet never was any Project more unſucceſsful ; for *Orſua* had taken with him one Don *Fernand de Guſman*, a young Man lately come from *Spain*, and another more advanced in Years, named *Lopez d' Aguira* of *Biſcay*, a little ill favoured Man, whom he had made his Enſign. Theſe two Wretches fell in love with their General's Lady, whoſe Name was *Agnes*, and who had accompanied her Huſband in all his Travels ; and thinking they had a favourable Occaſion to ſatisfy their Luſt and Ambition together, they engaged *Orſua*'s Troop to revolt, and aſſaſſinated him.

After the Tragical Fact, the Traitors who committed it, who to the Number or ſeven or eight were in a ſtrict Confederacy, elected Don *Fernand de Guſman* for their King, whoſe Mind was vain enough to receive that Title which became him ſo little ; but he did not enjoy it long ; for thoſe very Perſons that had given him the Quality of King, gave him his Death's Wound too ; and *d' Aguira* ſucceeded him, who made himſelf King, notwithſtanding the Remonſtrances of others. He gave all thoſe he had gained to his Party to underſtand, that he intended to make himſelf Maſter of *Guiana*, of *Peru*, and of the new Kingdom of *Grenada* ; and promiſed them all the Riches of thoſe great Kingdoms. His Reign was ſo bloody and barbarous, that the like Tyranny was ſcarce ever heard of in the World. Therefore the *Spaniards*, to this Day, called him *the Tyrant*. However he commanded *Orſua*'s Veſſels, and went down the River *Coca* into *Amazon*, hoping to obtain one of thoſe Kingdoms, and to make a conſiderable Progreſs into it : But having entered the *Amazon*, he was not able to maſter the Current of it, and ſo was conſtrained to ſuffer himſelf to be carried down to the Mouth of the River above a thouſand Leagues from the Place where he embarked, and was driven into the great Channel which goes to the *North Cape*, being the ſame Way *Orellana* had taken before him. Going out of the *Amazon* he came to the Iſland of *St. Margaret*, which is to this Day called the *Tyrant's Port*. There he killed Don *Irean de Villa Andrada*, Governor of the Iſland, and Don *John Sermiento* his Father.

After their Death, with the Aſſiſtance of one *John Burg*, he made himſelf Maſter of the Iſland, plundered it entirely, and there committed unheard of Barbarities ; he killed all that oppoſed him, and paſſed from thence to *Cumana*, where he exerciſed the ſame Cruelties. He after that deſolated all thoſe Coaſts that bear the Name of *Caraccas*, and all the Provinces along the Rivers *Venezuella* and *Bacho*. He then came to *St. Martha*, where he put all to the Sword, and entered the new Kingdom of *Grenada*, deſigning to march from thence through *Quito* into *Peru*. In this Kingdom he was forced to a Battle, in which he was utterly defeated and put to Flight, and all Ways being ſtopped, when he found he muſt periſh, he thereupon began his Tragedy with a Sort of Barbarity without Example. He had a Daughter by his Wife *Mendoza*, that had followed him in all his Expeditions, and whom he loved entirely : Daughter (ſaid he to her) I muſt kill thee ; I deſigned to have placed thee on a Throne, but ſince Fortune oppoſes it I am not willing thou ſhouldſt live to ſuffer the Shame of becoming a Slave to my Enemies, and of being called the Daughter of a Tyrant and a Traitor : *Die, my Child, die by the Hand of thy Father, if thou haſt not Courage enough to die by thy own :* She, ſurprized at this Diſcourſe, deſired him, at leaſt, to give her ſome time to prepare for Death, and to beg of God the Pardon of her Sins. This he granted, but, thinking her too tedious in her Devotion, as ſhe was praying upon her Knees he ſhot her through the Body with a Carbine ; but having not killed her outright, he ſtuck his Dagger into her Heart, and ſhe falling down at the Stroke, cry'd, *Ah Father, 'tis enough*. Soon after her Death he was taken Priſoner, and carried to the Iſland *la Trinidada*, where he had a conſiderable Eſtate. His Proceſs was made, and he condemned to be quartered. He was publickly executed ; his Houſes razed to the

Ground, and the Places where they ſtood ſowed with Salt.

I choſe to mention the Attempts of the *Spaniards* to penetrate into this Country on the South-ſide; firſt, that I might end with thoſe Attempts made by the ſame Nation upon the North, by the great River *Oronoco*, or, as moſt of our *Engliſh* Writers write it, after the *French* Manner, *Oronoque*, by which alſo Sir *Walter Raleigh* made his Attempt. The firſt Perſon we read of who engaged in this Deſign of finding and making himſelf Maſter of the Inca's new City of *Manoa*, was *Diego de Ordaca*, who ſailed from *Spain* with a great Force for this Purpoſe, in the Year 1531; which, by the way, ſhews how early this Notion was taken up, and that it was not, as is commonly believed, invented by the *Indians*, to rid themſelves of *Gonzalo Pizarro*. This *Diego de Ordaca*, with ſix hundred Foot and thirty Horſe, reached the *Oronoco*, where, by a Series of unlucky Accidents, too long for us to relate, his Expedition was totally ruined: Yet one of theſe Accidents proved the Means (as the *Spaniards* pretend and believe) of making a full Diſcovery of this famous City; and the Story is thus told: When *Ordaca* came firſt upon this Coaſt, and anchored in the Harbour of *Morequito*, his Magazine of Powder, by ſome Miſchance, blew up; and this being imputed to the Careleſneſs of *Juan Martinez*, his Maſter Gunner, he was condemned to be ſhot for it; but the Seamen prevailed to have this Puniſhment changed into his being put alone into a little Canoe, with his Arms only, and without any Proviſions, and ſo committed to the Mercy of the Wind and Waves.

In this wretched Condition he was found by ſome of the *Indians*, or Savages, who, having never ſeen a white Man before, paſſed him about from one Place to another, till he came to the Royal City of *Manoa*, where the King no ſooner ſaw him than he knew him to be a Chriſtian and a *Spaniard*, for this happened but a very little after the Marquis *Pizarro* had deſtroyed the Empire of the Inca's in *Peru*. This Prince, however, received him civilly enough, though he was far from forgetting the Cruelties exerciſed by the *Spaniards* on his Countrymen. He kept him ſeven Months at *Manoa*; but in all that time he was never ſuffered to go without the City, or even to paſs through the Streets of it, without a Guard, and a Cloth bound over his Eyes. At the End of this Space, when it was perceived that *Martinez* had acquired, in ſome meaſure, the Language of the Country, the King ſent for him, and propoſed two Things to his Choice, *viz.* either to remain with him as long as he lived, or to return into his own Country, and he choſe the latter; upon which the King ſent him under a Guard the ſhorteſt way to the River *Oronoco*; but, at the Time he diſmiſſed him, he was pleaſed to beſtow on him, as a Mark of his Favour, a conſiderable Quantity of Gold, which, however, was taken from him by the Savages on the Frontiers, and by the *Oronocoponi*, a Nation ſo called from their living upon the Banks of that great River. They left him, however, two large Bottles, in which they thought he kept his Drink, but which were really filled with Gold Duſt, and theſe he brought along with him to the Iſland of *Trinidada*, from whence he went afterwards to *St. Juan de Puerto Rico*, where he lived for ſome Time, and from whence he intended to have procured a Paſſage to *Spain*; but being ſeized there with a mortal Diſeaſe, after he had received the extreme Unction, and ſaw no Hopes of Life, he cauſed his two Bottles of Gold to be brought, and the Account he had written of his Voyage: The Gold he gave to the Church for Maſſes to be ſaid for his Soul, and the Relation of his Voyage was entered, at large, in the Regiſters of the Chancery of *St. Juan de Puerto Rico*.

To this *Martinez* the *Spaniſh* Writers unanimouſly aſcribe the Diſcovery of this famous City, which he ſtiled *Manoa el Dorado* or the *Golden Manoa*, on account of the prodigious Quantities of that Metal which he had ſeen there, in their Palaces, Temples, and other public Edifices, but more eſpecially in their drunken Feaſts, of which he gave the following very ſingular Account: That thoſe who drank with the King were quite naked, and having their Bodies rubbed over with a kind of thin gummy Balſam, they were then powdered with gold Duſt, ſo as to be gilt from Head to Foot; this Relation, whether true or falſe, proved of very fatal Conſequence to the *Spaniards*, for it gave Occaſion to, ſome ſay twenty, others ſixty, ſeveral Expeditions in ſearch of this golden City, all of them with very indifferent Succeſs. *Juan Cortez* attempted it with thirty Men, but neither he nor they were ever heard of more. *Gaſpar de Sylva*, and his two Brothers, ſailed with two hundred Men from the *Canaries* to reinforce *Diego de Ordaca*; and, after taking a great deal of Pains, to no Purpoſe, returned to the Iſland of *Trinidada*, where they died.

Another Adventurer, in the ſame way, was Don *Pedro Hernandez de Serpa*, who landed at *Cumana*, and afterwards marched by Land on the Banks of the *Oronoco* till he came to an *Indian* Nation called *Wikiri*, who oppoſed his further Paſſage, and attacked his Men with ſuch Fury, that only eighteen of his *Spaniards* eſcaped from the Battle; yet this Enterprize was of particular Service to Sir *Walter*; for it fell out that when Captain *Amias Preſton* took the City of *St. Jago de Leon* by Storm, he made one of theſe Adventurers Priſoner, who gave him a large Account of the vaſt Riches the *Spaniards* hoped to find in this Country, which coming to the Ears of Sir *Walter Raleigh*, induced him to make diligent and ſtrict Search into the Original of this Story, whence he came to collect a Multitude of Hiſtories, relating to this Matter, of which we have given the Reader only a few, that he might ſee upon what Grounds this Expedition was undertaken, or rather what Reaſon Sir *Walter Raleigh* thought fit to aſſign for his Voyage, in order to draw ſuch an Approbation of it as was neceſſary, from thoſe whom nothing but a Shew of vaſt and immediate Profit could tempt; for, I muſt confeſs, it ſeems very doubtful to me, whether Sir *Walter Raleigh* gave entire Credit to theſe Accounts, or not; but whatever his own Opinion was, he had certainly a Right to uſe them as popular Arguments for promoting his Deſign, ſince no Politician ever doubted that it is lawful to cheat Men as well as Children for their own Good. But he took care to provide Reaſons of another Nature, for Men of other Minds: He ſhewed them that of all the Countries in *America* the moſt profitable, the beſt ſituated, the eaſieſt planted, the moſt defenſible, was *Guiana*. Theſe Notes of Excellency I have collected from his Writings upon this Subject, which are very artfully immethodical, and, under an apparent Careleſneſs of Stile and Order, are ſo wrote, as to affect the Mind of the Reader with an Opinion, that he has made Diſcoveries in Sir *Walter*'s Treatiſe, by penetrating into thoſe Secrets, which he meant to conceal; while, alas! the true Secret is, that he meant thus to catch us, and make every Man's Underſtanding revolt in his Favour.

It was neceſſary, in his Time, and more eſpecially to him; and therefore his Deſign is as commendable as his Execution is inimitable. But that he might proceed cautiouſly in an Affair of ſuch Importance, he ſent before him one Capt. *Whiddon*, to take a View of the Coaſt, that he might be perfectly informed of the State things were then in, and thereby become more able to take the proper Meaſures for overcoming thoſe Difficulties, which a Man of leſs Sagacity would have deemed inſuperable. This Gentleman did his Buſineſs effectually, though he met with ſome Obſtruction from the Force, and ſuffered much greater Inconveniences from the Frauds of the *Spaniards*, who were at that Time bent upon the ſame Deſign, and labouring with the utmoſt Diligence to diſcover and ſecure this valuable Country.

Among other Adventurers there was one *Gonzales Ximenes de Caſada*, a Man of greater Courage than good Fortune; who, after having had a large Share in the Conqueſt of *New Grenada*, attempted to penetrate into *Guiana*; but after a great Expence, and incredible Fatigue, to no Purpoſe, was obliged to return, diſappointed indeed, but not in Deſpair. This Gentleman had an only Daughter, whom he married to Don *Antonio de Berreo*; to whom, with a large Fortune, he bequeathed this Expedition, taking from him an Oath, that he would proſecute the Diſcovery and Conqueſt of *Guiana*, to the laſt Hour of his Life. He, to fulfil this Obligation, underetook this Enterprize, with ſeven hundred Horſe, attended by a vaſt Number of *Indian* Slaves; but after marching five hundred Leagues in purſuit of this Project, he was obliged to return, but brought with him from the Frontiers of *Guiana* forty Plates of Gold, and many other valuable Curioſities, ſufficient to fortify him in his Reſolution not to abandon the Deſign. It was this *Berreo* that Captain *Whiddon* had to deal with, and of whom he made a very bad Report on his return.

When Sir *Walter*'s Project was ripe for Execution, he was aſſiſted by the Lord Admiral *Howard* and Sir *Robert Cecil*, ſo that in the beginning of the Year 1595 he was ready to proceed; and it appears, from his Relation, that he had in the whole five Ships. He does not tells us the Name of his own, which he commanded in Perſon; though, as to the reſt, he diſtinguiſhes them plain enough; ſo that we perceive the *Lion's Whelp*, which was the Lord Admiral's, was commanded by Captain *George Gifford*; Captain *Keymis* had the Command of a Galego, beſides a Bark, which was committed to Captain *Croſs*, and another to Captain *Calfield*. The whole Number of Men in this Fleet is not mentioned; but the ſelect Company of Officers, Gentlemen, and Soldiers, he uſed in his Diſcoveries, exceeded not one hundred.

Thus prepared he departed from *Plymouth* on the 6th of *February* following, and ſailed to the *Grand Canaries*, and ſo to *Teneriff*, where he waited a while for the *Lion's Whelp*, and for Captain *Amias Preſton*. But this Captain diſappointed him, and went upon another Adventure, which proved ſome Diſadvantage in the Proſecution of his Diſcoveries. After waiting ſeven or eight Days to no Purpoſe, he ſailed with his own Ship and a Bark, commanded by Captain *Croſs*, to the Iſland of *Trinadada*, where he arrived the 22d of *March*, and ſpent a conſiderable Space of Time in viewing that Iſland, examining all its Ports and Havens, and even every little Creek, with infinite Care and Exactneſs. The Reaſons which moved him to this Stay, were two; the firſt, that he might revenge himſelf upon *Berreo* for the Injuries he had done Captain *Whiddon*'s People, eight of whom he betrayed into his Hands, and then uſed them barbarouſly; the other was, that he might obtain ſome Account of the Continent, and of the moſt proper Method for entering into *Guiana*, in both of which he ſucceeded, in ſpite of all the Care the *Spaniſh* Governor could take to hinder it. At laſt, perceiving that the *Spaniards* were contriving Meaſures for his Deſtruction, and knowing there could be nothing more fatal than to leave an Enemy at his Back, he reſolved to make himſelf Maſter of this Place, which he knew would gain him the Friendſhip, as well as ſecure him the Obedience, of the *Indians*, who by the *Spaniards* were moſt cruelly oppreſſed. Accordingly he ſent Captain *Calfield* to attack the Main-guard with ſixty Men, and, following himſelf with forty more, reduced the Town of *St. Joſeph* without much Trouble.

The Inhabitants he ſet at Liberty, keeping only the Governor and his *Spaniards* Priſoners; and afterwards at the Requeſt of the *Indians*, burnt the Place; but though he gratified them in this Reſpect, yet, in all others, he acted towards his Priſoners and more eſpecially towards the Governor, with ſo much Civility and Kindneſs, that he drew from him a faithful Account of all his Adventures in Purſuit of the Deſign before-mentioned. The ſame Day that *Raliegh* made his Conqueſt arrived Captain *Gifford* and Captain *Keymis*, and in their Ships divers Gentlemen, and others, which to his little Army was a great Succour and Solace. Then, proceeding upon his Diſcovery, *Raliegh* firſt called all the Chiefs of the Iſland together, who were Enemies to the *Spaniards*; for ſome of them *Berreo* had brought out of other Countries, and planted there to eat out and waſte the Natives; then by the *Indian* Interpreter, whom he carried out of *England*, he made them underſtand, "He was the Servant of a Queen, who was the greateſt Cazique in the North, and a Virgin, who had more Caziques under her Command than there were Trees in that Iſland; that ſhe was an Enemy to the *Caſtelans*, in regard of their Tyranny and Oppreſſion; and, having freed all the Coaſts of the northern World from their Servitude, had ſent him to free them alſo; and withal, to defend the Country of *Guiana* from their Invaſion and Conqueſt." Then he ſhewed them her Majeſty's Picture, which they ſo admired and honoured, that it had been eaſy to have made them idolatrous thereof.

The like and larger Speeches he made in a ſolemn Manner to the reſt of the Nations, both in his Paſſage to *Guiana* and to thoſe of the Borders, ſo as in that part of the World the Queen of *England*'s Fame was diffuſed, with great Admiration. This done, *Raliegh* returned to *Curiapan*; and though he had learnt of *Berreo* that *Guiana* was ſome hundred Miles farther than the Accounts he had received of Captain *Whiddon* had repreſented it, he kept the Knowledge thereof from his Company, who he much feared would have been diſcouraged thereby from proſecuting the Diſcovery. When *Raliegh* had farther gathered from *Berreo* the Proceedings of the paſt Adventurers and his own, he told him he was come upon the ſame Deſign, and was reſolved to ſee *Guiana*. *Berreo* uſed many Arguments to diſſuade him; as that he muſt venture in very light and ſmall Boats, to paſs ſo many dangerous Shallows, and could not carry Victuals enough above half the way; that none of the Country would ſpeak with him, and if he followed them would burn their Towns; beſides, the Way was long, the Winter at hand, and the Rivers beginning to ſwell; but above all, that the Kings and Lords who bordered upon *Guiana*, had decreed that none of them ſhould trade with any Chriſtians for Gold, becauſe the ſame would be their own Overthrow. *Raliegh*, reſolving however to make trial, directed his Vice-Admiral Captain *Gifford* and Captain *Calfield* to turn Eaſtward againſt the Mouth of the River *Capuri*, and gave them Inſtructions to enter at the Edge of the Shole, and upon the beſt of the Flood to thruſt over, but they laboured in vain, nor did the Flood continue ſo long, but the Water fell before they could paſs the Sands, tho' they uſed all the Skill and Diligence they could.

Then *Raliegh* ſent one *King*, Maſter of the *Lion's Whelp* to try another Branch, called *Amana*, if either of the ſmall Ships would enter; but when he came to the Mouth, he found it like the reſt; after him went *John Dowglas*, who diſcovered four fair Entrances, but all ſhole and ſhallow in the Bays leading to them. In the mean time *Raliegh*, fearing the worſt, cauſed his Carpenter to cut down an old Galego Boat, to fit her with Banks for Oars, and ſo as ſhe might draw but five Feet. In this went *Raleigh* with Gentlemen and Officers, to the Number of threeſcore; in the *Lion's Whelp* Boat and Wherry, they carried twenty; Captain *Calfield*, in his Wherry, carried ten; and a Barge of *Raleigh*'s ten more; this was all the Means they had, having left their Ships at *Curiapan*, to carry a hundred Men with Weapons and Proviſions for a Month, expoſed to all the Extremes of the Weather, all the Hazards of the Water, to lie open to the Air, and upon hard Boards by Night in Storms of Rain, or under the burning Sun by Day: to ſmell the wet Clothes of ſo many crowded together, the dreſſing of their Food, and that moſtly ſtale Fiſh, in the ſame Place, to be in ſuch a Labyrinth of Rivers, in ſuch a remote unknown Region; what Priſon could be more loathſome and unhealthy, what Proſpect more fearful and deſolate? At firſt ſetting out they had twenty Miles of a high Sea to croſs in theſe crazy Boats, ſo that they were driven before the Wind into the Bottom of the Bay of *Guanipa*, inhabited by inhuman Cannibals, who ſhot poiſoned Arrows, and from thence to enter one of the Rivers of which *Dowglas* had brought Tidings. After four Days they got above the Force of the Tide, and might have wandered a Year about, and never been able to extricate themſelves, in ſuch a general Confluence or Rendezvous of Streams were they now bewildered, and ſo reſembling one another, as not to be diſtinguiſhed, but imperceptibly circulating and driving them about into the ſame Place where they had been before, paſſing between many Iſlands and Straits, whoſe

Borders were ſo thickly arched and overſhadowed with Trees, as bounded their Sight to the Breadth of the River and the Length of the Avenue, while the Gloomineſs of the Proſpect added Horror to the Loathſomneſs of the Places in which they were confined.

At length, on the 22d of *May*, 1595, they fell into a River, which, becauſe it had no Name, they called the *Red Croſs River*, theſe being the firſt Chriſtians who ever entered the ſame: When they drew into a Creek, which led to a Town upon this River, their *Indian* Pilot, named *Ferdinando*, landing, was ſet upon by his Countrymen, who hunted him with Dogs; whereupon *Raleigh* ſeized an old Man paſſing that Way, and threatened to cut off his Head, if he did not procure his Pilot's Liberty; but he, by his Agility, ſoon eſcaped them, and ſwam to *Raleigh*'s Barge; however, they kept the old Man, and uſed him kindly, aſſuring themſelves of uſeful Information from a Native, ſo long converſant in thoſe Parts. And indeed, but for this Accident, they had never found their Way forward to the Country they ſought, nor back to that where their Ships lay; the old Man himſelf being often in the utmoſt Perplexity which River to take, ſo numerous and intricate they were. The People who inhabit the Countries at the Mouth of this great River, are comprehended under the general Name of *Tivitivas*, a bold and hardy Race of People, who know the Value of Liberty, and have Courage enough to defend it: They live in Houſes during the Summer, or dry Seaſon, but in the Wet or Winter Months they live in little Huts, which are built upon Trees, a Thing common enough on this Coaſt and even in the *Eaſt-Indies* where the Countries are exceſſively wet.

After this *Raleigh*'s Barge ran a-ground, and that with ſuch Force, that it did not ſeem very probable they ſhould be able to get her off; ſo that the Diſcovery ſeemed at a ſtand; but on the fourth Day after this Accident happened they ſet her on float, and, ſtriking into the *Amana*, one of the nobleſt Branches of the *Oronoco*, they continued their Voyage, but with incredible Fatigue. As they were now within five Degrees of the Line, Sir *Walter* was forced to keep up their Spirits by directing his Pilots to give them Hopes from time to time that their Labours would ſoon have an End. At length, the old *Indian* Pilot they had on board, perceiving that their Proviſions were quite exhauſted, and that they were in danger of periſhing without an immediate Supply, told them, that if they would venture up a River on their right Hand, he would bring them to a Town where they might be ſure of Refreſhments, and be able to return before Night. Sir *Walter* took him at his Word, and went immediately into his Boat with eight Muſketeers, followed by the Captains *Gifford* and *Calfield* in their Wherries, with eight Men a-piece. But it appeared, that the *Indian* Pilot had learned Sir *Walter*'s Art, for they not only rowed all Day, but all Night, without ſeeing any Town, and a leſs prudent Captain than he would have been tempted to have puniſhed the Pilot for giving them falſe Hopes. Yet about One the next Morning they reached this long expected Town, and obtained thoſe Supplies of which they ſtood ſo much in need. In the mean time the Company in the Galley manned out a Boat in ſearch of them, but next Day they returned and continued their Courſe. After they had made this hungry and hazardous Voyage for fourſcore Miles in that River, which, beſides other ſtrange Fiſhes of marvellous Bigneſs, abounded with Crocodiles, whence the People named it the River of *Lagartis*, *Raleigh* had a very proper young Negro attending upon him in his Galley, who, leaping out to ſwim in the Mouth of this River, was in the Sight of them all inſtantly devoured by one of theſe amphibious Animals.

Not long after, being again in want of Victuals, they took two Canoes laden with excellent Bread, being run aſhore by the *Indians* in them, called *Arwaycas*, who fled to hide themſelves in the Woods, fearing, through the Prepoſſeſſions of the *Spaniards*, that *Raleigh* and his Company were Cannibals. *Raleigh*, purſuing them, in hopes of ſome Intelligence, found, as he was creeping through the Buſhes, a Refiner's Baſket; in which were Quickſilver, Salt-petre, and divers other Materials for the Trial of Metals, and alſo the Duſt of ſome Ore that had been refined. But in two other Canoes that eſcaped them, they heard of a good Quantity of Ore and Gold. *Raleigh* then landed more Men, and offered 500 *l.* to any of his Soldiers who ſhould take one of the *Spaniards*. He found the *Arwaycas* hidden in the Woods, who had been Pilots to the *Spaniards*, of which *Raleigh* kept the Chief for his Pilot, and carried him to *Guiana*; by whom he underſtood in what Parts the *Spaniards* laboured for Gold, which he divulged to two of his Company, knowing both the Seaſon of the Year and other Conveniencies would be wanting to work any Mine himſelf. After recruiting his People with wholeſome Refreſhments, he continued his Voyage: The Men ſeemed now quite as well pleaſed as their Commander had been from the Beginning, and of their own Accord offered to go as far as he would; ſo that on the 15th Day from their leaving their Ships he entered the great River *Oronoco*, and had an Opportunity of ſatisfying himſelf as to the Number and Names of the *Indian* Nations that inhabited both Sides of it.

After having paſſed the Mountain *Aio*, and a great Iſland which he mentions, he reached on the fifth Day of his entering the great River aforeſaid, as high as the Province of *Aromaia*, and anchoring at the Port of *Morequito*, which is full three hundred Miles within the Land, upon the ſaid great River *Oronoco*, he ſent a Meſſenger to the old King of *Aramaia*, named *Topiowary*, who came the next Day before Noon on Foot from his Houſe, and returned the ſame Evening, being twenty-eight Miles backwards and forwards, though himſelf was one hundred and ten Years of Age. He had many Attendants of both Sexes, who came alſo to wonder at the *Engliſh*, and brought them great Plenty of Fleſh and Fiſh, with divers ſorts of Fruits. When the old King had refreſhed himſelf a while in the Tent, which *Raleigh* had cauſed to be pitched for him, they entered by the Interpreter into Diſcourſe about the Murder of *Morequito* his Predeceſſor, and the other Barbarities of the *Spaniards*. Then *Raleigh* acquainted him with the Cauſe of his coming thither, whoſe Servant he was, and that it was his Queen's Pleaſure he ſhould undertake this Voyage for their Defence, and to deliver them from the Tyranny of the *Spaniards*, dilating at large (as he had done before at *Trinidada)* on her Majeſty's Power, her Juſtice, and her Clemency towards all oppreſſed Nations; all which being with great Reverence and Attention received, he began to ſound the old Man touching *Guiana*, as what Sort of Commonwealth it was; how governed; of what Strength and Policy; of what Extent; with whom in Alliance or Enmity; laſtly, the Diſtance and Way to enter the Heart of the Country. The King gave ſuch an ample and perfect Account of theſe Particulars, that *Raleigh* wondered to find a Man of ſuch Gravity, Judgment, and good Diſcourſe, without the Help of Learning or Breeding.

After his Departure *Raleigh* ſailed Weſtward to view the famous River *Caroli*, both becauſe it was ſo wonderful in itſelf, and led to the ſtrongeſt Nations of all the Frontiers, who were Enemies to the *Epuremei*, Subjects to the Inca or Emperor of *Guiana*, and *Manoa*: Even when he was ſhort of it, or lower down than the Port of *Morequito*, he heard the roaring Falls of this River; but when he entered it with his Barge and Wherries, thinking to have gone up ſome forty Miles to the *Caſiagotos*, he was not able, with a Barge of eight Oars, to row one Stone's Throw in an Hour, and yet the River is as broad as the *Thames* at *Woolwich*. Therefore encamping on the Banks, he ſent off an *Indian* to acquaint the Nation upon the River of his Arrival and his Purpoſe, and that he deſired to ſee the Lords of *Canuri*, who dwelt in that Province. Then one of the Princes came down, named *Wanuretona*, with many of his People, and brought great Store of Proviſions, as the reſt had done. By him *Raleigh* found the *Carolians* were not only Enemies to the *Spaniards*, but moſt of all to the *Epuremei*, who abounded in Gold; and that there were three mighty Nations at the Head of that River which would join them againſt them; he was farther informed, by one Captain *George*, whom he had taken with *Berreo*, that near the Banks of this River there was a great Silver Mine, but the Rivers were now all ſo riſen, that it was not poſſible for the Strength of Men, with any Boat, to row againſt the Stream. Therefore he diſpatched a Party of between thirty and forty to coaſt the River by Land, while himſelf with a few Officers and half a dozen Shot, marched over Land to view the ſtrange and wonderful Overfalls of the ſaid River *Caroli*, which roared at ſuch a Diſtance, and the Plains adjoining, with the reſt of the Province of *Canuri*.

When they had got to the Top of the firſt Hills, overlooking the River, they beheld that prodigious Breach of Water which poured down *Caroli*, and how it ran in three Streams for twenty Miles together; no leſs than ten or a Dozen of the ſteep Cataracts appeared in Sight, each as high above the other as a Church Tower, which ruſhed down with ſuch Violence, that the very Rebound of the Waters made the Place ſeem as if it had been all over covered with a great Shower of Rain; and in ſome Places they took it at firſt for a thick Smoak which had riſen out of ſome great Town, till they drew nearer down in the Valley to this Thunder of Waters, where they better diſcerned and diſtinguiſhed the Effects of it. And here *Raleigh* ſays he never ſaw a more beautiful Country, nor more lively Proſpects; the Hills ſo raiſed up and down about the Valleys; the Waters winding into ſuch various Branches; the Plains ſo clear of Bruſh and Shrub, and covered all with fair green Graſs; the Ground of hard Sand, and eaſy for the March either of Horſe or Foot; the Deer croſſing in every Path; the Birds towards the Evening ſinging on every Tree a thouſand ſeveral Tunes, with Cranes and Herons, of White, Crimſon, and Carnation, perched along the River-Banks; the Air refreſhed with gentle eaſterly Breezes, and every Stone they ſtooped to take up, promiſing either Gold or Silver by its Complexion. His Company, at their Return, brought ſeveral of thoſe Stones home, which they rather found coloured outwardly like Gold, than any of that Metal fixed in them; for thoſe who had leaſt Judgment or Experience, kept only ſuch as glittered, and would not be perſuaded but they were rich, becauſe they ſhone; and thereby bred an Opinion that all the reſt were no better. Yet ſome of theſe Stones *Raleigh* ſhewed afterwards to a *Spaniard* of the *Caraccas*, who told him it was *El Madre del Oro*, that is, the Mother of Gold, and that the Mine was farther in the Ground: He received alſo many other Informations from theſe People, ſome of which, however, ſeemed to border upon thoſe fabulous Accounts delivered by Antiquity, but always ſuſpected by Men of Senſe; which *Raleigh* reports, but with due Caution.

While he lay at Anchor near the Banks of the *Caroli*, he ſpared no Pains that were requiſite to gain a thorough Knowledge of the Names and Manners of the ſeveral *Indian* Nations that lay farther within the Country, which was all, in that reſpect, left in his Power; there being many Reaſons which rendered his farther Stay improper, and his Return to his Fleet a Point of abſolute Neceſſity; for he had been now abſent above a Month, had wandered in that Space above four hundred Miles from the Sea-Coaſts; and beſides the Winter was coming on very faſt, and the great River began to riſe. Beſides all this, they had no Inſtruments with them to open Mines; and if they advanced farther, were to act againſt a numerous, civilized, and warlike People; ſo that, having done more with a Handful of People, and that too in fewer Days than the *Spaniards* had been Years in ſearching for this Country, he very wiſely reſolved to ſubmit to Neceſſity, and ſeek the ſhorteſt Way back to his Ships. Yet as he returned to the Eaſt, he ſpent ſome Time in diſcovering the River towards the Sea, which he had not ſurveyed, and which he thought alſo neceſſary to do: In a Day's time he arrived again at the Port of *Marequito*; for, gliding down the Stream, he went, without Labour, though againſt the Wind, little leſs than one hundred Miles a Day; when he came to anchor, he was very deſirous of farther Conference with old *Topiowary*, who ſoon came with a Multitude of his People flocking down to *Raleigh*'s Tent upon the Shore, loaded with Preſents.

When the old King was refreſhed, and the Crowd retired, *Raleigh*, by his Interpreter, entered into a long Conference with him, telling him, that as both the *Epuremei* and the *Spaniards* were his Enemies, the one having conquered *Guiana* already, and the other endeavoured to get it from both, he deſired to be inſtructed, both in the beſt Way to the golden Parts of *Guiana*, and the civilized Towns of the Inca. The King anſwered, He could not perceive *Raleigh* meant to proceed to the great City of *Manoa*, becauſe neither the Seaſon of the Year, nor the Strength of his Company, would enable him; for he remembered that in the Plains of *Maquregu̇arai*, the firſt Town of *Guiana*, where all the Gold Plates were made, which were ſcattered over the neighbouring Nations, and above four Days Journey from his own, three hundred *Spaniards* were deſtroyed, who had no Friends among the Borderers; he therefore adviſed *Raleigh* never to invade the ſtrong Parts of *Guiana*, without the Help of all thoſe Nations which were their Enemies. *Raleigh* aſked, If he thought the Company he had with him were ſufficient to take that Town? The King thought they were, and offered to aſſiſt him with all his Borderers, if he would leave him a Guard of fifty Men upon his Departure.

But *Raleigh*, knowing if they ſhould eſcape the *Guianians*, the *Spaniards*, expecting Supplies, would repay upon him his Treatment at *Trinidada*, very plauſibly excuſed himſelf. Hereupon the King deſired he would forbear him and his Country at this Time; for if the *Epuremei* ſhould know he had given *Raleigh* any Aid or Intelligence, he ſhould ſoon be over-run by them; nor could he avoid the *Spaniards* if they ſhould return, who had before led him, ſeventeen Days, in a Chain like a Dog, till he paid a hundred Plates of Gold, and ſeveral Chains of Spleen-ſtones, for his Ranſom; but if *Raleigh* would return in due Seaſon next Year, he would engage all the Borderers in the Enterprize; for that he could not more deſire to make himſelf Maſter of *Guiana*, than they to aſſiſt him, having been plundered in their Wars by the *Epuremei* of their Women, whom to recover, they would willingly renew the War, without Hopes of farther Profit; for the old King complained of it as a Matter of grievous Reſtraint, that now they were confined to three or four Wives apiece, who were wont to enjoy ten or a Dozen, while the Lords of their Enemies had no leſs than fifty or a hundred; but they ſeem to have had a political Reaſon for this Recovery, to ſtrengthen their Alliance, and increaſe their Forces; thoſe Frontiers having been much depopulated, between the Subjects of the Inca and the *Spaniards*.

Raleigh, after farther Conſultation, finding it abſolutely improper, either to leave any of his Company, or to attempt War upon the *Epuremei* till the next Year, applied himſelf now, only to learn how thoſe People wrought thoſe Plates of Gold, which were diſperſed about, and how they divided it from the Stone. The King told him, that moſt of their Plates and Images were not ſevered from the Stone; but that, on the Lake of *Manoa*, and many other Rivers thereabouts, they gathered the perfect Grains of Gold, and, mingling a Proportion of Copper, the better to work it, put it into a great earthen Pot, under which they increaſed the Fire by the Breath of Men through long Canes, faſtened to the Holes under the ſaid Pot, till the Metal diſſolved, which then they caſt into Moulds of Stone and Clay, and ſo made theſe Plates and Images; whereof *Raleigh* brought two Sorts into *England*, more to ſhew the Manner of them, than the Value; for he gave more Pieces of Gold of the twenty Shilling Coin, with the Queen's Effigy upon them, among theſe People, to wear in Honour of her Majeſty, and to engage them in her Service, than he received; ſo little did he make his Deſign of Gold known to them. He brought away with him, however, various Samples both of the Spar and of the Ore, which were ſufficient to juſtify his Reports of the Riches of this Country; and he likewiſe brought with him the higheſt Teſtimony that could well be given him of the ſincere Love and entire Confidence of the Natives, ſince old *Topiowari*, one of the wiſeſt, and none of the leaſt powerful, Princes in that Country, ſent over his own Son *Cayworaco* into *England*, where he was baptized with much Ceremony by the Name of *Gualtero*. On the other hand, Sir *Walter* left behind him, at their own Requeſt, two of his Company, *viz. Francis Sperry*, who was an excellent Draughtſman, and undertook to deſcribe, as he did, all the Country very exactly; and *Hugh Goodwin*, a Boy, who waited upon Sir *Walter*, and who was to learn the Languages of the *Indian* Nations, which he did to great Perfection, but was unfortunately devoured by a wild Beaſt.

After this, a Cazique, whoſe Name was *Putoma*, and another whoſe Name was *Warapana*, offered to conduct him to a Gold Mine, which they accordingly performed; but the Weather being extremely bad, Sir *Walter* was deſirous to make as much haſte back as it was poſſible to his Ships, which he accordingly did; but when he found himſelf on the Sea-Coaſt, and in a manner at the End of his Labours, he met with a moſt dreadful and dangerous Storm, which drove them almoſt to their Wits-end; and at length, in a dark Night, and in the midſt of the Tempeſt, he quitted his Galley, which he found amongſt Sholes and Sands, and in his Boat thruſt out to Sea, with ſo much good Fortune, however, that the next Morning, by Nine o'Clock, they had Sight of the Iſland of *Trinidada*, and, rowing cautiouſly under the Shore, arrived ſafely at *Curiapan*, where their Veſſels lay at Anchor. In all this tedious and ſurpriſing Expedition, wherein they went through ſuch a Variety of Dangers, being always alike expoſed to the Severities of the Weather, and to the Attempts of their Enemies, abſolutely wanting moſt of the Conveniencies, and frequently even the Neceſſaries, of Life; except the Negroe devoured by the Crocodile, he loſt not ſo much as a ſingle Man, which amazed the *Spaniſh* Governor *Berreo* to the higheſt Degree, who openly profeſſed his Admiration of Sir *Walter*'s Conduct and Courage, which ſo viſibly ſurpaſſed thoſe of all the *Spaniſh* Captains employed in this Service, from *Orellana* down to himſelf.

After a ſhort Stay, to put his little Squadron in order, he ſailed from *Trinidada* on his Return to *England*; and in his Paſſage home, landed and burnt ſeveral of the *Spaniſh* Towns upon the Coaſt; and on the 13th of *July* he met with Captain *Preſton*, under Cape *St. Antonio*, in the Iſland of *Cuba*; and on the 20th of the ſame Month purſued his Voyage to *England*, where he ſafely arrived, his Expedition being exceedingly applauded in Proſe and Verſe by all the reputed Wits of thoſe Times.

But it was not long before thoſe who envied *Raleigh* began to circulate new Calumnies, framed on purpoſe to depreciate his Diſcovery. It is of ſome Conſequence, even at this Day, to examine and expoſe theſe lying Stories, becauſe they have moſt unaccountably found ſo great Credit with the Generality of Mankind, that though they commend Sir *Walter*'s Deſign, as ſuppoſing it againſt the *Spaniards*, yet they queſtion his Veracity, with regard to the Produce, Value, and Expediency of ſettling *Guiana*, which is the Reaſon (at leaſt it ought ſo to be) why it was not afterwards attempted, when the Importance of Plantations were better underſtood. The firſt Suggeſtion was, that this was a favourite Scheme, perhaps a pleaſing Viſion of Sir *Walter Raleigh*'s; and there was no Reaſon to yield implicit Credit to any Man's Dreams, how wiſe and learned ſoever. It is really ſtrange, how far ſuch fooliſh Inſinuations as theſe prevail, and how baſely Mankind repay the greateſt Services that can be done them. When *Columbus* opened his Scheme in *Portugal*, it was reputed a mere Fancy, and a Contrivance to gain Employment; when *Fauſtus* invented Printing, he was treated by ſome as a Conjurer, and by others the Art was condemned as prejudicial to the Book-Scriveners; and at the Time *Harvey* taught the Circulation of the Blood, he was almoſt generally run down; and that, according to the Phyſicians of thoſe Times, was treated as a ridiculous Fiction, which is now regarded as the very Foundation of the Art of Phyſic. The Truth ſeems to be, that what is pervaded and clearly comprehended by a firſt-rate Genius, is a mere Cloud, Viſion, or airy Appearance, in the Judgment of common Men, who, either really forgetting, or affecting not to diſtinguiſh, this Difference in Capacities, would have their Judgments take place, and the Ignorance of the Many rather reputed Wiſdom than the Sentiments of a ſingle Man; and thus, between Folly and Arrogance, the Advantages which might be drawn from ſuch high and rare Spirits, if due Diſtinction were made, are abſolutely loſt, and the Diſcoveries in the World of Science (always atchieved by ſuch Men) poſtponed for Ages. Sir *Walter Raleigh* was aware of this, which induced him to take ſo much Pains in tracing the Knowledge of the *Spaniards*, and in making what they knew, and had endeavoured on this Subject, public; by which he thought he plainly proved this was no Invention of his, but only an Improvement on the Notions of other Men. He obſerved likewiſe, that the *French*, at the very Time he attempted it, had a View to this Diſcovery; and it is very certain, that, ſince his Time, Count *Pagan* recommended ſuch a Settlement to Cardinal *Richlieu*; ſo that the calling this a Whim of Sir *Walter*'s, as many did then, who are believed; now is to talk childiſhly and ignorantly on a very important Subject.

The next Inſinuation was, that there was no ſuch thing as Gold Duſt, Gold Plates, or Gold Mines there; but that all was mere Invention, calculated to recommend the Project. To this Sir *Walter* oppoſed three Reaſons, each of which was a fair and full Anſwer, and indeed wholly deſtroyed the Objection. For firſt, he ſhewed from the Situation, it was impoſſible this Country ſhould not be rich, as having *New Grenada* on one Side, *Peru* at its Back, and in that Climate which affords the richeſt Mines of Gold and Silver in *America*; to which, we may add, the Diſcovery of the *Brazil* Treaſures unknown in his Age. He next pleaded the Authority of the *Spaniards*; and that with reſpect not to Opinions only, but as to Facts; for he annexes to his Voyage Certificates of conſiderable Quantities of Gold, which they had drawn from that Country, and which made them ſo eager to diſcover it fully. This too has been confirmed by Father *D'Acughna*, and other Writers, ſince his Days, who very poſitively maintain the very ſame thing. He laſtly urges his own actual Experience, producing very ample Specimens of Gold Ore from thence. Upon ſome Doubt whether the Stones by him produced were Gold Ore or not, he cauſed them to be examined by Refiners. From ſome, Mr. *Weſtwood*, who lived in *Wood-ſtreet*, drew at the Rate of twelve or thirteen thouſand Pounds a Ton; ſome, tried by Meſſrs. *Bulmar* and *Dimock*, held after the Rate of twenty-three thouſand Pounds a Ton; and ſome, examined by Mr. *Palmer*, Comptroller of the Mint, and Mr. *Dimock*, held almoſt twenty-ſeven thouſand Pounds in a Ton. Yet, after all this, another Queſtion was ſtarted, whether *Raleigh* did not carry this Gold from *Africa*, as well as bring it from *Guiana*; to which he anſwered, that, from the very Mines in that Country, he helped to dig it himſelf, though with no fitter Inſtrument than his Dagger.

Another Head of Calumny was, that he chiefly aimed at attacking and plundering the *Spaniſh* Towns upon the Coaſts; and that theſe were, in reality, *Raleigh*'s Gold Mines in *Guiana*. But this was ſo far from the Truth, that one principal Reaſon, which Sir *Walter* aſſigns for fixing here, was, that the Catholic King had neither any Right to or Poſſeſſion of this Country. It is alſo moſt evident, from Sir *Walter*'s own Accounts, that, except at *San Joſeph* in *Trinidada*, he took nothing in the Places which he plundered in that Country, and from this very Inſtance he recommends planting rather than privateering. On the Whole, therefore, this Affair has been miſtaken from firſt to laſt: Sir *Walter*'s Propoſal was wiſe and well founded; his Deſcription of this Country true and very exact; his Expectations, though ſanguine, perfectly well grounded; and his own Voyage a very pregnant Proof that ſuch an Eſtabliſhment is highly practicable. If any ſhould enquire what Views I have in labouring this Topic ſo much, I ſhall fairly anſwer, many: I thought the Nature of my Subject led me to it; I conceived that Sir *Walter*'s Memory demanded this Piece of Juſtice; and I remembered that we are at War with *Spain*, *Guiana* ſtill unſettled; and that we may, as the Phraſe once was, TAKE and HOLD.

15. We are now to ſpeak briefly of ſuch other Tranſactions under the Reign of this great Princeſs, as may contribute to explain ſome Paſſages in this Section, and

ſet what follows in a clear Light. She encouraged Privateers immediately after her coming to the Crown, as the moſt effectual Means of raiſing a Fleet in a ſhort time; but when ſhe found this End anſwered, ſhe brought that Practice under due Regulations. She was extremely careful in giving all poſſible Encouragement for Diſcoveries, and it was with this View that ſhe promoted, as we ſhall ſee hereafter, ſeveral Enterprizes for finding out a Paſſage to the *Eaſt-Indies*, by the North-eaſt and by the North-weſt. The *Ruſſia* Trade ſhe encouraged; and her Conduct in reſpect to that Nation was ſuch as raiſed her Credit in thoſe Parts of the World, to the higheſt Degree that can be imagined. The King of *Sweden* was ſo charmed with what Fame reported of the Queen, that he put himſelf into the Number of thoſe who were Suitors to her for Marriage. The King of *Denmark* aſked her Leave to tranſport Corn through the narrow Seas, which, to ſhew her Dominion over them, ſhe once refuſed; and the *Hanſe-Towns* having preſumed to ſend a Fleet through them without her Leave, ſhe ſeized and confiſcated their Ships; as for the *Dutch*, they more than once offered to ſubmit themſelves to her Government, and in the moſt public manner acknowledged that they owed the Recovery of their Liberty to her Succour and Protection; but ſhe was wiſe enough to foreſee, that as they grew in Power they might alter their Notions, and ſhe took care to provide againſt this, by procuring the Keys of *Holland* and *Zealand* to be put into her Hands; by which means ſhe was able to lock up their Commerce and naval Force at her Pleaſure.

She kept *France* in great Awe, even when it was governed by *Henry* IV. the wiſeſt, braveſt, and beſt Monarch of the Houſe of *Bourbon*. She ruined the naval Power of *Spain*, then the moſt formidable in *Europe*, and under the Direction of a Prince whoſe Abilities were equal to every thing but his Ambition: She encouraged Expeditions to the *Weſt-Indies*, as long as they proved beneficial to her Subjects; and when they appeared to be no longer ſo, ſhe very prudently reſtrained them. It was under her Reign that the *Engliſh* firſt attempted the Paſſage into the *South-Seas* by the Straits of *Magellan*; which proved of great Conſequence, not only in that Part of the World, but alſo in opening a Way to the *Eaſt-Indies*, as we have already ſhewn in the former Parts of this Work, to which thoſe Paſſages properly belonged.

She brought, by affording the Means of employing them, the building of Ships into uſe, and by Degrees to great Perfection, which was of infinite Benefit to the Nation, and at the ſame time delivered us from the heavy Inconvenience of hiring Veſſels from Foreigners whenever the public Occaſions demanded a large Fleet; but moſt of theſe Things (though incident to my Purpoſe) have been already inſiſted on by others, and therefore I am content barely to mention them, that I may have room to mention ſome other Things of no leſs Importance, though not ſo much attended to. We have ſhewn how wretched a Situation Things were in at the Beginning of her Reign, and how ſuddenly and how effectually ſhe changed the Face of our Affairs; and we have in ſome meaſure pointed out the Manner in which this was done; but there remain ſome other Points worthy the Reader's Conſideration, which I ſhall next handle with all imaginable Brevity.

Queen *Elizabeth* taught all her Subjects Induſtry and Application by her perſonal Conduct; ſhe was conſtantly attentive to every Branch of her Government; knew exactly what was done, what might be done, and what was omitted; ſhe underſtood moſt Things herſelf, and what ſhe did not underſtand, ſhe committed to the Inſpection of ſuch as were reputed to be beſt acquainted with them; ſhe was ſlow in reſolving, and quick in Execution; ſhe heard all that could be ſaid for, or againſt, Sir *Francis Drake*, before ſhe went on board his Ship, or gave him any public Marks of her Favour; but afterwards ſhe would never permit his Conduct to be cenſured.

She was ſparing in her Honours, becauſe ſhe was reſolved to uſe them as Rewards; and ſhe knew that in order to this it was requiſite they ſhould not become cheap; ſhe never employed any but capable Miniſters; for ſhe had Men for Shew, and Men for Service; and in nothing demonſtrated her great Capacity more than in her Choice of Servants. Secretary *Walſingham*, and after him Secretary *Cecil*, had the Department of the Marine, and both underſtood it well; ſo that whoever applied to them, was to make out the Reaſon and Probability, as well as the Profitableneſs, of his Project. This produced the many excellent Pieces which are preſerved in *Hackluit*, particularly Sir *Humphrey Gilbert*'s Diſcourſe of the North-weſt Paſſage, Sir *George Peacham*'s Benefits of weſtern Planting, with Mr. *Harriot*'s Account of *Virginia*, and many ſuch Things. By this means a Spirit of uſeful Knowledge was promoted and kept up; all Things were thoroughly ſifted before Encouragement was given, and due Regard had to what ſucceeded, to what did not, and to the Reaſon and Cauſes of both.

She took ſome Share of moſt Expeditions of Conſequence, as well to keep up the Spirits of thoſe concerned, as, in caſe any good Prizes were made, that the Public might have its Part, in which we find her always ſtrict, and ſometimes a little ſevere: But with all her Frugality and good Management in this Reſpect, ſhe found War an expenſive and ruinous Thing, which demanded conſtant and great Supplies, bringing in but ſlowly and inconſiderably. She was the better able to diſcern this, becauſe ſhe took care to have the Treaſury-Books as regularly kept as thoſe of a Merchant, whence ſhe was very well able to tell how far her Revenues anſwered her Expences, in what Articles her Exceſſes were incurred, and even the Loſs and Gain on particular Expeditions: As for Inſtance, that of *Cadiz*, or *Cales*, reputed the moſt fortunate in her long Reign, which nevertheleſs coſt ſixty-four thouſand Pounds more than it brought in. The Balance, in this reſpect, was always againſt her, notwithſtanding the vaſt Sound her Prizes made in the World; for, according to a Minute of an Account made up by the famous Lord-Treaſurer *Burleigh*, from the thirtieth to the thirty-fourth Year of her Government, it appears, that the bare Expence of the Navy amounted to two hundred ſeventy-five thouſand, ſeven hundred and ſixty-one Pounds, and all received by Prizes within thoſe Years, which were the moſt proſperous in that reſpect of the whole *Spaniſh* War, came to no more than ſixty-four thouſand and forty-four Pounds.

Yet, conſidering what Miſchief was done the Enemy, how much his Commerce was embarraſſed, his Merchants ruined, his Credit leſſened, and his Power decreaſed, there was no great Cauſe to repine; and, in truth, we no where find the Queen did ſo, but ſhe always endeavoured to put her Nobility upon ſuch Enterprizes, as well to keep them employed, as to throw a Part of the Expence upon ſuch as ſhe judged were much more able to afford it than the common People.

But there was another great and uſeful Effect which flowed from this aſſiduous Care in the Queen, and this generous Conduct in her Nobility, and that was, the eſtabliſhing a juſt Regard for Public Spirit. It was the Mode in her Days, to do every thing with a View to the Welfare of the State, and it was impoſſible for any Man to make a figure at Court, or to appear with Diſtinction in his County, whoſe Actions as well as Words did not diſcover ſomewhat of the Patriot. Some of the Nobility ſerved in *Holland*, to learn the Trade of War, at the ſame time that they contributed to break the Power of *Spain*, and to raiſe the *Engliſh* Reputation for Courage, Steadineſs, and other Military Virtues. The Earl of *Eſſex*, and other Men of Quality, ſerved the Queen at Sea in various Expeditions of great Importance. Others again, ſuch as the Earl of *Cumberland*, embarked in particular Enterprizes at their own Expence; and by this means, after the formidable Invaſion in 1588, the King of *Spain* found himſelf ſufficiently employed at home, and perceived, when it was too late, that he had waſted the Blood and Treaſure of all his Kingdoms, to raiſe up two new Powers in *Europe*, *viz.* *England* and *Holland*, which neither he nor his Succeſſors would be able to cope with.

But the Queen and her Miniſters, when the Dangers of War were thus removed, or kept at a diſtance, knew how to divert the ſame Spirit to other good and ſalutary

Purpoſes. In former Reigns there had been little Care taken to explore the Riches of this Kingdom; but now every Part of it was examined, and every kind of Improvement ſet on foot. The Lord-Treaſurer ſent for ſeveral *Germans* over, who were employed in erecting Iron-works, in diſcovering and working Lead-mines, and in making Salt-petre. We formerly exported moſt of our Commodities raw and unwrought, but now the Perſecution in the *Low-Countries* furniſhed us with Multitudes of able Workmen in every Branch of the Woollen Manufacture, who had all imaginable Encouragement given them, and with very conſiderable Privileges were ſettled in different Parts of the Kingdom, more eſpecially at *London*, *Norwich*, *Colcheſter*, and *Canterbury*. The like Care was taken with reſpect to other Trades, and this was attended with ſuch Succeſs, that, whereas in the Beginning of the Queen's Reign we bought our Artillery abroad, towards the End of it we furniſhed all *Europe* with Ordnance; ſo that at length it grew a Queſtion, Whether it might not be requiſite for the public Safety, to put a Stop to the Exportation of Iron cannon.

There was now ſcarce a Seſſion of Parliament held in which there were not Acts paſſed for promoting new Branches of Trade, or for preſerving or regulating the old; and though it may be, and I believe it is, true, that ſome of the Laws, then made, have become in proceſs of Time rather dangerous and deſtructive, than profitable or advantageous, to Commerce, yet certainly they were made with a good Intent; and we have Reaſon to believe were well enough ſuited to thoſe times; ſo that we have no Reaſon to cenſure thoſe who made them, on account of the Inconveniencies they produce, but ought rather to blame ourſelves for not repealing them. By theſe Steps the Face of Things in this Country was quite changed: Inſtead of being ſerved by the *Venetians* and *Genoeſe*, with all the Commodities of the Eaſt, we brought them Home ourſelves, and even furniſhed them to others; inſtead of ſuffering all our Domeſtic Trade to be managed as formerly by *Germans* and other Foreigners, we began to ſettle Factories abroad, and there was hardly a Nation in the known World, with which, before the Death of this Queen, we had not ſome Correſpondence.

Yet, inſtead of ſetting down quietly with theſe Acquiſitions, and falling into a nominal Trade amongſt ourſelves, like the modern Stock-jobbing, we were then continually contriving and executing new Schemes, either for improving our Country, or exporting its Produce; our People, even then, began to think the Trading-world too narrow for them, and admired nothing ſo much as finding out new Markets, where Goods always ſell beſt, where Novelty and Variety often procure high Prices, even for indifferent Commodities. We need not at all wonder, therefore, that in theſe times there were Men of ſuch extenſive Abilities produced, as ſeemed to graſp the whole Circle of Commercial Knowledge; ſuch as Sir *Walter Raleigh*, Sir *Robert Dudley*, Sir *Thomas Greſham*, and many others; ſome of whom have left us Treatiſes in this Way, that are both read and admired in more enlightened Times. We may therefore ſafely pronounce, that the Seeds of all our Traffic, which have ſince ſo happily come up, and from which the Nation has reaped ſuch mighty Profits, were ſown in this Reign, and cultivated, when they needed Cultivation moſt, by the royal Hand of the matchleſs *Elizabeth*; the Mother of her Subjects, the Terror of her Enemies, and the Benefactor of Poſterity.

16. We are now to take a View of the State of *Engliſh* Affairs in regard to *America*, at the Cloſe of this Queen's Reign, when it will appear, that there was ſcarce any Part of it, whether of the Northern or Southern Continent, or Iſlands, with which we had not ſome Acquaintance; though we had made no Settlements any where. *Drake* and *Candiſh* examined the whole Backſide of *America* from South to North; and it appears very clearly from Sir *Richard Hawkins's Hiſtory of his own Voyage*, that we were almoſt as well acquainted with thoſe Countries as the *Spaniards* themſelves; this will appear leſs ſtrange, when it is obſerved, that ſome of our Seamen being ſurprized, others being ſent aſhore by their Commanders, and ſeveral ſtraggling when landed in Parties, on particular Deſigns, fell into the Hands of the *Spaniards*; and being ſent from Place to Place, travelled through more Countries than moſt of the *Spaniards* that were ſent thither by their Government, or were driven thither by their Neceſſities, ſome of whom, coming home, related, and ſeveral of them, particularly *Miles Phillips* and *David Ingram*, wrote Accounts of their Adventures, as we ſhall have occaſion to ſhew in another Place.

By this means we gained very clear and diſtinct Deſcriptions of the Countries bordering on the *Straits of Magellan*, of *Chili*, *Peru*, the *Bay of Panama*, the ſeveral Provinces of the Kingdom of *Old Mexico*, ſome Knowledge of the *New*, and even of *California*: Nor were we leſs acquainted with the other Side of the Continent, as the Reader may learn from the *Engliſh* Voyages of the firſt Chapter of this Work, in which are contained very diſtinct Accounts of the moſt Southern Parts, from the River of *Plata* to the Mouth of *Magellan's Straits*. We have likewiſe a ſufficient Knowledge of the great Country of *Brazil*, from Mr. *Knivet*, and other Travellers; though it muſt be allowed that they gave great Scope to their Imaginations, in what they have written, or, at leaſt, what is publiſhed by *Purchas*, if it was by them written, upon this Subject. As to *Guiana*, or the Country of the *Amazons*, Sir *Walter Ralleigh* and Capt. *Laurence Keymiſh*, whom he ſent thither ſoon after his Return, have written as good Deſcriptions of them, if not better, than any that are extant in other Languages.

As for the Coaſt, from the Iſland of *Trinity* up to *Carthagena*, it was the chief Scene of moſt of our Privateer Expeditions in this Reign; ſo that we had repeated Relations of all that was neceſſary to make this Part of the new World perfectly known. The remaining Part of the Coaſt, as far as the *Gulph of Honduras*, was likewiſe explained and deſcribed by ſeveral *Engliſhmen*, who had viſited thoſe Coaſts; particularly Capt. *Barker*; and as for the *Bay of Mexico*, it was often reſorted to; but more particularly by Captain (afterwards Sir *John*) *Hawkins*, in the Year 1568, at which Time he ſet on ſhore *David Ingram*, before-mentioned, at about one hundred and forty Leagues Weſt-by-north from the Cape of *Florida*. From thence he travelled with ſeveral other Perſons of his Company by Land, to within ſixty Leagues of *Cape-Breton*, where they found a Paſſage home by a *French* Ship, in 1369, and ſoon after their Arrival, *David Ingram*, *Richard Brown*, and *Richard Twede* went to viſit Capt. *Hawkins*, who had ſet them on ſhore, and related to him their Adventures. I have been more particular on this Head, becauſe this *Ingram* has given the cleareſt Account of any Man concerning the North-weſt Paſſage, as the Reader will ſee hereafter in its proper Place, where I ſhall give his Account at large. The remaining Part of the Coaſt of *North-America*, from the Cape of *Florida* to the utmoſt Extent of the Continent Northward, was examined by ſeveral of our Seamen, as appears by what has been already ſaid in this Section, and will farther appear from the Account we are yet to give of ſome Voyages that were made in the laſt Years of the Queen, and which I thought proper to reſerve for this Place.

The firſt of theſe, in order of Time, is the glorious Expedition of Capt. *William Parker* of *Plymouth*, who undertook, at the Expence of a few private Perſons, an Enterprize againſt the *Spaniards*, in which he was accompanied by Capt. *Giles* and Capt. *Ward*, Land-Officers; and by the Captains *Fugars*, *Loriman*, *Aſhly*, and ſeveral other Gentlemen, as Volunteers, which, all Circumſtances conſidered, will appear one of the hardieſt Undertakings, as well as one of the moſt ſucceſsful, in that Reign, or indeed ever attempted by our own Nation, or any other, of which there remains an Account in Hiſtory. This Squadron of his conſiſted but of three ſmall Barks, ſcarce equal in Strength to a Fifth-rate Man of War; of theſe the *Prudence*, ſtiled the Admiral, was of the Burden of one hundred Tons, and a hundred and thirty Men, commanded by Mr. *Parker* himſelf; the *Pearl*, Vice-Admiral, of ſixty Tons, and ſixty Men, Capt. *Robert Rawlins* Commander, the Pinnace of twenty Tons and eighteen Men. They ſailed in *November* 1601, and off the South Cape had the Miſfortune, in a violent Guſt of Wind, to loſe their Pinnace, with all her Men but three: Steering their Courſe from thence to the Iſlands of *Cape Verd*, they landed one hundred Men, and took one of them called *St. Vincent*, with a Town of the ſame Name; and, after having given the Spoil of it to the Soldiers, ſet fire to the Place. Hence they haled over to the Coaſt of the Continent, and coming to *la Rancheria*, or the Pearl Fiſhery, in the ſmall Iſland *Cubagua*, they there found the Governor of *Cumana*, with a ſmall Company of Soldiers. This did not diſcourage them from landing; and though at firſt they were received with great Warmth, they got at laſt the better of them, and took the Place with ſeveral Priſoners, Barks, and Boats, all which they ranſomed for the Value of five hundred Pounds, which was paid them in Pearls.

They ſailed from thence directly for Cape *de la Vela*, where they took a great *Portugueze* Ship of 250 Tons, coming from *Angola* and *Congo*, and bound for *Carthagena*; which, having little of Value in her, except three hundred and ſeventy Negroes, they ranſomed for 500 *l.* After this they went to the Iſland of *Cabecas*, where they embarked one hundred and fifty of their Men in two ſmall Pinnaces and two Shallops, and ſailed to the *Baſtimentos*, where they landed; and picking up ſome Negroes for their Guides, with their Boats and Pinnaces they entered the River of *Puerto Bello* the 7th of *February*, 1602; it being Moon-light, the Watch diſcovered them at their very firſt Entrance into the Haven, and haled them by the ſtrong Caſtle of *St. Philip*; in which were thirty-five Braſs Guns, and Soldiers enough to manage them. Having ſome on board who ſpoke the *Spaniſh* Tongue, they pretended they were *Spaniards* coming from *Carthagena*.

The Officer of the Caſtle bid them come to Anchor, which they did; but about an Hour after Captain *Parker* gave them the ſlip, with his two Boats and above thirty Men, leaving the Pinnaces at Anchor before the Caſtle. With this Force he went directly to the Suburb of *Triana*, and, though the Alarm was given, landed his thirty Men, and ſetting it on fire, left it burning, and marched into the great and rich Town of *Puerto Bello*. As ſoon as he entered, he marched directly to the King's Treaſury, where he found a Guard of Soldiers drawn up to receive him, with two Braſs Field-pieces on their Carriages; the Fight was long and obſtinate, and *Parker* had loſt the beſt Part of his Men, when Captain *Fugars* and Captain *Loriman*, who commanded the Pinnaces, hearing the Noiſe, came timely to his Relief, with one hundred and twenty Men. This Aſſiſtance ſoon turned the Scale, and the *Spaniards* began to think of ſecuring themſelves by Flight; a good Number of them got into the King's Houſe, which they defended very reſolutely for four or five Hours; but at length the *Engliſh* became Maſters of that, as well as of the whole Town. They found but ten thouſand Ducats in the Treaſury, though there were often ſix Millions in it; and if they had been ſeven Days ſooner, they would have found one hundred and twenty thouſand, which had been embarked in two Frigates for *Carthagena*.

The Spoil of the Town, which, in Money, Plate, and Merchandize, was conſiderable, was by Captain *Parker* given to the Soldiers. But two Frigates, which he took farther up the River, he carried away with him; after having kept Poſſeſſion of the Town two Days, Captain *Parker* generouſly ſpared it, with its Churches, Buildings, and Forts, from burning; and releaſed the Priſoners, among whom were Don *Pedro Melandez*, the Governor, the King's Secretary, and ſeveral Perſons of Quality, without Ranſom; ſatisfied with the Honour of having taken with a Handful of Men, in ſo little Time, and with ſo inconſiderable a Loſs, one of the fineſt Towns the King of *Spain* had in the *Weſt Indies*. His Reaſon for this was to give the *Spaniards* an Example of civil and generous Deportment towards their Enemies; and the Governor he releaſed, becauſe he had fought ſo bravely, having received eleven Wounds in the Action.

The Town had at this Time two Churches, ſix or ſeven fine Streets, three ſmall Forts on one Side, beſides the great Caſtle of *St. Philip*; all which they might have demoliſhed, and have left the Whole a Heap of Ruins: During their Stay in Town they had not the leaſt Diſturbance from any Forces of the *Spaniards*, nor any Alarm given; only as they were ſailing away the Enemy began to appear, but it was only to exchange a few Bullets, and to take leave of each other from the Mouths of their great Guns. Thus Captain *Parker* returned ſafely home with much Honour, and not without reaſonable Profit; and not only our own, but *Spaniſh* Writers, ſpeak of his Expedition in very honourable Terms.

The next Year ſome of the *Virginia* Company reſolved to fit out a Veſſel for that Country, and accordingly made choice of Captain *Bartholomew Goſnold* for their Commander, who had been formerly there. He ſailed from *Falmouth* on the 26th of *March* 1602, in a ſmall Veſſel, and no more than thirty-two Perſons on board, of whom it was propoſed that twelve ſhould ſtay behind, and form a Settlement, in caſe he ſhould meet with any Place which he ſhould judge convenient for that Purpoſe. This Captain *Goſnold* was an excellent Mariner, and therefore he did not go the former Courſe, but a much ſhorter one; and on the 11th of *May* he arrived in the Latitude of 42 Degrees and ſome few Minutes, among the Iſlands, forming the North Side of *Maſſachuſet's Bay* in *New England*; where, not finding the Conveniencies he deſired, he ſet ſail again; and when he thought he had got clear of the Land, he fell upon the Bay of *Cod*, now Part of *New England*. He went aſhore on a ſmall uninhabited Iſland, which he called *Elizabeth Iſland*, and on another Iſland, which he named *Martha's Vineyard*; where the Natives had left ſome Marks of their Habitations. Here ſome of his Company ſowed *Engliſh* Corn, and ſaw it come up very kindly; he built a little Fort for his and his Men's Security, and Trade from thence with the *Savages*, to whom *Europeans* were no Strangers; for the Commander of the firſt Body of them that came to trade was dreſſed with Waiſtcoat, Breeches, Shoes, Stockings, Hat, and all Accoutrements befitting an *Engliſhman*; but his Attendants had only Deer-ſkins about their Shoulders, and Seal-ſkins about their Waiſts; their Hair was very long, and tied up with a Knot behind; they were painted all over, but their natural ſwarthy Colour was eaſy enough to be diſcerned.

On the North-weſt Side of *Elizabeth's Iſland* the Captain found a Lake of freſh Water, about a League in Circumference, and very near the Sea; in the Midſt of which was another little Iſland, of about an Acre of Ground; and this they pitched upon as the moſt commodious Place for building their Fort above-mentioned, and they began it accordingly. About this Lake they found an infinite Number of Tortoiſes, with ſeveral Sorts of Fiſh and Fowl; ſo that thoſe who propoſed to ſettle there had a fair Proſpect of having Proviſions enough. They viſited the main Land adjoining to this Iſland, which they found, in all reſpects, as charming as Meadows, Groves, Brooks, and Rivers could make it. They had ſome Communication with the *Indians* of the main Land, who came and bartered with them for ſome of their *European* Rarities, and there was nothing hardly but what was ſo to theſe People. The Commodities they gave in exchange for Knives and other Toys, were Beavers, Lucains, Martens, Otters, Foxes, Conies, Seals, Deer, and Skins. The Affairs of this Plantation might have gone on very well, had all the Planters been unanimous and eaſy in their Settlements here; but they were intent upon their private Intereſts, and contrived to make only a profitable Voyage. The Captain laboured againſt it, but to no purpoſe; ſo having gotten a large Cargo of Saſſafras, Cedar-wood, Furs, and other good Commodities, they ſet ſail for *England*. They left their little Fort on the 18th of *June*, and they arrived at *Plymouth* the 23d of *July* following, *A. D.* 1602.

What the Conſequences were of this Voyage and Diſcovery will appear in the next Section; and therefore we ſhall paſs on to the laſt Voyage, which we are concerned to take notice of here; and that was made in the ſame Year 1602, by one Captain *Mace* of *Weymouth*, fitted out by Sir *Walter Raleigh*; and as the ſhort Account we have remaining, ſerves to correct all that has been ſaid by different Authors upon this Subject; and does a very ſingular Piece of Juſtice to the Memory of Sir *Walter*, who might ſeem to have abandoned thoſe who went upon his Faith to ſettle in *Virginia*; I have judged it both reaſonable and requiſite to inſert the whole Paper here, with this farther Obſervation, that Mr. *Richard Hackluit* received, as he acknowledges, great Aſſiſtances from Sir *Walter Raleigh*, in compiling his excellent Collection, and the Papers of Mr. *Hackluit* falling upon his Death into the Hands of Mr. *Samuel Purchas*, he made ſuch uſe of them as he thought fit, having by no means a Capacity adequate to his Undertaking; and from his fourth Volume, Page 1653, we tranſcribe the Account beforementioned, which ſeems to be no more than a Memorandum from a larger Relation of the Voyage to which it refers; and which, if it had been given us at length in the Manner that ſuch things were given by Mr. *Hackluit*, would very probably have furniſhed us with other curious Particulars. As it is, thus it runs:

A Brief Note of the ſending another Bark this preſent Year 1602, by Sir *Walter Raleigh*, for the ſearching out of his Colony in *Virginia*.

" *Samuel Mace* of *Weymouth*, a very ſufficient Mari-
" ner, an honeſt ſober Man, who had been at *Virginia*
" twice before, was employed thither by Sir *Walter Ra-*
" *leigh*, to find theſe People which were left there in the
" Year 1587; to whoſe Succour he hath ſent five differ-
" ent times at his own Charges. The Parties by him ſet
" forth performed nothing, ſome of them following
" their own Profit elſewhere, others returning with frivo-
" lous Allegations; at this laſt Time, to avoid all Ex-
" cuſe, he bought a Bark, and hired all the Company
" for Wages by the Month, who departed from *Weymouth*
" in *March* laſt, 1602, fell forty Leagues from the South-
" weſtward of *Hateraſke* in 34 Degrees, or thereabouts;
" and having there ſpent a Month, when they ſhould
" have come along the Coaſt to ſeek the People, they
" did it not, pretending the Extremity of Weather, and
" Loſs of ſome principal Ground-tackle, forced and fear-
" ed them from ſeeking the Port of *Hateraſke*, to which
" they were ſent. From that Place where they abode, they
" brought Saſſafras, Radix China, or the *China* Root,
" Benjamin, Caſſia-lignea, and the Bark of a kind of a
" Tree more ſtrong than any Spice as yet known, with
" diverſe other Commodities, which hereafter, in a large
" Diſcourſe, may come to light."

17. It may be very natural for the Reader to think that I ought to have changed the Order of the two laſt Paragraphs, and that I ſhould have concluded my Account of the Voyages to *America*, before I had drawn up a general View of ſuch naval Tranſactions as happened in the Reign of Queen *Elizabeth*; but I dare aſſure him that I conſidered this attentively, and that I quitted what I ſaw was the regular Method, in order to obtain what appears to me to be the great End of Method, Clearneſs, and being perfectly underſtood. By drawing together the naval Tranſactions in the Time of this famous Queen, I have ſhewn how ſhe was occupied throughout the whole Courſe of the Government, ſo as not to have it in her Power to attend to the Eſtabliſhment of Colonies, which is a Work of Time, of Leiſure, and of Recollection. But what the Nature and Circumſtances of her Adminiſtration would allow her to do for Trade, ſhe moſt certainly did; and that ſhe did it by Fits and Starts, was owing not to any Fault in her or in her Miniſters, but to the Faults of the Times, which did not permit her to do it otherwiſe. This, as I have diſpoſed the Thing, will to the Reader appear at firſt Sight to be the Truth, becauſe he will ſee that in the latter Part of her Reign the Deſire of planting revived, and in the Courſe of it all the different Parts of *America*, ſome from one Motive, and ſome from another, were viſited and diſcovered.

This I take to be the true State of the Matter for though there are many Writers, who, in their general Characters of that Queen, have aſcribed to her the Beginning of our Plantations, yet undoubtedly they were therein either miſtaken themſelves, or delivered their Sentiments in ſuch a Manner as occaſioned their being miſtaken by others. The Glories of that Period of Time are ſo many, and ſo great, that they need no falſe Colours to heighten them; on the contrary, they are leſſened thereby: For when, upon Enquiry, it is found that Part of them are miſrepreſented, it naturally leads People to doubt of the reſt; and, as in all other Caſes, ſo here, Flattery debaſes what it meant to exalt, and really leſſens what it ſeems to extol. The Buſineſs of Planting is indeed highly advantageous; and I believe it will appear from the following Sections, that no Nation has gained more by it than our own; but then it is the Buſineſs of peaceable and ſettled Times, when Nations grow full, and Diſcharges of People become neceſſary, which was not ſurely the Caſe under this great Princeſs. The great and real Excellency of her Adminiſtration conſiſted in this, that ſhe always, and in all things, conſulted the Good of her People; and the Wiſdom of her Miniſters is viſible chiefly from hence, that they did not obſtinately purſue good Things in Seaſon and out of Seaſon, but choſe, as the Circumſtances of things directed, to do the beſt for the Nation that their Situation would allow. It was the Opinion of ſeveral great Men in her Time, and upon their Authority it has grown to be a received and ſettled Notion ſince, that the Queen went rather too far into the *Spaniſh* War, and that her Subjects would have been greater Gainers, if ſhe had either avoided that War entirely, or if ſhe had ended it ſooner; which perhaps might be true.

But after conſidering, as maturely as it is poſſible for me to do, all that has been ſaid by Sir *Robert Cotton*, and other able Writers, upon this Subject, I am thoroughly convinced that the Queen acted upon right Principles, and that ſhe began and continued the War with no other View than the Good of her People. I am, at the ſame Time, however, perſuaded that ſhe extended her Views in this reſpect very far beyond her own Times, and that ſhe was ſenſible enough ſhe might have ended the Conteſt with *Spain* earlier, and with a Proſpect of much more Quiet to herſelf, than to her Dying-day ſhe enjoyed. But this was not the Diſpoſition of *Elizabeth*; if it had, the whole Turn of her Conduct would have differed widely from what it was; and ſhe ſacrificed willingly and knowingly the Tranquillity of her own Government, to fix the Welfare of her Subjects upon a ſolid Foundation. In this conſiſted the Strength of her Mind and the Greatneſs of her Genius; whoever conſiders her in another Light will miſtake her Character. She ſaw plainly that extenſive Trade and ſuperior naval Force were Things neceſſary to the Felicity of the Inhabitants of this Iſland; but ſhe ſaw at the ſame Time that it was impoſſible theſe ſhould be attained, if the Power of *Spain* was not deſtroyed. This therefore became her ſettled Point, which once gained, ſhe knew the other muſt follow, and therefore from this ſhe never departed; ſhe was very ſenſible that if the *Spaniſh* Power was once removed, the Trade and naval Force of this Nation would have room enough to grow and proſper, and therefore ſhe reſolved to remove it: She could not but know that this would prove a Work of great Difficulty; that it would expoſe her to a long and expenſive War abroad, and, which was worſe ſtill, to many Commotions, Plots, and Conſpiracies at home; but that did not at all move her; ſhe was bent upon doing what the Safety and Well-being of the Nation required; and though ſhe could not but foreſee that the Advantages ſhe laboured to procure muſt belong rather to Poſterity than to the People ſhe governed, yet ſhe reſolved to hazard all Things to procure them.

This was her Syſtem, vaſt and extenſive in itſelf, big with Difficulties and Dangers, extremely liable to be miſunderſtood, miſinterpreted, and miſrepreſented; full of Uncertainties, and requiring a great Length of Time, and a conſtant Series of Labours, to accompliſh it. If it had been poſſible to have ſet ſuch a Scheme as this before the Eyes of a Monarch of ordinary Qualities and Virtues, it would, without doubt, have raiſed Aſtoniſhment and Terror; but to a Mind like hers, capable of looking through the Miſt of preſent Events, and diſcerning the Face of things beyond them; though few Obſtacles were hid, yet none ſeemed unſurmountable; the Toil was great, the Journey long, the Road extremely rough, and it was impoſſible for her to know how far ſhe ſhould be able to proceed; but however, ſhe thought it neceſſary to ſet forward, and though for a Time things grew worſe and worſe, yet ſhe knew that by perſiſting they muſt grow better and better. This Reſolution, this Conſtancy, this Magnanimity, carried her through all, and ſhe had the great Comfort of ſeeing before ſhe died all the great Ends accompliſhed, which, in the Dawning of her Government, her admirable Underſtanding had preſented to her View; and, like the Sun, ſhe ſet when ſhe had accompliſhed that Round propoſed at her Riſing.

We are told of *Auguſtus*, that he boaſted of leaving *Rome* built with Stone, whereas he found it of Wood only. Queen *Elizabeth* might have boaſted of much greater things, and with much greater Truth; for ſhe did not riſe to Empire through Blood and Uſurpation, but came to it by Succeſſion, and with the Acclamations of all her People: Acclamations that were ſure Omens of Succeſs; for without doubt there never was a Kingdom in a lower, meaner, and more dejected State than this; when the Crown was placed upon her Brow, and her Subjects could not have either Joy or Hopes, but what aroſe from ſeeing it fixed there. She choſe for her Motto *Semper Eadam* that is, Always the ſame; and I hope I have ſhewn what ſhe meant by it. Her Conduct is the eveneſt that we meet with in Hiſtory; ſhe met with many Difficulties, but ſhe created none; ſhe experienced Misfortunes, but they were Trials and not Puniſhments; ſhe met with much Proſperity, but all viſibly derived to her by the Bleſſing of God upon her wiſe Endeavours.

We will ſupport a few of theſe Particulars by Facts. She found ſcarce any Navy; ſhe left a great one. She found the Government much in Debt, and though poſſibly her Power might have borne her out, if ſhe had expunged it; yet ſhe paid it, even to the Penſions granted by her Father, to thoſe who were excluded from their Monaſteries. She found her People poor and herſelf neceſſitous; yet ſhe ſpared them till they grew rich; and in the mean time grew rich herſelf, by managing frugally a very ſmall Revenue; for at the Time ſhe entered into the War with *Spain* ſhe had ſeven hundred thouſand Pounds in her Coffers. She ſpent above two Millions in the War. She lent the *States* eight hundred thouſand Pounds at different Times, and half that Sum to the *French* King, and yet ſhe did not raiſe quite three Millions upon her Subjects. She ſaw the Inhabitants of her Capital City doubled in her Life-time, as appears from the Computations, publiſhed by Sir *William Petty*. She found the Cuſtoms producing no more than thirty-ſix thouſand Pounds *per Annum*; ſhe left them worth more than double that Sum, without heightening of Duties. At the Time of her Acceſſion there were ſcarce any *Engliſh* Merchants in *England*; but before her Death there were conſiderable Traders in every Port of *England*. It is very true, that at the Death of Queen *Elizabeth* our Commerce was very trifling, to what it is; but it is no leſs certain, that if ſhe had not lived, our Commerce would have fallen very far ſhort of what we find it.

The next Section will fully ſhew that our great Improvements were made in the two ſucceeding Reigns; but in this, we have made it evident, that no ſuch Improvements could have been made if this Reign had not gone before them. It was in Queen *Elizabeth*'s Time that the Foundation of *Engliſh* Commerce was laid, though the Superſtructure was raiſed in the Days of King *James* and King *Charles*. It was under her that our Ships viſited all Parts of the known World. It was ſhe that protected the *Ruſſia* Company; one of the moſt uſeful ever formed in this Nation, and beyond Compariſon the beſt conſtituted. She founded the Company trading to the *Eaſt Indies*; and, in a word, ſhe encouraged every Branch of Trade that had been opened before her Time, projected many, and made way for all. The Room I had was much too little, to afford a juſt Account of all that we owe in this Reſpect to her Memory, but I have made the beſt Uſe of it I could, and am only ſorry that I could not make a better. If what I have done expreſſes my Senſe of the Advantages derived to us, and which will deſcend to our Poſterity, from what ſhe and her Miniſters, who were truly ſuch, (I mean the Inſtruments, and not the Directors of their Miſtreſs) did, it will afford me great Satiſfaction; for to praiſe Queen *Elizabeth*, with Judgment, is a Character ſufficient to gratify the Ambition of the moſt aſpiring Author, and to have attempted it is the greateſt Merit I ſhall have to plead.

SECTION XVIII.

The Hiſtory of the Diſcoveries, Settlements, and other Tranſactions of the ENGLISH *Nation in* America, *from the Acceſſion of King* James I. *to the Reſtoration.*

1. *A ſuccinct View of the State of Affairs at the Acceſſion of King* James; *the Voyages of Captain* Martin Pringe, *and of Captain* Gilbert, *to* Virginia, *and the Conſequences of their Diſcoveries.* 2. *The Earl of* Southampton, *and Lord* Arundel *of* Wardour, *ſend Captain* Weymouth *thither*; *his proſperous Voyage, and the Patent granted by the King for erecting two* Virginia *Companies.* 3. *The* London *Company fit out Captain* Chriſtopher Newport *with a ſmall Squadron, who ſettles a Colony at* James-Town *in* Virginia, *in* 1607, *and the various unlucky Accidents that befel this Colony.* 4. *They deſert* James-Town, *embark for* England, *and are met at the Mouth of* Cheſepeak Bay *by* Thomas Weſt, *Lord* de la War, *who carries them back, reſettles them, and effectually ſecures this valuable Country to the Crown of* Great-Britain. 5. *A ſhort Deſcription of this Colony, ſhewing its ſeveral Advantages, the Nature of its Trade, and its great Conſequence to this Nation.* 6. *The firſt Attempts of the ſecond or North* Virginia *Company, to ſettle within the Bounds of their Grant, and the Difficulties and Diſcouragements they met with in thoſe Attempts.* 7. *The Colony is at laſt ſettled, under the Direction of the famous Captain* Smith, *and the Country named by Prince* Charles (*afterwards* Charles I.) New England. 8. *A ſuccinct Account of the Tranſactions in this Colony, from its Eſtabliſhment to the Reſtoration.* 9. *The Situation, Climate, Soil, Produce and Trade of* New England, *briefly repreſented, and the Importance of this Colony ſet in a true Light.* 10. *The Diſcovery and firſt Settlement of the* Bermudas, *or* Summer Iſlands, *with ſome Account of them before they came into our Poſſeſſion.* 11. *A ſhort Deſcription of thoſe Iſlands, with an Account of their Commodities, and their Trade to* England *and to the Plantations.* 12. *The Diſcovery of* Hudſon's Bay, *and the Countries in* America, *to which the Names of* New North-Wales *and* New South-Wales, *were given by the firſt Diſcoverers.* 13. *The Recovery of* Acadia, *or* Nova Scotia, *and*

the Hiſtory of this Country within this Period, wherein is demonſtrated our clear and indubitable Right to
the Iſland of Cape Breton. 14. *The ſeveral Voyages to* Guiana, *down to the Death of Sir* Walter Ra-
leigh, *after his laſt Expedition thither, and an Account of our Settlement at* Surinam. 15. *A ſhort Ac-*
count of the firſt planting the rich and fruitful Iſland of Barbadoes. 16. *The Hiſtory of this advanta-*
geous Settlement, down to the Reſtoration. 17. *The Situation, Climate, Soil, Produce, and incredible*
Advantages that have accrued to Great Britain *from this Colony, which is proved to be the beſt in the*
World. 18. *The Diſcovery, Conqueſt, and Settlement of* St. Chriſtopher's, Nevis or Mevis, Montſerrat, &c.
19. *The Grant of the Province of* Maryland *to the Lord* Baltimore, *and the Settlement of that Country,*
with other Particulars relating to it within the Compaſs of this Period. 20. *The Expedition by the Di-*
rection of the Protector Cromwell, *for the taking* Hiſpaniola *from the* Spaniards, *with the true Cauſes*
of its Miſcarriage. 21. *The Hiſtory of the Conqueſt and Settlement of the moſt noble and moſt important*
Iſland of Jamaica. 22. *A ſhort Deſcription of the Iſland, a View of the vaſt Profits derived to* Great
Britain *from the Poſſeſſion of it, and other Particulars.* 23. *The Concluſion of the Section, with ſome Re-*
marks and Obſervations on the principal Events mentioned therein.

1. AT the Time of King *James's* Acceſſion to the *Engliſh* Throne, there were the faireſt Opportunities offered for extending and ſecuring the Commerce of this Iſland that could be wiſhed; and therefore we need not be ſurpriſed at finding ſuch vaſt Improvements made, and ſuch mighty Advantages gained to this Nation, under a Government that has not hitherto been repreſented in the faireſt Lights to the People. We muſt, however, obſerve, that the peaceable Temper of King *James* was of great Uſe to the trading Part of his Subjects; for the Power of Queen *Elizabeth* had raiſed ſuch a Veneration in ſome, and ſtruck ſuch a Terror into others, that there was ſcarce any Nation which did not willingly embrace the Friendſhip of King *James*, and offer him whatever Terms could be thought moſt ſuitable to the commerical Views of his Subjects; which was extremely agreeable to the *Engliſh*, at that Time, who began to entertain very true Notions of Trade; to ſee its Importance, above all Things, and to wiſh for the Means of promoting and extending it on all Sides, to which they began to think a Peace with *Spain* would not a little contribute. At the Time of the Queen's Deceaſe there was a Fleet preparing under the Command of Sir *William Monſon*, intended for the *Spaniſh* Coaſt; for it was a wiſe and juſt Policy in that Princeſs, to keep the War at a Diſtance from her own Dominions, to find her Enemies work enough at Home, and thereby prevent their diſturbing any of her Territories. But upon the Acceſſion of King *James* this Fleet was countermanded; and, it ſeems, not without Reaſon; for the Archduke, who was then Governor of the *Low Countries*, thought fit to recal his Letters of Reprizal, and thereby opened a free Trade between *England* and *Flanders*, a thing highly ſatisfactory to the Merchants, who immediately reaped the Benefit of it.

There was likewiſe another Deſign on foot at the Time of the Queen's Demiſe, which was the proſecuting the Diſcoveries and Trade to *North America*, in which ſeveral Gentlemen and Merchants of *Briſtol* were concerned, and amongſt them the Reverend Mr. *Hackluit*, whom we have ſo often mentioned; and who, having a Prebend in the Cathedral Church of *Briſtol*, and having a great Genius for promoting ſuch Enterprizes, was fixed upon to apply in behalf of himſelf, and the reſt of the Perſons concerned, to Sir *Walter Raleigh*, who was ſtill looked upon as the Proprietor of *Virginia*, in order to procure his Licence for this Trade. Upon his Application to that worthy Perſon, they received all the Encouragement they could deſire; for he not only granted them a Licence under his Hand and Seal, but alſo made over to them all the Profits which ſhould ariſe from the Voyage.

After they were thus impowered, they raiſed a joint Stock of a thouſand Pounds, and fitted out two ſmall Veſſels, the one called the *Speedwell*, commanded by Capt. *Matthew Pringe*, of the Burthen of fifty Tons, with thirty Men and Boys; the other a Bark of twenty-ſix Tons, called the *Diſcoverer*, commanded by Mr. *William Brown*, who had under him a Mate, and eleven Men, and Boys beſides. Theſe Veſſels were victualed for eight Months, and had a large Cargo on board, conſiſting of all ſorts of Goods that were thought proper for that Country. They ſailed from *King's-Road*, near *Briſtol*, on the 20th of *March*, 1683. Being hindered by contrary Winds, they put into *Milford* Haven, where they continued till the 10th of *April* following, and then continued their Voyage. The Rout they took was by the *Azores*, and they arrived without any remarkable Accident on the Coaſt of *North America*, in the Lat. of 43 Degrees; and after having examined the Coaſt, on which they found nothing for their Purpoſe, they ſailed on South-weſt in ſearch of that Part of the Country where Capt. *Goſnold* had been.

At length, they found in the Latitude of 41 Degrees, and ſome few Minutes, a very convenient Bay, to which they gave the Name of *Whitſon's-Bay*, in honour of Mr. *John Whitſon*, who was then Mayor of *Briſtol*. Here they landed, and cut a good Quantity of Saſſafras, and carried it on-board; but, leſt they ſhould be ſurpriſed in the Woods by the Natives while they were at work, they erected a little Fort or Redoubt, wherein they left their Effects, and four or five Men to guard them while the reſt were at work. The Natives came and trafficked with the *Engliſh*, forty or fifty in a Company, and ſometimes upwards of an hundred, who eat and drank, and were very merry with our Adventurers; eſpecially when they obſerved a Lad in their Company playing upon a Guitar, they would get round about him, and, taking Hands, dance twenty or thirty in a Ring, after the *American* Manner.

Our Seamen obſerved, that the Natives were more afraid of two Maſtiff-Dogs they carried with them than of twenty Men; and when they deſigned to get rid of their Company, they let looſe one of theſe Maſtiffs; whereupon the Natives would ſhriek out, and run away to the Woods. But 'tis probable this Uſage, and the erecting a Fortification in their Country, made the *Indians* at length look upon the *Engliſh* as their Enemies: For our Adventurers inform us, that a Party of *Indians* came and ſurrounded their Fort a few Days after, when moſt of them were abſent, and would probably have ſurpriſed it, if the Captain of the Ship had not fired two Guns, and alarmed the Workmen in the Woods, who thereupon returned to the Relief of the Fort.

The *Indians* pretended indeed they had no hoſtile Intentions, but our People never cared to truſt them afterwards: And the Day before the *Engliſh* embarked, the Natives came down again in great Numbers, and ſet fire to the Woods where they had cut the Saſſafras; which, 'tis probable, was deſigned to let the *Engliſh* know they would preſerve nothing in their Country which ſhould invite ſuch Gueſts to viſit them again; for no doubt the great Guns and Fire-arms had rendered the *Engliſh* very terrible to them, as well as their Dogs. The Account theſe People gave of the Country and the Inhabitants was, as might very well be expected, much the ſame with what had been given before by Capt. *Goſnold*, and thoſe who had ſailed with him into thoſe Parts, and therefore we need not dwell upon the Subject. Amongſt other Curioſities they brought back with them, the moſt remarkable was, one of the Boats uſed by the Inhabitants, made of the Bark of a Birch Tree, ſowed together with Twigs, the Seams covered with Roſin or Turpentine; and tho' it was ſeventeen Foot long, four broad, and capable of of carrying nine Perſons, it did not weigh ſixty Pounds. Theſe Boats the Inhabitants rowed, or rather paddled, with two wooden Inſtruments like to our Bakers Peels, by the

Help of which they went at a great rate. About the middle of *June* they had compleated the Freight of their Bark, which they ſent home before them into *England*. After her Departure, they made all the Diſpatch they could in loading their own Veſſel; for which they procured a very valuable Cargo of Skins and Furs, in exchange for the Commodities they carried. On the 9th of *Auguſt* they quitted the Coaſt of *Virginia*, and ſailed for *England*, arriving in the Mouth of the Channel in five Weeks; but meeting there with contrary Winds, they could not reach *King's-Road* before the 2d of *October*; but they had the Satisfaction of finding that their Bark was ſafely arrived a Fortnight before them.

There was another Attempt made the ſame Year, upon the ſame Account, which, however, did not end ſo fortunately. This Voyage was performed by the *Elizabeth* of *London*, a Bark of fifty Tons, commanded by Capt. *Bartholomew Gilbert*, who had been the Year before at *Virginia* with Capt. *Goſnold*. They departed from *Plymouth* the 10th of *May*, and in their Paſſage traded at *St. Lucia*, *Dominica*, and *Mevis*, at the latter of which they cut about twenty Tons of Lignum-vitæ. The third of *July* they ſet ſail from thence for the Coaſt of *Virginia* and particularly for *Cheſepeak* Bay, which Capt. *Gilbert* was very deſirous of ſailing to, that he might make ſome Enquiry after the People near thoſe Parts. On the 25th they came near the Mouth of that Bay.

But the Wind blowing hard, with a high Sea, though they beat about for two or three Days, they could not make it, and were obliged to bear more to the eaſtward. The 29th, being not far from Shore, the Captain with four of his beſt Men landed in their Boat, and, being provided with Arms, marched ſome way up the Country; but in this March, being ſet upon and overpowered by the Inhabitants, they were all killed; and it was not without Difficulty that the Boat, with two young Men who were left in her, reached the Ship again to bring the News. They, being now in all but eleven Men and Boys in the Ship, were afraid to venture the Loſs of any more of their ſmall Company; and their Proviſions growing ſhort, the Maſter, *Henry Sute*, who had taken the Command, reſolved, though they were in extreme Want of Wood and Water, to return homewards, which they did, and arrived in the River of *Thames* about the End of *September*.

The Peace being concluded with *Spain* in 1604, removed ſeveral Obſtacles that ſtood in the way of the *Britiſh* Trade; and at the ſame time opened to our Ships a free Acceſs to many Iſlands, Countries and Ports, to which they had not before reſorted; which occaſioned a great Increaſe in our Exportations, and gave much Encouragement to ſuch as were employed in the different Branches of the Woollen Manufacture. As for the Buiſineſs of ſettling and planting on the northern Continent of *America*, that too was laid open, by the Attainder of Sir *Walter Raleigh*, which happened at the beginning of this Reign, on account of a Plot, which appeared very improbable then, and with reſpect to him eſpecially, very ridiculous ever ſince. The Reports made by thoſe who were concerned in the three laſt Voyages being very favourable to the Country, and the Profits made by them being very conſiderable, induced ſeveral Perſons of Diſtinction to think ſeriouſly of promoting theſe Diſcoveries, inſomuch that ſome of the Nobility reſolved to engage in an Undertaking of this kind.

2. Accordingly *Henry Wriotheſly* Earl of *Southampton*, and *Thomas* Lord *Arundel* of *Wardour*, reſolved to fit out a Ship for this Expedition. This Veſſel was called the *Archangel*, and was commanded by Capt. *George Weymouth*, an experienced and ſkilful Seaman, who ſailed on the laſt Day of *March*, 1605, from *Dartmouth*, and met with nothing of conſequence, till ſuch time as they judged themſelves to be very near the Coaſt of *Virginia*; but the Winds carrying them to the northward, in the Latitude of 41° 30', and their Wood and Water beginning to grow extremely ſhort, they grew very deſirous of ſeeing Land. By their Charts they had reaſon to expect it, and therefore bore directly in with it, according to their Inſtruction, yet they found none in a Run of almoſt 50 Leagues. After much Expectation, on the 16th of *May* they obtained Sight of an Iſland, of no great conſequence, and very woody along the Shore; but by the Fruits they found it appeared no barren nor deſpicable Spot, more eſpecially as there were Streams of freſh Water running down the Cliffs in great plenty, vaſt numbers of Fowls, and Fiſh enough all along the Shore. This Iſland is now called *Long-Iſland*, and it was upon the eaſtern Parts of it they fell, to their great Satisfaction. From hence they could diſcern a great many other Iſlands, and the main Land ſtretching from the Weſt-ſouth-weſt, to the Eaſt-north-eaſt. Several of the Iſlands adjoining to the Continent they viſited, and found very full both of Timber and Fruit-trees, of ſeveral Sorts.

Among thoſe Iſlands they met with a Harbour, in which Ships of any Burthen might lie, defended from all Winds, in ſix to ten Fathom Water, upon a tough Clay Ooze. This they called *Pentecoſt-Harbour*, becauſe it was about *Whitſuntide* they diſcovered it. The Fir-trees, which were in great numbers on theſe Iſlands, yielded an exceeding ſweet Turpentine; and the Muſcles, which they found about the Rocks, afforded ſmall Pearl in abundance, and ſome that were large and orient; and the Shell of theſe Pearls on the Inſide reſembled Mother-of-pearl; but they wanted proper Tackle to dredge for them, and therefore could not take any conſiderable Quantity. The Natives from the Continent came oft in their Canoes to trade with them while they lay in this excellent Harbour, their Commerce being much the ſame as in former Voyages, all ſorts of Skins and Furs in exchange for Knives, Beads, and ſuch like Trifles: And ſo good Chapmen were they at that time, that they would give the Value of ten or twelve Pounds in their Goods, for five Shillings-worth of *Engliſh* Iron Ware. We ſhall not enlarge on the Manners, Habits and Cuſtoms, *&c.* of the Natives, which were the ſame we have already ſeen. Their Bows, Arrows, and Canoes, had nothing in them but what was common among other Savages. Their Tobacco-Pipes were ſometimes made of Clay, and ſometimes the Claw of a Lobſter only, but always of a Capicity to hold as much as ten or twelve of ours.

They grew pretty familiar with thoſe People, but found, as others had done, that, amidſt all their ſpecious Shews of Friendſhip, they were very treacherous, and ſought every Opportunity of betraying them. Of this they had one very evident Proof; when thoſe Savages, having invited them on Shore to traffic, had very near drawn them into an Ambuſh of near three hundred Men, armed after their Manner, with Bows and Arrows; but they diſcovered their Treachery in time, and eſcaped the Snare. But the moſt extraordinary Diſcovery made in this Voyage was that of a River, eſteemed by thoſe who found it the moſt beautiful in *America*. They went up it with their Ships ſeveral Leagues, and gave this Account of it; that as it runs up the Main, it keeps a good Breadth for forty Miles together, in moſt Places a Mile, in ſome three Quarters, but never leſs than half a Mile: It flows ſixteen or eighteen Feet; at low Water it is from ſix to ten Fathom deep; it has abundance of Harbours for Ships of all Burthens, and will ſecure them better from Wind and Weather than any known in *Europe*. On both Sides there are, at a ſmall Diſtance one from another, many fine Coves, ſome of them capable of containing more than an hundred Sail, where the Ground is ſoft Ooze, with a tough Clay underneath for Anchor-hold. Nature alſo has made ſeveral convenient Places, like Docks, to grave and careen Ships of all Burthens, and ſecure them from all Winds; the neighbouring Land trends along on both Sides in a ſmooth Line, and, inſtead of Rocks and Cliffs, is bordered with green Graſs, and tall Trees of different Sorts. After they had remained here about ſix Weeks, and during all that Time carried on a very profitable Trade with the Natives, they thought of returning to *England*; with which View they hoiſted Sail *June* the 16th, and arrived that Day Month in Sight of the Land's-End of *England*.

This proſperous Voyage induced many Perſons of high Rank, and many more of great Fortune, to deſire to ſee this new Trade thoroughly eſtabliſhed, who applied to the Crown for ſuch legal Authorities as were neceſſary; which Deſire of theirs was very ſoon complied with, and two Companies formed for ſettling this large Tract of Land, which for the preſent was divided into *North* and *South Virginia*, and were ſo ſtiled many Years after. It was to this Intent King *James*, by his Letters Patent dated the 10th of *April* 1606, reciting, that Sir *Thomas Gates*, and Sir *George Summers*, Knights, and *Richard Hackluit*, Clerk, Prebendary of *Weſtminſter*, *Edward Maria Wingfield*, *Thomas Hanham*, and *Raleigh Gilbert*, Eſquires, *William Parker* and *George Popham*, Gentlemen, and divers others his loving Subjects, had petitioned him for Leave to ſend Colonies to *Virginia*, and ſuch other Parts of *America* as either appertained to his Crown, or which were not actually poſſeſſed by any other Chriſtian Prince or People, and lying between thirty-four and forty-five Degrees of northern Latitude, and within an hundred Miles of the Sea-Coaſt: And for the ſpeedy Accompliſhment of the ſaid Plantation, intended to divide themſelves into two ſeveral Companies, the one conſiſting of the Adventurers of the City of *London*, who were deſirous to fix themſelves between thirty-four and forty-one Degrees of North Latitude; and the other conſiſting of the Adventurers of the Cities of *Briſtol* and *Exeter*, and the Town of *Plymouth*, who were deſirous to ſettle between thirty-eight and forty-five Degrees on the Coaſt of *Virginia* in *America*. His Majeſty, in order to promote ſo noble a Work, which might tend to the Glory of God, by propagating the Chriſtian Religion among the Infidels and Savages, and bring them to Humanity and Civility, did graciouſly accept their Petition, and for himſelf, his Heirs and Succeſſors, did grant and agree that the ſaid Sir *Thomas Gates*, Sir *George Summers*, *Richard Hackluit*, and *Edward Maria Wingfield*, Adventurers of the City of *London*, and all others that ſhould aſſociate with them, ſhould be called the firſt Colony, and might begin their firſt Plantation, at any Place upon the ſaid Coaſt of *Virginia*, or *America*, where they ſhould think fit, between 34 and 41 Degrees of Latitude; and ſhould have all the Lands, Woods, Rivers, Ports, Fiſhing, and Hereditaments whatſoever to the ſame belonging and appertaining, from the firſt Seat of their Plantation, for fifty Miles either Way along the Coaſt, North and South, and an hundred Miles to the Weſtward, within Land, with all the Iſlands over-againſt the ſaid Coaſt for the Space of an hundred Miles at Sea; with all the Lands, Ports, Rivers, Harbours, Fiſhings, and Mines thereunto belonging or appertaining; and Liberty to plant, build and fortify therein; and that no other Subjects of this Crown ſhould be permitted to ſettle themſelves in the Lands to the weſtward of this Colony without their Leave. And his Majeſty did grant to the aforeſaid *Thomas Hanham*, *Raleigh Gilbert*, *William Parker*, *and George Popham*, of the Cities of *Briſtol* and *Exeter*, and the Town of *Plymouth*, in the County of *Devon*, and all others that ſhould aſſociate with them, that they ſhould be called the ſecond Colony, and might begin their firſt Plantation upon the ſaid Coaſt of *Virginia*, or *America*, where they ſhould think fit between 38 and 45 Degrees of Latitude; and enjoy all the Lands, Ports, Rivers, Fiſhings, and Hereditaments thereto belonging, with the like Extent of Land and Sea, from the Seat of their Plantation, as was granted to the firſt Colony. And it was provided, that the ſaid reſpective Colonies ſhould not plant within the Space of one hundred Miles of each other; that each Company ſhould have a Council, conſiſting of thirteen Perſons, in whom the Government ſhould be lodged, but limited by certain Articles under the Privy Seal; they were impowered alſo to dig Mines in and beyond their reſpective Limits to the Weſtward, paying the Crown a Fifth of all Gold, and a Fifth of all Copper Ore they ſhould get; they were alſo impowered to ſeize all Ships that ſhould trade within their reſpective Limits; to coin Money, raiſe Forces for their Defence, *&c.*

3. The Patentees firſt named were commonly ſtiled the *London* Company, and thoſe laſt named the Weſtern Company, who no ſooner received this Authority from the Crown, than they began in earneſt to provide for making effectual Settlements within the Bounds preſcribed by their reſpective Grants. With this View the *London* Company fitted out three Veſſels, one of an hundred Tons, another of forty, and a Pinnace of twenty. On board of which they embarked an hundred and ten Land-Men, with every thing requiſite for ſettling a Colony. The Command of this ſmall Squadron was given to Capt. *Chriſtopher Newport*, an experienced Seaman, well acquainted with the *Weſt-India* Navigation; but to prevent any Diſputes in the Paſſage, the Orders which regarded the Government of the Colony, and the Names of the Council who were to be intruſted with the Adminiſtration of it when ſettled, were delivered to them in a Box ſealed up, with Directions not to be opened till they were on Shore.

They ſailed from *London* on the 20th of *December*, 1606; but, by ſeveral unlucky Accidents, were, for ſeveral Weeks, detained on the Coaſt of *England*. At laſt they continued their Voyage, and, having taken in freſh Water and other Neceſſaries at the *Canaries*, proceeded to the *Caribbee Iſlands*, where they arrived on the 23d of *February*, and ſtaid amongſt them, but chiefly on the Iſland of *Nevis*, about five Weeks. On the 3d of *April* they ſailed for *Virginia*, and arrived on the 26th of the ſame Month at the Mouth of *Cheſepeak-Bay*. The firſt Place on which they landed was the Southern Cape of that Bay, where they built a Fort, which they called *Cape* and *Fort-Henry*, as they did the Northern *Cape Charles*, in honour of the two Princes; and the firſt great River they ſearched, the *Indian* Name of which was *Powhatan*, they called *James-River*, after the King's own Name.

Of this River they made a full Search, before they would come to any Reſolution about a Settlement, and then, by unanimous Conſent, they pitched upon a Peninſula about fifty Miles up the River, which, beſides the Goodneſs of the Soil, was eſteemed moſt capable to be made a Place both of Trade and Security, two Thirds of it environed by the main River, which affords good Anchorage all along, and the other Third by a ſmall River, capable of receiving ſmall Veſſels of one hundred Tons Burden quite up till it comes within thirty Yards of the great River again, and where generally, in Spring-tides, it overflows into the main River; for which Reaſon the Land they choſe to pitch their Town upon had obtained the Name of an Iſland. In this back River Ships and ſmall Veſſels may ride laſhed to one another, and moored aſhore, ſecure from all Wind and Weather. They gave the ſame Name to the Town as to the River *viz James-Town*. The whole Iſland thus incloſed contained about two thouſand Acres of high Land, and many thouſand of very good Marſh, and is extraordinary good Paſture as any in that Country. By means of the narrow Paſſage, this Place was of great Security to them from the *Indian* Enemy; and, to ſtrengthen it the more, they built Caſtles and a Fort there. This was the firſt Plantation of the *Engliſh* that ſucceeded, and which has continued to this Day.

As to the Colony, the firſt Buſineſs they entered upon, after they landed, was, to open their Orders, where they found the following Gentlemen appointed of the Council, *viz. Bartholomew Goſnold*, *Edward Wingfield*, *Chriſtopher Newport*, *John Smith*, *John Ratcliffe*, *John Martin*, and *George Kendall*, of whom *Wingfield* was choſen Preſident: but they thought fit to leave Capt. *Smith* out of the Council: For it ſeems the reſt of the Gentlemen were ſo ſet againſt him, that they had confined him Priſoner ever ſince they left *England*, which *Purchas* inſinuates was occaſioned by their Envy at his ſuperior Talents, and becauſe the Company in *England* ſeemed to rely more upon his Skill and Experience than upon any of the reſt; and it appears, that the Planters themſelves were ſo convinced of his Abilities afterwards, that they were obliged not only to admit him into their Council, but in a manner reſign their Adminiſtration into his Hands, after they had, by their perpetual Jars and weak Management, almoſt ruined the Company's Affairs. After about five or ſix Weeks Stay before this their intended new Town, the Ships being diſpatched, Capt. *Newport* departed with them for *England* about the Middle of *June* leaving upwards of one hundred Men ſettled in the Form of Government already mentioned; but, when the Ships were gone, the ſame Feuds and Diſorders broke out again with freſh Violence.

In the Midſt of theſe Feuds, however, they fell to planting, ſowing, building, and fortifying; but, above all, they carried on a very advantageous Trade with the Natives. They might nevertheleſs have made much greater Gains of it, and managed it more to the Satisfaction of the *Indians*, as well as to the great Eaſe and Security of themſelves, if they had been under any Rule, or ſubject to any Method in Trade, and not at liberty to out-bid one another. By this they not only leſſened their own Profit, but created Jealouſies and Diſturbances among the *Indians*, by letting one have a better Bargain than another; for they being unaccuſtomed to barter, ſuch of them as had been hardeſt dealt by in their Commodities thought themſelves cheated and abuſed. Thence they conceived a Grudge againſt the *Engliſh* in general, and made it a national Quarrel, which ſeems to have been the original Cauſe of moſt of their ſubſequent Misfortunes from the *Indians*. Theſe *Indians* proved much the ſame as they had been found to be in other Places, fair and friendly at firſt, but treacherous and deceitful in the ſequel. However, it was chiefly by the help of their Proviſions that the *Engliſh* ſubſiſted till the Return of their Ships.

The next Year two Veſſels were ſent thither full freighted with Men and Proviſions for the Supply of the Plantation: One of them arrived directly; but the other, being beat off to the *Caribbee Iſlands*, did not arrive till the former was ſailed back for *England*. But what gave the greateſt Interruption to their Trade was, an Object which drew their Eyes and Thoughts entirely not only from that, but even from taking the neceſſary Care for their Preſervation, and for the Support of their Lives, which was this: They found, in a Neck of Land on the Back of *James-Town* Iſland, a freſh Stream of Water, ſpringing from a ſmall Bank, which waſhed down with a yellow ſort of Duſt Iſing-glaſs, which, being cleanſed by the freſh ſtreaming of the Water, lay ſhining at the Bottom, and ſtirred up in them an unreaſonable Deſire after Riches, for they, taking all to be Gold that glittered, ran into the utmoſt Diſtraction, neglecting both the neceſſary Defence of their Lives from the *Indians*, and the Support of their Bodies by ſecuring Proviſions, abſolutely relying upon the Power of Gold, and thinking that, where this was plenty, nothing could be wanting. Nay, they began to be ſo infatuated with the Hopes of Mountains of Wealth, that they deſpiſed the Mines of *Peru* and *Mexico*, in compariſon of their own ineſtimable Stream.

They ſoon, however, grew ſenſible of their Error, and found that, if this gilded Dirt had been really Gold, it could then have been of no Advantage; for, by their Negligence, they were reduced to an exceeding Scarcity of Proviſions, and that little they had was loſt by the burning of their Town, while all Hands were employed about this imaginary golden Treaſure; ſo that they were obliged to live, for ſome time, upon the wild Fruits of the Earth, and upon Crabs and Muſcles, and ſuch like, not having a Day's Proviſion beforehand. By this Neglect, likewiſe, they, many of them became a Prey to the Cruelty of the *Indians*, and the reſt durſt not venture abroad, and ſo were forced to be content with what they could get. In this miſerable Condition they were, when the firſt of the two Ships arrived from *England* to their Aſſiſtance. They neither thought or ſpoke of any thing but Gold; and therefore they put into this Ship all the yellow Dirt they had gathered, and what Skins and Furs they had bartered for, and, filling her up with Cedar, ſent her away. When the other Ship arrived, they ſtowed her likewiſe with this imaginary Gold Duſt, and filled her up with Cedar and Clapboard.

But being at length perſuaded that they might apply themſelves to other Labours as profitable, as well as more neceſſary than collecting yellow Sand, which, ſuppoſing it valuable, would be always in their Power, if they took care to fortify themſelves effectually, they began to beſtir themſelves for that Purpoſe, and by the good Management and Direction of Capt. *Smith*, they made ſeveral Diſcoveries in *James-River*, and up *Cheſepeak-bay*; and, in the Year 1608, they firſt gathered *Indian* Corn of their own planting. While Capt. *Smith* was out on his Expedition among the Savages, he was treacherouſly fallen upon by three hundred of the *Indians*, under the Command of one of their Kings, called *Pamaunkee*, who put all his Men to Death, and taking him Priſoner, carried him to *Powhatan*, their chief King, who would have put him to Death, had he not been ſaved at the Interceſſion of *Powhatan*'s Daughter, *Pacahunta*.

Being releaſed he returned to *James-Town*, where Mr. *Ratcliff* reſigning his Preſidentſhip, he was unanimouſly deſired to accept of that Office. While theſe Diſcoveries were making by Captain *Smith*, Matters ran again into Confuſion in *James-Town*; and ſeveral uneaſy People, taking Advantage of his Abſence, attempted to deſert the Settlement and to run away with the ſmall Veſſel which was left to attend it; for Captain *Smith*, was the only Man among them who could manage Diſcoveries with Succeſs, or who could keep the Settlement in any Order. Nevertheleſs, amidſt all theſe Inconveniences which they brought upon themſelves, the Plantation being increaſed to near five hundred Men, they made two other Settlements, one at *Nanſamond* in *James-River*, above thirty Miles below *James-Town*; and the other at *Powhatan*, ſix Miles below the Falls of *James-River*; which laſt was bought of *Powhatan* for a certain Quantity of Copper, each Setttlement conſiſting of one hundred and twenty Men; and ſoon after they made a fourth Settlement at *Kiguotan*, near the Mouth of *James-River*. Captain *Smith* obſerved that two Thirds of the Adventurers came over with a View of having every thing provided to their Hands, without any Care or Labour of their own, and were ſubſiſted by the Labours of the other Induſtrious Third, until he compelled them all to take Share in the Work; and then he ſoon planted Ground enough to ſubſiſt the Colony in Plenty, and, by moderate Exerciſe and good Food, ſaw them not only reſtored to their Healths, but in a very flouriſhing Condition; and, as there was now no longer Neceſſity of procuring Food from the *Indians* by Violence, they lived and trafficked very amicably together, and *Powhatan* ſuffered him to make ſeveral other Settlements in the Country.

When their Affairs were in this proſperous Situation there arrived ſix or ſeven Ships from *England*, with between three and four hundred Planters, and ſuch ample Supplies of Ammunition and Proviſion, as would have enabled the Colony to have made an entire Conquſt of *Virginia*, or, at leaſt, to have procured what Terms they ſaw fit of the *Indians*, if they had been under any Command; but as things were managed, this Supply only brought the Colony into Confuſion. Upon Report of which the Company in *England*, imagining the Diviſions among the Council in *Virginia*, in whom the Government there was lodged, were the Occaſion of moſt of the Miſmanagements that had happened, procured a new Patent from King *James*, whereby they were impowered to appoint a Governor with a more ample Authority than they had by the preceding Patent; and prevailed on the Lord *de la War* to accept of the Government of their new Colony; who thereupon made Sir *Thomas Gates*, Sir *George Summers*, and Captain *Newport*, his Deputies, until his Arrival; and theſe Gentlemen ſet ſail for *England* with nine Ships and five hundred Men, in the Month of *May* 1609.

All the three Deputy-Governors, being embarked in one Ship, were unfortunately caſt away on the Iſlands of *Bermudas*, being then uninhabited, but they and all the People eſcaped to the Shore; where, finding Plenty of Proviſions, they took Poſſeſſion of theſe Iſlands for the Crown of *England*, and from Sir *George Summers* they have been ever ſince called the *Summer Iſlands*. In the mean time the reſt of their Fleet arrived ſafe in the Bay of *Cheſepeak*, with the Reinforcement above mentioned; were they found Captain *Smith* Preſident; but both old and new Planters gave out they were not obliged to obey him, for their was another Commiſſion granted which had ſuperſeded his, and they expected the Arrival of the Deputy-Governors every Day.

But notwithſtanding theſe Jarrs, Captain *Smith* made a ſhift to keep them in ſome Order while he remained among them, for otherwiſe the Colony had been deſerted over and over; but as this Gentleman was extremely active, and almoſt continually employed in ſome Service or other, he had the Misfortune to be blown up by Accident; which, though it did not coſt him his Life, yet he was ſo wounded and maimed thereby, that it was found abſolutely neceſſary for him to return to *England* with the Veſſels that ſailed not long after; a thing, happy for himſelf, but extremely diſadvantageous for the Settlement; ſince he was no ſooner on Ship board than every Man took upon him to do what ſeemed right in his own Eyes, which had deſperate Conſequences, ſo that thoſe who had given him moſt Trouble while he was amongſt them, deeply regretted the Loſs of him; and yet this Senſe of their own bad Behaviour did not at all incline them to Amendment, or to the ſetting up any other Perſon with ſuch Powers as might enable him to do what Captain *Smith* had done.

On the contrary, they emptied their Magazines and lived in the greateſt Profuſion, till that brought on Want; and then they rambled without Order, and under no Command, through the Country; taking Proviſions by Force from the Natives, who failed not to employ all their Cunning, of which they had enough, to deſtroy and cut them off; ſo that when the Deputy-Governors arrived, in two Sloops, which they had built in *Bermudas*, they found them in a moſt deplorable Condition; War, Sickneſs, and Famine, having reduced them from upwards of four hundred, to fewer than fourſcore, and theſe too uneaſy and diſcontented. Sir *Thomas Gates*, and Sir *George Summers*, took all the Pains they could to quiet theſe Uneaſineſſes, and to bring things once more into Order; but it was all in vain; and the People ſhewing their empty Warehouſes, their ruined Settlements, and the Number of Sick among them, induced thoſe Gentlemen to conſent to their embarking for *England*, as the only Means of ſaving thoſe who were left; which they accordingly did, to the great Joy, no doubt, of the *Indians*.

4. But juſt as they were ſailing out of the Bay of *Cheſepeak*, they met with their new Governor, who obliged them to return to *James-Town*, to repair their Habitations and Forts there, and to diſpoſe every thing for maintaining the Settlement. This worthy Governor was the Right Honourable *Thomas Weſt*, Lord *de la War*, of an ancient, as well as noble, Family; in which Prudence ſeems to have been hereditary, as well as Title. He was endued with the Virtues moſt requiſite for his Station, as Governor of an infant Colony; for, with great Mildneſs and Humanity, he had the warmeſt Courage and the greateſt Firmneſs of Mind, and was equally capable of perſuading by Words, animating by Example, and awing by the juſt Uſe of his Authority. He accepted of this Commiſſion from the Company, with a View of putting an end to theſe Diſtractions, which had hitherto diſappointed all their Expectations, and defeated all their Endeavours, and which they juſtly attributed to the Want of having there ſome Perſon in ſupreme Authority; who might be able to direct the Induſtrious, encourage the Deſerving, and puniſh the Factious and Diſobedient.

As ſoon therefore as theſe old, or rather new, Planters, were once on ſhore again, his Lordſhip, in a free and plain Diſcourſe, ſet before them the Folly and Madneſs of their Proceedings, reproving them for their Diviſions, Idleneſs, and ill Conduct, which had occaſioned their Misfortunes; adviſing them to reform, or he ſhould be compelled to draw the Sword of Juſtice, and cut off the Delinquents; declaring, however, he had much rather draw his own Sword in their Defence; and telling them for their Encouragement, that he had brought them ſuch Plenty of Proviſions, that they would be in no Danger of wanting for the future, if they were not wanting to themſelves, in providing ſuch things as the Country produced; then he proceeded to conſtitute a Council, conſiſting of Sir *Thomas Gates*, his Lieutenant General; Sir *George Summers*, his Admiral; the honourable *George Piercy*, one of his Captains; Sir *Ferdinand Wenman* his Maſter of the Ordnance, and *Chriſtopher Newport* his Admiral: Theſe, and the reſt of his Officers, having taken the Oaths to the Government, and entered on their ſeveral Employments; his next Care was, to furniſh his People with Fleſh, for notwithſtanding there were not leſs than five or ſix hundred Hogs in the Plantation, when Capt. *Smith* went to *England*, there was not one left alive at this time; they had either been eat by the Colony, or deſtroyed by the *Indians*, who, to diſtreſs them, had driven all the Deer, and other Game, out of the Country; and the *Engliſh* were ſo ill provided with Nets, that though there was Plenty of Fiſh in the Rivers, they knew not how to take them.

The Company had ſent over a Supply of Cloathing, Biſket, Flour, Beer, and other Liquors; but, taking it for granted, that they had Hogs, Veniſon, Fowl, and Fiſh enough in the Country, had made no Proviſion of Fleſh; whereupon Sir *George Summers*, the Admiral, was diſpatched to *Bermudas*, to bring over live Hogs from thence, for of thoſe Sir *George* found Plenty in that Iſland when he was caſt away there, though there were no People upon it. The Governor alſo ſet ſome to fiſhing within the Bay, and others without, where there were Shoals of Cod-fiſh; but their Nets and Tackle were ſo defective, that they could not catch any. Hereupon he endeavoured to ſettle a Correſpondence with *Powhatan* and other *Indian* Princes, that he might purchaſe Fleſh of them for *Engliſh* Goods; and in ſome of theſe Negotiations he ſucceeded, particularly with the King of *Patowmack*, one of the moſt potent of the *Indian* Princes; but notwithſtanding he repreſented to *Powhatan* that he had already promiſed to acknowledge the King of *England* for his Sovereign, accepted of a Crown and Sceptre, and other Enſigns of Royalty from him; with Preſents of great Value; this Prince would give him no other Anſwer, but, That he expected the *Engliſh* ſhould depart his Country, or confine themſelves within the Limits of *James-Town* Iſland, and not range through every Part of the Country, as they continued to do, only with a View of ſubduing it, as he apprehended; threatning to iſſue his Orders to cut them off and deſtroy them, if ever they were found without the Limits he preſcribed them; and commanded the Meſſengers his Lordſhip ſent to him, not to ſee his Face again unleſs they brought him a Coach and ſix Horſes; for in theſe he had been informed by ſome *Indians* who had been in *England*, their great Weroances were drawn.

The Lord *de la War* finding he was to expect no Friendſhip from *Powhatan*, determined he ſhould fear him: Having taken an *Indian* Priſoner, therefore, he cut off his Right-hand, and ſent him to his Maſter *Powhatan*, letting him know, that he would ſend all his Subjects in that manner, and burn all the Corn in his Country (which was ripe at this time) if he did not forbear all Acts of Hoſtility for the future; which had ſo good an Effect, that the Colony lived in Peace and Plenty for ſome time, every Day making freſh Diſcoveries, and forming new Alliances with ſome *Indian* Princes.

And thus the Company's Affairs being happily eſtabliſhed again by the Conduct of Lord *de la War*, Sir *Thomas Gates* was ſent to *England*, to give an Account of the State of the Colony; the Ships being freighted home with Cedar, black Walnut, and Iron Ore; which Returns appeared ſo inconſiderable, that the Company were in Suſpence, whether they ſhould not ſend for the Lord *de la War* and the Colony home. However, they firſt deſired Sir *Thomas Gates*'s Opinion upon it; who told them that theſe were not the only Returns they were to expect; that if they would ſend over Men who underſtood how to make Pitch and Tar, and plant Hemp and Flax, they might furniſh *England* with all manner of naval Stores; and that it would be very eaſy alſo to ſet up a Manufacture of Silk, the Country abounding in Mulberry Trees as well as Silk Graſs; that the Soil was exceeding fruitful, producing Corn, Graſs, Grapes, and other Fruits in abundance; that *European* Cattle and Corn multiplied prodigiouſly; and that there was great Plenty of Veniſon, Fiſh and Fowl, which they would never want when they could be provided with Boats, Nets, and Engines to take them. The

Company needed then to be at very little Charge to ſupport the Colony; on the contrary, they would in a ſhort time meet with Returns anſwerable to their Expectations. Whereupon the Patentees reſolved to proceed with Alacrity to improve their *Virginia* Plantation, in which Reſolution they were confirmed by the Lord *de la War*, who returned to *England* about this time (1610) for the Recovery of his Health.

He left behind him the honourable Mr. *Piercy*, as his Deputy; and, while he reſided in *England*, took as much Care of this Plantation as if it had been his paternal Eſtate; and was no leſs ſolicitous about the Welfare of its Inhabitants than if they had been his neareſt Relations: To ſay the Truth; it was to the Wiſdom and Foreſight of this worthy Lord that this Nation owes the preſerving ſo great and ſo beneficial an Acquiſition; as it was to his Courage and Steadineſs they were indebted for the Plantation itſelf. In ſhort, he ſpent the whole Remainder of his Life, which was about eight Years, in the Service of the Company and the Colony, and actually died in his Voyage back to *Virginia* in 1618, with a great Supply of People, Cloathing, and Goods, for that Settlement, which, however, arrived ſafe. As I have now given an Account of the ſettling this Country, I have executed all that falls within the Compaſs of my Deſign; but, as I apprehend that it may be both entertaining to the Reader, and better anſwer the Deſign of this *Collection*, I ſhall juſt run over a few of the principal Facts relating to the Hiſtory of this Province, and then give a ſhort Deſcription of it as it ſtands at preſent; in order to ſhew what Advantages have accrued to the Nation from an Eſtabliſhment which it coſt ſo much Labour and Pains to effect: And the ſame Method I ſhall take in regard to other Plantations, as moſt earneſtly deſiring to render this Work as agreeable, as uſeful, and as perfect, as it is in my Power to make it.

While Lord *de la War* was in *England* the Colony was governed by his Deputies, who, applying themſelves to bring about a peaceable Correſpondence with the Natives, advanced it at laſt ſo far, that ſeveral Intermarriages took place, and amongſt theſe the *Indian* Princeſs *Pacahunta* eſpouſed Mr. *John Rolf*, an *Engliſh* Gentleman, whoſe Poſterity enjoy, at this Day, the Lands deſcended to them from this Lady. In the Year 1616 one Captain *Yardly* was at the Head of Affairs; and the Reaſon I take notice particularly of his Adminiſtration is, becauſe under it they firſt began to cultivate Tobacco, which is ſince become the Staple Commodity of the Colony. He was ſucceeded by Capt. *Argoll*, afterwards Sir *Samuel Argoll*; who was a Man of a military Turn, whom we ſhall have Occaſion to mention frequently hereafter: He repaired the Forts that had run to ruin, and put the Colony into ſuch a State of Defence, that there was no great Danger of any Attempts that could be made againſt them by the *Indians*.

After the Death of Lord *de la War*, Capt, *Yardly*, who was likewiſe in *England*, and who, being knighted by King *James*, had the Title of Sir *George Yardly*, was ſent over with the Title of Governor; and a very good Governor he proved, for to him the People owed their being made as free as their Countrymen in this Iſland, ſince he augmented the Number of the Council, and allowed the Planters to ſend their Repreſentatives to the Aſſembly, the firſt of which ſat at *James-Town*, in *May* 1620. In his Time Negroes were firſt brought into *Virginia*, the Lands divided, Salt-works erected at Cape *Charles*, and an Iron Mine wrought with good Effect. He was ſucceeded, in 1621, by Sir *Francis Wyat*, a young Genrleman of a very good Diſpoſition, who endeavoured all he could to promote the Welfare of the Colony, yet in his Time it was that this Settlement ran a very great Hazard of being totally deſtroyed; for the *Indians*, who had lived amongſt them now for ſeven or eight Years with great Freedom and Familiarity, formed a Deſign of extirpating them entirely, on account of one of their War-Captains being killed, though he had committed Murder and Robbery, and died in defending himſelf from falling into the Hands of Juſtice. The Method they took to revenge this was, by a general Maſſacre, which they fixed for *Friday*, the 22d of *March*, 1622, and, in all probability, it had effectually anſwered their End, if it had not been diſcovered by a converted *Indian*, the very Day on which it was to have taken place; ſo that the advanced Plantations could not receive Intelligence time enough, which gave the Natives an Opportunity of cutting off three hundred and thirty-four Perſons. The *Engliſh* revenged this in a manner very unbecoming them, ſince, pretending to be reconciled to the *Indians*; and thereby gaining their Confidence, they maſſacred likewiſe in their Turn, and purſued their firſt Blow ſo effectually as to drive moſt of theſe poor People to ſeek for new Habitations.

But it was not long before the *Engliſh* gave them an Opportunity of ſatisfying that Vice which is deepeſt rooted in their Nation, I mean Revenge, for dividing amongſt themſelves, and falling into Factions and Parties; and, at the ſame time, running out new Settlements; the *Indians* fell upon them again, and cut them off in great Numbers. As this Misfortune was chiefly owing to the imprudent Grants made in *England*; it occaſioned loud Complaints; and the fatal Conſequences of the Company's Mal-Adminiſtration cried ſo loud, that King *Charles* I. coming to the Crown of *England*, expreſſed a tender Concern for the poor People that had been betrayed thither, and loſt; upon which Conſideration he diſſolved the Company in the Year 1626, reducing the Country and Government under his own immediate Direction, appointing the Governor and Council himſelf, and ordering all Patents and Proceſs to iſſue in his own Name, reſerving to himſelf a Quit-Rent of Two Shillings for every hundred Acres of Land, and ſo *pro rata*. The Country being thus taken into the King's Hands, his Majeſty was pleaſed to re-eſtabliſh the Conſtitution by a Governor, Council, and Aſſembly, and to confirm the former Methods and Juriſdictions of ſeveral Courts, as they had been appointed in the Year 1620; and placed the laſt Reſort in the Aſſembly; he likewiſe confirmed the Rules and Orders made by the firſt Aſſembly, for apportioning of Land, and granting Patents to particular Adventurers.

This was a Conſtitution according to their Hearts Deſire, and things ſeemed now to go on in a happy Courſe, for Encouragement of the Colony; People flocked thither apace, every one took up Land, by Patent, to his liking; and, not minding any thing but to be Maſters of great Tracts of Land, they ſettled themſelves ſeparately on their ſeveral Plantations. Nor did they fear the *Indians*, but kept them at a greater Diſtance than formerly; and they, for their Parts, ſeeing the *Engliſh* ſo ſenſibly increaſe in Number, were glad to keep their Diſtance, and be peaceable. This Liberty of taking up Land, and the Ambition each Man had of being Lord of a vaſt, though unimproved Territory, together with the Advantage of the many Rivers, which afforded a commodious Road for Shipping, at every Man's Door, has made the Country fall into ſuch an unhappy Settlement and Courſe of Trade; that, to this Day, they have not any one Place of Cohabitation among them that may reaſonably bear the Name of a Town. The next Governor after the ſettling of this new Conſtitution, was Sir *John Harvey*, who proved of a Spirit very improper for ſuch an Employment, ſince he began early to differ with his Council; and ſoon after oppreſſed the People to ſuch a Degree, that they were reſolved to be rid of him, at all Events; and accordingly in 1639 they ſeized him, and ſent him home Priſoner, with a long Charge againſt him, accompanied by two of the Council, appointed to manage the Proſecution againſt him. But as ſoon as he came to *London*, the King, who highly reſented this Outrage on his Prerogative, ſent Sir *John* back again, with the ſame Authority as before; but the very next Year removed that oppreſſive Governor, and appointed Sir *William Berkley* to ſucceed him.

This Gentleman held the Government longer than all his Predeceſſors put together, and deſerved it; he was, in all reſpects, an excellent Governor; ſo careful of the Colony, and ſo kind to the People, that he preſerved Loyalty in *Virginia* long after it was loſt at home; nor did he ſubmit to the Rump, till he was forced to it; and then withdrew to his own Plantation, where he lived as a private Perſon, and would have no Concern in public Affairs at all; but he was ſtill reſpected by the Inhabitants for the great Things he had performed. He had purſued the War with the *Indians* till he had reduced them ſo low as to be no longer troubleſome, after having made their Emperor Priſoner; he encouraged the making of Pot-Aſhes, Soap, Salt; planting of Flax, Hemp, and Cotton; and the Manufacture of Silk, which he brought to great Perfection. After he retired from the Government there were three Perſons ſent from *England*, who ruled one after another ſeven Years; the firſt of them was Colonel *Diggs*, who acted under the Parliament's Authority; then Mr. *Bennet* was ſent over by *Oliver*; and afterwards one Mr. *Matthews*, who died Governor; and, upon this Accident, the People of *Virginia* deſired Sir *William Berkley* to reſume the Adminiſtration of Affairs. He had a Commiſſion from King *Charles* II. then in exile; but he abſolutely refuſed to act, unleſs the People would acknowledge his Maſter, to which they very readily conſented, which will appear the leſs ſurpriſing, when it is conſidered, that Abundance of Gentlemen, who had been ruined in the Support of the Royal Cauſe, had retired into this Colony from *England*.

In conſequence therefore, of this Reſolution, King *Charles* II. was proclaimed in *Virginia*, before he was acknowledged in any of his three Kingdoms; but it happened very luckily for Sir *William* that his Maſter was ſoon after reſtored; and as a Mark of his Affection for the Province, he wore at his Coronation a Robe of Silk, ſent from *Virginia*. Soon after Sir *William* went over to compliment the King upon his Return, and left Colonel *Francis Morriſon*, his Deputy; who behaved, in his Abſence, to the general Satisfaction of the Plantation. He ordered the Laws to be reviſed and collected into a Body, to be laid before the Aſſembly, at their next Seſſion. He took the ſame Care of the Church as he did of the State; he regulated the Pariſhes, ſettled the Miniſter's Allowance, got a Revenue for the Support of the Government, and other Laws for the Encouragement of the Linnen and Wollen Manufactures, the breeding of Silk-Worms, Tanning, and Salt-Works.

Whilſt the Deputy-Governor was ſo buſy for the Service of the Colony, Sir *William Berkley* was in *England*, taking his Inſtructions from the King for his future Conduct. His Majeſty ordered him to promote Huſbandry, Manufactures, Silk and Vineyards, that all Ships trading to *Virginia* ſhould go to *James Town*, and be entered at the Cuſtom-Houſe there before they broke Bulk; which Orders were given, with an Intent, that by them the People might be tempted to come thither, and dwell there for the Conveniency of Trade; and had they been obeyed, it might have increaſed the Number of Buildings in that City, which is now much leſs than it was fourſcore Years ago; every body coveting to live at his Plantation, and ſettle where he thinks he ſhall have the beſt Crops and Conveniency of Shipping. This is the Reaſon that there are ſo few Towns in *Virginia* and thoſe that are there ſo very ſmall. Sir *William*, being fully inſtructed by the King how to proceed on his Return to his Government, ſet ſail from *England* in *Virginia*, where he arrived in the Year 1662, and immediately put the People upon improving their Plantations, and advancing Manufactures. He ſummoned an Aſſembly, and got an Act paſſed for building *James-Town*; each County was to build ſo many Houſes, and ſome actually built their Quota; which, notwithſtanding the Act, were converted into Taverns and Eating-Houſes, and the Town was very little the bigger for them. Sir *Wiliam Berkley*, at his Return, gave a Sanction to the new Body of Laws, and took all the Care he could to carry them into Execution; which was all that he could do, or that indeed could be expected from him. And, as we are now come down in the Hiſtory of this Colony as low as this Period will permit, we are next to give a ſuccinct Account of the Nature and Condition of this Plantation, that it may appear how well it deſerves the Pains that have been taken about it, and how amply it rewards this Nation for all the Care and Expence beſtowed in planting of it, which will alſo acquit us of all the Promiſes made to the Reader upon this Subject.

5. The Situation of *Virginia* is remarkably happy and convenient, having the River *Potowmac* upon the North-eaſt, the *Atlantic* Ocean on the Eaſt, the Province of *Carolina* on the South, and the *Apalachian* Mountains on the Weſt, which ſeparate it from *Florida*. It lies from 36 to 39° North Latitude, and between 74 and 80° of Weſtern Longitude, it extends about 240 Miles in length from North to South, and may be in breadth 120 Miles from Eaſt to Weſt. As to the Air of this Country it depends very much on the Winds. The North and North-weſt are either very ſharp aud piercing, or boiſterous and ſtormy, the South-eaſt and South being hazy and ſultry. The Winter is dry and clear, which makes it very pleaſant, Snow falls in great Quantities, but it ſeldom lies above a Day or two, and their Froſts though quick and ſharp, yet ſeldom laſt long. Their Spring is ſomewhat earlier than ours; in *April* they have frequent Rains; *Moy* and *June* are very pleaſant Months, the Heat being greatly tempered by cooling Breezes; *July* and *Auguſt* are ſultry hot, the Air growing in a manner ſtagnant, which produces dreadful Thunderings and Lightning; in *September* the Weather breaks, and there fall prodigious Showers of Rain, at which Seaſon it is that the Inhabitants are moſt ſickly. It ought, however, to be obſerved, that in this, and indeed in all our Colonies, the Climate grows daily better, and theſe Thunder Seaſons leſs violent, which the Inhabitants very juſtly aſcribe to the clearing the Country, and cutting down the Woods, which gives the Air a freer Paſſage, and is attended with many other Conveniences.

As to the Soil it is generally low towards the Sea Coaſts, and for one hundred Miles up into the Country there is hardly a Hill or Stone to be met with, except that here and there ſome Rocks of Iron Ore appear above the Ground, and ſome Banks of a kind of petrified Oyſter-ſhells, that are of a prodigious Thickneſs; the whole Country before it was planted was either Foreſt or Moraſs, which in the *Weſt Indies* they call Swamps. The Bay of *Cheſepeak* runs directly up the Country, almoſt due North, for three hundred Miles; at the Entrance it is eſteemed about twenty-one Miles broad, or ſomething more; and it continues navigable as long as it waſhes the Coaſt of *Virginia*, and much farther; into the Weſt-ſide of this Bay fall four great Rivers, which riſe in the *Apalachian* Mountains, all of them running from the North-weſt to the South-eaſt: The moſt ſoutherly of theſe is *James-River*, the *Indian* Name whereof was *Powhatan*, being generally about two Miles over, and navigable at leaſt, fourſcore Miles. *York-River*, whoſe *Indian* Name was *Pamaunkee*, is a little to the Northward of *James-River*, and in ſome Places they approach one another ſo near, that they are not five Miles aſunder. To the Northward of *York-River* is the River *Raphanack*, which in ſome Places is not ten Miles diſtant from *York-River*, and either of them as broad or broader than *James-River*. North of *Raphanack* is the great River of *Patowmack*, which in ſome Places is not above ſeven Miles diſtant from *Raphanack-River*, and in other Places upwards of fifty. This River of *Patowmack* is navigable above two hundred Miles, being nine Miles broad in ſome Places, but generally about ſeven. The Mouth of the River *Patowmack*, and that of *James-River*, are about one hundred Miles aſunder; but the Heads of all the four Rivers riſe in the ſame Hills, pretty near each other. There are great Plenty of Springs in all Parts of the Country, but the Water is ſomewhat harſher than in *England*.

As to Animals, there were neither Horſes, Cows, Sheep, or Swine, before the coming of the *Engliſh*, but they have now plenty of them all; and their Horſes are very ſerviceable, and travel at a great Rate. They have likewiſe Elks, but not common, Red-Deer in great Plenty; Hares, Squirrels of ſeveral Kinds, Muſk-Rats, Rackoons, wild Cats, Beavers, Wolves, Foxes, and ſeveral Sorts of Dogs. As for Reptiles, they have Lizards, ſeveral kinds of Snakes, particularly the Rattle-Snake, of which an Account will be given hereafter. As to Birds, they have Eagles of three ſorts: The firſt is the grey Eagle about the Size of a Kite; the ſecond the bald Eagle, ſo called becauſe the upper Part of the Neck and Head is covered with a Sort of white Down; the third a black Eagle, reſembling thoſe in *England*, very ravenous, and which do a great deal of Miſchief; moſt ſorts of Hawks, two kinds of Owls, both very large; and the white Owl very beautiful, all the Feathers of her Back and Breaſt being bright as Silver, except a black Spot immediately below the Throat. They have a large Bird of Prey, which they call a Buſtard, but it is rather a kind of Kite; they have wild Turkies very large, ſome of them weighing forty Pounds; their Partridges are ſmaller than ours, but to the full as well taſted; they have a Bird called the Mocking-Bird, of two ſorts, grey and red, eſteemed the fineſt ſinging Bird in the World; it receives its Name from imitating the Notes of all other kinds of Birds it hears: The humming Bird with a long Bill and very fine Feathers. As to Water-Fowl they have of all ſorts, ſuch as Herns, Bitterns, Curlews, Wild Swans, Geeſe, Ducks, Teal, Wigeons, Cormorants, and Gulls.

As for Fiſh, no Country in the World has greater Plenty: In *February*, *March*, *April*, and *May*, there are Shoals of Herrings come up into their very Brooks, ſome of the Size of ours, but for the moſt Part much bigger. There are alſo plenty of Cod-fiſh and Sting-graſs; which laſt is ſaid to be peculiar to this Country, being ſo called from having a Sting in its Tail; it is eſteemed good Food. In their Rivers there are the old Wife, the Sheep's-head, an excellent Fiſh; Trouts, Green-Fiſh, Sturgeons in great Plenty; Plaice, Flounders, Whitings, Carp, Pikes, Mullets, and Perch. And for Shell-fiſh, they have Oyſters, Crabs, Cockles, and Shrimps. Of thoſe that are not eaten, they have in their Seas Whale, Dog-fiſh, Sharks, Porpuſſes, Gar-fiſh, and Sword-fiſh: There is alſo a Fiſh they call the Toad-fiſh, from his ſwelling monſtrouſly when taken out of the Water; and the Rock-Fiſh, ſome Species whereof are poiſonous, and have been fatal to thoſe that have eaten them; though others, which are not eaſy to be diſtinguiſhed from the former, are very wholeſome Food; the Skip-jack, ſo called from his ſkipping out of the Water, is tolerable good Food; and ſo is the Tobacco-pipe-fiſh, ſo called from its being long and ſlender, like a Tobacco-pipe. They have many Inſects, ſuch as Muſketoes, Buggs, Seed-ticks, Red-worms, which lie only on old Trees and rotten Logs; on which, if a Man ſits down in the Midſt of Summer, he is ſure to catch them, but they are eaſily got off with warm Water. We may add to theſe the Worm that eats Plank, which has a kind of Horn or Screw in its Head, with which it forces a Paſſage through any Wood to which it ſticks; and as we have heard much of theſe Worms, and perhaps not a little concerning them that is wide of the Truth, it may not be amiſs to give an Account of them, from a Gentlemen who reſided long in *Virginia*, and made very exact Obſervations. In the Month of *June*, annually, there riſe up in the Salts vaſt Beds of Seedling Worms, which enter the Ships, Sloops, or Boats, wherever they find the Coat of Pitch, Tar, or Lime worn off the Timber, and by degrees eat the Plank into Cells, like thoſe of an Honeycomb. Theſe Worms continue thus upon the Surface of the Water, from their Riſe in *June*, until the firſt great Rains after the Middle of *July*; but after that do no freſh Damage till the next Summer Seaſon, and never penetrate farther than the Plank or Timber they firſt fix upon.

The Damage occaſioned by theſe Worms may be four ſeveral Ways avoided; 1ſt, By keeping the Coat (of Pitch, Lime, and Tallow, or whatever elſe it is) whole upon the Bottom of the Ship, or Veſſel; for theſe Worms never faſten or enter but where the Timber is naked. 2dly, By anchoring the large Veſſels in the Strength of the Tide, during the Worm-Seaſon, and haling the ſmaller aſhore; for in the Current of a ſtrong Tide the Worms cannot faſten. 3dly, By burning and cleaning immediately after the Worm-Seaſon, is over, for then they are but juſt ſtuck into the Plank, and have not buried themſelves in it; ſo that the leaſt Fire in the World deſtroys them entirely, and prevents all Damage that would otherwiſe enſue from them. 4thly, By running up into the Freſhes with a Ship or Veſſel, during the five or ſix Weeks that the Worm is thus above Water; for they never enter, or do any Damage in freſh Water, or where it is not very ſalt.

We come now to ſpeak of what is produced by their Soil. And firſt with reſpect to Trees; of which, we may affirm, few Countries are better ſtocked, or afford greater Variety. As to Timber, they have Oaks, Cedars, Firs, Cypreſs, Elm, Aſh, and Walnut; ſome of their Oaks meaſure two Feet ſquare and ſixty Feet in height. They have alſo Beach, Poplar, Hazel, *&c.* beſides Saſſafras, Sarſaparilla, and many other ſweet Woods, and ſuch as are uſed in Dying. Their Fruits are, Grapes of ſeveral kinds, Cherries of various ſorts, Plumbs from the Bigneſs of a Damſon to that of a Pear; Peaches in ſuch Plenty that in ſome Places they feed their Hogs with them; Quinces in abundance, and Apples and Pears in as great Plenty as can be wiſhed. Their Corn is of two Sorts, *Engliſh* Wheat, Barley, Oats, Rye, which all thrive very well, and yield from fifteen to thirty fold Increaſe; and Maize, or *Indian* Corn, which is not unlike our Peaſe in Taſte, but grows in a great Ear or Head as big as the Handle of a large Horſe-whip, having from three hundred to ſeven hundred Grains in one Ear, and ſometimes one Grain produces two or three ſuch Ears or Heads; it is of various Colours, Red, White, Yellow, Blue, Green and Black, and ſome ſpeckled and ſtriped, but the White, and Yellow, are moſt common; the Stalk is as thick as an ordinary walking Cane, and grows ſix or eight Feet high, in Joints, having a ſweet Juice in it of which a Syrrup is ſometimes made, and from every Joint there grow long Leaves in the Shape of Sedge Leaves: The manner of Planting is in Holes or Trenches, about five or ſix Feet Diſtance from each other; the Earth is opened with a Hoe (and of late Years, with a Plough), four Inches deep, and four or five Grains thrown into each Hole, or Trench, about a Span diſtant from each other, and then covered with Earth: They keep it weeding from time to time, and as the Stalk grows high they keep the Mould about it like the Hillocks in a Hop-Garden: They begin to plant in *April*, but the chief Plantation is in *May*, and they continue to plant till the Middle of *June*: What is planted in *April* is reaped in *Auguſt*; what is planted in *May* is reaped in *September*; and the laſt in *October*.

But as the great Produce of this Country is Tobacco, and as that of *Virginia* is looked upon as the beſt in the World, it is but juſt that we ſhould give a more particular Account of it. It is certain that the Country produced vaſt Quantities of it before any *Europeans* went thither, and that the Uſe of it was taught them by the Natives; but in what manner they cultivated it, or how they cured it, is now no longer known, ſince at preſent they buy what they conſume from the *Engliſh*, and therefore it is of their manner of Managing this Plant, that we ſhall ſpeak. The Tobacco Seeds are firſt ſown in Beds, where having remained a Month, the Plants are tranſplanted into the little Hillocks, like thoſe in our Hop-gardens, the firſt rainy Weather; and being grown a Foot high there, within the Space of another Month they top them, and prune off all the bottom Leaves, leaving only ſeven or eight on the Stalk, that they may be the better fed; and theſe Leaves, in ſix Weeks time, will be in their full Growth; the Planters prune off the Suckers, and clean them of the Horn-worm twice a Week, which is called *Worming* and *Suckering*; and this Work laſts three Weeks or a Month, by which time the Leaf from Green begins to turn browniſh, and to ſpot and thicken; which is a Sign of its ripening: As faſt as the Plants ripen, they cut them down, heap them up, and let them lie and ſweat a Night, and the next Day they carry them to the Tobacco-houſe, where every Plant is hung up at a convenient Diſtance one from another, for about a Month or five Weeks; at the End of which Time they ſtrike, or take them down, in moiſt Weather, when the Leaf gives, or elſe it will crumble to Duſt; after which they are laid upon Sticks, and covered up cloſe in the Tobacco houſe for a Week or a Fortnight to ſweat; and then opening the Bulk in a wet Day, the Servants ſtrip and ſort them, the top-leaves being the beſt and the bottom the worſt Tobacco; the laſt Work is to pack it in Hogſheads or bundle it up, which is alſo done in a wet Seaſon; for in curing of Tobacco, wet Seaſons are as neceſſary as dry to make the Leaf pliant.

Yet Tobacco is very far from being the only Thing of Value which this Country produces; on the contrary, they have Flax, Hemp, and Cotton; and Silk they might have if they were not ſo extreamly addicted to their ſtaple Commodity, as never to think of any thing elſe, if Tobacco can be brought to a tolerable Market. They have likewiſe Silk-graſs, of which they make very little Advantage, though, no doubt, under proper Management, moſt profitable Manufactures might be raiſed from it, ſince its Threads are finer than thoſe of Flax, and ſtronger than Hemp. We may add to this, that all kind of naval Stores might be produced in *Virginia* with great Eaſe, and in vaſt Plenty: Such as Plank-Timber, Maſts, Yards, Pitch, Tar, Roſin, and Turpentine, beſides Sails, Cordage, and Iron. It is commonly ſaid, and there are ſome who have lived in *Virginia* ready enough to affirm it, that there is hardly a Stone to be found in the Country; but, however, this is far enough from being true; for at the Water-falls there are Stones enough of different kinds fit for paving, and other Uſes; and towards the Hills there are Quarries of Slate, and of a kind of Freeſtone; there are likewiſe a Sort of ſhining Pebbles, not at all inferior to Kerry-ſtones and though generally ſpeaking they are ſoft, yet I have heard that when long expoſed to the Air, they become very hard, and if poliſhed are extremely beautiful. As to Mines, they have ſeveral of good Iron in almoſt all Parts of the Country, more eſpecially in the Northern Neck, which belongs to Lord *Fairfax*. There was once a Lead Mine diſcovered, but loſt in the firſt Maſſacre; there has been likewiſe a Talk of Silver and Gold Mines; but it is certain, that they have a great many Coals, Antimony, and other Things of Value, in the Bowels of that Country, which they would not fail to ſearch out, if Tobacco alone did not ſupply them plentifully.

Thus far we have deſcribed the Country itſelf: Let us next enquire into its Condition as a Colony; and in this Light we find it divided into twenty-five Counties, ſome ſay, twenty-nine; of theſe the firſt is *James County*, lying on both Sides *James River*, which contains five Pariſhes, and the only two Towns that are in *Virginia*. Their firſt is *James Town*, on the North-ſide of the River, and about forty Miles from the Mouth of it; it is very far from being conſiderable, as it does not contain above ſixty or eighty Houſes at moſt, and of theſe, as we obſerved before, the greater Part are Taverns or public Houſes, for the Entertainment of ſeafaring People, the Gentlemen of *Virginia* making it their Choice to live on their Plantations, in order to ſee how their Eſtates are managed; and in theſe Seats of theirs they live ſo handſomely, and ſo hoſpitably, that how much ſoever Strangers may diſapprove their Method before they come into the Country, they are quickly reconciled to it afterwards. The ſecond is *Williamſburgh*, to which the Seat of Government is now transferred, and yet it does not conſiſt of above forty Houſes. The reſt of the Counties are denominated as follows: *Henrico County*, *Prince George*, *Charles County*, *Surry*, *Iſle of White*, *Nanſamond*, *Norfolk*, *Princeſs Anne*, *York County*, *Warwick*, *Elizabeth*, *New Kent*, *King William*, *King and Queen*, *Glouceſter*, *Middleſex*, *Eſſex*, *Richmond*, *Stafford*, *Weſtmoreland*, and *Lancaſter*, *Northumberland*, *Acomack*, and *Northampton*.

The Number of People in theſe Counties, taken all together, Men, Women, Children, and Negroes, may amount to about half a Million; of theſe, one hundred and twenty thouſand are Freemen, or their Wives and Children, and above twenty thouſand are capable of bearing Arms. As for the *Indians*, there are ſtill many Nations of them; but ſome of them ſo ſmall, that they do not exceed four or five Families.; and it is thought, that amongſt them all, they could ſcarce raiſe ſeven hundred, ſome think, not five hundred fighting Men. As to the Government, it reſembles that of *England*; for the legiſlative Authority is lodged in the Governor, or Council and Aſſembly: The Governor repreſents the King; gives his Aſſent to Laws, and has a negative Voice. As Governor, he is at the Head of the Civil Adminiſtration, and being by his Commiſſion a Lieutenant-General and Vice-Admiral, the Military and Naval Power are likewiſe in his Hands. In other Reſpects, the Government is very well regulated, and the Church alſo is well taken care of; neither has any Plantation belonging to us been under better Management, or the People more happy than thoſe of *Virginia*; and this appears very plainly from the Face of the Country, though there are no great Towns in it, and but very few Villages; for the Gentlemens Seats are very thick, all of them good convenient Houſes, many of them large and magnificent. The Roads are no where better, the Country being for the moſt part, level, and ſcarce any rugged or deep Ways; ſo that it is a common thing to travel forty or fifty Miles in an Afternoon, and ſometimes an hundred in a Summer's Day. They have likewiſe as great Conveniencies with reſpect to Water-carriage as any Country in the World; and it is this that has chiefly hindered them from living in great Towns, which, though prejudicial to the Manufactures, has certainly proved very advantageous to their Plantations, which are larger, more frequent, and better ſecured, than in almoſt any other Colony; and as it has flouriſhed extreamly hitherto, ſo at this time it is as thriving a Colony, and as likely to continue ſo, as any that belong to this Nation.

The laſt Thing we propoſe is, to give the Reader ſome Idea of the Advantages that ariſe to the Nation from this particular Plantation, which I muſt confeſs is a very difficult thing to do; but, however, I ſhall labour to give as much Satisfaction as I can, and if I ſhould be ſo fortunate as to meet with any farther Informations, Care ſhall be taken that the Publick ſhall not loſe the Benefit of them, ſince they will come in properly enough in the latter Part of the Work. In the firſt place it muſt be obſerved, that as the Value of Labour differs in ſeveral Parts of this Kingdom, ſo the Labour of a Man in moſt of the Plantations is not only as advantageous to his native Country as if he worked at home, but much more ſo: I believe, upon a moderate Computation, we may reckon, that ſuch a Perſon contributes to the public Stock, by which I mean, the Income and Wealth of the *Britiſh* Nation, four times as much: So that we may with Reaſon reckon, that the White People in *Virginia*, one with another, produce twelve Pounds to this Nation; the Reaſon of which will appear, when we conſider the Nature of their Commerce more particularly. But beſides this, the Negroes are of great Advantage to this Kingdom, though of infinitely leſs than White People would be, if they were employed in the ſame Work; for every one of theſe poor Creatures conſumes yearly two Hilling-hoes, two Weeding-hoes, two Grubbing-hoes, beſides Axes, Saws, Wimbles, Nails, and other Iron Tools and Materials. On the Whole, there can be no ſort of Queſtion, becauſe it appears a plain Matter of Fact, that theſe People neceſſarily take off the Sum of one hundred and fifty thouſand Pounds, in the Commodities of this Country. How far it might have been more expedient for the Infant-Colony to have intermarried with the *Indians*, and thereby ſo increaſed their Numbers as to have been in a Condition to manage their Affairs without Slaves at all, I will not take upon me to determine; but this ſeems ſo clear as to admit of no Diſpute, that ſuch a Settlement would have been by far more beneficial to the Mother-Country, and out of Compariſon more commodious and ſecure for the Planters themſelves. But I mention this only incidentally, and that it may paſs the Conſideration of Perſons better verſed in theſe Things than I pretend to be; and, from juſt hinting how Things might be, return to the Detail of how they really are.

I have before ſtated (agreeable to what able Authors have aſſerted upon this Subject) ſome general Principles of Computation, ſuch as that every Head in this Plantation may be reckoned worth twelve Pounds a Year to this Nation, which muſt ſeem prodigious, and indeed ſo does every thing grounded on Calculation, to ſuch as have not applied themſelves thereto; and ſo they always will unleſs clearly explained, which is what I ſhall next attempt, as deſiring to inculcate uſeful Truths, capable of influencing Men's Practice, and not to write paradoxical Diſcourſes for my own, and other Peoples Amuſement. In order to untie theſe Knots, we muſt conſider that the People in *Virginia* live exactly as we do, or rather more freely, in that generous, open, hoſpitable, and conſequently expenſive Method, that prevailed here in the laſt Age. But as they are ſupplied both with Neceſſaries and Conveniencies, with the Inſtruments of Labour, as well as the Means of Luxury, from *England*; it follows of Courſe that they muſt employ an infinite Number of Hands to provide theſe. For it is generally known that theſe Demands muſt be ſupplied from thoſe Handicrafts and Mechanics that have moſt Hands in their Service; ſuch as Weavers, Shoemakers, Hatters, Ironmongers, Turners, Joiners, Taylors, Cutlers, Smiths, Bakers, Brewers, Ropemakers, Hoſiers, and indeed all the Mechanics in *England*; their Manufactures being good Merchandize in *Virginia*. The Commodities ſent thither, beſides Linnen, Silks, *India* Goods, Wine, and other foreign Manfactures, are Cloth, coarſe and fine Serges, Stuffs, Bays, Hats, and all Sorts of Haberdaſhers Ware; Hoes, Bills, Axes, Nails, Adzes, and other Iron Ware; Cloaths ready made; Knives, Biſket, Flour, Stockings, Shoes, Caps for Servants, and, in ſhort, every thing that is made in *England*.

But if they employ theſe People they muſt feed them likewiſe, and pay them their Wages; and not only them, but thoſe who take the Pains to go between the Planters and theſe Workmen; by which I mean the Agents, Merchants, or Factors; who though fewer in Number, yet have their Servants and Dependents; who, from the Nature of their Employments, expect to be paid at a better rate. Neither is this all, for when things are made and brought to the Factor, they are never the nearer to the Planter in *Virginia*, but muſt be put into the Hands of a new ſet of People, who are to be paid for the Carriage of them; ſo that now I think the moſt common Capacity may underſtand how the Labour of every Head in any Plantation muſt be worth four times as much to the Community of his Mother Country, as if he wrought at home; for if he ſpends ſo much, and pays for what he has, both of which are undeniable, his Labour muſt produce ſo much. This ſhews the Benefit of Plantations to their Mother Country; and I hope there is no need to ſay that this ſhews how much Regard and Reſpect is due from thoſe who manage the Affairs of the Mother Country, to thoſe who live and labour for her in the Plantations. But becauſe it is not impoſſible we may err a little in the Meaſure of theſe Computations, and as I am far from deſiring to magnify theſe Advantages beyond the Truth, I ſhall lay it down as a thing certainly to be depended upon, that every white Perſon in *Virginia*, one with another, is worth to this Nation ten Pounds, which will make the Value of the whole Plantation equal to an Annuity of 1,200,000 *l.* to *Great Britain*.

This I think is already, in a great meaſure, demonſtrated; but as I am very ſenſible that many People will ſtill think full Satisfaction is not given upon this Head, if they are not ſhewn how this, or at leaſt the greateſt Part of it, is received; that we may not do things by halves, my next Care ſhall be to remove this Difficulty likewiſe. In order to this, we muſt conſider that the Trade of this Colony, as well as that of *Maryland*, conſiſts almoſt entirely of Tobacco; for though the Country would produce ſeveral excellent Commodities fit for Trade, yet the Planters are ſo wholly bent on planting Tobacco, that they ſeem to have laid aſide all Thoughts of other Improvements. This Trade is brought to ſuch Perfection, that the *Virginia* Tobacco, eſpecially the ſweet-ſcented which grows on *York River*, is reckoned the beſt in the World, and is what is generally vended in *England* for a home Conſumption; the other Sorts, called *Oronoac*, and that of *Maryland*, are hotter in the Mouth, but they turn to as good Account, being in demand in *Holland*, *Denmark*, *Sweden*, and *Germany*; it is therefore from this Commodity that we are to look for the beſt Part of that vaſt Sum which we have mentioned, and if we proceed diligently, and with Attention, I dare ſay we ſhall not ſearch in vain.

In Time of Peace, I am perſuaded from ſeveral different Calculations, and from the Compariſon of the Informations I have ſought and received from ſuch as are, or ought to be, beſt acquainted with theſe Matters, that there is very little leſs than one hundred thouſand Hogſheads of Tobacco exported every Year from this Colony; that between three and four hundred Ships are employed in this Trade; and upwards of four thouſand Seamen. If we take things, upon this Foot, then the hundred thouſand Hogſheads of Tobacco will produce about the Sum at which I have fixed the Produce of this Colony to the Nation; but it may be ſaid, that if we take Tobacco for the Commodities and Manufactures that we ſend to *Virginia*, it differs very widely from an Annuity; and that inſtead of reciving 1,200,000 *l.* from the Perſons inhabiting this Plantation, we return them the moſt valuable things we have, for 60,000,000 of Pounds of Tobacco, which in itſelf is no Neceſſary of Life, and which we might very well do without: Thus we are all at Sea again, and it is my Buſineſs to ſet us once more aſhore; and if I am able to clear up this laſt Miſt, I hope there will, for ever after, be fair Weather for the Plantations.

In anſwer therefore to this Objection, which ſeems to deſtroy all, and to demoliſh entirely that Structure which I have been erecting, I ſay, that ſtrictly conſidered, it makes more in favour of the Colony of *Virginia*, than all that I have been ſaying for it; and this I ſhall be able to make as plain as any thing can be made, in a very few Words. It is, I think, generally agreed, that Sir *Walter Raleigh* firſt brought Tobacco into *England*, or rather, as I apprehend, had it brought over to him from this Colony; and we find the Uſe of it much recommended by the learned and worthy Mr. *Harriott*, whom he ſent over thither. But we muſt not infer from thence that *Virginia* Tobacco was always uſed here, ſince the contrary is very certain; for, as the Reader has been told, it was Sir *George Yardly* who introduced the planting and cultivating Tobacco in that Country by the *Europeans*, in the Reign of King *James* I.

Yet before this Time the Practice of taking Tobacco was become ſo common in *England*, that King *James* wrote a Book againſt it. I do not concern myſelf in the Controverſy, whether he was right or wrong in his Oppoſition to this Practice; but I mention it to ſhew that it was become common, and that the Faſhion of uſing it was growing ſtrong. We had moſt of our Tobacco then from *Brazil*, and ſome from the *Spaniſh* Plantations; the Price of it was from four to ſeventeen Shillings a Pound, and if we had come to uſe as much of it as we do of the *Virginia* Tobacco, and had paid for it at the rate only of five Shillings, this ſingle Article of Luxury would have ſtood us in upwards of ſeven Millions every Year. I very readily allow that this would be a very abſurd and improbable Suppoſition, ſince it cannot be imagined that in ſuch a Caſe, the common Sort of People either could or would have ſmoaked Tobacco; but then let us conſider what a Number of People there are to whom the Dearneſs of this Commodity would have proved no Reſtraint; and let us ſuppoſe that we ſhould, in this Reſpect, have been no wiſer than our Neighbours, which I look upon to be a very modeſt and rational Suppoſition, we might then, inſtead of forty thouſand Hogſheads, have conſumed ten or twelve thouſand, which would have amounted to a Million or upwards, and conſequently ſo much ready Money is hindered from going out of the Nation by the bringing in of *Virginia* Tobacco, which, viewed in this Light, is equivalent to the importing of ſo much Silver.

But to proceed, beſides the Money ſaved to the Nation by the Uſe of this Tobacco, we export one way or other ſixty thouſand Hogſheads, which, at five Pound per Hogſhead, amounts to 300,000 *l.* excluſive of the Duty of this Tobacco, which is not drawn back. I might have taken another Method of Reaſoning upon this Subject, by ſhewing that whatever Exchange of Commodities contributes to the Maintenance and Employment of a certain Number of People, is not only equal to, but is really much better than an Annuity, that would maintain the ſame Number of People in the ſame Way, had I not been inclined to render this Matter as evident as it is poſſible. After this I ſhall make but two ſhort Obſervations, and ſo quit this Part of my Subject.

The firſt is, that in caſe what we receive from *Virginia* in Tobacco ſhould fall ſhort of the Sum I have computed we derive from thence, this Deficiency is certainly made up ſome other Way; or, in other Words, the *Virginians* ſend us other Commodities, or pay us with the Balance of their Trade with other Places. The ſecond Obſervation is, that there is not the leaſt Danger of ſeeing this Country over-peopled, and thereby ſinking the Value of Tobacco, becauſe there are a multitude of things to which the People may turn their Hands; ſeveral of which have been enumerated already, and therefore I ſhall only obſerve that in the Articles of Silk and Iron, the Inhabitants of this Colony might ſave us 300,000*l.* a Year, and bring us in very near the ſame Sum from other Nations. But it is now Time to quit this agreeable Topic, which however is a very hard Taſk, for one who has any Tincture of publick Spirit, in order to proceed with the proper Buſineſs of this Section.

6. In what we have delivered concerning *Virginia*, we have purſued the Hiſtory only of the firſt Company eſtabliſhed by King *James*'s Patent, called alſo the *London* or *South Virginia* Company; but we are next to account for the Conduct of the other Adventurers, or the *Weſtern* or *Plymouth* Company as they are ſtiled by the Writers of thoſe Times, who contented themſelves for ſome Years with trading with the Natives of *North Virginia* for Furs, and fiſhing upon that Coaſt. Two Ships being employed in this Fiſhery in the Year 1614, commanded by the famous Captain *John Smith*, and Captain *Thomas Hunt*: Captain *Smith* went on Shore, and took a particular View of the Country of the *Maſſachuſets*, and had ſome Skirmiſhes with the Natives; after which he returned to *England*, ordering *Hunt* to ſail with the other Ship to *Spain*, and diſpoſe of the Fiſh he had taken there; but *Hunt*, propoſing to make a Market of the Natives themſelves as well as of their Fiſh, after Captain *Smith* was gone, enticed twenty-ſeven Men of the *Indians* on board his Ship, and then ſetting ſail with them to *Malaga* ſold them there to the *Spaniards* for Slaves, at the rate of twenty Pounds a Man, among whom was an *Indian* called *Squanto*, afterwards very ſerviceable to the *Engliſh*.

This Outrage was ſo reſented by the *Indians* for the preſent, that all Commerce with them became impracticable; nor was this the firſt Time the Natives had been thus violently carried away by the *Engliſh*; for Captain *Harlow*, in the Year 1611, ſurpriſed one *Epenow*, and two more of his Countrymen, and brought them to *England*; where *Epenow* learned *Engliſh* enough to impoſe upon his Maſters; and underſtanding that the Hopes of acquiring Mountains of Gold was the principal Inducement the *Engliſh* had to viſit his Country; the cunning *Indian* in order to get thither again, pretended there was a rich Gold Mine not far from the Country where he was born, which he would guide them to if they thought it worth their while to fit out a Ship on ſuch an Expedition. This Overture had the Succeſs *Epenow* expected, and Captain *Hobſon* was diſpatched the next Year with Proviſions, Tools and Materials, proper to make a Settlement, and open the Mines *Epenow* had given them Intelligence of. This Ship arriving on the Coaſt of *Maſſachuſets*, ſeveral *Indians* came on board, promiſing to return again the next Day with Furs and other Merchandize; and they did, indeed, return, but in an hoſtile Manner, with twenty Canoes full of armed Men; and *Epenow*, beckoning to them to approach nearer the Ship, jumped into the Sea, and made his eſcape to them; whereupon the *Engliſh* fired upon the Canoes, and were anſwered with a flight of Arrows, and ſeveral were wounded on both Sides, among whom was captain *Hobſon* himſelf; after which, the Captain, without attempting any thing farther, thought fit to return to *England*.

In the Year 1619 Capt. *Dormer* was ſent to *New England*, and with him *Squanto*, the *Indian*, as an Interpreter, to endeavour to make Peace with the Natives, and ſettle a Colony in the *Maſſachuſets-Bay*, but to no Purpoſe; the *Indians* would not be reconciled, and, in a Skirmiſh with them, *Dormer* received farther Wounds, whereupon he proceeded to *Virginia*, leaving *Squanto* on Shore in *New England*. The Patentees, having met with ſuch Diſcouragement, were, at laſt, ſo much diſheartened, that they gave up all Thoughts of making a Settlement; however, other Adventurers carried on the Trade to *New England*; eight Ships were employed in it by the Merchants of *London* and *Plymouth* this and the next Year, and the Succeſs was ſuch, that the Seamen, who were Sharers alſo, had each 17*l.* in ſix Months Time, as much as 30*l.* now, and as good as 5*l.* a Month, or Maſter's Pay. It is very probable, that the Commerce might have gone on in this Manner for ſeveral Years, without any Thoughts of planting, though that was the Motive upon which their Patent was granted, ſo early began the Faſhion, with Companies, to make that their leaſt Care for which they were conſtituted. But it ſo fell out, that a Congregation of Independents or Browniſts, that for the Sake of their Religion had retired to *Holland*, and formed themſelves into a Church under one Mr. *John Robinſon*, who was their Miniſter, found themſelves more uneaſy there than they had been in *England*; and therefore formed a Project of ſeeking an Eſtabliſhment in the *New World*, where they imagined they might enjoy Peace and Quiet; yet before they could carry this Deſign into Execution, it was neceſſary to have King *James*'s Licence, not only in regard to the Rights of the Crown; but to ſecure them, when ſettled, from being turned out either by their own Countrymen or Strangers. In order thereto they got Sir *Robert Nanton* to procure the King's Conſent for their tranſporting themſelves to *America*. Sir *Robert* aſked his Majeſty that ſuch a People might enjoy Liberty of Conſcience under his gracious Protection in *America*, where they would endeavour the Advancement of his Dominions, and promote the Goſpel: The King replied, *It is a good and honeſt Propoſal*, and yielded to it.

This Congregation, by their Agents in *England*, treated firſt with the Council at *Plymouth* for a large Tract of Land towards *Norembegua* and *New Scotland*; but upon better Conſideration they abandoned their Purpoſes, and reſolved to ſeat themſelves more to the Southward on the Bank of *Hudſon*'s *River*, which falls into the Sea at *New York*. To this End, they contracted with ſome Merchants, who were willing to be Adventurers with them, in their intended Settlement, and were Proprietors of the Country; but the Contract bore too hard upon them, and made them the more eaſy in the Diſappointment they met with in ſettling on *Hudſon*'s *River*; ſeveral of Mr. *Robinſon*'s Congregation ſold their Eſtates, and made a common Bank for a Fund to carry on this Undertaking. The Agents hired the *May-Flower*, a Ship of 180 Tons, which was freighted with proper Goods and Merchandize, and ordered to *Southampton*, where ſhe took aboard the Company that came from *Holland* with Mr. *Brewſter*. The whole Company, about 120 Perſons, ſailed from *Plymouth* the 6th of *September*, and fell in with *Cape Cod* on the 9th of *November*, an ill Time of the Year to begin building, planting, or indeed any hard and difficult Labour; and nothing could be more difficult and hard than theirs was like to be: Here they refreſhed themſelves about half a Day, and then tacked about to the Southward for *Hudſon*'s *River*; but *Jones* the Maſter of the *Speedwell*, having been bribed by the *Hollanders*, who intended themſelves to take Poſſeſſion of thoſe Parts, as they did ſome Time after, inſtead of putting out to Sea, entangled them among the dangerous Sholes and Breakers, where, meeting with a Storm, the Ship was driven back again to the *Cape*, upon which they put into the Harbour, and reſolved, conſidering the Seaſon of the Year, to attempt a Settlement there, and to proceed forward to the Bay. But *Cape Cod* not being within the Limits of the Land they had a Grant for under the Patent, they aſſociated themſelves into a Body Politic, by a formal Inſtrument in which, having declared themſelves Subjects of the Crown of *England*, they ſolemnly engaged Submiſſion to the Laws that ſhould from time to time be made for the good of the Colony.

The Place they made choice of to build a Town on, was very commodious, and the Country about it not leſs agreeable; ſo they reſolved not to trouble themſelves or their Friends about obtaining any farther Licence, but to riſque their Fortunes where Providence had caſt them; in Conſequence of which Reſolution they went hard to work in raiſing their new Town of *Plymouth*, for that was the Name they gave it, and which lies in the Latitude of 42 Degrees North. The Planters deſigned to ſtay in the Country, including Women and Children, were about an hundred, of whom only one Boy died in the Paſſage. Their Hiſtorians mention no more than nineteen Families that ſettled at *Plymouth*, and give us the Names but of forty one effective Men, among whom the Chief were *John Carver*, whom they choſe Governor, *William Bradford*, *Edward Winſlow*, *John Brewſter*, Aſſiſtant to Mr. *Robinſon*, and ruling Elder of his Church, *Iſaac Alerton*, *Miles Standiſh*, *John Howland*, *Richard Warren*, *Stephen Hopkins*, *Edward Tilly*, *Chriſtopher Martin*, *William White*, *Richard Clack*, and *Thomas Engliſh*. But ſuch were the Fatigues this infant Colony underwent the firſt Winter, that out of an hundred Planters fifty died within the Space of two Months; and had the *Indians* attacked them, they had probably all periſhed, but they met with no Diſturbance.

After they had fixed themſelves at *Plymouth Bay*, they ſaw very few of the Natives till the Middle of *March*, when *Samoſet*, one of their Sagamores, or Captains, came to them in a friendly Manner, and gave them to underſtand they were welcome into the Country, and that his People would be glad to trade with them; and coming again the next Day with other *Indians*, they informed the *Engliſh* that their great Sachem, whom they called *Maſſaſſoiet*, had his Reſidence but three Days March to the Northward, and intended them a Viſit. And accordingly *Maſſaſſoiet* arrived the 22d Day of *March*, with a Retinue of ſixty People; and, being received by Captain *Standiſh* at the Head of a File of Muſketeers, was conducted to a kind of Throne they had prepared in one of their Houſes. This Monarch was of a large Stature, middle aged, of a grave Countenance, and ſparing in his Speech; his Face was painted red, and both Head and Face ſmeared over with Oil; he had a Mantle of Deer-Skin, and his Breeches and Stockings, which were of a Piece, were all of the ſame Materials; his Knife or Tomahauk hung upon his Breaſt on a String, his Tobacco Pouch behind him, and his Arms covered with wild Cat-Skins, and in the ſame Garb were his principal Attendants. They did not obſerve any Marks of Diſtinction between this Prince and his Subjects, unleſs it were a Chain of Fiſh Bones, which *Maſſaſſoiet* wore about his Neck. Soon after the Prince was ſeated, Mr. *Carver*, the Governor, came in with a Guard of Muſketeers, whereupon *Maſſaſſoiet* roſe up and kiſſed him, after which they both ſat down, and an Entertainment was provided for the *Indians*, of which no Part appeared more acceptable than the Brandy, the Sachem himſelf drinking very plentifully of it. In *Maſſaſſoiet*'s Retinue was *Squanto*, who had been carried to *Europe* by *Hunt*, and brought to *New England* again. This *Indian*, it ſeems, had a very great Affection for the *Engliſh*, among whom he had lived ſeveral Years; and it was to his favourable Repreſentation of the Colony, that the Sachem was induced to make them this friendly Viſit; and, at this firſt Meeting, to enter into an Alliance, Offenſive and Defenſive, with the *Engliſh*, and even to acknowledge King *James* for his Sovereign, and to hold his Dominions of him; and, as an Evidence of his Sincerity, *Maſſaſſoiet* granted Part of his Country to the Planters and their Heirs for ever.

This Alliance, being founded upon the mutual Intereſts of the contracting Parties, was maintained inviolably many Years. The Sachem, who had been informed by *Squanto*, how powerful a People the *Engliſh* were both by Sea and Land, promiſed himſelf their Aſſiſtance againſt the *Naraganſet Indians*, his Enemies; and the *Engliſh* ſtood in no leſs need of his Friendſhip to eſtabliſh themſelves in that Country. The Treaty being concluded, *Maſſaſſoiet* returned to his Capital, leaving *Squanto* with the Colony, who was extremely ſerviceable to them, not only as an Interpreter, but by inſtructing them how to plant and manage their *Indian* Corn, in piloting them along the Coaſt, and ſupplying them with Fiſh, Fowl, and Veniſon. The *Engliſh* ſtill remained ſickly, and many of them died; among whom was Mr. *Carver*, their Governor, in the Month of *April*, 1621. The Seamen alſo had their Share of Illneſs, inſomuch that they were not in a Condition to ſail till *May*, when the Ships returned to *England* to give their Friends an Account of the Circumſtances of the Colony.

While theſe Ships were gone to, or remained in, the *Britiſh* Dominions, the Colony made choice of Mr. *Bradford* for their Governor, who enjoyed that Poſt for many Years, and ſaw the Plantation thoroughly eſtabliſhed; notwithſtanding that, in his Time, there aroſe ſuch Differences about Religion as actually occaſioned great Feuds and Jealouſies, and ſeemed to threaten worſe Conſequences. It may be expected, that I ſhould give ſome competent Reaſon for the quick Progreſs of this Colony beyond that of *Virginia*, which met with no ſuch Succeſs; and this ſeems to be the rather neceſſary, becauſe at firſt Sight one might be inclined to think that it ought to be attributed to the ſuperior Diligence and Application of the Weſtern Company, in Compariſon of that of *London*; which is, however, ſo far from being true, as in reality this Company had no Share at all in the ſending over, or eſtabliſhing this flouriſhing Plantation. On the contrary, it was raiſed by the Spirit, Vigilance, and Ardour of the Malcontents in the Reign of King *Charles* I. who, before the breaking out of the civil War, and when they had little Hopes of getting the Government into their own Hands, projected the ſecuring to themſelves a ſafe Retreat in *New England*, which induced them to ſend thither ſuch regular Supplies, and thoſe too under the Direction of Men very capable of anſwering the Ends for which they were ſent thither. We have ſeen with what wonderful Succeſs their firſt Attempts were attended, and how ſoon their new Colony was in a Condition to defend and ſupport itſelf, not only without any Aſſiſtance, but almoſt without any Notice, from the Crown, which in the beginning they did not deſire; but afterwards, foreſeeing many Inconveniencies that were like to attend this Manner of Proceeding, they very prudently reſolved to alter it, and to procure to themſelves ſuch farther Security as appeared to them requiſite towards attaining thoſe Ends of which they were in Purſuit.

This therefore being the Caſe, and the Colony of *Plymouth* ſtill remaining without a Patent, or any Title to the Lands they poſſeſſed from the *North Virginia* (or *New England*) Company, ſent over Mr. *Winſlow*, one of their Number, to ſollicit for both in the Year 1624; and this Gentleman ſucceeded beyond their Expectation; for the Charter he procured, enabled the Planters to elect a Governor, a Council, and Magiſtrates, and to make Laws, provided they were not oppoſite to ours, or encroached on the Prerogatives of the Crown. After conducting the Hiſtory thus low, and ſhewing how, where, and when, the firſt regular *Engliſh* Settlement was founded and fixed in this Country, now the largeſt, beſt improved, and moſt populous of our Plantations upon the Continent, I muſt excuſe myſelf from going farther in this way, becauſe it would extend this Section to an unproportionable Length; and becauſe the Hiſtory of *New England* has been already written by ſeveral able Men, much better informed thereof than I can poſſibly be; and therefore I ſhall be very well content with endeavouring, in as ſmall a Compaſs as I can, to do as much towards explaining the State of this Colony, as I have already done for that of *Virginia*.

7. In order to this, it will be neceſſary to explain what is meant by *New England*, ſince it differs thus far from all our Colonies, that, in reality, it is a general Name for ſeveral of them, though there is no particular Plantation, or even Province, properly ſo called. We are therefore to obſerve, that under this Denomination was originally

comprehended that part of the Continent of *North America*, which had been formerly ſtiled *North Virginia* and *Norembegua*, and the way it acquired this Name, was thus: When Captain *Smith* made his Voyage thither, which has been before mentioned, he went aſhore, with no more than eight Perſons; and at that time drew a Plan of as much of the Country as he had ſeen. This, as I apprehend, was in the Year 1614; and upon his Return he ſhewed the Prince of *Wales* his Account of the Country, and the Map he had drawn of it. His then Royal Highneſs, afterwards King *Charles* I. read the one, and examined the other, giving ſeveral *Engliſh* Names to Places, diſtinguiſhed by *Indian* Appellations in the Book; and from Captain *Smith*'s Information of the Soil and Climate of the Country, called it *New England*, which Name it has ever ſince borne. This Work, thus ſeen, peruſed, and approved by the Prince, Captain *Smith* publiſhed to the World, under the Title of *A Deſcription of New England*, in which he gave a very fair and true Account of it, as well as of the Advantages that might be hoped from a Settlement there; in attempting of which, however, he had the Misfortune to be taken Priſoner by the *French*; but notwithſtanding this, his Treatiſe produced the intended Effect, and actually brought about that Eſtabliſhment, of which we have already given the Hiſtory. He likewiſe wrote and publiſhed another Book, which he called *New England's Trials*, which was very well received, inſomuch that we may ſafely aver, that all the Advantages derived ſince to *Great Britain*, from the ſeveral Settlements made in this large and fruitful Country, are originally due to the Virtue and Induſtry of this indefatigable Man.

The Name and Bounds of this Country being thus ſettled, it is neceſſary next to take Notice of the ſeveral Plantations made in *New England* in the proper Order of Time, and then we ſhall ſhew, in what Situation they now ſtand. We have already given an Account of *New Plymouth*, which was the firſt of them; and we are next to ſpeak of that which, tho' later in Point of Time, is now become the moſt conſiderable in every Reſpect, and which had its Beginning and Progreſs much in the ſame manner with it. For in the Year 1625 (as the *New England* Hiſtorian relates) Mr. *White*, Miniſter of *Dorcheſter*, obſerving the Succeſs of the *Plymouth Colony*, projected a new Settlement in the *Maſſachuſets Bay* in *New England*, and prevailing with Mr. *Conant*, and ſome others, to go over, and make choice of a proper Settlement, he and his Friends purchaſed, or procured, a Grant from the *North Virginia*, or *New England*, Company, in the Year 1622, to Sir *Henry Roſwell*, Sir *John Young*, Knights; *Thomas Southcott*, *John Humphreys* and *Simon Newcomb*, Eſquires; their Heirs, Aſſigns and Aſſociates, of all that Part of *New England* which lies between the great River *Merimack* and *Charles River*, at the Bottom of the *Maſſachuſets Bay*, and all Lands, &c. three Miles North of *Merimack River*, and three Miles South of *Charles River*, and in Length, or in Longitude, between thoſe Rivers, from the *Atlantic* to the *South Sea*; and obtained a Patent from King *Charles* I. to hold the ſame as of his Manor of *Eaſt-Greenwich* in common Soccage, yielding and paying to his Majeſty a fifth Part of ſuch Gold and Silver Ore as ſhould be from time to time found within theſe Limits. Theſe Gentlemen, having taken in Sir *Richard Salſtonſtal*, Mr. *Iſaac Johnſton*, *Samuel Addeſly*, *John Van*, *Matthew Cradock*, *Thomas Goff*, *George Harwood*, *Samuel Moor*, and ſeveral more, the following Year, 1628, procured a new Patent with the Names of the laſt-mentioned Gentlemen inſerted, as the Proprietors; by which Patent they, and all others who ſhould join with them, were incorporated by the Name of, *The Governor and Company of the* Maſſachuſets Bay *in* New England; and were empowered to elect a Governor, Deputy-Governor, and Magiſtrates, and make Laws for the Good of the Plantation, not repugnant to the Laws of *England*; and Liberty of Conſcience was granted to all that ſhould ſettle there. The Adventurers, by Virtue of this Patent, elected Mr. *Cradock* their Governor, and Mr. *Endicot* their Deputy-Governor, and ſent over the latter immediately to reinforce Mr. *Conant*, who was ſettled at *Neumkeak*, now *Salem*, ſituated on the Coaſt of *New England*, between the Promontories of *Marblehead* and *Cape Anne*.

This new Colony was ſupported with the ſame Spirit and Vigour as the former, and ſuch mighty Embarkations made for its Service, as ſhewed plainly enough of how great Conſequence it appeared to thoſe who were its Protectors in *England*; and ſo much they were ſet upon having ſome Man of Diſtinction on the Spot, that in the Year 1630 they choſe *John Winthorp*, Eſquire, Governor, in the Room of Mr. *Cradock*, who declined going over, and he appointed Mr. *Thomas Dudley* his Deputy-Governor; both of them embarked the ſame Year, with Sir *Richard Saltonſtal*, *Iſaac Johnſon*, Eſquire, and the Lady *Arabella*, his Wife, Mr. *Eaton*, and ſeveral other Patentees, on board a Fleet of ten Sail of large Ships, with about two hundred Planters every way completely furniſhed: So that ſoon after their Arrival they erected two new Settlements; the one ſtyled *Charles-Town*, on the North-ſide of *Charles River*; and the other *Dorcheſter*, at the Bottom of *Maſſachuſets Bay*; and in a ſhort time part of the Inhabitants of *Charles-Town*, paſſing over to the oppoſite Shore, erected *Boſton*, which is now the Capital of *New England*. As new Planters arrived every Year, the Colony quickly became over-ſtocked; and Diviſions breaking out amongſt them, one Mr. *Roger Williams*, who was Paſtor of a Church of *Browniſts*, went and ſettled without this Government; and called his new Plantation *Providence*, which afterwards was united to the Government of *Rhode Iſland*; of which we ſhall ſpeak in its proper Place.

In 1635, arrived a larger Fleet from *England* than at any time before, and amongſt other Perſons of Diſtinction, who came over in it, was *Henry Vane*, Eſquire, Son to Sir *Henry Vane*, Secretary of State to King *Charles* I. with whom the People were ſo taken, that they elected him Governor, in the Room of Mr. *Winthorp*; but as he had the Misfortune to have a very roving and extravagant Genius, he quickly loſt his Credit with them, and ſaw his Predeceſſor reſtored: Upon which he formed a Project of erecting a new Plantation to the North-weſt of the *Maſſachuſets*; which, however, he did not carry into Execution; but returning into *England*, was knighted, and made an extraordinary Figure under the Name of Sir *Henry Vane* the Younger, as every body knows that is acquainted at all with our Hiſtory. But the Project for a Plantation on *Connecticut* River was not dropped, though Sir *Henry Vane* did not proceed in it. This Settlement was become the more neceſſary, becauſe the *Pequet Indians* began to grow very troubleſome; and as the building a Town and Fort on that River, would make a good Frontier on that Side, Agents were ſent to view the Country, who made ſuch an advantageous Report of the Fruitfulneſs of the Soil, and Largeneſs of the River, as made many of the Planters of *Newton*, *Dorcheſter*, *Weatherton*, and *Roxbury*, entertain Thoughts of tranſplanting themſelves thither, being already ſtraitened for Room where they were.

Mr. *Hooker*, Miniſter of *Newton*, put himſelf at the Head of theſe new Adventurers, about a hundred in Number, who ſet out in the Month of *July*, and travelling on Foot with their Children and Baggage, about nine or ten Miles a Day, came in ten or eleven Days to the Banks of the River, where they began a Town, which they called *Hartford*; after theſe came another Draught from *Dorcheſter*, who built a little Town, which they called *Windſor*; a third Detachment from *Waterton* built *Weathersfield*; and a fourth from *Roxbury* built *Springfield*. The Towns the Planters built on this River were fifty and ſixty Miles from its Mouth, ſo that the Ship freighted with Proviſions for theſe Planters at the *Maſſachuſets*, came ſo late in the Year that it was frozen up at the Mouth of it, ſixty Miles from the Plantation; upon which, many of the new Adventurers travelled back in the Depth of Winter, and others who attempted it were frozen to Death. The Calamities which attended them, are ſuch as all new Settlements are liable to; but, however, thoſe that had Courage to ſtay till the Spring, carried on their Settlements with ſuch Succeſs, that they were not only in a Capacity of ſubſiſting, but making Head againſt their Enemies.

They had a ſort of Commiſſion from the Government of the *Maſſachuſets Bay* ; but finding they had extended their Plantations beyond the Limits of that Colony, they entered into a voluntary Aſſociation to obey the Laws that ſhould be made by proper Perſons, for the common Good, and choſe *Edward Hopkins*, Eſq; their Governor ; and in this Situation they remained as to Conſtitution, till *John Winthorp* Junior, Eſq; obtained an ample Charter for them from King *Charles* II. authorizing them to elect their own Governor, Council, and Magiſtrates ; and enact ſuch Laws as they thought moſt advantageous to the Colony, not oppoſite to the Laws of *England* ; the Benefit whereof they enjoy to this Day.

8. By that Time this Settlement was brought into tolerable Order, *George Fenwick*, Eſq; was ſent to *New-England*, in order to make choice of the moſt commodious Spot he could find, for the Heads of that Party, which had hitherto ſupported all theſe Colonies ; and it was conceived he would execute his Commiſſion the more readily, ſince the Lord Viſcount *Say* and *Seal*, and the Lord *Brook*, two Heads of the Party, held Lands on *Connecticut*, by Virtue of a Grant from the Earl of *Warwick*, another Puritan, who held a Patent for all that Part of the Country, extending from the River *Naraganſet* forty Leagues, in a ſtraight Line near the Sea-ſhore, towards *Virginia*, as all the Continent South of *New-England* was then called, as far as *Florida*. The Earl of *Warwick* aſſigned his Grant to theſe two Lords, *Brook* and *Say*, *Charles Fiennes*, Eſq; Brother to the Lord *Say*, Sir *Nathaniel Rich* of the *Warwick* Family, Sir *Richard Saltonſtall*, *Richard Knightly*, Eſq; *John Pym*, Eſq; *John Hampden*, Eſq; and *Herbert Pelham*, Eſq; Mr. *Fenwick* ſeated himſelf at the Mouth of the River, and built a Town which he called *Saybrook*, in which he was aſſiſted by Mr. *Winthorp* Junior, Son of the Governor of the *Maſſachuſets* ; but the Gentlemen, for whom Mr. *Fenwick* acted, finding Matters grow more to a Head at home, and foreſeeing they ſhould be more uſeful there for their Country and their Cauſe, gave over the Thoughts of removing to *New-England*, and authorized Mr. *Fenwick* to diſpoſe of their Lands to the Colony of *Connecticut*, who were the more willing to buy them becauſe they had no Title to their Plantation without the Limits of the *Maſſachuſets* Patent, than what Poſſeſſion gave them. The very next Year there came over ſuch Numbers of People to ſettle in *New England*, that the old Colonies were over-ſtocked, and there was an abſolute Neceſſity of looking out for new Plantations.

Amongſt thoſe who put themſelves at the Head of ſuch as were inclined to remove in the Summer of the Year 1637, were *Theophilus Eaton*, Eſq; a noted Merchant of *London*, and the Reverend Mr. *Davenport*. Theſe Gentlemen finding there was not Room at the *Maſſachuſets*, and being informed of a large Bay to the South-weſt of *Connecticut River*, commodious for Trade, purchaſed of the Natives all the Land that lies between that River and *New York*, or *Hudſon's River* ; thither they removed, ſeated themſelves in the Bay over-againſt *Long Iſland*, and built *New Haven* ; from whence that Colony, Province, and Government, were ſo denominated, as alſo *Guilford*, *Milford*, *Stamford*, and *Brainford* ; they alſo went over to *Long Iſland*, and made there ſeveral Settlements, erecting Churches in all Places where they ſettled ; but being without the Limits of the *Maſſachuſets* Juriſdiction, they had no Charter, and no other Title to the Lands than what they had from the Natives ; the Men who ſettled in this Colony were generally *Londoners* and Merchants, who applied themſelves firſt to Trade, after the Example of Governor *Eaton*, who had been an Eaſt Country Merchant, and, travelling into *Denmark*, was employed by the King as his Agent at that Court. But the new Comers met with ſo many Loſſes, either as Novices in the *American* Trade, or ſome unfortunate Accidents, that they were diſcouraged in their Trade, and were going to tranſport themſelves to *Maryland* or *Ireland*, until at laſt turning to Huſbandry, they thrived wonderfully, and thought no more of removing.

While the South-weſt Parts of *New England* were thus filling with Inhabitants, the North-eaſt were not neglected : The *Engliſh* very much frequented the Coaſt for the Benefit of fiſhing and the Fur Trade, for which that Part of the Country lay convenient. This put ſome of them on attempting a Settlement between the Rivers *Merimack* and *Sagadabock*, and it ſucceeded ſo well in a few Years, that there were two Counties laid out, *New Hampſhire* and *Main*, and ſeveral Towns built, as *Dover*, *Hampton*, *Wells*, *Kittery*, &c. Theſe Planters and Traders being ſettled without the Limits of the *Maſſachuſet's* Colony, entered into a voluntary Combination, and formed themſelves into a Body Politic, after the Example of *Connecticut* Colony ; thus they continued, till being wearied out with Feuds and Diviſions, they petitioned the General Court of the *Maſſachuſets* to be brought within their Juriſdiction, which was done : Yet, in 1684, they made an abſolute Reſignation of their Charter, and the Government has remained in the Hands of the Crown ever ſince. Thus the Reader has ſeen, in few Words, the Riſe and Progreſs of the ſeveral Plantations raiſed in *New England*, which had a quicker Growth than any that were ever attempted from hence, or perhaps from any other Country ; for, in the Space of about twenty Years, they had above twice as many good Towns, well ſettled, and the People in a very happy and thriving Condition ; and, indeed, it muſt be allowed, the Inhabitants were the moſt laborious and induſtrious, that were any where ſettled in *America* ; for though they had ſcarce any ſtaple Commodity, yet they made every thing turn to Account, and that chiefly, as I have been informed, by purſuing ſteadily theſe two Maxims ; firſt, to fix themſelves well, and to raiſe one or more good Towns in convenient Places, and next to build and freight Ships with ſuch Commodities as they had, and to ſend them any where to find a proper Market.

9. The Country of *New England* comprehends, at preſent, four conſiderable Colonies, or Governments, *viz.* the *Maſſachuſets*, which with *New Plymouth* and the *Main* are now included in one Charter ; *New Hampſhire*, which remains a ſeparate Government ; *Connecticut*, which likewiſe comprehends *New Haven* ; and *Rhode Iſland*, with *Providence Plantation*. The whole Country extends from 41 to 45 Degrees North Latitude, and lies betwixt 67 and 73 Degrees of Weſtern Longitude ; bounded on the North-weſt by *Canada* ; on the North-eaſt by *Nova Scotia* ; on the Eaſt and South by the *Atlantic Ocean*, and on the Weſt by *New York* ; ſtretching in Length ſomewhat more than three hundred Miles, and in ſome Places it is near two hundred in Breadth. The Air of this Country is ſharper than ours, though it lies ſo much farther to the South, and the Winters are longer and ſeverer than they are here ; but then their Summers are warmer, though ſhorter than ours ; and, at the ſame Time, the Inhabitants have the Advantage of a clear Sky, which renders the Country very wholſome ; ſo that none of our Plantations agree better with an *Engliſh* Conſtitution. Their longeſt Day at *Boſton* is about fifteen Hours, and their ſhorteſt about nine ; the Land, next the Sea, is generally low, and in ſome Places marſhy ; but farther up, the Land riſes into Hills ; along the North-eaſt the Country is rocky and mountainous.

As it is waſhed by the Ocean on the Eaſt and South, it has many good Harbours, ſome of them ſo capacious as to be able to receive large Fleets. There are few Countries better watered ; for, beſides ſeveral ſmall Lakes and Rivulets, there are no leſs than ſeven navigable Rivers. The moſt Weſtern of theſe is *Connecticut* ; which, riſing in the North of *New England*, runs almoſt directly South, till it falls into the Sea, and runs, at leaſt, two hundred Miles, and navigable to a great Height, having at its Mouth two large Towns, called *Saybrooke* and *Lime* : To the Eaſt of this lies the *River of Thames*, though leſs conſiderable than the former ; it likewiſe runs South, and falls into the Sea a little below *New London* : The River *Patuxet* riſes in the North-weſt of the Country of *Maſſachuſets*, and, running South-eaſt, falls into a noble Bay near *Swanſey* : The River *Merimack* riſes in the North of *New England*, and runs directly South for near one hundred Miles, and then, turning Eaſt, falls into the Sea between *Saliſbury* and *Newbury* : The River *Piſcata-*

way runs from Weſt to Eaſt, and falls into the Sea at *Portſmouth*, where the Opening is ſo large, that it affords a Port capable of receiving the largeſt Ships: The River *Saco* riſes in the North of *New England*, and, running South, falls into the Sea between the Capes *Porpus* and *Elizabeth*: The River *Caſco* runs parallel thereto, till it falls into a Bay of its own Name.

It is owing to the Conveniency of ſo many fine Rivers that this Country is ſo full of large and populous Towns; and in the Country between the Rivers there is ſuch plenty of ſmall Brooks and Springs, that there is ſcarce any Place where Water may not be had, by ſinking a Well to the Depth of ten Foot; and, which is another ſingular Advantage, the Water is almoſt every where good, and fit for all kind of Uſes.

As to Quadrupeds, or four-footed Animals, they are here in great Plenty, both tame and wild; among the former are Cows, Sheep, Goats, Hogs, and Horſes, all originally brought from *England*, but now very numerous here; the latter are, generally ſpeaking, of a much ſmaller Breed than ours, but they are ſomewhat larger than the *Welſh*: They are, notwithſtanding the Inferiority of their Size, extremely ſerviceable; and, though they have but one Pace, and that too not very agreeable, being a kind of a Shuffle, yet they go at a very great Rate; ſome ſay, not leſs than twenty Miles an Hour, which would be a little incredible, if ſome *New England* Horſes had not been brought over to *Britain*, which are ſaid to have put the Matter beyond Diſpute; but though there are Plenty of theſe Horſes, yet they ſell at a good Rate, twenty Pound being looked upon to be a very low Price for a ſound Horſe, at the Prime of his Age. As for Beaſts of the Foreſts, they have almoſt all Sorts, ſuch as Deer, Elks, Rackoons, Bears, Wolves, which ſeem to be only a kind of wild Dogs; which, when they are taken very young, may be made tame; Foxes, Hares, Rabbits, Squirrels, Beavers, Martins, Opoſſums, which are ſmall Beaſts about the Size of a Fox, and grey as a Badger; remarkable for having a falſe Belly, in which they hide their Young, and from whence they may be taken without any Prejudice either to them or to the Beaſt itſelf. They have alſo a great many Cur-Dogs, but theſe I ſuppoſe were originally from *Europe*. When the *Engliſh* firſt ſettled here, they made a great Profit of Furs, but they are ſince much fallen in their Value. I have been the ſhorter in the Accounts of theſe Creatures, which are common enough in other Countries of *America*, that I might have the more Leiſure to deſcribe a Creature which is peculiar, almoſt, to *New England*; and which ſeems therefore to deſerve a more particular Deſcription.

The Mooſe is found no where but in North *America*, and is one of the nobleſt Creatures in the Foreſt: There are two Sorts, the common grey Mooſe, by the *Indians* called Wampooſe, (theſe are more like the ordinary Deer, and like them herd ſometimes thirty in a Company) and the large and black Mooſe, of which we have the following Account: He is the Head of the Deer Kind, has many things in common with other Deer, in many differs, but in all very ſuperior. The Mooſe is made much like a Deer, parts the Hoof, chews the Cud, has no Gall, and his Ears large and erect; the Hair of the black Mooſe is a dark grey, upon the Ridge of his Back ten or twelve Inches long, of which the *Indians* make Belts; he has a very ſhort Tail. The *New England* Hunters have found a Stag Mooſe of fourteen Spans in Height, from the Withers, reckoning nine Inches to the Span, that is ten Feet and an half; a Quarter of this Veniſon weighed more than two hundred Pounds. A few Years ago a Gentleman ſurprized one of the black Mooſe in his Grounds, within two Miles of *Boſton*: It proved a Doe or Hind of the fourth Year; after ſhe was dead, they meaſured her upon the Ground, from the Noſe to the Tail between ten and eleven Feet; ſhe wanted an Inch of ſeven Feet in Height. The Horns of the Mooſe, when full grown, are about four or five Feet from the Head to the Tip, and have Shoots and Branches to each Horn, and generally ſpread about ſix Feet; when the Horns come out of the Head they are round, like the Horns of an Ox, about a Foot from the Head they begin to grow a Palm broad, and farther up ſtill wider, of which the *Indians* make good Ladles, that will hold a Pint. When a Mooſe goes through a Thicket, or under the Boughs of Trees, he lays his Horns back on his Neck, not only that he may make his way the eaſier, but to cover the Body from the Browſe or Scratch of the Woods. Theſe prodigious Horns are ſhed every Year.

A Mooſe does not ſpring or riſe in going as Deer, but ſhoves along ſideways, throwing out the Feet like a Horſe, in a raking Pace. One of theſe large black Mooſe, in his common Walk, has been ſeen to ſtep over a large Gate, five Feet high: After you unharbour a Mooſe, he will run a Courſe of twenty or thirty Miles before he turns about, or comes to a Bay; when they are chaſed they generally take to the Water. The common Deer, for a ſhort Space, are ſwifter than a Mooſe; but then a Mooſe ſoon out-winds a Deer, and runs much farther. The Meat of a Mooſe is excellent Food; and though it is not ſo delicate as the common Veniſon, yet it is more ſubſtantial, and will bear ſalting; the Noſe is looked upon as a great Dainty. The black Mooſe are rarely found above four or five together; the young Ones keep with the Dam a full Year. A Mooſe calves every Year, and generally brings two; they bring forth their young Ones ſtanding, and the Young fall from their Dam upon their Feet. The time of their bringing forth is generally in the Month of *April*.

The Mooſe being very tall, and having very ſhort Necks, do not graze, as the common Deer, other Cattle, &c. do, and if at any Time they eat Graſs, it is the Top of that which grows very high, or on ſteep riſing Ground; in the Summer they feed upon Plants, Herbs, and young Shrubs, that grow upon the Land, but moſtly, and with the greateſt Delight, on Water Plants, eſpecially a Sort of wild Colt's-foot and Lilly, that abound in their Ponds, and near the Banks of Rivers, and for which the Mooſe will wade far and deep; and by the Noiſe they make in the Water, the Hunters often diſcover them. In the Winter they live upon Browſe, or the Tops of Buſhes, and young Trees, and being very tall and ſtrong, they will bend down a Tree as big as a Man's Leg; and where the Browſe fail them they will eat off the Bark of ſome Sort of Trees as high as they can reach; they generally feed in the Night, and lie ſtill in the Day. The Skin of the Mooſe, when well dreſſed, makes excellent Buff; the *Indians* make their Snow-Shoes of them. Their way of dreſſing it, which is very good, is thus: After they have haired and grained the Hide, they make a Lather of the Mooſe's Brains in warm Water, and after they have ſoaked the Hide for ſome time, they ſtretch and ſupple it.

There is hardly greater Variety and Plenty of Fowl any where, ſuch as Turkies, Geeſe, Partridges, Ducks, Herons, Stocks, Heath-Cocks, Swans, Wigeons, Dapers, Black-Birds; all Sorts of Barn-door Fowl, Crows, Ravens, Cormorants, &c. Vaſt Flights of Pigeons come and go at certain Seaſons of the Year.

The Fiſh in the Sea and Rivers here are excellent, and in vaſt Abundance, as Cod, Thorn-back, Sturgeon, Salmon, Haddocks, Herrings, Mackrel, Smelts, Eels, Lampreys, Sharks, Seals, Porpuſſes, Grampuſſes, Whales, and other Fiſh, great and ſmall. The beſt Months for fiſhing are *March*, *April*, *May*, and *June*. Six or ſeven Star-Fiſh were formerly taken off the Shore near *Nantucket*, of which Governor *Winthorp* gave the Royal Society an Account, having obſerved that this Fiſh divides itſelf into no leſs than 81920 ſmall Parts by Branchings, and is one of the moſt wonderful Works of the Creation. Some Years ſince there ſtranded on the Coaſt of *New England* a dead Whale, of the Sort which in Fiſher's Language is called Trumpo, having Teeth like thoſe of a Mill, its Mouth at a good Diſtance from and under the Noſe, and ſeveral Partitions in the Noſe, out of which run a thin oily Subſtance, they candied; the Remainder, which proved a thick fat Subſtance, being ſcraped out, was ſaid to be the Sperma Ceti. We have ſome very curious Accounts, not only of this, but of other kinds of Whales, by the ingenious Mr. *Dudley*, which for want of Room I omit; and alſo, becauſe, I ſhall be obliged to mention this Subject again more largely in another Place.

We will now proceed from the Animal to the Vegetable Kingdom, which is in full as flouriſhing a Condition, and yields very little to any Country in *America*. There is Plenty of good Timber in the Woods and Swamps of *New England*; but that Plenty is ſo much leſſened within ten or twelve Miles from the Sea, that, we are told, there is a Neceſſity of a Law, to prevent the Waſte of Woods, which three or fourſcore Years ago the Planters would have been glad to have ſeen waſted. Oak, Elm, Firr, Aſh, Cypreſs, fine Cheſnut, Walnut, Cedar, Beech, Aſpin, Saſſafras, and Shumack, are common here; their Firr is of an extraordinary Growth for Maſts, Yards, and Planks. The Shumack is of uſe for Dyers and Tanners; and, as there is no want of Hides or Skins, nor Bark, there muſt be much Leather in *New England*, if thoſe Advantages are improved; the Oak has ſupplied the Shipwrights for Building: the Firr produces Pitch, Tar, Roſin, and Turpentine. All Sorts of Garden and Orchard Trees grow in Perfection, ſo that it is no hard Thing for one Planter to make a hundred Hogſheads of Cyder in a Seaſon, and the Export of Apples to the Sugar Iſlands is one of the conſtant Articles in the Trade of the Province.

It is affirmed, their Apples are larger and ſweeter than ours in *England*; and the ſame Obſervation extends to their Plumbs, Cherries, Peaches, Pears, *&c.* All Sorts of Roots for the Table are in great Plenty here, as Turnips, Parſnips, Carrots, Radiſhes, much larger and richer than in *England*, though originally their Seeds came from hence. There are alſo Pompions and Onions, good ſtore of Water-Melons; and Squaſhes grow here, perhaps, from Seeds that were firſt brought from *Portugal*; whither the Traders here have long ſent, and ſtill ſend, their Fiſh in great Quantities. Flax and Hemp grow as naturally here as in any Country on the *Baltick*, and in as great Perfection; Oats, Barley, Peas, Beans, and indeed every thing of this Kind, ſucceed as well as can be wiſhed; but amongſt them all, there is nothing ſo much planted as *Indian* Corn, of which Mr. *Winthorp* having given a large Account to the Royal Society, we ſhall take as much as is neceſſary for ours or the Reader's Purpoſe from thence, and inſert it here.

The Natives called it Weachin, and in ſome ſouthern Parts of *América*, it is known by the Name of Maiis, or Maize; the Ear is a Span long, compoſed of eight Rows of Grain, or more, according to the Goodneſs of the Ground, about thirty Grains in a Row; 'tis of various Colours, as red, white, yellow, blue, olive, greeniſh, black, ſpeckled, ſtriped, and ſometimes in the ſame Field, and in the ſame Ear; but the white and yellow is the moſt common; the Ear is defended from the Cold and Storms by ſtrong thick Huſks, the Stalks grow ſix or eight Feet high; that of *New England* is not quite ſo tall as that of *Virginia*, and at *Canada* it is ſhorter than at *New England*; 'tis jointed like a Cane, and full of ſweet Juice, like the Sugar Cane, and a Syrup as ſweet as Sugar may be made of it, as has been often tried; at every Joint there are long Flags, and at the Top a Branch of Flowers like Rye Bloſſoms.

It is generally planted from the Middle of *April* to the Middle of *May*, In the northern Parts the *Mohawk* Corn is not planted till the Middle of *June*, and yet is ripe in Seaſon. The Stalks of this Sort are ſhort, and the Ears near the Bottom, and are of ſeveral Colours. The manner of planting Maize is in Rows, at equal Diſtance every way, about five or ſix Feet; the Earth is opened with a Hoe four Inches deep, and four or five Grains are thrown into it, at a little Diſtance from one another in the Breadth of a Hoe; then they are covered with Earth; if they grow, the Crop will anſwer. The Corn is weeded at a Hand's Length, and the Earth is looſened about it with a Hoe. This Labour muſt be repeated as the Weeds come up; when the Stalk begins to grow high, a little Earth ſhould be drawn about it, and on putting forth the Ear ſo much as to make a little Hill, like a Hop-hill. 'Tis ripe about the Middle of *September*; it muſt be ſtripped as ſoon as gathered, unleſs 'tis laid thin, to prevent its growing mouldy, or ſprouting. The common way is to move the Ear together, in long Traces, by ſome Part of the Huſks left thereon, which is called tracing. Theſe Traces they hang upon Bearers, without Doors, and will keep ſo all Winter good and ſweet. The *Indians* thraſh it as they gather it. They dry it well on Matts in the Sun, and bury it in Holes in the Ground, lined with Moſs or Matts, which are their Barns. The *Engliſh* of late plant it with the Help of the Plow; they turn up ſingle Furrows, ſix Feet diſtance; then plow a-croſs, at the ſame Diſtance, throw in the Corn, where theſe meet, and cover it with a Hoe, or run another Furrow over it with the Plow.

The *Indians* boil it till it becomes tender, and eat it with Fiſh or Veniſon, inſtead of Bread; ſometimes they bruiſe it in Mortars, and ſo boil it. The moſt uſual way is to parch it in Aſhes, ſtirring it ſo artificially as to be very tender, without burning; this they ſift, and beat in Mortars into fine Meal, which they eat dry, or mixed with Water. The *Engliſh* mix it into a ſtiff Paſte, make Bread of it, which they bake all Day, or all Night. The beſt Sort of Food which is made of it is called Samp; to make it, the Corn is watered half an Hour, beaten in a Mortar to the Bigneſs of Rice, ſifted, boiled, and eaten with Milk, or Butter and Sugar, like Rice; and this ſeems to be ſo good and wholeſome a Diet, that 'tis a ſtrange Sort of Folly in ſome that deſpiſe it, becauſe 'tis *Indian* Corn; and the *Indians* have no other Corn to eat. The *Engliſh* have alſo made good Beer of it, by malting it, or making it of Bread; when they malt it, it muſt chit both ways, Root and Blade; to do which, they heap it up at a convenient Time, then take away the Top of the Earth of a Garden-Field, two or three Inches deep; after which they cover the Ground with the Corn, and the Corn with the Earth; when the Plat is green all over with the Corn-Sprouts, which it will be in about ten Days, it muſt be taken up, the Earth ſhaken from it and dried, and then waſhed and dried again on a Kiln; this makes the Malt, and that the Beer, which will be pleaſant, wholeſome, and of a brown Colour. The Beer made of Bread is more durable, and altogether as pleaſant; to make this, they cut the Bread into great Lumps, as big as a Man's Fiſt, maſh and manage it as they do Malt; adding or omitting Hops, of which they have enough, and as good a Sort of their own as is deſired. No *Indian* Corn grows wild now; but both that and Kidney Beans were found among the Natives. The *Indians* have a Tradition, that the firſt Grain of Corn was brought thither by a Black-Bird, and the firſt Bean by a Crow.

We are now to proceed from the Deſcription of the Country, and an Account of its Produce, in which we ought, by all means, to include Iron Ore, of which there is in this Country great Plenty; I ſay, our Method leads us to go on to the Political State and Condition of this Colony, that the Situation of the *Engliſh* therein may be rendered more obvious, and be the better apprehended. In order to do this as ſuccinctly as poſſible, we ſhall obſerve there are very few Countries, in which ſo many different Forms of Government have prevailed within ſo narrow a Space of Time as in *New England*. At the firſt going over of the People thither, they framed a Government of their own; and afterwards procured, as themſelves boaſt, or ſome of their Writers have boaſted for them, the Eſtabliſhment of a Republic, by virtue of a Patent from King *James* I. which, however, they managed ſo indifferently, and were guilty of ſuch flagrant Oppreſſions, on account of Differences in Religion, that their Charter was, in the Reign of King *Charles* II. declared forfeited; and though it was renewed under the Reign of King *William*, yet it was under various Reſtrictions, and with ſeveral material Alterations; ſo that we may ſafely affirm, that there are at preſent three kinds of Governments eſtabliſhed by Law in thoſe four Colonies; which, as we before obſerved, are eſtabliſhed within the Limits of *New England*. The firſt kind of Government I ſhall mention is that old Form of Charter Government, which allows the People to chuſe annually their own Governors, Deputy-Governors, Council, and Aſſembly, with all their Officers, Civil and Military, and to make ſuch Laws as to them ſhall ſeem expedient, provided they are not repugnant to the Laws of *Great Britain*. This kind of Government, which, I believe, is more independent than that of any Colony belonging to any other Nation in the World, is enjoyed in its full Extent by the People who inhabit the Plantations of *Connecticut* and *Rhode Iſland*; but they make a very different Uſe of it; for thoſe of the firſt-mentioned Colony are very ſtrict in point of Religion; whereas thoſe in *Rhode Iſland* are the freeſt in that Reſpect of any in the World; for there are among them People of all Religions, or rather, of all thoſe Sects into which Proteſtants are divided, but without the leaſt Prejudice to their temporal Concerns, every Man being alike capable of Magiſtracy; and with reſpect to an Eſtabliſhed Church, there is none; but every Body of Chriſtians live according to their own Syſtem, and chuſe and pay their Miniſters as they think fit. The great Colony of *Maſſachuſets* is likewiſe a Charter-Government; but the Appointment of the Governor, Lieutenant-Governor, Secretary, and all the Officers of the Admiralty, is veſted in the Crown. The People have not only the Choice of the Aſſembly, but of the Council; upon which, however, the Governor in his Turn has a Negative; and, by virtue of his Commiſſion as Captain-General, has the Power of the Militia; ſo that here the ſupreme Authority reſts neither in the Governor nor the People, but in them both, whenever they can agree to exert it. The Government of *New Hampſhire* is intirely in the Hands of the Crown, in the ſame Manner as that of *Virginia*, and other Colonies.

The Capital of this Country is *Boſton*, in the County of *Suffolk*, and within the Province of *Maſſachuſet Proper*: It is ſituated in the Latitude of 42 Degrees 20 Minutes North, and in 71 Degrees of Longitude Weſt from *London*; it ſtands on a Peninſula about four Miles in Circumference, at the Bottom of a fine Bay of the Sea, at the Entrance whereof are ſeveral Rocks which appear above Water, and above a Dozen ſmall Iſlands, ſome of which are inhabited. There is but one ſafe Channel to approach the Harbour, and that ſo narrow, that two Ships can ſcarce ſail through a-breaſt; but within the Harbour there is Room enough for five hundred Sail to lie at Anchor. The Entrance is defended by the Caſtle of *Fort-William*, on which are one hundred Guns mounted, twenty of which lie in a Platform, level with the Water, ſo that it is ſcarce poſſible for an Enemy to paſs the Caſtle; and, to prevent Surprize, they have a Guard placed on one of the Rocks about two Leagues diſtant, on which alſo there ſtands a little Houſe, from whence they make Signals to the Caſtle when any Ships come near it: There is alſo a Battery of great Guns at each End of the Town, which commands the Harbour, to the Fire whereof any Enemy would be expoſed, if he ſhould be ſo fortunate as to paſs the Caſtle.

At the Bottom of the Bay there is a Pier near two thouſand Feet in Length, with Warehouſes for the Merchants on the North Side of it; and Ships of the greateſt Burden may come up cloſe to the Pier and unload, without the Help of Boats. The greateſt Part of the Town of *Boſton* lies in the Form of a Creſcent about the Harbour, the Country beyond riſing gradually, and affording a moſt delightful Proſpect from the Sea: There are in it ſeveral Streets, not much inferior to the beſt in *London*, the chief of which runs from the Pier up to their Town-houſe, or *Guild-hall*, a handſome Building, where are Walks for the Merchants, as on the *Exchange*; and there alſo are the Council-Chamber, the Houſe of Repreſentatives, and their Courts of Juſtice, the *Exchange* being ſurrounded with Bookſellers Shops, who have Trade enough to employ five Printing-preſſes. There are ten Churches of all Denominations, of which ſix are Independents, the moſt prevailing Party in *New England*. And the Number of Souls in the Town of that Perſuaſion may be about fourteen or fifteen thouſand. The Epiſcopal Church is handſomely built and adorned, and the Congregation ſaid to be about a thouſand in Number. Their Church Furniture, and ſome Pieces of Plate, were given them by K. *William* and Q. *Mary*, and their Organ by *Thomas Brattley*, Eſq; There is alſo in this Church a magnificent Seat for the Governor, who comes thither when he happens to be of the Church of *England*. *Boſton* is the moſt flouriſhing Town for Trade in *Engliſh America*, and there are ſeveral hundred Sail of Ships, Brigantines, and other Veſſels, annually loaded here with Timber, Beef, Pork, Fiſh, and other Commodities, for *Europe*, or the *American* Iſlands: Their Merchants and Tradeſmen are a polite ſort of People, many of them having travelled into *Europe*, or converſed with Foreigners of ſeveral Nations at home: Their Houſes are elegantly furniſhed, and their Tables as well ſerved as thoſe of the Merchants and Tradeſmen of *London*; all manner of Proviſions being as plentiful as in any Town in *Old England*.

A late Writer tells us, in relation to the Fortreſs beforementioned, that it is a beautiful Caſtle, by far the fineſt Piece of Military Architecture in *Britiſh America*; being a Quarry ſurrounded by a Covered Way, and joined with two Lines of Communication to the Main Battery, as alſo a Line of Communication from the Main Gate to a Redoubt, to prevent any Enemies landing; and the Battery is ſituated ſo near to the Channel, as to hinder Ships coming up to the Town, which muſt all come within Piſtol-ſhot of it. In time of Peace there is but one Company on Duty in the Caſtle; but in time of War, there are five hundred able bodied Men, exempted from all other Military Duty, to attend the Service of the Caſtle at an Hour's Warning, when the Signal is given from the Night-houſe of the Approach of an Enemy. The Caſtle thereupon makes a Signal to the Town, and if five Ships or more appear in time of War, the neighbouring Country is alarmed, by firing a Beacon. In this City commonly the Governor reſides; here the General Court and Aſſembly meet, and almoſt all the public Buſineſs of the Province is here tranſacted. The Number of Houſes is computed at four thouſand four hundred; the Number of People, at about twenty-four thouſand; and the Shipping of this Port is computed at between ſix and ſeven hundred. There are, beſides this, ſeveral great Towns and good Ports, and a Multitude of ſmall ones, in *New England*; but I have not room to enter into more particular Accounts.

As to the Number of People, Writers differ extremely, and it is not eaſy to know which is in the right; but the following, about twenty Years ago, was ſaid to be the beſt Authority, *viz.* that in the *Maſſachuſets* Colony there were eighty thouſand Souls; in that of *Connecticut*, thirty thouſand; and in *Rhode Iſland*, ten thouſand; in the whole, one hundred and twenty thouſand: But I am perſuaded, that at preſent they amount to one hundred and ſixty thouſand at leaſt.

The Commerce of theſe Colonies is very conſiderable, and extends itſelf over all *America*, and into ſome Parts of *Europe*; they furniſh our Sugar Colonies with Fiſh, Cattle, Boards, Hoops, Pipe-ſtaves, Bark, Skins, Butter, Cheeſe, Oil, Tallow, Corn, Apples, Turpentine, *&c.* and this in ſuch vaſt Abundance, that it is computed the Iſland of *Barbadoes* alone takes off to the Value of two hundred thouſand Pounds every Year: They deal beſides with the other Sugar Colonies, ſometimes with the *French*, largely with the *Spaniards*, and they ſhip off prodigious Quantities of Fiſh to *Italy*, *Spain*, and *Portugal*. They take from us all kinds of Mercery Goods; Linnen, Stockings, Shoes, Sail-cloth, Cordage, Haberdaſhery Ware, and a vaſt many other Things; in Return they build a prodigious Number of Ships, and export a vaſt Quantity of Maſts, Plank, and Yards, for the Royal Navy; Pitch, Tar, Turpentine, Skins, Furs, Oil, Whale-Fins, Logwood, and other Commodities.

The Obſervations made by the famous Sir *Joſiah Child*, in reference to this Colony, are very well worthy our Notice, as they will lead us to form the trueſt Judgment poſſible, as to that important Point, what the Profit is which reſults to this Kingdom, from our Plantations in *New England*; upon which he reaſons in the following Manner: “ 1ſt, All our *American* Plantations, except “ the *New England*, produce Commodities of different “ Natures, as Sugar, Tobacco, Cocoa, Wool, Ginger, “ ſundry Sorts of dying Woods, *&c.* Whereas *New* “ *England* produces generally the ſame we have here, *viz.*

“ Corn and Cattle; ſome quantity of Fiſh they do likewiſe kill, but that is taken and cured altogether by their own Inhabitants, which prejudices our *Newfoundland* Trade; where, as has been ſaid, very few are, or ought, according to Prudence, to be employed in theſe Fiſheries, but the Inhabitants of *Old England*. The other Commodities we have from them are ſome few great Maſts, Furs, and Train Oil, of which the yearly Value amounts to very little; the much greater Value of Returns from thence being made in Sugar, Cotton, Wool, Tobacco, and ſuch like Commodities, which they firſt receive from ſome other of his Majeſty's Plantations, in barter for dry Cod-fiſh, Salt, Mackrel, Beef, Pork, Bread, Beans, Flour, Peaſe, *&c.* which they ſupply *Barbadoes*, *Jamaica*, *&c.* with, to the Diminution of the Vent of thoſe Commodities from this Kingdom; the great Experience of which, in our own *Weſt India* Plantations, would ſoon be found in the Advantage of the Value of our Lands in *England*, were it not for the vaſt and almoſt incredible Supplies thoſe Colonies have from *New-England*.

“ 2dly, The People of *New-England*, by virtue of their primitive Charters, being not ſo ſtrictly tied to the Obſervation of the Laws of this Kingdom, do ſometimes aſſume the Liberty of trading, contrary to the Act of Navigation, by reaſon of which many of our *American* Commodities, eſpecially Tobacco and Sugar, are tranſported in *New Engliſh* Shipping, directly into *Spain*, and other foreign Countries, without being landed in *England*, or paying any Duty to his Majeſty; which is not only a Loſs to the King, and Prejudice to the Navigation of *Old England*, but alſo a total Excluſion of the *Old Engliſh* Merchant, from the Vent of thoſe Commodities in thoſe Ports where the *New Engliſh* Veſſels trade; becauſe there being no Cuſtom on thoſe Commodities in *New-England*, and a great Cuſtom paid to them in *Old-England*; it muſt neceſſarily follow that the *New-Engliſh* Merchant will be able to afford his Commodity much cheaper than the *Old Engliſh* Merchant; and thoſe that can ſell cheapeſt, will infallibly engroſs the whole Trade ſooner or later.

“ 3dly, Of all the *American* Plantations, His Majeſty has none ſo apt for the Building of Shipping as *New England*, nor none comparably ſo qualified for the breeding of Seamen, not only by reaſon of the natural Induſtry of that People, but principally by reaſon of their Cod and Mackarel Fiſheries; and, in my poor Opinion, there is nothing more prejudicial, and in Proſpect, more dangerous to any Mother Kingdom, than the Increaſe of Shipping in her Colonies, Plantations, and Provinces.

“ 4thly, The People that evacuate from us to *Barbadoes*, and the other *Weſt India* Plantations, as was before hinted, do commonly work one *Engliſh* to ten or eight Blacks; and if we kept the Trade of our ſaid Plantations entirely to *England*, *England* would have no leſs Inhabitants, but rather an Increaſe of People, by ſuch Evacuation, becauſe that one *Engliſhman*, with ten Blacks that work with him, accounting what they eat, uſe, and wear, would make Employment for four Men in *England*, as was ſaid before; whereas, peradventure, of ten Men that iſſue from us to *New England* or *Ireland*, what we ſend to, or receive from, them, does not employ one Man in *England*.”

But with great Submiſſion to ſo knowing a Man and ſo able a Judge as he was in theſe Matters, what he has delivered upon this Subject, though hitherto received with general Approbation, is liable to many Objections, which, being duly conſidered, will give the State and Utility of this Colony another Aſpect. For, with reſpect to his firſt Head of Objections, it is not the Fault of *New England* that they have not a ſtaple Commodity, as well as the Sugar and Tobacco Plantations, but it is our own; ſince we might be furniſhed from thence with as great Plenty, and in as great Perfection, as from any Part of the *Baltic*, with all the naval Stores, which are ſo neceſſary, and for which we actually pay, yearly, a vaſt Sum of ready Money. It is therefore very unjuſt to call *New England* a uſeleſs Province, becauſe we will not make uſe of her Commodities, which we might command for our own Manufactures, at our own Time, and on our own Terms, but rather pay our Money for them to Foreigners; who, whenever an Opportunity offers, never fail to force their own Terms upon us. As to the Proviſions furniſhed to our Sugar Colonies by the People of *New England*, it is ſo far from being a Diſadvantage to the Nation, that it is a very great Convenience; for without it they could not poſſibly ſubſiſt. This, at firſt Sight, may ſeem a very bold Aſſertion, but I am very confident that it is true; for in Time of Peace, if the Sugar Colonies were to draw all their Proviſions from hence, it would make their Commodity much dearer, and conſequently enable Foreigners to beat us out of that Trade entirely, and in Time of War the People in thoſe Colonies would be in danger of ſtarving, as the Inhabitants of the *French* Sugar Iſlands generally are; to avoid which Inconveniency they are now labouring to render *Louviſiana* as uſeful to their Sugar Colonies, as *New England* is to ours; and after all, what the *New England* People get by this Trade comes hither. To this we may add, that if we had not ſettled *New England*, the *French* certainly would, the Conſequences of which may be more eaſily conceived than deſcribed.

The ſecond Objection admits of the ſame Anſwer. We have the Benefit of all the Trade the People in this Colony carry on in *Europe*, as well as *America*; and while we have this certain Advantage, there ſeems to be no juſt Cauſe for our diſturbing ourſelves with the Thoughts of the Advantages that might be gained if this Trade ran in another Channel; ſince theſe are Incertainties, as to which, however, our Government has already taken all the Precautions that are poſſible, or at leaſt that are practicable, without running into greater Inconveniencies, than thoſe they are calculated to guard againſt. The breeding of Seamen, and the building of Ships, are not found by Experience, to be attended with the Inconveniencies that were feared from them; but on the contrary, have had many advantageous Conſequences, both in time of War and of Peace. The fourth Objection, which ſeems to have the greateſt Weight of any, we know now by Experience has in reality no Weight at all; for without having Colonies compoſed entirely of white People, it would be impoſſible for us to defend our other Colonies againſt our Enemies in *America*; and, as we ſhall ſhew hereafter in ſpeaking of *Georgia*, inſtead of repining at the Want of Negroes in *New-England*, we ought rather to wiſh that there were fewer Negroes elſewhere. The Reader will eaſily perceive that I do not affect to contradict this great Author, I only expreſs the Reaſons why his Arguments do not convince me, and from the Lights of Experience ſhew that it is not impoſſible even for the greateſt Men to be miſtaken.

Sir *Joſiah Child* ſaw this himſelf, as appears by the Manner in which he finiſhes his Remarks, which I look upon to be one of the fineſt Paſſages in his whole Work. “ To conclude, ſays he, and to do right to that moſt induſtrious *Engliſh* Colony, I muſt confeſs, that though we loſe by their unlimited Trade with our foreign Plantations, yet we are very great Gainers by their direct Trade, to and from *Old England*. Our yearly Exportations of *Engliſh* Manufactures, Malt, and other Goods from hence, thither amounting, in my Opinion, to ten times the Value of what is imported from thence; which Calculation I do not make at Random, but upon mature Conſideration; and, peradventure, upon as much Experience of this very Trade, as any other Perſon will pretend to do; and therefore, whenever a Reformation of our Correſpondency in Trade with that People ſhall be thought on, it will, in my poor Judgment, require great Tenderneſs, and very ſerious Circumſpection.”

I ſhall not dwell much longer upon this Subject, or pretend to give the Reader any Calculation of the Value of thoſe Advantages which from this Colony are derived to *Great Britain*, becauſe I am ſenſible that though the Thing may be practicable in itſelf, yet ſufficient Informations are not hitherto fallen into my Power; I deſire therefore to leave only theſe three Remarks with the ingenious and impartial Reader: The firſt is, that we have it in our Power to bring from this Colony all the naval Stores that we now bring from the *Baltic*; which, whenever it is thoroughly conſidered by our Parliament, will produce ſome Law, which cannot fail of rendering this Colony twice as beneficial to the Nation as it has hitherto been, or could be, till enabled by ſuch a Law. In the ſecond Place I muſt obſerve, that as we derive a great Part of our Sugars from the Aſſiſtance given to the Colonies which produce them by *New England*, ſo this Part of their Produce ought to be placed to the *New England* Account. I am to remark laſtly, that the Complaints which have been made of the Inhabitants of this Colony dealing in Goods, and employing themſelves in Manufactures, which interfere with thoſe of *Great Britain*, is a Complaint, which, though well founded, is ill applied; for though it be true that this may be an Injury to us, yet the Fault lies in ourſelves, and not in the People of *New England*, who only raiſe and manufacture for themſelves what they cannot purchaſe from us; ſo that not content with having their All (for, as we have ſhewn, the whole Ballance of their Trade comes hither) we ſeem to be angry that they endeavour to ſupply themſelves with what we could ſell, and they want wherewithal to purchaſe; which Want, however, might be removed, by taking their naval Stores. But it is now fit that we ſhould give a ſhort View of the Plantation of our next Colony, which though we cannot call it one of the moſt profitable, yet it muſt be allowed one of the moſt pleaſant of our Plantations.

10. The Iſlands of *Bermudas* were diſcovered by one *John Bermudas* a *Spaniard*, after which they were frequently touched at by his Countrymen in their Paſſage to the *Weſt Indies*, but were quite unknown to us till the Year 1593, when one *Henry May* was ſhipwrecked upon them in a *French* Veſſel, whoſe Report made them very famous; but they became more ſo by the like Misfortune of Sir *George Summers*, and Sir *Thomas Gates*, in their Paſſage to *Virginia* in 1609, of which we have before given a particular Account, as well as of his being ſent thither a ſecond Time to fetch Hogs, when it was with great Difficulty he found theſe Iſlands, and not long after he breathed his laſt in them, being upwards of threeſcore, and much fatigued for many Months before. It was from him their Name was changed to *Summers*'s *Iſlands*, which our Mariners call the *Summer Iſlands*; a Name they very well deſerve for their Pleaſantneſs and Fertility. Sir *George* directed his Men to return to *Virginia* with black Hogs, for the Relief of that Colony, but they reſolved otherwiſe after his Death; and ſtoring their Cedar Ship with ſuch Proviſions as they had, they ſet ſail for *England*, where they arrived at *Whitchurch* in *Dorſetſhire*, having Sir *George Summers*'s Corps on board, only the Heart and Bowels they left at *Bermudas*, where Captain *Butler*, twelve Years afterwards, built a handſome Monument over them.

Theſe Men, at their Return, gave ſuch an Account of the Country to the *Virginia* Company, that they thought it worth their while to eſtabliſh a Correſpondence between *England* and *Bermudas*; accordingly they ſold theſe Iſlands to one hundred and twenty Perſons of the ſame Society, who obtained a Charter from King *James*, and became the Proprietors of them. When Sir *George Summers* was firſt here, two of his Men ſtaid behind, having committed ſome Crime, for which they would have been put to Death. They were ſtill there when Sir *George* returned, and had, ever ſince his Departure, ſupported themſelves on the Productions of the Place, and built them a Hut, and took Poſſeſſion of *St. George's Iſland*. Theſe two Men, whoſe Names were *Chriſtopher Carter*, and *Edward Waters*, ſtaid alſo behind Sir *George*'s ſecond Company, of whom they perſuaded one *Edward Chard* to remain with them; and now *Carter*, *Waters*, and *Chard*, were ſole Lords of the Country, but ſoon fell out among themſelves; *Chard* and *Waters* were coming to a pitched Battle; but *Carter*, though he hated them both, yet not liking to be left alone, prevented it, by threatening to declare againſt the Man who ſtruck firſt. At laſt Neceſſity made them good Friends, and they joined together in making Diſcoveries, in one of which Expeditions they found the largeſt Piece of Ambergreaſe among the Rocks, that ever was ſeen, weighing eighty Pounds, beſides other ſmaller Pieces. This Treaſure made them almoſt mad; they grew giddy with the Thoughts of it, and, that they might have an Opportunity to make uſe of it, reſolved, on the moſt deſperate Attempt that Men could run upon, which was to build a Boat after the beſt Manner they could, to ſail to *Virginia* or *Newfoundland*, according as the Wind and Weather ſhould preſent.

But before they could put their Project in Execution, a Ship arrived from *England*; for Captain *Mathew Summers*, Sir *George*'s Brother, had promiſed to come to them, or ſend a Veſſel to their Relief. The Ship they diſcovered ſtanding in with the Shore was the *Plough*, which had ſixty Perſons aboard, ſent by the new *Bermudas* Company to make a Settlement, of which Mr. *Richard Moor* was Governor, who was an honeſt induſtrious Perſon. He pitched upon a Plain in *St. George*'s *Iſland* to ſettle on, and there firſt built himſelf a Houſe, or rather Cabbin, for the Building was only of Palmeto Leaves; yet he made it large enough for him, his Wife and Family; and the reſt of the Adventurers following his Example, it became a ſort of a Town, which in Time grew to a conſiderable Bigneſs, and is now *St. George*'s Town, one of the ſtrongeſt and beſt built in our *American* Colonies; for all the Houſes are of Cedar, and all the Forts of hewn Stone. This Man proved an excellent Governor in every Reſpect; and, in the Year 1614, diſappointed the *Spaniards* in a Deſign they had formed of landing upon, and conquering theſe Iſlands.

He was ſucceeded by Captain *Daniel Tucker*, who was a Perſon of better Education, and more Experience in the World, who took upon him to eſtabliſh a regular Form of Government; to diſtinguiſh and trace out Plantations; to oblige every Man to build uniformly in the Town, and to plant regularly in the Country; by which Method the Iſlands were very much improved, and the Exportations for *England* increaſed; he likewiſe eſtabliſhed a tolerable Militia, and put the Iſlands in ſuch a Poſture of Defence, as, together with their Situation, put it out of the Power of any of their Enemies to diſembark ſuch a Force as might hurt them. But the Severity of his Government was ſo grievous to ſome licentious Perſons, that five of them executed as deſperate a Deſign to eſcape him, as *Waters* and his Companions had projected to get away from the Iſland. They knew the Governor would not give them leave to go off, and therefore invented this Contrivance to effect it: Hearing Captain *Tucker* had a great Deſire to go a fiſhing out at Sea, but was afraid to do it, becauſe ſeveral Fiſher-boats had been driven off by the Weather and the Men periſhed, they propoſed to him to build a Boat of two or three Tons, with a Deck, and ſo fitted that ſhe ſhould live in all Weathers. The Governor conſenting to it, they fell to building in a private Place, pretending it was convenient for getting Timber and launching the Boat. They finiſhed it ſooner than was expected; and the Governor ſent Hands to fetch it, intending to go in it aboard a Ship which he was then diſpatching for *England*. When his Men came to the Place, neither the Boat nor the Builders were to be found; all that they could hear of them was, that the Boat being finiſhed the Night before, thoſe that built it went off to Sea in it, to try how it would ſail. At laſt they found by ſome Letters they left behind them, that they were gone for *England*; and the Story of their Adventure is told us in this Manner:

They borrowed a Compaſs-dial of a Neighbour, on ſome Pretence or other, and went on board the Ship bound for *England*, where they trucked with the Seamen ſuch Things as they had, for Proviſions. One of them, at parting, told the Mariners, that though they were forbidden to go with them, yet they hoped to be in *England* before them. At which the Maſter of the Ship laughed, and away theſe fearleſs Adventures ſailed, with a fair Wind and Weather for one and twenty Days; they then met with a Storm, which reduced them to Extremity for eight and forty Hours, and obliging them to bear up afore it drove them a little out of their Courſe to the Weſtward; but the Wind coming fair again, and continuing ſo ten Days, they went on chearfully. In that Time they met with a *French* Privateer, where they went aboard to beg ſome Relief; but inſtead of helping they plundered them of the little they had; took away even their Inſtrument of Navigation, and turned them a-drift. In this miſerable Condition they ſailed on, growing every Day weaker and weaker; their Proviſions were almoſt ſpent, their Fire-wood quite gone, not a Drop of freſh Water left, nor Food for above a Day, when at laſt, in the very Hour they expected to periſh, they made Land to their unſpeakable Joy. This Land was *Ireland*, where they went aſhore in the County of *Cork*, and were nobly entertained by the Earl of *Thomond*, to whom they related their Voyage, which had then laſted forty-two Days,

There were but five Perſons concerned, of whom there was one Mr. *James Barker*, a Gentleman, *Richard Saunders*, who contrived the Deſign, *William Goodwin*, a Ship-Carpenter, who built the Boat, and *Henry Puet*, a common Sailor, who undertook to navigate this Veſſel. Both theſe Stories may ſeem a little beſide our preſent Purpoſe, but I have inſerted them as belonging more immediately to a *Collection of Voyages*, and becauſe I look upon both theſe Incidents to be very well worth preſerving. Capt. *Tucker* reſigned, in the Year 1619, to Capt *Butler*, who arrived at that time with four good Ships, in which he brought five hundred Paſſengers, and there being as many *Engliſh* on the Iſland, the Colony began to make a conſiderable Figure. This Governor raiſed a noble Monument over the Remains of Sir *George Summers* that were left in the Iſland, depoſiting them in the Church in *St. George's Town*. He divided the Iſlands into Diſtricts; and now the Government, by Governor, Council, and Aſſembly, was eſtabliſhed, which before had been only the Governor and Council. The Laws of the Country were alſo ſettled, as near as the Circumſtances and Conveniencies of the Place would admit, to the Laws of *England*; as is done in all the Colonies in *America*. After bringing down the Hiſtory of theſe Iſlands to their becoming a regular and ſettled Colony, I am next to give an Account of the Iſlands themſelves, in order to ſhew the Value of them.

11. There are ſome who would perſuade us, that theſe Iſlands have received their Name from the vaſt Quantity of Black Hogs found upon them: *Bermudas*, in the old *Spaniſh* Tongue, ſignifying a *Black Hog*; but though this Derivation be plauſible, yet the Fact upon which it is founded, is moſt certainly falſe; for when the *Spaniards* firſt diſcovered them there was not a ſingle Hog upon theſe, or perhaps upon any other Iſland whatever; neither is it well known upon what Part the *Spaniards* landed. Theſe Iſlands lie very contiguous to each other; but Authors differ ſo much as to the Number of them, that it is very difficult to ſpeak of them with Certainty; for ſome ſay there are but three hundred, others affirm there are more than five hundred. They lie in the Latitude of 32 Degrees 30 Minutes North, and in 35 Degrees of Weſtern Longitude, at a vaſt Diſtance from the Continent, ſince the neareſt Land, which is *Cape Hatteras* in *Carolina*, lies at leaſt two hundred and fifty Leagues to the Weſt of them, and they are above ſixteen hundred Leagues from *England*. The Air here has been always thought extremely wholeſome, and the Country wonderfully pleaſant, inſomuch that People were wont to remove hither from the other Colonies, in order to recover their broken Conſtitution. The Heat in Summer is very ſupportable, and with reſpect to Winter, they have really none; nay, ſome go ſo far as to affirm, that there is but one Seaſon in the Iſland of *Bermudas*, and this a perpetual Spring; which, however, may be in ſome meaſure aſcribed to the Soil, which though it be thin is very rich and very fruitful, though remarkably ſtoney. The Earth is of ſeveral Colours, brown, white, and red; the firſt is the beſt and the laſt the worſt. Two or three Feet under the Mould they find a white hard Body, which the Inhabitants call the Rock, but which ſeems more to reſemble Chalk, or a Pumice-ſtone, through which the Roots of their Trees force a Paſſage; and a kind of Clay is generally found under it.

Maize, or *Indian* Corn, which is the main Support of the People here, is twice reaped; for what they ſow in *March*, they cut in *July*; in a Fortnight after they ſow again, and reap in *December*. They have all the Plants peculiar to the *Weſt-Indies*, and all Kinds of Herbs, Roots, Flowers, and Trees, brought from *Europe*, thrive to Perfection. They have ſome Tobacco, but it is of an indifferent ſort, and therefore does not yield them any great Profit; but certainly, with a little Care, they might be able to produce any kind of Tobacco, or other Vegetable that turns to Account almoſt in any Climate. They have Palmeto's, a kind of Wild Palm, that is extremely uſeful, the Leaves being eight or ten Feet long, and near as broad, with which they cover or thatch their Houſes; it produces a very luſcious Fruit, which in Shape, Size, and Colour reſembles a Damſon. Laurel, Olive, Mulberry, and Date Trees, are very common; and their Foreſts abound with Variety of odoriferous Woods, ſome black, ſome of a yellow, and ſome of a red Colour: The Berries of theſe Trees have the Stiptic Quality of a Sloe, and are much uſed by the *Engliſh* to cure the Flux, which they frequently get by eating the luſcious Palm-berries too greedily. But amongſt a Multitude of Shrubs and Trees peculiar to theſe Iſlands, and equally valuable for their Timber and Fruit, there are two which, though found in other Parts of the World, have a peculiar Excellence here; the firſt is their Orange, which in point of Size, Scent, and Flavour, far exceeds any either in the *Weſt* or *Eaſt Indies*: The ſecond is their Cedar, which from the Nature of the Soil wherein it grows is firmer and more durable than any of its Kind that we are acquainted with, anſwers in every reſpect to Oak-Timber, and is found of extraordinary Uſe in Ship-building, ſo that the beſt Sloops, Brigantines, and other ſmall Veſſels, both for Service and Sailing, which are in Uſe throughout the *Weſt Indies*, are built at *Bermudas*.

They have likewiſe two very ſingular Plants, one uſeful and the other noxious, but both ſo remarkable as to deſerve particular Notice; the firſt is called, the *Summer-Iſland Redwood*, the Berry of which is as red as the Prickle Pear, giving alſo ſuch a Tincture; out of which Berry come firſt Worms, which afterwards turn into Flies, ſometimes bigger than the Cochineel Fly, and a medicinal Virtue much exceeding it. The Poiſon-Weed is the other ſtrange Plant, which grows much in the ſame manner as our Ivy, and if we may depend upon a Gentleman, who lived long in theſe Iſlands, and ſent an Account of what was remarkable in them, to the Royal Society, there is not a more ſurpriſing Production than this in Nature: He ſays he had ſeen a Man ſo infected by it, as to have all the Skin of his Face peel off though he paſſed by without touching it, and yet he affirms that he had chewed it in his Mouth without feeling any Inconvenience, whence he infers, that it is not hurtful alike to all Conſtitutions. In this all who have been upon theſe Iſlands agree, that this Weed is very prejudicial, but then they agree likewiſe, that there is nothing venomous beſides, in any of theſe Iſlands.

As for Animals, there were none in *Bermudas* but Hogs, Inſects, and Birds, when Sir *George Summers* was ſhipwrecked there: He found out that there were ſome Hogs in the Iſland, by ſending out two or three of his own to feed, and when they rambled home, a huge wild Boar followed them, and being killed was found to be excellent Meat: The Hogs they killed afterwards were found to be all black, and from thence it is concluded that the *Spaniards* had left them there to breed, becauſe they were of the ſame Kind with them they carried to the Continent of *America*. They now fat them at *Bermudas*, with Palm and Cedar Berries; but their Number is very much decreaſed. Theſe Iſlands abound in more and greater Variety of Fowl than any in *America*. There are Hawks of all ſorts, Herns, Bitterns, Offspreys, Cormorants, Baldcoots, Moorhens, Swans, Teal, Snipe, Duck, and Wigeons; Bats and Owls are alſo very common here, with Multitudes of ſmall Birds; as Wood-peckers, Sparrows, *&c.* The *Engliſh*, at their firſt coming, found a ſort of Fowl here they called *Cowkoes*, which bred in the Holes of the Rocks, and in Burrows, like Rabbets, and were ſo numerous and gentle, that they were taken by Hand. They are now almoſt deſtroyed, being very eaſy to be caught. This Bird is of the Bigneſs of a Sea-mew. There are alſo the Tropic-Bird, and the Pemlico, ſeldom ſeen by Day, and when it is, held to be the unwelcome Fore-teller of a Storm.

Fiſh there is as plenty as Fowl, of which there are ſo many ſorts that Authors have not yet found out Names for them: They have of the ſcaly and the ſhelly Kind; the Whale and Sword-fiſh, and the Threſher; but particularly the Tortoiſe abounds to a Wonder, and is as good and great, of the Sort, as any in the World. Whale-fiſhing has been attempted, but without Succeſs. The Whales about *Bermudas* are found only in the Months of *February*, *March*, and *April*; the Female Whales have abundance of Milk, which the young ones ſuck out of the Teats that grow by her Navel; they have no Teeth, but feed on Graſs growing on the Rocks at the Bottom during theſe three Months, and at no other Seaſon of the Year; when this is conſumed and gone, the Whales go. There have been Sperma-ceti Whales driven upon the Shore, which Sperma (as they call it) lies all over the Bodies of theſe Whales: Theſe have divers Teeth, which may be about as big as a Man's Wriſt. Ambergreaſe and Sperma-ceti, have been found here in great Quantities, and Pearl. All which are almoſt as rare here now, as elſewhere; which is a little wonderful.

The Inſects in theſe Iſlands are, generally ſpeaking, the ſame before mentioned in other Plantations, except it be the Spider, which is thought to be larger here than in any other Country in the World, and ſo adorned with beautiful Colours, that it takes off very much, if it does not entirely remove, that Diſtaſte, which otherwiſe the Sight of Creatures of this Kind and of ſo enormous a Size would naturally occaſion. One of theſe Spiders, with its Legs extended, would take up a Space equal to the Breadth of a Man's Hand. Their Bodies are compoſed of two Parts, one flat and the other round, not unlike, either in Shape or Size, to a Pigeons Egg. On their Backs they have an Orifice, which ſerves as well as in ſome kinds of Hogs for a Navel; their Mouths are covered with a kind of grey Hairs, intermixed ſometimes with bright red, and on each Side of their Mouths they have a kind of crooked Tooth, of a fine poliſhed Subſtance, extremely hard, and of a bright ſhining black, and therefore they are often ſet in Silver or Gold for Tooth-picks. When theſe Creatures grow old, they are covered all over with a kind of dark brown or black Down, ſmooth, ſoft, and ſhining like Velvet; on the flat Part they have their ten Legs, five on each Side, each of which has four Joints, and two ſmall Claws at the Ends. They caſt their Skins every Year, together with thoſe hard Teeth-like Subſtances before mentioned; they live upon Flies and Gnats, in catching of which they ſhew great Cunning and no leſs Agility. Their Webs, which are very large, they ſpirt into the Air, by which means they are lodged upon Trees at ſome Diſtance, and then run along the Threads, and weave them ſo ſtrong, that Birds of the Size of a Thruſh are ſometimes caught in them.

There is ſcarce an eighth Part of theſe Iſlands inhabited, and all but *St. George's*, *St. David's*, and *Coopers Iſles*, have only a few Houſes ſcattered up and down; they all together make the Figure of a Sheep-hook, and are within the Circuit of ſix or ſeven Leagues at moſt. There are none of them of any conſiderable Bigneſs, yet ſome much bigger than others; as Time and the Sea continually waſhing upon them, have worn them away in different Proportions. The main or great Iſland of all is called *St. George*'s, and is about ſixteen Miles in Length, from Eaſt-north-eaſt to Weſt-ſouth-weſt; 'tis not a League over in the broadeſt Place, but is fortified by Nature all round, the Rocks every way extending themſelves a great Way into the Sea. To natural Strength, eſpecially towards the Eaſtward, where it is moſt expoſed, the Inhabitants have added that of Forts, Batteries, Parapets, and Lines; the Cannon of the Forts and Batteries being ſo well diſpoſed as to command the ſeveral Channels and Inlets into the Sea. There are no more than two Places where Shipping may ſafely come in, and it is not eaſy for a Man to find thoſe Places out; the Rocks lie ſo thick in ſuch a Manner, and ſome ſo undiſcovered, that without a good Pilot from the Shore, a Veſſel of ten Tons could not find the Way into thoſe Harbours, which being once known, the biggeſt Ships in the World may enter. Theſe two Havens are ſo fortified, that if an Enemy ſhould attempt either, he might eaſily be kept out. The Rocks, at moſt Places, appear at low-water; it ebbs and flows there not above five Feet; the very Shore itſelf is, for the moſt Part, a Rock, and it is impoſſible to find out any Iſlands better guarded by Rocks than theſe; indeed they are all of them ſo invironed with them, that they ſeem to threaten all Ships who venture on that Coaſt with preſent Deſtruction, and ſo many have been ſhipwrecked upon them, that the *Spaniards* gave them the Name of *Los Diabolos*, the *Devil's Iſlands*; this Place having been fatal to them and all Nations.

The Town of *St. George* ſtands at the Bottom of the *Haven* of the ſame Name, covered by no leſs than ſix or ſeven Forts and Batteries, as *King's Caſtle*, *Charles' Fort*, *Pembrook Fort*, *Cavendiſh Fort*, *Davie's Fort*, *Warwick Fort*, and *Sandy's Fort*, mounted with above ſeventy Pieces of Cannon; and they are ſo diſpoſed, that they can be all brought to bear upon any Ship before ſhe can make her Entrance. In this Town there is a fair Church with a fine Library, for which the Inhabitants are indebted to Dr. *Thomas Bray*. There are near a thouſand Houſes in it handſomely built, and a State-Houſe for the meeting of the Governor, Council, and Aſſembly. Beſides the Town and Diviſion of *St. George*, there are eight Tribes, *Hamilton*'s Tribe, *Smith*'s Tribe, *Devonſhire*'s Tribe, *Pembrook*'s Tribe, *Paget*'s Tribe, *Warwick*'s Tribe, *Southampton*'s Tribe, and *Sandy*'s Tribe, of which, *Devonſhire* in the North, and *Southampton* in the South, are Pariſhes, have each a Church, and a particular Library. In the whole Iſland there are Plantations of Oranges, Mulberries, and other Productions of the Country, which render it a very delightful Proſpect. There is a Haven in *Southampton* Tribe or Diſtrict, which is alſo called *Southampton*, and other Harbours, as the *Great Sound*, *Harrington*'s Inlet in *Hamilton*'s Tribe, *Paget*'s Port in *Paget*'s Tribe, and others. There are no Pariſh Churches in any of the leſſer Iſlands, and all the Inhabitants are ranged under one or the other of the eight Tribes. The Number of People in the whole, who inhabit theſe Iſlands, has been computed to be nine thouſand, and it is thought they do not much increaſe, many of the younger Sort removing, for the Sake of making their Fortunes, into other Colonies.

The Government is like that of *Virginia*; the Crown appointing both a Governor and Council, but the People, by their Repreſentatives, compoſe the Aſſembly; they have fewer By-Laws than any of our other Settlements, which we impute to the Smalneſs of their Trade; for this Colony produces no conſiderable Commodity by which the Inhabitants may be enriched; and their Commerce conſiſts chiefly in Timber and Proviſions, which they ſend to the other Parts of *America* that ſtand in need of them, and ſome Tobacco imported to *England*; ſeveral Families retired thither formerly, on account of their Religion, or Health, from *England*, and carried conſiderable Effects with them. The building of Ships and Sloops is the moſt advantageous Branch of their Trade; and the People of *Bermudas* ſeem to content themſelves with the Pleaſure and Plenty of their Country, with a ſafe and quiet Retreat from the Troubles and Cares of the other Part of the World, without any Ambition to enrich themſelves; and, if they had any ſuch Deſire, it is to be queſtioned whether they have any Opportunity of gratifying it: Be that as it will, the Inhabitants have conſtantly maintained a moſt excellent Reputation; inſomuch that I knew a very ingenious Gentleman as well acquainted with this, and our other Plantations, as thirty Years trading to them all could render him, who was wont to ſay that *Bermudas* was the fineſt Country, and inhabited by the beſt People he ever knew.

It was this Report of the Place and People that induced the Reverend Dean *Berkley*, who is ſince become, very worthily, a Biſhop of our Church, to think of erecting an Academy there, for promoting uſeful Learning and true Religion in the *Weſt-Indies*; and the Society for Propogation of the Goſpel had ſo good an Opinion of the

Propoſal made them by the Biſhop of erecting a College or Seminary at *Bermudas*, that they aſſiſted him in procuring a Patent for it from King *George* I. and contributed to the Expence of the Undertaking. And the Doctor, with three Fellows of Trinity College in *Dublin*, viz. The Rev. Mr. *William Thompſon*, *Jonathan Rogers*, and *James King*, Maſters of Art, with ſeveral of the Doctor's Relations, who were People of Fortune, embarked for *Bermudas*, in order to lay the Foundation of the intended College ; but they were unfortunately driven, by a Storm, to *Long Iſland*, in the Province of *New York* ; from whence the Doctor, with his Companions, viſited *Boſton*, and ſeveral other great Towns in *New England*, where they preached, and performed other Parts of their Function. But the Deſign of erecting a College was laid aſide, the Expence appearing larger than it had been firſt calculated, and many of thoſe who had promiſed Subſcriptions failing in their Performance ; ſo that Dr. *Berkley* found himſelf obliged to return home, and was not long after promoted to the See of *Cloyne*, in the Kingdom of *Ireland*, which he ſtill enjoys.

There remains nothing farther to be ſaid of this Plantation, which, though it has flouriſhed exceedingly, and is ſtill in a very good Condition, yet has no great Trade with *Great-Britain*, at leaſt that we can obtain any Account of, though undoubtedly we receive very conſiderable Advantages from thence annually, as the People make uſe of a conſiderable Quantity of our Goods, are cloathed with our Manufactures, and employ Tools ſent from hence in all kinds of Work. There might, perhaps, if due Encouragement was given, be a Poſſibility of raiſing ſeveral rich Commodities in this Country, but more particularly two, for which it ſeems fitter than any of our Plantations, *viz.* Cochineel and Silk ; and with this View, as I have been informed, a very worthy Merchant of this City has collected, digeſted, and printed, the beſt Accounts that are to be met with on theſe Heads, and alſo with reſpect to Indigo, and has ſent them to be diſtributed at his own Expence in *Carolina* and the *Bermudas* Iſlands, which is an Inſtance of public Spirit that deſerves to be mentioned with Honour, and it is hoped may be likewiſe thought worthy of Imitation. A very few Attempts of this kind, ſupported with Subſcriptions inferior to thoſe made for ſome Diverſions, might produce immenſe public Advantages to this Nation, and prove the means of making Multitudes of People happy.

12. All the Miſcarriages that had happened in attempting Diſcoveries to the North-eaſt and North-weſt for a new Paſſage to the *Indies*, could not ſo far diſcourage the Merchants of *England*, as to oblige them to lay aſide their Deſigns of that Sort ; and therefore when any Opportunity offered they never failed to lay hold of it, in hopes that ſome Time or other they might accompliſh one or both of theſe great Projects. It was with this View that they fitted out Captain *Henry Hudſon* in 1607, who undertook to ſail directly North, which he did to the Height of 81 Degrees 30 Minutes, on the Coaſt of *Groenland*, where he was on the 16th of *July*, the Weather being pretty warm. His Scheme, It ſeems, was to have paſſed round that great Tract of Country, which the *Danes* call *Groenland*, and falling into *Davis*'s *Streights*, have returned that way home. After being diſappointed in this, he undertook two Voyages for the Diſcovery of a North-eaſt Paſſage, in which his Conduct was very good, though his Succeſs no better than that of thoſe who went before him ; upon which he reſolved to make an Attempt towards the North-weſt. He ſailed on this Voyage *April* the 17th, 1610 ; and thus Mr. *Pricket* deſcribes the principal Events in that Undertaking:

" We continued ſteering North-weſt ; on the 8th of *July* we raiſed Land to the South-weſt, covered with Snow, which our Maſter named *Deſire Provokes* ; lying in the Latitude of 60 Degrees. Here we heard the Noiſe of a great Overfall of a Tide that came out of the Land, and were now ſenſible that we had been embayed before ; and we were now ſo well acquainted with the Ice, that in foggy or foul Weather we ſought out the broadeſt Iſland of Ice, and there anchoring, we went out and ſported upon the Ice, and filled Water that ſtood in Ponds upon the Ice very ſweet and good, being now in the Tides-way, the Ice opened, by being firſt carried one way and then another, whereas in Bays it is immoveable ; and in that Bay where we had been ſo troubled with Ice, we ſaw many of thoſe Mountains of Ice a-ground in ſixty or ſeventy Fathom Water. We ſtill plied to Weſtward as the Ice would give us leave, and fearing a Storm, we found an Harbour at the Weſt-End of an Iſland, whereunto we went at a full Sea, over a Rock, which had then two Fathom and a half of Water upon it, and the next Morning was two Fathoms above Water. Our Maſter named it *The Iſland of God's Mercies.* The Water flows here better than four Fathoms, and the Floods come from the North, flowing eight the Change Day, Latitude 62° 9′. Then plying to South-weſt, we were on the 16th in the Latitude of 58° 50′, but found ourſelves embayed and much peſtered with Ice ; whereupon we ſtood to the South-weſt until we ſaw the Land, which our Maſter named *Hold with Hope* ; and being gotten again into a clear Sea, our Maſter ſtood to the Weſt along the South Shore, and raiſed three Capes or Head-lands, lying one beyond another, which he named *Cape Henry*, *Cape James*, and *Queen Anne's Foreland* ; we alſo raiſed a high Hill, which he named *Mount Charles.* We paſſed on in Sight of the South Shore until we raiſed a fair Head-land, (which our Maſter took to be Part of the main North Land, but is an Iſland) and named it *Deep's Cape*, and the Land on the South Side now falling away to the South makes another Cape or Head-land, which our Maſter called *Worſenham's Cape.*

" The Maſter ſent me, the Carpenter, and ſome others, aſhore near *Deep's Cape* ; we there ſaw ſome Deer, twelve or ſixteen in a Herd, but could not come within Shot of them ; we found Plenty of Sorrel and Scurvy-graſs, and ſaw ſome round Hills of Stones like to Graſs-cocks ; and when we came to them I turned off the uppermoſt Stone, and found them hollow within, and full of Fowls hanged by their Necks ; we turned back, and told the Maſter what we had ſeen, and what Refreſhment might be had ; intreating him to ſtay a Day or two in this Place, but he was not pleaſed with the Motion, nor could be perſuaded to ſtay. Then ſtanding Southward we loſt Sight of the main Land that we had all this while followed, and came into ſhallow Water, broken Ground, and Rocks, and paſſed down ſo far Southward till we had Land on both Sides, and the Water ſhoaling a-pace, we came to an Anchor. From hence we ſtood back again towards the North ; and one Day a Debate ariſing concerning our coming into this Bay, and how we ſhould get out again, the Maſter took Occaſion to revive old Matters, and to diſplace *Robert Ivett*, his Mate, and Boatſwain, for Words ſpoken on the firſt great Bay of Ice, and made *Robert Bilet* his Mate, and *William Wilſon*, our Boatſwain.

" We plied to and fro from the North to the South, and thence to the North again, till we came to the Shoal-water, where we anchored in ſeven Fathom, and lay there eight Days ; in all which Time we could not get one Hour to weigh our Anchor ; but the eighth Day the Wind beginning to ceaſe, our Maſter would have the Anchors up again againſt the Minds of all that knew what belonged thereunto ; ſo to it we went, and when we had brought it a-peak, a Sea took her, and caſt us all off from the Capſtern, and hurt many of us ; here we loſt our Anchor, and if the Carpenter had not been nimble we had loſt our Cable too ; but he fearing ſuch a Matter, was ready with his Ax, and ſo cut it from thence. We ſtood to the South, and divers Courſes, until we came to a Bay on the North Shore, where we anchored. While we lay here we ſaw a Ledge of Rocks to the Southward, about a League long, which were covered at full Sea ; for a ſtrong Tide ſet in here. At Midnight we weighed, and ſtood to go out as we came in, and

“ had not gone long before the Carpenter told the
“ Maſter that if we kept that Courſe we ſhould be upon
“ the Rocks; the Maſter conceived that he was paſt
“ them, when preſently we ran on them, and there
“ ſtuck faſt twelve Hours, but by the Mercy of God
“ we got off unhurt. We ſtood to the Eaſt, and an-
“ chored in a Bay; here the Maſter ſent me and the
“ Carpenter, in a Boat, to ſeek a Place to winter in,
“ and it was Time, the Days being long and cold, and
“ the Earth being covered with Snow, having ſpent
“ three Months, to no Purpoſe, and it being now the
“ laſt Day of *October*.

“ On the firſt of *November* we found a Place where-
“ unto we brought our Ship, and haled her a-ground;
“ on the 10th we were frozen in, and now it concerned
“ us to take Care of what we had, and ſo to ſpend,
“ that we might have wherewith to keep us alive, until
“ we ſhould come at the Capes where the Fowls breed;
“ for there were all the Hopes we had of finding Subſiſt-
“ ence to bring us home. Our Maſter therefore ap-
“ pointed a Reward to them that killed Boat-fiſh, or
“ Fowl. We were victualled for ſix Months, in good
“ Proportion, and of that which was good; and if our
“ Maſter would have had more he might have been ſup-
“ plied at Home and in other Places; and it is ſtrange
“ he did not prevent the Hunger we endured, which oc-
“ caſioned the Overthrow of himſelf and many other ho-
“ neſt Men.”

It appears very clearly from this Relation, which is indeed the only one we have of this famous Voyage; concerning which it is not eaſy to determine if it was moſt for the Advantage of this Nation or ruinous to the brave Man who undertook it; that he was reſolved to ſtrike out ſomething new, and not to waſte his Time, in retracing other People's Footſteps; and therefore when he came to the Mouth of *Davis's Straights*, he continuing ſteering directly Weſt, and then as the Courſe directed him through thoſe Straights that ſince bear his Name, till he doubled *Cape Worſenham*, and then he ſailed down the Weſt Coaſt of *New Britain* to the very Bottom of the Bay, where he made Choice of a Place to winter in, that was very near as far South as any Part of the Iſland of *Great-Britain*, and at the very Back of the *French* Settlements in *Canada*. Captain *Hudſon* was a very good Judge of the Importance and Conſequences of his Diſcovery, which induced him to winter there, in hopes of performing ſomething very conſiderable the next Seaſon, which very probably he would have done, if his Men had not mutinied, and conſigned him over to the Savages to be murdered.

The Relation we have of his Voyage from *Pricket* is chiefly calculated to give an Account of this Mutiny; but as it is more to our Purpoſe to come at as good an Account as we can of the Voyage itſelf we ſhall endeavour to pick out of it what relates to that Matter, and then give a ſhort Relation of that Accident which deſtroyed Captain *Hudſon*, and all his Hopes. “ It would be te-
“ dious, ſays he, to relate the Hardſhips we endured
“ whilſt we wintered in this Place; the Cold was ſo ex-
“ treme that it lamed moſt of our Company, but I muſt
“ not forget God's great Mercy to us in ſending ſuch
“ Store of white Partriges, during the firſt three Months,
“ that we killed above one hundred Dozen, beſides other
“ Fowl of ſundry ſorts.

“ The Spring approaching the Partriges left us, and
“ were ſucceeded by other Fowl; as Swans, Geeſe,
“ Ducks, and Teal, but hard to come by; they came
“ from the South and flew to the North; but if they be
“ taken ſhort by a northerly Wind, then they fall, and
“ ſtay till the Wind ſerves them, and then fly to the North-
“ ward. As the Summer came on the Fowls were gone,
“ and few or none to be ſeen. Then we ſearched the
“ Woods, Hills, and Vallies, for any thing that might
“ ſerve for Food, though never ſo vile; the Frogs (in
“ the time of their engendering, as loathſome as Toads)
“ were not ſpared, nor the Moſs that grew on the
“ Ground; but amongſt divers ſorts of Vegetables,
“ *Thomas Woodhouſe* brought home a Bud of a Tree full
“ of a Turpentine Subſtance; of this our Surgeon made a
“ Decoction to drink, and applied the Buds hot to ſuch
“ as were troubled with Aches in any Part of their Bodies;
“ and I muſt confeſs I received thereby preſent Eaſe of
“ my Pain. As ſoon as the Ice began to break out of
“ the Bays, a Savage came to our Ship, being the firſt
“ we had ſeen in all this time; our Maſter entertained
“ him well, promiſing to himſelf great Matters by his
“ Means, and therefore would have to his own Uſe all
“ the Knives and Hatchets that every Man had, but re-
“ ceived none except from *John King* the Carpenter, and
“ myſelf. To this Savage our Maſter gave a Knife, a
“ Looking-glaſs, and Buttons; who received them
“ thankfully, and made Signs that after he had ſlept he
“ would come again; as he did. When he came again,
“ he drew after him a Sledge, and upon it two Deer-
“ ſkins, and two Beaver-ſkins; he laid the Knife upon
“ one of the Beaver-ſkins, and his Glaſs and Buttons
“ upon the other, and ſo gave them to the Maſter, who
“ received them; and the Savage took thoſe Things the
“ Maſter had given him, and put them into his Scrip;
“ then the Maſter ſhewed him an Hachet, for which he
“ would have given the Maſter one of his Deer-ſkins;
“ but the Maſter would have them both, and ſo he had;
“ but not willingly.

“ After many Signs of People to the South and to
“ the North, and that, after ſo many Sleeps, he would
“ come again, he went his way; but never came more.
“ The Sound being now clear of Ice, ſo that our Boat
“ could go from one Place to another, *Wilſon*, *Green*, and
“ five more, were ordered to go a fiſhing with our Net.
“ They caught the firſt Day, five hundred Fiſhes as big
“ as large Herrings, which put us all in good Hopes to
“ have our Wants ſupplied; but thoſe were the moſt that
“ ever they caught in one Day, and many Days they
“ got not a Quarter ſo many. In this Time of their
“ fiſhing, *Green*, *Wilſon*, and ſome others, plotted to
“ take the Net, and the Shallop which the Carpenter had
“ newly ſet up, and ſo to ſhift for themſelves; but the
“ Shallop being ready, our Maſter would go in it himſelf
“ to the South and South-weſt, to ſee if he could meet
“ with People; for that Way we could ſee the Woods
“ burning: So taking with him as much Proviſion as
“ would ſerve for eight or nine Days, he went towards
“ the South, and ſet no Time for his Return; becauſe he
“ was perſuaded, if he could meet with People, he ſhould
“ have Fleſh of them, and that good Store; but he re-
“ turned worſe than he went forth; for although he was
“ ſo near them as to ſee them ſet the Woods on fire, yet
“ could he not by any Means come to the Speech of
“ them.

“ Being come on board, he fitted all Things for his
“ Return; and firſt delivered all the Bread out of the
“ Bread-room, which came to a Pound a-piece for every
“ Man's Share; and delivered alſo a Bill of Return, wil-
“ ling them to have that to ſhew, if it ſhould pleaſe God
“ they ſhould come home, and wept when he gave it to
“ them: But to help us to ſome Relief in this poor E-
“ ſtate, our Boat went to work on *Friday* Morning, and
“ ſtaid till *Sunday* Noon, and brought fourſcore ſmall
“ Fiſhes; a poor Relief for ſo many hungry Bellies.
“ Then we weighed, and ſtood out of our Wintering-
“ place, and anchored without at the Mouth of the Bay;
“ where, our Bread being gone, what Store of Cheeſe we
“ had was to ſtop a Gap, whereof there were five, at
“ which time the Company grudged, becauſe by their
“ Reckoning there ſhould have been nine, but thoſe that
“ were left were equally divided by the Maſter, although
“ he was adviſed to the contrary, becauſe there were ſome
“ who could not govern themſelves.”

It was this Reſolution of the Maſter's, to make all fare alike for the ſake of proſecuting the Voyage with Effect, than which no Man was more like to do it than himſelf, that drew upon him his Deſtruction; for his old Mate, one *Green*, and ſome other People in the Ship, reſolving to leſſen the Number of Hands, and ſo get all the Proviſions that were left to themſelves, moſt barbarouſly contrived to turn Captain *Hudſon*, the Carpenter, and all the ſick Men, out of the Ship; after which they determined to make the beſt of their Way for *England*. This they performed the 19th of *June*, 1611, by forcing Capt. *Hudſon* and eight more into the Shallop without Proviſions, tho' moſt of them were taken ſick out of Bed, who after that time were never heard of, but were either drowned, ſtarved, or murdered by the Savages: Neither did the Leaders of this Mutiny eſcape much better; for being obliged to land frequently on the deſart Coaſt, in order to obtain ſome Subſiſtance, they fell there into a Fray with the Savages, in which *Green* and ſome others were killed; ſo that very few, and thoſe too in a miſerable Condition, returned to *England*, where *Pricket* wrote that Account of the Voyage for his own Juſtification, from which we have made theſe Extracts.

At firſt there fell great Imputations upon this Man, becauſe he adminiſtred the Oath to the Conſpirators; but upon an Enquiry it appeared very clearly, that this Oath contained nothing in it contrary to the Duty of the Seamen; and that the true Reaſon why they preſerved him was, becauſe that being Servant to Sir *Dudley Diggs*, who was a Man of great Power and Reputation, they were in hopes he would interpoſe, and ſave their Lives, which they ought to have forfeited as Pirates. Upon this imperfect Account of *Hudſon's Bay*, ſeveral Perſons who had been engaged already in Expeditions for the Diſcovery of a North-weſt Paſſage, began to hope that now they had a fairer Proſpect than ever of bringing this Project to bear, in caſe they could find any able Mariner who would undertake to proſecute the Diſcoveries made by *Hudſon*.

His Royal Highneſs *Henry*, Prince of *Wales*, was the great Patron of Learning and Virtue at that time; and being applied to by the Perſons concerned in this Project, he reſolved to ſend one Capt. *Button*, his own Servant, a Man of great Abilities, Courage, and Experience, and having the Countenance of ſo great a Perſon, was moſt likely to maintain Diſcipline amongſt his Seamen. Accordingly, in the Year 1611, he ſailed on this Expedition, in which he paſſed *Hudſon's Straits*, and leaving *Hudſon's Bay* to the South ſailed above two hundred Leagues to the North-weſt, through a Sea above eighty Fathom deep, and diſcovered a great Continent called by him *New Wales*; where, after much Miſery and Sickneſs, wintering at *Port Nelſon*, he carefully ſearched all the Bay, from him called *Button's Bay*, back again, almoſt to *Diggs's Iſland*. He diſcovered the great Iſland called *Cary's Swans-neſt*. He loſt many of his Men during his Stay in the River called *Port Nelſon*, in fifty-ſeven Degrees ten Minutes North Latitude, though he kept three Fires in his Ship all Winter, and had great Store of white Partriges, and other Fowl, beſides Deer, Bears, and Foxes. Upon his Return from this Voyage he received the Honour of Knighthood, and great Expectations were raiſed from his Diſcoveries, which had certainly been proſecuted with Effect, if Prince *Henry* had not died ſoon after.

It was a great Pity that Sir *Thomas Button*, who was certainly a very underſtanding Man, formed private Views of his own from the Knowledge he obtained in his Voyage; which were of ſuch a Nature, that he affirmed he had convinced his Maſter, King *James*, that there was a Paſſage this Way into the *South Seas*. The Reaſons upon which this Opinion was founded, as well as Notes of his Voyage, he promiſed to give to Mr. *Briggs*, the famous Mathematician, who had turned his Thoughts much upon this Subject, but never did; which was the Reaſon that all the Expeditions undertaken on that Side afterwards failed; but, however, we have ſufficient Grounds to affirm, from the Knowledge derived to us from another Quarter, that the Diſcoveries of Sir *Thomas Button*, if proſecuted, might have proved highly advantageous to this Nation, notwithſtanding the ſeeming Rigour of the Climate, and Barrenneſs of the Country.

The *French* were in poſſeſſion of *Fort Bourbon*, which we call *New York Fort*, upon *St. Thereſa*, the Eaſtern Branch of *Nelſon River*, from the Year 1697 to 1714. Monſieur *Jeremie*, who was Lieutenant there from 1697 to 1708, and afterwards Governor till he gave it up, in 1714, to us, gives a very particular Account of that River and the adjoining Countries, great Part of which he affirms to be of his own Knowledge, having travelled a great way South-weſt into the Country, among the Rivers and Lakes. The *Daniſh*, or *Churchill's River*, upon which the *Hudſon's Bay* Company have lately built a ſtrong Stone Fort, he ſays is ſituated in 59 Degrees North Latitude, and is about five hundred Paces wide at the Entrance for about a quarter of a League, and very deep; but within, it is much broader, and navigable into the Country a hundred and fifty Leagues; there is but little Wood upon the River near the Bay, except in the Iſlands. At a hundred and fifty Leagues Diſtance is a Chain of high Mountains, with great Cataracts, and Falls of Water; but beyond theſe it is again navigable, and has a Communication with a River, called the *River of Stags*. Fifteen Leagues Northward of this River is the River of *Loup Marine*, or River of Seals. Betwixt theſe Rivers is found a kind of Ox, called the *Muſk Ox*, which ſmells, at ſome time of the Year, ſo ſtrong of Muſk that it cannot be eat; they have very fine Wool, which is longer than that of the *Barbary* Sheep: They are ſmaller than *French* Oxen, with very crooked Horns which turn round like Rams-Horns, and are ſo long that they weigh ſometimes ſixty Pounds; they have ſhort Legs, and their Wool trails upon the Ground: They are not numerous.

This River comes from a Nation he calls *Platſcotez de Chiens*, who make War againſt the *Savanna Indians*, who traded with the *French*. In that Country they have a large Copper Mine ſo fine, that without Smelting it they make Copper of it, by beating it betwixt two Stones: He ſaw a great deal of it, which their *Indians* got when they went to War againſt that Nation. This Nation has a ſweet humane Aſpect, but their Country is not good. They have no Beaver, but live by fiſhing, and a kind of Deer they call *Cariboux* (Rain Deer;) the Hares grow white in Winter, and recover their Colour in Spring; they have very large Ears, and are always black; their Skins in Winter are very pretty of fine long Hair, which does not fall, ſo that they make very fine Muffs. He ſays he can ſay nothing poſitively in going farther Northward, but only, that their Savages reported that, in the Bottom of the Northern Bay there is a Strait, where they can eaſily diſcover Land on the other Side: They had never gone to the End of that Strait; they ſay there is Ice there all the Year, which is drove by the Wind, ſometimes one Way ſometimes another. According to all Appearance, this Arm of the Sea has a Communication with the Weſtern Ocean; and what makes it more probable is, that when the Winds come from the Northern Quarter, the Sea is diſcharged by that Strait, in ſuch Abundance, into *Hudſon's Bay*, as to raiſe the Water ten Feet above the ordinary Tides; inſomuch that when they find the Waters riſe, Ships take Shelter againſt theſe Northerly Winds. The Savages ſay, that after travelling ſome Months to Weſt-ſouth-weſt, they came to the Sea, upon which they ſaw great Veſſels with Men, who had Beards and Caps, who gather Gold on the Shore that is at the Mouths of Rivers. In paſſing to the Southward from the *Daniſh* River, at ſixty Leagues Diſtance, is the River *Bourbon* or *Nelſon*, in Latitude 57 Degrees.

There is nothing remarkable in the Country betwixt thoſe two Rivers, but a great Number of the Deer, called *Cariboux*, which being drove from the Woods by a great Number of Muſchetoes or Midges, come to the Shore to refreſh themſelves; they are in Herds of 10,000 together, and ſpread through a Country forty or fifty Leagues in extent. They might have as many of their Skins as they pleaſed, and ſome have been dreſſed, which have been very fine. They have there all Sorts of wild Fowl, as Swans, Buſtards, Geeſe, Cranes, Ducks, and thoſe of the ſmaller Kind in ſuch great Numbers, that when they riſe they darken the Sky, and make ſo loud a Noiſe, that they can ſcarce hear each other ſpeak. He ſays, that this may appear fabulous, but affirms, he ſays nothing but what he ſaw himſelf, for he would not truſt to the Report of others, but went himſelf to almoſt every Place he mentions. The River *St. Thereſa*, upon which they built *Fort Bourbon*, is a Branch of *Nelſon River*, by which the Natives come down to trade. This

River is of ſo great Extent that it paſſes through many great Lakes: The firſt is 150 Leagues from the Entrance of the River, and is 100 Leagues in Circuit; the Natives call it the *Lake of Forts* (or rather *Foreſts*). On the North Side a River diſcharges itſelf, called the *Rapid River*; this takes its riſe from a Lake 300 Leagues from the firſt, which they call *Michinipi*, or the *Great Waters*; becauſe, in effect, it is the greateſt and deepeſt Lake, being 600 Leagues in Circumference, and receives into it many Rivers, ſome of which have a Communication with the *Daniſh River*, and others with the *Plaſcotez de Chiens*: about this Lake and along theſe Rivers are many *Indians*, who call themſelves the *Nation of the great Waters*, or of *Aſſinibowls*; it is to be remarked, that theſe are as humane and affable, as the *Eſkimaux* are fierce and barbarous, as are alſo all other Nations along *Hudſon*'s Bay. At the Extremity of the *Lake of Foreſts* the *River Bourbon* continues its Courſe, and comes from another Lake, called *the Junction of the two Seas*, becauſe the Land almoſt meets in the Middle of the Lake; the Eaſt-ſide of this Lake is a Country full of thick Foreſts, in which are great Numbers of Beaver and Elks. Here begins the Country of the *Chriſtinaux*.

This is in a much more temperate Climate. The Weſt-ſide is full of fine Meadows, filled with wild Oxen. The *Aſſinibowls* live here; the Lake is 400 Leagues in Circumference, and 200 from the other Lake. 100 Leagues farther Weſt-ſouth-weſt along this River is another Lake, which they call *Ounipigouchib*, or the *Little Sea*; it is almoſt the ſame Country and Climate with the other, inhabited by the ſame *Indians*, the *Aſſinibowls*, the *Chriſtinaux*, and *Souteurs*; it is 300 Leagues in Circumference; at the further End is a River, which comes from *Tacamiouen*, which is not ſo great as the other; it is into this Lake that the *River of Stags* is diſcharged, which is of ſuch a Length that the Natives have not yet diſcovered its Source; from this River they can go to another, which runs Weſtward, but all the reſt run either into the Bay or River of *Canada*. He endeavoured to ſend the Natives to diſcover if it went to the Weſtward Sea, but their Enemies lying in the way prevented them; however, they brought ſome of them Priſoners, who ſaid they alſo were at War with another Nation farther Weſt; theſe ſaid they had Neighbours with Beards, who lived in Stone Houſes and Forts, that they were not clothed like them; that they had white Kettles; and ſhewing them a Silver Cup, they ſaid it was of that Metal; they ſaid they tilled their Land with Tools of that Metal. According to their Deſcription it was Maize they cultivated.

The Intendant of *Canada* was very deſirous to diſcover theſe Countries from thence; but it is much eaſier from *Fort Bourbon*, as it is ſhorter; and though a fine Country full of Beaſts and wild Fowl, beſides Fruit, which grow wild, as Plumbs, Apples, and Grapes, and great Variety of ſmaller Fruit. On the South-weſt Side of this Lake *Tacamiouen* is a River which comes from another, called the *Lake of Dogs*, which is not far from the ſuperior Lake. The River *St. Thereſa* is but half a League wide where the Fort is built; two Leagues higher is *Fort Philipeaux*, built for a Retreat; there the River begins to be interſperſed with Iſlands; twenty Leagues above the Fort the River divides into two Branches, one which comes from the North-weſt Side communicates with *Nelſon* or *Bourbon River*, by which the Natives come down to trade, by the Means of a Land Carriage from the *Lake of Foreſts* to this River. Twenty Leagues above the firſt Fork there is another that comes from the South-eaſt, which the Natives call *Guicomatouang*, or the *Great Fork*. This has a Communication with the River *St. Huiles*; the Weſtern Branch, though ſtill called *St. Thereſa*, is but of a ſmall Extent, coming from its Source by ſeveral ſmall Brooks, in each of which are great Numbers of Lynx, Beavers, Martins, and others of ſmaller Furs. Betwixt the two Forts is a ſmall River, called *Egaree*, from whence they get their Wood for firing, it being ſcarce at the Fort. Near the Mouth of the River is another ſmall one they call *Gargouſſe*; there comes in at hihg Water a great Number of Porpoiſes. The River being narrow here, there might be a good Fiſhing, where they might make above ſix hundred Barrels of Oil annually.

From this River of *St. Huiles*, or *New Severn*, is 100 Leagues South-eaſt. It is ſituated in Latitude 56 Degrees; the Entrance is but ſhallow, only capable of Veſſels of 60 Tuns: Here might be made good Houſes, for Wood is very plenty here; and there are great Numbers of Beavers higher up the River. As to the Climate of Fort *Bourbon*, it being in Latitude 57 Degrees, is very cold in Winter, which begins about Michaelmas, and ends in *May*. The Sun ſets about three, and riſes about nine in the Winter. When the Days grow a little longer, and the Cold is more temperate, the Sportſmen kill as many Partriges and Hares as they pleaſe. One Year, when they had eighty Men in Garriſon, they had the Curioſity to reckon the Number, which amounted to ninety thouſand Partriges, and twenty-five thouſand Hares. At the End of *April* the Geeſe, Buſtards, and Ducks, return in ſuch Numbers, that they kill as many as they pleaſe; they alſo take great Numbers of *Cariboux*, or Rain Deer; in *March* and *April*, they come from the North to the South, and extend then along the River 60 Leagues: They go again Northward in *July* and *Auguſt*; the Roads they make in the Snow are as well padded, and croſs each other as often as the Streets at *Paris*. The Natives make Hedges with the Branches of Trees, and leave Openings, in which they fix Snares, and thus take Numbers of them: When they ſwim the Rivers, in returning Northwards, the Natives kill them in Canoes with Lances, as many as they pleaſe. In Summer they have the Pleaſure of fiſhing, and with Nets take Pike, Trout, and Carp, and a white Fiſh ſomething like a Herring, by much the beſt Fiſh in the World: They preſerve thoſe for their Winter Proviſion, by putting them in Snow, or freezing them, as alſo the Fleſh they would preſerve. They keep thus alſo Geeſe, Ducks, and Buſtards, which they roaſt with the Hares and Partriges they kill in Winter. So that though it be a cold Climate, there is good Living there, by getting Bread and Wine from *Europe*.

Though the Summer be ſhort they had a Garden, and good Coleworts, with Sallads and ſmall Herbs, which they put in their Soups in Winter. He had 120,000 Livres Profit out of 8000 ſent him in Goods in one Seaſon; they have alſo Bears, Elks, and all Sorts of Beaſts, whoſe Skins and Furs are valued in *France*; and, according to him, it is one of the moſt profitable Poſts in *North America*, conſidering the Expence. Thus far this *French* Writer, from whom we have borrowed a very clear and copious Account of the Advantages that might have accrued to us, if our original Diſcovery of *Hudſon's Bay* had been properly conſidered.

But there were, and will be always, a Race of People decrying thoſe Projects they want Courage to attempt; and who, by ridiculing the Pains taken to viſit frozen Climates and barren Countries, hinder thoſe Improvements which might otherwiſe follow from ſuch kind of Expeditions. But they ought to conſider before they run down ſuch Attempts, that we have Numbers of poor People here who want Employment, and for whom Employments ought to be found; that if this be not done, they will either ſtarve to our ſhame, or ſtrike out Ways of living at our Expence; whereas, if they were thus employed, they would both maintain themſelves and benefit the Public: Beſides, there is this Advantage that attends Northern Expeditions and Diſcoveries, that they breed a Race of hardy and uſeful Seamen, who are nearer at hand, and conſequently more capable of ſerving their Country upon any Emergency than ſuch as are employed in other Branches of Navigation. As to the ſuppoſed Difficulties that are to be in this Way encountered, it is a Shame to hear them mentioned amongſt People who pretend to maritime Power.

If Men are afraid of Ice, Cold, and Rocks, they muſt relinquiſh all Thoughts of being great at Sea, and leave it to thoſe who can, not only endure, but even deſpiſe, ſuch Hardſhips; the *Dutch*, the *Danes*, and the *Hamburghers*, ſail every Year on the Whale Fiſhery, near

20 Degrees farther North than the Bottom of *Hudſon*'s *Bay*; and the *French* from *Canada*, travel through, and live in theſe very Countries of which we are ſpeaking, with as much Eaſe as the Savages themſelves; and, indeed, why ſhould they not, or why ſhould we imagine that one Man, or one Race of Men, can do more than another? Our Anceſtors were of this Opinion, or at leaſt they thought that if ſuch a Race of Men there were, they might be found in this Iſland: And here, if properly encouraged and due Regard ſhewn to their Virtue, they will be always found; for it is not the People but their Governors that alter, and therefore we have a Right to blame thoſe who took ſo little Notice of what Sir *Thomas Button* performed, and ſo little attended to what might be made of theſe Countries, as we certainly ought to commend ſuch as contrived or promoted the Law lately paſſed for encouraging private Perſons to attempt once more the Diſcovery of a North-weſt Paſſage, by ſecuring to them a Reward from the Public, which, without doubt, they will juſtly deſerve.

13. The next thing that occurs in order of Time, is the aſſerting our Right to that Part of the Continent of *America* which lies North from *New England*, and which is now called *Nova Scotia*, but was then looked upon as Part of *North Virginia*, and as ſuch within the Charter of the Weſtern Company, who gave ſtrict Orders to thoſe in their Service to prevent foreign Nations ſettling in their Limits; by which means this Country of *Acadia*, or *Nova Scotia*, which is of ſo great Conſequence in itſelf, and for the Secutity of our other Plantations on the Main, was preſerved. The Bounds of this Province are the Ocean to the North, *Cape Breton Iſland*, and the Bay of *St. Laurence* to the Eaſt, *Canada* to the Weſt, and *New England* to the South; it lies from 43 to 51 Degrees North Latitude, and from the River *St. Croix* the neareſt to *New Hampſhire*, to the great River of *St. Laurence*, has almoſt ſix hundred Miles of Coaſt, but moſt of it uninhabited and deſert, the *Indians* themſelves making little or no Uſe of it.

Sir *Samuel Argall*, then Governor of *Virginia*, made a Sort of cruizing Voyage round the Coaſt Northwards, as far as *Cape Cod* in *New England*, in the Year 1618, five or ſix Years before the *Engliſh*, who intended to ſettle, arrived in that Country. The *Indians* informed him that ſome white Men, like himſelf, were come to inhabit to the Northward of them. Sir *Samuel Argall*, who took all that Country, as far as it had been diſcovered by *Cabot*, to belong to the *Virginia* Company his Employers, ſailed thither, found a Settlement and a Ship riding before it, which belonged to ſome *Frenchmen*; *Argall* drew ſo cloſe to it, that, with his ſmall Arms, he beat all the Men from the Deck, ſo that they could not uſe their Guns, their Ship having but one Deck; among others there were two *Jeſuits* aboard, one of which endeavoured to fire off one of their Cannon, and was ſhot. *Argall* having taken the Ship, landed his Men, marched to, and ſummoned, the Fort to ſurrender: The *French* aſked Time to conſider of it, which was denied, upon which they got privately away, and fled into the Woods. The *Engliſh* entered it, and lodged there that Night, and the next Day the *French* came and yielded to Sir *Samuel*, cancelling the Patents that had been granted them for their Settlement by the *French* King. Sir *Samuel* permitted ſuch of the *French* as were ſo diſpoſed to take Paſſage for *Europe* in the fiſhing Ships, and took the reſt with him to *Virginia*, according to their Choice.

The *French* had another Settlement at a Place they called *Port Royal*, on a Bay on the South-weſt Coaſt of *Acadia*, which the two Jeſuits had left out of Pique to their Governor M. *Biencourt*; and with theſe *Frenchmen* ſeparated from the others. Father *Biard*, the ſurviving Jeſuit, out of Malice to *Biencourt*, informed Sir *Samuel* of the Settlement at *Port Royal*, and the Eaſe with which he might reduce it, which he found to be true; and, on the Surrender of the *French*, he did no Damage to their Houſes, their Barns, and Mills, but obliged them to quit the Country; they had ſowed and reaped, and thoſe of them that did not care to return home, removed to the River of *St. Laurence*, where now is the Capital of *Canada* or *New France*.

When Sir *Ferdinand Gorges* was Preſident of the *New England* Company, he propoſed to Sir *William Alexander* to procure a particular Grant for the Land to the Northward of their Patent, which was eaſily obtained of King *James* I. and a Year after, 1622, Sir *William*, and ſome others whom he had got to be concerned with him, ſent a Ship with Paſſengers to plant and ſettle there. *Newfoundland* was then very well known on account of the Fiſhery, and the Ship being late in her Voyage the Maſter put in and wintered there. The next Year they ſet ſail, and made the Promontory at the North Shore of *Cape Breton Iſland*: They coaſted it along till they came to *Cape Sable* in *Acadia*, where they found three good Harbours, and went aſhore at one of them, which they called *Luke's Bay*; in which was a large River that had eight Fathom Water at Ebb. This Ship ſailed up one of theſe, and, according to the Accounts that were publiſhed by thoſe that were to be Sharers in the Patent, this Country is deſcribed as a kind of Paradiſe: With a View, no doubt, to have engaged People to go over thither to ſettle, to which End Sir *William Alexander* the original Proprietor, afterwards created *Earl of Sterling*, wrote and publiſhed a Book, and his Sovereign King *James* erected a new Order, called the Knights of *Nova Scotia*, to facilitate this Plantation.

But, notwithſtanding all the Care that was taken of it, this Project proved abortive, and, which is very extraordinary, modern Authors have taught us to condemn and cenſure ſuch as foreſaw the Conſequence and Importance of this Country to the *Britiſh* Nation, when unſettled and unimproved, and to treat as weak and puſillanimous the Conduct of thoſe Times, when in full Peace the *French* were, by Force of Arms, compelled to quit a Country, which, though ſettled by them, was diſcovered by us; and from theſe Fugitives it was that the more Northern Settlement of the *French* took Birth. The Expedition of Sir *Samuel Argall* was certainly both a vigorous and a right Meaſure; and the Grant to Sir *William Alexander* was a very ſenſible thing, though the Deſign of it is now not well underſtood, or rather forgot; and therefore, though it may take up ſome Room, I ſhall endeavour to revive and to explain it. It was ſuggeſted to King *James* that the Tract of Country on the Continent of *North America*, belonging to his Crown, being very large and not likely to be planted in any reaſonable Space of Time by the *Engliſh*, it would be a very wiſe and prudent Meaſure to grant under the Great Seal of *Scotland*, a Part of it to his Subjects of that Kingdom, upon a Suppoſition that it would be more beneficial for them, and more for the Intereſt of the united Kingdoms if they went over and ſettled there, than if, as to that Time they had frequently done, they tranſported themſelves to *Poland*, *Sweden*, and *Ruſſia*, in which Countries there were at that Time many thouſand *Scotch* Families.

Such was the original Scheme of ſettling and planting *Nova Scotia*; and if the Courtiers of thoſe Times made a Jobb of this, and thereby defeated the Scheme; however this may reflect on their Memories, it ought to draw no ſort of Odium on the Project itſelf, which was very well and wiſely laid, if it had been as honeſtly and wiſely executed. There was afterwards another Grant made of the Northern Part of this Country, to Sir *David Kirk*, from whom the *French* King bought it, or at leaſt contracted to give him 5000*l.* for it; a very plain Proof that even the *French* acknowledged the Right by which he held it; and a *French* Nobleman likewiſe bought, many Years after that, Sir *William Alexander*'s Property. It may be enquired why the Crown of *England* did not interpoſe and prevent theſe Sales, as might, no doubt, have been done; and the plain Anſwer to this is, that the *French* Proteſtants being principally concerned in theſe Settlements, the Crown had a Tenderneſs for them.

But *Oliver Cromwell* ſent Major *Sedgwick* to diſlodge the *French* from *Port Royal*, which he did, and though the Protector afterwards conſented that a *French* Proprietor ſhould enjoy the Country, yet it was upon Condition that he ſhould make out this Right by Purchaſe from the Earl of *Sterling*; which he afterwards did, and then ſold it to Sir *Thomas Temple*, who was both Proprietor and Governor at the Reſtoration: After which the *French* ſettled there again, and remained there in quiet Poſſeſſion till the Year 1690, when they were diſpoſſeſſed by Sir *William Phips*, then Governor of *New England*; but it was afterwards given up again to the *French*, by King *William*'s Treaty of *Ryſwick*. It is not, however, to be underſtood that either King *Charles* II. or King *William* III. by their reſpective Treaties with *France*, gave up the Claim of this Nation to that Country, nor did the *French* ſo underſtand it, but only permitted that Poſſeſſion, becauſe, as the Circumſtances of things then ſtood, they were unwilling to conteſt it. In all theſe Changes, however, the Iſland of *Cape Breton* followed the Fate of *Nova Scotia*, and both continued in the Hands of the *French* till the Year 1710, when Governor *Nicholſon* made himſelf Maſter of *Port Royal*, which was become a Place of very great Importance in many Reſpects, more eſpecially in this, that it gave the *French* an Opportunity of diſturbing and diſtreſſing our Trade to ſuch a Degree, that it was very properly ſtiled the *Dunkirk* of *America*.

We need not wonder, therefore, that the taking this Place was looked upon as a very remarkable Service, or that the Queen ſhould beſtow her Name upon it to ſhew that ſhe never meant to part with it. Upon the ſame Principle, Colonel *Nicholſon* upon his Return to *England*, had a Commiſſion granted him to be Governor of *Nova Scotia*, and of *Annapolis Royal*, and Commander of all her Majeſty's Forces there and in *Newfoundland*. While things were in this Situation, a Negociation for Peace was ſet on foot, which afterwards produced one that has ſince made a great deal of Noiſe, more eſpecially with regard to the Stipulations therein, in reference to this Province; and therefore it is requiſite for us to ſee what relates to *Nova Scotia* in the *Utrecht* Treaty, the Words of which, in the twelfth Article, are, "All *Nova-*
" *Scotia*, or *Acadia*, with all ancient Boundaries, as alſo
" the City of *Port Royal*, now called *Annapolis*, and all
" other things in theſe Parts which depend on Lands
" and Iſlands, together with the Dominion, Property,
" Poſſeſſion of the ſaid Iſlands, Lands, and all Rights
" whatſoever, by Treaties or by any other Way obtained,
" *&c.*" To which the *French* King added the Excluſion of the Subjects of *France* from fiſhing on the Coaſt of *Nova Scotia*, and within thirty Leagues, beginning from *Cape Sable*, and ſtretching along to the South-weſt; there is no doubt but this Article, as it is worded, contains the Reſtitution of *Cape Breton*, which ought to have gone along with *Nova Scotia*, as it had hitherto done; neither is this a bare Conjecture, or my particular Notion, but the general Sentiment of ſuch as were beſt acquainted with this Affair, and with the Negotiation that concerned it; which induced the Queen, in her Inſtructions to the late Duke of *Shrewſbury*, when he went Embaſſador to *France*, to declare that ſhe looked upon *Cape Breton* to belong to her, and reckoned that Iſland a Part of the ancient Territory of *Nova Scotia*. But notwithſtanding this Article in the Queen's Inſtructions, the *French* were ſuffered to keep *Cape Breton*, but, moſt undoubtedly, this gave them no Right to it.

I am very far from thinking that in this Caſe, I mean in the Caſe of Plantations, Poſſeſſion is the only, or even the beſt Right, becauſe ſuch a Doctrine might confer Right upon Pirates. The beſt Claim of civilized Nations, with reſpect to new Countries, was always allowed to be the firſt Diſcovery. This Right is that on which is founded our Title, and very juſtly; for we have certainly diſcovered all the Countries that border on *Davis's Straits*, *Hudſon's Bay*, and ſo forwards to the Limits of *Georgia*; and this Right being in the Crown of *England*, and inherited with the Crown of *England*, could never be granted away, yielded to a foreign Power, or otherwiſe transferred, without the Conſent of Parliament; though the temporary Poſſeſſion might. For, in thoſe Treaties by which *Acadia* was left to *France*, the Crown only ſtipulated not to deprive the *French* of their Poſſeſſion, during the Continuance of the Peace, but the Right ſtill remained in us, and muſt always remain in us.

We have before ſhewn that the *French* acknowledged this, as appears by the King of *France*'s purchaſing under our Title; nor was it ever diſputed till the Treaty of *Utrecht*, that the Iſland of *Cape Breton* belonged to *Nova Scotia*; nor could it be diſputed, becauſe the very Charter which eſtabliſhed *Nova Scotia* as a diſtinct Province, included the Iſland of *Cape Breton* in expreſs Words. We may add to this, that our Title to *Labrador* or *New Britain* is unqueſtionable, of which Country *Nova Scotia* was a Part, till ſeparated by the Charter; and our Claim to *Newfoundland* has been always maintained, as we ſhewed in the former Section: So that on the whole it may be juſtly affirmed, that our Right to the Iſland of *Cape Breton* is as clear and as unqueſtionable as that of any *European* Nation to any of its Settlements in *America*, or elſewhere. But if it ſhould be demanded of what Uſe this Reaſoning is, I anſwer, that having now recovered the Poſſeſſion of that Iſland to which we had always a Right, and out of which we were cheated at the Treaty of *Utrecht*, the *French* have no Colour to demand the Reſtitution of it; nor is the Caſe the ſame now, that it was when King *Charles* II. concluded his Treaty in 1666, when King *William* concluded the Treaty of *Ryſwick*, in 1697, or when the Treaty of *Utrecht* was made by Queen *Anne*, in 1712.

14. We gave a large Account, in the former Section, of the Attempt made by that great Man, and good Patriot, Sir *Walter Raleigh*, to eſtabliſh an *Engliſh* Plantation in *Guiana*; and of his ſending, after his Return to *England*, a Ship to proſecute that Diſcovery: Of which ſecond Voyage we have likewiſe a long Account, publiſhed by Captain *Keymiſh*: But this Deſign met with continual Interruptions; or otherwiſe, Sir *Walter* himſelf tells us in his *Apology*, there had been, before the Death of Queen *Elizabeth*, a ſufficient Number of *Engliſh* ſettled in that Part of the World, to have ſecured the Poſſeſſion of it for ever to this Crown and Nation. The very next Year after Sir *Walter*'s Return, he was employed in the Expedition to *Cadiz*: The two following Years, his Time was taken up in that which was called the *Iſland Voyage*. Then the great Rebellion broke out in *Ireland*, which rendered Queen *Elizabeth* unwilling to encourage any private Expeditions that required a conſiderable Force; and this Rebellion laſted till the Queen's Death. Immediately after this, Sir *Walter* himſelf was impriſoned, and ſo continued for many Years. Which very fairly accounts for this noble Deſign remaining ſo long unpurſued.

But Things delayed are not always loſt; the Deſire of ſettling *Guiana* revived in a few Years after Peace was reſtored; and, as I do not know it has ever yet been done, I ſhall give a ſuccinct Account of the ſeveral Attempts made to carry this Deſign into Execution, to the Time they were wholly given over, and the ſmall Intereſt we had in that Part of the World ſurrendered up to the *Dutch*. In the Year 1604, Capt. *Charles Leigh* undertook a Voyage to *Guiana*, at his own, and his Brother Sir *Olive Leigh*'s, Charge: He had a Bark of about fifty Tons, called the *Olive-Plant*; and his Company, about forty-ſix Men and Boys. They ſailed from *Woolwich* the 21ſt of *March*, with a Deſign to make a more complete Diſcovery of the Country of *Guiana* than had been yet done, and to fix an *Engliſh* Colony there. On the 22d of *May* they came into the River of *Wyapoco*, in the Latitude of 8 Degrees 30 Minutes to the North of the Line, and the Town of *Wyapoco*, which lies on the Coaſt of *Guiana*, was the Place in which they intended to take up their Abode. Here the Captain came to an Agreement with the Inhabitants, who received him very kindly, that they ſhould allow him a good Space of Ground and ſome Houſes, for the preſent; in Conſideration of which he was to aſſiſt them againſt their inveterate Enemies the *Caribbees*, who greatly diſtreſſed them.

This Agreement was made by Means of two of the Natives of *Guiana* who had been in *England*, and could ſpeak ſome *Engliſh*; and for the better Security of Performance on the Part of the Ssvages, they conſented to give five of their Body, among whom were two Perſons of Note, as Pledges to be ſent to *England*. Their firſt Settlement was on part of the Mountain that lies on the Weſtſide of the Entrance of the River, to which they gave the Name of *Mount Howard*. The Captain might have lived here a very quiet Life, and been very uſeful to his Country too, had he not had a mutinous and diſcontented Company. The next Year after, he ſent his Ship to *England*, in the Month of *June*, for freſh Supplies of ſuch Things as he wanted, retaining thirty-five of his Men and Boys with him, to ſettle his ſmall Village, and thereby ſet this Colony upon a better Footing than it had till then been. They had ſome Trade with the Natives, as well round about their Settlement, as farther up the River; and the chief Merchandizes they obtained were Wax, fine white Feathers, Tobacco, Parrots, Monkeys green and black, Cotton, Yarn and Wool, ſweet Gums, red Pepper, Spleen and Maſate Stones; with ſeveral ſorts of Wood, Roots, and Berries, partly for Medicine, and partly for Dying; but the Flux, and other Diſtempers, carried off a good Number of the Company; and the Captain, being ſeized with it himſelf juſt as he was going on board for *England* to fetch a complete Loading of ſuch Things as were needful for his Colony, died of it. It was by this unhappy Stroke, the whole Undertaking was quaſhed, and every one ſhifted for himſelf; ſome returned to *England* in their own Veſſel, others in a *French* Ship, and others in two *Dutch* Ships, very much to the Regret of the *Indians*, and to the no ſmall Loſs of Sir *Olive Leigh*, and Detriment of the *Engliſh* Nation.

Sir *Olive Leigh* reſolving to ſupport his Brother in the Eſtabliſhment of his Colony at *Guiana*, before he had any Account of his Succeſs, fitted out another Ship called the *Olive Bloſſom*, under Capt. *Catalin* and Capt. *St. John*, to carry him a freſh Supply of Men and Neceſſaries. The Ship ſet out from *Woolwich* for *Wyapoco*, the 14th of *April*, 1605; but, between contrary Winds and Currents, by the Unſkilfulneſs of the Maſter, Mr. *Richard Chambers*, they were put ſo far to the Leeward, that they deſpaired of ever recovering their intended Port in any due time; and therefore they put in firſt at *Barbadoes*, and afterwards at the Iſland of *St. Lucia*, deſigning from thence to return to *England*: However, examining their Stores of Proviſions, and finding not near enough to ſerve ſo large a Company as they were, for ſo long a Voyage, Capt. *St. John* himſelf, with ſeveral of the Paſſengers to the Number of ſixty-ſeven, reſolved rather to ſtay, and take their Lot upon that Iſland, than to run the Hazard of their being ſtarved at Sea.

They ſoon made an Acquaintance with the *Indians*, who furniſhed them, in Exchange for Trifles, with Roots, Fruits, and ſome Fowls; and they every Night had an Opportunity, with very little Trouble, of taking delicate Tortoiſes upon the Sands; ſo that they were in no Want of Food. They lived five or ſix Weeks in little Huts, or Houſes which they had built, without making any Excurſions into the Country; but the Captain ſeeing one Day certain Plates of Metal upon the Arms of ſome of the *Indians*, and being informed by one *Brown* a Refiner in their Company, that they were at leaſt three Parts Gold; and enquiring of the *Indians* from whence they had it, they pointed to a very high Mountain, in the North-weſt Part of the Iſland. Upon this, the Captain himſelf, with ſeveral of the chief of his Men, went in queſt of this golden Mountain, the reſt being appointed to keep Guard at home, and aſſured they would return in a Week's time. When this Part of the Company was gone, the other expected the *Indians* would have brought them Proviſion, as they uſed to do; but they heard nothing of them for three Days together. They had it ſeems obſerved when the Captain went, followed him, and moſt barbarouſly cut him off with his whole Company.

They were now intent upon making the ſame Diſpatch of their Companions, and to this End had got one *Augramart*, a deſperate Savage, and Captain of the Iſland of *St. Vincent*, to head them in this Enterprize. To cover their Deſign, however, they carried it fair to them, and viſited them frequently; till one Day *Augramart*, having dined with them, would have the *Engliſh* go with him to his Quarters, where he promiſed to furniſh them with whatever Proviſions they wanted. Mr. *St. John*, with ſeventeen others, accepted of the Invitation; but inſtead of carrying them to their Quarters, they led them into an Ambuſh of five hundred Savages; where, being ſurrounded, and attacked on every Side with Vollies of Arrows, after doing all that Men could do in their own Defence, they were over-powered, and all ſlain but one *John Nichols*, who made his Eſcape from this bloody Slaughter, and was forced to hide himſelf in a Wood, then ſwimming a Lake, and ſo with great Difficulty returned home, juſt time enough to give his Companions the Alarm; for it was not long before they appeared before their Houſes; yet letting fly their ſmall Pieces of Ordnance they quickly marched off again. In two or three Days time they returned, to the Number of thirteen or fourteen hundred Men; who, after having attacked their little Fort and Houſes for ſeven Days together, with little Succeſs, thought of throwing in Fire with their Arrows, which in a ſhort time reduced the Habitations of the *Engliſh*, and all they had, to a Heap of Aſhes. They continued, however, to defend themſelves in ſo brave a manner, that the *Indians*, ſeeing they could not accompliſh their Deſign againſt this Handful of Men, reſolved at laſt to abandon the Enterprize.

After their Departure, ſome of the neighbouring Savages were prevailed upon, for a Reward of Hatchets, Knives, and Beads, to furniſh them with an old pitiful Boat; this they fitted up as well as they could, and nineteen of them, the miſerable Remains of ſixty-eight, of which twelve were wounded, ventured out to Sea in her, without Chart or Compaſs, and having only four or five Gallons of Water, with a few Plantains and Potatoes, about twenty Biſkets, and a little Rice; and, what was worſe than all the reſt, not one Mariner among them. In this little Boat they were ſo over-laden that her Gunnel lay almoſt even with the Water: They lived at Sea ten Days, four of them being obliged by Turns to keep ſcooping of the Water. The tenth Day, when all Hopes began to fail them, they diſcovered Land; but when they came upon it the Land proved to be an uninhabited Iſland, which afforded no manner of Suſtenance. In this miſerable State they had no Remedy, but to repair their Boat again as well as they could, and to ſend five of their Men to the Continent to ſeek Relief. After many Difficulties theſe Men came to an *Indian* Town on the Continent, called *Tocoyo*; from whence, after fifteen Days Abſence, they carried Succour to their miſerable Companions. They were now reduced to thirteen, who got together to a *Spaniſh* Town, called *Coro*, where they were treated with great Humanity; two more of them died; three of them went from thence to *Carthagena*, and were followed thither by two more, where they procured a Paſſage to *Spain*; but what became of the reſt does not any where appear.

One would have imagined, that ſuch a Series of Miſfortunes as had attended the Attempts made for eſtabliſhing this Settlement, would have worn out all Deſire of running further Hazards; but ſuch was the Credit of Sir *Walter Raleigh*, ſuch the ſettled Opinion of the vaſt Riches to be found in this Part of *America*, and ſuch the Remains of that Spirit which prevailed through the whole Nation in the Time of Queen *Elizabeth*, that in the Year 1609, a new Attempt was made, at a much greater Expence than the former, with the Participation, at leaſt, if not under the Influence of Sir *Walter Raleigh*. This Voyage was performed under the Direction and Command of *Robert Harcourt* of *Stanton-Harcourt*, in the County of *Oxford*, Eſq; and the Veſſels employed in it were, the *Roſe*, a Ship of eighty Tons; the *Patience*, a Ship of ſix-and-thirty Tons; and the *Lilly*-Shallop, of nine Tons. They ſet ſail from *Dartmouth* the 29th of *March*, and arrived the 17th of *May* in the Bay of *Wyapoco*. It was not long before ſeveral Canoes of *Indians* came to ſee what they were; and finding they were *Engliſh*, came on board them without any Fear or Ceremony: Such an advantageous Idea had Sir *Walter*

Raleigh by his courteous Behaviour imprinted in them of the *Engliſh* Nation.

Theſe People, who were very forward and ready to traffic with the *Engliſh*, were of the Town called *Caripo*, on the Eaſt Side of the Hill, at the Mouth of *Wyapoco*-River. Their King, or Chief, who had been many Years in *England*, was then with Mr. *Harcourt*, and another of his Countrymen came Paſſenger with him, though he had not diſcovered his Quality, till the Joy of his Subjects at the Sight of him made him known. Among the *Indians* who came firſt on board was one who ſpoke the *Engliſh* Tongue perfectly well, and was known to ſome of the Ships Companies, having ſerved Sir *John Gilbert* in *England* many Years; and the *Indian* who accompanied the King or Chief, having been fourteen Years in *England*; theſe two were of ſingular Service to the Adventurers.

The firſt Ceremonies being paſt, Mr. *Harcourt* acquainted them that the Occaſion of his coming among them was to ſettle a Colony there, and to take Poſſeſſion of the Country for the King of *England*, by virtue of their Grant of it to Captain *Leigh*, and by ſome of their Countrymen before to Sir *Walter Raleigh*; aſſuring them at the ſame time, that his Majeſty intended no unjuſt Uſurpation over them, nor to treat them in any way like Slaves and Vaſſals; but only to be their Friend and Protector, and to deliver them from the Inſolencies and Oppreſſions of the *Caribbees*. After ſome Debate the *Indians* gave their Conſent that they might live among them, and promiſed to furniſh them with Houſes, and all other Neceſſaries, as far as they were able; but could not forbear expreſſing ſome Diffidence in their performing their Promiſes, ſince Sir *Walter Raleigh* had been ſo dilatory in his accompliſhing thoſe he made them.

This being done they all went aſhore, where they met with the beſt Reception the *Indians* could give them; and were diſperſed up and down the Town, on the Side of a Hill, while their Ships rode at Anchor at the Foot of it. The great Rains, which confined them near a Month, being over, the Captain ſet himſelf to diſcover the Golden Mountains, which had been the Spurs to this Undertaking; but their Guide, who had promiſed ſuch great Things, failed in the Performance of them, and either had wilfully deceived them, or had been deceived himſelf; for when he came to the Spot he had built his Hopes upon, nothing was to be found: And yet they were convinced the Country afforded Gold, as well by the Aſſurances given them by the Natives, who ſhewed them certain Images, which upon an Eſſay appeared to contain at leaſt one third Gold, as by ocular Demonſtration of great Quantities of the white Spar in which the Gold is contained, and which they found to hold both Gold and Silver; but they had Reaſon to believe theſe Mines were too far up in the higher Parts of *Guiana*, and perhaps too ſtrongly guarded for them to hope they ſhould be able to reach them. And, beſides, they had then neither Time nor Power to ſearch in the Manner requiſite for finding theſe Mines.

This Diſappointment had like to have excited a Mutiny, among thoſe who came out with no other View than to tumble at once into Riches; but the Captain, with great Prudence and with no leſs Conduct, prevented its running ſuch a length; and to keep them employed, not only went himſelf up the River of *Wyapoco* upon Diſcovery, but ſent his Brother with ſome others on the ſame Errand to the River *Arrawary*, and the Country bordering upon it, which adjoins to the River of *Amazons*. He went alſo and took Poſſeſſion of the Mountain *Gomoribo*, which is the utmoſt Point of Land to the Northward in the *Wyapoco*. This he did, according to Cuſtom, by the Ceremony of Twig and Turf, in the Preſence both of his own People and the *Indians*. After Poſſeſſion taken, the Mountain was delivered over to an *Indian*, to hold and poſſeſs the ſame for himſelf and his Heirs, of his Majeſty *James* King of *England*, paying the yearly Duty of a tenth Part of the Tobacco, Cotton, Wood, Annotta, and all other Commodities growing within the Limits of the ſame. The Attempt of the Captain's Brother, and Captain *Harvey*, in Diſcovery of the River *Arrawary*, was attended with great Difficulties and Hazards; for the length they run by Sea to this River was near one hundred Leagues, through terrible Breaks of Flats and Sholes. They went likewiſe fifty Leagues up the River, and all this only with flat-bottom'd Canoes, ſomething longer than the common *Thames* Wherries, but not ſo broad.

The *Indians* they met with in this River plainly diſcovered they had never ſeen any *Europeans* before. It was long before they could be brought to any ſort of Trade or Converſation with them, though they had other *Indians* in their Company: But at laſt the Sight of their Toys wrought upon them, and induced them to exchange for Proviſions; a Want of which however at laſt obliged them to return to *Wyapoco*. They took Poſſeſſion nevertheleſs of the Country in Form, as Mr. *Harcourt* had done of *Gomoribo*. Not long after this, Mr. *Harcourt* was obliged to return for *England*, purely for fear of wanting Caſks to contain ſufficient Beer and Water for the Voyage, the Maſter having neglected to have his Caſks Iron-bound before their Departure, which occaſioned many of them to burſt their Hoops in that hot Country.

Mr. *Harcourt* left his Brother to command in Chief in his Abſence, to whom Captain *Harvey* was joined as Aſſiſtant, and Mr. *Gifford* as his Lieutenant, and with them he left fifty or ſixty of his Men. He departed the 18th of *Auguſt*; and Mr. *Harcourt*, in his Way homewards, made ſeveral Diſcoveries upon the Coaſt, and in ſome of the Rivers; returned to *Ireland* the 29th of *November*, and came from thence to *England*. Being come to *London*, by the Favour of Prince *Henry*, he obtained a large Patent for all that Coaſt, called *Guiana*, together with the famous River of *Amazons*, to him and his Heirs: But he was involved in ſo many Troubles, that he was not able to ſupply his Colony, and only ſent over ſome few People, with eighteen *Dutchmen*, but to little Purpoſe. Captain *Harcourt*, however, kept Poſſeſſion of that Part of the Country in which he was ſettled for full three Years, in all which Time he loſt but ſix of his People.

The Reader will obſerve, that we have now brought down the Hiſtory of our Expeditions to *Guiana* from 1595 to 1612, which is within five Years of Sir *Walter Raleigh*'s laſt Embarkation. It is however certain, that ſome other Voyages had been made to this Country: For Sir *Walter Raleigh*, in his Apology, ſays, that the *Spaniards* at St. *Thomas*'s had, ſome Years before his laſt Attempt, murdered many *Engliſh*, under pretence of trading with them, and ſome of thoſe who were thus murdered he mentions by Name. He had ſuffered a very long Impriſonment in the Tower of *London*, when, by the Help of many Friends, and perhaps by the laying out of a great deal of Money, he procured his Liberty, and therewith a Commiſſion to execute his laſt Expedition to *Guiana*. In order to this, he turned into Money the beſt part of his own Fortune, which he employed in fitting out Ships for this Service. He engaged many of his beſt Friends to do the ſame; and embarked ſeveral of them, and his own eldeſt Son, on board the Fleet; and all this from a Perſuaſion that the Country he was going to was very rich in Gold, and if they could gain Poſſeſſion of it, would make all their Fortunes.

The famous Count *Gondomar*, who was then the *Spaniſh* Embaſſador here, and, as all the World knows, had a great Influence over King *James*, did all that lay in his Power to hinder this Expedition; and as he did not ſucceed therein, it very plainly proves that King *James* did not credit what he ſuggeſted to the Prejudice of Sir *Walter Raleigh*. And indeed what he gave out upon this Subject, of Sir *Walter*'s having no Intention to make either Diſcovery or Settlement, but merely to engage in a piratical Attempt upon the *Spaniſh* Colonies in *America*, was abſurd and ridiculous, ſince no Man had ever a meaner Opinion of ſuch Exploits, or had ſo fully expoſed the Folly of hoping for great Riches from the Plunder of *Spaniſh* Towns, than Sir *Walter* had done. But in all Probability the *Spaniſh* Miniſter had not ſo much in view the making theſe Suggeſtions of his paſs for Truth, as obtaining, by this Means, under Colour of reſenting this Charge, a diſtinct Account of Sir *Walter*'s true Deſign, and of the Force with which he was to undertake it; in which he had but too great Succeſs; for Sir *Walter* giving the King a ſhort but true Scheme of what he intended, that very Paper was delivered to the *Spaniſh* Embaſſador, and found its Way to *Guiana* long before Sir *Walter Raleigh*.

The Commiſſion granted to this excellent Man was very full, and free from Limitations, which has been generally underſtood to be deſigned to his Prejudice. But I muſt confeſs I ſee no Reaſon for that Opinion. On the contrary, I am perſuaded that Sir *Walter* himſelf was well ſatisfied with his Commiſſion; and that in reſpect to the Law of the Land, and the Law of Nations, it fully juſtified the Deſign he went upon, and all that followed in the Execution of it. Certain it is that the Contents of his Commiſſion were no Secrets, ſince, by publiſhing them, he brought Numbers at home and abroad to ſubſcribe large Sums towards the Support of his Undertaking; which he could never have done, if the Form or Words of that Commiſſion had been liable to Exception. It was ſeven Months after his Commiſſion was granted before his Fleet was in Condition to put to Sea.

As to the Strength of this Fleet, it is clear from a Survey taken by the Order of the Earl of *Nottingham*, then Lord High-Admiral, that it conſiſted of ſeven Sail, of ſeveral Sizes. It appears that the firſt of them, or Admiral, a fine Ship built by *Raleigh* himſelf, was named the *Deſtiny*, of four hundred and forty Tons, and thirty-ſix Pieces or more of Ordnance, Sir *Walter Raleigh* General, and his Son *Walter* Captain, beſides two hundred Men, whereof fourſcore were Gentlemen Volunteers and Adventurers, moſt of them Sir *Walter*'s Relations; which Number was afterwards increaſed. Second, the *Jaſon* of *London*, two hundred and forty Tons, and twenty-five Pieces of Ordnance, Captain *John Pennington* Vice-Admiral, eighty Men, one Gentleman, and no more. Third, the *Encounter*, one hundred and ſixty Tons, ſeventeen Pieces of Ordnance, *Edward Haſtings* Captain (no Men more except the Maſter mentioned); but he dying in the *Indies*, was ſucceeded in the Command by Captain *Whitney*. Fourth, the *Thunder*, one hundred and fifty Tons, twenty Pieces of Ordnance, Sir *Warham St. Legar* Captain, ſix Gentlemen, ſixty Soldiers, ten Landmen. Fifth, the *Flying-Joan*, one hundred and twenty Tons, fourteen Pieces of Ordnance, *John Chidley* Captain, twenty-five Men. Sixth, the *Southampton*, eighty Tons, and ſix Pieces of Ordnance, *John Bayley* Captain, twenty-five Mariners, two Gentlemen. Seventh, the *Page*, a Pinnace, twenty-five Tons, three Rabnets of Braſs, *James Barker* Captain, and eight Sailors. But before *Raleigh* left the Coaſt of *England*, he was joined by as many Ships more; ſo that this whole Fleet conſiſted of thirteen Sail, beſides his own Ship.

But for this remaining Part of his Fleet he waited long, and it had been better if he had left them behind, for they proved a Burden to him, and ſome of them deſerted the Expedition. It was the Beginning of *July* before he left the Coaſt of *England*, and meeting with a Storm, was obliged to put into *Cork*, from whence he ſailed on the 19th of *Auguſt* following. He proceeded from thence to the *Canaries*, where, though inſulted by the *Spaniards*, he committed no Hoſtilities; but, on the contrary, behaved ſo well that he obtained a Certificate thereof from the Governor. After this his Ships grew very ſickly; and before he arrived at *Trinidada*, he had loſt many of his Men, and was himſelf dangerouſly ill. In this weak and low Condition they arrived at the North Cape of *Wyapoco* on the 11th of *November*.

The firſt thing he did after his Arrival was, to endeavour to find out *Leonard* the *Indian*, who had been in *England* three or four Years with him, but was removed ſo far up into the Country there was no procuring him; therefore he ſtood away for *Caliana* on the Coaſt of *Guiana*, at the firſt Diſcovery called *Port-Howard*, where the Cazique was alſo his Servant, and had lived with him in the Tower of *London* two Years. There he arrived in a Day or two, having paſſed the Iſland noted for its Multitude of Birds and Silk-bearing Trees; and from thence ſent for his Servant, *Harry* the *Indian*, who with other Caziques came and brought him great Store of Caſſavi-Bread, and roaſted Mullets, with Plantains, Pines, and Piſtachio's. But *Raleigh* ventured not to eat of the Pines, which tempted him exceedingly, till after a Day or two's airing on the Shore, in a Tent which was there pitched for him. Then he alſo eat ſome Armadillo and a little Pork, and begun to gather Strength. Here he alſo landed his ſick Men, and recovered many; and here he buried Captain *Edward Haſtings*, (the Lord *Huntington*'s Brother) who died ten Days, or more, before; and with him his Serjeant-Major *Hart*, and Captain *Henry Snedale*, the Charge of whoſe Ship *Raleigh* gave to his Servant Captain *Robert Smith* of *Cornwall*. Here he alſo ſet up his Barges and Shallops, which they brought from *England* in Quarters, cleanſed his Ship, trimmed up his Caſks and ſupplied them with Water, fixed up a Forge, and made ſuch Iron Works as they wanted. Thus on that Shore and this River they employed and refreſhed themſelves for about three Weeks, during which time *Raleigh* was very much careſſed by the *Indians*, of his old Acquaintance aforeſaid, and other Natives of this Place, who furniſhed him daily with the beſt Proviſions that the Country yielded, and offered him all kind of Obedience, even to the making him their Sovereign Prince and Ruler, if he would abide and ſettle among them; ſo freſh continued his Memory, and ſuch Impreſſions of Homage and Reſpect had his former Behaviour ſtill left upon them; which Offer, he mentions, with the greateſt Modeſty and Deference, in the Diſpatch he ſent ſoon after this to *England*.

On the 4th of *December* they left this River, and on the 5th came to the Triangle Iſlands, where *Raleigh*'s Ship ran on Shore; and was, with Difficulty, got off. Here they held a Council to conſider what they ſhould do next, and as Sir *Walter* was extremely ill, and it was found impoſſible to carry the larger Ships any higher, it was reſolved that the five ſmaller Veſſels, with as many Companies of Foot, of fifty Men each, ſhould enter the River. According to this Determination the Fleet was divided; that is to ſay, Captain *Whitney*, in the *Encounter*; *Woolaſton*, in the *Confidence*; *King*, in the *Supply*; *Smith*, in a *Prick*, and *Hall* in a *Caravel*. The Companies had for their Leaders Captain *Charles Parker* and Captain *North* (Brothers to the Lord *Mounteagle* and the Lord *North*) young *Raleigh*, Captain *Thornhurſt* of *Kent*, Captain *Pennington*'s Lieutenant, who ſeems to be another *Hall*, and Captain *Chidley*'s Lieutenant *Prideaux*. Sir *Warham St. Legar*, *Raleigh*'s Lieutenant, who had the Charge of theſe Companies, fell ſick at *Caliana*, ſo it was conferred on *George Raleigh*, Sir *Walter*'s Nephew, who had ſerved with great Commendation in the *Low Countries*; and Captain *Keymiſh* had the chief Charge for their landing within the River: But *Keymiſh* having laid down the Plan of his intended Attempt upon the Mine, and undertaking to diſcover it with ſix or eight Perſons in Sir *John Ferne*'s Shallop; *Raleigh*, upon Conſideration, diſliked that Method of Procedure, determined to alter it, and therefore gave him his Inſtructions to go to the Mine, bring him a Sample, and avoid fighting the *Spaniards* if poſſible.

With theſe Inſtructions thoſe five Ships ſet forward, parting from *Raleigh* and the reſt of the Fleet at the Iſlands aforeſaid, with a Month's Proviſion, on the 10th of *December*. But when they found a new *Spaniſh* Town, called *St. Thomas*, conſiſting of about one hundred and forty Houſes, though ſlightly built, with a Chapel, a Convent of Franciſcans, and a Garriſon, erected on the main Channel of *Oranoco*, about twenty Miles diſtant from the Place; where *Antonio Berreo*, the Governor, taken by *Raleigh* in his firſt Diſcovery and Conqueſt here, endeavoured to plant; *Keymiſh* and the reſt, thought themſelves obliged, through fear of leaving the Enemy between them and the Boats, to deviate from their Inſtructions, which enjoined them firſt to take a ſmall Party to make Trial of the Mine, under a Shelter of their own Camp; and then to deal with the Town as it ſhould give Cauſe; ſo they concluded to land in one Body, and encamp between the Mine and the Town, whereby they themſelves were nothing ſtronger, their Boats were as much expoſed, and the Mine left untried, contrary to *Raleigh*'s Order.

For about three Weeks after their Departure, landing by Night nearer the Town, it ſeems, than they ſuſpected, and meaning to reſt themſelves by the River-ſide till the Morning, they were, in the Night time, ſet upon by the *Spaniſh* Troops, apprized of their coming. This Charge was ſo unexpected, and ſtruck the common Soldiers with ſuch Amazement, that had not the Captains and ſome other valiant Gentlemen made a head, and animated the reſt, they had all been cut to pieces: But the reſt, by their Example, ſoon rallying, made ſuch a vigorous Defence againſt the *Spaniards*, that they drove them to a Retreat; till, in the Warmth of their Purſuit, the *Engliſh* found themſelves at the *Spaniſh* Town before they knew where they were. Here the Battle was renewed, being aſſaulted by the Governor himſelf, Don *Diego Palamecca*, and four or five Captains at the Head of their Companies; againſt whom Captain *Walter Raleigh*, a brave and ſprightly young Man, now twenty-three Years of Age, not waiting for the Muſketeers, ruſhed foremoſt at the Head of a Company of Pikes, and, having killed one of the *Spaniſh* Captains, was mortally wounded by another; but preſſing ſtill on with his Sword upon *Erinetta*, probably the Captain who had ſhot him, this *Spaniard*, with the butt End of his Muſket, felled him down to the Ground; and after theſe Words, *Lord have Mercy upon me, and proſper your Enterprize*, young *Raleigh* ſpoke no more: Hereupon *John Pleſſington*, his Serjeant, thruſt the *Spaniſh* Captain through with his Halbert. Two Commanders more of the *Spaniards* were ſlain, one by *John* of *Morocco*, another of young *Raleigh*'s Company, and laſtly the Governor himſelf alſo loſt his Life in the Engagement; which happened, as *Cambden* informs us, upon the 2d of *January*.

The Leaders being all thus diſpatched, and many of their Soldiers, the reſt diſperſed; ſome took Shelter about the Market Place, from whence they killed and wounded the *Engliſh* at Pleaſure, ſo as they ſaw no Way left to be ſafe but by burning the Town down about their Ears, and driving them into the Woods and Mountains, whence they ſtill kept the *Engliſh* waking in perpetual Alarms; others were more careful to defend their Paſſages to their Mines, of which they had three or four not far diſtant, than they had been to defend the Town. Captain *Keymiſh* found the Paſſages, leading to the Mine he had in his Eye, very difficult, and the Rivers ſo low, that he could not approach the Banks, in moſt Places near the Mine, by a Mile; and where he found an Aſcent, a Volley of Muſkets came from the Woods, and at one time ſlew two of the Rowers, hurt ſix others, and wounded Captain *Thornhurſt* in the Head. *Keymiſh* ſeeing ſo much Hazard in attempting to find the Mine, the Paſſage to it being full of thick and unpaſſable Woods; and thinking the *Engliſh*, who were left at *St. Thomas*'s, would not be able to defend it, eſpecially if the Enemy ſhould be recruited, the Country being all in alarm, he gave over the Enterprize and returned. Beſides the Difficulty of finding the Mine, he pretended, that if he had found it, he had not a Man to work it; and, being a great Way up in the Land, Men would have been got thither with great Danger and Difficulty: But this ſhould have been thought of before; and it was ill adviſed to take ſo much Pains, and run ſo much Hazard, to get and poſſeſs that, which when they had it they could not make Uſe of; ſo that which *Keymiſh* pleaded, when he returned, for an Excuſe, reflected upon him as a great Miſcarriage.

Sir *Walter* very much blamed him for it, and, among other things, told him if he had but brought one hundred Weight of the Ore, though with the Loſs of one hundred Men, it would have given the King Satisfaction, and preſerved his Reputation; and beſides, would have given the Nation Encouragement to have returned the next Year with a greater Force, and have held the Country for his Majeſty, to whom it belonged. As ſoon as they returned to *St. Thomas*'s, the *Engliſh* pillaged the Town, carried away the beſt and moſt portable things; and the Enemy not daring to appear for the Redemption of it, they ſet it on fire, leaving behind them an infinite Maſs of Treaſure, which, either for want of Knowledge or Power, they could not attain. Sir *Walter*, upon the News of his Son's Death, and *Keymiſh*'s Return, finding himſelf diſappointed thereby of his Hopes, was perplexed to the very Soul, and threatened *Keymiſh* with the King's Indignation, telling him he had undone him, and wounded his Credit with his Majeſty paſt Recovery. This had ſuch an Effect upon him, that it threw him into Deſpair, and a few Days after he made away with himſelf. Some ſay he retired immediately into his Cabin and ſhot himſelf, with a Piſtol, into the Body; but that being too ſlow for his Fury, deſperately thruſt a large Knife into the ſame Wound up to the Haft.

Theſe Accounts may be ſaid both to be true, for, after Sir *Walter*'s firſt Reproof, he went away diſcontented, and continued ſo ſeveral Days. He came then a ſecond Time with his Excuſes, and ſhewed him a Letter which he had written to the Earl of *Arundel*, in his own Juſtification, praying Sir *Walter* to allow of his Reaſons, which he refuſing, and telling him he would not favour or colour his Folly; upon that he retired into his Cabin, and immediately committed the Fact. The Deſign being thus defeated, the Ships leaky, Victuals failing, and, above all, having miſſed thoſe golden Showers they gaped after, ſome of the Men began to mutiny againſt their General, while others were for him; ſome would have him go home, others ſtay; the major Part forced him not to go home, but with their Conſent, and yet his Ships ſlipped away one after another, till from ten they were reduced to four, and thoſe on board would do juſt what they liſt: Some would go to *Italy*, ſome for *France*, and ſome few for *England*. When they arrived at *Kinſale* in *Ireland*, Sir *Walter*, it is pretended, would have perſuaded them to go with him to *France*; but inſtead of liſtening to this Propoſal, they carried him, againſt his Will, to *Plymouth*, where he was arreſted by Sir *Lewis Stukeley* his Kinſman, by the King's Order, and conveyed to the Tower of *London*.

All the World knows what followed afterwards, when, under Colour of his former Judgment, Sir *Walter* was put to Death on the 29th of *October*, 1618; an Action ſo black and baſe, ſo mean, ſo unworthy of a Government, and ſo utterly inexcuſable, that one really wants Words to expreſs the Foulneſs of the Action; but with regard to the Cauſe of his Death, or rather with reſpect to the Manner of it, I differ ſomewhat in my Judgment from moſt of thoſe who have written about it; and therefore I ſhall take the Liberty of explaining myſelf upon it, in as few Words as I can. It is very certain that King *James* was very well ſatisfied that the firſt Judgment againſt Sir *Walter Raleigh*, at *Wincheſter*, was very ill founded; and of this *Raleigh* himſelf was ſo ſenſible, that he neglected obtaining a Pardon before he left *England*, which he might have obtained for 700 *l.* When he came back, it was reſolved to ſacrifice him to the *Spaniſh* Match, to the Fears of King *James*, and the Jealouſies of his Miniſters; and, in order to this, without doubt, it was intended a new Proſecution ſhould commence; and in that Caſe there is the greateſt Reaſon in the World to believe no Jury would have found him guilty; but Sir *Walter Raleigh*, from an Eagerneſs to defend himſelf, wrote an Apology, in which he moſt clearly proved that *Guiana* belonged to the Crown of *England*; that his going thither was no Breach of Treaty; that the *Spaniards* in *America* always behaved towards the *Engliſh* as Enemies, and conſequently ought not to be conſidered as Allies; that his whole Deſign was betrayed to them from the Beginning, which occaſioned their ſending Forces into thoſe Parts, and all the Blood-ſhed that afterwards happened; that even in reſpect to this the *Spaniards* were Aggreſſors; and that, throughout the whole Expedition, he had done nothing but what he was warranted to do by his Commiſſion. This it was that drove the Miniſtry from their firſt Purpoſe, and forced them upon that Meaſure, which they afterwards took, of calling him down to his former Judgment, contrary to

Law, Reaſon, Juſtice, and the King's own Senſe of the Thing, as he afterwards teſtified under his Hand.

But, however, though by this barbarous Meaſure our great Diſcoverer loſt his Head, yet the Title of the Crown of *England*, to his Diſcovery, remained abſolutely unimpeached, as appears clearly by King *James*'s granting a new Commiſſion to Captain *Roger North*, for ſettling in *Guiana* a Year after *Raleigh*'s Death; which, however, he afterwards recalled by a Proclamation, and ſent the Lord *North*, who was at the Expence of that Expedition, to the *Fleet*, for making too much Diſpatch in it. Such a Fluctuation of Councils there muſt always be, where a foreign Intereſt is regarded, as the Caſe was then, when the Politics of *Britain* were dictated by *Spain*. Yet even this did not put an End to all Thoughts of maintaining the Rights of the Crown of *England* to this valuable Country, where the People ſtill remembered, and enquired after, Sir *Walter*, when he had been many Years in his Grave.

The Accounts we have, however, of theſe Expeditions are ſo imperfect, that we can ſay very little with Certainty till after the Reſtoration; when the Lord *Willoughby*, who was Governor of *Barbadoes*, obtained a Grant from King *Charles* II. of this Country, and actually made a conſiderable Settlement on the River of *Surinam*, where they might have continued much longer than they did, if it had not been for their own Indiſcretion. For when the firſt *Dutch* War broke out, in which the *French* took Part with the Republic againſt us, both theſe Nations would have conſented to a Neutrality in thoſe Parts; but our People were bent upon a War, which turned to their Ruin. For the Coaſt of *Guiana*, from *Cape Orange* to near the River *Oronoco*, was, about the Year 1666, poſſeſſed by three *European* Nations: The *Dutch* were about the River *Aproague*; the *French* had the Iſland of *Cayenne*, and the Rivers of *Ovia*, *Corrou*, and *Sinamary*; this laſt is about twenty-five Leagues North-weſt from *Cayenne*, and fifty-three Eaſt from *Surinam*; and the *Engliſh* had a ſmall Colony and Redoubt on the River *Maronny*; their chief Settlement being then at *Surinam* River, which is ſo good and deep, that ſhips of three hundred Tons run twenty Leagues up it. The *Zealanders* were poſſeſſed of the River *Berbiche*, and had repulſed the *Engliſh*, who attacked them there, with conſiderable Loſs.

The ſame Year, 1666, the States of *Zealand* being provoked at the *Engliſh* having invaded and taken from them all the Lands they had been poſſeſſed of in *America*, except the River *Berbiche*, ſent thither Commodore *Creiſſen*, with four Men of War, and three hundred Men to attack *Surinam*. He ſailed from *Zealand* at the latter End of *January*; arrived at *Cayenne* in *March*; went thence for *Surinam*; ſailed up the River under *Engliſh* Colours, and came to the Fort of *Paramorbo*, three Leagues up the River, without being taken for an Enemy; but being diſcovered there for want of Signals, the Fort began to fire on his Ships, which he anſwered with Broadſides from all the Veſſels, and immediately landed his Forces. The *Engliſh*, who had lived long in profound Security, found themſelves too weak, and the Fort in no Poſture of Defence on the Land-ſide, and their Habitations being diſperſed along the River for thirty Leagues up, the Fort could not be ſuccoured but by Water, where the *Zealanders* were Maſters: Upon which Conſideration they ſurrendered it, capitulating for the Inhabitants of the River of *Surinam*, and thoſe of *Kamomioque*; ſtipulating that all thoſe who ſhould take the Oath of Fidelity to the States of *Zealand*, ſhould enjoy their Eſtates peaceably; the Habitations of ſuch as abſented themſelves, and thoſe belonging to the Lord *Willoughby*, ſhould be forfeited to the ſaid Eſtates; all Foreigners who had no Eſtates there, ſhould remain Priſoners of War; and all the *Engliſh* to be obliged to deliver up their Arms. When the Capitulation was executed, *Creiſſen* put aboard a Fly-boat he had taken in the River, the moſt valuable Part of the Booty he found in the Places that were confiſcated, and the Priſoners aboard a Man of War; and after cauſing the Fort to be repaired, and put into a Poſture of Defence, and leaving it in the Hands of Sieur *de Rome* with one hundred and fifty Men, he ſailed for the Iſlands.

Afterwards, when the Peace was made at *Breda*, it was agreed, That the *Dutch* ſhould keep *Surinam*, and that in return we ſhould keep *New York*, which was then called the *New Netherlands*. Thus we have traced this Point fairly, from beginning to ending; from the firſt Settlement, nay from the very firſt Thoughts of a Settlement, to the giving up of all the Settlements we then had, and which might be ſtyled the Legacy of *Raleigh* to this Nation, into the Hands of the *Dutch*. It may not be amiſs, however, before I quit the Subject, to obſerve that the *Dutch* have ſucceeded very happily in a Plantation that was not very beneficial to us; and that if ever we ſhould be inclined to try our Fortunes again upon this Coaſt; for without queſtion our Ceſſion of *Surinam* does not preclude us from viſiting the reſt of *Guiana*; if this, I ſay, ſhould ever be attempted, it muſt be either by the *South-Sea* Company, or under their Licence, ſince all this great Country, as well as many other valuable Places, lye within their Charter, which covers them from all the reſt of this Nation, and leaves them open only to all the World beſides.

15. We are now to paſs to the Mother-colony of that which we mentioned laſt, the famous Iſland of *Barbadoes*, which may be juſtly eſteemed the faireſt, beſt peopled, and beſt cultivated Spot of Ground, not in *America* only, but in the whole known World: When, or by whom, it was firſt diſcovered, is a Point not eaſily ſettled, and, in my Judgment, cannot be determined at all, farther than by Conjecture. The *Portugueze* were certainly the firſt Diſcoverers of *Brazil*, and it is not very probable that they ſhould make any Voyages thither, or at leaſt ſhould eſtabliſh a regular Commerce with that Country, without falling in with this Iſland, which lies ſo much in the Way. It is the more probable that they were the firſt Diſcoverers, from the Name by which this Country has been always known; *Barbadoes* having apparently a *Portugueze* Termination, but what it ſignifies is very doubtful. Some ſay the Iſland was ſo called from its barbarous Inhabitants; to prove which they ſhould have ſhewn us that it was inhabited at all, which in thoſe Times undoubtedly it was not; but however, it is not impoſſible that the Thing might be ſo, ſince the *Caribbees* certainly viſited that Iſland from *St. Vincent*, which is within ſight, and the *Portugueze* might poſſibly land when they were upon it, and fright them off this Iſland, whence they might from theſe People give it the Name of *Barbadoes*, which it has ſtill retained, and is ſo called, without any Variation at leaſt that I know of, in all the Languages of *Europe*.

The firſt *Engliſhmen* that landed here, it is ſaid, were ſome of Sir *William Curteen*'s Seamen, that were cruizing in theſe Seas in the latter End of the Reign of King *James* I. who reporting, at their Return to *England*, that the Soil was fruitful, ſome Adventurers went thither with Intent to plant it; but finding the Iſland covered with Wood, and ſcarce any other Animals upon it than Hogs, it did not anſwer their Expectations a great while. The Property of this Iſland was afterwards granted by King *Charles* I. to *James* Earl of *Carliſle*, in the firſt Year of his Reign; of whom ſeveral Adventurers purchaſing Shares, tranſported themſelves thither, and firſt fell to planting Tobacco; which not thriving here as they expected, they proceeded to try Cotton and Indico, which yielded them a conſiderable Profit; but they made little Sugar till 1647; when Colonel *Modiford*, Col. *Drax*, Col. *Walrond*, and ſeveral other Cavaliers, finding there was no living with any Satisfaction in *England* under the Uſurper, converted their Eſtates into Money, and tranſported themſelves to *Barbadoes*, with ſuch Machines and Implements as were proper to carry on Sugar-Works there. Colonel *Drax*, it is ſaid, in a few Years acquired an Eſtate of ſeven or eight thouſand Pounds *per Annum*, and married the Earl of *Carliſle*'s Daughter, then Proprietor of the Iſland; and the Adventurers fixing their principal Settlement on the great Bay in the South-weſt Part of the Iſland, gave it the Name of *Carliſle Bay*, in honour of their Proprietor, which it ſtill retains.

The Iſland was afterwards divided into four Circuits, and eleven Pariſhes, each Pariſh being allowed to ſend two Repreſentatives to the General Aſſembly, and every Pariſh had its Church and an Incumbent, with a handſome Maintenance aſſigned him. In the Year 1650, the white Inhabitants of the Iſland are ſaid to have increaſed to between thirty and forty thouſand, beſides Negroes, who were much more numerous, and frequently plotted the Deſtruction of their Maſters; but their Plots were conſtantly diſcovered, and the moſt terrible Puniſhments inflicted on the Ring-leaders; which did but increaſe the Diſaffection of the reſt, and laid the Foundation of freſh Conſpiracies. But notwithſtanding the repeated Plots of their Slaves, never any Plantation of ſo ſmall an Extent, arrived to that Riches and Grandeur as *Barbadoes* did, in the Space of twenty or thirty Years. The *Rump* apprehended this Iſland of ſuch Conſequence, during their Uſurpation, that they ſent a ſtrong Squadron of Men of War thither, *Anno* 1651, under the Command of Sir *George Aſcue*, who compelled the Lord *Willoughby*, (appointed Governor by King *Charles* II.) to ſurrender the Iſland upon Condition the Royaliſts ſhould remain in the Poſſeſſion of their Eſtates and Liberties, and Mr. *Searl* was appointed Governor by them.

The *Dutch* War ſucceeding ſoon after, the Colony was prohibited trading with the *Hollanders*, with whom they had principally trafficked hitherto; for the *Dutch* it ſeems conſtantly furniſhed the Iſland with Negroes till this time, and taught the *Barbadians* to plant, and manage their Sugars to the beſt Advantage, taking moſt of it off of their Hands, with which they ſupplied themſelves, and the reſt of *Europe*; but after the Uſurper's Quarrel with the *Dutch*, the *Barbadians* were compelled, by an Ordinance of Parliament, to bring all their Sugars directly to *England*, which was imitated by the Miniſtry after the Reſtoration of King *Charles* II. and was the Foundation of the Act of Navigation, which requires all the *Britiſh* Colonies to bring their Sugars and Tobacco directly to *England*, and forbids their trading with Foreigners in theſe, and ſome other, ſtiled *enumerated* Articles.

16. In the Year 1661 King *Charles* II. purchaſed the Property of this Iſland of the Lord *Kinoul*, Heir to the Earl of *Carliſle*, and appointed the Lord *Willoughby* of *Parham* Governor; ever ſince which *Barbadoes* has been a regular Government; and the Colony granted a Duty of four and a half *per Cent.* for the Support of the Civil Government of that Iſland, and maintaining the Forces and Fortifications thereof; which Duty (according to my Information) amounts to ten thouſand Pounds a Year: But inſtead of being applied to the Purpoſes for which it was given, it is diſpoſed of in Penſions to Courtiers, to the irreparable Damage of that Colony; no other Iſland having laid ſo high a Duty on their Sugars. In the Year 1664 *de Ruyter*, the *Dutch* Admiral, with a great Fleet of Men of War, treacherouſly attempted to ſurpriſe the Iſland of *Barbadoes*, tho' *England* was then in full Peace with *Holland*; but he was bravely beat off by the *Barbadians*, and obliged to abandon that Enterprize.

In the Year 1674 Sir *Jonathan Atkins*, being made Governor, had Orders to ſeize all the Ships trading in *Africa* for Negroes, that Trade being granted to the Royal *African* Company about that Time, excluſive of all others. And ſeveral Ships belonging to the Merchants of *Barbadoes*, bringing over Negroes afterward, were condemned and forfeited, being denominated Interlopers; which that Colony complained of as a great Grievance, the *African* Company ſetting what Price they pleaſed upon their Negroes; but this was not redreſſed till after the Revolution, when that Trade was laid open to all the Subjects of *England*, paying ten *per Cent.* towards the Charge of their Forts. The *Barbadians* alſo ſuffered great Loſſes by a terrible Hurricane which happened there on the 10th of *Auguſt* 1674, when three hundred Houſes were blown down, two hundred Perſons killed, moſt of their Sugar-works and Plantations ſpoiled; and all their Wind-mills for grinding of Canes were blown down, except thoſe that were built of Stone; eight Ships alſo ſuffered Shipwreck in the Harbour; inſomuch that the *Barbadians* were diſabled from making much Sugar the two ſucceeding Years. Another Calamity with which the *Barbadians* were afflicted, was an epidemical Diſtemper, that ſeveral Years raged in the Iſland, differing very little from the Plague. This began about the Year 1691, and occaſioned a great Decreaſe amongſt the white Inhabitants, which they have not recovered from that Day to this. It ſeems the Miniſtry of *England*, ſending a Squadron of Men of War to *Barbadoes*, with a Body of Land Forces on board, to protect the Trade of the *Caribbee Iſlands*, which had ſuffered very much by the Depredations of the *French* Privateers; the *Barbadians*, on their Arrival, concerted an Enterprize with the Commanders againſt the *French* Iſlands of *Guadalupe*, *Martinico*, *St. Chriſtopher's*, &c. and joining the King's Forces with ſome of their own, formed a Body of four or five thouſand Men; with which they made a Deſcent on *Guadalupe* and *St. Chriſtopher's*, and ruined many *French* Settlements, but did not make a Conqueſt of them, as was expected; and what was ſtill more unfortunate, the Diſtemper above-mentioned broke out in the Army, which the Soldiers brought back to *Barbadoes*, and almoſt depopulated that Iſland of white Men. The King's Ships alſo loſt ſo many of their Men, that there were not Hands enough to carry them home.

If we ſhould purſue this Hiſtory lower, it would not contribute very much to the Information, Entertainment, or Satisfaction of the Reader, becauſe it would involve us in long and perplexed Relations of the Diſputes between the Inhabitants of this Colony and their Governors, Appeals from both Parties to the Government at home, and other ſuch-like tedious and diſagreeable Subjects. We will therefore content ourſelves with obſerving, that till ſome very different Method is taken from that which has been hitherto in uſe for appointing Governors in this and other Colonies, ſo that Men are not ſent over with a View to repair their own Fortunes, inſtead of enquiring into, and redreſſing, thoſe Grievances that affect the Properties of the Perſons they are ſent to govern, we can never hope to ſee the Plantations flouriſh, or this Country reap thoſe Advantages from them which otherwiſe ſhe might. What is the Nature of thoſe Advantages, and what their Degree in reſpect to this noble Iſland, juſtly eſteemed the moſt valuable Plantation, for its Size, that ever this Nation poſſeſſed, ſhall be our next Buſineſs to explain, by entering into a particular Deſcription of this Iſland and its Product.

17. The Iſland of *Barbadoes* is ſituated in the *Atlantic Ocean*, in 13 Degrees North Latitude, and 59 Degrees of weſtern Longitude, being of a triangular Form; about twenty-five Miles in length from South to North, and fifteen in Breadth from Eaſt to Weſt, where broadeſt: It is a plain level Country for the moſt Part, with ſome ſmall Hills of an eaſy Aſcent, and ſcarce any Wood upon it at preſent; it was covered with Woods, indeed, when the *Engliſh* firſt ſent Colonies there, but they are all cut down to make room for Plantations of Sugar Canes, which take up almoſt the whole Iſland at preſent, nothing elſe being cultivated in any great Quantities. Their very Corn, Fleſh, and Fiſh, being imported, for the moſt Part, from the northern Colonies: There is ſcarce an Harbour in the Iſland, the beſt is that of *Bridge-Town* in *Carliſle-Bay*, on the South weſt Part of the Iſland, and this lies open to the Weſtward; however it is ſecure from the North-eaſt, which is the conſtant Trade Wind here, and blows from Morning to Evening, except their Tornades and Hurricanes, which happen uſually about Midſummer, and in *July* and *Auguſt*, and blow from every Quarter. The Ships in the Bay, at ſuch times, are in the utmoſt Danger of being wrecked on Shore, if they cannot get out to Sea, and therefore ſeldom attempt to ride out thoſe Storms.

The Coaſt is defended on the Eaſt by Rocks and Sholes, from the Invaſion of an Enemy; and on the Weſt, where it is moſt expoſed to a Deſcent, Breaſt-works and Redoubts are erected for its Security, but the Repair of them is too much neglected. There is ſcarce a Stream in the Iſland that deſerves the name of a River; however, we find two on the Eaſt-ſide, to which they have given the Names of *Scotland River*, and *Joſeph's River*: They have good Water in their Wells almoſt all over the Iſland, and do not dig very deep for it: They have alſo large Ponds and Reſervoirs, where they preſerve Rain-water. They have generally fine ſerene Weather; their Rains fall as in other Parts of the *Torrid Zone*, chiefly when the Sun is vertical; and after the Rains are the proper Seaſons for planting; their Heats are not ſo exceſſive as in the ſame Latitude on the Continent, being conſtantly refreſhed by the Sea Breezes in the Day-time, which increaſes as the Sun advances, and abates as the Sun declines. And they have this further Satisfacttion, that their Days ſeldom exceed twelve Hours; but there being no Mountains on the Iſland, there are no Land-winds in the Night as in *Jamaica*.

The only Town of any Conſequence in the Iſland, is that of *Bridge-Town* or *St. Michael's*, ſituate in *Carliſle-Bay*: It was formerly encompaſſed with a Moraſs which rendered it unhealthy, but this has been drained in a great Meaſure; however, the low Situation makes the Town ſtill ſubject to Inundations: It is ſaid to contain a thouſand or twelve hundred Houſes tolerably well built of Brick or Stone. They have commodious Wharfs and Keys for loading and unloading of Goods, and three Forts or Caſtles of Defence, which, if kept in Repair, would render them no eaſy Conqueſt. The chief Produce and Manufacture of the Iſland, as has been intimated already, is Sugar; of the Moloſſes, or Droſs, whereof they make great Quantities of Rum. They have alſo ſome Cotton, Indico, Ginger, and Pimento, and formerly Tobacco was planted here in good Quantities, but very little at preſent. Foreſt Trees they have ſcarce any left. Their Fruits are Oranges, Limes, Citrons, Pomegranates, Pine-apples, Guavas, Plantains, Cocoa-Nuts, *Indian*-Figs, Prickle-Pears, Melons, and almoſt all manner of Roots and Garden-ſtuff, but very few Flowers.

Their Horſes they import from *New England*, &c. and have a ſlight Breed of their own. They have alſo ſome Aſſes, Cows, and Sheep, but the laſt do not thrive here. They have a good Number of Hogs, the Fleſh whereof is the beſt Meat that is eaten in thoſe hot Climates. Here are alſo good Sea-Fiſh and Poultry, but no Freſh-water Fiſh; and, in general, all manner of Proviſion is very dear. There is no dining at an Ordinary under a Crown a-head; freſh Meat is a Rarity, and chiefly the Food of People of Condition; the reſt are glad of Salt-Beef, Pork, and Fiſh, imported from the northern Colonies; from whence alſo comes their Wheat, Flower, *Indian*-Corn, Peaſe, Beans, *&c.* They make Bread alſo of the Caſſavi Root, and the Negroes feed on Yams, Potatoes, and other Roots and Fruits. The Liquor drank by the Gentry here, is chiefly *Madeira* Wine, or Wine and Water, and great Quantities of Punch are drank by the Vulgar. They have alſo ſtrong Beer imported from *Old* and *New-England*, and Liquors made of their Maize and Fruits as in *Jamaica*. The Government here alſo reſembles that of *Jamaica*, and the reſt of our *American* Iſlands, having the Governor and Council appointed by the Crown, which, with the Houſe of Repreſentatives, are veſted with a legiſlative Power, and make Laws for the Government of the Iſland.

The Numbers of white People are ſaid to have been once forty thouſand and upwards, and are computed to be near thirty thouſand at preſent. The *Negroes*, *Mulottoes*, and *Meſtive* Slaves, about an hundred thouſand. Their Militia conſiſts of fifteen hundred Horſe, and three thouſand Foot, or thereabouts.

After this general Repreſentation of the preſent State of the Iſland, it is requiſite that we ſhould proceed to a more cloſe Enquiry into the ſtaple Commodity of this Iſland. We are to obſerve, that before the Year 1626, the *Portugueze* ſupplied all *Europe* with Sugar from their Colonies in *Brazil*, to their immenſe Profit: But the firſt Settlers finding the Soil to be fertile, and the producing of Sugar advantageous, they encouraged more People to come over and plant the ſame Commodity. This induced the Merchants at home, to ſend over Ships with Proviſions and other Neceſſaries for thoſe new Planters, which their Agents and Factors exchanged with them for the Produce of the Country, and from thence a reciprocal Trade and Correſpondence was eſtabliſhed between *Great Britain* and this *Iſland*.

The growing Succeſs of this new Sugar Colony promoted the Settlement of the others; and as the Sugar Plantations encreaſed, more Hands were required to carry on the Works, than could, at that Time, be ſpared from home. This gave Birth to the *Guinea* Trade, for ſupplying thoſe Colonies with Negroe Slaves; and as the Planters flouriſhed and encreaſed, ſo did their Demands for all Sorts of *Britiſh* Manufactures, and ſuch Neceſſaries of Life as they could not produce in thoſe Climates; which opened another Scene of Trade to the *Britiſh* Merchants, to furniſh theſe new Colonies with Wine from *Madeira*. Theſe Branches of Trade were of the utmoſt Advantage to *Great Britain*, foraſmuch as they took no Money out of the Kingdom, but yearly brought in large Sums for *Britiſh* Manufactures carried out. The Trade to this Iſland was commonly open and free; for we find, that before the civil War in *England*, the *Dutch* Ships came hither to purchaſe Sugars, as well as the *Engliſh*. This Freedom in Trade made the Country flouriſh, and made Money plenty among the Inhabitants. But ſince the Reſtoration, ſeveral Acts of Parliament have been made to confine the Trade of the Sugar Colonies to *Great Britain*, and *Britiſh* Ships only; which Reſtraints ſoon made *London* the chiefeſt Mart in *Europe* for Sugar; and as there was yearly more imported than was neceſſary for Home Conſumption, the Merchants exported the Surplus to foreign Markets, and by underſelling the *Portugueze*, they in Time beat them almoſt out of all their Sugar Trade to the Northward of *Cape Finiſterre*.

This Trade of re-evporting Sugars was carried on for many Years with great Succeſs. Mr. *Joſhua Gee* ſays, that by this Trade only ſuch an Increaſe of Treaſure and Wealth was brought into this Kingdom, as yearly added three or four hundred thouſand Pounds to the Stock of the Nation, which in thirty Years Time amounted to upwards of ten Millions Sterling. And a late Author computes the clear Profits, accruing to *Great Britain* from the Sugar Trade, and thoſe other Branches which chiefly depend upon thoſe Iſlands, to amount to more than one Million a Year. He tells us farther, that it appears by the Cuſtom-houſe in *London*, that the Value of the Exports from *Great Britain* to the Sugar Colonies, were a few Years ago upwards of five hundred thouſand Pounds Sterling every Year; and their Importations from thoſe Iſlands more than twelve hundred thouſand Pounds *per Annum*. In theſe Computations the Author has taken no Notice of the vaſt Quantities of *Britiſh* Manufactures yearly exported to *Guinea* and *Madeira*: But if they were to be added to the Exportations of the Sugar Colonies, where the greateſt Part of their Produce is taken off with an Advantage to the *Britiſh* Merchant, it would greatly augment the Sum, and conſequently enlarge the Profits which our Mother Country receives from the Sugar Colonies, and the ſeveral Branches of Trade depending on them. I ſhall not take upon me to determine whether this Gentleman's Calculations are exact or not; but it is evident beyond Diſpute, that while the Sugar Trade flouriſhed, both Planters and Merchants grew immenſely rich, and the Trade and Navigation of *Great Britain* was carried on to a much greater Height than it ever was before. And this great Source of Wealth and Treaſure to their Mother Country, aroſe from ſo ſmall a Beginning as a few Families ſeeking Shelter in a deſolate Iſland.

This ſhews what may be done by Induſtry and Trade rightly applied. Now if the Trade and Navigation of *Great Britain* have received ſuch an Addition from the Sugar Colonies, as added greatly to the Riches and Strength of the Kingdom; and if *Barbadoes* has the Honour to ſtand foremoſt in the Sugar Trade (as the firſt Founder of it) how well has ſhe deſerved of her Mother Country! When the Sugar Trade was at the Height which we deſcribed above, the flouriſhing State of *Great Britain* alarmed her Neighbours, and put them upon

Ways to circumvent her in Trade, as the only Means to put a Stop to the growing Strength of the Kingdom, which they feared might become too formidable, from the great Increaſe of Seamen and Shipping employed in the *Weſt India* and *Guinea* Trades, both flouriſhing at the ſame Time. Upon a Parliamentary Enquiry into the State of Trade to *Africa*, in the Year 1728, it appeared to the Houſe, that in three Years Time only, the Number of Negroes imported at *Barbadoes*, *Jamaica*, and *Antigua*, amounted to forty-two thouſand, beſides what were carried to *St. Chriſtopher's*, *Nevis* and *Montſerrat*.

But we are now to inquire into the Cauſes of the general Declenſion of this Trade. And here I beg Leave further to obſerve, that the *French* ſpared no Coſt or Labour to rival *Great Britain*, they well knowing, if that ſunk, her *Guinea* and *Madeira* Trades muſt fall with it; for which Purpoſe they embraced every Opportunity to enlarge and improve their Sugar Plantations; and, if I am not miſinformed, where the Planter was not able to complete his Works himſelf, proper Utenſils were ſent over from *France* at the Public Charge, and the Crown truſted them for ſeveral Years without Intereſt: What ſuch an Aſſiſtance will enable Men to do, we may gather from the flouriſhing State of the Linnen Manufactory in *Ireland*, ſince the Public allowed them a Fund to ſupport it. Having by theſe Means eſtabliſhed their Sugar Colonies, the next Thing they had in View was to beat the *Britiſh* Merchants out of the foreign Markets, for Sugar; and therefore deſtroy their Trade for Exportation; and this they have effected, by giving Liberty for their Ships to carry their Sugars directly to the foreign Markets, while ours were obliged to import all into *Great Britain*, which enables them to ſell ſo much cheaper than our Merchants can carry it from *London*, as has almoſt put an entire Stop to that valuable Branch of Trade to their Mother Country; and the utter Ruin of the *Britiſh* Sugar Colonies muſt neceſſarily follow, unleſs they are relieved ſome way or other.

The very firſt Declenſion of their Exportation Trade was attended with ill Conſequences to the Sugar Colonies. It lowered the Price of Sugar ſo much at home, as diſcouraged the Merchants from ſending to purchaſe Sugars here. This obliged the Sugar Planters to turn Merchant-Adventurers in a declining Trade, and to ſhip their Sugars upon their own Account and Riſque: This put a Stop to the Currency of Caſh, which was before brought over yearly to purchaſe Sugars, and laid the whole Burden of Freight, Duty, and Commiſſion, upon the Plantation, that were formerly paid by the *Britiſh* Merchants. And ſuppoſe but fifteen thouſand Hogſheads of Sugar to be ſhipped in a Year from this Iſland, on Gentlemens own Accounts, theſe three Articles will amount to upwards of ſixty thouſand Pounds Sterling. Another great Evil that has likewiſe followed from the ſame Cauſe is, Combinations among the Buyers, by which the Price of Sugars is ſunk ſo low as greatly to prejudice the Planters, and yet turning to the Benefit only of a few private Perſons, who are the firſt Buyers, and not at all to that of the Conſumers in general, by which that Iſland is hurt, and this receives no Benefit, or very little.

Theſe are the Particulars which we have collected from Books; but we will now add ſome few Remarks, from the Informations we have received, which will ſerve to give Light to the preſent State and Importance of this Iſland; and theſe will come chiefly under the three following Heads. In the firſt Place, we ſhall ſhew that this Colony throve the faſteſt, became the beſt peopled, and by far the moſt wealthy in *America*. We ſhall next ſhew the Advantages formerly derived from thence to the *Britiſh* Nation, clearly, and in a very few Words. And laſtly, we ſhall take Notice of the preſent Condition of this Iſland, and of the infinite Conſequence thereof to this Government of *Great Britain*. In the firſt Place then, it is to be conſidered that the Iſland of *Barbadoes* is generally eſteemed to be a very little bigger than the Iſle of *Wight*, and to contain, according to a round Computation, one hundred thouſand Acres. It has been ſhewn, that about the Year 1626 this Country was not only unſettled, but actually uninhabitable, as affording nothing for the Support of Life, and over-run with a bruſhy kind of Shrub Wood, which gave a great deal of Trouble to the firſt Planters; yet in the Space of fifty Years, this Plantation came to its greateſt Height, and by a Calculation that was made with much Exactneſs, there were in it fifty thouſand white People of all Sorts, of whom twenty thouſand were able to bear Arms, and eighty thouſand Negroes: Nay, we are told that in twenty Years after the Colony was ſettled they muſtered eleven thouſand Horſe and Foot; which would be altogether incredible, if we had not ſuch Proofs of theſe Facts as put them beyond all Doubt or Queſtion.

This ſufficiently proves that never any Colony of ours, or any other Nation, was ſo populous as this Iſland. But to make this ſtill clearer to an *Engliſh* Reader, we ſhall obſerve that *Barbadoes* is rather leſs than the County of *Rutland*, the ſmalleſt County in *England*; and that, according to the higheſt Computation, the Number of People in that County, in 1676, did not exceed twenty thouſand: But this may be made ſtill clearer, by comparing that whole Iſland with this, in Point of Extent; for if *England* and *Wales*, taken together, conſiſt of near forty Millions of Acres, then if they were as populous as *Barbadoes* they ought to contain fifty Millions of People; whereas Sir *William Petty*, who was a very able Man in Computations, and is thought not to have undervalued this Country, but rather the contrary, never reckoned the People higher than eight Millions; which ſhews what a vaſt Diſproportion there is between the peopling of the two Countries.

But to proceed farther ſtill: The ſame great Man aſſerts, that in *Holland* and *Zealand*, which are looked upon to be the beſt peopled Countries in *Europe*, there are a Million of Souls inhabiting about as many Acres; and conſequently it appears from hence, that even this Country was not ſo well peopled as *Barbadoes*. In Point of Wealth, the Compariſon holds full as ſtrong; for in the Year 1661 King *Charles* II. created on the ſame Day thirteen Baronets in *Barbadoes*, none of them having leſs than one thouſand, and ſome of them ten thouſand, Pounds a Year. At this Time their Trade actually maintained four hundred Sail of Ships; and it was computed, that the Running Caſh of the Iſland might be about two hundred thouſand Pounds; and their annual Exportation to *Great Britain*, in Sugar, Indico, Ginger, and other Commodities, at leaſt three hundred and fifty thouſand Pounds. Theſe are Facts that may be depended upon, that deſerve in every reſpect the greateſt Conſideration, and that plainly demonſtrate at once the great Value of this Iſland, and the prodigious Conſequence of our Plantations in general.

By the gradual Increaſe of the Colony upon this Iſland, it has, ſince we firſt poſſeſſed it, contributed beyond Conception and Belief to the Riches of its Mother Country; and, as I know not any Subject that either can or ought to give an *Engliſh* Reader more Pleaſure than the Conſideration of what has been obtained by the Bleſſing of God, upon the Virtue and Induſtry of his Countrymen; ſo, I think, an Endeavour to ſhew what has accrued in the whole to *Britain*, by eſtabliſhing a Colony here, will be allowed to be equally inſtructive and pleaſant, uſeful and entertaining.

What has been ſaid before, gives us a ſufficient general Notion of the Importance and Value of the Iſland; what we now aim at is, to come at a more particular Account of what it has yielded in the Whole. When this Colony was in its moſt flouriſhing Condition, which we fix to the Year 1676, there were four hundred Ships of one hundred and fifty Tons, one with another, employed annually in this Trade; and I believe it will be thought a very moderate Computation, if we reckon that the Seamen, Ship-Builders, and other Trades that live by theſe Veſſels, amounted in the Whole to ten thouſand Souls. The Sugars that came from *Barbadoes*, were either ſpent at home or ſent abroad; and I reckon, that in the manufacturing the Sugars, and vending them at home and abroad, there might be twenty thouſand People more employed. To theſe we muſt add, ſuch as got their Bread by the Goods and Manufactures yearly exported from hence to *Barbadoes*; for almoſt all that the People eat, drink, and wear there, are the Product of *England*; ſo that the Computation cannot be thought to riſe too high, if we allow, that in this Way twenty thouſand more got their Bread; which will make about fifty thouſand in the Whole: All ſupported here by the Labour and Induſtry of the Whites and Negroes in that Country. We are next to compute the Money brought into this Nation by the Export of the Commodities imported from thence, which was that Year allowed to be above two hundred thouſand Pounds, and it was alſo agreed, that as much or more had been gained every Year, between that Time and the Reſtoration.

I ſhall ſay nothing of the Money ariſing to the Exchequer from the Duties, though this might be computed at thirty-five thouſand Pounds *per Annum*; but upon theſe Principles ſhall proceed in my Computation thus: I will ſuppoſe, that from the Year 1636 to 1656, which is twenty Years, this Colony produced but half ſo much, and though it may be true, that before the Year 1640 it did not produce a Quarter ſo much, yet, in the remaining part of that Period, it certainly brought in a great deal more; and therefore we cannot be far from the Truth, in computing that this Nation acquired two Millions in Money, by *Barbadoes*, in that twenty Years. In the next twenty, that is, from 1656 to 1676, when it is allowed this Iſland was in its moſt flouriſhing Condition, there muſt have been gained four Millions of Money; and allowing for the gradual Falling off of this Trade, by a Multitude of unlucky Accidents, but more particularly by the ſettling the *French* Sugar Iſlands, we ſhall compute the laſt ſeventy Years, from 1676 to 1736, at the ſame Rate we did the firſt twenty Years, and the Gain will then amount to ſix Millions; ſo that in the Space of one hundred Years, the Inhabitants of *Great-Britain* have received twelve Millions of Silver, by the Means of this Plantation; and had fifty thouſand of her Inhabitants maintained by the People in that Colony all the time. It is highly poſſible, that in ſome of theſe Articles we may be wrong one way, and it is more than probable, that in other Articles we may err the other way; which is ſo far from making againſt the Credit of our Computation in general, that it really makes for it, ſince we may very well ſuppoſe theſe Errors balance each other, and that the Sum total is very near right.

We are now come to the laſt Head, which is, aſſigning the comparative Excellence of this Colony with regard to our own and other Plantations in *America*; and this, at firſt Sight, may appear a thing very difficult, if not impoſſible to be done; however, we may come ſufficiently near it for our Purpoſe. It is thought that *Barbadoes* contains one hundred and forty ſquare Miles, and if ſo it is in proportion, as 1 to 34,771 in reſpect to the *Spaniſh* Plantations; as 1 to 12,000 in regard to our own; as 1 to 11,000 in reference to the *French*; as 1 to 7,000 as to the *Portugueze*; and as 1 to 4 as to the *Dutch*. This I ſay, as to the Extent of Territory, is as juſt a Compariſon as can be made; but with regard to the Value of theſe Colonies, it is very eaſy to perceive that there is hardly any Computation to be made at all, for we may truly affirm that the Produce of *Barbadoes* is very near equal to a twentieth Part of what *Spain* receives from her *Indies* annually, in time of Peace, and from thence we may eaſily judge of the reſt.

I have inſiſted the longer upon this Topic, becauſe it may enable us to form ſome Notion of what might be made of our Plantations, if we attended to them as much as they deſerve; for though it may be, and perhaps is, impoſſible to improve any of them in proportion to what has been done in *Barbadoes*, yet we may well enough diſcern, from hence, that they might be made inconteſtably more profitable to us than they now are, or indeed, than the whole Trade that we now poſſeſs; and if, at the ſame time we reflect on this, we likewiſe conſider that there is nothing ſo abſolutely in our Power, as the Improvement of our Colonies; it will moſt certainly appear to be the Point, which, of all others, imports us moſt; and if I have done any thing towards proving this, I ſhall account all my Labour well beſtowed.

18. We are next to ſpeak of the Iſland of *St. Chriſtopher*, which was called *Liamuega* by the *Savages*, and was diſcovered by *Chriſtopher Columbus*, in the firſt Voyage he made to *America*. He gave it the Name of *St. Chriſtopher* from the Figure of its Mountains, there being in the upper Part of the Iſland a very high Mountain, which bears on its Summit another leſs Mountain, as *St. Chriſtopher* is painted like a Giant, with our Saviour on his Back. It is ſituated in the Latitude of 17 Degrees 25 Minutes on this Side the Line, and is about 75 Miles in Circuit; the *Caribbeans* inhabited it when Sir *Thomas Warner*, an *Engliſh* Adventurer, went thither. Monſieur *Deſnambue*, a *French* Gentleman of the ancient Houſe of *Vauderop*, who commanded for the *French* in *America*, arrived at *St. Chriſtopher*'s the ſame Day with Sir *Thomas Warner*, and both took Poſſeſſion of the Iſland in the Names of their reſpective Maſters, that they might have a Place of ſafe Retreat, and a good Haven for the Receipt of ſuch Ships, of both Nations, as ſhould be bound for *America*, it being well provided with Harbours. The *Spaniards* uſed to put in there in their *Weſt India* Voyage, to take in freſh Water; and they were on ſo good Terms with the *Caribbeans*, that, ſometimes they left their Sick there, of whom the *Savages* took a great deal of Care.

The two Gentlemen before-mentioned, left ſome of their Men upon the Place, and returned, Sir *Thomas Warner* to *England*, and Monſieur *Deſnambue* to *France*, for Recruits. Their Maſters approved of their Conduct, and ſent them back with Supplies of Men and Proviſions, and Commiſſions to be Governors of the new Settlements. This Company contiued in *France* till the Year 1661, when they ſold *St. Chriſtopher*'s, and the other Iſlands, to the Knights of *Malta*; but in the Year 1664, the *Weſt India* Company, by the King's Orders, bought out the laſt Proprietors. Sir *Thomas Warner*, and Monſieur *Deſnambue*, ſailed in the Year 1626, and the latter arrived there about *January* 1627, having had a long ſickly Voyage. The *French* were about three hundred in Number, the *Engliſh* Colony as many; Sir *Thomas* had proceeded a good way in his Settlement before Monſieur *Deſnambue* arrived; and the two Governors, to prevent Differences among the People about the Limits of their Territories, ſigned Articles of Diviſion on the 13th of *May* 1627: They then ſet Bounadries to their ſeveral Diviſions, with this particular Proviſo, that fiſhing and hunting ſhould be equally free to the Inhabitants of both Nations; that the Salt-ponds, and moſt valuable Timber, ſhould be in common, together with the Mines and Havens; alſo a League offenſive and defenſive was concluded between them, againſt all their Enemies; after which they ſet to work, each in his Station, to advance his Settlement, and went on very harmoniouſly.

The *Engliſh* received Supplies of Men and Proviſions from *London*, by which means they throve better than the *French*, and not only became ſtrong enough to keep what they had, but to be able to ſpare Men for new Plantations at *Nevis*; of which Sir *Thomas Warner* took Poſſeſſion, and left People upon it for a Settlement, in the Year 1628. And in that which followed, Don *Frederick de Toledo* was ſent with a Fleet of twenty-four Ships and fifteen Frigates, to diſpoſſeſs the *Engliſh* and *French* of the Iſland of *St. Chriſtopher*'s. The *Spaniards* were alarmed at the Progreſs of the *Engliſh* in the *Caribbee Iſlands*, and thought it concerned the Safety of their own Plantations to prevent thoſe Nations from ſettling in the Neighbourhood. Don *Frederick* meeting ſome *Engliſh* Ships lying near the Iſle of *Nevis*, ſeized them, and then came and anchored in the Road of *Marigot*, under the Cannon of the *Baſſe Terre*, where Monſieur *Roſſe* commanded. Neither the *French* nor the *Engliſh* Forts were in a Condition to oppoſe ſuch an Enemy; their Stores of Ammunition fell ſhort, and their Numbers were not a Match for the *Spaniſh* Army, had they been ever ſo well provided with Powder and Shot. *Roſſey*, after a ſmall Oppoſition, abandoned the *Baſſe Terre*, and retreated to *Cabes Terre*, another Fort, where Monſieur *Deſnambue* was in Perſon, who could not prevail with his Men, either to defend themſelves there, or to retire to the Foreſts and Mountains, where a few Men might have reſiſted a thouſand. He remonſtrated to them that Don *Frederick* could not afford much Time, being bound to the *Havannah* to bring home the *Flota*. Yet this was to no purpoſe, nothing would content them but embarking and leaving the Place, which he was forced to comply with, and ſo all the *French* deſerted their Settlement, as did their Allies the *Engliſh*; who were in a great Conſternation, and the Diſorder encreaſed, upon the News of *Deſnambue*'s being gone with his Colony; ſome endeavoured to eſcape by Sea, others fled to the Mountains, and all who were left ſent Deputies to treat with the *Spaniards*. The Don knowing he had them in his Power, commanded them to leave the Iſland immediately, or he would put them to the Sword; he ſent them their own Ships, which he had taken at *Nevis*, to embark in, and was perſuaded to give leave to thoſe to ſtay that had not room in the Ships for themſelves and their Families, till they could be tranſported; upon which Don *Frederick* weighed Anchor, carried with him ſix hundred *Engliſh* who were fitteſt for his Service, and he was no ſooner gone but the *Engliſh* rallied, and reſolved to go on with their Settlement. The *French*, who were got no farther than *Antigua* and *Montſerrat*, ſent a Ship for Intelligence to *St. Chriſtopher*'s, and underſtanding the *Spaniards* were gone, and the *Engliſh* buſy in rebuilding and planting, rejoiced at this happy and unexpected turn of Fortune, ſailed back to *St. Chriſtopher*'s, and retook Poſſeſſion of their former Habitations.

The *Engliſh* continued carrying on their Colony till they were in a Condition to ſpare more Men for Settlements, at *Barbuda*, *Montſerrat*, and *Antigua*, which Sir *Thomas Warner* peopled and planted. And the ſame Year the *Dutch* made themſelves Maſters of *St. Euſtace*, and the *French* took Poſſeſſion of ſome other Iſlands. The *Engliſh* built themſelves good Houſes at *St. Chriſtopher*'s, and had Wives and Families; whereas the *French* contented themſelves with Huts, after the *Caribbean* Manner; few of them were married, and conſequently took little Pains to furniſh themſelves with all Things neceſſary and convenient for Life. Monſieur *Deſnambue* died about the Year 1637, and Sir *Thomas Warner* did not long ſurvive him. Before the *Engliſh* Governor's Death, the Colony was ſo increaſed, that there were between twelve and thirteen thouſand Souls of his own Nation in the Iſland. He was ſucceeded in his Government by Col. *Rich*, who, by following his Predeceſſor's Steps in governing the Colony, invited more People to come and ſettle there. The chief Employment of the firſt Planters was cultivating Tobacco; by which they got a competent Livelihood; but afterwards, the Quantity that was made bringing down the Price, they ſet themſelves in ſeveral Places to plant Sugar, Ginger, Indico, and Cotton, and in a little time became a rich and flouriſhing People, both *French* and *Engliſh* living cordially together till the laſt War broke out, when the *Engliſh* drove the *French* entirely from their Settlements; and the Country being yielded to the Crown of *Great-Britain* by the Peace of *Utrecht*, all the *French* Territory was ſold for the Benefit of the Public, which muſt have produced a very large Sum, ſince out of it there were eighty thouſand Pounds paid, for the Marriage Portion of her Royal Highneſs the Princeſs of *Orange*.

There were indeed ſome who pretended, that notwithſtanding the *French* Part of the Iſland of *St. Chriſtopher*'s was by far the richeſt, we were no Gainers by obtaining it; but that, on the contrary, the *French* received Benefit thereby, becauſe it enabled them to people the reſt of their Iſlands more effectually; but whoever conſiders that the Sugars of this Iſland are the very beſt in all *America*; that the Plantations were in perfect Order; and that the *French* ventured a War to prevent our ſettling *St. Lucia* and *St. Vincent*, will ſcarce be brought to believe, that they parted with a Country ready ſettled, and more valuable than both thoſe Iſlands, with their Goodwill. The Treaty of *Utrecht* was ſo indifferent a Treaty that, I think, there is no ſort of Neceſſity for making it appear worſe than it really was. The ſame Perſons who firſt ſettled *St. Chriſtopher*'s likewiſe ſettled *Nevis*, or *Mevis*, about the Year 1628; and notwithſtanding the Miſfortune of being diſpoſſeſſed by the *Spaniards* in the manner before-mentioned, in twenty Years time there were at leaſt four thouſand People upon the Iſland, and they continued increaſing in the ſame manner, by a Succeſſion of prudent Governors, for a conſiderable Space. After the Reſtoration, when Trade and Peace flouriſhed, this Iſle enjoyed its Share of the Benefit, and increaſed, in Inhabitants and Riches; the only Enemy they had to ſtruggle with was the Hurricane, which generally viſited them once a Year.

On the 19th of *Auguſt*, 1667, there was a terrible one in this Iſland; at which time Sir *John Berry*, Captain of the *Centurion* Man of War, was in the Harbour with that and ſeveral other Ships, of which one was commanded by Capt. *Langford*, who having learned ſome of the Prognoſtics of a Tornado, from a *Caribbean*, perceiving them, he told Sir *John* and the reſt of the Commanders of it, who depending on his Intelligence, made their Ships ready, and in the Morning, about four o'Clock, the Wind coming very hard northerly, they put to Sea, and came all back within four or five Days time ſafe to the Road again: Captain *Langford* was aſhore, and being confident of the Hurricane, took ſuch care in ſecuring his Sugars and Goods in the Store-houſe, that when the Hurricane had carried away the Roof of the Houſe, all except one Hogſhead of Sugar remained ſafe.

When Sir *William Stapleton* was Governor of theſe Iſlands he uſually made this the Place of his Reſidence. Here Courts were kept, and the Governor living upon it, moſt of the Affairs of this Government were tranſacted here; for every one of theſe Iſlands hath a particular Lieutenant-Governor, Council, and Aſſembly; and the general Government centers only in the Authority of Captain-General. Sir *William Stapleton*, who was Governor in King *James*'s Time, made Sir *James Ruſſel* Lieutenant-Governor of this Iſland, and he enjoyed the Place till his Commiſſion was ſuperſeded by that of Captain-General, granted to Sir *Nathaniel Johnſon*, who alſo reſided at *Nevis*; and at this Time none of the *Leeward Iſlands* flouriſhed ſo much as this; it ſupplied the others with almoſt all their Wines and Negroes, and was computed to have contained at that Time near two thouſand fighting Men, which will make the Number of Souls, by common Computation, to be above ten thouſand beſides Negroes, of which Number there were not leſs than twenty thouſand. A prodigious Improvement of an Iſland ſcarce ſix Miles long, to maintain between thirty and forty thouſand Men, Women, and Children!

We are to proceed next to the Iſland of *Montſerrat*, which Name the *Spaniards* gave to this Iſland, from the Reſemblance it has to a Mountain in *Catalonia*, not far from *Barcelona*; famous for a Chapel dedicated to the *Bleſſed Virgin*, in the greateſt Reputation with the *Roman Catholics* of any, except that of *Lorretto*. The *Engliſh* have not thought fit to give it another Name ſince they were Maſters of it. It lies in 17 Degrees North Latitude, is about three Leagues in Length, and almoſt as much in Breadth; ſo that it ſeems to be of a round Figure. It was diſcovered by the *Europeans* at the ſame time with *St. Chriſtopher*'s; but no Settlement was made upon it till the Year 1632, at which Time Sir *Thomas Warner*, firſt Governor of *St. Chriſtopher*'s, procured a ſmall Colony to ſettle there, of the Subjects of *England*, for we cannot aſſure ourſelves they were *Engliſh* Men, this Iſland being generally looked upon as an *Iriſh* Colony. This Iſland flouriſhed at firſt more than *Antigua*; but ſince the Lord *Willoughby*'s Time, the latter has got, and kept, the Start of it. There were ſeven hundred Men in *Montſerrat*, ſixteen Years after it was firſt inhabited; the Rolls of the Militia at this Time amounts to three hundred and ſixty. We find but one Battery for the Defence of the Coaſt, and other old diſmounted Cannon at ſeveral Landing-places. As to the Climate, Soil, Animals, Trade, and Productions of this Iſle, they are much the ſame with thoſe of the other *Caribbee Iſlands*, only this is fuller of Mountains, which are covered with Cedars and other Trees, that make it a lovely Proſpect from the Sea: The Vallies are fruitful, and better ſtored with freſh Water than thoſe of *Antigua*.

According to the beſt Accounts that have been received from this Iſland of late Years, it is rather increaſing, both in the Number of People, and in the Value of their Settlements, than not; as to the former, it is computed, there may be about four thouſand five hundred white Perſons, and about twelve thouſand Negroes, in this Country: And as for the latter, I mean the Value of its Produce, we ſhall have Occaſion to ſpeak of it hereafter.

The Iſland of *Barbuda* lies in the Latitude of 17 Degrees 30 Minutes North, is about fifteen Miles long, and lies North-eaſt from the Iſland of which we were laſt ſpeaking. The Land is low and fruitful, and the *Engliſh* began to plant it as early as *Nevis*, *Montſerrat*, or any other of the Leeward Iſlands, *St. Chriſtopher*'s excepted; for Sir *Thomas Warner*, who firſt ſettled there, placed a ſmall Colony in this Iſland, but the *Caribbeans* diſturbed them ſo much, that they were often forced to deſert it and their Plantations. There hardly paſſed a Year but they made one or two Incurſions, and that generally in the Night, for they durſt not attack them by Day; the Damage the *Engliſh* ſuſtained by them, made them weary of dwelling in a Place where they were ſo much expoſed to the Fury of thoſe Barbarians, who diminiſhing daily in Number, and the *Europeans* increaſing, the *Engliſh* again poſſeſſed themſelves of *Barbuda*, and in a few Years there were five hundred Inhabitants. There are now a thouſand or twelve hundred Souls upon it, and their Number is daily increaſing. The Proprietor is the Honourable *Chriſtopher Codrington*, Eſq; and he puts in a Governor here, having the ſame Prerogative as the other Lords Proprietors in their ſeveral Juriſdictions in *America*. This Iſland has bred great Store of Cattle, and the Inhabitants employ themſelves moſtly in that ſort of Huſbandry; Corn and Proviſions coming almoſt always to a good Market in the Sugar Iſlands. There is plenty of all Sorts of tame Cattle, as in *Europe*; and the *Engliſh* live here much after the ſame Manner as they do in the Countries in *England*; only their Labour in the Field is not ſo hard as here, the Country being ſo much hotter.

The next Plantation to this, if it may be properly ſo called, is *Anguilla*, or *Snake Iſland*, ſo called from its Figure, being a long Tract of Earth, but narrow, winding almoſt about; near *St. Martins*, from whence it may eaſily be ſeen: It lies in 17 Degrees 12 Minutes. The Country is level and woody; the Soil fruitful, and the Tobacco that grew there formerly was reckoned very good in its kind. There is not a Mountain in it; where it is broadeſt there is a Pond, about which the *Engliſh* ſettled in the Year 1650. Their Buſineſs, like the Inhabitants of *Barbuda*, was to plant Corn, and breed tame Cattle, for which purpoſe they brought Stock with them. They were poor, and continue ſo to this Day, being perhaps the lazieſt Creatures in the World. Some People have gone from *Barbadoes*, and other *Engliſh Caribbee Iſlands*, thither, and there they live like the firſt Race of Men, without Government or Religion, having no Miniſter or Magiſtrate. They are ſaid to make up, altogether, about one hundred and fifty Families, or nine hundred Souls; and their Condition in that Place is ſingular enough to deſerve particular Notice, if we had any room to ſpare; but as we have not, it ſhall ſuffice to ſay that they have no great Quantities of Sugar upon the Iſland, but addict themſelves rather to farming, in which they have had very good Succeſs; and this it is that enables them to live in the old Patriarchal Way, every Man being a kind of Sovereign in his own Family, and no other Government there is in *Anguilla*.

We have now gone through all the Leeward Iſlands, *Antigua*, or *Antego*, only excepted, of which we are to ſpeak in the next Section, as not having been ſettled within the Period to which we have confined this. As to the general Produce or Value of theſe Iſlands, which may ſerve to ſhew of how great Conſequence they are to *Great-Britain*, the beſt Account I have been able to obtain, is to the following Effect: *St. Chriſtopher*'s is the largeſt of all the Iſlands, but the middle Part of it being extremely mountainous, it is thought that there are not above twenty-four thouſand Acres of Land, fit for Sugar, in the whole Iſland, which produces about ten thouſand Hogſheads of that valuable Commodity. *Antego* contains about ſeventy thouſand Acres, and produces ſixteen thouſand Hogſheads of Sugar yearly. *Nevis* is ſaid to be about twenty Miles in Circumference, and produces ſix thouſand Hogſheads. *Montſerrat*, which is leſs than any of them, produces two thouſand five hundred, and ſometimes three thouſand, Hogſheads of Sugar. In *Barbuda* they breed Cattle, and in *Anguilla* they raiſe Corn.

19. We are now, according to the Method that we have hitherto purſued of ſpeaking of our Plantations, in the Order of Time in which they were ſettled, obliged to return to the Continent of *North America*, in order to give an Account of the noble Colony of *Maryland*, which remained a Part of *Virginia* till the Year 1632, which was the eighth of King *Charles* I. when that Monarch was pleaſed to grant all the Country to the North of *Potowmack River*, not then planted, unto *Cecilius Calvert*, Lord *Baltimore*, of the Kingdom of *Ireland*, and his Heirs; and this Part of the Country was afterwards called *Maryland*, in Honour of the then Queen Conſort, *Henrietta Maria*, youngeſt Daughter of the *French* King, *Henry* the IVth. The Lord *Baltimore* having obtained his Grant, ſent over his Brother, the honourable *Leonard Calvert*, Eſq; with ſome *Roman Catholic* Gentlemen, and other Adventurers, to the Number of two hundred, to take Poſſeſſion of the Country; who, ſetting ſail from *England* on the 22d of *November* 1633, arrived at *Point Comfort* in the Bay of *Cheſepeak*, on the 24th of *February* following; where, being kindly received and ſupplied with Proviſions by the *Engliſh* of *Virginia*, they continued their Voyage Northward, to the River *Potowmack*, appointed to be the Boundary between *Virginia* and *Maryland*, on the Eaſt-ſide of the Bay.

The Adventurers ſailed up this River, and landing on ſeveral Places of the northern Shore, acquainted the Natives they were come to ſettle amongſt them, and trade with them; but the Natives ſeemed rather to deſire their Abſence than their Company: However, there were no Acts of Hoſtility committed on either Side; and the *Engliſh* returning down the River *Potowmack* again, made choice of a Place near the Mouth of a River (which falls into it, and by them called *St. George*'s *River*) to ſettle their firſt Colony. They advanced afterwards to an *Indian* Town called *Yoamaco*, then the Capital of the Country, and at a Conference with the Weorance or Sovereign of the Place, to whom they made conſiderable Preſents, the Weorance conſented that the *Engliſh* ſhould dwell in one Part of the Town, reſerving the other for his own People, till the Harveſt was over, and then agreed to quit the whole entirely to the *Engliſh*, and retire farther into the Country, which they did accordingly. And the *March* following Mr *Calvert* and the Planters were left in the quiet Poſſeſſion of the whole Town, to which they gave the Name of *St. Mary*'s; and it was agreed on both Sides, that if any Wrong was done by either Party, the Nation offending ſhould make full Satisfaction for the Injury. The Reaſon the *Yoamaco Indians* were ſo ready to enter into a Treaty with the *Engliſh*, and yield them Part of their Country, was in Hopes of obtaining their Protection and Aſſiſtance againſt the *Saſquahanah Indians*, their northern Neighbours, with whom they were then at War; and, indeed, the *Yoamaco Indians* were upon the Point of abandoning their Country, to avoid the Fury of the *Saſquahanah* Nation, before the *Engliſh* arrived; from whence it appears that the Adventurers, ſent over by the Lord *Baltimore*, cannot be charged with any Injuſtice in ſettling themſelves in this Part of *America*, being invited to it by the original Inhabitants.

The Inhabitants who were thus ſettled at *St. Mary*'s, applied themſelves, with great Diligence, to cultivating the Ground, and raiſed large Quantities of *Indian* Corn, while the Natives went every Day into the Woods to hunt for Game, bringing home Veniſon and Turkies, to the *Engliſh* Colony, in abundance, for which they received Knives, Tools, and Toys, in return. And thus both Nations lived in the greateſt Friendſhip, doing good Offices to each other; till ſome of the *Engliſh* in *Virginia*, envious of the Happineſs of this thriving Colony, ſuggeſted to the *Indians*, that theſe Strangers were not really *Engliſh* as they pretended, but *Spaniards*, and would enſlave them as they had done many of their Countrymen: And the *Indians* were ſo credulous as to believe it, and appeared jealous of Mr. *Calvert*, making Preparations as if they intended to fall upon the Strangers, which the *Engliſh* perceiving, ſtood upon their Guard, and erected a Fort for their Security, on which they planted ſeveral Pieces of Ordnance; at the firing whereof the *Yoamacos* were ſo terrified, that they abandoned their Country without any other Compulſion, and left the *Engliſh* in full Poſſeſſion of it; who receiving Supplies and Reinforcements continually from *England*, and having no other Enemy to contend with than Agues and Fevers (which ſwept off ſome of them before they found out a proper Regimen for the Climate) they ſoon became a flouriſhing People, many *Roman Catholic* Families of Quality and Fortune tranſporting themſelves thither to avoid the Penal Laws made againſt them in *England*; and *Maryland* has been a Place of Refuge for thoſe of that Perſuaſion from that Day to this.

While the civil War laſted in *England*, the Lord *Baltimore*'s Family were deprived of the Government of this Province, but were reſtored to their Right by King *Charles* II. ſoon after his own Reſtoration. Whereupon the Lord *Baltimore* ſent over his Son, *Charles Calvert*, afterwards Lord *Baltimore*, to be Governor of *Maryland*, who continued in that Poſt upwards of twenty Years, and long after his Father's Death. By whoſe Prudence the Colony became almoſt as conſiderable as *Virginia*, for its Tobacco and other Products of the Soil; and all the *Indian* Nations on that Side put themſelves under their Protection. The *Indian* Chiefs were appointed, or at leaſt approved and confirmed in their Commands, by the Lord *Baltimore* the Proprietor, whoſe Succeſs is to be aſcribed, in a great Meaſure, to the Endeavours he uſed to cultivate a good Correſpondence with the *Indian* Nations, and to give them as little Offence as poſſible.

In the Reign of King *James* II. we are told that Father *Peters*, a Jeſuit, whom that Prince admitted into his Councils, which contributed not a little to his loſing firſt the Hearts of his Subjects, and after that his Dominions, took ſuch a Prejudice to the then Lord *Baltimore*, though of his own Religion, but a Nobleman of great Wiſdom, Juſtice, and Moderation, that he reſolved to deprive him of the Power of nominating a Governor, by extending the royal Prerogative at the Expence of the Grant made by the Crown, to the Anceſtors of his Lordſhip. But before this could be effected, the Revolution intervened, but the Change of Government did not prove ſerviceable to his Lordſhip; for the Crown proſecuting the former Project, deprived him of his Power of Nomination; which was ſo much the harder, becauſe it is univerſally allowed that no People were ever better governed than the Inhabitants of this Colony, while they depended ſolely upon this noble Family.

The preſent Lord *Baltimore* is a Proteſtant, and inherits the Virtues, as well as the Title, of his Anceſtors; being in all reſpects a Bleſſing to that Country, as he is the Proprietor of it. His Lordſhip once took the Pains to viſit his Colony, was received with all due Marks of Reſpect on account of his Quality and Intereſt in that Country; but when he left it, the People gave him much ſtronger Teſtimonies of their Affection, and their Regret at parting with him, on account of his Mildneſs, public Spirit, and ſincere good Will towards them, of which he gave them ſo many Inſtances, and teſtified upon all Occaſions, ſuch a Readineſs not only to comply with, but to go beyond, their Requeſts; that there was not a Planter in *Maryland*, who did not conſider him rather as a Father and a Friend, than as their Lord Proprietor; and to ſay the Truth, they had ſo much Experience of him in the former Characters, and felt ſo little of him in the latter, that it was extremely natural for them to behave as they did.

Whatever the great Deſign might be when this Settlement was firſt made, moſt certain it is that no Country in *America* can boaſt of having had fewer Diſturbances on the Score of Religion. There are, indeed, of all Perſuaſions in the Colony; but notwithſtanding this, they live together in the greateſt Tranquillity, as if they made it their Buſineſs to forget the Points about which they differ, and to remember that they agree in thoſe of being *Engliſhmen* and *Chriſtians*, as ſufficiently appears by their kind Behaviour towards the *Indians*, who have ſcarce ever had any Difference with them, and of whom the Colony have no ſort of Apprehenſions, though they are much more numerous in that Country than in *Virginia*. But after ſhewing how this Country was firſt planted, what remarkable Accidents have ſince happened therein, and in what State the Colony now is with reſpect to the Government; the next thing is to give a ſuccinct View of the Place itſelf, in order to bring it the better to the Acquaintance of every *Engliſh* Reader, who is curious on this Subject.

This Province is ſituated between 38 and 40 Degrees of northern Latitude, and between 44 and 48 Degrees of Weſtern Longitude, as is generally computed; but it muſt be confeſſed the Weſtern Boundaries are very uncertain, ſome extending them beyond the *Apalachean Mountains*. The North End of the Bay of *Cheſepeak* divides *Maryland* into two Parts, called the *Eaſtern* and *Weſtern Shores*. It is bounded, at preſent, by Part of *Penſylvania* and the *Atlantic Ocean* on the Eaſt, by *Virginia Proper* on the South, and by the *Apalachean Mountains* on the Weſt. It is ſeparated from *Virginia* on the South, by the River *Patowmack* on the Weſtern Shore, and the River *Pocomoac* on the Eaſtern Shore, the Length from North to South being about an hundred and forty Miles, and the Breadth from Eaſt to Weſt, if we extend it no farther than the Country already planted, will not be ſo much, though its future Limits poſſibly may extend much farther. As to the Face of the Country, this, as well as *Virginia*, may be divided into, 1ſt, the *Lowlands* next the Sea; 2dly, the hilly Country towards the Heads of the Rivers; and 3dly, the *Apalachean Mountains*, which are exceeding high, and run paralell to the *Atlantic Ocean*, viz. from the North-eaſt to the South-weſt. The *Lowlands* heretofore conſiſted of Swamps or Woods, being one continued Foreſt almoſt, till the *Engliſh* cleared Part of it, either to make room for their Plantations, or for building of Ships and Houſes, and the making Tobacco Caſks and Pipe-ſtaves for Exportation, which has made ſuch Havock among their Woods, that ſome of them begin to apprehend the Want of Timber, eſpecially near their Forts and Rivers; for as to that which lies remote from the Water it is of little uſe to them, the Price of the Carriage exceeding the Value of the Wood. Towards the Heads of the Rivers there is a Mixture of Hills and Vallies, as in *Virginia*, well planted, with Variety of Timber and Fruit Trees; and where theſe are wanting there are large Meadows or Savanahs, where the Graſs grows to a moſt ſurprizing Height.

This Country, like *Virginia*, is watered by innumerable Springs and a great many fine Rivers, of which the chief are, 1ſt, *Potowmack*, which, riſing in the Mountains North-weſt, runs to the South-eaſt, and ſeparates *Maryland* from *Virginia* on the South-weſt, falling into the Middle of the Bay of *Cheſepeak*. 2dly, The River *Pocomoac*, which riſing near the Ocean, runs alſo directly South, and then turning to the Weſt, falls alſo into the Bay of *Cheſepeak*, near *Watkins*'s Point. A Line drawn from the Mouth of the River directly Eaſt, to the *Atlantic Ocean*, is the true Boundary between *Maryland* and *Virginia* on the Eaſtern Shore. 3dly, The River *Patuxent*, which riſing in *Anne Arundel* County, runs to the South-eaſt, and falls into the Bay of *Cheſepeak*, about twenty Miles to the Northward of the Mouth of *Potowmack River*. 4thly, *Severn River*, which riſes on the North weſt Part of *Maryland*, running South-eaſt, falls into the upper Part of the ſaid Bay. 5thly, *Cheptonk*, which riſes on the Eaſtern Shore, runs to the South-weſt, and falls into the ſame Bay. 6thly, *Saſſafras River*, which riſes in the North-eaſt of *Maryland*, and running almoſt due Weſt, falls into the North End of the ſaid Bay. 7thly, *Wicomo River*, which riſes on the Eaſtern Shore, runs to the South-weſt, and falls into the Bay almoſt againſt the Mouth of *Potowmack River*. The 8th and laſt River I ſhall mention is *St. George*, on the Weſt-ſide of the Bay; which, running from North to South, falls into the Mouth of the River *Potowmack*. Here the *Engliſh* firſt ſettled, and built the Town of *St. Mary's*. There are a great many more Rivers capable of receiving large Ships, which, with the numerous Bays and Creeks, that indent the Land on every Side, give the Seamen an Opportunity of bringing their Veſſels up to the very Planters Doors, to receive their Freight, as in *Virginia*.

The Air of this Country is exceſſive hot ſome part of the Summer, and very cold in Winter when the North-weſt Wind blows; but the Natives tell us, that they are happily ſituated; that their Heats are very ſeldom troubleſome, and then only by Accident, in a perfect Calm; but that this does not happen above two or three Days in a Year, and then laſts but a few Hours at a Time, and even this Inconvenience is made very tolerable by their cool Shades, their open and airy Rooms, Arbours and Grottos; and in Spring and Fall the Weather is as pleaſant as can be wiſhed; that their Winters are not of more than three or four Months Duration, and in theſe they ſeldom have one Month's bad Weather, all the reſt they are happy in a clear Air and a bright Sun, and are ſcarce ever troubled with Fogs; it is acknowledged they have hard Froſts ſometimes, but they laſt no longer than while the Wind blows from the North, and North-weſt Points, which is ſeldom more than three or four Days.

At other times they have no Froſt at all; and their Froſts are attended with bright and ſerene Weather; and in the Spring, Summer, and Winter, their Winds are only cool pleaſant Breezes. Their Rains, except in the Depth of Winter, are very pleaſant and refreſhing; in Summer they laſt but a few Hours, and then bright Weather ſucceeds: However, it is acknowledged, that the Showers which fall in Summer are very heavy for the Time they laſt; and the Part of the Country which lies on the Bays of the Sea, and the Mouths of the Rivers, which is much the beſt peopled, is certainly hot and moiſt; indeed, higher up the Country, whither the Plantations are now extended, the Air is much more healthful, eſpecially ſince their Lands are cleared of Wood. They have here, however, dreadful Thunder in the Heat of Summer; but as it cools and refreſhes the Air, they rather wiſh for it than fear it, though it ſometimes does much Miſchief, but leſs than formerly.

Since the *Indians* transferred, or yielded, this Province to the *Engliſh*, it has been divided into ten Counties, ſix on the Weſt-ſide of the Bay, and four on the Eaſt-ſide of it; thoſe on the Weſt-ſide, taking them from South to North, are, 1. *St. Mary*'s County. 2. *Charles* County. 3. *Prince George* County. 4. *Calvert* County. 5. *Anne Arundel* County. And 6. *Baltimore* County. The Counties on the Eaſt-ſide of this Bay, lying alſo from the South, are, 1. *Somerſet* County. 2. *Dorcheſter* County. 3. *Talbot* County. 4. *Cecil* County. As for the County of *Kent*, that, or the greateſt Part of it, is now ſaid to be in *Penſylvania*. *St. Mary*, the Capital of the County of the ſame Name, and, for ſome Time, of the whole Province, is ſituated on the Eaſt-ſide of the River *St. George*, in 38 Degrees and ſome Minutes North Latitude. This, as has been intimated, was the firſt Town in *Maryland* built by the *Engliſh*, who raiſed a Fort for its Defence; but in its moſt flouriſhing State never had more than thirty or forty Houſes in it, and ſince the Seat of the Government has been removed to *Annapolis*, ſeems to be upon the Decline; for the ſame Humour prevails here as in *Virginia*, of Gentlemens living on their reſpective Plantations, and not in Towns.

In this County alſo are the Pariſhes of *Hervington*, *St. Clement*'s, and *St. John*'s; and here is a noble Seat of the Lord *Baltimore* the Proprietor, called *Mettapenny*, ſituate on the Mouth of the River *Patuxent*. In *Prince Charles* County, which lies North of *St. Mary's*, are the Pariſhes of *Briſtol*, and *Piſcataway*; and in that of *Prince George*, the Pariſh of *Maſterkout*. In *Calvert* County, which is divided from *Charles* County by the River *Patuxent*, are the Pariſhes of *Abington*, *Warrington*, and *Calverton*. In the County of *Anne Arundel*, which lies North of *Charles* County, the chief Town is *Annapolis*, now the Capital of the Province, and formerly called *Severn*, being ſituate on the River of that Name, in 39 Degrees and ſome Minutes North Latitude. Here the Courts of Juſtice, and the General Aſſemblies were ordered to be held, in the Year 1699; and this has ever ſince been the Reſidence of the Governor; notwithſtanding which, there are not yet an hundred Houſes built in the Town.

In *Baltimore* County, which lies between *Anne Arundel* County and the Province of *Penſylvania*, is the Pariſh of *Baltimore*, ſituate on the North-weſt Part of the Bay of *Cheſepeak*. In *Somerſet* County, which is the moſt ſoutherly County on the Eaſt-ſide of the Bay, are the Town and Pariſh of *Somerſet*. In *Dorcheſter* County, which lies North of *Somerſet*, are the Town and Pariſh of *Dorcheſter*, beſides a great many *Indian* Towns. In *Talbot* County, which lies North of *Dorcheſter*, are the Pariſhes of *Oxford*, *St. Michael's*, *Bolingbrooke*, and *Cecil*, the moſt northerly County on the Eaſt-ſide of the Bay, is bounded both on the North and Eaſt by the Province of *Penſylvania*.

Throughout the whole Colony of *Maryland*, as in that of *Virginia*, the *Engliſh* live at large at their ſeveral Plantations, which hinders the Increaſe of Towns; indeed every Plantation is a little Town itſelf and can very well ſubſiſt with Proviſions and Neceſſaries; every conſiderable Planter's Warehouſe being like a Shop, where he ſupplies not only himſelf, with what he wants, but the inferior Planters, Servants, and Labourers; and has Commodities to barter for Tobacco, and other Goods, there being little Money in this Province, and little Occaſion for any, as long as Tobacco anſwers all the Uſes of Silver and Gold in Trade. There are few Merchants, or Shopkeepers, who may be properly ſo called, and live wholly by their Trade: The Tobacco of this Province, called *Oroonoko*, is ſtronger than that of *Virginia*; and no *Engliſhman*, who has not a very coarſe Reliſh, will bear it; yet it is as profitable to the Planter, and to the Trade of the Nation in general, being in Demand in the Eaſtern and Northern Parts of *Europe*, where it is preferred before the ſweet-ſcented Tobacco of *James* and *York* Rivers in *Virginia*. The Planters in *Maryland*, finding ſo good Vent for their Commodity in foreign Markets, have cultivated it ſo much, that the Province is thought to produce as much Tobacco as *Virginia*. The Soil is here as fruitful as in any Country, being a large Plain; and the Hills in it ſo eaſy of Aſcent, and of ſuch a moderate Height, that they ſeem rather an artificial Ornament to it, than one of the Accidents of Nature.

The Abundance of Rivers and Brooks is no little Help to the Fertility of the Soil, and there is no Grain, Plant, or Tree, which grows in *Virginia*, but thrives as well here; the Product, the Animals, and every Thing are the ſame here as there, only the black and yellow Bird, called the *Baltimore Bird*, goes by another Name in *Virginia*; it had that given it, becauſe the Colours of the Field of the Lord *Baltimore*'s Coat of Arms are *Or* and *Sable*. It is thought that the Number of Souls in *Maryland*, may be about thirty thouſand, or rather more. There are ſeveral hundred Sail of Ships employed yearly in the Commerce between *Great-Britain* and this Country, and the Benefit which reſults to this Nation from thence, is very large, as may be eaſily computed from the Principles laid down in the foregoing Account of the Colony of *Virginia*; which may likewiſe ſerve with reſpect to all the other Colonies that do not interfere with their Mother-Country in their Manufactures.

20. When *Oliver Cromwell*, after ſubverting entirely the Conſtitution of his Country, took upon him the Title of Protector, he reſolved to obliterate the Memory of what was paſt, by undertaking ſomewhat that might be of great and laſting Advantage to his Country. It was with this View, and to rid himſelf of many Officers whom he ſuſpected, that he framed a Project of attacking the *Spaniards* in the *Weſt Indies*, and of taking from them the noble Iſland of *Hiſpaniola* or *St. Domingo*; in the adjuſting of which Deſign, he depended chiefly on the Information he received from one Father *Gage*, a Prieſt, who had been many Years in the *Spaniſh America*, and who died in this Voyage; for which, tho' great Preparations were made, yet they went on very ſlowly, and it was certainly, though the beſt conceived, yet the worſt executed of all his Enterprizes.

The Squadron commanded by General *Penn*, being ordered to rendezvous at *Portſmouth*, where the Land Force were to embark, Complaints were made to *Venables* of Diſorders and Diſcontents among the People, and more particularly about the Badneſs of the Proviſions; which, by his Means, being made known to General *Deſborrow*, he, by very harſh Expreſſions, ſignified his Diſcontent thereat; and particularly charged *Venables* with a Deſign of fruſtrating the intended Expedition, by being the Author of Reports which were falſe; while he, on the other hand, endeavoured to juſtify himſelf, and to ſhew that he intended no otherwiſe than for the public Good; and there was a ſhrewd Suſpicion that *Deſborrow*'s Diſſatisfaction herein aroſe, from his being concerned with thoſe who had the Management of victualing the Navy. After *Venables* had attended near four Months without any poſitive Aſſurance whether the Government was determined to go on with the Deſign or not, although it was publickly diſcourſed of, and the *Spaniards* had thereby not only the Knowledge thereof, but Opportunities of providing for their Defence; he was ſome time after ſent to, and directed to hold himſelf in a Readineſs to proceed; and though he then requeſted that the Draughts which were to be made out of the Regiments, might be Men, in all Reſpects, fitting for the intended Service, yet the Colonels were permitted to pick and cull them as they pleaſed, inſomuch that moſt of them were raw and altogether undiſciplined, and amongſt them many *Iriſh* Papiſts; nor had not half of them Arms in any Degree ſerviceable: And ſo far were the Council from permitting him to ſtay till better could be furniſhed in their Room, that they ſent him poſitive Orders to leave the Town next Day, upon pain of Impriſonment.

Before he came to *Portſmouth* many of the Troops were embarked, and the reſt ſhipping off with the utmoſt Haſte, ſo that he had no Opportunity of viewing, much leſs of exerciſing, them on Shore; and thereby informing himſelf of their Condition, with reſpect to their Abilities or otherwiſe; and although he was promiſed that the Storeſhip, with Arms and other Neceſſaries, ſhould join him at *Spithead*, he was at laſt told that no Delay muſt be made in ſtaying for her, but that he might expect her coming to him at *Barbadoes*. He was likewiſe aſſured that he ſhould carry out with him, at leaſt, ten Months Proviſions for ten thouſand Men, but the moſt Part thereof was ſent back to *London*, to be ſhipped off there, under pretence that there was not ſufficient Room for the ſame in the Ships at *Portſmouth*, although the Officers in the Fleet found Paſſage in them for no inconſiderable Quantities of Goods, with which they deſigned to traffic when they arrived at the aforeſaid Iſland.

The Forces being embarked, and the Wind preſenting fair, the Squadron ſailed, and arrived at *Barbadoes* on the 29th Day of *January*, 1654; ſoon after which, General *Venables* wrote to the Protector, the Lord Preſident of the Council *Laurence*, the Lord *Lambeth*, and ſeveral others, letting them know in what a miſerable Condition the Army was, and how deſtitute they were, not only of Proviſions, but Arms and other Neceſſaries, proper for carrying on the intended Deſign; inſomuch that they were conſtrained to make the hardeſt Shifts to ſupply them with the ſmall Quantities, either of one or the other, that could be had in theſe Parts. The firſt thing that was done after the Fleet's Arrival at *Barbadoes*, was the ſeizing ſuch *Dutch* Ships and Veſſels as were found there, and General *Penn* appointed a Nephew of his to take an Account of their Cargoes, and all things belonging to them, without admitting any Cheque on him as General *Venables* deſired and inſiſted on, that ſo no Embezzlements might be made.

The 18th of *March*, *Venables* thought it neceſſary to hold a Council of War of the Land Officers, to conſider of the State of the Army; and it was reſolved to make theſe Propoſitions to *Penn*, among ſeveral others, *viz.* 1ſt, That as the Officers of the Army had reſolved not to deſert the Fleet, he with his Officers would reciprocally reſolve not to leave the Army, at leaſt not till ſuch time as their expected Supplies arrived from *England*. 2dly, That it ſhould be propoſed to the Commiſſioners, that a fit Quantity of Shipping might be taken up for tranſporting the Forces. 3dly, That they might not proceed on Service with leſs than twenty Tons of Ball, and that they might likewiſe be furniſhed from the Fleet with two hundred Fire-arms, ſix hundred Pikes, beſides Piſtols, Carbines, and two hundred Half-Pikes. To this *Venables* received no ſatisfactory Anſwer from *Penn*, and the Stores not arriving in *England*, he again deſired to know from him what Arms, Shot, Match, and other Neceſſaries he could furniſh from the Fleet; General *Deſborrow* having aſſured him, when in *England*, that the Commiſſioners had Power to diſpoſe of what might be on board the Ships, to the neceſſary Uſe of the Army; but to this *Penn* returned him an Anſwer, that fifteen ſhot a Man, and a few Tons of Match, was all he could ſpare; beſides which, he at length prevailed with him to add thereunto a few Half and Quarter Pikes, which gave Occaſion to one of the Commiſſioners to let fall ſome Words, as if he doubted they were betrayed.

Beſides all theſe Diſappointments, and the Badneſs of the Proviſions ſent from *England*, yet even of them the Soldiers were put to ſhort Allowance, while the Seamen were at whole, which occaſioned no little Diſcontent, and rendered them very ſickly and weak; and as the Commiſſioners were empowered and required to diſpoſe of all Prizes and Booty taken towards defraying the Charge of the Expedition, and only a Fortnight's Pay was offered to the Officers and Soldiers in lieu of whatever Booty ſhould be taken at *St. Domingo* (whither they were firſt deſigned from *Barbadoes*) it very much increaſed the Diſſatisfaction of the Army; for moſt of the Officers, when they ſet forwards on the Expedition, were in hopes of bettering themſelves very conſiderably. At length General *Venables* prevailed with the Officers and Men to accept of ſix Weeks Pay inſtead of their Plunder; and thereupon himſelf and *Penn* iſſued out Orders, reſtraining all Perſons from pillaging without Orders, or from concealing the ſame on pain of Death, and Forfeiture of their Pay. But although the Officers were willing to ſubmit to this, yet the Commiſſioners refuſed to ſign it, inſomuch that the Soldiers publickly declared they would return to *England*, and never more ſtrike Stroke where there were Commiſſioners who ſhould have Power to controul the Army.

The Fleet being now in a Readineſs to ſail, General *Venables*, with ſome of the Commiſſioners, and the Officers of the Army, propoſed that they might proceed to the Harbour of *St. Domingo* (but for what Reaſon it doth not appear, unleſs it was for want of experienced Pilots). That was refuſed, and a Reſolution taken to land the Troops at the River *Hind*; that ſo they might endeavour to force the Fort and Trench. It was alſo reſolved among the Land Officers, 1ſt, That the Regiments ſhould caſt Lots which of them ſhould go on Shore firſt. 2dly, That two or three Regiments ſhould be landed at once. 3dly, That the Seconds to each Regiment ſhould be appointed. 4thly, That the Ships wherein the Regiments were, ſhould keep near each other, for their more regular landing. And it was farther determined, that if the Surges of the Sea ran high, and that the Enemy were prepared to defend the Fort and Trench, the Army ſhould be landed behind the ſecond Point to Leeward, and that, when on Shore, one Regiment ſhould be ordered to march Eaſtward of the City, provided General *Penn* would engage to furniſh the Army with all Neceſſaries.

Lots having been caſt as aforeſaid, it fell to Colonel *Buller*'s Regiment to land firſt, and there was one *Cox* who had lived in thoſe Parts many Years, was to have been their Guide, but he had been ſent of ſome Errand by *Penn*, ſo that he was at this time abſent; and Vice-Admiral *Goodſon* declaring that he neither had Orders to go into *Hind River*, nor Pilots to conduct the Ship thereinto; the Army were conſtrained to land at the Weſt Point (which *Venables* proteſted againſt) and by that means were expoſed to a tedious March of forty Miles, through a thick woody Country, without any Guide, inſomuch that both Horſe and Men, by the Fatigue and Extremity of Heat, fell down with Thirſt, and were miſerably

rably afflicted with the Flux, by their eating Oranges and other green Fruit, having no Water to moiſten their Mouths with. After four Days March the Army came to the Place where they might firſt have been put on Shore, but by that time the Enemy had ſummoned in the whole Country to their Aſſiſtance; and even now many of the Soldiers had no more than one Day's Proviſions of the three that had been promiſed them from the Ships.

Colonel *Buller* being ſent with his Regiment to a particular Station near *Hind River*, and ordered not to ſtir from thence until the reſt of the Army joined him, he was ſo far from complying with thoſe Commands from the General, that he marched away under the Guidance of *Cox*, who was now arrived from the Fleet; inſomuch that for want of the ſaid Guide, the General miſtaking the Way, marched ten or twelve Miles about; and *Buller* having ſuffered his Men to ſtraggle, they fell into, and ſuffered much by, the Ambuſcades laid by the Enemy. The Hardſhips the Forces had undergone for want of Proviſions, and their being denied what Plunder they might happen to take at *St. Domingo*, ſo exaſperated them, that the Seamen who had been firſt ſent aſhore, and ſoon after thoſe on the Land, were in a general Mutiny: However, in this Condition they forded the River *Hind*, with a Reſolution to march to the Harbour, that ſo they might be furniſhed with Proviſion and Ammunition from the Ships, but they were ſtrangers to the Way; neither had they any Water to drink. At length Colonel *Buller*, and *Cox* the Guide, joining them, promiſed to conduct them to a Place where they might be ſupplied with Water. But ſome of the ſaid Colonel's Men having rambled about for Pillage, encouraged the Enemy to lay Ambuſcades for them in their March, who, falling upon the Forlorn, routed them, and killed ſeveral Officers; but they were ſoon after beaten back with Loſs, and purſued within Cannon-ſhot of the Town; yet when the Action was over, many Men, as well as Horſes, periſhed with Thirſt.

A Council of War being called to conſider of the Condition of the Army, it was found that many of the Men had eat nothing for four Days together, unleſs it were ſome Fruits they gathered in the Woods; and that they were without Water, the *Spaniards* having ſtopped up all their Wells within ſeveral Miles of the Town. Neither knew they the Country, or how to get to their Ships, for *Cox* the Guide was ſlain in the laſt Skirmiſh; however, after mature Conſideration, it was reſolved to march to the Harbour in the beſt Manner they could, and at length arriving there, they ſtaid three or four Days to furniſh themſelves with Proviſions and other Neceſſaries, and then advanced with a Mortar Piece, in order to reduce the Fort; but the Enemy having laid an Ambuſcade, they charged the Van, which was to have been led by Adjutant General *Jackſon*, very vigorouſly, and were anſwered in like Manner; whereas *Jackſon*'s Party running away, and the Paſſage through the Woods being very narrow, they fell upon the General's own Regiment, who, to no purpoſe, endeavoured to ſtop them with their Pikes; for they firſt diſordered that Regiment and ſoon after Major General *Haynes*'s: Mean while the Enemy followed very eagerly, and giving no Quarter, the ſaid Major General, and the beſt of his Officers, who preferred Death before Flight, fell in the Action.

At length the General's own Regiment making head againſt them, as alſo that of the Seamen, commanded by Vice Admiral *Goodſon*, they, with their Swords, forced the Runaways into the Woods, rather chuſing to kill them than they ſhould diſorder the reſt; which the Enemy perceiving, they retreated, and our Men kept their Ground, though the Shot from the Fort killed many of them. The Troops, nevertheleſs, were ſo very weak and diſheartened, that not many of them could be brought to play the Mortar againſt the Fort; and though the General was reduced to a very low Condition by the Flux, he cauſed himſelf to be led from Place to Place to encourage them; but fainting at laſt, was forced to leave the Care to Major General *Forteſcue*, who ſoon found that he could prevail no more than the General himſelf. It was reſolved ſoon after, at a Council of War, that ſince the Enemy had guarded every Paſs, and that the Army were under very great Neceſſities for Water, they ſhould march to a Place where they had been informed a Supply thereof, and of other Neceſſaries, had been put on Shore for them from the Ships. But in that March the Soldiers accompanied their Officers no farther than till they found them in Danger, and then left them, inſomuch that the Commiſſioners owned, in a Letter they wrote to the Governor at *Barbadoes*, that had not the Enemy been as fearful as our own Men, they might, in a few Days, have deſtroyed the whole Army; and withal they let him know, that thoſe who had occaſioned the greateſt Diſorder, were thoſe of *Barbadoes* and *St. Chriſtophers*, inſomuch that they, the ſaid Commiſſioners, who were *Penn*, *Winſlow*, and *Buller*, had reſolved to leave the Place, and try what could be done againſt the Iſland of *Jamaica*.

21. The Army was accordingly in little Time embarked, but the Sick and Wounded were kept on the bare Decks for forty eight Hours, without Meat, Drink, or dreſſing, inſomuch that Worms bred in their Sores; and even while they were on Shore the Proviſions ſent to them were not watered but candied with Salt, notwithſtanding they had not Water ſufficient to quench their Thirſt. Nay, after this Misfortune on Shore, *Venables* averred that *Penn* gave Rear Admiral *Blagge* Orders not to furniſh them with any more Proviſions of what kind ſoever, ſo that they eat up all the Horſes, Dogs, and Aſſes, in the Camp, and ſome of them ſuch Things as were in themſelves poiſonous, of which about forty died; and before the Forces were embarked, Adjutant General *Jackſon* was tried by a Court Martial, and not only ſentenced to be caſhiered, and his Sword broken over his Head, but to do the Duty of a Swabber, in keeping clean the Hoſpital Ships; a Puniſhment ſuitable to his notorious Cowardice. The Fleets and Troops arriving at *Jamaica*, Orders were iſſued by General *Venables*, that where it ſhould be found any Man attempted to run away, the next Man to him ſhould put him to Death, or that if he failed ſo to do, he ſhould be liable to be tryed for his Life; and now all the Troops being ready for Service, they advanced towards the Fort, which they made themſelves Maſters of with little Loſs; and next Morning when the Sun roſe, they began to march towards the Savanah, which was near the Town, when ſome *Spaniards* came towards them, and deſired to treat; but the General refuſed ſo to do, unleſs they would ſend them a conſtant Supply of Proviſions, then much wanted; which they punctually did, according to the Promiſe they had made. The Articles agreed on at laſt were theſe, *viz.* 1ſt, That all Forts, Arms, Ammunitions, and Neceſſaries for War, and all kinds of Shipping in any Harbour in the Iſland, with their Furniture, *&c.* as alſo all good Wares, Merchandize, *&c.* ſhould be delivered up to General *Venables*, or whom he ſhould appoint, for the Uſe of the Protector, and the Commonwealth of *England*. 2dly, That all and every of the Inhabitants of the Iſland (except ſome that were particularly named) ſhould have their Lives granted, and as thoſe who inclined to ſtay had leave ſo to do, ſo was it agreed to tranſport the others to *New Spain*, or ſome other of the Dominions belonging to the King of *Spain* in *America*, together with their Apparel, Books, and Papers, they providing themſelves with Victuals and Neceſſaries. 3dly, That all Commiſſion Officers, and none others, ſhould be permitted to wear their Rapiers and Poniards. 4thly, All Artificers, and meaner Sort of People, ſhould be permitted to remain on the Iſland, and to enjoy their Goods, provided they conformed themſelves to the Laws which ſhould be eſtabliſhed.

By theſe Means the noble Iſland of *Jamaica* was ſubdued, and though the *Spaniards* continued to lurk in ſome Parts of the Iſland for ſeveral Years afterwards, and once made a bold Attempt to recover the Place; yet Colonel *Doyly* forced them to withdraw, and reduced the whole Iſland ſo effectually, that at the Reſtoration the *Spaniards* yielded it to the Crown of *Great-Britain*, to which it has belonged ever ſince; and is, beyond Queſtion, on, the nobleſt Poſſeſſion we have in theſe Parts. The Hiſtory of this Country, ſince it came into our Poſſeſſion is ſo well known, and would alſo take up ſo much room, that we cannot enter into it here, nor indeed is it neceſſary, becauſe our chief Buſineſs is to ſhew the Value and Importance of our Colonies, with reſpect to their Mother-Country, which is always beſt done by deſcribing the Plantation, explaining the Nature of its Product, and giving as good an Account as may be of the Nature of its Trade and the Number of its Inhabitants; and as this appears to be the moſt material Part, to an *Engliſh* Reader, where we cannot inſert all that relates to a Colony, we prefer this Part to any other.

22. We have a very large and accurate Account of this noble Country written by a learned, candid and indefatigable Perſon, who reſided long there, I mean Sir *Hans Sloane*, from whom others have taken their Materials, and ſo muſt I; as not knowing where to find any ſo good, or that may be ſo well depended upon; which Acknowledgment, as it is due to his Merit, I think it but Juſtice to make, as I hope it will add ſome Degree of Credit both to his Work and mine.

It is from him, therefore, that we learn moſt of the Particulars, which follow, and are every way ſufficient for our Purpoſe. *Jamaica* is ſituated on the *Atlantic Ocean*, between 17 and 18 Degrees North Latitude, and between 76 and 79 Degrees Weſtern Longitude, about twenty Leagues Eaſt of *Hiſpaniola* and as many South of *Cuba*, and upwards of an hundred and fifty Leagues to the Northward of *Porto Bello* and *Carthagena* on the Coaſt of *Terra Firma*. This Iſland ſtretches from Eaſt to Weſt one hundred and forty Miles in Length, and about ſixty in Breadth in the Middle; growing leſs towards each End; the Form is pretty near oval.

The whole Iſland has one continued Ridge of Hills running from Eaſt to Weſt through the Middle of it, which are generally called the *Blue Mountains*; the Tops of ſome are higher than others; one of the higheſt is called *Mont Diabolo*: Other Hills there are on each Side of this Ridge of Mountains, which, however, are much lower. The outward Face of the Earth ſeems to be different here from what it is in *Europe*, the Valleys being very level, with little or no riſing Ground or ſmall Hills, without Rocks or Stones; the mountainous Part is very ſteep, and furrowed by very deep Channels on the North and South Side of the higheſt Hills; theſe Channels are made here by frequent and very violent Rains, which every Day almoſt fall on the Mountains, and firſt wearing a ſmall Trough or Courſe for their Paſſage, waſh away afterwards whatever comes in the way, and make their Channels extraordinary ſteep. The greateſt Part of the high Land of this Iſland is either Stone or Clay, which reſiſts the Rains, and ſo is not carried down violently with them into the Plains, as the Mould proper for Tillage and friable Earths are: Hence it is, that in theſe mountainous Places one ſhall have very little or none of ſuch Earths, but either a very ſtrong tough Clay or a Honey-Comb, or other Rock, upon which no Earth appears. All the high Land is covered with Woods, ſome of the Trees very good Timber, tall and ſtrait; and one would wonder how ſuch Trees ſhould grow in ſuch a barren Soil, ſo thick together among the Rocks; but the Trees ſend down their fibrous Roots into the Crannies of the Rocks, where here and there they meet with little Receptacles of Rain-Water, which nouriſh their Roots.

It is a very ſtrange Thing to ſee in how ſhort a Time a Plantation formerly cleared of Trees and Shrubs will commonly grow foul, which ariſes from two Cauſes; one, the not ſtubbing the Roots, whence ariſes young Sprouts, and the other the Fertility of the Soil. The Settlements and Plantations not only of the *Indians* but the *Spaniards* being quite overgrown with tall Trees, ſo that there would be no Footſteps left were it not for old Palliſadoes, Building, Orange Walks, &c. which evidently ſhew Plantations have been there. There are the ſame Layers of Earth, one over another, in the fruitful Part of the Iſland, as are to be met with in *Europe*; and the ſame Difference of Soil appears as in *England*, in digging of Wells, and other Occaſions of opening the Ground. Moſt of the Savanahs, or Plains fit for Paſture, and cleared of Wood, are like our Meadow Land, and lie near the South Side of the Iſland, where one may ride a great many Miles without meeting the leaſt Aſcent; ſome of theſe Plains are within Land, incircled with Hills. Theſe Savanahs after Rain are very green and pleaſant, but after long Droughts are very much withered, and look yellow and parched.

The chief Ports in the Iſland are, 1. *Port Royal*, a fine capacious Harbour. 2. *Old Harbour*, which lies ſeven or eight Miles South-weſt of *St. Jago*. 3. *Port Morant*, at the Eaſt End of the Iſland; and, 4. *Point Negril*, at the Weſt End of this Iſland; beſides which, are ſeveral more on the South and North Sides of the Iſland; but it is dangerous approaching the Coaſt, without a Pilot, on account of the Coral Rocks, which almoſt ſurround it. There are near an hundred Rivers in *Jamaica*, but none of them navigable; for riſing in the Mountains in the Middle of the Iſland, they precipitate themſelves down the Rocks to the North or South, falling into the Sea before they have run many Miles, and carrying down with them frequently great Pieces of Rock and Timber. Yet freſh Water is very ſcarce in dry Years in the Savanahs diſtant from Rivers, ſo that many of their Cattle die with driving to Water. Near the Sea the Well-water, as at *Port Royal*, is brackiſh; this brackiſh Water, which is very common in Wells on Sea Shores is not wholſome, but the Cauſe of Fluxes and other Diſeaſes in Sailors by their drinking it.

Their River Water carries with it much Clay or Earth, and has an odd Taſte, which in *St. Jago* gives Occaſion to the *Spaniards* to call it *Rio Cobre*, and the *Engliſh* to ſay it is not wholſome, and taſtes of Copper; whereas, on the Trial of the Sand, there is no Metal found therein; this River Water, however, if ſuffered to ſettle ſome Days in Earthen Jars is good; Spring-Water, at a Diſtance from the Sea, is preferred to River or Pond-Water. There are ſome Springs as well as Rivers, which putrify their Channels, and ſtop their Courſe by a Cement, uniting the Gravel and Sand in their Bottoms. There is a Hot-Bath, or Spring, near *Port Morant*, in the Eaſt Part of the Iſland, ſituate in a Wood, which hath been bathed in, and drunk of late Years for the Belly-ach, the common Diſeaſe of the Country, with great Succeſs. A great many Salt Springs ariſe in a level Ground under the Soils in *Cabbage-Tree Bottom*, about a Mile or two diſtant from the Sea, which united, make what is called the Salt River. Salt is made here in Ponds, into which the Sea or Salt Water comes, and by the Heat of the Sun the Moiſture being exhaled, leave the Salt, which is in great Plenty; at the Salt Ponds about *Old Harbour*, the Salt is not perfectly white, or in ſmall Grains, but in large Lumps, and has an Eye of Red in it, as ſome *Sal Gemmæ*, from *Spain*, or what comes from the Iſland of *Salt Tortuga* near the Main of *America*, which is here reckoned the ſtronger and better. *Salt Lagunas*, or great Ponds, there are many here, one whereof, *Riottoa Pond*, receives a great deal of Water by a River, which yet has no viſible Rivulet or Diſcharge runs from it; ſome Rivers in the Mountains riſe above and go under Ground again in a great many Places. *Rio d'Oro* particularly falls and riſes two or three times, and ſo it is in many others. At *Abraham*'s Plantation on the North Side is a River, which has ſtopt its own Courſe by letting a Settlement fall, and putrifying its own Bottom. It is very common to have Cataracts or Caſcades in Rivers among the Mountains fifty or ſixty Feet high.

This Iſland being ſeven Degrees within the Tropic, has the Trade-Wind continually there, which is on the South ſide of the Iſland, called the Sea-breeze. It comes about eight o'Clock in the Morning, and increaſes till twelve in the Day; and then, as the Sun grows lower, it decreaſes till there is none at four in the Evening. About eight in the Evening begins the Land-breeze, blowing four Leagues into the Sea, and continues increaſing till twelve at Night, and decreaſes again till four. The Sea-breeze is now and then more violent than at other times, as at new or full Moon, and encroaches very much on the Land Winds; and the *Norths* when they reign, *viz.* in the Months of *December*, *January*, and *February*, blow over the Ridge of Mountains with Violence, and hinder the Sea-breeze, which blows ſtronger and longer near the Sea, as at *Port Royal*, or

Paſſage-Fort, than within Land, as at *St. Jago de la Vega*, or *Spaniſh-Town*; as on the contrary the Land-Wind blows harder at the Town than at *Paſſage-Fort* or *Port-Royal*. The Land-Wind blowing at Night, and the Sea-Breeze in the Day-time, no Shipping can come into Port except in the Day, nor go out, but at break of Day, or very ſoon after.

The Norths, as they call them, come in when the Sun is near the Tropic of *Capricorn*, and ſo fartheſt off Southerly, and are very cold and unhealthy Winds, more violent in the Night, becauſe it is then they have the additional Force of the Land-Wind. They check the Growth of Canes, and all Vegetables on the North-ſide, but are hindered by the Ridge of Mountains from ſhewing much of their Fury on the South, where it ſeldom rains with this Wind. The South Winds bring the moſt laſting Rains. The Rains from the South are laſting on the South-ſide of this Iſland. As at Sea with the Trade-Winds one meets with Tornadoes, ſo at Land here ſometimes will be a violent Weſt, directly contrary to the Trade, Wind; but this happens ſeldom, and is ſoon over. The Sea-Breeze, when it blows hard, is thought to hinder the Rain from coming to the Plains, it for the moſt part then raining on the Hills. On this account it is that there are in the Mountains many Springs and Rivers, and few or none in the Plains. And this is likewiſe the Cauſe why there is never any Want of Water in the Rivers coming from them through the Plains, and likewiſe that, ſometimes, Rivers ſuffer very great Increaſe and Inundations in the Plains, when no Rains have fallen in the Places where ſuch Inundations appear.

Earthquakes, as they are very frequent in *Hiſpaniola*, where they have formerly thrown down the Town of *St. Domingo*; ſo they are too common alſo here: The Inhabitants expect one every Year, and ſome of them think they follow their great Rains: One happened on *Sunday* the 19th of *February*, 1688: As if People had raſed the Foundation of the Houſes, it was felt all over the Iſland about the ſame time, ſome Houſes being wrecked, and very near ruined, and very few eſcaped ſome Injury; the People were in a very great Conſternation, and the Ships in *Port Royal* Harbour felt it: It was obſerved, that the Ground roſe like the ſea, in Waves, as the Earthquake paſſed along. But this was nothing to the Earthquake which happened at *Port Royal* in the Year 1692, by which that Town was almoſt ſwallowed up. Thunder is heard almoſt every Day in the Mountains, with the Rains there, ſo that any Perſons in the Plains may here it, as well as ſee the Rain; it does not ſo ordinarily accompany thoſe Rains that come from the Sea, although when it does it is very violent. Lightning for the moſt part precedes Thunder, in this Iſland, as elſewhere; and, if it be fair Weather, eſpecially in the hotteſt Seaſons, it lightens almoſt all the Night, firſt in one Part of the Sky, or Horizon, out of ſome Clouds, and then out of others oppoſite to them, as it were anſwering one another. Froſt or Snow are never ſeen in this hot Climate; but ſometimes Hail, and that very large; it comes with very great Norths, which reach with great Violence to the South-ſide, and throw down every thing before them.

The Dews here are ſo great within Land, that the Water drops from the Leaves of the Trees in a Morning, as if it had rained; a Man riding in the Night, will find his Cloaths, Hair, *&c.* very wet in a ſmall time; but there are ſeldom any Fogs in the Plains or ſandy Places near the Sea. The Rains there are violent, and the Drops very large; according to the different Poſitions of Places, ſo the Rains are more or leſs violent, and come at different times, but generally ſpeaking the great rainy Seaſons are in *May* and *October*; in which Months, at new or full Moon they begin, and continue Day and Night for a whole Fortnight, ſo that the Earth in all level Places is laid under Water for ſome Inches, and it becomes looſe for ſome Inches deep, and conſequently the Roads are almoſt impaſſable. "In the Town of *St. Jago de la Vega*, "in thoſe rainy Seaſons, I was forced to ride on Horſe-"back (ſays Dr. *Sloane*) although but from Door to "Door, to viſit the Sick." And theſe Seaſons, as they are called, from being fit to plant in, are generally ſo over the whole Iſland, though they are much altered in their Time and Violence of late Years, which ariſes from the clearing much of the Country of Wood. In the Month of *January* is likewiſe expected a Seaſon, or Rain; but this is not ſo conſtant and violent as the other two, and probably may come from the violent Norths, at that time paſſing over the Mountains, with part of their Rains with them.

As to the Produce of the Iſland of *Jamaica*, it is not eaſy to give a very clear Account thereof in a narrow Compaſs; however, I ſhall do the beſt I can. In the firſt place, I ſhall mention Cocoa, of which there ſtill comes more from this than from any of our Plantations; and as it is known to be a very rich and valuable Commodity, the Reader will probably be pleaſed with a particular Account of it. Cocoa grows on a Tree in Cods, green, red, and yellow, every Cod having in it three, four, or five Kernels, about the Bigneſs and Shape of ſmall Cheſsnuts, which are ſeparated from each other by a Subſtance like the Pulp of a roaſted Apple, moderately ſharp and ſweet, from which its Nuts are taken when ripe, and by drying cured. The Body of a Cocoa Tree is commonly about four Inches Diameter, five Feet in Height, and above twelve to the Top of the Tree. Theſe Trees are very different; for ſome ſhoot up in two or three Bodies; others in one; their Leaves are, many of them, dead and moſt diſcoloured, unleſs on very young Trees; a bearing Tree generally yields from two to eight Pounds of Nuts a Year, and each Cod contains from twenty to thirty Nuts. The Manner of curing them is, to cut them down when ripe, and to lay them to ſweat three or four Days in the Cods; which is done by laying them in Heaps; after this the Cods are cut, the Nuts taken out and put into a Trough covered with Plantain Leaves, where they ſweat again about ſixteen or twenty Days; the Nuts that are on each Cod are knit together by certain Fibres, and have a white kind of Pulp about them, very agreeable to the Palate, as has been hinted before; by their turning and ſweating, their little Strings are broken, and their Pulp is imbibed and mingled with the Subſtance of the Nut: After which they are put to dry three or four Weeks in the Sun, and then they become of a reddiſh-dark Colour. The Cods grow out of the Body, or great Limbs and Boughs; at the ſame Place there are Bloſſoms, and young and ripe Fruit. It is planted firſt in the Night, and always under Shade; ſome ſet them under Caſſave, others under Plantain Trees, and ſome in the Woods. The *Spaniards* uſed a certain large ſhady Plant, called by them *Madre di Cocoa*, the Mother of Cocoa; the *Engliſh* uſe the others only.

It muſt always be ſheltered from the North-eaſt Winds. The People at *Jamaica* ſeldom tranſplant it, only when it falls, as it does often, in open, poor and dry Lands; for this Tree requires to have a flat, moiſt, low Soil, which makes them be planted commonly by Rivers, and between Mountains. 'Tis an Obſervation, that it is ill living where there are good Cocoa Walks. In a Year's time, the Plant becomes four Feet high, and has a Leaf ſix times as big as an old Tree, which, as the Plant grows bigger, falls off, and a leſſer comes in its Place. The Trees are almoſt always planted at two Feet Diſtance; and ſometimes at three Years old, where the Ground is good, and the Plant proſperous, it begins to bear a little, and then they cut down all or ſome of the Shade. The Fruit increaſes till the tenth or twelfth Year, when the Tree is ſuppoſed to be in its Prime. The Root generally ſhoots out Suckers, they ſupply the Place of the old Stock when dead, or cut down; unleſs any ill Quality of the Ground, or Air, kill both.

The Manner of planting them is, in Order, like our Cherry-Gardens: They place a Plantain by every Tree, and when it is grown up it reſembles a Cherry Tree; it delights in Shade, and for that Reaſon has the Plantain ſet by it. The Cocoa Walks are kept clear from Graſs by hoeing and weeding. The Trees begin to bear at three, four, or five Years, and, did they not almoſt always die before, would come to Perfection at fifteen Years Growth, and laſt till thirty; which renders them the moſt profitable Tree in the World, one Acre of them having cleared above two hundred Pounds in a Year;

but the old Trees planted by the *Spaniards* being gone by Age, and few now thriving, as the *Spaniſh* Negroes foretold, little or none now is produced worthy the Care and Pains in planting and expecting it. Thoſe Slaves aſcribe its not coming to Perfection to a ſuperſtitious Cauſe, many religious Rites being performed at its Planting by the *Spaniards*, which their Slaves were not permitted to ſee. But 'tis probable that wary Nation, as they removed the Art of making Cochineal, and curing Venelloes, into their inland Provinces, which were the Commodities of the Iſlands in the *Indians* Time, and forbad the opening any Mines in them, for fear ſome maritime Nation might be tempted to conquer them; ſo in tranſplanting the Cocoa from the *Caraccas* and *Guatamala* on the Continent, they might conceal, wilfully, ſome Secret in its planting from their Slaves.

There is alſo more Indico produced in *Jamaica*, than in any other Colony, by reaſon of the great Quantity of Savanah Land, for it thrives beſt in ſandy Ground. The Seed from whence it is raiſed is yellow and round, ſomething leſs than a Tare. The Ground is made light by hoeing; then Trenches are dug like thoſe our Gardeners prepare for Peaſe, into which the Seed is put about *March*: It grows ripe in eight Weeks Time, and in freſh broken Ground will ſpring up about three Feet high, but in others to no more than eighteen Inches. The Stalk is full of Leaves of a deep green Colour, and will, from its firſt ſowing, yield many Crops in one Year. When it is ripe it is cut and ſteeped in Fats twenty-four Hours, then it muſt be cleared from the firſt Water and put into proper Ciſterns, where, when it has been carefully beaten, it ſettles about eighteen Hours. In theſe Ciſterns are ſeveral Taps, which let the clear Water run out, and the thick is put into Bags of about three Feet long, made commonly of Ozenbrigs; which being hung up, all the liquid Part drops away; when it will drop no longer, it is put into Wooden Boxes, three Feet long, fourteen Inches wide, and one and an half deep; theſe Boxes muſt be placed in the Sun till it is very hot, and then taken in till the extreme Heat is over; this muſt be done continually till it is ſufficiently dryed. In Land that proves proper for Indico, the Labour of one Hand, in a Year's time, will produce between eighty and one hundred Weight, which may amount from twelve to fifteen Pounds to the Planter, if no Accident happen; for Indico, as well as other Commodities in thoſe Parts, is ſubject to many; the moſt common are Blaſting and Worms, by which it is frequently deſtroyed.

Piemento is another Natural Production of *Jamaica*, from whence it is called *Jamaica* Pepper, alluding to its Figure and the chief Place of its Growth; the Trees that bear it are generally very tall, and ſpreading, haveing a Trunk as thick as one's Thigh. It riſes ſtrait, above thirty Foot high, is covered with an extraordinary ſmooth Skin of a grey Colour; it is branched out on every hand, having the End of its Twigs ſet with Leaves of ſeveral Sizes, the largeſt being four or five Inches long, and two or three broad, in the Middle, where it is broadeſt, and whence it decreaſes to both extremes, ending in a Point ſmooth, thin, ſhining, without any Inciſures of deep green Colour, and ſtanding on Foot-Stalks an Inch long; when bruiſed very odoriferous, and in all things like the Leaves of a Bay Tree. The Ends of the Twigs are branched into Bunches of Flowers, and each Stalk ſuſtained a Flower bending back, within which Bend are many Stamina of a pale green Colour; to theſe follows a Bunch of crowned Berries, the Crown being made up of four ſmall Leaves, which are bigger, when ripe, than Juniper Berries: At firſt, when ſmall, greeniſh, but when they are ripe, black, ſmooth, and ſhining; containing in them a moiſt, green, aromatic Pulp, two large Seeds ſeparated by a Membrane, each of which is a Hemiſphere, and both joined make a ſpherical Seed.

It grows on all the hilly Part of the Iſland of *Jamaica*, but chiefly on the North Side; and wherever theſe Trees grow, they are generally left ſtanding when other Trees are felled; and they are ſometimes planted where they never grew, becauſe of the great Profit from the cured Fruit exported yearly in great Quantities into *Europe*. The *Jamaica* Pepper Tree flowers in *June*, *July*, and *Auguſt*, but ſooner or later, according to their Situation and different Seaſons for Rains; and after it flowers the Fruit ſoon ripens: But 'tis to be obſerved, that in clear open Grounds it is ſooner ripe than in thick Woods. There is no great Difficulty in curing or preſerving this Fruit for Uſe; 'tis for the moſt Part done by the Negroes. They climb the Trees and pull off the Twigs with the unripe green Fruit, and afterwards carefully ſeparate the Fruit from the Twigs and Leaves, which done, they expoſe them to the Sun, from the Riſing to the Setting, for many Days; ſpreading them thin on Cloths, turning them now and then, and carefully avoiding the Dews, which are there very great. By this means they become a little wrinkled, and from a green, change to a brown Colour, when they are fit for the Market; being of different Sizes, but commonly of the Bigneſs of black Pepper; ſomething like in Smell and Taſte to Cloves, Juniper Berries, Cinnamon and Pepper, or rather having a peculiar mixt Smell, ſomewhat a kin to all of them, from whence it is called All-ſpice. The more fragrant and ſmaller they are, they are accounted the better.

It is deſervedly reckoned the beſt and moſt temperate, mild and innocent, of all Spices, and fit to come into greater Uſe, and to gain more Ground than it has of the *Eaſt India* Commodities of this kind, almoſt all of which it far ſurpaſſes, by promoting the Digeſtion of Meat, attenuating tough Humours, moderately heating and ſtrengthening the Stomach, expelling Wind, and doing thoſe friendly Offices to the Bowels, which we expect from Spices.

The wild Cinnamon Tree, commonly called, though falſly, Cortex Winteranus, grows in this Iſland; its Trunk is about the Bigneſs of the Piemento Tree, and riſes twenty or thirty Foot high, having many Branches and Twigs hanging downwards, making a very lovely Top; the Bark conſiſts of two Parts one outward and another inward; the outward Bark is as thin as a milled Shilling, of whitiſh Aſh or grey Colour, with ſome white Spots here and there upon it, and ſeveral ſhallow Furrows of a darker Colour running variouſly through it, of an aromatic Taſte; the inward Bark is much thicker than Cinnamon, being as thick as a milled Crown Piece, ſmooth, and of a whiter Colour than the outward, of a much more biting and aromatic Taſte, ſomething like that of Cloves, and not glutinous like Cinnamon but dry and crumbling between the Teeth; the Leaves come out near the Ends of the Twigs, without any Order, ſtanding on Foot-Stalks, each of them two Inches in Length, and one in Breadth; near the End where broadeſt and rougheſt, being narrow at the Beginning, from whence it augments in Breadth to near its End, of a yellowiſh green Colour, ſhining and ſmooth, without any Inciſures about its Edges, and ſomewhat reſembling the Leaves of Bay.

The Ends of the Twigs are branched into Bunches of Flowers, ſtanding ſomewhat like Umbels, each of which has a Foot-Stalk, on the Top of which is a Calix made up of ſome little Leaves, in which ſtand five ſcarlet or purple Petala, within which is a large Stylix; to theſe follow ſo many calyculated Berries of the Bigneſs of a large Pea, roughiſh, green, and containing, within a mucilaginous pale green thin Pulp, four black ſhining Seeds of an irregular Figure: All the Parts of this Tree, when freſh, are very hot, aromatic, and biting to the Taſte, ſomething like Cloves, which is ſo troubleſome, as ſometimes to need the Remedy of fair Water. It grows in the Savanah Woods, very frequently on each Side the Road, between *Paſſage Fort* and the Town of *St Jago de la Vega*. The Bark of the Tree is what is chiefly in Uſe, both in the *Engliſh* Plantations, between the Tropics in the *Weſt Indies* and in *Europe*, and is without any Difficulty cured, by only cutting off the Bark, and letting it dry in the Shade. The ordinary Sort of People in the *Weſt Indies* uſe it inſtead of all other Spices, being thought very good to conſume the immoderate Humidity of the Stomach, to help Digeſtion, and expel Wind, &c. Rum loſes its diſagreeable Smell if mixed with this Bark.

The true Cortex Winteranus, for which the Druggiſts ſell this wild Cinnamon, was brought by Captain *Winter*, who accompanied Sir *Francis Drake* in his Voyage round the World, from the Streights of *Magellan*.

There is plenty of Cotton in *Jamaica*, and it is finer than that in the *Caribbee Iſlands*. The Tobacco that was planted there was better than at *Barbadoes*; but there's ſo little it deſerves not the Name of a Commodity. Very good tanned Leather is made there: The Tanners have three Barks to tann with, Mangrove, Olive Barks, and another. They tann better than in *England*; and in ſix Weeks the Leather is ready to work into Shoes. There's abundance of Dyers Woods, as Fuſtick, Red-wood, Logwood, and others; with ſeveral Sorts of Sweet-woods. The Iſland abounds in Drugs and medicinal Herbs, as Guaiacum, China, Saſaparilla, Caſſia, Tamarinds, Venelloes, many ſorts of Miſſeltoe; as alſo in ſalutary Gums and Roots; the Plant of which Cochineal is made, grows in *Jamaica*; and yet the Inhabitants, for want of Knowledge how to cure it, make no Advantage of it; beſides the Eaſt Wind blaſts it ſo, that it ſeldom or never comes to Maturity.

It is not doubted but that there are Copper Mines in the Iſland; and the *Spaniards* ſay the Bells of the great Church at *St. Jago* were made of *Jamaica* Metal; 'tis ſuppoſed there are Silver Mines in it, as well as at *Cuba*, and on the Continent; and there is a Place in the Mountains of *Port Royal*, or *Caguag*, where it is reported the *Spaniards* dug Silver, but the *Engliſh* have not been ſo happy as to find it. The *Spaniards* alſo found Ambergreaſe on the Coaſt, but the *Engliſh* have not often had that good Fortune: Yet ſome Years ago an ignorant Fellow found 180 Pound Weight of Ambergreaſe caſt upon the Shore, at a Place called *Ambergreaſe Point*, where the *Spaniards* came uſually once a Year to look for it. This vaſt Quantity was divided into two Parts, ſuppoſed by rolling and tumbling in the Sea; ſome ſay it is produced from a Creature, as Honey and Silk; and Mr. *Tredway*, who viewed this Piece, writes, he ſaw, in ſundry Places in this Body, the Beak, Wings, and Part of the Body of the Creature, which he preſerved for ſome time; he was alſo told by a Man, that he had ſeen the Creature alive, and believed they ſwarmed as Bees on the Sea Shore, or in the Sea; others ſay it is the Excrement of the Whale, and others, that it iſſues out of the Root of a Tree.

But, after all, it is the Sugar Cane that is the Glory of *Jamaica*, by which the Inhabitants have acquired ſuch immenſe Riches. It is generally ſaid, that the Sugar from *St. Chriſtopher's*, is the beſt in the *Leeward Iſlands*; but, I think, it is agreed on all Hands, that the Sugar made in *Jamaica* exceeds that of all our Plantations, though it is made there with much greater Eaſe, ſince it cures faſter in ten Days at *Jamaica* than in ſix Months at *Barbadoes*. There were in the Year 1670 upwards of threeſcore Mills in *Jamaica*, which were computed to make about two Millions of Pounds Weight of Sugar; but ſome Writers tell us, they make ten Times as much at preſent; whether that Computation be right or not, is impoſſible for me to decide; but this is certain, that there is Ground enough unoccupied in that Country to make much more, ſince it is an hundred and forty Miles long and ſixty broad; and it contains, according to a moderate Computation, four Millions of Acres, of which, though there may be about one-fourth, in which *Engliſh* Subjects have Property; yet, it is certain, that not above a fourth of that fourth is actually planted, and a great deal of this is employed to other Purpoſes, than that of raiſing Sugar. It is impoſſible to ſay preciſely what Quantity may be made here, becauſe Seaſons differ, and other Accidents intervene; ſome have thought they did not riſe beyond the Truth, in affirming, that it produces one hundred thouſand Hogſheads, which, though it appears a moſt prodigious Quantity, yet there are many Circumſtances that concur to render it credible. As for the Number of People in this Iſland various Computations have been made; but according to the beſt Accounts I have been able to gain, there may be, at this Time, ſeventy thouſand white People therein, and one hundred and twenty thouſand Negroes.

We may from hence judge of the almoſt inexpreſſible Advantages which this Iſland affords to *Great Britain*; for, as all our Hiſtories of *Jamaica*, and almoſt every Voyage thither, that have been printed, ſpeak largely of the Luxury and Expence of all Degrees of People there, which is a plain Proof of their Wealth and vaſt Acquiſitions; ſo we may reſt ſatisfied, that whatever Shew they may make, whatever Appearance there may be of Magnificence there; yet the real Produce of all their Labour, and of all their Commerce, comes over here to *Britain*, and maintains and enriches the induſtrious Part of our People; ſo that there can be nothing more abſurd, or unreaſonable, than to grudge or envy the People ſettled there, the great Fortunes they acquire and poſſeſs, or to repine at the Pomp and Splendor in which they live; becauſe, whatever it may be in Appearance, it is perhaps an indifferent Reward for their dwelling at ſuch a Diſtance from Home, and for the Hazards and Labours they run through to acquire ſuch Fortunes, but this will appear much more clearly if we advert a little to the Situation of *Jamaica*, and conſider the vaſt Benefits that accrue from thence, in all Times, and under all Circumſtances, of War as well as Peace.

As we are at preſent in the former Situation, we will treat firſt of that. There is conſtantly in time of War a conſiderable naval Force kept here, and though this be attended with a great Expence to the *Britiſh* Nation, yet it certainly is, or at leaſt ought to be, a great Comfort to us, that our Money is ſpent with our Countrymen, that it increaſes the Value of their Plantations, and which is ſtill more to our Purpoſe, that, ſooner or later, all that is ſpent and circulated there, by ſome Channel or other returns hither, ſo that at the long run the Nation loſes nothing by the vaſt Charge ſhe is at in maintaining Fleets upon this Coaſt. We ought likewiſe to reflect, that in a Time of War there are many Prizes taken and carried into *Jamaica*, which makes an unuſual and almoſt incredible Plenty of Silver, and is the true Cauſe of the Dearneſs and high Price of Neceſſaries in that Country; all which alſo in Time comes over hither; ſo that when we hear of vaſt Eſtates raiſed there in a ſhort Space of Time, it ought to afford us the higheſt Satiſfaction; becauſe, thoſe who make thoſe large Fortunes, or their immediate Deſcendants, come over hither, and either veſt their Money in our Funds or purchaſe Lands here. Thus a State of War, which implies a Suſpenſion of Trade, produces few of the Inconveniencies that uſually attend ſuch a Suſpenſion; becauſe, in *Jamaica*, the very Conſequences of War become a kind of Trade, and the Wealth ariſing from them takes the ſame Courſe, and runs in the very individual Channels that any other Trade would do, that is, they finally enrich and tend to the Benefit of the Mother Country.

But, in time of Peace, beſides what we draw from *Jamaica*, conſidered barely in the light of a Sugar Plantation, we are to conſider likewiſe whatever accrues to the Inhabitants from their Intercourſe and Dealings with other People, ſince whatever they gain is for us; and therefore, it may not, in this Place, be improper to ſay ſomething of the Trade carried on by the *Engliſh* at *Jamaica* with the *Spaniards* on the Continent, which is thus managed: The Merchant or Maſter of the *Engliſh* Ship bound for this Voyage being furniſhed with a proper Cargo of dry Goods and Negroes, commonly makes firſt for the Coaſt near the Harbour of *Porto Bello*; and in War at the *Grout*, within *Monkey-Key*, a very good Harbour, within four Miles of the Town; from thence it is uſual for the Merchant or Maſter of the Ship to ſend one who can ſpeak *Spaniſh*, as many of theſe Traders do to the Town, to give Notice of her Arrival to the Dealers, who appoint the Time and Place for the *Spaniards* Canoe to attend them; they come accordingly, and having purchaſed as many Negroes and as much dry Goods as they think fit, they return to the Town, fetch the Money, bring it aboard, and take the Goods. Here ſuch a Ship lies ſometimes five or ſix Weeks trading with the *Spaniards*; for after the firſt Market is pretty well over, the Dealers, who have ſoon Information of her being on the Coaſt, come from *Panama* over the *Iſthmus* to trade, travelling like Peaſants, with Mules bearing their Silver in Jars; and if any of the King's Officers meet them nothing appears but Meal, which they pretend to be carrying to *Porto Bello*; but for the moſt part they travel through Woods and Bye-Ways for fear of being diſcovered by thoſe Officers. When they have bought what Negroes and Goods their Money will purchaſe, which they ſell again up in the Country, and get very well by it; the Goods are made up in little Packs fit for one Man to carry, and the *Engliſh* ſupply them with as much Proviſions as will ſerve them Home, croſs the *Iſthmus* to the *South Sea*, for they come very far off.

A ſingle familiar Inſtance will make all this very plain. An *Engliſh* Ship lying between *Chagre* and *Porto Novo*, a Signal was given from the Caſtle of *Chagre*, and ſhe anchored two Miles from it. The *Spaniards* came to her, and one Merchant bought ſeventy Negroes and a good Quantity of dry Goods, amounting to three or four thouſand Pounds, which was brought on Mules to the Water-ſide, part Gold and part Silver. From the *Grout* the *Engliſh* Ship ſailed to the *Brew* near *Carthagena*, where ſhe lay to trade with the Merchants of that City, from which it is about eight Miles diſtant. The People of the Iſland *Brew* gave their Merchants Notice of her Arrival, and they came and traded as the others did at the *Grout*; this trading Ship in about two Months diſpoſed of one hundred and fifty Negroes, and a good Cargo of dry Goods, by which, probably, the Proprietors cleared two thouſand Pounds more than would have been got in any other Market; a plain Proof of the very great Advantage of this Trade between *Jamaica* and *New Spain*, of which we ſee the *Spaniards* are ſo fond, that they run as great Hazards in buying the Merchandizes as the *Engliſh* do in ſelling it to them.

There is likewiſe in time of Peace a great deal of Money brought into *Jamaica* by the *Aſſiento* Trade, or Sale of Negroes, granted to us by the *Spaniards* in the Treaty of *Utrecht*, which, whatever it may be in other Reſpects, has certainly proved a very beneficial Trade to that Iſland. I have indeed heard ſome very able and intelligent Perſons intimate, that if inſtead of erecting a new Company for the Management of this Trade, it had been put into the Hands of one already erected, I mean the *Royal African Company*, it had preſerved that once famous Corporation from falling into its preſent melancholy Condition, as well as ſecured much larger Profits to the Nation, which are Things that deſerve to be conſidered before we ſet in earneſt about any Negotiation with *Spain*, that we may indemnify ourſelves from the heavy Loſſes and vaſt Expences of this War by the Fruits of a ſolid and well regulated Peace; which, without doubt, may be as eaſily obtained as one of a looſer and more precarious Nature; it being the Intereſt of the *Spaniards* as well as of ourſelves, to have all Matters ſo adjuſted, as to prevent not only Wars, but Diſputes for the future.

Before I quit this Subject I find it abſolutely neceſſary to take Notice of another Branch of Trade carried on from *Jamaica*, which has been made the Subject of much Debate; I mean the cutting of Logwood in the Bay of *Campeachy*. This Matter came to be conſidered with the utmoſt Care and Circumſpection by the Board of Trade and Plantations in the Year 1717, who ſolemnly reported that we had an undoubted Right to that Trade, in which the Subjects of the Crown of *England* had been maintained and ſupported by former Kings, his Majeſty's Royal Predeceſſors. They obſerve, that Logwood is the Product of *Jucatan*, a *Peninſula* that extends itſelf an hundred Leagues into the North Sea, on each Side whereof are the Bays of *Campeachy* and *Honduras*, where the Wood is chiefly cut by the *Engliſh*.

The *Spaniards* are poſſeſſed only of the Town of *Campeachy*, and two more ſmall Places in this part of *America*, and that the reſt of *Jucatan* was an uninhabited Deſart, till our Logwood Cutters ſettled at *Cape Catoch*, the North Eaſt Promontory of *Jucatan*, or at *Triſt*, or the *Laguna de Terminos* in the Bay of *Campeachy*, before, or in, the Year 1667, when a Treaty of Peace was concluded between *Great-Britain* and *Spain*; and thereupon the Privateers of *Jamaica*, who uſed to diſturb the *Spaniſh* Trade, being obliged to quit that way of Life, became Logwood Cutters, and ſettled with others of their Countrymen at *Triſt*, and the Lake *de Terminos* aforeſaid, and great Quantities of Logwood were afterwards imported from thence to *Old* and *New England*.

They obſerved that Sir *Thomas Lynch*, Governor of *Jamaica*, under whoſe Direction that Trade was carried on, in the Year 1671, gave his Majeſty King *Charles* II. the following Reaſons for his encouraging this Trade. 1ſt, That the *Engliſh* had then uſed it for divers Years. 2dly, That the Logwood was cut in deſolate and uninhabited Places. 3dly, That it was a Right confirmed by Treaty with the *Spaniards*. 4thly, That thereby we excluded the *French* and *Dutch* from that Trade. 5thly, That the *Spaniards* had not then made any Complaint of it. 6thly, That this Employment made the reducing our Privateers, who uſed to commit Hoſtilities againſt the *Spaniards* more eaſy. Laſtly, That this Trade employed a hundred Sail of Ships annually, and increaſed his Majeſty's Cuſtoms, and the Trade of the Nation, more than any of his *American* Colonies.

Sir *Thomas Modyford*, the ſucceeding Governor of *Jamaica*, informed the Lords of the Privy Council, in the Year 1672, that the *Engliſh* Logwood Cutters had uſed that Trade for three Years, and that they had planted Corn, and built Houſes, for their Conveniency; and though they frequently hunted Deer in the Country, they had never ſeen a ſingle *Spaniard*, or any other Man in that Part of the Country, in all the Time they had been there; and concludes, that their felling of Wood, building of Houſes, and clearing and planting the Ground, was ſuch a Poſſeſſion, as in the *Weſt-Indies* gave them an undoubted Right to the Countries they thus occupied. And Sir *Thomas*, to juſtify his Conduct in encouraging this Trade, in the Year 1672 (when the *Spaniards* firſt complained of it) ſent home Copies of ſeveral Depoſitions he had taken from the Maſters of Ships, and others concerned in the Logwood Trade, with a Proclamation he had iſſued for the Regulation and Security thereof, as a Confirmation of what he had aſſerted; and the Lords of the Council thereupon let the Governor know that they approved what he had done.

The Lords Commiſſioners of Trade further obſerved, that there is a Clauſe in the abovesaid *American* Treaty, which provides that the King of *Great-Britain* ſhall keep and poſſeſs, in full Right of Sovereignty and Propriety, all Places ſituate in the *Weſt-Indies*, or any Part of *America*, which he and his Subjects were then in Poſſeſſion of; and that they actually were then, and had been for ſeveral Years, in Poſſeſſion of *Triſt* and the Lake *de Terminos*, and ſeveral other Places in the Province of *Jucatan*, which the *Spaniards* began to ſet up a Title to about this Time, notwithſtanding they enjoyed the full Benefit of what *Great-Britain* ſtipulated on her Part, *viz.* 1ſt, The ſecuring the Trade of the *Spaniſh Weſt-Indies* to them; a Point which had never before been yielded. 2dly, The obliging the Privateers to ceaſe their Depredations, whereby the *Spaniſh* Trade had been miſerably haraſſed; and this had been effected chiefly by the Care of his Majeſty's Governors, and the employing thoſe People in the Logwood Trade.

That in 1680 the *Spaniards* proceeded in a hoſtile Manner to diſpoſſeſs the *Engliſh* Logwood Cutters of their Settlements of *Triſt*, &c. and even of the Iſland of *Providence*, a *Britiſh* Plantation to which they had no Pretence; but theſe were ſoon repoſſeſſed by his Majeſty's Subjects, and the Logwood Trade, in 1682, was greater than ever, and was maintained and carried on by the *Engliſh*, till the Treaty of *Utrecht* 1713; when the Adjuſtment and Settlement thereof came again under Conſideration; and it was ſtipulated that only ſuch Places ſhould be reſtored to the *Spaniards*, as had been taken during the preceding War (in the Reign of Queen *Anne*) among which, *Triſt* could not be reckoned one, becauſe the *Engliſh* were in Poſſeſſion of it many Years before that War commenced, and, indeed, had been in the actual Poſſeſſion of it from 1699 to 1713, except for two or three Months in the Year 1689, when the *Spaniards* ſurprized and expelled them by Force, as related above.

They farther repreſented it by a Clauſe in the Treaty of Commerce, concluded in *November* 1713. The *American* Treaty of 1670 is confirmed and ratified; and it was thereby declared that this ſhould be underſtood to be without Prejudice to any Liberty or Power, which the Subjects of *Great-Britain* enjoyed before, either through Right, Sufferance, or Indulgence; and the *Engliſh* having long enjoyed the Liberty of cutting Logwood, whether through Right, Sufferance, or Indulgence, they are by this Treaty entitled to the ſame, in as plain and expreſs Words as can be imagined. Then the Lords Commiſſioners proceeded to ſhew the Importance of the Logwood Trade to *Great-Britain*, by the following Account of what Logwood had been imported ſince the late War.

	Tons.	C.	Q.	lb.
In 1713	2189	15	3	22
In 1714	4848	14	3	24
In 1715	5863	12	1	14
In 1716	2032	17	2	0
	14935	0	3	4

This is, *communibus annis*, 3741 Tons, which cannot be computed at leſs than 60,000 *l. per Annum*, though the Price is already reduced from 40 *l.* to 16 *l.* per Ton. And before your Majeſty's Subjects were ſettled there, it was worth 100 *l.* a Ton. Nor is this Trade leſs neceſſary than beneficial to your Majeſty's Dominions, by Reaſon of the great Encouragement it gives to our Seamen and Shipping, which at all times require a particular Attention, but now eſpecially; when it is daily obſerved that very many *Britiſh* Mariners, either through defect of the Laws, or for want of Employment at home, or in hopes of greater Advantage abroad, enter themſelves into foreign Service.

Upon the Whole, they give it as their Opinion, that ſome Time before, and long after, the Year 1670, the Subjects of *England* were poſſeſſed of, and quietly enjoyed Part of the Country of *Jucatan*, uninhabited by the *Spaniards*, and conſequently the Right of *Britiſh* Subjects to cut Logwood, and even to ſettle in that Country, was not only certain and apparent, but was alſo ſettled and confirmed by Treaty.

This Repreſentation is certainly more than ſufficient to convince us, here at home, of our being well intitled to this Trade; and therefore it is a Point that deſerves to be maturely reflected upon, before any new Negotiation for Peace, with the Crown of *Spain*, is commenced; for, without doubt, Care ought to be taken that our Right, in this Reſpect, be acknowledged and admitted, in ſuch expreſs Terms, that hereafter no Diſputes may ariſe about it, or afford Pretences for fitting out Guarda Coſtas to impede and diſturb our Navigation. We know, and have heard, what high and loud Complaints were made againſt the Miniſtry in the Reign of Queen *Anne*, for not obliging the *French* to reſtore *Cape Breton*, and for not compelling the *Spaniards* to make ſuch Conceſſions in favour of our Trade, as were neceſſary for the carrying it on with Safety and Advantage. But at preſent *Cape Brition* is ours, and the Superiority of our naval Force in the *Weſt-Indies* is ſo great, that it would be, certainly, an unpardonable Omiſſion, ſhould there be any Thing left to object on any of theſe Heads for the future. The capital Trade of this Nation, at preſent, that which employs moſt Ships, moſt Seamen, and moſt Manufactures, is our Commerce to our Plantations; and therefore the ſecuring, encouraging, and improving this Commerce, ought to be the principal Object of our Stateſmen; who, as they often lay heavy Burdens upon the Subject, to carry their Projects into Execution, ſo they are in Intereſt, and in Conſcience, bound to pay the utmoſt Attention to thoſe Points, which regard the filling again the Purſes of thoſe to whom they have conſtant Recourſe for the public Service.

23. We have now gone through this Section, and have ſhewn when, how, and with what Views our Settlements, within this Period of Time, were made. It is eaſy to perceive from thence, what prodigious Advantages have been derived from them to the People of this Kingdom. If we conſider that at the Death of Queen *Elizabeth*, we had not a ſingle Cottage erected in *America*; and that at the Time of the Reſtoration of King *Charles* II. we had ſettled from *Nova Scotia* to the utmoſt Bounds of *Virginia*, beſides peopling many of the Iſlands, it muſt appear an amazing Thing. The vaſt Change in our Circumſtances, in the Space of ſixty Years; the mighty Augmentation of our Shipping; the vaſt Increaſe of our Coin, and all the other certain and indubitable Signs of an extended and profitable Commerce, ſufficiently prove the Value and Importance of our Plantations; for I make no ſcruple of affirming that we owed them all to theſe. To ſay the Truth, the civil War, which was ſo ruinous and fatal to theſe Kingdoms, was, by the kind Diſpoſition of Providence, highly ſerviceable to the Plantations. In the firſt Ferment of the Nation, we have ſeen that *New England* was planted and peopled as it were at once; and in ſucceeding Times, when the Conſtitution was overturned, and the loyal Nobility and Gentry, who were deprived of their Eſtates, by thoſe the Fortune of War had made their Maſters, and had not even the Liberty of ſtarving here in Peace, *Virginia* and *Barbadoes* were their Refuge: There the Wicked ceaſed from troubling, and there the Weary were at reſt. The Spirit and Vigour with which they ſet about improving the Places of their Exile, ſoon changed them into Habitations of Delight, and where they looked only for a quiet and a bare Subſiſtance, the Bleſſing of God upon their Induſtry produced them vaſt Eſtates.

We may ſafely venture to affirm, that a little after the Reſtoration the Sugar Colonies roſe to their greateſt Height, *Jamaica* only excepted. Since then the Tobacco Colonies have encreaſed greatly, and ſo have the Bread Colonies likewiſe; for the Reader is to obſerve, that *Jamaica*, *Barbadoes*, and moſt of the Leeward Iſlands, are furniſhed with Proviſions from the northern Colonies, and with Garden Stuff from the Iſlands of *Bermudas*. But it has ſo fallen out, that though theſe Colonies have ſuch a natural Dependance upon each other, yet Complaints have ariſen, and we have ſeen both Sides appealing to the *Britiſh* Parliament, the one for Relief, and the other for Protection. The Occaſion of theſe Diſputes was this:

A Bill was brought into the Houſe of Commons on the Petition of the Merchants and Planters concerned in the Sugar Colonies in the Year 1731, for ſecuring and encouraging the Trade of the ſaid Colonies. The Intent whereof was to enable them to ſupply foreign Markets, with Sugar, as cheap as the *French*, which they ſuggeſted might be done by prohibiting the Exportation of Horſes, Proviſions, and Lumber, from our Northern Colonies on the Continent of *America*, to the *French* and *Dutch* Plantations, and by prohibiting the Importation of all foreign Sugar, Rum, and Moloſſes, to our Northern Colonies; for the permitting of this, they ſuggeſted, was giving the *French* and *Dutch*, at leaſt, twenty-five *per Cent.* upon the whole Produce of their Sugar Colonies; and thereby enabled them to afford their Sugar, at foreign Markets, cheaper than our Sugar Colonies can. It was finding them Plantation Neceſſaries, as well as Money to pay for them; that is, the foreign Colonies paid our Northern Colonies for their Horſes, Proviſions, and Lumber, with Moloſſes and Rum, which otherwiſe the *French* muſt throw away as they did formerly. To induce the Parliament to paſs this Bill, the Sugar Colonies endeavoured to ſhew the vaſt Importance thoſe Colonies are of to *Great-Britain*, obſerving that they produced, at an Average, eighty-five thouſand Hogſheads of Sugar annually at leaſt, which, at ten Pound a Hogſhead, amounted to eight hundred and fifty thouſand Pounds. This Sum, or much the greateſt Part of it, as they affirm, is ſpent here by the ſeveral Proprietors of Eſtates in the *Weſt-Indies*, who live in *England*, or is ſent out annually in the Manufactures of *Great-Britain*, either directly to the Sugar Colonies, or to the Coaſt of *Guinea*, to purchaſe Negroes for the Uſe of thoſe Colonies.

Beſides this neat Produce of Sugar, another vaſt Advantage ariſing from the Sugar Colony Trade, is the large Number of Ships and Seamen employed and maintained in the Courſe of our Commerce with them; and they calculate that there are three hundred Sail of Ships ſent from *Great-Britain* (not to mention thoſe from other Places) every Year, to our Sugar Colonies, which are navigated by about five thouſand five hundred Seamen; and that the Freight from the Sugars, brought hither, amounts to an hundred and ſeventy thouſand Pounds a Year; and the Duties, Commiſſions, *&c.* to little leſs than two hundred thouſand Pounds more, which upon the Whole is a good one Million two hundred thouſand Pounds a Year Profit and Advantage to *Great-Britain.* But beſides this conſiderable Article of Sugar, they obſerve that theſe Iſlands produce great Quantities of Cotton, Ginger, Indico, Aloes, *&c.* which are all brought to *Great-Britain,* where the whole Profit of all our Plantation Product, does and muſt centre. They have been equal, they inſiſt, to the Mines of the *Spaniſh Weſt-Indies,* and have contributed, in a particular Manner, to the Trade, Navigation, and Wealth of this Kingdom.

But at preſent they were in a very bad and languiſhing Condition: Their Duties high, their Planters poor, their Soil worn out, and their Fortifications deſtroyed. They obſerve farther, that the *French* Sugar Iſlands are much larger, more beautiful, better inhabited, pay leſs Duties, and have greater Encouragement from *France* than ours have from *Great-Britain.* And that if our Sugar Iſlands, for want of being put in a poſture of Defence, ſhould either be taken, as ſome have been, or moulder, and come to ruin, it would be one of the greateſt Blows this Kingdom ever received. It would then loſe the Benefit of all their Product imported hither; it would loſe the Exports of our Woollen and other Manufactures thither, to the amount of ſeveral hundred thouſand Pounds a Year; it would loſe, in a great Meaſure, the Trade to *Guinea*; it would loſe the employing and maintaining of many hundred *Britiſh* Ships, and many thouſand *Britiſh* Seamen every Year; and laſtly, it would loſe one of the moſt conſiderable and main Branches of our Funds, the Deficiency of which muſt be made good, and the Weight and Burthen fall on our Lands here at home.

To this Bill, however, many Objections were made by ſuch as were employed here in behalf of the Northern Colonies, and amongſt them the moſt material were theſe: 1ſt, That ſuch a Prohibition as was deſired by the Bill, would put the *French* upon ſupplying themſelves with Lumber from their own Settlements, and the *Britiſh* Colonies on the Continent would thereby loſe the Trade in which many Ships and Seamen were employed. 2dly, That the *Britiſh* Colonies could not take off their Lumber, or ſupply them with Rum for their Fiſheries, their Trade with the *Indians,* and what they wanted in the Harveſt-time. 3dly, That the reſtraining the Northern Colonies from diſpoſing of their Horſes, Proviſions, and Lumber to the *French* and *Hollanders,* might draw them into Employments prejudicial to *Great-Britain.* 4thly, The *French* would diſtil their Moloſſes themſelves, and ſupply the Fiſheries with Rum, if the Northern Colonies did not. 5thly, If the Northern Colonies did not take off the *French* Sugars, they would carry them to Market themſelves. 6thly, If the Importation of *French* and *Dutch* Rum and Moloſſes into *New England* was prohibited, and they could go to no other Market for Rum, or ſell their Lumber and Proviſions any where elſe, the *Engliſh* Sugar Colonies, like other Monopolies, would exact an unreaſonable Price for their Rum, and beat down the Price of Lumber, and other Goods, as low as they ſaw fit. 7thly, That the *French* and *Dutch* Colonies furniſh the Northern Colonies with Money, which they bring to *Great-Britain* and lay out in our Manufactures. 8thly, That the Luxury and Extravagance of the Sugar Colonies was the Occaſion of this Decline. And 9thly, That the Trade of the Sugar Colonies, was ſtill vaſtly increaſing; inſtancing in *Barbadoes,* which, in the Year 1730, imported twenty two thouſand ſeven hundred and ſixty-nine Hogſheads of Sugar into *England,* valued at 340,396 Pounds; and that this was the Neat Profit, they inſiſted, becauſe it was admitted that the Rum and Moloſſes of Sugar Plantations bear the Charges of them: The Sugar Planters therefore have no Reaſon to complain, when ſo ſmall an Iſland as *Barbadoes* produced ſo vaſt a Neat Profit.

As there is nothing can contribute more to make this Subject thoroughly underſtood, and to point out effectually what the Inhabitants of the Colonies take to be their reſpective Intereſt, I think it will be neceſſary to add the Replies or Solutions, given by the Friends of the Sugar Colonies to theſe Objections. As to the firſt, That the *French,* if not ſupplied from the Northern Colonies, would furniſh their own Settlements with Lumber, they ſaid, That the *French* could not be ſupplied with Lumber from their own Settlements; or, if they could, it muſt be at great Charge and Expence, ſince the only Places they can pretend to be ſupplied from, are *Cape Breton* and *Quebec.* Some indeed have gone ſo far, and been ſo extravagant, as to imagine that the *French* Iſlands may be ſupplied with Lumber from the Bay of *Apalachi,* or the Settlement of *Miſſiſſippi:* But we muſt conſider that great Snows are neceſſary for drawing down Trees to the Sides of Rivers; and likewiſe (upon the Snows melting) for floating them down to the Mills; and, if they had Snows, theſe Countries do not produce any Quantity of ſuch kind of Wood as is proper to work into Lumber; nor have they any ſuch Mills, which are expenſive to build, and the Labour and Time required to manufacture ſuch Trees into Lumber, would make it extremely dear to the *French*; beſides the Navigation to and from ſuch Place, to *Martinico,* and the *French* Iſlands ſo much to Windward, would be ſo difficult and long for ſuch Veſſels as are proper to carry Lumber, by reaſon of the Calms, contrary Winds, and ſtrong Currents againſt them, that ſuch a Project would probably end in the Ruin of the People concerned in it; which would put an End to ſuch Endeavours of the *French.*

As to *Cape Breton,* though it has the Advantage of Snows, yet it has no other Conveniency; it produces little Wood; they have few Rivers, and thoſe longer frozen, and ſooner dried, than in *New England:* It is thinly inhabited, and is a ſmall, and, in that Light, but an inconſiderable Iſland, commodious only for fiſhing. And as for *Quebec,* allowing all the Advantages the other Places want, and all that our Northern Colonies have, with Reſpect to Wood and Mills; yet the Navigation of the River *St. Laurence* (which is practicable only a few Months in the Year) is ſo very long and dangerous, that all the Lumber from thence muſt be exceeding dear; and though ſome may think that theſe Difficulties in time may be removed, and the Navigation of the River become both ſafe and eaſy, it may be wiſhed the *French* had no Supply of Lumber till theſe Difficulties were removed; for thoſe Difficulties muſt always continue from the Nature of the Coaſt, the Rocks, Shoals, and Sands, in that River, and from the Inclemency of the Air, and other natural Cauſes; which will make that Navigation for ever unſafe. If then the *French* cannot be ſupplied with Lumber, or at leaſt not upon any reaſonable Terms, How much will this give our Sugar Colonies an Advantage over the *French?* But let us ſuppoſe the utmoſt and worſt that can be: That they can be ſupplied with Lumber from their own Settlements, yet, What muſt the Lumber be bought with? Not with Rum and Moloſſes, but with Money: So that if this Prohibition of foreign Rum and Moloſſes take Place, ſo much will be loſt to the *French* Plantations, becauſe they can have no Vent for their Rum, as interfering with Brandy, the Product of *France.*

But what ſtronger Argument can we have, that the Trade carried on by ſome of the Northern Colonies is a prejudicial Trade, than the Permiſſion of it by the *French* themſelves? They underſtand the whole Compaſs of Trade perfectly well, and ſteadily purſue their Intereſts: They know that their Colonies either cannot be ſupplied at all with Horſes, Lumber, and other Neceſſaries, or elſe they muſt purchaſe them at a greater Expence: They find they have them for Rum and Moloſſes, which is all clear Gain to them; that they ſave at leaſt twenty-five *per Cent.* in having Lumber and Horſes ſo conveniently from the Northern Colonies; and get twenty five *per Cent.* by their Rum and Moloſſes, which elſe would be all

Loſs to them; and what is more, they plainly perceive that this Trade muſt ſhortly and effectually ruin and deſtroy our Sugar Plantations, by inhancing the Price of our Plantation Neceſſaries, and ſtopping the Product of our Manufacture; however ſpecious therefore the Argument may be in favour of this Trade, nothing leſs than a Prohibition of Horſes and Lumber, as well as of foreign Sugar, Rum, and Moloſſes, will be of any real Service or Benefit to the Sugar Colonies.

For if you allow them to carry Lumber, what muſt they have in Exchange for it but Sugar? And how will it be poſſible, on ſo long a Coaſt as ſeven or eight hundred Miles, as that of thoſe Northern Colonies, where there are ſo many Bays, Creeks, and Rivers, and ſo few Officers, to prevent the Running of theſe Goods, let your Penalties be never ſo ſtrict. But it may be ſaid, perhaps, that *France* will allow them to carry their Rum to their own Settlements on the Continent; but that is altogether as improbable and as unlikely, as that we ſhould ſuffer *Ireland* to ſupply our Plantations with woollen Manufactures. Thoſe Colonies there are abundantly ſupplied with Brandy from *France* very cheap, and which is a Spirit much better liked, and what they have been uſed to.

As to the ſecond Objection, that the *Engliſh* Sugar Colonies cannot take off the Lumber they have, or ſupply them with the Rum they want, they anſwered, if the Trade and Navigation from the *Britiſh* Colonies on the Continent, to the foreign Colonies, be prejudicial to the Sugar Colonies, and to *Great-Britain*, and if the reſtaining it will effectually diſtreſs the *French* in the Sugar Trade, it ought to be prohibited, though ſome few Traders ſhall ſuffer Hardſhips and Inconveniency by it. As to diſpoſing of their Lumber, the Sugar Colonies have more Reaſon to apprehend that they ſhall find a Want of it, than that the *New England* People will have much upon their Hands; at leaſt, if what they ſay be true, and founded in Fact. For we have for many Years been alarmed with Scarcity of Lumber in *New England*, and we have felt the Effects of it in the advanced Price we have paid for it; for ſome Time, upon this Pretence. Thoſe who are principally concerned there, in the Lumber Trade, complained laſt Year, 1730, of the great Want of Oak and Firr near the Rivers on which their Saw-Mills ſtand; and as they are reſtrained by ſeveral Acts of Parliament from cutting the King's Trees, they will hardly be able to ſupply us long with Lumber, of private Property, at any reaſonable Rate, which deſerves Conſideration. The other Part of this Objection, That our Sugar Colonies are not able to ſupply them with a ſufficient Quantity of Rum, is as groundleſs as the former. A Gentleman of Diſtinction, of *St. Chriſtopher's*, informed the Committee, that himſelf made two thouſand Gallons of Rum a Year, but that if he had Encouragement he could make twenty thouſand Gallons; and the other Gentlemen of *St. Chriſtopher's*, *Nevis*, and *Montſerrat*, who made little or no Rum now, could make a very great Quantity, if there was a Demand for it. Therefore the Queſtion that was aſked by a *New England* Gentleman, whether we have any Rum left on our Hands at the End of the Year, is not at all to the Purpoſe, though at firſt Sight it ſeems ſo.

The Diſtillers in *New England* find this Trade in Spirits, made of foreign Moloſſes, very profitable, and for that Reaſon raiſe Objections which have nothing in them, in order to make *Boſton* the great Staple of Rum. For ſhould the Prohibition take Place on foreign Rum and Moloſſes, then our Sugar Colonies might ſend again their Rum to *Virginia*, *Maryland*, *Carolina*, and *Newfoundland*, as they did before, and ſave the Lives of many hundred of poor Wretches, who, if this Trade be not ſtopped, will probably be deſtroyed by this pernicious Spirit, made of foreign Moloſſes, which is very unwholſome. If we ſhould admit, for Argument's ſake, that the *French* Sugar Colonies, and *Surinam* (belonging to the *Dutch*) do take off one half of the *New England* Lumber (which by the Way is more than can be proved) the Deficiency then of the Demand of Lumber, will be one Moiety. Now if it can be proved that the *Britiſh* Sugar Colonies, upon a proper Encouragement, might be improved ſufficiently to make as much more Rum and Sugar as they now do, it will follow that the *Britiſh* Sugar Colonies may take off all the *New England* Lumber.

Barbadoes is allowed to be at its Perfection, and perhaps incapable of being farther improved, ſo as to increaſe its annual Product of Sugar and Rum. *Antigua* is capable of farther Improvements, and may enlarge its Product of Sugar, according to the beſt Computations, at leaſt, one fifth Part *per Annum*; as to the Product of Rum there, it may certainly be enlarged near one half upon proper Encouragement, for the Rum it now makes is not quite one half of its Product of Sugar: That is to ſay, if *Antigua* makes twenty thouſand Hogſheads of Sugar *per annum*, its Product of Rum is not quite ten thouſand. But it is evident from the Experience of *Barbadoes*, that out of twenty thouſand Hogſheads of Sugar, there ought to be made near fourteen thouſand Hogſheads of Rum. And this Increaſe, both of Sugar and Rum, would certainly be made if there was proper Encouragement. *Monſerrat*, *Nevis*, and *St. Chriſtopher's*, for want of Encouragement, do not make one Hogſhead of Rum for three Hogſheads of Sugar. Whereas it is evident, by the Experience of *Barbadoes*, that three Hogſheads of Sugar ought to produce two Hogſheads of Rum; conſequently the Product of Rum in theſe three Iſlands might be, upon proper Encouragement, encreaſed to as much more as it now is. Add to this the Improvement to be made in thoſe Iſlands, by which the Quantity of Sugar would be encreaſed. It will follow ſtill farther, that the Quantity of Rum which thoſe Iſlands are capable of making, would be as much more as they now make, and conſequently the Demand for Lumber would be proportionable. *Jamaica*, the largeſt of all the *Britiſh* Sugar Colonies, is yet but in its Infancy; having now as much Land uncultivated, as would produce above three times its preſent Product if cultivated, as it certainly would be upon proper Encouragement.

But farther it appeared by the Cuſtom-houſe Books, that all the *Britiſh* Sugar Colonies do produce about one hundred thouſand Hogſheads of Sugar *per annum*; and they ought, in proportion, to make about ſeventy thouſand Hogſheads of Rum; a Quantity more than ſufficient to ſupply the *New England* Fiſhery, and *Indian* Trade, even according to their own Computation. But the preſent Product of the Sugar Colonies, under all the incumbent Diſadvantages, is more than they of *New-England* can prove to be neceſſary to both thoſe Trades; nay, on the contrary, they will have a proof ſooner than deſired, that their Fiſhery and *Indian* Trade do not take off one half of the Rum, now actually made in the Sugar Colonies. *South Carolina* trades with eight thouſand *Indians*, and yet nine hundred Hogſheads is the moſt they ever imported in one Year, both to ſupply their home Conſumption, all their Trade with theſe eight thouſand *Indians*, and to trade to other Ports with; and yet this is a Colony that is the hotteſt, has the largeſt Harveſt of Rice, *&c.* and is not ſo well ſupplied with Beer, *&c.* as the other Northern Colonies; ſo let us allow this Colony of *South Carolina* theſe nine hundred Hogſheads; *North Carolina* one thouſand Hogſheads; *Virginia* and *Maryland* three thouſand Hogſheads; *New York* and *Philadelphia* four thouſand Hogſheads; *Rhode Iſland* and *New England* ten thouſand; which Calculations both by their reſpective Cuſtom-houſe Accounts, and by the greateſt Eſtimates that ever have been made, are too large, and yet the whole amounts but to eighteen thouſand and nine hundred Hogſheads; whereas the Sugar Colonies produce forty thouſand, and might fifty-five thouſand, Hogſheads. It was obſerved alſo, that the *New England* People thus taking from the *French* their Moloſſes, Rum, and Sugar, and ſupplying all the other Northern Colonies, as well as *Newfoundland*, *Great-Britain*, *Ireland*, and *Africa*, with large Quantities thereof, was a very great Hurt to the Revenue; for if theſe Places were not thus ſupplied, they muſt be ſupplied by our own Sugar Colonies, and then every thouſand Pounds Value of Rum, or Moloſſes, of our own Growth, muſt pay his Majeſty a Duty of forty-five Pounds, and every thouſand Pounds value of Sugar a Duty of one hundred and twenty Pounds. It might have been added that it was likewiſe a great Hurt to the Trade and Navigation of this Kingdom, as well as to the Sugar Colonies, that we cannot ſupply thoſe Places with Rum, Sugar, and Moloſſes of our own Growth, and in Ships and Veſſels of this Kingdom, without the Diſadvantage of paying for our Rum and Moloſſes a Duty of four and a half *per Cent.* when *New England* can ſupply all the Markets with Rum, Sugar, and Moloſſes, of foreign Growth, without paying any of theſe Duties. Was it not for this Advantage they have over us, a great many of our Veſſels that miſs a Freight of Sugar in the *Weſt-Indies* for *London*, would take ſome Rum, Moloſſes, and Sugar, and go to *Newfoundland* and barter it for Fiſh or Oil, and then proceed to ſome other Market with it, and might probably employ themſelves to Advantage, or might, with a little Rum, Sugar, and Moloſſes, go to *North Carolina*, &c. and barter them for a Cargo of Pitch, Tar, and Skins, and bring them to *Great-Britain.*

As to what is alledged, That the reſtraining the Northern Colonies from the diſpoſing of their Horſes, Proviſions, and Lumber to the *French* and *Hollanders*, might put them upon ſome Employment prejudicial to *Great-Britain*, it is anſwered, That it hath been ſhewn already, that there is more Reaſon to fear the Iſlands will not be ſupplied with Lumber as they ought to be, than that the Northern Colonies will want a Vent for their Lumber; but if the *Britiſh* Colonies could not take off their Lumber, they might ſend it to *Spain*, or *Portugal*, or to *Great-Britain*, where it might be imported Duty-free. They might employ themſelves in raiſing naval Stores; the Government hath given them a large Bounty upon that Trade, which would be of vaſt Advantage to our Navigation, and ſave the Nation three or four hundred thouſand Pounds a Year, which is ſent out annually to purchaſe naval Stores with from the North. But this favourite Trade with the foreign Sugar Colonies, hath diverted them from that excellent Deſign, to the enriching of the *French*, and to the great Prejudice and almoſt Ruin of our own. As to the fourth Objection: That the *French* would diſtil their Moloſſes themſelves, and ſupply the Fiſheries with Rum, if the Northern Colonies did not; it was anſwered, That the *French* diſtil but very little Rum at preſent, and know little of the Matter; Worms, Stills, and other diſtilling Utenſils, coſt a great deal of Money; and this muſt be a Work of Time and very great Expence; however, a Poſſibility of an Inconvenience that might happen ought not to have that Regard paid to it, as to prevent our Colonies from being relieved in a Point ſo very prejudicial to them, as well as to the Malt Spirits of *Great-Britain*, with which their Fiſheries were formerly ſupplied.

To the 5th, That if the Northern Colonies did not take off the *French* Sugars, they would carry them to other Markets themſelves; it was anſwered, The *French* do already carry many Sugars to foreign Markets; if ſo, they may ſell to Advantage, and the Surplus which foreign Markets won't take off, goes to our Northern Colonies to purchaſe what is abſolutely neceſſary for them, and what they could not have conveniently from any other Place; but even here the Profit of the Freight is gained not by *Great-Britain*, but by the Northern Colonies only; which is a very ſmall Advantage, in Compariſon of the Damage done by this Means to our Sugar Colonies, eſpecially as the *French* can afford their Sugars cheaper than ours, and as the high Duties paid for Sugars in our Plantations, make it impoſſible for us to vend any to the Northern Colonies.

To the next Objection: That if the Importation of *French* and *Dutch* Rum and Moloſſes was prohibited, and they could have none but what they bought of the *Engliſh* Sugar Iſlands, or ſell their Lumber and Proviſions any where elſe, then the *Engliſh* Iſlands would ſet what Price they pleaſed upon their Rum, and beat down the Price of their Lumber and other Goods as they thought fit; it was anſwered: If the Caſe was as the Objection ſtates it, the *Britiſh* Sugar Colonies would be only upon a Level with *New England*; for, as that Place is the only Market from whence Lumber is imported to the Sugar Colonies, *New England*, by a Parity of Reaſon, is a Monopoly of the Lumber-Trade, and therefore does exact in the Price of its Lumber. But this is not, nor ever can be, the Truth of the Caſe, either with Regard to *New England*, or the Sugar Colonies; for as in a Place of ſuch Extent as *New England*, where the Lumber-Trade is carried on by a Multitude of People, with a View to each Trader's ſeparate Intereſt, a Monopoly of Lumber cannot properly be made; ſo in the Sugar Colonies that lie at a vaſt Diſtance from, and are Rivals to each other, by the Production of the ſame Commodities, a Monopoly is impracticable. The *New England* Traders have no leſs than ſix *Britiſh* Iſlands to go to for Rum and Moloſſes; each of theſe Iſlands is as independent on the other in its Polity, as diſtant in Situation. There is little or no Intercourſe, and leſs Commerce, between thoſe of them which are ſituated the neareſt, and no Intercourſe at all between the remoteſt of theſe Iſlands; becauſe the Produce of them all being the ſame, there can be no Exchange of Commodities, and conſequently no Commerce or Intercourſe. It follows therefore, where there is no Intercourſe there can be no Combination, no Monopoly. On the contrary, each Iſland is a Rival to its Neighbour, producing the ſame Commodities, and will in common Prudence uſe all proper Means to have its full Share of Trade; to which End nothing can be more conducive, than to ſell its Produce at the cheapeſt Rate poſſible.

As to the ſeventh Objection, that the *French* and *Dutch* Colonies furniſh our Northern Colonies with Money, which they bring to *Great-Britain*, and lay out in our Manufactures, they anſwered, That there is no Money among the *French* and *Dutch* Sugar Colonies. How therefore they can bring Money from Places, where there is not enough for the common Uſes of Life among the Inhabitants, is a Paradox which they muſt explain before the World will take it upon their Word. If then that Aſſertion be not founded on Truth, it follows that they do not lay out Money, brought from theſe Places, in the Manufactures of *Great-Britain*; their Traffic for Fiſh in the Streights (a Trade in which they have ſupplanted *Great-Britain*) may furniſh them with Money, but we deny that ſuch Money is laid out by them in the Manufactures of *Great-Britain.* On the contrary, it is to be preſumed, that their Money is laid out with the *French* and *Dutch* in *Europe*, for *Eaſt-India* Goods, *French* Silks, and other foreign Commodities; for, as it appears by their own Evidence, at the Bar of the Houſe of Commons, they import ſuch Wares into *New England*; and we muſt ſuppoſe they pay for them in Money or Fiſh, till they can prove that Lumber is a valuable Commodity in *France* and *Holland.* But ſuppoſing the *New England* People to lay out their Product of Fiſh in *Britiſh* Manufactures, is that a ſufficient Compenſation to *Great-Britain* for robbing her of the Fiſh Trade to the Streights? Do not the *New England* People, by their Confeſſion, acknowledge by Implication, that they reap the Profit of it, both in Navigation and Trade up the Streights, which uſed to be enjoyed by *Great-Britain* herſelf? What Advantage is it to *Britain* to have this Money laid out in her Manufactures? Would it not be a far greater to be the Carrier of theſe Manufactures to the Streights, and to bring home this Money in her own Ships, navigated by her own Sailors?

The Inhabitants of the Sugar Colonies, it is ſaid, are very rich, and very luxurious. That the Product of theſe Colonies are of the richeſt Sort, and a Mine to *Great-Britain*, is allowed, and has been fully proved; but that the Proprietors of the Soil and Manufactures are far from being rich, is evident from the Proofs already made to the Parliament, that they do not clear five Shillings for every hundred pound Weight of Sugar they make. This the *New England* Traders would think but a moderate Profit upon one of their ſhort Voyages; but it is too much for an Inhabitant of the Sugar Colonies, who runs infinitely more riſques in the Heat of the

Torrid Zone, does the Duty, and is liable to run the Hazard of a Camp in the Time of War, and in Time of Peace live the hardeſt Life of all the Inhabitants under the Sun. That this is truly the Caſe of the Planters in the Sugar Colonies, all Mankind that are acquainted with them will atteſt; but it may be evinced from the Nature of the *Weſt-Indian* Eſtate itſelf, which is ſubject to Ruin by the *French*, to Fire from the combuſtible Nature of the Sugar Canes, which are its Product; from the vaſt Expence of Materials and Edifices for making Sugar and Rum, and from the like Expence in Negroes, Cattle, and Mules; from the Riſque of Mortality in this Part of their Property, which is always half the Value of a well ſettled Plantation: And laſtly, the Expence of feeding, the Care, Anxiety, and prudent Conduct of governing two or three hundred Negroes, with ſtrict Juſtice and Humanity, and with Advantage to himſelf, is the Station of a Planter: And is not this a Station that requires as much Fortitude, Induſtry, Oeconomy, as catching Fiſh, or buying Skins from the *Indians* in *New England*? In ſhort, without a good Share of all the Qualifications neceſſary to conduct an Affair the moſt complicated in its Nature ſurrounded with Difficulties and Hazards, and in which the niceſt Oeconomy and Order muſt be obſerved, it is impoſſible a Planter ſhould reap any Profit from his Eſtate; therefore if Planters are rich, they muſt be the beſt Oeconomiſts, and the moſt induſtrious Men in the World, and therefore deſerve what they acquire.

To the ninth Objection, That the Trade of the *Engliſh* Sugar Colonies is at preſent vaſtly profitable; for the little Iſland of *Barbadoes* in the Year 1730 imported twenty thouſand ſeven hundred and ſixty-nine Hogſheads of Sugar, of which they made 340,396 *l.* clear Profit. It is admitted to be true, when Rum and Moloſſes bear a reaſonable Price, then a Plantation may, with the niceſt Oeconomy, pay its own Charges out of thoſe Articles. But if the *New England* Traders take Rum from Foreigners, and Moloſſes to be diſtilled into Rum by themſelves, then the Rum and Moloſſes will be ſo far from bearing ſuch a Charge, that, on the contrary, they will bear no Price at all; but the Moloſſes muſt be given to the Hogs, as the *French* uſed to do, until *New England* taught them how to make a better Profit of it. Have not then the *Barbadians* Reaſon to complain? By the Aſſiſtance of the *New England* Traders the *French* now have that great Advantage, and the *French* Plantations are now increaſed above one third of the annual Value, purely by that pernicious Trade. This Increaſe to Foreigners is a proportionable Diminution of our own Sugar Colonies, and conſequently a Diſadvantage to *Great Britain*. But is the Product of that little Iſland *Barbadoes* no leſs than 340,396 *l.* brought into the Ports of *Great Britain*, in one Year, what a Fountain of Treaſure muſt this be to the Kingdom, even by the Confeſſion of the Enemies to our *Britiſh* Sugar Colonies? Do therefore the *New England* Traders imagine that the Parliament of *Great Britain* will ſacrifice this immenſe Treaſure to the Advantage of a few *New England* Diſtillers; or if it was a Diſadvantage to all *New England* (from whence *Great Britain* derives no Advantage in compariſon of that) would it not be juſt Policy to ſupport the Sugar Colonies? but when the preſent Oppoſition is conſidered, as founded on a Trade with the *French*, the natural and implacable Enemies of this Kingdom, what honeſt *Engliſhman* will look upon it but with Diſdain? eſpecially after it has appeared evident from Reaſon, from undoubted Teſtimony, and even by the implicit Confeſſion of the *New England* People concerned in this Oppoſition, that the *French* have increaſed one third *per Annum* in their Wealth by this very Trade; that our Sugar Colonies have declined in Proportion, as has been proved already; and to compleat the Misfortune, the *New England* Traders have drained even the *Britiſh* Sugar Colonies of all their current Caſh, for no other Purpoſe but to purchaſe Moloſſes and Rum of the *French*. This is a Fact known by all the Inhabitants of the Sugar Colonies, who are ready to prove it in the moſt ſolemn Manner.

The two Houſes having heard the ſeveral Facts ſtated, with the Proofs; and conſidered the Arguments and Inferences drawn from them, paſſed an Act of the following Tenor: That after the 25th of *December* 1738 there ſhould be paid a Duty of Nine-pence a Gallon for all Rum and Spirits made in the Plantations, not ſubject to *Great Britain*, on the Importation of them into any of the *Britiſh* Plantations; that Sixpence a Gallon ſhould be paid for all foreign Moloſſes and Syrups imported, and Five Shillings for every Hundred Weight, *Engliſh* Money, for Sugar and Paneles imported; and that no Sugar, Paneles, Syrups, or Moloſſes, ſhould be imported into *Ireland*, unleſs ſhipped in *Great Britain*. And an Allowance of Two Shillings *per* Hundred Weight more than heretofore granted, on the Exportation of refined Sugars. But the Importation of *Spaniſh* or *Portugueze* Sugars into *Great Britain* is ſtill permitted by the ſaid Act.

Since the Act, the Merchants and Planters concerned in the *Britiſh* Sugar Colonies preferred a Petition to the *Houſe of Commons*, ſetting forth, that by two Acts of Parliament paſſed in the 12th and 22d of *Charles* II. the Inhabitants of the ſaid Colonies were reſtrained from ſending Sugar to Foreign Markets before they are firſt landed in *Great Britain*. That how prudent ſoever this Reſtraint may have been at the Time the Sugar Trade in the *Weſt Indies* was entirely in our Hands, yet now our Sugar Iſlands are in a declining Condition from the Increaſe of the *French* Settlements, it would be highly beneficial not only to them but to *Great Britain* to put the *Britiſh* Subject in a Capacity of diſputing foreign Markets with the *French*, and to permit him to carry his Sugars earlier and cheaper to thoſe Markets than he can do, under the Reſtraint aforeſaid. That the Sugar Colonies import yearly into this Kingdom Sugar enough for our Home Conſumption, and alſo a large Surplus for Re-exportation to foreign Parts; but the Demand from Abroad has greatly decreaſed within theſe few Years, and the Markets for that Commodity have been foreſtalled by the *French*, not only to the Prejudice of the Sugar Trade but alſo of the general Trade of *Great Britain*, which muſt affect the Balance thereof. That if *Britiſh* Ships were permitted to go to foreign Markets under proper Reſtrictions without unloading here, the whole Charge, and in a great Meaſure, the Riſque, of a double Voyage would be ſaved; and the obliging ſuch Ships to return to *Great Britain*, unloaded, and take their Clearance here, before their proceeding on another *American* Voyage, would be attended with this farther good Effect, that they muſt afford to carry Freight at the cheapeſt Rates, or return Home empty; ſo that this Regulation would extend our Navigation, and contribute to make us the Carriers of *Europe*, without prejudicing the Revenue, all the Duties on Sugar being drawn back on the Re-exportation of it to foreign Parts. For theſe Reaſons the Petitioners prayed that Liberty might be granted of carrying *Britiſh* Sugar from our Sugar Colonies in *America* directly to any foreign Markets to the Southward of *Cape Finiſterre*, upon the ſame Conditions that the People of *Carolina* are permitted to carry their Rice to the ſaid Markets, and alſo of carrying ſuch Sugars to any foreign Markets to the Northward of *Cape Finiſterre*, after firſt touching at *Great Britain*, before they proceed on another *Weſt India* Voyage. But the great Tenderneſs the Parliament has always had for the famous Act of Navigation, has prevented theſe Indulgences from being granted, that might otherwiſe perhaps have been yielded to in behalf of the Sugar Colonies.

But the preſent War with *France* will afford the beſt Means of coming at the Truth, in reſpect to the Facts aſſerted in the Papers before-mentioned; and therefore, whenever a general Peace ſhall be made, and the Parliament is at leiſure to look into Affairs of this Nature, we have all the Reaſon in the World to expect that this Commerce will be put upon ſuch a Foot as that the Inhabitants both of *Great Britain* and the Plantations may reap from it the greateſt Advantages poſſible. In order to this, the intelligent Reader will eaſily diſcern that the following Steps are neceſſary. In the firſt Place, due Care muſt be taken to give the Inhabitants of the Sugar Colonies all the Relief that is poſſible from any Hardſhips of which they have, or with good Reaſon might have, complained; ſuch as heavy and exorbitant Salaries to their Governors, large Sums levied upon them, without being applied for their Service, and the Difficulties they are under, in obtaining ſpeedy and effectual Juſtice, when Perſons in public Stations are inclined to extend their Power too far, with a View to promote their private Intereſt. They ſhould likewiſe have all poſſible Encouragement given them for recovering their foreign Trade, and beating out the *French* and other Nations who have interfered in it; ſince in regard to both Heads, it ought to be conſidered that the public Benefit, that is to ſay, the enriching the Subjects of *Great Britain* by the Balance of Trade in general, is the great Point to be held in View; from the attaining of which, all other incidental Advantages, ſuch as advancing the Revenue of the Crown, enriching particular Families, and raiſing private Fortunes, would certainly and neceſſarily follow, without their entering at all into the Motives, upon which Laws for the Good of the Plantations are enacted. For if it could be once brought about, that either the old Markets for Sugar were retrieved or new ones opened, there is no doubt that *Jamaica* and other Iſlands, where there are Lands, fit for that Purpoſe, uncultivated, would be more fully planted, the Inhabitants become more numerous, and their Demands from *Great Britain* conſequently larger than they are at preſent. On the other Hand, the ſame Care, the ſame Diligence and Alacrity are requiſite, with regard to the Colonies on the Continent; but, at the ſame time, it ought to be remembered, that whatever is done to promote the Welfare and Trade of the Sugar Colonies, muſt neceſſarily tend to the Benefit and Advantage of the Plantations on the Continent, which ſupply the Sugar Colonies with Lumber, and other Things requiſite for the carrying on their Trade; and if, beſides this, Ways and Means could be found to open new Channels for the Benefit of theſe Colonies alſo, it ought moſt certainly to be done.

We have ſpent a grat deal of Time indeed in ſurveying thus far the *Engliſh* Poſſeſſions in the *Weſt-Indies*; but in a Work of this Nature Time could not well be ſpent better; they are, if I may be allowed the Expreſſion, the pacific Conqueſts of this Nation. Territories acquired, and for the moſt part, at leaſt, acquired without ſhedding Blood, which ſhews that Induſtry is as capable of rendering a Nation powerful, as a Thirſt of War; and that a martial is not a more noble than a trading Spirit. What is gained by one War is frequently loſt by another; and even while it is kept, the Expences created by a diſputed Title are greater than the Value of the Poſſeſſion; but what becomes ours, by this Method of planting, remains always ours, and paſſes without Debate to our Poſterity, the very Power by which we acquire it ſecures its Continuance, and the longer we hold ſuch Acquiſitions the more valuable they are rendered, and the more effectually annexed to our Empire. They are Out-works well garriſoned, which yet put us to little or no Expence; they are diſtant Dominions, and yet cloſely connected to us by the Commerce which they create, they are continually drawing People without Prejudice to their Mother-Country, becauſe the more populous they grow the greater their Demands from hence, conſequently the quicker our Trade here, which will always bring over hither People from other Countries.

We may therefore ſafely affirm, that nothing can be of ſuch Conſequence to *Britain* as the Improvement of her Colonies; and which, at the ſame time, is a Conſideration that muſt powerfully recommend this to our Attention, that it lies wholly in our Power. We may be diſappointed in our Views, with reſpect to other Branches of Trade, by the Intrigues of our Enemies, or from the want of a right Diſpoſition in our Friends, but with regard to this great Branch of our Commerce, nothing can injure, nothing can diſappoint us, nothing can abridge or defeat our Succeſſes therein, if we are not wanting to ourſelves. We can from our Plantations bring moſt of thoſe Commodities that are requiſite for the Support of our foreign Commerce; and this is as well, or rather better, than if we had them here at home; we can, from our Colonies, ſupply ourſelves with thoſe Neceſſaries, for want of which only Foreigners could diſtreſs us, ſuch as Iron, Plank, Hemp, Pitch and Tar, and if we ſo pleaſed there are few Things we might not fetch from our Plantations; ſince, it is certain, that Indico, Cochineal, and Silk, might be had from our Southern Colonies, and many Things from our Northern Settlements, that have never been ſo much as talked of, but might be eaſily diſcovered; if Men well verſed in Minerals and Metals were ſent thither. In a Word, the Plantations were an Honour of the laſt Age, and it ſhould be our Study to make them the Glory of this.

SECTION XIX.

An Hiſtorical Account of the BRITISH *Settlements in* America *from the Reſtoration of King* Charles II. *to the Revolution.*

1. *A ſuccinct Account of commercial Affairs at the King's Return, and of the Circumſtances that favoured the ſettling New Colonies.* 2. *The State of the Country now called* Carolina, *from the Time of its firſt Diſcovery to the granting of it to the Lords Proprietors by King* Charles II. *and thence to the Surrender of that Patent.* 3. *A ſhort Deſcription of the Country of* Carolina *and the principal Places in that Colony.* 4. *An Account of the Produce, People, Commerce, Shipping, and Importance of this Colony to the* Britiſh *Nation.* 5. *The Grant of the Iſland of* Antego *to Lord* Willoughby, *the planting that Iſland, its Produce, Commerce, and Shipping.* 6. *The Conqueſt of* Nova Belgia *from the* Dutch, *the Grant of that Country to the Duke of* York, *whence is derived its preſent Name of* New York, *and a Defence of our Title to that Plantation.* 7. *An Account of that Country, its Situation, Climate and Product.* 8. *Of its Trade, Intereſts, and Importance to* Great Britain. 9. *The Grant of the* Eaſt *and* Weſt Jerſeys *to ſeveral Proprietors, and the Extent, Product and Trade of theſe Plantations.* 10. *The Settlement of the Iſland of* New Providence *and the* Bahama Iſlands, *their preſent Situation, and the Advantages that may be expected from them.* 11. *An Account of the Charter granted to the* Hudſon's-Bay Company *for facilitating the Diſcovery of a North-weſt Paſſage, and of the Settlements that have been made under it.* 12. *The Motives upon which were founded the Grant of the noble Country of* Penſylvania *to* William Penn, *Eſq*; *by King* Charles II. 13. *An Account of the Extent, Climate, Soil, Produce, and State of that flouriſhing Colony.* 14. *The Commerce, Intereſts, and Importance of* Penſylvania *to* Britain. 15. *Remarks and Obſervations on the foregoing Events.*

1. AT the Time King *Charles* II. returned to the Poſſeſſion of his Dominions, the Nature of Trade and the Importance of the Plantations were generally underſtood, and by very few better than the King himſelf, who had a Head mighty well turned for the comprehending whatever related to Maritime Affairs; had improved

his Notions on that Subject in *Holland*, and had converſed much with Perſons of Quality and Character, who had found it neceſſary to ſeek Shelter from their Enemies in thoſe Parts of the World. We need not wonder therefore, that ſoon after the Reſtoration various Schemes were ſet on Foot for enlarging, and effectually peopling, the Colonies already planted in *America*, as well as for ſettling new Colonies, in ſuch Places as were not already occupied by our own, or any other *European*, Nation. The King was adviſed by ſome, and ſollicited by others, to grant Charters to new Colonies, from various Motives. Prince *Robert*, or as we uſually call him, Prince *Rupert*, Duke of *Cumberland*, who had ſpent ſome Years in *America*, had great Notions of raiſing a naval Strength there, capable of diſtreſſing the *Spaniards*, and of obtaining a Share of the Gold and Silver they bring from thence. He was likewiſe perſuaded, that there were very rich Mines in *Florida*, and was therefore for promoting, at any Rate, Diſcoveries and Settlements in that Country; the Earl of *Clarendon*, Lord *Aſhley*, and ſeveral others of his firſt Miniſtry, conſidered Things in a very different Light: They thought that Plantations might be made uſeful Drains for carrying off warm and turbulent Spirits; and that by granting Liberty of Conſcience there to all the different Sects who were reſtrained at Home, they might ſecure Peace in *Britain*, and at the ſame Time procure vaſt Profit from *America*; for it was a ſettled Maxim with them, *That Induſtry was the beſt Cure for Enthuſiaſm*; which Experience ſhewed was extremely well founded.

There were ſome other Reaſons that contributed not a little to render Projects of this Nature acceptable to the King; for at that Time there were Numbers of People that wanted ſome Eſtabliſhment of this kind for their Support, and whom it was much eaſier to diſpoſe of in this manner, than to find Means of rendering them eaſy and content at home. As, for Inſtance, Multitudes of Royaliſts who were undone by the War, and who ſeeing the Succeſs that had attended the Planters in *Virginia* and *Barbadoes*, were better pleaſed to ſeek new Fortunes in the *Weſt Indies*, than to continue in a State of Indigence and Neceſſity in *England*. Many likewiſe of the Army that had been lately diſbanded, were alſo inclined to take the ſame Method for obtaining a comfortable Subſiſtance; and were not afraid of Danger and Fatigues abroad, to which they had been long inured at home. There were a third Sort of People who, either from a Diſaffection to the Government then newly re-eſtabliſhed, or for fear of being called to an Account for what they had done in former Times, were very willing to tranſport themſelves into theſe diſtant Parts of the King's Dominions, that they might have a Chance of raiſing Eſtates there, and at the ſame Time be ſecure from any After-reckonings for what, during our long Scene of public Confuſions, they had been doing here: We need not wonder therefore, that as ſoon as the Government was a little ſettled, many Propoſals ſhould be made for gratifying the Friends to the Government, who had very high Pretenſions to the royal Favour, with Grants in *America*, which coſt the Crown nothing, and which afforded probable Means of enriching particular Perſons at the ſame Time that it opened a ſure and certain Means of extending the Power, increaſing the Trade, and augmenting the Wealth of the Nation. We may add, that beſides all theſe Reaſons, Expedients, and Advantages, there were likewiſe ſome of Neceſſity; for it was evident, even to ſuch as were no great Politicians, that if ſome Meaſures were not taken to prevent it, the *Dutch* and other Foreigners, would infallibly fix themſelves in thoſe Countries which belonged of Right to this Crown, and which had been hitherto neglected; and therefore it was very wiſely judged, that the Plantations firſt ſettled, ſhould be in thoſe Parts of the Continent that were in moſt Danger of falling into the Hands of other Nations.

Upon theſe Conſiderations therefore, the Adminiſtration liſtened very willingly to a Propoſal that was made within two Years after the King was reſtored, for planting the Country now known by the Name of *Carolina*; which ſeemed the more worthy of being ſecured, as lying indiſputably in the fineſt Climate in the World; and thereby promiſing the higheſt Advantages to that *European* Nation which ſhould ſettle and cultivate it. Neither was it at all improbable, that when the Property of this Country was once fixed by a Charter from the Crown, and large Privileges offered to ſuch as would go thither and ſettle, it might be very ſoon peopled; ſince amongſt the many Things for which that Country was undoubtedly fit, they were likely to fall upon ſomewhat that might ſupport and maintain them; it is true, that many Things were given out of the Country at that time, which have not hitherto been verified by Experience; but then, as we ſhall ſhew hereafter at large, it ſeems to be rather imputable to the Want of Induſtry and Application in the Inhabitants, than to any Defect in the Soil or Climate: But to have juſt Notions of this, and from thence to form a right Idea of the Value of this noble Country, than which the Globe affords not a better, it is neceſſary that we ſhould enter into a few Particulars, that we may thoroughly apprehend by what Right we poſſeſs it; how it came to be abandoned by another Nation that ſeized it while unoccupied by us; and after what Manner our firſt Plantations were made; what great Changes have happened in the Conſtitution of the Colony; the State it is in at preſent; the Benefits which *Great-Britain* reaps from it, and what reaſonable Hopes there are, that it may yet turn more to our Advantage. Of all which Heads we ſhall treat as clearly and as conciſely as it is poſſible.

2. The Country of *Carolina* is Part of that vaſt Region of *North America* which was formerly comprehended under the Name of *Florida*, a Name beſtowed by *John Ponce de Leon*, in the Year 1512; of whoſe Adventures and Diſcoveries we have already ſpoken largely: He advanced, however, no farther Northwards than the River of *St. Matheo*, and therefore it is plain, that the *Spaniards* never had any juſt Title to *Carolina*: But it is, however, very true that they flattered themſelves, that his having touched upon this Continent, gave them a Right to it; which Notion, if well founded, would give us a better Right, ſince *Sebaſtian Cabot* had been ſeveral Years before on the Northern Coaſt of this very Country, though it is doubtful whether he advanced ſo far South as *St. Matheo*. The *Spaniards*, who deſired to ſecure it to themſelves eight Years afterwards, ſent *Vaſquez de Ayllon* to make a farther Diſcovery of it: He came upon the North Coaſt, and called the North-north-weſt River by the Name of *Jordan*. He did nothing except inviting many of the Natives on board his Ships, where, when he had got them, he hoiſted Sail, and carried them into miſerable Bondage. In the Year 1526, *Charles* V. Emperor of *Germany* and King of *Spain*, ſent *Pamphilio Narvaez* to *Florida*, who ſtaid ſo long in the South-weſt Part of this Country, which is the moſt barren, that his People eat one another, his Crew having ſpent their Proviſions. Ten Years afterwards, *Ferdinando Soto* came hither in Search of Gold and Silver Mines, having a little Army of nine hundred Foot and five hundred Horſe. Himſelf and three Parts of his Soldiers died through Want, by Sickneſs, and the *Indians*, and the reſt, were led back by *Lewis Moſcos* to *New Spain*, though not without great Difficulty, the Natives ſetting upon them ſeveral times in their March, and killing all that fell into their Hands. This unfortunate and expenſive Expedition ſo diſcouraged the *Spaniards*, that for ſeveral Years they made no more Attempts in thoſe Parts, and indeed they ſearched no farther than that Part of the Continent which lies oppoſite to the Gulph of *New Spain*, and not within, and beyond the Streights of *Bahama*, which is the moſt fertile and rich, abounding in many valuable Commodities.

The *French* perceiving the *Spaniards* neglected this long Tract of Land, Admiral *Coligny*, in the Reign of *Charles* IX. procured two of the King's Ships to be ſent thither; the Command of which he gave to *Jean Ribaut*, who, after a Voyage of two Months, arrived at the River *Dolphin*, between that of *St. Matheo* and that of *May*; lying about the 30th Degree. The next River to that of *May* he called the *Seine*, the next to that the *Somme*, then *Loire*, then the *Charente* and *Garonne*, at the Mouth of *Albemarle* River, then called the *Great River*. The Port being ſafe and commodious, he built a Fort, which he called *Charles Fort*,

Fort, and gave it the Name of *Port Royal*, in 32 Degrees, bordering on *Virginia*, now *North Carolina*, where the firſt Settlement was made by any *European* Nation. The Civil War raging in *France*, *Ribaut*'s Soldiers mutinied for want of Supplies; the Natives, it is true, were very kind to them out of Hatred to the *Spaniards*; but they could not furniſh them with many Neceſſaries that they wanted; and the Admiral was ſo engaged in Politics at home, that he had not leiſure to provide for the Wants of his Colony, ſo *Ribaut*, having made ſome Diſcoveries, in the North-eaſt Part of *Florida*, returned to *France*; and in his Return his Company were reduced to ſuch Extremity, that they killed and eat one of their own Men, and probably would have done ſo by others, had they not accidentally met with an *Engliſh* Ship; the Maſter of which furniſhed them with ſome Proviſions. A Peace being concluded two Years after in *France*, between the Papiſts and the Proteſtants, *Coligny*, who was then in favour at Court, procured other Ships to be ſent to this Country, which was now called *Carolina*, from *Fort Charles*, as that was from the *French* King.

The Command of thoſe Ships and Men on board, was given to *Lewis Laudoner*, who was ordered to carry on the Settlement. He arrived here the 20th of *June*, 1564, with three Ships, and was kindly received by the Inhabitants; but could find no Gold or Silver, though he ſpent much Labour and Time about them. His Proviſions being almoſt all gone, and the Natives either unwilling or unable to furniſh him with more, *Laudoner* reſolved to return alſo to *France*; and as he was preparing to depart, *Jean Ribaut* arrived with three Ships, which had ſo good an Effect on the *Indians*, that they ſeemed to be as welcome to them as to the *French*: The Kings of *Homoloa*, *Servaratri*, *Almacam*, *Malica*, and *Caſtri*, waited upon *Ribaut* to congratulate his Arrival, and promiſed to conduct him to the *Apalachian* Mountains, which part *Carolina* from *Virginia*. The *French* conceived great Hopes from this Settlement, but all vaniſhed on the Arrival of the *Spaniards*, who with a Squadron of Ships and Land Forces drove the *French* out of their Forts, killed *Ribaut* and ſix hundred Men, after having given them Quarter, and obliged *Laudoner*, with a few of his Countrymen who remained alive, to return to *France*.

The *French* King was leſs moved with this Outrage committed on his Subjects, becauſe they were Proteſtants; and indeed, it is thought, *Coligny* intended by this Settlement to ſecure a Retreat for himſelf and his Brethren of the reformed Religion in caſe they were conquered in *France*. *Peter Melanda* commanded the *Spaniards*, who diſlodged the *French*, and ſo provoked the *Indians*, by his Cruelty and Injuſtice, that they were very ready to revenge themſelves when Opportunity offered, as it did not long after. For Captain *de Gorgues*, a *French* Gentleman, at his own Coſt, fitted out three ſtout Ships, and with two hundred and eighty Men ſailed to *Carolina*, where he took the Fort, and put the *Spaniards* therein all to the Sword. They had built two other Forts, which he eaſily reduced, and ſerved the Garriſons as he did that of *Fort Charles*; he demoliſhed them, and was aſſiſted by the Kings of *Homoloa* and *Servaratri*. The *French* travelled into the Dominions of the Great King of *Apalacha*, near the Mountains, where they converted many *Indians* to Chriſtianity. Theſe *Indians* were more civil than thoſe to the Northward, their King's Dominions larger, and their Manners, in a great Meaſure, reſembled thoſe of the *Mexicans*, from whom they were thought to be deſcended. We do not find that Monſieur *de Gorgues* made any Settlement here, or that the *Spaniards* endeavoured to recover the Country, which from the Year 1567 lay deſerted by all *European* Nations till the Reign of King *Charles* II. of *England*.

In the Year 1622 ſeveral *Engliſh* Families flying from the Maſſacres of the *Indians* in *Virginia* and *New England*, were driven upon theſe Coaſts and ſettled in the Province of *Malica* near the Head of the River of *May*, where they became a kind of Miſſionaries among the *Malicans* and *Apalachites*. The King of the Country is ſaid to have been baptized; and in the Year 1653, Mr *Brigſtock*, an *Engliſhman*, went to *Apalacha*, where he was honourably entertained by his Countrymen, who were there before him, and from his Relation of the Country ours is taken.

Such was the Situation of Things, and it had been abandoned by the *French* for near one hundred Years, when King *Charles* the IId. made a Grant thereof, bearing Date *March* 24, 1663, to *Edward* Earl of *Clarendon*, then Lord High Chancellor of *England*, *George* Duke of *Albemarle*, *William* Lord *Craven*, *John* Lord *Berkley*, *Anthony* Lord *Aſhley*, Sir *George Carteret*, Sir *William Berkley*, and Sir *John Colliton*, from the North-end of the Iſland called *Luck Iſland*, which lies in the Southern *Virginia Sea*, and within 36 Degrees of North Latitude, and to the Weſt, as far as the *South-Seas*, and ſo ſoutherly as far as the River *San Matheo*, which borders on the Coaſt of *Florida*, and is within 31 Degrees of North Latitude, and ſo Weſt, in a direct Line, as far as the *South-Seas* aforeſaid, with all Royal Fiſheries, Mines, Power of Life and Limb, and every thing neceſſary in an abſolute Propriety, paying a Quit-Rent of twenty Marks yearly. Theſe Proprietors afterwards obtained another Grant, which ſomewhat varied the Bounds of the Province, by fixing its Northern Frontier at *Carotoch River* in 36 Degrees 30 Minutes North Latitude, and extending it to the Latitude of 29 Degrees to the South, within which Bounds both the *Carolinas* and the new Province of *Georgia* are included.

The Plan of Government for this new Colony was ſtruck out by that great Stateſman, *Anthony* Earl of *Shafteſbury*, and digeſted into Form by the famous Mr. *John Locke*; ſo that great Expectations were raiſed by it. But without entering into a long Detail upon this Subject, it is ſufficient to ſay, that how fair ſoever it might appear in Theory, it was found by Experience impoſſible to carry it into Practice; ſo that after ſtruggling with the Inconveniencies produced by it for about ſixty Years, to the Prejudice of the Planters and Proprietors; the only Remedy that could at laſt be found, was to get rid of this fine ſpun Conſtitution, in which it was pretended all the Errors in our own were cured, and to put the Province under the Protection and into the Hands of his Majeſty, which was accordingly done; and this Remedy has anſwered all the Ends that could be expected from it in ſo few Years.

This Surrender was made by the Proprietors to *Edward Bertie*, *Samuel Horſy*, *Henry Smith* and *Alexis Clayton*, Eſqrs. in Truſt for the Crown. The Proprietors, in their own Right, or in Truſt, were then *Henry* Duke of *Beaufort*, *William* Lord *Craven*, *James Bertie*, Eſq; *Doddington Grenville*, Eſq; *Henry Bertie*, Eſq; *Mary Danſan*, *Elizabeth Moore*, Sir *John Colliton*, *John Cotton* and *Joſeph Blake*, Eſqrs. who were poſſeſſed of Seven-Eighths of their Property of the Province, and ſold it to the Crown for 17500 *l.* Each Proprietor, who had a whole Share, having 2500 *l.* The outſtanding Quit-Rents, and other Incomes, due to the Proprietors from the People of the Province amounting to ſomewhat above 9000, alſo were ſold to the Crown for 5000 *l.* which was paid to the above-mentioned Proprietors after the Sale and Surrender had been confirmed by a particular Act of Parliament, in the Year 1728, entitled, *An Act for eſtabliſhing an Agreement with ſeven of the Lords Proprietors of* Carolina, *for ſurrender of their Title and Intereſt in that Province to his Majeſty*. It will appear by the following Clauſe in the Act of Parliament, that the remaining One-Eighth of the Propriety, and Arrears of Quit-Rents aforeſaid, were reſerved to the Right Honourable *John* Lord *Carteret*, late Earl of *Granville*, "Saving and "reſerving always to the ſaid *John* Lord *Carteret*, his "Heirs, Executors, Adminiſtrators, and Aſſigns, all "ſuch Eſtate, Right, Title, *&c.* to One-Eighth Part "of the ſaid Province or Territories, and to One-"Eighth Part of all Arrears, *&c.*"

In conſequence of the Powers granted to his Majeſty by this Act, he has ever ſince appointed Governors of *North* and *South Carolina*, and there is a great Proſpect of its becoming a Purchaſe highly beneficial to the Crown, which will, however, in a great Meaſure depend on the Capacity and Conduct of the Governors they ſend thither, who ought to have true Notions of the Intereſts of King and People, and a Firmneſs of Mind equally capable of reſiſting Flattery and deſpiſing Clamour, to both which he will be as much expoſed in theſe, as in any other Countries in the World, if from what has already paſſed, we may form any Judgment of what will happen in ſucceeding Times.

3. After having given the Reader an Account of the Time and Manner in which we became poſſeſſed of this Colony, and the Means by which its Government has been changed ſince it was ſettled, we are next to enter into an exact Deſcription of the Country itſelf, that the Reader may be the better able to judge of the Value of this Plantation, and of the Certainty of thoſe Rules, for determining the beſt Climates, and the Commodities that may be expected, either from the Bounty of Nature, or the Induſtry of the Inhabitants; with reſpect to which, more rational Hopes could ſcarce be formed of any Place in our Poſſeſſion, or, indeed, of any *European* Nation in *America*, than of this; which, in Point of Situation, as I have hinted more than once, is as happy as could be wiſhed, and in that reſpect certainly merits the Reader's particular Attention. *Carolina* is ſituated between the Extremes of Heat and Cold, but the Heat is more troubleſome in Summer than the Cold in Winter, their Winters being very ſhort, and their froſty Mornings frequently ſucceeded by warm Days. The Air is, for the moſt Part, ſerene and clear, both in Summer and Winter; yet they have their Winter Rains, and ſometimes very heavy Showers about Midſummer; and eſpecially if the Wind changes ſuddenly from the South-eaſt to the North-weſt, for then it blows exceeding cold, and brings Diſtempers on thoſe who do not take Care to guard againſt it; but the Country is generally healthful, where People live regularly, and uſe any Precaution: Thoſe, indeed, who after a hot Day expoſe themſelves to the cool Breezes of the Evening, uſually feel the Effects of it, as others do that indulge their Appetites in eating Fruit, and drinking pernicious Liquors to Exceſs.

They are ſubject to Hurricanes as well as the *Caribbee Iſlands*, but theſe do not happen every Year; and ſometimes are ſo favourable as not to do much Miſchief in ſeven Years. There was a very terrible one which happened in the Year 1729. This Province is now divided into North and South *Carolina*; and, as we have before ſhewn, the Country now known by the Name of *Georgia* is alſo within the original Limits of this Colony. At preſent we ſhall concern ourſelves only with the two firſt mentioned Provinces, intending to ſpeak more of the laſt in its proper Place. *North Carolina* is bounded by *Virginia* on the North, the Ocean on the Eaſt, by a Line drawn in 34 Degrees from the Ocean to the Mountains on the South, and by that Part of *Florida*, poſſeſſed by the *Indians*, on the Weſt, and is ſubdivided into fourteen Townſhips or Pariſhes. But there is not one Town or Church, as I can learn, in the Country; and it is but very lately that the Society for the propagating the Goſpel has ſent itinerant Preachers amongſt them. *South Carolina* is divided from *North Carolina*, by the aboveſaid imaginary Line on the North, by the Ocean on the Eaſt, by the River *Savannah*, which ſeparates it from *Georgia*, on the South, and by the Country of the *Indians* on the Weſt, being ſubdivided into fourteen Pariſhes or Townſhips, each of them having a good Church of Brick or Timber.

But the chief and almoſt the only Town in both *Carolina's*, is *Charles Town*, ſituate in 32 Degrees 45 Minutes North Latitude, and on the Point of a *Peninſula*, formed by *Aſhley* and *Cooper Rivers*; the former of which is navigable for Ships twenty Miles above the Town; and for Boats and Pettyaugers (large Canoes) near 40 Miles. The other River is not navigable for Ships ſo far, but for Boats and Pettyaugers much farther; the Bar before the Harbour has ſixteen Feet Water at a low Tide, and there is good riding when a Ship is got cloſe to the Town, the Harbour being ſecured by a Fort called *Johnſon's* Fort, which has about twenty Guns in it, level with the Surface of the Water. The Town was regularly fortified ſome Years ago, and ſeveral of the Baſtions, near the Water, are ſtill in being, and in good Repair. But the Baſtions, Palliſadoes, and Foſſe, next the Land, being much damaged by a Hurricane, and deemed of too great an Extent to be defended by the Inhabitants, General *Nicholſon* cauſed them to be demoliſhed. The Town now contains upwards of ſix hundred Houſes, generally well built, ſome of them of Brick, but more of Timber, and moſt of them ſaſhed, forming regular and ſpacious Streets; and their Church is much the moſt magnificent in *Engliſh America*, having three Iſles, an Organ, and Gallery all round the Church.

The Town of *Beaufort* is ſituated on the Iſland of *Port Royal*, in 31 Degrees 40 Minutes North Latitude, an hundred Miles South of *Charles Town*; the Continent and Iſland forming a fine capacious Harbour, which might hold the Royal Navy of *England*. The Iſland on which the Town ſtands, conſiſts of near one thouſand Acres, and is navigable all round for Boats and Pettyaugers, and one half of it for Shipping, having four Fathom Water cloſe to the high Bluff, ſo that Ships may load and unload from the Shore, without the Aſſiſtance of Boats. The Harbour is ſecure by a Fort built ſome Years ſince, on which twelve Culverins are mounted, but the Town and Iſland have no Fortification; nor is the Harbour ſo well fortified as a Place of this Importance deſerves, eſpecially as it lies ſo nigh *Spaniſh Florida*, and is ſaid to be demanded by the *Spaniards* as Part of their Territories. There is not, indeed, above fifty or threeſcore Houſes in the Town of *Beaufort* at preſent, but from its advantageous Situation, and the Goodneſs of the Harbour, it is expected that this Town will one Day be the Capital of *Carolina*: It is already the Station for the *Britiſh* Squadron in thoſe Seas. There is another Port-Town lately erected at *Wingaw*, about fifty Miles to the Northward of *Charles Town*, to which they have given the Name of *George Town*, and the Society for the Propagation of the Goſpel have a Miſſionary here.

It would be needleſs to enter into a large Deſcription of this Country, or of the Towns that are erected in it; only it may not be amiſs to ſay that *North Carolina* is within this few Years become quite a different Country from what it was, and the Number of People therein is continually increaſing; ſo that there is good Reaſon to believe that whenever the Inhabitants are bleſſed with a wiſe, active, prudent, and public-ſpirited Governor, this Country may be ſo improved, as to become infinitely more valuable than from any of the Accounts hitherto received of it could be expected. Indeed it may juſtly be affirmed, that the Welfare and Proſperity of all our Colonies depend ſo much upon the Choice of Governors, that we can ſcarce conceive any thing of ſo great Importance as the Crown's being extremely careful to veſt none with ſuch Authority, but Men of known Capacity, eſtabliſhed Reputation, and competent Fortunes.

4. As to the Produce, Strength, and Commerce of *Carolina*, the beſt Account we have, is from Colonel *Purry*, a Man of great Judgment, Induſtry, and Integrity, who went thither with a View to ſettle, as he did, and therefore his Accounts may be very ſafely depended upon. He obſerves that all Sorts of Trees and Plants will grow there as well as can be wiſhed; particularly Vines, Wheat, Barley, Oats, Peaſe, Beans, Hemp, Flax, Cotton, Tobacco, Indico, Olives, Orange Trees, and Citron Trees, as alſo white Mulberry Trees for feeding of Silk-worms; and that the Lands are not difficult to clear, becauſe there are neither Stones nor Brambles, but only great Trees, which do not grow very thick, ſo that more Land may be cleared there in one Week, than could be done in *Europe* in a Month. The Cuſtom of the Country is, that after having cut down theſe great Trees, they leave the Stumps for four or five Years to rot, and afterwards eaſily root them up, in order to manure the Land. It is therefore very certain that *Carolina* is in general an excellent Country.

It is true the Ground is ſandy, but then it is a Sand impregnated with Salt or Nitre, ſo that it brings forth in great abundance, as the like Soil does in divers Parts of *Europe*. But what ſeems peculiar to *Carolina*, there are a great Number of Plantations that have been continually cultivated for near ſeventy Years, which yet produce great Plenty, without ever being manured by the leaſt Dung, for they never lay any on their Grounds; the Planter only turns up the Superficies of the Earth, and all that he plants and ſows therein quickly grows and thrives: Thoſe who underſtand ever ſo little of Agriculture will be obliged to own, that if the Lands in *Europe* were not conſtantly manured, their Strength would be ſo exhauſted that at length the Crops would not pay for their Seed; but a Man who has a little Land in *Carolina*, and is not willing to work above two or three Hours in a Day, may very eaſily live there, even on ſo little Labour. Another Conſideration deſerving our Notice is, the Progreſs of the firſt Colonies; their ſudden Advancement; the Riches of the preſent Inhabitants; the great Number of public Expences for which they provide; the great Trade they carry on at preſent; and laſtly, their Misfortunes and Loſſes, which are entirely repaired. The better to comprehend theſe Matters, we ſhall only make the following Obſervations: That there were no People in *Carolina* till near fourſcore Years ago; for the *Engliſh* did not ſend any thither till the Year 1670: That they had at firſt a very fatal Beginning; afflicted with Sickneſs, and even the Plague, which daily diminiſhed the Number of the People: That cruel deſtructive Diviſions broke out amongſt them: That they had a very bad Government under the Lords Proprietors, being alſo without Juſtice, Order, or Diſcipline: That at a certain Time the Pirates interrupted their Trade and Navigation: That they have often had great Droughts: That a terrible Fire conſumed almoſt all *Charles Town:* That they have been at great Expence in Fortifications, public Edifices, Churches, *&c.* That they have often ſuſtained long Wars with the *French*, *Spaniards*, and particularly with the *Indians*, who once united together to deſtroy the whole Province. That notwithſtanding all theſe Misfortunes, the People of *Carolina*, except thoſe who give themſelves up to Debauchery, are all rich, either in Slaves, Furniture, Clothes, Plate, Jewels, or other Merchandizes, but eſpecially Cattle; which ſhews the Goodneſs of the Country they inhabit.

Silk-worms, in *Carolina*, are hatched from the Egg, about the Middle of *March*; at the ſame Time that the Mulberry-leaves, which are their Food, begin to open; being attended and fed ſix Weeks, they eat no more; but have ſmall Buſhes ſet up for them to ſpin themſelves into Balls; which thrown into warm Water, are wound off into raw Silk. Roſin, Tar, and Pitch, are all produced from the Pine Trees; Roſin, by cutting Channels in the ſtanding green Trees that meet at a Point at the Foot of the Tree, where is placed a Receiver; the Channels are cut as high as one can reach with an Ax; and the Bark is peeled off from all thoſe Parts of the Tree that are expoſed to the Sun, that the Heat of it may the more eaſily force out the Turpentine, which being taken from the Receiver, and melted in Kettles becomes Roſin. Tar is made thus: They prepare a circular Floor of Clay declining a little towards the Center; from which is laid a Pipe of Wood, the Upper-part of which is even with the Floor, and reaches ten Feet without the Circumference; under the End the Earth is dug away, and Barrels placed to receive the Tar as it runs; upon the Floor is built up a large Pile of dry Pine Wood ſplit in Pieces, and ſurrounded with a Wall of Earth, which covers it all over only a little at the Top, where the Fire is firſt kindled: After the Fire begins to burn, they cover it likewiſe with Earth, to the End there may be no Flame, but only Heat ſufficient to force the Tar downward into the Floor; they temper the Heat as they pleaſe, by thruſting a Stick through the Earth, and letting the Air in at as many Places as they ſee convenient. Pitch is made by boiling Tar in large Iron Kettles ſet in Furnaces, or by burning it in round Clay Holes made in the Earth.

Black Cattle have mightily increaſed ſince the firſt ſettling of the Colony. About forty Years ago it was reckoned a great deal to have three or four Cows, now ſome People have a thouſand Head; and for one Man to have two hundred is very common. The Cows graze in the Foreſt, and the Calves being ſeparated and kept in Paſtures fenced in, they return home at Night to ſuckle them: They are firſt milked, then ſhut up in a Fold all Night, milked again in the Morning, and then turned out into the Woods. Here are Hogs in abundance; they go daily to feed in the Woods, where they rove ſeveral Miles, feeding on Nuts and Roots; but having a Shelter made at home, to keep them warm, and ſomething given them to eat, they generally return in the Evening. The Beef and Pork that are raiſed here find a good Market in the Sugar Iſlands.

The Trade of *Carolina* is now ſo conſiderable, that of late Years there have ſailed from thence, annually, above two hundred Ships laden with Merchandize of the Growth of the Country, beſides three Ships of War, which they commonly have for the Security of their Commerce; and laſt Winter they had conſtantly five, the leaſt of which had above an hundred Men on board. It appears from the Cuſtom-houſe Entries, from *March* 1730 to *March* 1731, that there ſailed, within that Time, from *Charles Town*, two hundred and ſeven Ships, moſt of them for *England*; which carried among other Goods, forty-one thouſand nine hundred and fifty-ſeven Barrels of Rice, about five hundred Pounds weight *per* Barrel; ten thouſand ſeven hundred and fifty Barrels of Pitch; two thouſand ſixty-three of Tar; and ſeven hundred and fifty-nine of Turpentine; of Deer-ſkins three hundred Caſks, containing eight or nine hundred each; beſides a vaſt Quantity of *Indian* Corn, Peaſe, Beans, *&c.* Beef, Pork, and other ſalted Fleſh; Beams, Plank, and Timber for Building, moſt part of Cedar, Cypreſs, Saſſafras, Oak, Wallnut, and Pine.

They carry on a great Trade with the *Indians*, from whence they get their great Quantities of Deer-ſkins, and of other wild Beaſts, in exchange for which they give them only Lead, Powder, coarſe Cloth, Vermillion, Iron, ſtrong Waters, and ſome other Goods, by which they have a very conſiderable Profit. The great Number of Slaves makes another Part of the Riches of this Province, there being above forty thouſand Negroes, which are worth, one with another, twenty-five Pounds each. Artificers are ſo ſcarce at preſent, that all Sorts of Work is very dear; Taylors, Shoe-makers, Smiths, *&c.* would be particularly acceptable there; a ſkilful Carpenter is not aſhamed to demand thirty Shillings a Day beſides his Diet, and the common Wages of a Workman is twenty Shillings *per* Day, provided he ſpeaks *Engliſh*, without which he cannot be underſtood, and conſequently not ſo uſeful as others; and when a Workman has but ten Shillings *per* Day, he thinks he labours for almoſt nothing, though he has his Maintenance beſides; but this is *Carolina* Money. Moſt of their Shoes are brought from *England*, and generally ſell for forty Shillings *per* Pair; not but that they have Hides enough, and very cheap, an Ox's Hide being ſold for twenty Shillings; neither are they deſtitute of the Means to tan them, for they make very good Lime with Oyſter-ſhells, and the Bark of Oak Trees is ſo plentiful, that it coſts nothing but the Trouble of gathering; they therefore want only a ſufficient Number of good Tanners and Shoe-makers. I might ſay the ſame of Leather-Dreſſers, ſince they ſend every Year to *England* above two hundred thouſand Deer-ſkins undreſſed; yet *Carolina* produces Oker naturally, and good Fiſh-Oil may be had from *New York*, or *New England*, very cheap; ſo that they might be dreſſed and made up into Breeches in the Country, for which thoſe Skins are very proper, being cool in Summer, and warm in Winter. There is not one Potter in all the Province, and no earthen Ware but what comes from *England*, nor Glaſs of any kind; ſo that a Pot-houſe and a good Glaſs-houſe would ſucceed perfectly well, not only for *Carolina* but for all the Colonies in *America*. There is a kind of Sand and Earth which would be very proper for thoſe Purpoſes, as alſo Wood and Fern in abundance, if they had but Workmen to make Uſe of them.

It may ſeem ſtrange to affirm this, in an Age when it is well known, that Men are inclined to go almoſt any where, and may be tempted to almoſt any Thing, from the Hopes of Money. Theſe Facts, however, are very true, neither is it very difficult to account for them; for if without much Labour and Pains not only a bare Subſiſtence may be gained, but in time alſo good Eſtates may be raiſed by Methods already in uſe; we are not to expect that our People in the Colonies will either run Hazards or give themſelves much Trouble to ſtrike out new Ways to Wealth, even though they ſhould be convinced that ſuch Ways, at the ſame time they increaſed their own Fortunes, would prove beneficial to their Mother-Country likewiſe. There are indeed ſome People who take a Pleaſure in running down the Countries we have planted in *America*, and in making their Countrymen believe, that they are amuſed with fine Stories without Truth, or which, at leaſt, have but a ſmall Mixture of Truth in them. They ſay, for Inſtance, that though *Engliſh* Wheat will grow in *Carolina*, yet it is apt to mildew, and almoſt always runs up into Straw, and produces but a ſmall Grain, and that it is very difficult to keep it from the Wevill. Theſe, however, are Inconveniencies felt in other Countries, where very good Wheat grows, for which many Remedies have been found and applied with Succeſs, as doubtleſs they might be there, if the Planters went about it. The Truth of the Matter is, that Rice is raiſed without ſo much Trouble, and as they can exchange this in *Penſylvania* and *New York*, almoſt Weight for Weight for Flour, they are content, and indeed think it a Happineſs they can have Bread without being at much Pains in procuring it.

The ſame thing may be ſaid of Wine, which it is now generally agreed cannot be made there, becauſe their Grapes ripening in *June*, when their great Heats and heavy Rains come on, are very ſeldom fit for preſſing. But it is very certain, that this is no better than an Excuſe, ſince the wild Grape ripens in *October*, and Perſons ſkilful in Vineyards would ſoon teach them the Means of making uſe of theſe. The very ſame Objections were raiſed in reference to the Country about the *Cape of Good Hope*; and it was as poſitively ſaid that no Wine could be made there, but the *Dutch* have ſhewn what Strength there was in the Objection, by their improving into a Paradiſe a Place we deſpiſed, and thought not worth the keeping; and while Madeira is to be had ſo cheap, I am convinced no Grapes will ripen kindly in *Carolina*. As to Silk, the ſame Objection does not lie; for, it is well known, there are Woods of Mulberry-Trees there, upon which the Worms feed and ſpin as well as in any Place in the World. I may add, that Silk has been brought over from *Carolina*, as good, in the Opinion of the beſt Judges, as any that comes from *Piedmont*, for which we pay large Sums of Money every Year; but it falls out unluckily, that from the End of *March* to the Beginning of *May*, when the Worms want moſt Attendance, all the Hands in *Carolina* are employed in planting and hoeing their Rice, ſo that they have no time to ſpare for procuring a Commodity, of which hitherto they do not ſeem to know the true Value.

But all the Faults do not lie on that Side of the Water; ſince it is true, that though there comes a great deal of Pitch from thence, we have but little Tar from *Carolina*; whereas, there have been formerly many thouſand Barrels brought in a Year, not at all inferior to the beſt Tar from *Norway*; which was, by this Means, reduced from three Pounds to fifteen Shillings a Barrel, with which Reduction, it ſeems, we are content to have recourſe again to the North Country Tar, and no longer make uſe of what might come from this Plantation. We may from theſe few Hints ſee clearly, that as great as our Trade to theſe Colonies is, it might ſtill become much greater, and that how beneficial ſoever they may be to *Great-Britain*, we are far from deriving from them all the Benefits we might do; and though conſidered, in one light, this ſeems a little diſtaſteful; yet, if we view it in another, it affords us a very comfortable Proſpect; ſince, when we are diſpoſed to apply ourſelves heartily to the Improvement of this Commerce, we have a moral Certainty, that our Endeavours will ſucceed, and that *Great-Britain* can never feel any ſenſible Decay of Trade, while ſhe preſerves and cheriſhes her Plantations.

5. Among other Perſons of Quality and Diſtinction who were juſtly entitled to the Favour of King *Charles*, there were few who had a better Title than *Francis* Lord *Willoughby*, who was Governor of *Barbadoes*, and who in 1663 obtained a Grant of the Iſland of *Antego*, in which he ſettled a Colony about three Years after. The Country had been known before, and, if I am not miſtaken, Sir *Thomas Warner* had attempted to ſettle it. How it came to paſs that after the Death of Lord *Willoughby*, who removed hither, this Iſland came again into the Hands of the Crown I cannot ſay; but without all doubt the Fact is true, and this Iſland now makes a Part of the Government with the reſt of the *Leeward Iſlands*, and is ſaid to owe its preſent happy Situation to the Care, Induſtry, and Skill of Sir *Chriſtopher Codrington*, who made it the Seat of his Government when he was General and Commander in chief of thoſe Iſlands. It was here, that in the latter End of the late Queen's Time Governor *Park* was killed by the People; an Affair that will be ever remembered, both in that Part of the World and this, though it does not ſeem to be well underſtood in either; the Fact moſt certainly was barbarous and bloody enough; but, at the ſame Time, it is as certain the Provocations the People had received were great, which was the Reaſon that moſt of thoſe concerned in this Murder eſcaped with Impunity.

But our Buſineſs lies not ſo much with Men as with Things, and therefore we ſhall proceed to the Deſcription of the Iſland *Antego*, or as it is ſometimes written *Antigua*, wich lies in 16 Degrees 11 Minutes North Latitude, and in 63 Degrees of Longitude Weſt from *London*. It is of a circular Form, about twenty Miles in Diameter, and near ſixty in Circumference. The Climate is not to be boaſted of, ſince it is allowed to be hotter than *Barbadoes*, and very ſubject to Hurricanes. The Soil too is ſandy, and a great Part of the Iſland is overgrown with Wood; but the worſt of it is, that there are but few Springs, and not ſo much as a ſingle Brook in the whole Iſland, ſo that the People depend chiefly upon Rain-water, for which they are ſometimes diſtreſſed: Yet, notwithſtanding theſe Inconveniencies, it is a very conſiderable and a very thriving Plantation.

This Iſland is divided into five Pariſhes, four of which are Towns; as *St. John's Town* to the Northward, and *Falmouth*, *Parham*, and *Bridge-Town* to the Southward; the other Pariſh is *St. Peter's*. *St. John's Harbour* is the moſt commodious, beſides which there are ſeveral other good Harbours, as *Five Iſland Harbour*, ſo called from five little Iſlands to the Weſtward of the Iſle of *Carliſle Bay*; *Engliſh Harbour*, at the Bottom of which is *Falmouth Town*, defended by *Charles Fort*; next to it is *Willoughby Bay*; on the Eaſt Shore is *Bridge Town*, the *Green Bay*, off which is *Green Iſland*; then *Nonſuch Harbour*, a ſpacious Bay. On this Coaſt, on the North-eaſt Shore, are ſeveral little Iſlands called *Polecat Iſlands* and *Goat Iſland*, and more to the Northward *Goana Iſland*, *Bird Iſland*, *Long Iſland*, *Maiden Iſland*, and *Prickle-Pear Iſland*. The Forts are now in pretty good Repair; *Monkſhill Fort* is mounted with thirty Pieces of Ordnance, it has a Magazine with about four hundred and ten Muſkets and eight hundred Bayonets, in good order; the other Fort erected at *St. John's Harbour*, is mounted with fourteen Pieces of Cannon; there are ſeven other Batteries raiſed for Defence of ſo many landing Places, in all mounted with twenty-ſix Guns.

The Capital of the Iſland is *St. John's Town*, which conſiſts of about two hundred Houſes; and the Number of Souls in all this Colony are one thouſand five hundred at preſent. It has greater plenty of Cattle and other Beaſts, eſpecially Veniſon, than any other of our *Caribbee Iſlands*; the Animals of which are much the ſame, as alſo their Productions. Sugar, Indico, Ginger, and Tobacco, were the chief Growths and Commodities of *Antego*, when it was firſt planted, but now Indico and Ginger are very rarely cultivated there. The Sugar and Tobacco were both bad of the Sort; the former ſo black and coarſe, that one would ſcarce have thought any Art could have refined it; and, as if our Sugar Bakers ſcorned to put ſuch Dirt into their Coppers, it was generally ſhipped off for *Holland* and *Hamburgh*, being ſold for ſixteen Shillings a hundred Weight, when other *Muſ-*

covado Sugars fetched eighteen or nineteen Shillings a hundred. The Planters of *Antego* have ſince improved their Art, and as good *Muſcovado* Sugar is now made there, as in any of our Sugar Iſlands. They have alſo clayed ſome Sugar, which was not known to have been done in *Antego* forty Years ago.

Though there is not much Tobacco planted in this Iſland, what there is now is not ſo bad as was formerly, when it was ſold for no other Uſe but to make Snuff. The wild Cinnamon Tree is ſaid to grow in the *Lowlands*, or Savanah Woods in *Antego*. After *Jamaica* and *Barbadoes*, this has been conſidered by ſome as the moſt conſiderable of our Iſlands in *America*; and as there is ſtill a great Quantity of Land capable of Improvement, and it is allowed the People there might make a third more Sugar than they do, we may venture to allow, that it either is, or may be ſo; and if we conſider what muſt have been gained by our Commerce with this Iſland for upwards of fourſcore Years, we cannot but judge that it has been highly advantageous to this Nation, and very well deſerves all the Care and Concern that can poſſibly be expreſſed for its Protection and Preſervation.

6. The next Colony in *America*, which our Method leads us to conſider, is that of *New York*, which is ours by a double Right, *viz.* of Diſcovery and Conqueſt. It was undoubtedly Part of the Country, the Coaſts of which were firſt viewed by *Sebaſtian Cabot*, and as ſuch made a Part of the original Province of *Virginia*, I mean the Country known under that Name in the Reign of Queen *Elizabeth*, and was afterwards within the Limits of the Country, granted by King *James* to the Weſtern Company. But before it could be ſettled, that is about the Year 1608, the famous Navigator *Hudſon* diſcovered that River, which has ſince borne his Name, and the Country adjacent, which he afterwards ſold to the *Dutch* who planted there; but this was looked upon as illegal, becauſe they had not King *James*'s Licence, which it ſeems they afterwards obtained. There are ſome *Engliſh* Writers ſo very partial in favour of this Republic, as to be angry that this Settlement ſhould be looked upon by us as a kind of Invaſion, but ſurely this is without Reaſon; for if the Subjects of any Country were at Liberty to ſell and diſpoſe of Places they had but juſt ſeen, which was the Caſe of Captain *Hudſon*, the Inconveniencies would be ſo great as to produce endleſs Wars, and therefore this Practice muſt be underſtood to be contrary to the Law of Nations.

But however that Matter might be, King *James* was ſo great a Lover of Peace, that very probably he was glad to rid himſelf of the preſent Difficulty, by granting them a Licence: Yet if we duly conſider this, the granting ſuch a Licence was a thing very deſtructive to the Intereſt of *Great-Britain*, and might have proved extreamly prejudicial to our Northern Colonies, and have been ſuch a Bone of Contention, as muſt have for ever prevented any Harmony between the maritime Powers. Theſe Reflections which roſe naturally out of the Subject, have led me a little from my Purpoſe, which was to explain the firſt ſettling here, which the *Dutch* made a little before we planted *New England*; and from their firſt coming, being ſeated in Iſlands and at the Mouth of a good River, their Plantations were in a thriving Condition, and they begun, in *Holland*, to promiſe themſelves vaſt things from their new Colony. The *Engliſh* Puritans in *Holland*, who firſt removed to *America*, intended to ſettle here, having had an inviting Deſcription of the River, Climate, and Soil, from the *Hollanders*, who did not care, however, that the *Engliſh* ſhould be ſo near their Plantations, as to be tempted to encroach on them, conſidering the Flaw that was in their Title. The *Engliſh* that went from *Holland*, intended to ſettle on the Coaſt near *Fair Field County* in *New England*, lying between *Connecticut* and *Hudſon's River*, but the *Dutch* apprehended they would there be too near Neighbours. Theſe *Engliſh*, as has been already related, falling in with *Cape Cod*, after having refreſhed a little, tacked about to the Southward for *Hudſon's River*: But *Jones*, who was the Maſter of the Ship they came in, having been bribed by the *Hollanders* to carry them and land farther to the Northward, inſtead of putting to Sea, entangled them among dangerous Sholes, which made them willing to get aſhore where they were, and give over the Deſign upon *Hudſon's River*. The *Dutch* had, two or three Years before, been inſulted here by Sir *Samuel Argall*, in his Way from *Virginia* to *New Scotland*.

He deſtroyed their Plantations, and it was to prevent the like for the future, they applied to King *James* for his Licence to ſtay there, to build Cottages, and to plant for Traffic as well as Subſiſtence, pretending it was only for the Conveniency of their Ships touching there for freſh Water and freſh Proviſions, in their Voyage to *Brazil*; but they, by little and little, extended their Limits every Way, built Towns, fortified them, and became a flouriſhing Colony. In an Iſland, called *Manahattan*, at the Mouth of *Hudſon's River*, they built a City which they named *New Amſterdam*, and the River was called by them the *Great River*. The Bay to the Eaſt of it had the Name of *Naſſau* given it; about one hundred and fifty Miles up the River they built a Fort, which they called *Orange Fort*, and from thence drove a profitable Trade with the *Indians*, who came over land, as far as from *Quebec*, to deal with them. *Henry Chriſtian*, the Maſter of a Ship, the ſame who gave the Name to *Martha's Vineyard*, which he diſcovered, as the *Dutch* ſay, was the firſt Governor there, and his Succeſſor was *Jacob Elkin*, put in by the *Weſt India* Company in *Holland*, to whom the States General granted this Country. The firſt Bounds of *Nova Belgia* were *Maryland* on the South, the main Land, as far as could be diſcovered Weſtward, which would ſtretch to the Nations bordering on the *Miſſiſſippi*, the great River of *Canada* Northward, and *New England* Eaſtward; but, as will appear hereafter, the Limits of *New York* are not ſo large at preſent.

The *Dutch* Colonies were in a very thriving Condition when they were attacked by the *Engliſh*, which was at the Opening the firſt *Dutch* War in King *Charles*'s Reign. We find ſome Writers very willing to repreſent this as a very unjuſt War, becauſe Sir *Robert Carr* was ſent to attack this Plantation before they, in that Part of the World, could have any Notice of the War; but then it ought to be remembered, that it was after the *Dutch* Admiral, *de Ruyter*, attacked our Settlements in *Africa*, and therefore I cannot think that this is ſo very bad as it has been repreſented, or that it can at all prejudice our Title to this Country. The Commiſſion of Sir *Robert Carr*, impowering him to act againſt the *Dutch*, was dated on *St. George*'s Day 1664, but he did not arrive till the latter End of the Year. He brought with him between two and three thouſand Men, and offering Protection to ſuch of the Inhabitants as ſubmitted, he became Maſter of the whole Country without a Blow; and it does not appear that the People were at all diſpleaſed at changing their Maſters. His Majeſty, after it was reduced, gave leave to ſuch of the Inhabitants to ſtay as were inclined thereto, and ſuffered the reſt to depart freely with their Effects. The Number of the latter was but very inconſiderable in Compariſon of the former; and Colonel *Richard Nichols*, who was left Governor of the Province, and continued ſo twenty Years, brought the People not only to reliſh, but to be in love with the *Engliſh* Government; ſo that there never was the leaſt Diſturbance among the Inhabitants on the ſcore of their being Subjects to *England*.

The Duke of *York* granted away a Part of this Province, as will be ſhewn hereafter; but the Remainder, which is what we now ſtile *New York*, continued a Royal Government, as it ſtill is, but very much changed for the better; ſince from being one of the pooreſt, it is become one of the moſt conſiderable that we have in *America*, in Conſequence of the Colony's becoming one of the moſt flouriſhing, and this, though it has had the Misfortune of being ſometimes governed by Men of moſt arbitrary Principles, and capable of doing ſuch violent things, as nothing but their Diſtance from *Great-Britain* could, I think, induce them to venture upon. The laſt Governor of the *Jerſeys*, who is lately dead, felt the Effects of ſuch a Spirit, when in another Station, and roſe to that Government by ſuffering with Decency and Dignity the

Outrages of one cloathed with that Authority; but when he came himſelf to execute that Office, he ſhewed, what we very ſeldom ſee, that there are ſome Natures which even Power cannot corrupt; for he behaved ſo well as to aboliſh the Memory of paſt Grievances, and to leave a perfect Model for his Succeſſors in that Government.

7. The Country of *New York*, properly ſo called ſince it became *Engliſh*, is thus bounded, *viz.* by *Canada* on the North, *New England* on the Eaſt, the Ocean on the South, and the five Nations and *New Jerſey* on the Weſt, and is about two hundred Miles in Length from North to South, that is, from the Mouth of *Hudſon's River* to the Lake of *Champlain* or *Corlaer*, and it might be extended two hundred Miles farther North if we poſſeſſed all the Country we claim, as far as the River *St. Laurence*: But the *French* having built Forts on the Lake *Champlain*, have, in a Manner, expelled us from the North Part of this Country; the *Engliſh* only poſſeſs the Country South of that Lake at preſent, and this is exceeding narrow in moſt Places; particularly between *Connecticut* Colony on the Eaſt, and *New Jerſey* on the Weſt, it is ſcarce twenty Miles broad. But to this we muſt add the Iſland *Manhattan*, which the City of *New York* ſtands upon, *Staten Iſland* and *Long Iſland*, all which lie before the Mouth of *Hudſon's River*, and are comprehended in *New York Proper*.

This Province is divided into ten Counties, which going from North to South down *Hudſon's River*, are *Albany*, *Ulſter*, *Ducheſs*, *Orange*, *King's County*, *Cheſter*, *New York County*, *Queen's County*, *Suffolk County*, and *Richmond County*, which are pretty well repleniſhed with Proviſions and Farms, but have not many great Towns in them. The chief Towns are *New York* City, *Schenectida*, *Albany*, *Weſtcheſter*, *&c.* in all, or moſt of which Towns, are Miſſionaries, either Miniſters, School-maſters, or Catechiſts, ſent over and maintained chiefly by the Society for the Propagation of the Goſpel, who have taken moſt laudable Care in this reſpect. *New York* City is ſituated in 40 Degrees 40 Minutes North Latitude, and 47 Degrees 4 Minues Weſtern Longitude, at the South End of *York County*, being an Iſland at the Mouth of *Hudſon's River*, about fourteen Miles long and two or three broad. As this Town ſtands upon an Eminence, and contains upwards of a thouſand Houſes well built with Brick and Stone, with a Wall and Forts, which ſerve as well for Ornament as Defence, there is ſcarce any Town in *North America* that makes a better, and but a very few ſo good an Appearance. It has alſo an excellent Harbour, furniſhed with commodious Quays and Warehouſes, and employs ſome hundreds of Ships and Veſſels in its foreign Trade and Fiſheries. The public Buildings are the ſeveral Churches belonging to thoſe of the Church of *England*, to the *Swedes* of the *Lutheran* Perſuaſion, to the *Dutch Calviniſts*, the *French* Refugees, and the *Engliſh* Sectaries; but the Church of *England* may well be looked upon as the eſtabliſhed Religion, becauſe the Conſtitution of the Government is the ſame as in *England*; the reſt, however, are tolerated, and capable of Poſts in the Government, and of ſitting in the Houſe of Repreſentatives, as I apprehend. The other public Buildings are the Town Houſe, and that where their general Aſſemblies and Courts of Juſtice are held. As to their Fortifications, they are not, I doubt, capable of defending them againſt an *Europen* Enemy, any more than thoſe in the reſt of the Plantations, for this unanſwerable Reaſon; becauſe they were ſome Years ago confeſſed to be ſo bad, that it was not fit to enquire into the State of them, leſt Foreigners ſhould be acquainted with our Weakneſs on that Side. There are, indeed, four hundred regular Troops ſent from *England* to garriſon this, and ſome other Towns of this Province; of which two Companies always are, or ought to be, upon Duty in this City; but admitting they were always compleat, and ever ſo well diſciplined, this ſeems to be but a very inconſiderable Force to defend a Province of this Importance againſt an Invaſion, unleſs their Country Militia be more to be depended upon than that of other Places.

As *New York* may be looked upon to be the frontier Garriſon in the South againſt an Invaſion from any maritime Power; ſo *Schenectida* Town and Fort, in the County of *Albany*, twenty Miles North of the Town of *Albany*, may well be deemed their Frontier on the North againſt the *French* of *Canada*, and the *Indian* Allies, who, in the Year 1688, ſurprized and almoſt demoliſhed the Town with the Works about it; but they have ſince been repaired and enlarged, and Fort *Nicholſon* and ſome other Forts erected; in which, and in *Albany*, the reſt of the regular Troops are quartered, for the Defence of that Frontier. *Albany* is a conſiderable Town, ſituated on *Hudſon's River*, an hundred and fifty Miles North of *New York*, having a Fort erected for its Defence; and here it is that the Sachems, or Kings of the five Nations, meet the Governors of our Northern Colonies, to renew their Alliances, and concert Meaſures for their Defence againſt their common Enemy, as has been intimated already. South-weſt of the Iſland and County of *New York*, lies *Staten Iſland*, being about ten Miles in Length and ſix in Breadth, and in it are a great many good Farms and Plantations, but not one Town that I can meet with in the Accounts of this Province.

Long Iſland lies Eaſt of *Staten Iſland*, and South-eaſt of that of *New York*, oppoſite to the Colony of *Connecticut*, being an hundred and fifty Miles in Length, and generally about twelve in Breadth, and contains three of the Counties above-mentioned, *viz.* *Queen's County*, *Suffolk County*, and *Richmond County*; the chief Towns in *Queen's County*, are *Jamaica* and *Hempſtead*; in *Suffolk County*, the chief Town is *Oyſter Bay*. The Town of *Richmond* gives Name to *Richmond County*, in which alſo is the Town of *Southampton*, in the South-eaſt Part of the Iſland; and there alſo are ſituatud the Towns of *North Caſtle* and *New Windſor*. There is a celebrated Plain in the Midſt of *Long Iſland*, ſixteen Miles long, and four broad, to which they have given the Name of *Saliſbury Plain*; having, as it is ſaid, as fine a Turf as that on *Saliſbury Plain* in *Old England*; and there being an excellent Breed of Horſes in the Iſland, they have Races here every Seaſon, to which the Gentlemen of *New England* and *New York* reſort, as they do to *Newmarket* with us. There are other good Towns which lie in the County of *Weſtcheſter*, on the Continent, Eaſt of the Mouth of *Hudſon's River*, the chief whereof are *Weſtcheſter* and *Rye*.

8. At the Time we became Maſters of this Country, it was very thinly peopled, in compariſon to what it is at preſent, and in no ſmall Danger from the *French*, who ſettled at the back of it, and the *Indians* who were ſettled on its Frontiers, but, at preſent, it is ſafe enough from both; the Number of People being vaſtly increaſed, ſome ſay to fifty thouſand, taking in all Sorts, ſo that the *French* apprehend Danger from us in their turn; and the *Indians* think themſelves very happy under our Protection; and ſuch Care has been taken to treat them with proper Kindneſs, as to preſerve them in our Intereſt, as effectually as if by Force they had been reduced to be our Subjects. They ſupply the *Engliſh*, in the Summer, with Veniſon, Fiſh, and Fowl, very cheap. The Trade from *New York* to the Sugar Iſlands, particularly *Barbadoes*, which is very conſiderable, is in Corn, Flour, Bread, Beef, Pork, Peaſe, Bacon Gamons, Smoaked Beef, Apples, Onions, Board and Pipe-ſtaves, for which they receive, in return, Sugar, Moloſſes, Rum, Ginger, *&c.*

The *New York* Merchants drive alſo a very advantageous Trade with *Madeira* and the *Azores*, in Pipe-ſtaves and Fiſh, for which they load their Ships back with Wine and Brandy; and, generally ſpeaking, there is ſcarce a more profitable Trade in the *Britiſh* Commerce. I am very well warranted in ſaying this, by what the Agents for the Colony alledged upon the Diſpute with the Sugar Plantations, of which we have given ſo large an Account. They affirm that their Winters being ſevere they take off more of the Woollen Manufactures of this Kingdom, than all the Iſlands put together, *Jamaica* excepted; and return more Gold and Silver to pay for them, which I never heard was denied. What they alledge in Juſtification of their Dealing with the *French* Settlements is ſingular enough, and deſerves particular Notice. They ſay that they trade with what they have with thoſe who will purchaſe it, and that while they do this they ſhall live well, clothe themſelves in *Engliſh* Stuffs, and pay for them honeſtly; but if they are deprived of this Trade, the Profits of which enable them to pay for *Engliſh* Cloathing, they muſt endeavour to make uſe of their own Wool, and ſupply themſelves as well as they can. If this ſhould be prohibited, they affirm, they muſt abſolutely go naked.

This perhaps is ſtraining the Matter a little beyond the Truth; but beyond all Doubt this Colony is very uſeful to *Great-Britain*, and in Conjunction with the other *Bread Colonies*, as they are called, the ſole Source of our foreign Sugar Trade, as in a few Words may be ſhewn. The Sugar Iſlands muſt depend for their Subſiſtence, either upon the *Britiſh* Iſlands or upon theſe Colonies; ſince it is very certain, that if they were to draw all their Maintenance from hence, granting that to be poſſible, it would make Labour in thoſe Iſlands ſo dear that no Sugar at all could be exported. On the other hand, if the People of *New York* ſhould be forced to ſet up Manufactures of their own, this would employ ſo many Hands as muſt neceſſarily raiſe the Price of Proviſions, and this conſequently would have, in a great meaſure, the ſame bad Effect in making Labour dear in the Iſlands. It is therefore the Buſineſs of *Great-Britain* to take care of both, and not to ſide haſtily with either.

But it is more eſpecially our Buſineſs to prevent ſetting up Manufactures in the Plantations on the Continent; becauſe this would injure the Trade between us and them, leſſen the Shipping employed therein, decreaſe the Number of our Seamen, and detach thoſe Colonies, in a great meaſure, from their Mother Country; which, as they are Evils not to be borne, ſo too much Diligence cannot be uſed to avoid them. As things ſtand at preſent, there is not a Colony in *America* which makes a better Figure than *New York*, or where the People ſeem to have a greater Spirit of Induſtry, or more hearty Affection to the *Britiſh* Nation; and it is univerſally agreed, that the City of *New York* is, in point of good Government and Politeneſs, at leaſt equal, if not ſuperior, to any thing we poſſeſs in that Part of the World: And as for the Inhabitants of the Inland Part of the Colony, they are our beſt Defence againſt the *French*, and are every Day gaining upon them in point of Trade with the *Indians*; which are certainly Circumſtances that deſerve the utmoſt Conſideration, and ought above all others, to recommend this Plantation to the Protection and Favour of the *Britiſh* Government; which no doubt they will always meet with while they continue, as they have hitherto done, to ſtudy by every Method to deſerve it.

9. The Countries now called the *Jerſeys*, or, with greater Propriety, the *Eaſt* and *Weſt Jerſeys*, come next in our Way. Theſe fell under the Dominion of the Crown of *Great-Britain* by Conqueſt, at the ſame time with, and as making a Part of, *Nova Belgia*; and if to this Right acquired by War, or rather vindicated by it, for I conceive that the Dominion of this Country, which was all that we gained by the War, we had a very juſt Title to before; if, I ſay, there was any thing wanting to fill up the Meaſure of our Claim, it was certainly made up by the Peace, ſince an Equivalent was then given to the *Dutch*; ſo that both Nations had very good Reaſon to be content. In order, however, to obtain a juſt and clear Notion of the Hiſtory and Condition of this Tract of Country, it is neceſſary to obſerve, that even the *Dutch* were not the original Inhabitants of it: The ſeveral Voyages that had been made for the planting of *Virginia*, made theſe Coaſts very well known to Multitudes of *Engliſh* Seamen, and theſe being diſperſed into different Parts of the World, carried the News of theſe rich and pleaſant Lands in *America* along with them whereſoever they went, which inſpired Strangers with ſtrong Deſires of occupying what we ſeemed to have abandoned, or the ſettling of which was beyond our Strength, at leaſt at that Time.

The firſt *Europeans* that ſettled here were the *Swedes*, who had three Towns in this Province, *Chriſtina*, called by the *Indians*, *Andaſtaka*, *Elſinbourg*, and *Gottembourg*. Their Settlements were chiefly on the Southſide of the River towards *Penſylvania*; oppoſite to which there is a Place, to this Day called *Fort Elſinbourg*; but the *Swedes* made very little of their Plantation, and the *Dutch*, always induſtrious for their own Advantage, worked them ſo far out of it, that *Bergen*, the Northen Part of the *New Jerſey*, was almoſt entirely new planted by *Hollanders*. King *Charles* II, gave this Tract, in his Grant of *Nova Belgia*, to the Duke of *York*; but the *Engliſh* never made any Settlement in it till ſeveral Years after they were in the Poſſeſſion of that Province, and had mightily extended their Plantations.

The Duke of *York* having inveſted this Province, by the Name of *Nova Caneria*, *John* Lord *Berkeley* and Sir *George Carteret*, they, or their Aſſignees, agreed to divide it into two Parts, denominated *Eaſt* and *Weſt New Jerſeys*, which remained two diſtinct Proprieties and Governments for many Years afterwards, as will be ſhewn: *Eaſt New Jerſey*, or that Part of it which borders on *New York*, fell to Sir *George Carteret*; whoſe Family being of the Iſle of *Jerſey*, this Province on that Account took its Name from thence. *Weſt New Jerſey*, that Part of it which borders on *Penſylvania*, fell to the Lord *Berkeley*. This whole Province, containing the two *Jerſeys* is thus bounded; it has the main Ocean on the South-eaſt, the River *de la War* on the Weſt, *Hudſon's* River on the Eaſt, and the main Land on the North; it lies beeween 39 and 40 Degrees North Latitude; extends itſelf in Length on the Sea Coaſts, and along *Hudſon's* River one hundred and twenty Miles, and is almoſt as broad as long where it is broadeſt. We muſt now take ſome Notice of the Province as it was under the Diviſion of *Eaſt* and *Weſt*, and was divided into two Proprieties; of theſe, the largeſt and moſt inhabited, was *Eaſt Jerſey*, which extended Eaſtward and Northward all along the Sea Coaſt and *Hudſon's* River, from *Little Egg* Harbour to that Part of *Hudſon's* River which is 41 Degrees North Latitude; and Southward and Weſtward was divided from *Weſt Jerſey* by a Line of Partition from *Egg* Harbour, or *Creſwick* River, *Stony* River, and the South Branch of *Raritan* River: It extends in Length along *Hudſon's* River, and on the Coaſts, 100 Miles: In Breadth it is very unequal. It is divided into Counties, for which there was little Occaſion, as *Bergen County*, *Eſſex County*, *Middleſex* on the Northſide of *Raritan* River, and *Monmouth County* on the South. According to ſome Writers, *Weſt Jerſey* is divided from the other by a Line from North to South; contains the like Number of Counties, *viz. Burlington*, *Glouceſter*, *Salem*, and *Cape May*.

Theſe two Provinces are in the Hands of different Proprietors, who made many Aſſignments of their Rights, which would take up too much Room to enter into the Detail of here, and therefore we ſhall content ourſelves with obſerving, that the Proprietors both of the *Eaſt* and *Weſt Jerſeys*, on the 22d of *April* 1702, put them into the Hands of Queen *Anne*, and they have been ever ſince governed by the royal Authority, having a Governor, Council, and Aſſembly; which Governor has Power of appointing a Deputy. We muſt alſo remark, that ſometimes this Government has been granted by a ſeparate Commiſſion to the ſame Perſon intruſted with that of *New York*; but at preſent they are in different Hands. The chief Towns in the *Jerſeys* are *Perth Amboy*, the Capital of the County of *Middleſex*, and of all *Eaſt Jerſey*, pleaſantly ſituated at the Mouth of *Raritan* River, and, had it been built according to the intended Model, would have been one of the fineſt Towns in *North America*; but Planters have not reſorted to it, as was expected; notwithſtanding it is ſo commodiouſly ſituated for Trade, that Ships of three hundred Tons may come up in one Tide, and lie before the Merchants Doors: But the Town of *Elizabeth*, ſituate to the North of it, flouriſhes much more, and may ſtill be deemed the moſt conſiderable Town; in the County of *Bergen*, the Capital of the County of the ſame Name; *Elizabeth* Town, Capital of the County of *Eſſex*, and formerly of *Middleſex*; *Middleton*, *Shrewſbury*, and *Freehold*, in the County of *Monmouth*; *Burlington* or *Bridlington*, the Capital of the Country of *Burlington*, and of all *Weſt Jerſey*: This Town is ſituate 40 Degrees 40 Minutes of North Latitude, on an Iſland in the Middle of the River *de la War*, to the Norward of *Philadelphia* in *Penſylvania*,

nia, and on the oppoſite Side of the River: The Houſes are handſomly built of Brick, and laid out into ſpacious Streets, with commodious Quays and Wharfs, to which Ships of two or three hundred Tons may come up: It has alſo a handſome Market-place, a Town-houſe or Guild-hall, where the Courts of Juſtice were heretofore held, and two good Bridges over the River; the one called *London-Bridge*, and the other *York-Bridge*, and having an eaſy Communication with *Philadelphia*, and the Ocean by the River *Salem*, which falls into *de la War* Bay, it is ſaid to be one of the beſt Towns in *Weſt Jerſey*, whether we conſider its Situation, Building, or Trade.

The Trade of the two *Jerſeys*, as alſo the Soil and Conveniencies of Rivers and Creeks, are much the ſame, except that *Weſt Jerſey*, by its Situation on *de la War* River, abounds more in the latter. The Country yields Plenty of all Sorts of Grain, and the Inhabitants are ſaid to have been ſo ſcrupulous, that they would not enter upon a new Plantation before they had purchaſed it of the *Indians*, which they did at no very dear Rate. It is computed that they are about ſixteen thouſand Souls, and about three thouſand Men fit to bear Arms: There are not two hundred *Indians* in this Province, indeed neither here or elſewhere in the *Britiſh* Empire are the *Indians* of any Force unleſs in Conjunction with the *French* at *Canada*, or the *Spaniards* in *Florida*. The *Indians* are now rather an Help than an Hurt to the *Engliſh*, and here eſpecially they wiſh there were more of them than there are, ſo uſeful have they found them. Beſides Proviſions for the Sugar Iſlands, the Inhabitants drive a Trade in Furs and Skins, and a little in Tobacco; but it would be well if the Colonies cultivated that leſs, and Proviſion more, or any other Commodities that are fit for foreign Markets, which are much clogged by the Product of our Tobacco Plantations: They ſhip off Train-Oil, Fiſh, Corn, and ſome other Proviſions for *Portugal*, *Spain*, and the *Canaries*: Ships may be built at *Perth*, but *New England* engroſſes that Trade, and has the beſt and the moſt Materials for it; and it muſt be owned that *New York* is the beſt Market *New Jerſey* has, for the buying and ſelling any conſiderable Quantity of Goods of any Kind.

This may poſſibly keep the *Jerſeys* a little under, but notwithſtanding the Difficulties they have had to ſtruggle with, it is very certain, that within theſe twenty or thirty Years paſt they have increaſed prodigiouſly, and nothing can give a Check to it, except ſome ſudden Suſpicion of their dealing in Commodities and ſetting up Manufactures which may interfere with thoſe of their Mother-Country. I do not deny that if there were any juſt Grounds for ſuch a Suſpicion, Care ought to be taken and ſome Remedy applied, but then this requires great Caution. In former Times, when we were leſs uſed to Trade, we encouraged all; and provided our People were but employed, and Traders buſy, we took it for granted that Profit muſt enſue, and ſo very probably it did. But the preſent Age is ſo unacquainted with the Cauſe of the Increaſe of our Riches, that they rather interrupt than encourage it, and inſtead of inlarging lay hold of ſome ſmall trifling Things, which they think may touch their private Intereſt rather than promote the general Good; and if they think any Commodity from the Plantations interferes with ſomething we have at home, ſome haſty Step is taken to prevent it; ſo that for the Sake of ſaving one Penny, we often debar ourſelves of Things of a thouſand Times the Value. This Misfortune will happen to any trading Nation, if the Perſons who have the Regulation of the Commerce do not underſtand it well enough to diſtinguiſh nicely between thoſe Channels by which the Riches flow in upon them and thoſe that carry them away; and therefore, when Things are carried into a wrong Channel by ſome of the Planters, Merchants are afraid to mention thoſe Diſorders for fear the Remedy ſhould prove worſe than the Diſeaſe. The Gentlemen that would judge of theſe Things ought to inform themſelves what this Nation was one hundred and fifty Years ago, how we have increaſed in Riches ſince that Time, what Price Corn, Cattle, and Land bore then, and what now; and what concurring Circumſtances have put us in ſo flouriſhing a Condition, who were then ſo inconſiderable in Trade, that even *London*, the Metropolis of this Kingdom, made but a ſmall Figure, to what *Bruges*, *Antwerp*, and other Hanſe Towns did, as well as the great Cities in the *Mediterranean*.

If we examine into the Circumſtances of the Inhabitants of our Plantations, and our own, it will appear that not one fourth Part of their Product redounds to their own Profit; for, out of all that comes here, they only carry back Cloathing and other Accommodations for their Families, all which is of the Manufacture and Merchandize of this Kingdom. If there is any Thing to ſpare it is laid up here, and their Children are ſent home to be educated; if there is enough to ſupport the Family, they come here, and only an Overſeer is left upon the Plantation to direct, and the whole Produce is remitted home, and if enough to purchaſe an Eſtate, then it is laid out in *Old England*. All theſe Advantagea we receive by the Plantations, beſides the Mortgages on the Planters Eſtates, and the high Intereſt they pay us, which is very conſiderable; and therefore very great Care ought to be taken in regulating all Affairs of the Colonies, that the Planters be not put under too many Difficulties, but encouraged to go on chearfully. They are born with us, or the Deſcendants of ſuch, and we know nothing but the Want of the Means to live at home keeps them abroad. There are very few trading or manufacturing Towns in the Kingdom, but have ſome Dependence on the Plantation Trade. It is true, theſe, and in general all the Northern Colonies, have not Commodities and Products enough to ſend us, in return for purchaſing their neceſſary Cloathings, *&c.* but are under very great Difficulties, and therefore any ordinary Sort ſells with them; and when they are grown out of Faſhion with us, they are new-faſhioned enough there; and beſides thoſe Places are the great Markets we have to diſpoſe of ſuch Goods, which are generally ſent at the Riſque of the Shop-keepers and Traders of *England*, who are the great Exporters, and not the Inhabitants of the Colonies, as ſome have imagined. As the Colonies are Markets for thoſe Sorts of Goods, ſo they are Receptacles for young Merchants who have not Stocks of their own, and therefore all our Plantations are filled with ſuch who receive the Conſignments of their Friends from hence; and when they have got a ſufficient Stock to trade with, they return home, and other young Men take their Places, ſo that the continual Motion and Intercourſe our People have into the Colonies, may be compared to Bees in a Hive, which go out empty, but come home loaded; by which Means the Foundations of many Families are laid. The Numbers of Sailors, and other Tradeſmen who have all their Dependence upon this Traffic, are prodigiouſly great.

Our Factors, who frequent the Northern Colonies, being under Difficulties to make Returns for ſuch Goods as they diſpoſe of, what Gold, Siver, Logwood, and other Commodities they trade for upon the *Spaniſh* Coaſt, is ſent home to *England*, as alſo Oil, Whale-Fins, and many other Goods; likewiſe another great Part of Returns is made by Ships built there, and diſpoſed of in the Streights, and other Parts of *Europe*, and the Money remitted to us. Now all thoſe Ships are called *New England* Ships, and our Factors, after they undertake any Buſineſs, are no longer called *Engliſhmen*, but *New Englanders*, and the Ships they build, we are informed, are regiſtered as *New England* Ships. I ſhall therefore humbly recommend it to ſuch Gentlemen as are Guardians of the Trade of the Nation, that our own Intereſt is not miſtaken for thoſe of the Planters; for every Reſtraint and Difficulty put upon our Trade with them, makes them have recourſe to their own Products, which they manufacture, a Thing of great Conſequence to us, and ought to be guarded againſt; for if they are ſupplied with their own Manufactures, a great Part of the Advantages we ſhould otherwiſe receive is cut off; and therefore, as it is elſewhere obſerved, if Care is taken to find them Employment, and turn their Induſtry another Way, now they are in their Infancy, this may with a very little Trouble be avoided.

There is another Advantage we receive by our Plantations, which is hardly ſo much as thought of, I mean the prodigious Increaſe of our Shipping by the Timber Trade, between *Portugal*, &c. and our Plantations, which ought to have all poſſible Encouragement, for by it we have crept into all the Corners in *Europe*, and become the common Carriers in the *Mediterranean*, as well as between the *Mediterranean*, *Holland*, *Hamburg*, and the *Baltic*, and this is the Cauſe of ſo great an Addition to our Shipping, and the Reaſon why the *Dutch*, &c. are ſo exceedingly ſunk. But if ever a Stop ſhould be put to the building of Ships in *New England*, &c. and carrying our Timber from thence, we ſhould ſoon ſink in our Navigation, and that of the *Dutch* flouriſh in its former Height and Grandeur. The Numbers of *Engliſh* Ships we ſo often read of, that are at *Liſbon*, or the *Streights*, is a ſufficient Demonſtration of the Truth of this; doubtleſs a great many of theſe Ships are laden upon Account of the *Dutch*, for nothing is more common than their hiring our Ships (which diſcharge their Loading in the *Streights*) to tranſport their Goods from *Spain*, &c. to *Amſterdam*, and other Places.

We have a great many young Men who are bred to the Sea, and have Friends to ſupport them; if they cannot get Employment at home they go to *New England*, and the Northern Colonies, with a Cargo of Goods, which they there ſell at a very great Profit, and with the Produce build a Ship, and purchaſe a Loading of Lumber, and ſail for *Portugal* or the *Streights*, &c. And after diſpoſing of their Cargoes, they frequently ply from Port to Port in the *Mediterranean*, till they have cleared ſo much Money, as will, in a good Part, pay for the firſt Coſt of the Cargo carried out by them; and then, perhaps, ſell their Ships; come home, take up another Cargo from their Employers, and ſo go back and build another Ship: By this Means Multitudes of Seamen are brought up, and upon a War the Nation is better provided with a great Number of Sailors, than hath been heretofore known. Here the Maſter becomes Merchant alſo, and many of them gain, by this Lumber Trade, great Eſtates; and a vaſt Treaſure is thereby yearly brought into the Kingdom, in a Way new and unknown to our Fore-fathers, and, indeed, it is gaining the Timber Trade (heretofore carried on by the *Danes* and *Swedes*) our Plantations being nearer the Markets of *Portugal* and *Spain* than they are. Thoſe Advantages have made ſome People think that though we eſteem *New England*, and the Northern Colonies, of ſmall Advantage to us, yet if Things were truly ſtated, they are as profitable as moſt other of our Plantations, or, which amounts to the ſame Thing, the Cauſe of the Profits we reap from thoſe other Colonies, which, however, coming to us immediately from thence, ſeem to enrich us more than they really do, at the ſame Time that they hide from us the true Sources of their own Wealth. But,

We will now quit this Subject, in order to follow the Thread of our Hiſtory, which leads us next to ſpeak of the ſettling the *Bahama Iſlands*, Places that have not hitherto anſwered in any Proportion to the great Expectations that were raiſed upon the firſt Grant of them; tho' this is certainly ſo little to be aſcribed to them, that about twenty-five Years ago there was a general Diſpoſition in the moſt knowing People of this Kingdom, to attempt a new Settlement there, which degenerating into a Bubble, all Hopes of that kind ſeem to be loſt. Our Buſineſs, however, is not with the modern, but with the antient, State of theſe Iſlands; of which, and of the Motives for ſettling them, we ſhall give the cleareſt Account we can.

10. The *Lucayos*, or *Bahama Iſlands*, are ſituated in the *Atlantic Ocean*, and to the North of the Iſland of *Cuba*, ſtretching from the North-eaſt to the South-weſt, between 21 and 27 Degrees of Northern Latitude, and between 73 and 81 Degrees of Weſtern Longitude. The Iſland of *Bahama*, which communicates its Name to the reſt, is ſeated in the Latitude of 26 Degrees 30 Minutes, at the Diſtance of about twenty and thirty Leagues from the Continent of *Florida*. It is about fifty Miles in Length, but very narrow, ſcarce any where ſixteen, and in many Places not half ſo broad, but very pleaſant and fruitful; the Air temperate and ſerene; the Soil remarkably rich, and the Country every where abounding with Brooks and Springs of freſh Water.

Though theſe Iſlands were the firſt Fruits of the new World, *Columbus* arriving firſt at *Guanahani*, which is one of them, and to which he gave the Name of *St. Salvador*, yet the *Spaniards* never thought of ſettling there, but contented themſelves with extirpating the native Inhabitants; a moſt barbarous Proceeding ſurely, ſince at this Time they were the beſt People of any Part of all *America*; ſo that they wantonly murdered many thouſands to no purpoſe in the World. As theſe Iſlands lie pretty much out of the Courſe of Ships bound to the Continent of *America*, it was long before we had any Notice of them; but in 1667 Captain *William Sayle*, being bound to *Carolina*, was forced by a Storm amongſt theſe Iſlands, which gave him an Opportunity of examining them carefully, particularly a large Iſland, to which at that Time he gave his own Name, and is that which has been ſince known by the Name of *New Providence*.

Upon his Return to *England*, he acquainted the Proprietors of *Carolina*, with the Situation and Circumſtances of theſe Iſlands; obſerving, that in Caſe they were ſettled, they might prove a great Benefit to this Nation, and at the ſame Time a conſtant Bar and Check to the *French* and *Spaniards*, in caſe of a Breach with either or both of thoſe Nations. Theſe Reaſons being ſuggeſted to King *Charles* the IId, his Majeſty was graciouſly pleaſed to make a Grant of the *Bahama Iſlands*, between the Latitudes of 22 and 27 Degrees, to the following Proprietors, *viz. George* Duke of *Albemarle*, *William* Lord *Craven*, Sir *George Carteret*, *John* Lord *Berkeley*, *Anthony* Lord *Aſhley*, and Sir *Peter Colliton*, whoſe Heirs or Aſſigns are, as I take it, poſſeſſed of theſe Iſlands at this Day; by which I mean the Soil and Property, for as to the Government, it has been for ſome Time in the Hands of the Crown; upon a Suppoſition that this Change would render theſe Iſlands more beneficial to the Nation, as in Proceſs of Time it very probably may; but hitherto they have not been of any great Service to the Proprietors, the Crown, or the Nation; as we ſhall ſhew, by entering a little into their Hiſtory, from their firſt Settlement to the preſent Times, for Reaſons that in this Hiſtory will appear.

Providence Iſland lies in the Center of ſome hundreds of Iſlands, ſome of them many Miles in Length, others no bigger than Knolls or little Rocks, riſing above Water; ſo that one may imagine it muſt be very dangerous for Ships to be forced amongſt them in Tempeſts. The moſt conſiderable Profit made by the Inhabitants of *Providence*, was by the Misfortune of ſuch as were ſhipwrecked, or ſuch as, in a Winter Voyage for the Continent of *America*, were driven to the *Bahama Iſlands*, and put into *Providence* for Proviſions; for want of which, after they had lain a long while beating off the Iſlands, they uſed to be in great Diſtreſs. 'Tis true, this Iſland had little or none but what came from *Carolina*; however, the Traders here kept Store-houſes to ſupply thoſe that wanted, and they were a great Relief to the unfortunate Mariners, of whom we are ſpeaking. The Iſle of *Providence* lies in 25 Degrees North Latitude, is twenty-eight Miles long, and eleven Miles broad, where it is broadeſt.

It had the Name of *Providence* given it by Captain *Sayle*, after he had a ſecond Time been driven upon it, when he was bound for the Continent. The firſt Governor that was ſent thither by the Proprietaries, was Mr. *Chillingworth*: The Time of his going there was about the Year 1672; ſeveral People went from *England*, and the other Colonies, to ſettle there, and living a licentious Life, they were impatient under Government; Mr. *Chillingworth* endeavouring to bring them to Reaſon, they aſſembled tumultuouſly, ſeized him, and ſhipped him off for *Jamaica*, and lived every Man as he thought beſt for his own Pleaſure and Intereſt. The Proprietaries found they had got an unruly Colony to deal with, and it was a very ſmall Encouragement for any Man to put himſelf into their Hands, after the Treatment Mr. *Chillingworth* met with from them.

However, ſix or ſeven Years after, the Lords Proprietaries made Mr. *Clark* Governor, whoſe Fate was worſe ſtill than his Predeceſſor's; for the *Spaniards*, at that Time, being jealous of every new Colony of the *Engliſh* towards the South, came upon them in *Providence*, deſtroyed all their Stock, which they could not, or would not, carry off; and burnt ſeveral Houſes that were upon the Place. The Inhabitants deſerted it after this, and removed to other Colonies. Mr. *Trott*, one of Governor *Clark*'s Succeſſors, always aſſerted, that the *Spaniards* roaſted Mr. *Clark* on a Spit, after they had killed him; but perhaps that is ſaid to increaſe the Terror of the Story; but it is certain they killed him, and that after this Invaſion the Iſland was uninhabited till about the Time of the Revolution, when ſeveral Perſons removed thither from *Europe* and the Continent; among whom was Mr. *Thomas Bulkley*, who has printed a large Account of his Sufferings there, during the arbitrary Government of one *Cadwallader Jones*, whom the Lords Proprietaries made Governor upon this ſecond Settlement of *Providence* in the Year 1690, where he arrived on the 19th of *June*; but his Adminiſtration proved very unfortunate both for himſelf and the Colony, in which there aroſe ſuch Troubles and Diſſenſions, that he was once depoſed and made Priſoner, and again reſtored.

Nicholas Trott, Eſq; ſucceeded Mr. *Jones* in his Government, and he built a Fort in the Town of *Naſſau*; notwithſtanding which, the famous Pirate *Avery*, forced the Inhabitants to let him have what Victuals he wanted; but ſome Time after Governor *Trott* put the Iſland of *Providence* into ſo good a Condition, that though the *French* made ſeveral Attempts, yet they were always obliged to retire with Loſs. In 1697 *Nicholas Webb*, Eſq; was ſent to ſucceed Mr. *Trott*, and he held the Government about three Years; in which Time theſe Iſlands were in a better Condition than they have ever been ſince; and there was, in his Time, in *Providence* and the adjacent Iſlands, near one thouſand Inhabitants: Some Tobacco was planted; a Sugar Mill ſet up, and other Improvements made: But, as we ſhall ſee hereafter, theſe were ſoon deſtroyed.

To Mr. *Webb* ſucceeded *Elias Haſcott*, Eſq; who was ſo little liked by the Inhabitants, that they took upon them to ſeize him, and put him in Irons; and having ſent him away, aſſumed the Liberty of chuſing a Governor for themſelves, one *Elias Lightgood*, Eſq; in whoſe Time the Settlements were deſtroyed; for, in *July* 1708, the *Spaniards* and *French*, from *Petit Guaves*, landed, ſurprized the Fort, took the Governor Priſoner, plundered and ſtripped the *Engliſh*, burnt the Town of *Naſſau*, all but Mr. *Lightgood*'s Houſe, together with the Church, ſpoiled the Fort, and nailed up the Guns; they carried off the Governor, and about half the Blacks, the reſt ſaved themſelves in the Woods; but in *October* they came again, and picked up moſt of the Negroes. Mr. *Lightgood* having procured his Liberty, by Exchange or Ranſom, came to *Carolina*, and going off thence in a Veſſel, on ſome Adventure, was never ſince heard of. The *Engliſh* Inhabitants of the *Bahamas*, after this ſecond Invaſion, thought it in vain to ſtay longer; ſo they removed, ſome to *Carolina*, ſome to *Virginia*, and ſome to *New England*, and other Places.

The Proprietors having appointed one Mr. *Birch* to go over Governor to *Providence*, who, not having heard of the Deſertion of the Inhabitants, went thither; but finding it a Deſart, he did not give himſelf the Trouble to open his Commiſſion: He remained there two or three Months, and was all that while forced to ſleep in the Woods; after which he returned back, and left the Place uninhabited. This and the other *Bahama* Iſlands, were looked upon to be ſo neceſſary for the Security of our Trade in the *Weſt Indies*, that the Parliament of *England* have not thought them unworthy of their Care, as well to have them cleared of Pirates, as to defend them againſt *Spaniards* and *French*, who find their Situation very convenient to annoy, or befriend their Commerce. In Queen *Anne*'s War both *Spaniards* and *French* over-ran and plundered the *Bahama Iſlands* twice. Upon which, in *March* 1714, The Houſe of Lords addreſſed her Majeſty, that the Iſland of *Providence* might be put in a Poſture of Defence. Their Lordſhips obſerving it would be of fatal Conſequence, if the *Bahama* Iſlands ſhould fall into the Hands of an Enemy, they therefore prayed her Majeſty to take the ſaid Iſlands into her Hands, and give ſuch Order for their Security, as in her royal Wiſdom ſhe ſhould think fit; but nothing was done. And for the future Guidance of ſuch as have it in their Power to do good Offices for our *American* Colonies, it is not improper to remember that their Lordſhips, four Years after, took notice of that Neglect in an Addreſs to his late Majeſty King *George*; in which they ſay there were not any the leaſt Means uſed in Compliance with that Advice, for ſecuring the *Bahama Iſlands*, and that then the Pirates had a Lodgment with a Battery on *Harbour Iſland*; and that the uſual Retreat, and general Receptacle for the Pirates, was at *Providence*. Hereupon his Majeſty was pleaſed to give Directions for diſlodging theſe Pirates, and making Settlements, and a Fortification for its Security and Defence.

Purſuant to this Addreſs, Captain *Woods Rogers* was appointed Governor, the ſame Perſon which went with the Duke and Ducheſs of *Briſtol* to the *South Sea*, and made a proſperous Voyage, eight Years before. He ſailed for *Providence* in *April* 1718, taking with him a naval Force for ſubduing the Pirates; in the mean Time Colonel *Bennet*, Governor of *Bermudas*, ſent a Sloop to that Iſland, requiring them to ſurrender themſelves, purſuant to the late Proclamation. The Pirates who were then on the Iſland, very gladly accepted of the Mercy offered them thereby, and promiſed to ſurrender themſelves as ſoon as they could get a Paſſage to the *Engliſh* Colonies; adding, that they did not doubt but their Fellows, who were at Sea, would gladly do the ſame after their Example. Accordingly Captain *Henry Jennings*, and fifteen others, immediately followed the Sloop to *Bermudas*, and ſurrendered themſelves; and Captain *Laſſie*, and Captain *Nichols*, with a good Number of their Pirates, ſent Word that they would alſo ſurrender. The abovementioned Proclamation was brought hither by Captain *Peers*, in the *Phœnix* Frigate, then lately ſtationed at *New York*: Beſides the above, Captain *Hernigold*, Captain *Burges* ſurrendered, and in the whole, as many of their Men as amounted to one hundred and fourteen, which were followed by many more: However, Piracy was not ſuppreſſed, nor did Capt. *Rogers* anſwer the Expectations of thoſe that employed him; though at his Arrival here he ſeemed very zealous in the Service he was ſent for.

He arrived at *Naſſau*, in *Providence*, in *July* 1718. *Vane*, one of the Captains of the Pirates, knowing what Errand he came upon, to reduce thoſe Robbers by the Proclamation, or by Force, cauſed a *French* Ship of twenty two Guns, which he had taken, to be ſet on fire, intending to make uſe of her as a Fire-ſhip, to burn the *Roſe* Frigate, which came with Governor *Woods Rogers*: And, indeed, the *Roſe* would have been in much Danger, had ſhe not got off in Time, by cutting her Cables. But *Vane*'s bold and raſh Attempt could not have ſecured him; for beſides the *Roſe*, there was at hand the *Milford* Man of War, and another, aboard which was the Governor. Theſe were ſoon after ſeen ſtanding in for the Harbour of *Naſſau*, upon which *Vane*, and about fifty of his Men, made off in a Sloop. The Governor ſent a Sloop of ſufficient Force after them, but the Pirates got off; and the *Milford*, and the other Man of War, run aground. The 27th of *July* Mr. *Woods Rogers* came on Shore, took Poſſeſſion of the Fort, and cauſed his Majeſty's Commiſſion to be read in the Preſence of the Officers, Soldiers, and about three hundred People, whom he found there at his Arrival; which had been almoſt daily exerciſed in Arms for their Defence, in Caſe of Attack by the *Spaniards* or *French*. As for the Pirates, they were not in ſo great Fear of them, moſt of them having been themſelves of the Fraternity, who had ſurrendered and made their Peace with the Government. *Woods Rogers* brought with him above one hundred Soldiers, and this joint Force which was, and might have been ſtill farther recruited, being ſufficient to ſecure the *Bahama Iſlands*, againſt any Enterprize of the *French* and *Spaniards*; Mr. *Rogers* ſet himſelf to regulate the Government, and reſtore Order in it, which had been neglected ſeveral Years paſt.

Of the Adventurers who came with him, ſix were nominated to be of the Council, as alſo ſix of the Inhabitants, who had never been Pirates themſelves; and thus the Appearance of Government was renewed. As ſoon as the Governor and Council had ſettled the Board, about two hundred of thoſe that had been Pirates ſurrendered themſelves to them, had Certificates of their Surrender, and took the Oaths of Allegiance, as did, voluntarily, the greateſt Part of the Inhabitants of *Providence*; wherein, a few Years after, were computed to be one thouſand five hundred Souls, out of theſe were formed three Companies of Militia, under Officers of their own Iſland; theſe Companies took their turn every Night in the Town Guard at *Naſſau*, and the independent Company was always upon Duty in the Fort here, and another of eight Guns erected at the eaſtermoſt Entrance into the Harbour.

It was by theſe Methods that the Face of Affairs, in this Part of the World, was entirely changed; the Town of *Naſſau* rebuilt; a regular Force eſtabliſhed in *Providence*, and Plantations ſo laid out, that the Country looked like an *Engliſh* Settlement. Within a ſhort Time after, the neighbouring Iſland of *Eluthera* was ſettled likewiſe, upon which about ſixty Families fixed themſelves, erected a ſmall Fort for their Defence, and raiſed a Company of Militia under the Deputy Governor, Mr. *Holmes*, by whoſe prudent Management Matters were chiefly brought to bear; the like was done in *Harbour Iſland*, where the Plantation ſoon grew more conſiderable, and a larger Fort was built for the Protection of the Inhabitants. Captain *Woods Rogers* returning to *England*, was ſucceeded in his Government by Captain *Fitz-williams*, in whoſe Time an independent Company, that had been ſent thither, mutinied, which had like to have produced ſome very fatal Conſequences, but was happily ſuppreſſed; and by the Moderation of the Governor, only a few of the moſt Guilty were made Examples.

This happened in the Year 1736, from which Time theſe Iſlands have been improving, though ſlowly. It may well be wondered at by conſiderate Perſons, that conſidering the Number of poor People and Men out of Employment, which before the War peſtered the Streets of this City, and of all the great Towns in the Kingdom; ſome Methods were not taken for ſending them over to theſe Iſlands, which would have been a Relief to the People here, afforded them a comfortable Subſiſtence, and have contributed to augment the Strength and increaſe the Riches of this Nation. I ſhall content myſelf with juſt hinting this as it falls in my Way, and proceed to the next Corporation formed for enlarging our Commerce within the Period of Time aſſigned to this Section.

11. This was the *Hudſon's Bay* Company, erected by King *Charles* the IId. upon the following Occaſion: Monſieur *Radiſon*, and Monſieur *Gooſelier*, two *Frenchmen*, meeting with ſome *Savages* in the Lake of *Aſſimponals* in *Canada*, they learnt of them that they might go by Land to the Bottom of the Bay, where the *Engliſh* had not yet been, upon which they deſired them to conduct them thither, and the *Savages* accordingly did it. The two *Frenchmen* returned to the upper Lake the ſame Way they came, and thence to *Quebec*, the Capital of *Canada*; where they offered the principal Merchants to carry Ships to *Hudſon's Bay*, but their Project was rejected; thence they went to *France*, in Hopes of a more favourable hearing at Court; but after preſenting ſeveral Memorials, and ſpending a great deal of Time and Money, they were anſwered as they had been at *Quebec*, and their Project looked upon as chimerical. The King of *England*'s Embaſſador at *Paris*, hearing what Propoſals they had made, imagined he ſhould do his Country good Service by engaging them to ſerve the *Engliſh*, who had already Pretences to the Bay, perſuaded them to go for *London*, where they met with a favourable Reception from ſome Men of Quality, Merchants, and others, who employed Mr. *Gillam*, a Perſon long uſed to the *New England* Trade, to perfect this Diſcovery.

He ſailed in the *Noneſuch* Catch, in the Year 1667, into *Baffins Bay*, to the Height of 75 Degrees, and from thence Southward to 51 Degrees, where he entered a River, to which he gave the Name of Prince *Rupert's River*; and, finding the *Savages* diſpoſed to a friendly Commerce, he erected a ſmall Fortreſs there, which he ſtiled *Charles Fort*. The Succeſs of this Expedition was ſo remarkable, that the Perſons concerned in fitting out this Veſſel, upon the Return of Mr. *Gillam*, applied themſelves to King *Charles* the IId. for a Patent, who accordingly granted them one, dated the 2d of *May*, in the 22d Year of his Reign, A. D. 1670. The firſt Directors of what was called the *Hudſon's Bay* Company, were Prince *Rupert*, Sir *James Hayes*, Mr. *William Young*, Mr. *Gerrard Weymans*, Mr. *Richard Cradock*, Mr. *John Letton*, *Chriſtopher Wren*, Eſq; and Mr. *Nicholas Haywood*.

The Bay lies from 64 Degrees North Latitude, to 51 Degrees, and is 10 Degrees or ſix hundred Miles in Length. The Mouth of the Streights lies in about 61 Degrees North Latitude, and is ſix Leagues over. At the Mouth is an Iſland called *Reſolution*; *Charles Iſland*, *Saliſbury Iſland*, and *Nottingham* are in the Streights, and *Mansfield Iſland* is in the Mouth of the Bay. *Hudſon's Streights*, which leads to the Bay, are about one hundred and twenty Leagues in Length; the Land on both Sides inhabited by *Savages*, of whom we have little or no Knowledge. The South Coaſt is known by the Name of the *Terra de Labrador*, the North by as many Names as Men of ſeveral Nations have been there, and pretend to the Diſcovery. On the Weſt Side of the Bay the *Engliſh* made a Settlement, built a Fort at *Port Nelſon*, and all that Country goes by the Name of *New South Wales*. The Bay here is called *Button's* and *Hudſon's Bay*, which is broadeſt in this Place, and may be near one hundred and thirty Leagues. On the other Shore, or the Coaſt of *Labrador*, lie ſeveral Iſlands, called the *Sleepers Iſles*, and the *Baker's Dozen*. The Bottom of the Bay, by which we underſtand all that Part of it from Cape *Henrietta Maria*, in *New South Wales*, to *Redonda*, below Prince *Rupert's River*, is about 80 Leagues long, and all the Way between 40 and 50 Leagues over. Here are ſeveral Iſlands to which the firſt Adventurers gave the Names of ſome great Men in *England*, or ſome that employed them; as Lord *Weſton's Iſland*, Sir *Thomas Roe's Iſland*, *Charleton Iſland*, and others.

The two oppoſite Shores are called the *Eaſt Main* and *Weſt Main*, the former is *Labrador*, and the latter *New South Wales*. The Continent at the bottom of the Bay is, by the *French*, pretended to be Part of *New France*; and, indeed, to croſs the Country from *St. Margaret's River*, which runs into the River of *Canada*, to *Rupert's River*, at the bottom of *Hudſon's Bay*, is not above one hundred and fifty Miles. At *Rupert's River* the *Engliſh* built their firſt Fort, which they called *Charles Fort*. They never had any Towns or Plantations here, but live within their Forts in little Houſes or Huts, wherein the Builders conſider nothing but how to defend them from the Cold and Rains, though they are not ſo much diſturbed by the latter as by the former. There's an Iſland about five or ſix Leagues from the *Weſt Main* called the little *Rocky Iſle*, it being a mere heap of Rocks and Stones, with ſome ſmall Bruſh-wood growing upon it; it is ſuppoſed to overflow with great North-weſt Winds, which make a high Tide all over the Bay; in this Iſle is plenty of Gulls and Sea Swallows; about three Miles from the South-ſouth-eaſt Part of the Iſland lies a dangerous Reef of Sand, which is dry at low Water. *Charleton Iſland* is a dry white Sand, covered over with a white Moſs, full of Trees, Juniper and Spruce, though not very large. This Iſle affords a beautiful Proſpect to ſuch as are near it in the Spring, after a long Voyage of three or four Months, in the moſt uncomfortable Seas in the World, occaſioned by the vaſt Mountains of Ice which drive in the Bay and Streights; againſt which, if Ships happen to ſtrike, they are daſhed in Pieces, as certainly as if they ran againſt Rocks; for, indeed, they are Rocks petrified by the Violence of the continual Froſts. To ſee one Day the Shore on the *Weſt Main* bare, the Mountains covered with Snow, and Nature looking as if frozen to Death; and the next to behold *Charleton*

Iſland ſpread with Trees, and the Branches making, as it were, a green Tuft of the whole, is a Change capable of giving the greateſt Pleaſure, after the Fatigues of an intolerable Winter-Voyage.

The Air, even at the Bottom of the Bay, though by the Latitude it is nearer the Sun than *London*, being in 51 Degrees, is exceſſive cold for nine Months; the other three Months very hot; but on a North-weſt Wind the Soil on the *Eaſt Main*, as well as the Weſt, bears no manner of Grain: Some Fruits, Gooſberries, Strawberries, and Dewberries, grow about Prince *Rupert's River*. The Commodities for Trade here are Guns, Powder, Shot, Cloth, Hatchets, Kettles, Tobaccos, *&c.* which the *Engliſh* exchange with the *Indians* for Furs, Beavers, Martins, Foxes, Mooſe, and other Skins, and Furs. The great Profits acquired by this Trade, and the Proſpect of ingroſſing it, wholly engaged the new Company to proſecute their Meaſures vigorouſly, and to do all that lay in their Power to ſettle a good Correſpondence with the Natives, whom they found very tractable in that Point, and willing to do any thing they could expect from them upon reaſonable Terms; for the *Indians* about *Rupert's River*, and other Places in the Bay, are more ſimple than the *Canadans*, who have had longer Commerce with the *Europeans*: They are generally peaceable and not given to quarrel, either among themſelves or others, except the *Nodways*, a wild barbarous People on the Borders of *Hudſon's Streights*; who ſometimes, in ſlight Parties, make Incurſions on the other *Indians*, and having murdered eight or ten, return in triumph.

The *Indians* of certain Diſtricts, which are bounded by ſuch and ſuch Rivers, having each an Okimah, as they call him, or Captain, over them, who is an old Man, conſidered only for his Prudence and Experience: He has no Authority but what they think fit to give him upon certain Occaſions; he is the Speech-maker to the *Engliſh*, as alſo in their own Councils, when they meet every Spring and Fall to ſettle the Diſpoſition of their Quarters, for Hunting, Fowling, and Fiſhing: Every Family have their Boundaries adjuſted, which they ſeldom quit, except they have no Succeſs there in their Hunting, and then they join in with ſome Family who have ſucceeded. Their Notions of Religion are but very ſlender; they ſay, there are two Monetoes, or Spirits, the one ſends all the good Things, and the other all the bad. Their Worſhip conſiſts in Songs and Dances at their Feaſts, in Honour of their Monetoes that have favoured them; but if they are ſick or famiſhed, they hang ſome little Bauble which they ſet a Value upon, on the Top of a Pole near the Tent, to pacify the Spirit offended, as they conceive.

But to return to our Hiſtory: In the Year 1670 the Company ſent over *Charles Bailey*, Eſq; as their Governor, who with Mr. *Radiſon* ſettled at *Rupert's River*, and another Factory was eſtabliſhed at *Fort Nelſon*. Some Years after, *William Lydall*, Eſq; was ſent to ſucceed Mr. *Bailey*, and one Mr. *Bridger* was ſent to *Fort Nelſon*. In 1683, *Henry Serjeant*, Eſq; was made Governor at *Rupert's River*, with Orders to be very careful of the *French*, who began now to ſhew themſelves very jealous of the Trade carried on by the *Engliſh* Company with the Natives; and at the ſame time they were not a little perplexed by ſome bad Practices among their own Servants; who conſidering the Hardſhips they endured in that miſerable cold Country, thought they might make bold with ſome Part of the Profits which were entirely owing to their Labour and Negociations with the Natives; for the Company, by their Governors and Agents, made ſuch Contracts with the Captains, or Kings, of Rivers, or Territories where they had Settlements for the Freedom of Trade there, excluſive of all others, that the *Indians* could not pretend they had encroached upon them. Theſe Contracts were as firm as the *Indians* could make them by ſuch Ceremonies as were moſt ſacred and obligatory among them.

In the Year 1686 we find the Company in poſſeſſion of five Settlements, *viz.* *Albany River*, *Hayes Iſland*, *Rupert's River*, *Fort Nelſon*, and *New Severn*: Their Trade at each of them was very conſiderable. From *Albany River* they had generally three thouſand five hundred Beavers a Year, and by Mr. *Serjeant's* great Care and Fidelity, their Commerce increaſed ſo much, that the *French* began to be afraid all the upland *Indians* might be drawn down to the Bay. They knew they could do any thing with King *James* II. who then reigned in *England*; and therefore they reſolved to drive the *Engliſh* out of all their Places in the Bottom of the Bay. Firſt they took *Hayes Iſland*, and then the Fort on *Rupert's River*. The *French* Company at *Canada* procured a Detachment of Soldiers to be ſent, under the Chevalier *de Troyes*, who came over Land from *Quebec*, and in a Time of profound Peace committed theſe Acts of Hoſtilities. It is worth obſerving that the *French* have ſo good an Opinion of their *American* Colonies, as to take not only all lawful, but even unlawful, Means, to preſerve and enlarge them, as contemptible as they are in themſelves; whereas the *Engliſh*, who, next the *Spaniards*, have the richeſt Plantations in this Part of the World, have been as negligent of them as if they were not worth keeping.

The 8th of *July*, the Chevalier *de Troyes* came before the Fort at *Albany River*, where the Governor, Mr. *Serjeant*, then reſided. Two *Indians* having informed him of their having ſurpriſed the Forts at *Hayes Iſland* and *Rupert's River*, and had brought with them the great Guns from theſe Places, the Governor did all that was in his Power to defend the Place, but was not able to keep it above a Week, as appears by the Articles of his Surrender, dated *July* 16th, 1686, which Articles were but indifferently kept. In 1693, the *Hudſon's Bay* Company, being aſſiſted by the Government, retook all the Forts and Factories of which the *French* had deprived them in Time of Peace; but they were ſoon after driven out of them again by the *French*.

In the Year 1696, the Company applied themſelves to King *William*, repreſenting their own Incapacity to maintain themſelves againſt the *French*, and praying the Aſſiſtance of the Crown for their Support: Upon which two Men of War were ordered to their Aſſiſtance, under the Command of Captain *Allen*, who coming into the River *Hayes* ſent to ſummon all the Forts to ſurrender; and the *French* Governor, finding he could not defend them againſt the *Engliſh*, capitulated; and on the 2d of *Auguſt*, in the ſame Year, ſurrendered *Albany Fort* upon certain Articles, the chief of which were, That all thoſe in the Fort, as well *French* as *Indians*, and one *Engliſhman*, the Governor's Servant, ſhould have their Lives and Liberties; and, That no Harm or Violence ſhould be done to their Perſons, or any thing that belonged to them: That they ſhould march out with their Arms, Drums beating, Colours flying, Match lighted at both Ends, Ball in Mouth, and carry with them the two Guns brought from *France*: That they ſhould all embark with their Cloaths, and Goods, without being viſited or pillaged in any Thing; and, if they met with any *French* Veſſels, there ſhould be a Truce between the *Engliſh* and them; and the ſaid *French* Veſſels ſhould be permitted to take aboard the Perſons that came out of the ſame Fort, with all that belonged to them. Theſe Conditions were a little too honourable to grant, tho' they were complied with. Captain *Allen* took the Governor, and ſome of his Men, aboard his own Ship, the *Bonadventure*; ſome he put aboard the *Seaford*, and the reſt aboard a Merchant-man, called the *Doring*.

In his Return he fought the *Mary Roſe* Frigate, then a *French* Privateer of fifty Guns, and was killed in the Engagement; which gave the *Frenchman* an Opportunity to bear away. As to the other two Forts, they followed the Fate of *Albany*, and Mr. *Knight* was reſtored to the Government of *Fort Nelſon*. Mr. *Knight* had ſerved Mr. *Serjeant* while he was Governor of *Fort Albany*, and was acquainted with the Trade. In the Year 1697, the *Hampſhire* Frigate, and *Owners Love* Fireſhip, two of the King's Ships, were loſt in this Bay, and all the Men drowned. Indeed the Ice rendered it ſo dangerous that the Commerce ſeemed not to be worth the Riſque that was run for it. Whether thoſe two Ships run againſt thoſe frozen Mountains that float in the Sea, or foundered, is not known; but 'tis certain they were loſt, and that all the Men periſhed; which was the Cauſe of ſome Inconvenience.

venience. After this Time it appears very clearly, that the Trade of the *Hudſon's Bay* Company declined extremely, but whether from any Advantage gained in Trade by the *French*, or from any ill Management of their Affairs at home or abroad, I cannot pretend to ſay. This, however, is certain, that in the next general War the *French* had renewed their Attacks upon the Settlements of the *Hudſon's Bay* Company, and this with ſuch Effect, that they ſoon left them nothing but *Fort Albany*, which very well accounts for the low State of their Trade to the End of the War, and ſome Time after. At the making the Treaty at *Utrecht*, great Care was taken of this Company, who by the 10th and 11th Articles have every thing reſtored to them that had been taken from them, and an equitable Satisfaction ſtipulated for their Loſſes. Since which Time the Trade of the Company has wonderfully increaſed, inſomuch that it became at leaſt, treble to what it was at the Time that Peace was made, and is ſtill in a very flouriſhing Condition.

It is very natural for ſuch as reap the Benefit of any Branch of Trade, to be as ſilent and ſecret about it as poſſible, which is the Reaſon that till within theſe few Years both the Country and the Commerce of *Hudſon's Bay* were very little, and indeed ſcarce at all, known here, though carried on entirely by this Nation. As for the *French* they had ſo little Notion of it, that they treated all Mr. *Iberville*'s Projects, upon this Subject, as mere Chimeras; and when a Memorial was preſented to the Regent Duke of *Orleans*, ſetting forth the great Dangers the *French* Settlements in *North America* muſt run, if the *Engliſh* ſhould ever lay open this Trade, or think of tranſporting their Felons into this Part of the World, it was looked upon as a mere Viſion. But ſince that Time they are become much better acquainted with this Part of *America*, as appears from the Account I have already given from one of their Authors.

But as to the Product and preſent Condition of this Country, the beſt Account I ever ſaw of it, is that publiſhed by Mr. *Dobbs*, from the Mouth of one experimentally acquainted with it, and from whom I ſhall borrow as much as I think may ſuffice to give the Reader a general Notion of its Nature and Importance. “The *Indians* being obliged to go aſhore every Day to hunt for Proviſions, delays them very much in their Voyages; for their Canoes are ſo very ſmall, holding only two Men and a Pack of one hundred Beaver Skins, that they cannot carry Proviſions with them for any Time. If they had larger Canoes, they would make their Voyages ſhorter, and carry many more Beavers to Market, at leaſt four times as many, beſides other Skins of Value, which are too heavy for their preſent Canoes; this, and the high Price of the *European* Goods, by the Company in exchange, diſcourages the Natives ſo much, that if they were not abſolutely under Neceſſity of having Guns, Powder, and Shot, Hatchets, and other Iron Tools for their Hunting, and Tobacco, Brandy, and ſome Paint for Luxury, they would not go down to the Factory, with what they now carry. At preſent they leave great Numbers of Furs and Skins behind them. A good Hunter among the *Indians*, can kill ſix hundred Beavers in a Seaſon, and can carry down but one hundred; the reſt he uſes at home, or hangs them upon Branches of Trees, upon the Death of their Children, as an Offering to them, or uſe them for Bedding and Coverings. They ſometimes burn off the Fur, and roaſt the Beavers like Pigs, upon any Entertainments, and they often let them rot, having no farther Uſe for them. The Beavers, he ſays, are of three Colours, the brown reddiſh Colour, the black, and white; the firſt is the cheapeſt, the black is moſt valued by the Company in *England*, the white the moſt valued in *Canada*, giving eighteen Shillings, when others give five or ſix Shillings: it is blown upon by the Company's Factors at the Bay, they not allowing ſo much for theſe as for the others, and therefore the *Indians* uſe them at home, or burn off the Hair, when they roaſt the Beavers like Pigs, at an Entertainment when they feaſt together. He ſays theſe Skins are extremely white, and have a fine Luſtre, no Snow being whiter, and have a fine long Fur or Hair. He has ſeen fifteen taken of that Colour out of one Lodge or Pond.

“The Beavers have three Enemies, Man, Otters, and the Carcajon, or Quecquehatch, which prey upon them, when they take them at Advantage; the laſt is as large as a very great Dog, it has a ſhort Tail like a Deer or Hart, and has a good Fur, valued at a Beaver and half in exchange. The Beavers chiefeſt Food is the Poplar, or Tremble, but they alſo eat Sallows, Alders, and moſt other Trees, not having a reſinous Juice. The Middle Bark is their Food; in *May*, when the Wood is not plenty, they live upon a large Root which grows in the Marſhes a Fathom long and as thick as a Man's Leg, the *French* called it Volet: But the Beavers are not ſo good Food as when they feed upon Trees. They will cut down Trees about two Fathoms in Girth with their Teeth, and one of them obſerves when it is ready to fall, and gives a great Cry, and runs the contrary Way, to give room for the reſt to get out of the Way. They then cut off all the Twigs and ſmaller Branches, two or three Fathoms in Length, and draw them to their Houſes, which they have built in their Ponds; after having raiſed or repaired their Pond Head, and made it ſtaunch, and thruſt one End into the Clay or Mud, that they may lie under Water all the Winter, to preſerve the Bark green and tender, for their Winter Proviſion. After cutting off the ſmall Branches, they cut and carry away the larger, until they come to the Bole of the Tree. The Beavers are excellent Food, but the Tongue and Tail the moſt delicious Parts of the whole. They are very fat from *November* until the End of *March*: They have their Young in the Beginning of Summer, at which Time the Females are lean by ſuckling their Young, and the Males are lean the whole Summer, when they are making or repairing their Ponds or Houſes, and cutting down and providing Timber and Branches for their Winter Store. They breed once in a Year, and have from ten to fifteen at a Litter, which grow up in one Seaſon, ſo that they multiply very faſt; and if they can empty a Pond and take the whole Lodge, they generally leave a Pair to breed, ſo that they are fully ſtocked again in two or three Years. The Loup Corvier, or Lynx, is of the Cat kind, but as large as a great Dog; it preys upon all Beaſts it can conquer, as does the Tyger, which is the only Beaſt in that Country that won't fly from a Man. The *American* Oxen or Beeves, have a large Bunch upon their Backs, which is by far the moſt delicious Part of them for Food, it being all as ſweet as Marrow, juicy and rich, and weighs ſeveral Pounds.

“The *Indians* Weſt of the Bay, living an erratic Life, can have no Benefit by tame Fowl or Cattle; they ſeldom ſtay above a Fortnight at a Place, unleſs they find plenty of Game. When they remove, after having built their Hut, they diſperſe to get Game for their Food, and meet again at Night, after having killed enough to maintain them that Day; they don't go above a League or two from their Hut. When they find ſcarcity of Game, they remove a League or two farther, and thus they traverſe through theſe woody Countries and Bogs, ſcarce miſſing one Day, Winter or Summer, fair or foul, in the greateſt Storms of Snow, but what they are employed in ſome kind of Chace. The ſmaller Game, got by Traps or Snares, are generally the Employment of Women and Children, ſuch as the Martins, Squirrels, Ermins, *&c.* The Elks, Stags, Rein Deer, Bears, Tygers, wild Beef, Wolves, Foxes, Beavers, Otters, Corcajon, *&c.* are the Employment of the Men. The *Indians*, when they kill any Game for Food, leave it where they kill it, and ſend their Wives next Day to carry it home. They go home in a direct Line, never miſſing their Way by Obſervation they make of the Courſe they take upon their going out, and ſo judge upon what Point their Huts are, and can thus direct themſelves upon any Point of the Compaſs. The

Trees all bend towards the South, and the Branches on that Side are larger and ſtronger than on the North Side, as alſo the Moſs upon the Trees. To let their Wives know how to come at the killed Game, they from Place to Place break off Branches, and lay them in the Road, pointing them the Way they ſhould go, and ſometimes Moſs, ſo that they never miſs finding it.

“ In Winter when they go abroad, which they muſt do in all Weathers to hunt and ſhoot for their daily Food, before they dreſs they rub themſelves all over with Bear's Greaſe, or Oil of Beavers, which does not freeze, and alſo rub all the Fur off their Beaver Coats, and then put them on; they have alſo a kind of Boots or Stockings of Beaver's Skin, well oiled with the Fur inwards, and above them they have an oiled Skin laced about their Feet, which keeps out the Cold, and alſo Water, where there is no Ice or Snow, and by this Means they never freeze or ſuffer any thing by Cold. In Summer alſo, when they go naked, they rub themſelves with theſe Oils or Greaſe, and expoſe themſelves to the Sun without being ſcorched, their Skins being always kept ſoft and ſupple by it, nor do any Flies, Bugs, or Muſketoes, or any noxious Inſect ever moleſt them. When they want to get rid of it they go into the Water, and rub themſelves all over with Mud or Clay, and let it dry upon them, and then rub it off. But whenever they are free from the Oil, the Flies and Muſketoes immediately attack them, and oblige them again to anoint themſelves.

“ The *Indians* make no uſe of Honey; he ſaw no Bees there but the wild Humble-Bee; but they are ſo much afraid of being ſtung with them, as they go naked in Summer, that they avoid them as much as they can. Nor did he ſee any of the Maple they uſe in *Canada* to make Sugar of, but only the Birch, whoſe Juice they uſe for the ſame Purpoſe: Boiling it until it is black and dry, and then uſing it with their Meat. They uſe no Milk from the Time they are weaned, and they all hate to taſte Cheeſe, having taken up an Opinion that it is made of dead Men's Fat; they love Prunes and Raiſins, and will give a Beaver Skin for twelve of them, to carry to their Children, and alſo for a Thrum or Jews Harp.

“ He ſays the Women have all fine Voices, but have never heard any muſical Inſtrument. They are very fond of all Sorts of Pictures or Prints, giving a Beaver for the leaſt Print, and all Toys are like Jewels to them. When he got to the Natives, Southward of *Pachegoia*, he had about thirty Cowries left, and a few ſmall Bells, leſs than Hawks-Bells. When he ſhewed one of them, they gave him a Beaver's Skin for it, and they were ſo fond that ſome gave him two Skins, or three Martin Skins, for one, to give their Wives to make them fine. The Martins they take in Traps, for if they ſhoot them their Skins would be ſpoiled; they have generally five or ſix at a Litter. He ſays the Natives are ſo diſcouraged in their Trade with the Company, that no Skins are worth the Carriage; and the fineſt Furs were ſold for very little, when they came to the Factory in *June* 1742. The Prices they took for the *European* Goods were much higher than the ſettled Prices fixed by the Company, which the Governors fix ſo to ſhew the Company how zealous they are to improve their Trade, and ſell their Goods to Advantage. He ſays they gave but a Pound of Gunpowder for four Beavers; a Fathom of Tobacco for ſeven Beavers; a Pound of Shot for one; an Ell of coarſe Cloth for fifteen; a Blanket for twelve; two Fiſh-hooks or three Flints for one; a Gun for twenty-five; a Piſtol for ten; a common Hat, with white Lace for ſeven; an Ax for four; a Bill-hook for one; a Gallon of Brandy for four; a chequered Shirt for ſeven; all which are ſold at a monſtrous Profit, even to two thouſand *per Cent.* Notwithſtanding this Diſcouragement, the two Fleets which went down with him, and parted at the *Great Fork*, carried down two hundred Packs of one hundred each, twenty thouſand Beavers; and the other *Indians* who arrived that Year, he computed, carried down three hundred Packs of two hundred each, making thirty thouſand; in all fifty thouſand Beavers, and above nine thouſand Martins.

“ The Furs there are much more valuable than the Furs upon the *Canada* Lakes, ſold at *New York*; for theſe will give five or ſix Shillings *per Pound*, when the others ſell at three Shillings and Six-pence. He ſays that if a Fort was built at the *Great Fort*, ſixty Leagues above *York Fort*, and a Factory with *European* Goods was fixed there, and a reaſonable Price was put upon the *European* Goods, that the Trade would be wonderfully increaſed; for the Natives, from the Southward of *Pachegoia*, could make, at leaſt, two Returns in a Summer, and thoſe at greater Diſtances could make one, who cannot now come at all; and above double the Number would be employed in hunting, and many more Skins would be brought to Market that they cannot now afford to bring, for the Expence and low Price given for them. The Stream is ſo gentle from the *Fork*, to *York Fort*, on either Branch, that large Veſſels and Shallops may be built there, and carry down the bulky Goods, and alſo return again againſt the Stream; and the Climate is good and fit to produce Grain, Pulſe, *&c.* and very good Graſs and Hay for Horſes and Cattle; and if afterwards any Settlement were made upon *Pachegoia*, and Veſſels built to navigate that Lake, which is not more Northerly than the Latitude of 52 Degrees, the Trade would be ſtill vaſtly inlarged and improved, and ſpread the Trade not only up the River and Lakes, as far as the Lake *du Bois* and *du Pluis*, but alſo among the *Aſſinibouels*, and Nations beyond them; and the Nation *de vieux Hommes*, who are two hundred Leagues Weſtward of *Pachegoia*. He ſays the Nations who go up that River with Preſents, to confirm the Peace, are three Months in going, and ſay they live behind a range of Mountains beyond *Aſſinibouels*; he ſaw ſeveral of them, who all wanted a Joint of their little Finger, which they ſaid was cut off ſoon after they were born, but gave no Reaſon for it.

“ Whilſt he was at *York Fort* he got acquainted with an old *Indian* who lived at ſome Diſtance from *Nelſon's Bay* to the Weſtward, being one of thoſe they call the *Home Indians*, who had, about fifteen Years ago, gone at the Head of thirty Warriors, to make War againſt the *Attimoſpiquais*, *Tete Plat*, or *Plazcotez de Chiens*, a Nation lying Northward, on the Weſtern Ocean of *America*; he was the only one that returned, all the reſt being killed, or periſhed through Fatigue, or want of Food, upon their Return; when they went they carried their own Families with them, and hunted and fiſhed from Place to Place for two Winters and one Summer, having left their Country in Autumn, and in *April* following came to the Sea Side on the Weſtern Coaſt, where they immediately made their Canoes; at ſome ſmall Diſtance they ſaw an Iſland, which was about a League and a half long; when the Tide was out, or Water fell, they had no Water betwixt them and the Iſland, but when it roſe, it covered all the Paſſage and the Iſland, as high as the Woods upon the Shore. There they left their Wives and Children and old Men, to conduct them home, and provide them with Proviſions by hunting and ſhooting for them upon the Road; and he, with thirty Warriors, went in queſt of the Enemies of the *Tete Plat*.

“ After they parted with their Families they came to a Streight which they paſſed in their Canoes; the Sea Coaſt lay almoſt Eaſt and Weſt, for he ſaid the Sun roſe on his Right-hand, and at Noon it was almoſt behind him, as he paſſed the Streight, and always ſet in the Sea. After paſſing the Streight, they coaſted along the Sea for three Months, going into the Country and Woods as they went along to hunt for Proviſions. He ſaid they ſaw a great many large black Fiſh, ſpouting up Water in the Sea. After they had thus coaſted for near three Months, they ſaw the Footſteps of ſome Men on the Sand, by which they judged they were

“ not far from their Enemies; upon which they quitted their Canoes, and went five Days through the Woods and Buſhes, which were but very low and ſhrubby, and ſo cloſe they could with Difficulty make Way through it; and then came to the Banks of a River, where they found a large Town of their Enemies: And, after making their uſual Cry, they diſcharged their Arrows and Guns againſt thoſe who appeared; upon which they fled; but upon finding how few they were, they returned and killed fifteen of them, and wounded three or four more; upon which they fled to the Woods, and from thence made their Eſcape to their Canoes before their Enemies overtook them; and after a great deal of Fatigue got to the Streights, and after getting over they all died one after another, of Fatigue and Famine, except this old Man; leaving him alone to travel to his own Country, which took him up about a Year's Time, having left his Gun when his Ammunition was ſpent, and loſt all his Arrows, and upon his Return had not even a Knife with him; ſo that he was reduced to live upon Herbs and Moſs growing upon the Rocks, and was almoſt famiſhed when he reached the River *Sakie*, where he met his Friends, who relieved him when he deſpaired of ever again ſeeing his own Country.”

This, ſays Mr. *Dobbs*, is the Account ſo far as *Joſeph la France* could inform me of thoſe Countries Southward of *York Fort*, which may be brought to trade there in time. It muſt be allowed, that this Relation is equally inſtructive and entertaining; it makes us at once acquainted with the Country, and with the Reaſons which ſhould induce us to think it worth our while to enquire about it; it ſhews us, that theſe Countries are far from being unhoſpitable, or uninhabitable; that, on the contrary, there are many Nations already known, and many more of whom the *Europeans* have had Notice; all of whom are ſufficiently in Want, and have it at the ſame time abundantly in their Power to pay us for Supplies. This, I ſay, is evidently made appear, ſince it is affirmed, and the Fact is ſo true as not to be diſputed, that the *French* carry on a great Trade with theſe *Indians*, and that they are very well able to bear the Rigour of the Seaſons in thoſe Parts; and if they can bear it, ſurely ſo may we.

It may indeed be objected, that the *French* are very apt to boaſt of much more than they perform, and therefore we ought not to give an implicit Credit to their Relations, eſpecially in their own Favour.

But this is eaſily anſwered, ſince Mr. *Dobbs* has alſo furniſhed us with *Engliſh* Memoirs that prove the very ſame Thing; and therefore I ſhall quote from him what is ſufficient for that Purpoſe, and which is no leſs entertaining than the Account given us by *Joſeph la France*, and of no leſs Authority than his, ſince it is given us by an *Engliſhman* of Credit, who reports nothing but from his own Experience and Obſervation.

“ Mr. *Froſt*, who has been many Years employed by the Company in the Bay, both at *Churchill* and *Mooſe River* Factory, and who was their Interpreter with the Natives, and travelled a conſiderable way into the Country, both North-weſt of *Churchill* and Southward of *Mooſe River* Factory, and has reſided at *Mooſe River*, ſince the Factory was made there in 1730, gives a very good Account of that Climate and Country there, and up the River Southward of it: He ſays the Factory is built near the Mouth of the River, in Latitude 51 Degrees 28 Minutes, upon a navigable River, which, at twelve Miles diſtant from the Fort, is divided into two Branches; one comes from the Southward, the other from the South-weſt. Upon the Southern Branch, all ſort of Grain thrives, as Barley, Beans, and Peaſe do at the Factory, though expoſed to all the chilling Winds which come from the Ice in the Bay. Upon the Southern Part, above the Falls, there grows naturally along the River, the ſame Kind of wild Oats and Rye mentioned already upon the Lake of *Sieno*, the Huſk being black, but the Grain within perfectly white and clear, like Rice; the *Indians* beating it off when ripe into their Canoes, as they paſs along the River, it growing in the Water, like Rice. In their Woods, at the Bottom of the Bay, at *Mooſe* and *Albany*, as well as at *Rupert's River*, are very large Timber Trees of all Kinds; Oak, Aſh, &c. as well as Pine, Cedar, and Spruce: They have exceeding good Graſs to make Hay, which improves every Day, as they cut and feed it, and may have every where within Land all ſorts of Pulſe and Grain, and all ſorts of Fruit Trees, as in the ſame Climate in *Europe*; for all the Sorts they have tried thrive very well.

“ The Ice breaks up at *Mooſe* Factory in the Beginning of *April*, but higher up in the Country in *March*. It is navigable for Canoes a great way up among the Falls; at a conſiderable Diſtance there is one Fall of fifty Feet, but above that it is deep, and navigable for a great way; the Climate above the Fall is very good, and the River abounds with that wild Rice. The *French* have got a Houſe, or Settlement for Trade, near the Southern Branch, about one hundred Miles above the Factory, where they ſell their Goods cheaper than the Company do, although it be ſo difficult to carry them ſo far from *Canada*, and very expenſive; and give as much for a Martin's Skin as they do for a Beaver, when we inſiſt upon three for one; ſo that the *French* get all the choice Skins, and leave only the Refuſe for the Company. The *French* have alſo got another Houſe pretty high up upon *Rupert's River*, by which they have gained all the Trade upon the *Eaſt Main*, except a little the Company get at *Slude* River.” He ſays, “ That upon the South-ſide of the great Inland Sea, upon the *Eaſt Main*, which has lately been diſcovered, there is an exceeding rich Lead Mine, from which the Natives have brought very good Ore, which might turn to very great Advantage, as well as the Furs upon that Coaſt, which might be vaſtly increaſed if the Trade was laid open, and Settlements made in proper Places. He ſays, when he was at *Churchill*, he travelled a conſiderable way in the Country North-weſtward of the River of *Seals*, that near the River and Sea-coaſt there were ſmall ſhrubby Woods; but for many Miles, at leaſt ſixty farther into the Country, they had nothing but a barren, white Moſs, upon which the Rein-Deer feed, and alſo the Mooſe, Buffaloes, and other Deer: And the Natives told him, farther Weſtward, beyond that barren Country, there were large Woods. He was acquainted when there, about fifteen Years ago, with an *Indian* Chief, who traded at *Churchill*, who had been often at a fine Copper Mine, which they ſtruck off from the Rocks with ſharp Stones. He ſaid it was upon Iſlands at the Mouth of a River, and lay to the Northward of that Country where they had no Night in Summer.

“ As to the Trade at *Churchill*, it is increaſing; it being at too great Diſtance from the *French* for them to interfere in the Trade: In the Year 1742, it amounted to twenty thouſand Beavers. There were about one hundred Up-land *Indians* came in their Canoes to trade, and about two hundred Northern *Indians*, who brought their Furs and Skins upon Sledges; ſome of them came down the River of *Seals*, fifteen Leagues Northward of *Churchill*, in Canoes, and brought their Furs from thence by Land. They have no Beavers to the Northward of *Churchill*, they not having there ſuch Ponds or Woods as they chuſe to feed upon; but they have great Numbers of Martins, Foxes, Bears, Rein-Deer, Buffaloes, Wolves, and other Beaſts of rich Furs, the Country being moſtly rocky, and covered with white Moſs, upon which the Rein-Deer, or Cariboux, feed.

“ There is a great deal of ſmall Wood, of the Spruce or Fir Kind, near the old Factory; but the Wood improves, as it is farther up the River from the Bay; where they have Juniper, Birch, and Poplar. And more Southerly the Timber is larger, and there are great Variety of Trees; they are under great Inconveniencies at the new Fort, which is upon an elevated Situation, upon a Rock without Shelter, cloſe by the Shore, ſurrounded with Snow and Ice for eight Months in the Year, expoſed to all the Winds and Storms that happen; where they can have no Conveniency of

“ Graſs or Hay, or Gardening, and yet they had four or five Horſes there, and a Bull, and two Cows, near the Factory; but they were obliged to bring their Hay from a marſhy Bottom, ſome Miles up the River, to feed them in Winter; but if a Settlement was made higher up the River Southward, ſome Leagues from the Bay, in Shelter, without the Reach of the chilling Winds, they would have Graſs and Hay ſufficient, and might have alſo Gardens and proper Greens, and Roots, propagated there. They ſay there is a Communication betwixt that River and *Nelſon's River*, at a great Diſtance within Land, or a very ſhort Land-carriage betwixt them; for the *Indians* who trade here tell them, each Seaſon, what Chiefs, with their Followers, go down that Year to *Nelſon* and *Albany* River.”

We may juſtly wonder that we never had before any clear Account of theſe Matters, conſidering how long we have had Factories in theſe Parts; and that on the contrary all the Accounts hitherto given repreſent the Coaſts of *Hudſon's Bay*, as the moſt forlorn and dreadful Part of the Univerſe, hitherto diſcovered; as Regions freezing and frightful, almoſt beyond all Deſcription, and which it would appear dreadful and cruel to ſend even Malefactors to inhabit. But for this the ſame Gentleman has fully accounted; and it is requiſite that the Public ſhould be very well acquainted with the Account that he has given; for ſince the great Council of the Nation has thought fit to encourage an Attempt to diſcover a Paſſage this Way into the *South Seas*, it is very reaſonable to ſuppoſe that Endeavours will not be wanting to puſh that Attempt to the utmoſt; to facilitate which there is nothing of ſo great Importance as the proving that the Diſcouragements which have been hitherto repreſented as inſuperable, have been over-rated, and that notwithſtanding all that has been ſaid of them, it is not only poſſible but probable, that they may be overcome; towards which nothing ſurely can contribute more than the pointing out the Motives, upon which they have hitherto been conſtantly repreſented, in ſo ſtrong a Light, which is very effectually done in the following Paſſage from the ſame Author; who, as he has ſtudied this Point, ſo it muſt be allowed he has made it as clear as with Reaſon could well be expected.

“ The Company avoid all they can making Diſcoveries to the Northward of *Churchill*, or extending their Trade that Way, for fear they ſhould diſcover a Paſſage to the Weſtern Ocean of *America*, and tempt, by that Means, the reſt of the *Engliſh* Merchants to lay open their Trade, which they know they have no legal Right to; which if the Paſſage was found, would not only animate the reſt of the Merchants to purſue the Trade through that Paſſage, but alſo to find out the great Advantages that might be made of the Trade of the Rivers and Countries adjoining to the Bay, by which Means they would loſe their beloved Monopoly. But the Proſpect they have of Gain to be made by trading with the *Eſkimauk Indians*, for Whale-fin, Whale and Sea-oil, and Sea-horſe Teeth, induces them to venture a Sloop annually, as far as 62 Degrees 30 Minutes, to *Whale Cove*, where theſe *Indians* meet them, and truck their Fins and Oil with them. But though they are fully informed of a fine Copper Mine on a navigable Arm of the Sea, Northweſtward of *Whale Cove*, and the *Indians* have offered to carry their Sloops to it; yet their Fear of diſcovering the Paſſage, puts Bounds to their Avarice, and prevents their going to the Mine, which by all Accounts is very rich. Yet thoſe who have been at *Whale Cove*, own that from thence Northwards is all broken Land; and that after paſſing ſome Iſlands, they from the Hills ſee the Sea open, leading to the Weſtward. And the *Indians* who have been often at the Mine ſay it is upon a navigable Arm of the Sea, of great Depth, leading to the South-weſt, where are great Numbers of large black Fiſh ſpouting Water, which confirms the Opinion that all the Whales ſeen between *Whale Cove* and *Wager River*, all come there from the Weſtern Ocean, ſince none are ſeen any where elſe in *Hudſon's Bay* or *Streight*. All along this Coaſt from the Latitude 62 Degrees to 65 Degrees, a very beneficial Fiſhery of Whales may be carried on with theſe *Eſkimauk Indians*; who, even without the Uſe of Iron, can harpoon and kill Whales, and if they were ſupplied with Iron Harpoons, and proper Cordage, they might be brought to kill great Numbers of them. At preſent all their Nets, Lines, and Snares, are made of Whale-bone, and moſt of their Boats and other Neceſſaries of the Seal-ſkins, Fiſh-bones, and Sea-horſe Teeth, and in making all things neceſſary for them, they are very neat and ingenious.”

The ſame judicious Perſon, from whom we have borrowed ſo much already, has taken the Pains to give, from very authentic Relations, a very clear, as well as a very copious Account of moſt of the *Indian* Nations that lie at the Back of our Northern Colonies, and between the *French* Settlements in *Canada*, and on the *Miſſiſſippi River*; with the Countries they inhabited, and the Product of thoſe Countries, which I eſteem a Thing of very great Conſequence, and as material a Service to this Nation, as has been rendered for many Years; the Account is too long for me to inſert, but the Inferences he draws from it are ſo juſt, and of ſo high Conſequence, that I think it would be an Injury done the Reader not to report them, as it would certainly be doing both him and the Subject great Wrong, to report them in any other than his own Words, which without farther Preface I ſhall uſe; only it is neceſſary to premiſe at the Time this Gentleman publiſhed his Book, the War with *France* was not actually broke out.

“ How glorious, ſays he, would it be for us at the ſame Time to civilize ſo many Nations, and improve ſo large and ſpacious a Country, by communicating our Conſtitution and Liberties, both Civil and Religious, to ſo many Numbers, whoſe Happineſs and Pleaſure would increaſe at the ſame Time, that an Increaſe of Wealth and Power would be added to *Britain*.

“ There is, at preſent, a Beginning of this Scheme, by the Zeal of Mr. *Barclay*, who is inſtructing and civilizing the *Mowhawks*, among the *Iroqueſe*, who from a warlike Nation have embarked in Trade, and entered into Alliances with all Nations round the Lakes *Huron* and *Errie*, and to the Weſtward as far as the *Miſſiſſippi*, which is firmly eſtabliſhed by the Gain they make by the Trade. The *Engliſh* from *New York*, have fixed at *Oſwego*, in their Country, upon equitable Terms with all the *Indians*, who come now from a great Diſtance to trade at that Town; *Indians* coming now to trade there, whoſe Names were never before known to the *Engliſh*. This therefore ſeems to be the critical Time to begin this Settlement, on the Banks of *Conde River*. If there be a War with *France*, as we are at a great Expence to ſave the Liberties of *Europe*, and ſupport the Houſe of *Auſtria*, ſince we can have nothing in *Europe* beneficial for us; in caſe we are ſucceſsful at the Concluſion of the War, we ought to ſtipulate for ſomething advantageous in *America*; and the leaſt we ought to claim is our Right to the *American* Lakes, and ſecuring the Navigation of them. The *French* have, at preſent, two little Forts, and about thirty Men in each; at *Niagara*, and the Streights of St. *Joſeph*; and a few Men at *Miſſiliackinac*, and at the Bottom of the *Illineſe Lake*. Theſe we ought to have from them, either by Force or Treaty, which would ſecure the Inland Trade to us, and prevent their future Incroachments, either there or in *Hudſon's Bay*; and to do this effectually, would be to make a Settlement near the Lake *Errie*, which may be done with little or no Expence, conſidering our preſent Barrier and Alliance, and Trade with the Natives; and whenever our Troops are diſbanded, ſome of them may be ſent over upon Half-pay, to fix in proper Places, and make good our Poſſeſſions, which would be a fine Retreat to our Soldiers, who can't ſo eaſily, after being diſbanded, bring themſelves again to hard Labour, after being ſo long diſuſed to it.

“ By theſe Settlements, and thoſe adjoining to *Hudſon's Bay*, and by opening the Trade to the Bay, many thouſands more would be employed in Trade, and a much greater Vent would be opened to our Manufactures: Whereas all the Trade we have at preſent, whilſt it is thus confined to the Company, is the Employment of one hundred and twenty Men in all their Factories; and two or three Ships in that Trade, manned perhaps with one hundred and twenty Men in Time of War, to enrich nine or ten Merchants at their Country's Expence, at the ſame Time betraying the Nation, by allowing the *French* to encroach upon us at the Bottom of the Bay, having given up by that Means the greateſt Part of their Trade there to the *French*. It is therefore humbly ſubmitted to the Government, whether it is not juſt, as well as prudent, to open the Trade to all the *Britiſh* Merchants, and reſume, at the ſame Time, the Charter, ſo far as to take from them all the Lands they have not reclaimed or occupied, after ſeventy Years Poſſeſſion, leaving them only their Factories, and ſuch Lands as they have reclaimed, adjoining to them; and to give Grants, as uſual, in other Colonies, to all who ſhall go over to trade, and make Settlements in the Country; for no Grant was ever intended to be made to them, to enable them to prevent other Subjects of *Britain* from planting thoſe Colonies, which they themſelves would not plant or occupy; for ſuch a Power, inſtead of being beneficial, would be the greateſt Prejudice to *Britain*. It is therefore become a general Law in all the Colonies, that thoſe who take Grants of Land, and don't plant them in a reaſonable limited Time, forfeit their Right to thoſe Lands, and a new Grant is made out to ſuch others as ſhall plant and improve them; and if this Grant be not immediately reſumed ſo far, and the Trade laid open, and ſome Force be not ſent to ſecure our Southern Plantations in the Bay by the Government, in caſe there ſhould be a *French* War, we ſhall ſee the *French* immediately diſpoſſeſs the Company of all their Factories but *Churchill*, and all theſe Countries, and that Trade, will be in Poſſeſſion of the *French*.

“ To the making ſuch Settlements ſome Objections have been made by the Friends of the Company, as the great Difficulty of getting People to go to ſettle and plant in ſo cold a Country, and the Difficulty and Danger attending the making Settlements higher up upon the Rivers, and navigating them, as they are ſo full of Falls and Rapids, that can only be navigated by the Natives in ſmall Canoes, made of Birch Bark, which can't contain above two Men with any Cargo; and in theſe they are often overſet, and are in ſuch Danger of being drowned, and of ſpoiling their Goods, that they are often obliged to carry their Canoes and Cargo from Place to Place, which obſtructs greatly and delays the Navigation; and that ſcarce five Men out of one hundred and twenty, which the Company now have in the Bay, will venture themſelves in, or can conduct ſuch Canoes, without imminent Danger of being drowned, and conſequently theſe Hardſhips and Difficulties will counter-balance the Profit to be made of ſettling higher up in the Country, upon the Rivers, in pleaſanter and warmer Climates.

“ To this I anſwer, That by the Accounts already given here of theſe Climates and Countries, by impartial Perſons, who don't want to diſguiſe the Truth, it appears that the Cold is tolerable, even at theſe diſadvantageous Settlements at preſent in the Bay; and that upon paſſing only five or ſix Leagues up the Rivers into the Country, the Climate is ſo altered, as to be equal to thoſe of the ſame Latitudes in *Europe*. And that theſe prodigious Accounts of the Effects of Cold, are calculated only to ſerve the Company, in order to prevent People from going there to ſettle, and encroach upon the Company's Monopoly of Trade. And to the Difficulty they make about navigating theſe Rivers in thoſe ſmall Canoes, and the ſmall Number employed by the Company, who will venture in them, or can conduct them, I anſwer, That their Servants being at preſent no Gainers by Trade, won't endeavour to learn to navigate theſe Canoes, where there is any Riſque, and Care neceſſary to prevent the Danger. Beſides, the Company allows them no Time to learn, by confining them to their Factories, whilſt the *Indian* Trade continues, and the Navigation is open: And at other Times keeps them employed in cutting Wood for firing, bringing it home, ſhooting, fiſhing, and digging in their Gardens, to ſupply themſelves with Proviſions, to leſſen the Company's Expence, ſo that they are allowed no Time to learn to navigate theſe Boats, or to go up the Rivers to obſerve the Soil and Climate, or what Improvements might be made in the Country. But if they were Maſters of their own Time, and could advance their Wealth by Trade, and found a conſiderable Profit to ariſe to them by their Dexterity in managing theſe Canoes, and the great Pleaſure and Satisfaction they would have by living in a fine Climate among theſe Lakes and Rivers; they would be as enterprizing and dextrous as the *Cureur de Bois*, and be as able to navigate among theſe Water-falls, as the *French*. Neither is it impracticable to prevent even thoſe Canoes from overſetting, by Outlagers or blown Bladders fixed to their Sides; or other kind of Boats may be uſed, ſuch as are made at *Torneo* in *Sweden*, upon the Rivers, falling into the *Bothnic Gulph*, and *Laplanders* might be prevailed upon to go there to teach them how to make and manage theſe Boats, and train up Rein-Deer to draw in Sledges in Winter, and alſo to uſe *Lapland* Shoes, which are better than thoſe uſed in *America*.

“ If the Trade was once made free, the Profit made upon it would induce many to go and ſettle upon thoſe Rivers, when not only Horſes and other Conveniencies would be had near the Water-falls, to aſſiſt the Land Carriage in Summer, but alſo Horſes and Rein-Deer to draw their Sledges in Winter, as in *Ruſſia*, which is almoſt as cheap a Carriage as by Water, when the proper Roads are made through the Woods, ſo that Objection muſt be of no Force to prevent our opening the Trade, and ſettling theſe Countries. But ſuppoſing the worſt, that we could not manage theſe Canoes, that could not prevent our ſettling to Advantage upon theſe Rivers and Lakes above the Falls, for the Natives might ſtill be our Carriers, in navigating thoſe dangerous Places, and taking our Goods from one Settlement to another, whilſt we ſhould be employed in Navigation and Trade among the Lakes and Rivers where there are no Falls, in larger Veſſels, and puſh our Commerce Southward into better Climates and richer Soils, and put the Natives upon Improvements in Trade, by civilizing and inſtructing them in building convenient Houſes, and aſſociating in Towns, making Gardens, and tilling their Lands; providing them with Horſes and tame Cattle, and Fowl, for their Uſe, and proper Tools which our Trade would furniſh them with.

“ Another Objection is, that it is a difficult and dangerous Navigation into the Bay, and the Trade is not worth the Riſque. To this I anſwer, That the Navigation is not ſo dangerous as it is apprehended to be, but appears to be more ſo by the Inſinuations and Report of the Company and their Friends, who gave it out in order to deter others from venturing and interfering in their Trade, and for that Reaſon they oblige their Captains, under a Penalty, not to publiſh any Charts of the Bay and Streight. Captain *Middleton*, who was in their Service, made above twenty Voyages to different Parts of the Bay, and never loſt a Ship, nor had any Accident in theſe Voyages; nor have I heard that the Company, in about twenty-three Years, have loſt any Ships in that Trade, but two, and the Men and Cargo were ſaved by Captain *Middleton*. Where Captains are careful in the Ice, there is not much Danger; it is of great Advantage to them that there is no Night at that Seaſon they enter the Bay, where the Quantity of Ice is greateſt; and when they return in *September*, or even in *October*, all the Ice is in a Manner diſſolved or paſſed out of the

“ Streight into the Ocean, and none ſeen that can
“ hinder their Paſſage.

“ It is probable that during the whole Winter, from
“ *October* to *March*, there is no Ice in the Streight
“ to obſtruct their Paſſage into or out of the Bay; for
“ a Ship which chanced to be cloſed up with Ice in an
“ Inlet, by breaking of the Ice got out, and came through
“ the Ice at *Chriſtmas*, without finding any Ice in the
“ Streight to prevent her Paſſage: For the Ice which is
“ formed in Bays and Rivers, in Winter, does not
“ break up and get into the Channel or Streight until
“ it begins to thaw upon the Shore in *March* or *April*;
“ at which Time it is carried by the Winds and Tide
“ into the Streight, and obſtructs the Paſſage in *May* or
“ *June*, until it is diſſolved; yet, even then, good
“ Pilots know how to avoid it and get into the Eddy-
“ Tide, out of the Current; where the Ice is more open,
“ and not drove together by the Winds and Current, as
“ it is in the Channel. But theſe Difficulties would
“ leſſen every Day, if the Trade were opened and the
“ Voyages more frequent, by the great Number of Ships,
“ which would make many more experienced Pilots.
“ And as there is now a more accurate Chart publiſhed
“ of the Streight and Bay, by Capt. *Middleton*, with
“ the Iſlands, Soundings, Tides, and Variation; the
“ Navigation will become leſs dangerous daily, and
“ Coves, and Places of Shelter for Ships, will be found
“ out, by the Number of Ships which would then paſs,
“ and be trading in thoſe Seas which are now unknown.
“ I therefore apprehend that the Danger of the Ice is
“ more in Imagination than Reality, when Care and
“ Judgment are employed; for Ships are moſtly in-
“ cloſed in Ice in calm Weather and Fogs, when the
“ Ice prevents the Motion of the Sea; ſtormy Weather
“ diſperſes and breaks the Ice, unleſs they get under the
“ Lee of a large Iſland of Ice; and then they faſten to
“ it, and drive along with it whilſt the ſmaller Ice to
“ Leeward is drove from them by the Wind, and the
“ large Iſlands, being many Fathoms deep in the Water,
“ come on Ground before the Ships are in Danger of
“ being forced on Shore in ſhallow Water.

“ The greateſt Danger and Delay from the Ice is in
“ the Entrance into the Streight; for the firſt forty
“ Leagues from thence the Quantity is leſs, and they
“ paſs on with leſs Difficulty; and after getting into the
“ Bay, the North-weſt Side is the freeſt from Ice; the
“ Bottom of the Bay is full of low flat Ice, which is all
“ diſſolved in the latter end of Summer. Upon the
“ Whole, except two Ships, which were loſt in King
“ *William*'s Reign, and a *French* Ship, after an Engage-
“ ment with our Ships when they attacked Fort *Nelſon*,
“ I have heard of none, except the Ships already
“ mentioned, which have been loſt in the Voyage. The
“ two Ships which went out with *Barlow*, in 1719,
“ to find the North-weſt Paſſage, contrary to the Incli-
“ nations of the Company, if they did not make the
“ Paſſage, were probably, in the Winter, ſurpriſed
“ by the Natives, and were not loſt in the Ice; for they
“ ſay that the Natives, in about Latitude 63 Degrees,
“ where they ſuppoſe they were loſt, are ſhyer ſince
“ that Time in trading with the Company's Sloops;
“ which they apprehend to be from a Conſciouſneſs of
“ Guilt, fearing that if it were known they ſhould
“ ſtill be puniſhed for it. Since therefore the greateſt
“ Danger from the Ice, is in paſſing the Streight, and
“ ſo few Accidents have happened in ſo many Years,
“ the Navigation, I think, cannot be called dangerous,
“ though it has been ſo apprehended; and not equal to
“ the Whale-fiſhers, who go annually to *Spitſberg* and
“ *Davis*'s *Streights* to Latitude 78 and 80 Degrees,
“ without any Objection to that Navigation, either
“ by the *Dutch*, *Hamburghers*, *Danes*, *Biſcayners*, or
“ *Engliſh*.”

He concludes from thence, that the opening the Trade and ſettling in the Bay, would prove a great Benefit to, and great Improvement of, our Trade, which might be vaſtly increaſed, as well in reſpect to Furs as to Mines, and the Whale-Fiſhery; all which might be carried on with the Aſſiſtance of the *Indians*, and would turn to a very high Profit, even ſuppoſing that no Paſſage to the North-weſt ſhould ever be found; but ſhould future Experience demonſtrate that this Gentleman's Notions are, in this Reſpect, well founded, and this long ſought-for Paſſage ſhould actually be diſcovered, it would then certainly follow that this Country, ſo little known and ſo much deſpiſed till very lately, would become of more Conſequence to us than almoſt any Colony in *America*. Here let me take the Liberty of obſerving what hitherto, as far as I know, has never yet been conſidered: That if ſuch a Paſſage to the North-weſt ſhould be diſcovered before theſe Countries are tolerably planted, the *French* would have a fair Opportunity of ſupplanting us in the Advantages expected from that important Attempt; and perhaps we ſhould then be forced to fight for the Poſſeſſion of Countries that are now thought not worth the having.

It may likewiſe deſerve ſome Thought, whether it be not better to attempt ſuch Settlements without Loſs of Time, as muſt at all Events be highly uſeful and ſerviceable to this Nation, by dividing the *French* Settlements in *Canada*, and on the *Miſſiſſippi*, from each other, than to wait till the Importance of ſuch Settlements ſhall appear in ſo glaring a Light, as they muſt immediately do if ſuch a Paſſage ſhould be diſcovered; for we ought to remember, from the famous Inſtance of our being diſappointed in our Deſign of ſettling the Iſlands of *St. Lucia* and *St. Vincent*, that it is a very difficult Matter, in a Time of full Peace, for us to acquire any Advantage in Point of Commerce, at the Expence of the *French*, who, in ſuch a Caſe, would not fail to take the ſame vigorous Meaſures that they did in the Caſe before-mentioned. I have taken the more Pains to place this Matter in a fair and true Light, becauſe I am perſuaded this is the Time in which only it can be conſidered to Advantage; for if the Caſe now in View (I mean the Diſcovery of a North-weſt Paſſage) ſhould ever come, as I am convinced, ſooner or later it will come to be the Caſe in Fact, the Face of Affairs will be quite changed, and this new Rout to the *South-Seas* and *Eaſt-Indies*, will produce ſuch an Alteration in the whole Commerical Syſtem of *Europe*, that Things will be ſeen to be then of the utmoſt Conſequence, which at preſent moſt People look upon as Dreams and Viſions, notwithſtanding the late Sanction given them by the Wiſdom of the Parliament.

But it becomes a prudent and ſenſible People, and above all it imports a maritime Power, to conſider Things in time, and while what is propoſed for their Benefit is eaſy, or at leaſt practicable; and not to defer and delay Things, till from being troubleſome and difficult they come to be abſolutely impoſſible. We know what ſharp and cutting Remarks have been made on the Meanneſs of King *James*'s Spirit, in ſuffering the *Dutch* to deſpoil us of the Spice Trade: We cannot but remember the ſevere Reflections on Queen *Anne*'s Miniſtry, for not ſecuring to us *Cape Breton*, and therefore we ſhould be cautious of falling a third time into the ſame Miſtake, and of running the Hazard of making a great Diſcovery, ſuch as all the World allows that of the North-weſt Paſſage would be, rather for other Peoples Benefit than our own, ſince it muſt paſs for a Blunder, greater than ever was made by our Anceſtors, and would render us effectually ridiculous in the Eyes of lateſt Poſterity.

12. The Method we have taken in deſcribing the Acquiſitions of our Nation in *America*, leads us next to ſpeak of the noble Country of *Penſylvania*; the beſt projected, and one of the moſt flouriſhing of our Colonies on the Continent of *North America*. We have before mentioned Admiral *Penn*, who in Conjunction with Col. *Venables*, conquered the Iſland of *Jamaica* for this Nation; he became afterwards Sir *William Penn*, and ſtood in as high a Degree of Credit with King *Charles* II. and his Brother the Duke of *York*, as any Seamen of that Time, as indeed he very well deſerved; for, with Abilities ſuperior to moſt, he had as great Modeſty as any Man, and was ready, upon all Occaſions, to ſerve his Conntry in any Station that was found practicable. It was this excellent Diſpoſition of Mind that ſecured him from Danger under one Government, and recommended him to Preferment under another; for when the

Duke of *York* propoſed to take the Command of the *Engliſh* Fleet upon himſelf in the *Dutch* War, as Lord High Admiral; he made Choice of Sir *William Penn* as the moſt experienced, and moſt capable Officer to ſerve under him, which he did with equal Satisfaction to his Royal Highneſs, and Credit to himſelf; eſtabliſhing thereby ſuch a Reputation at Court, as laſted during his Life, and proved no leſs uſeful to his Son.

But Sir *William Penn* did not long enjoy his high Station, and dying in the *Weſt Country* where he was born, was buried in *Redcliff* Church in *Briſtol*, having, in reward of his Services, had a Promiſe of the Grant of this Country from King *Charles* the IId. Sir *William* had a Kinſman who was one of the firſt Planters in *New England*, and it is doubtleſs from him that he had exact and particular Information of the Advantages that might be made of Lands and Settlements in this Continent of *America*. But young Mr. *Penn* did not for ſome Years apply himſelf ſtrenuouſly to ſolicit the promiſed Grant, till at laſt finding his Friends, the Quakers, were haraſſed all over *England* by ſpiritual Courts, he reſolved to put himſelf at the Head of as many as would go with him and remove to this Country, of which he obtained the Grant in the Year 1679.

He gave it the Name of *Penſylvania* ſome Time before he was actually inveſted with it, and ſo it is called in the original Patent, bearing date *March* the 4th 1680. "It contained all that Tract of Land in *America*, with all the Iſlands belonging to it, from the Beginning of the 40th Degree of North Latitude to the 43d Degree, whoſe Eaſtern Bound, from twelve *Engliſh* Miles above *Newcaſtle*, *alias de la War Town*, runs all along upon the Side of *de la War River*." So that 'tis bounded on the Eaſt by that Bay and River, and the Eaſtern Sea; on the North by *Weſt New Jerſey*, or rather *New York*, for it runs a great Way above the *Jerſeys*; on the Weſt by the *Indian* Nations, above the Heads of *Suſquahanaugh* and *de la War* Rivers, by which we ſee it ſtretches far within Land, that River running through it about two or three hundred Miles; on the South 'tis bounded by *Maryland*, and reaching from *Penſbury* near the Falls of the River to *Hanlope*, near the Mouth of the Bay, above one hundred and fifty Miles directly; but 'tis narrow all along, being very much crowded in the Breadth by *Maryland*.

The Bounds and Extent we have mentioned are in the original Grant; but Mr. *Penn* having afterwards obtained Part of *Nova Belgia* of the Duke of *York*, it was added to the Country in the firſt Grant, and both together called *Penſylvania*, which is divided into three upper and three lower Counties; the three upper Counties, *Buckingham*, *Philadelphia* and *Cheſter*, are the *Penſylvania*, ſo called in King *Charles*'s Grant. The three lower Counties, *Newcaſtle*, *Kent*, and *Suſſex*, are taken out of *Nova Belgia*, or the Province of *New York*. The upper Counties end at *Marcus Hook*, four Miles below *Cheſter Town*; the lower run along the Coaſt one hundred and twenty Miles, and are forty Miles deep towards *Maryland*. Thus the whole Province of *Penſylvania* from the *Falls Townſhip*, to twenty Miles belong *Hanlope* or *Cape William*, is in Length three hundred and thirty Miles, and in Breadth two hundred. The River *de la War*, above and below the Falls, for a good Length, is called the *Freſhes*, and near the Mouth are the Marſhes, very fertile and profitable.

As ſoon as Mr. *Penn* had got his Patent, he invited ſeveral Perſons to purchaſe Lands under it. Though he did not ſatisfy himſelf with the Title granted him by *Charles* the IId. and his Brother. He alſo bought the Land of the *Indians*. The *Swedes*, who had encroached upon the *Dutch*, the firſt Planters here, as well as at *New York*, ſettled upon, or near, the *Freſhes* of *de la War*. The *Fins*, or Inhabitants of *Finland*, part of the Kingdom of *Sweden*, applied themſelves chiefly to Huſbandry. The King of *Sweden* appointed a Governer here, who had often Diſputes with the Governor that preſided over the *Dutch*. The latter applied themſelves moſtly to traffic, living upon, or near, the Bay, and by the Neighbourhood of *New York*. The *Dutch* alſo were too powerful for the *Swedes*, who, finding they could not maintain their Ground, ſubmitted to their ſtronger Neighbours. Accordingly *John Riſeing*, the *Swediſh* Governor, made a formal Surrender of the Country to *Peter Styerſont*, Governor for the States General, after which this Province continued ſubject to their Republic till the *Engliſh* drove the *Dutch* out of *New Amſterdam* or *New York*, which made the Poſſeſſion of thoſe Territories the more eaſy to Mr. *Penn*.

There were a few *Engliſh* here before Mr. *Penn* ſent over the firſt Adventurers under his Patent, over whom he placed, as Governor, Colonel *William Markham*, his Nephew, to whom both *Dutch* and *Swedes* ſubmitted. Thoſe that went over, were generally Diſſenters, from *London*, *Liverpool*, and eſpecially *Briſtol*, for the Weſt of *England* abounded with Diſſenters more than other Counties; they ſhipped themſelves at *Briſtol* in great Numbers for *Penſylvania*. Mr. *Thomas Gouldney*, and Mr. *Duddleſtone*, two Tobacco Merchants of that City, about this Time fitted out the *Unicorn*, a Ship of three hundred Tons, for this Voyage; which putting into *Start*. took in a great many from *Bridgewater*. Mr. *Penn* had ſold twenty thouſand Acres of his Property to Mr. *James Claypool*, Mr. *Nicholas Moor*, Mr. *Philip Ford*, and others, who formed a Company, and had a Street, and a Side of a Street, ſet out for them in *Philadelphia*, with four hundred Acres of Land in the City Liberties. They ſet up a Tannery, a Saw-Mill, a Glaſs-Houſe, and a Whalery, of the two latter I ſuppoſe they never made any great Profit. The Proprietors Conditions of Sale were theſe: Buyers purchaſed after the Rate of twenty Pounds for one thouſand Acres, ſo that he put four hundred Pounds in his Pocket immediately, but that was a Trifle to what went out of it for the Grant and Experiments to people and ſettle the Country; the Quit-Rent was twelve Pounds for every hundred Acres. This was cheap enough, but I think the Renters were not ſo well uſed, for they were to pay ſo much an Acre yearly. Thus theſe twenty thouſand Acres which he ſold the Company, would, if rented, have brought him one thouſand Pounds a Year. Since that Time the Value of Land is ſo much riſen, that I have been credibly informed it has ſold for twenty Years Purchaſe, at ſeveral Miles diſtant from *Philadelphia*; and that near it has gone at a Pound an Acre, and in ſome Places at more than a Pound an Acre yearly.

We have mentioned near four thouſand Acres to be at this Time parcelled out for Sale, ſome at ſixty Miles diſtant from *Philadelphia*; but none of theſe Parcels will fetch a tenth Part of ſuch Rates as theſe. Servants, Men and Women, were to have fifty Acres when their Times were out, and Owners of Land fifty Acres a Head for ſuch Servants, Men or Women. In the Year 1681 Mr. *Penn* went himſelf to *Penſylvania*, and carried with him, and there went after him, two thouſand Souls; a prodigious Augmentation in leſs than a Year! And he might with Reaſon ſay as he did, it was made at once a Country. As ſoon as he arrived he took the Government into his own Hands, and entered upon Treaties with the *Indian* Kings, for purchaſing his Patent-Lands, and others, as is before hinted. One may aſſure one's ſelf he gave but little for them, and if the *French* and *Spaniards* ſcorned to pay ſuch a Compliment to natural Right, and choſe rather to ſeize the Lands of the *Indian* Natives by Violence, it was what might have been expected from the Religion and Tyranny of the Countries from whence they came. Twenty Miles of Territory were thus bought of the *Indians* for leſs than an Acre of the beſt Ground about *Philadelphia* would be valued at now. But the *Indians*, in a little Time, obſerving what Profit the *Engliſh* made of the Land they ſold them, and that by the coming over of ſuch Numbers every Year, it would be more and more wanted, they raiſed the Price ten times as much as it was at firſt, and yet it was unconſcionably cheap, and for a long Time purchaſed by the Mile, and not by the Acre. Indeed they knew not what to do with it, they had not Hands enough to cultivate a hundredth Part; and if they could have raiſed ſuch a Product there was no body to buy it. The Purchaſe was all clear Gains to them;

and by the coming of the *Engliſh*, the peltry Trade became ſo profitable, that they were ſoon in a Condition to better their Manner of houſing, cloathing, and living, as they did very much, and are now in theſe Articles as well accommodated as the *European* Peaſantry, in many Places.

When the Province began to be planted, almoſt to the Mouth of *de la War*, it was laid out into the beforementioned Counties, in order to chuſe Repreſentatives, and eſtabliſh Courts for the Diſtribution of Juſtice. The original Draught of the Conſtitution for this Province was made by that great Lawyer Sir *William Jones*, and by it the Governor and People have a legiſlative Power. Sir *William Jones* had too much Underſtanding, Virtue, and Honour, to throw the People out of the Queſtion, when their Religion, their Liberty, their Well-being in this World and the next, were ſo nearly concerned in it. No Law can be here made, nor Money raiſed, but by Conſent of the Inhabitants. The Rights and Freedom of *England* were to be in force. They were to make no Law againſt Allegiance, and then they might enact what Laws they pleaſed for the Proſperity and Security of the Province. Mr. *Penn* held two General Aſſemblies while he was in the Country, and with ſuch Unanimity and Diſpatch, that tho' they made Laws by Scores, no leſs than ſeventy, yet they had done their Buſineſs in three Weeks Time. They preſented the Proprietary with an Impoſt on certain Goods, but he remitted it; which was artful enough, to have a Thing given on Purpoſe to give it away again to thoſe that gave it. He eſtabliſhed Courts of Juſtice in every County, with proper Officers, to prevent Law-ſuits and Contentions. Among theſe paſſive People there are alſo three Peace-makers, choſen by every County Court, in the Nature of common Arbitrators, to hear and end Differences between Man and Man. Every Spring and Fall there is an Orphans Court in each County, to inſpect and regulate the Affairs of Widows and Orphans.

Mr. *Penn* was viſited by the Kings, and Queens, and great Men among the *Indians*, of whom the greateſt did not think himſelf too good to go on the Proprietary's Errands if he had thought fit to ſend him. Both the *Dutch* and the *Swedes*, within this Juriſdiction, were very well pleaſed with his coming, and his Conduct; and there were, at that Time, almoſt as many *Swedes* and *Dutch* in *Penſylvania* as *Engliſh*. Mr. *Penn* ſtaid here above two Years, till he had ſettled Things to his own and the People's liking; he then returned to *England*, to forward the Affairs of the Propriety there, as he had done here: He was generous and free of his Thoughts and Expreſſions, which were not always ſufficiently guarded; and after the Revolution he became ſuſpected, from his Credit with King *James*. That we may form ſome Idea of the Manner in which this truly great Man acted in this Part of the World, and eſtabliſhed his Government upon the ſolid Baſis of a perfect Agreement with the Natives, let us hear what he himſelf ſays upon this ſubject: Mr. *Penn*, in a *Letter to his Friends in* England, on the Situation of his Affairs at that Time, relates, That he had attended the *Indian* Kings and their Councils in ſeveral Treaties, for the Purchaſe of their Lands, and for adjuſting the Terms of Trade between them. And that their Order was thus: “ Their King (ſays Mr. *Penn*) was “ ſeated in the Middle of an half Moon, or Semi- “ circle; his Council, the Old and Wiſe, ſitting on each “ Hand; behind them, at a little Diſtance, ſat the “ young Men, in the ſame Figure: Having reſolved “ their Buſineſs, the King commanded one of them to “ ſpeak to me. He ſtood up, and came to me, and “ in the King's Name ſaluted me; taking me by the “ Hand, and telling me; he was ordered by his King “ to ſpeak to me, and that now it was not he, but the “ King that ſpoke, becauſe what he ſhould ſay was the “ King's Mind. He firſt prayed me to excuſe them, “ that they had not complied with me in a former Meet- “ ing. He feared there might be ſome Fault in the “ Interpreter, being neither *Indian* or *Engliſh*; beſides, “ it was the *Indian* Cuſtom to deliberate before they “ reſolved; and that if the younger People, and Owners “ of the Land, had been as ready as he, I had not met “ with ſo much Delay.” Having thus introduced his Matter, he fell to the Bounds of the Land they had agreed to diſpoſe of, and the Price. During the Time this Perſon ſpoke, not a Man of them was obſerved to whiſper or ſmile; the Old were grave, the Young reverend in their Deportment; when they ſpoke, which was but ſeldom, it was warmly and elegantly. I have never ſeen more natural Sagacity, conſidering them without the Help of Tradition; and he will deſerve the Name of Wiſe that is too hard for them in any Treaty about a Thing they underſtand. When the Purchaſe was agreed, great Promiſes paſſed between us, of Kindneſs and good Neighbourhood; and that the *Indians* and *Engliſh* muſt live in Love as long as the Sun gave Light. After which another made a Speech to the *Indians*, in the Name of all the Sachems, or Kings; firſt, to tell them what was done; next, to charge and command them to love the Chriſtians, and particularly to live in Peace with me, and the People under my Government: That many Governors had been in the River, but that no Governor had come himſelf to live and ſtay there before, and having now ſuch an one that had treated them well, they ſhould never do him or his any Wrong. At every Sentence of which they ſhouted, and ſaid *Amen*, in their way.

This Conduct of his had ſo good an Effect upon the *Indians*, that he had him always in the higheſt Veneration, as they ſtill have to his Memory, of which the Reader will find an exemplary Proof in the following Speech, made to Sir *William Keith*, Governor of this Country in 1722; only it may not be amiſs to obſerve, that *Onas* ſignifies, in the *Indian* Language, a *Pen*; and therefore this is the Name the *Indians* have given to our Proprietor and all his Succeſſors, or Repreſentatives.

“ Brother *Onas*, You told us how *William Penn*, that “ good Man, did, on the firſt Settlement of the Pro- “ vince of *Penſylvania*, make Leagues of Friendſhip “ with the *Indians*, and treated them like Brethren; and “ that, like the ſame good Man, he left it in Charge to “ all his Governors who ſhould ſucceed him, and to all “ the People in *Penſylvania*, that they ſhould always “ keep the Covenant and Treaties he had made with the “ five Nations, and treat them with Love and Kindneſs. “ We acknowledge that his Governors and People have “ always kept the ſame honeſtly and truly to this Day. “ So we, on our Part, always have kept, and for ever “ ſhall keep Peace and Friendſhip with a good Heart, “ to all the People of *Penſylvania*. We thankfully re- “ ceive and approve of all the Articles in your Propo- “ ſition to us, and acknowledge them to be good, and “ full of Love: We receive and approve of the ſame “ with our whole Hearts; becauſe we are not only made “ one People by the Covenant Chain, but are alſo Peo- “ ple united in one Head, one Body, and one Heart, “ by the ſtrongeſt Ties of Love and Friendſhip.

“ Brother *Onas*, you deſire there may be a perpetual “ Friendſhip between you and the five Nations, and be- “ tween your Children and our Children; and that the “ ſame may be kept as long as the Mountains and Rivers “ endure. All which we like well, and on our Parts “ deſire, that the Covenant and Union made with a true “ and clean Heart between you and us, may laſt as long “ as the Sun and Moon ſhall continue to give Light. “ And we will deliver this in Charge to our Children, “ that it may be kept in Remembrance with their Chil- “ dren and Childrens Children to the laſt Ages: And “ we deſire that the Peace and Tranquillity that is now “ eſtabliſhed between us may be as clear as the Sun “ ſhining in its Luſtre without any Cloud or Darkneſs, “ and that the ſame may continue for ever.

“ Brother *Onas*, We have well conſidered all you “ have ſpoken, and like it well; becauſe it is only the “ renewing former Leagues and Treaties, made between “ the Government of *Penſylvania*, and us of the five “ Nations, which we always believed we were obliged “ to keep. And as to the Accident of one of our

“ Friends being killed by ſome of your People, which “ has happened by Misfortune, and againſt our Will; “ we ſay, that as we are all in Peace, we think it hard “ that the Perſons who killed our Friend and Brother “ ſhould ſuffer; and we do in the Name of all the “ five Nations forgive the Offence, and deſire you will “ likewiſe forgive it; and that the Men who did it may “ be releaſed from Priſon, and ſet at Liberty to go whi- “ ther they pleaſe; and we ſhall eſteem that as a Mark “ of Regard and Friendſhip for the five Nations, and as “ a farther Confirmation of this Treaty.” Upon theſe Principles, which are more likely to be obſerved in this than in moſt of our Colonies, the Friendſhip of the *Indians* may be preſerved as long as they remain a People; which ſhews how poſſible it might have been to have maintained a like Correſpondence with them in other Places, which would not only have ſaved a great deal of Blood-ſhed, and have contributed to the quick Growth of the Colonies ſettled in the Countries, inhabited by ſuch *Indians*, but would have been very uſeful in many other Reſpects: Since it is allowed where the *Indians* are treated as in *Penſylvania*, with ſtrict Juſtice and Humanity, they are as firm Allies as any in the World; and in that Quality more capable of doing Service, than if reduced to be either Slaves or Subjects; becauſe living as they do, they preſerve their Strength and Activity, and enjoy all the Liberty they can deſire, and are very willing to fight for thoſe under whoſe Protection they enjoy it.

13. We will now proceed to a more particular Deſcription of this famous Settlement, having before given an Account of the Situation of the Country in general, and of its Diviſion into Counties. The chief Rivers in *Penſylvania* are, the River *de la War*, which riſing far North in the Country of the *Iroquois*, takes it Courſe to the Southward, and dividing this Province from that of *New Jerſeys*, falls into the *Atlantic Ocean*, between the *Promontories* of *Cape May*, and *Cape Hanlope*, being navigable for two hundred Miles and upwards with large Veſſels; but has a Cataract or ſteep Fall in it above *Briſtol*, which renders the Navigation impracticable to the Northward of the County of *Bucks*. The ſecond River in this Province, is that of *Suſquahanaugh*, which, riſing likewiſe in the Country of the *Iroquois*, runs South through the Middle of *Penſylvania*, and falls into the Bay of *Cheſepeak*, being navigable for large Ships. The third River is *Schoolkill*, which having its Source in the Country of the *Iroquois*, runs South almoſt parallel to the Rivers *de la War* and *Suſquahanaugh*, and at Length turning to the Eaſtward, falls into *de la War*, at the City of *Philadelphia*. This River is alſo navigable for large Ships as far as the City of *Philadelphia*, and for Boats above an hundred Miles higher. Theſe Rivers, and the numerous Bays and Creeks in the Bay *de la War*, capable of containing the largeſt Fleets, render this Country admirably ſituated to carry on a foreign Trade.

In the County of *Buckingham*, the moſt northerly of any in this Province, the chief Town is *Briſtol*, ſituated on the River *de la War*, oppoſite to *Burlington* in *New Jerſey*, and twenty Miles North of the City of *Philadelphia*. In this Country alſo lies the Manor-Houſe of *Penſbury*, elegantly built by Mr. *Penn*, the firſt Proprietor, and ſituate on an Eminence which commands the Country, being almoſt ſurrounded by the River *de la War*. The Country of *Philadelphia* lies South of that of *Bucks*, and in it is the celebrated City of *Philadelphia*, the Capital of the Province, ſituated in 40 Degrees 30 Minutes North Latitude, being one of the fineſt Plans of a Town that was ever formed. It is an Oblong of two Miles, extending from the River *de la War* to the River *Schoolkill*, the Eaſt-end fronting the River *de la War*, and the Weſt the River *Schoolkill*, each Front being a Mile in Length. Every Owner of one thouſand Acres has his Houſe in one of the two Fronts, facing the Rivers, or in the high Street, running from the Middle of one Front to the Middle of the other; and every Owner of five thouſand Acres, has an Acre of Ground in the Front of his Houſe, and the reſt half an Acre for Gardens and Court-Yards In the Centre of the Town is a Square of ten Acres, ſurrounded by the Town-Houſe, and other public Buildings, and each Quarter of the City is a Square of eight Acres. The high Street, which runs the whole Length of the Town, is an hundred Feet wide, parallel to which run eight Streets, which are croſſed by twenty more at right Angles, all of them thirty Feet wide, and ſeveral Canals are let into the Town from each River, which add to the Beauty and Conveniency of the Place. There is alſo a fine Quay two hundred Feet ſquare, to which Ships of four or five hundred Tons may come up, with wet and dry Docks for building and repairing of Ships; Magazines, Warehouſes, and all manner of Conveniencies for importing and exporting of Merchandize; there are already fourteen or fifteen hundred Houſes in the City, moſt of them well built with Brick, but are ſtill a great many more wanting to compleat the Plan: However, more could not have been expected than has been done in ſo ſhort a Time, the Ground not having been laid out much above fifty Years.

The Town of *Oxford* is ſituated likewiſe in the County of *Philadelphia*, where a Miſſionary is maintained by the Society for propagating of the Goſpel. *Germain Town*, ſituated to the Northward of the City of *Philadelphia*, alſo is ſaid to be a thriving populous Place, inhabited chiefly by the *Dutch*, or thoſe of *Dutch* Extraction. In this County is the City of *Radnor*, ſituated on the Southweſt-ſide of *Schoolkill River*, being the Capital of a large Country, planted by the *Welch*, and extreamly well improved by them. To the South of the County of *Philadelphia* lies that of *Cheſter*, the Capital whereof is the Town of *Cheſter*, ſituate on the River *de la War*, which is about three hundred Miles broad at this Place; and to the Southward of *Cheſter* lies the Town of *Chicheſter*; either of thoſe Ports are capable of receiving and harbouring the largeſt Fleets, ſecure from Storms; the County of *Newcaſtle* lies South to that of *Cheſter*, the capital Town being of the ſame Name. This is ſaid to be a Town of the briſkeſt Trade in the Province, next to that of *Philadelphia*, and has an Iron Mine in the Neighbourhood of it. The Town of *Apoquinemink* lies upon the River *de la War*, South of *Newcaſtle*, and is a Place of good Trade. The County of *Kent* lies South of that of *Newcaſtle*, the chief Town whereof is *Dover*, being a commodious Port. The moſt Southern County is that of *Suſſex*, the capital Town whereof is *Lewes*, being a ſecure Harbour and a Town of Trade.

The Air here is ſweet and clear; the Fall begins about the 20th of *October*, and laſts to the Beginning of *December*; froſty Weather, and cold Seaſons are frequent; but as in moſt Countries where are ſuch Seaſons the Air is dry and hungry; the River *de la War* is ſometimes frozen over, notwithſtanding its Breadth. The Spring laſts from *March* to *June*, but the Weather then is more inconſtant than in the other Seaſons, which it generally is in other Countries. The Heats are extraordinary in the Summer Months, *July*, *Auguſt*, and *September*, but alleviated by cold Breezes, which make them very tolerable. The Wind is South-weſt during the Summer, but generally Northweſterly, Spring, Fall, and Winter; which blowing from the froſty and ſnowy Mountains, and Lakes of the *Terra Canadenſis*, is, doubtleſs, a main Reaſon of the exceſſive Cold here in Winter. The Soil in this Tract of Land is in ſome Places a yellow and black Sand, and in others a loomy Gravel, in others a fat Earth, like the Vales in *England*; eſpecially by inland Brooks and Rivers, where the Lands in this Country are moſtly three to one richer than thoſe that lie by navigable Rivers. There is alſo found a black hazle Mould, on a ſtony Bottom. The Earth is fruitful, fat, and eaſy to be cleared, becauſe the Roots of the Trees lie almoſt on the Surface of the Ground. Some Allowance muſt be made for Mr. *Penn's* Property in the tempting Deſcription he gives us of the Country. We have ſaid enough of the Rivers and Creeks in it, and ſhewn how commodious they are for Navigation and Communication; but among other Waters, Mr. *Penn* mentions mineral Waters: Theſe Springs are about two Miles from *Philadelphia*, at a happy Diſtance from Water-drinkers, but the Number of them, is ſince that, leſſened extreamly, and we need not inſiſt on their Virtue.

Here are Trees of almoſt all Sorts, Oak, red, white, and black Aſh, Beech, *Spaniſh* Cheſnuts, Cedar, Wallnut, Cypreſs, and Swamp; the moſt durable of all are Poplar, Gumwood, Hickery, Saſſafras; and as for Shrubs, Snakeroot, Sarſaparilla, Salop, Spruce, and Cranberries; Wheat, Barley, Oats, Rye, Peas, Beans, Water Melons, Muſkmelons, Apples, Pears, Cherries, Apricots, Carrots, Turneps, Parſnips, Onions, Cucumbers, Quinces, *&c.* are in great Plenty here; as alſo *Indian* Corn, Hemp, Flax, *&c.* It is common for one Buſhel of Corn ſown here to yield forty, often fifty, and ſometimes ſixty Buſhels. One Mr. *Edward Jones* had for one Grain of *Engliſh* Barley ſeventy Stalks and Ears of that Corn, in his Plantation on the *Schoolkill.* Of living Creatures there are for Food and Trade, Deer, the Elk as big as a ſmall Ox, Rabbits, Raccoons, Beaver; plenty of Oxen, Cows, and Sheep; of the latter, it is common for Farmers to have four or five hundred in a Flock. Horſes, ſome very good, and handſome enough. Of Fowl here are very fine Buſtards forty or fifty Pounds Weight, Pheaſants, Heath Birds, Pigeons, Partridges, Clouds of Blackbirds, Swans, Geeſe, Braindes, Tucks, Teal, and Snipe. The Fiſh here are Sturgeons, Herrings, Eels, Smelts, and Perch; the latter caught in abundance in *de la War Bay*; and in the River above the Freſhes, Oyſters, Crabs, Cockles, and Muſcles. There are alſo Rock, Shat, Catſhead, Sheepſhead, and other Fiſh, not worth our particular Regard.

We need not wonder, that in a Country ſo fruitful and ſo pleaſant, and where there was ſo clear a Proſpect of living happily, with moderate Induſtry, People ſhould reſort in ſuch Numbers. At firſt, without doubt, Religion was a ſtrong Motive, and the Quakers willingly followed Mr. *Penn*, from a Country where they were perſecuted, to a Land of Plenty and Peace. But, in Time, and indeed in a little Time, this Argument ceaſed, and People reſorted thither as they did to the other Colonies, upon the ordinary Motives of Gain and Trade; we may, however, venture to aſſert that Mr. *Penn*'s original Contract, for ſo the firſt Conſtitution drawn by him was ſtiled, had a very great Influence in procuring Inhabitants, ſince it muſt be allowed there never was a more beneficent Scheme of Government deviſed by the Wit of Man.

By degrees, however, this alſo has been ſomewhat altered, not by the Proprietor or thoſe acting under his Authority, but at the Deſire and on the Requeſt of the People, with reſpect to whom it may poſſibly be true, that ſuch Alterations, in proceſs of Time, might become neceſſary. The Spirit, however, of Mr. *Penn*'s Inſtitution is ſtill preſerved, and the People here are as free, and as well, and as cheaply governed, as in any Part of the known World. A very ſtrong Proof of this may be drawn from the greateſt Error in Government that was ever committed there, which was laying a Tax of Five Shillings a Head upon all new Comers; which ſhews, that they were once in ſome Apprehenſion of being over-ſtocked; but this Law was very ſoon repealed, as it ought to be At preſent it would be a very difficult Thing to pretend to compute the Number of People in this flouriſhing Colony, but we may form ſome Notion of it from the following Inſtance, which is very certain, *viz.* that the Inhabitants of *Philadelphia* in 1740 were full fifteen thouſand.

14. As to the Commerce of *Penſylvania* with reſpect to *Europe* and *America*, the Caſe, according to the beſt Accounts we have, ſtands thus: Their Merchandize conſiſts of Horſes, Pipe-Staves, Pork, Beef, and Fiſh, ſalted and barrelled up, Skins and Furs; all Sorts of Grain, *viz.* Wheat, Rye, Peas, Oats, Barley, Buck-Wheat, *Indian* Corn, *Indian* Peas and Beans, Pot-aſhes, Wax, *&c.* and in return for theſe, they import from the *Caribbee Iſlands* and other Places, Rum, Sugar, Moloſſes, Silver, Negroes, Salt, and Wine; and from *Great-Britain* Houſhold-Goods and Cloathing of all Kinds, Hard-Ware, Tools, and Toys. They have alſo ſome Rice, but no great Quantities and a little Tobacco of the worſt Sort. Their Trade with the *Indians* conſiſts but in a few Articles; they receive of the Natives chiefly Skins and Furs of their wild Beaſts, for which they give them Cloathing, Arms, Ammunition, Rum, and other Spirits in return. This, as well as other Northern Colonies, has alſo a clandeſtine Trade with the *Spaniards* upon the Coaſt of *Terra Firma*, *&c.* furniſhing them with *European* Goods and Merchandize, for which they receive chiefly Dollars in return; and they alſo trade to the Bays of *Honduras* and *Campeachy* for Logwood, by Connivance, as the *Spaniards* ſay; but the Subjects of *Great-Britain* inſiſt that they have a Right to that Trade, and as we have already ſhewn, they do not inſiſt upon this, without juſt Grounds, in the Opinion of thoſe who are the beſt and propereſt Judges of that Matter. But after all, it muſt be admitted, that *Penſylvania* has no ſtaple Commodity, which, however, is not juſtly chargeable upon the Inhabitants of this Colony; who, notwithſtanding this, have never ſet up any Manufactures of their own.

But the Point to be enquired into is, Whether they might not have ſuch a ſtaple Commodity if they went about it themſelves induſtriouſly, and received from hence proper Encouragement? It is a Point out of Diſpute, that no Country in the World is more proper than *Penſylvania* for producing Hemp and Flax; and with reſpect to theſe, we ought ſeriouſly to conſider, that there is nothing plainer than that Hemp and Flax are ſo uſeful in Navigation and Trade that we cannot do without them; the firſt for Cordage of all Sorts, the latter for making Sail-Cloth, as well as for the Linen Manufactures carried on in this Kingdom. The Neceſſity we are under for theſe Commodities ought to put us upon all imaginable Care how to provide them, that we may not fall under the ſame Neceſſity for them that we did in the Year 1703 for Pitch and Tar, when the Government of *Sweden* abſolutely refuſed to let us have them for our Ready-Money, otherwiſe than in their Shipping, from their Tar Company here, at their own Price, and only in ſuch Quantities as they thought fit. Upon that Diſappointment, the Government, by allowing a conſiderable Encouragement for carrying on the Manufactures of Pitch and Tar, had ſufficient Quantities from our own Plantations; and it is greatly to be wiſhed the like Encouragement was given for raiſing Hemp and Flax; and as all Sorts of Naval Stores may raiſed with ſo many Advantages to this Kingdom, it would be unaccountable to leave us dependent, and at an Uncertainty for them. It is very well known, that our Land is too dear for Hemp and Flax, and what does grow here (though it is tough, and makes ſtrong Linen) neither dreſſes ſo kindly, nor whitens ſo well as that which grows in hotter Climates. In *Ruſſia* the beſt Hemp and Flax grow in the ſouther moſt Parts of the Empire, where the Summer is hot and the Air clear, and yet the Flax is not accounted ſo good as that which grows in *Egypt* or *Italy.* *Egypt* has always been eſteemed for its Linen, and even now ſupplies *Leghorn* with large Quantities, and the Coaſt of *Syria*, *Aſia Minor*, *Smyrna*, *Conſtantinople*, and other great Cities, have a Supply of Hemp and Flax from thence.

All our Colonies (which run twelve or fourteen hundred Miles in Length, all the way bordering upon the Sea) have very hot Summers; the ſouthermoſt Parts of them lie near the ſame Latitude with *Egypt*, and the North Part much about the ſame with *Ancona* or *Bologna* in *Italy*, where Hemp and Flax grow; therefore, we have the greateſt Proſpect to receive mighty Supplies of Hemp and Flax from them. Part of the Land in the Colonies are very rich, and of ſo ſmall a Value, there will be Opportunity of breaking up freſh as often as there is Occaſion to change the Ground, which if laid down will recover itſelf again without the Charge of Manuring, as we do here, to the very great Damage of our Ploughing Lands. Nothing impoveriſhes Land more than Hemp and Flax; and though it is manured, that alone will not do ſo well, for the Land ought to be changed after three or four Crops, and generally the fineſt and fatteſt Pieces are converted to that Uſe. Thoſe great Conveniencies of having Land ſo very cheap, and ſo fine a Climate, which we know produces excellent Hemp and Flax, ſo commodiouſly ſituated along the Sea Coaſts, with ſuch Numbers of large Rivers running up the Country to the moſt inland Settlements, where Proviſions may be raiſed at ſo ſmall a Charge, and where Work may be done by the Labour of Slaves, almoſt as cheap as in *India*, gives Ground to hope, that we may manufacture Linen here cheaper than any Part of *Europe* can import them upon us, and the Colonies be as profitable to us, by raiſing rough Materials to carry on the Linen Manufacture, as the *Suſſex* and other Downs are, for ſupplying Wool for that Manufacture, the Profits of which we have valued ourſelves ſo much upon, that we have ſet the reſt of *Europe* upon being our Competitors therein.

Now as the Woollen Manufacture, eſpecially the coarſe Part has ſpread itſelf of late into ſeveral Parts of the Kingdom, which has exceeded the Demand, and cauſed great Stocks to remain on Hand, if thoſe rough Materials of Hemp and Flax were prepared in our Plantations, the People in *North Britain*, &c. would ſoon find the Advantage of falling upon that Manufacture; the laborious and coarſe Part being performed abroad, the reſt would invite not only the Poor and Neceſſitous, but People of better Circumſtances to employ their Time in it. If theſe Propoſitions are ſufficiently conſidered, and heartily put in Practice, we may hope that by providing the aforeſaid rough Materials, we ſhall have the delightful Proſpect of ſeeing Trade flouriſh; for as the Silk and Linen Manufactures, where brought to Perfection, are altogether as profitable to thoſe Nations as the Woollen is to us; and as we increaſe in our Linen Manufactures, thoſe of *Sileſia*, and all the Hereditary Countries of the Houſe of *Auſtria*, whence we take ſuch Quantities muſt abate of courſe; their People alſo will reſort to us, and help to carry them on; for it has always been obſerved, where new Manufactures are ſet up, the Manufacturers will likewiſe remove. This was the Caſe with the *Flemings* when Queen *Elizabeth* gave ſuch great Encouragement to have the Woollen Manufacture remove hither; and ours, when we had that Inundation of *China* and *India* wrought Silks, our Weavers went to *Holland*, *Flanders*, *France*, &c. ſo that ſeveral Streets in *Spittlefields* were almoſt deſolate; but when theſe Silks were prohibited, the Manufacturers returned again.

It is ſuppoſed the *Ruſſians* exported to *England*, and all other Parts, in Hemp and Flax, above the Value of a Million a Year. If Hemp and Flax be ſo valuable a Product for Merchandize with them, there ſeems to be a much greater Proſpect of its being ſo to ourſelves, by raiſing them in our Plantations, becauſe they will not be ſubject to any Land-Carriage, but ſhipped immediately from the Place of Growth; becauſe Land is much cheaper in our Plantations than in the South Parts of *Ruſſia*. The Climate, being equal with that in *Egypt* and *Italy*, is ſuppoſed to produce Hemp and Flax preferable to theirs. We have before ſhewn, that in the Caſes of Sugar and Tobacco, every white Man employs four at home, that is to ſay, finds them Work to ſupply him with Utenſils requiſite for his. If Sugar and Tobacco employ ſuch a Number of Hands at home, certainly every Perſon employed in the Plantations, in raiſing and dreſſing Hemp and Flax, muſt by his Labour there, return more than twice the Advantage that can be produced by Sugar and Tobacco, for they are manufactured in the Plantations: The refining the Sugar and cutting the Tobacco, with the little Quantity that is rolled excepted. Whereas Flax and Hemp are Materials for employing all idle Hands; and of Conſequence the Poors Rate will ſoon be abated, and the Nation will find in a little time what they ſave yearly thereby, will be more than ſufficient to encourage the People to begin that Employment. And if once we come to be employed with Hemp and Flax by the aforeſaid Methods, every Place will be filled with Flax-dreſſers, and the Overſeers of the Poor of every Pariſh where the Wool-ſpinning Trade is not carried on, may very eaſily come at Hemp and Flax, which they will find as profitable to them, as the Woollen is to the other; and the more diſtant the Employment is, the better; for many Inconveniencies have attended one Manufacture interfering with another; beſides, there will be an Intercourſe of Trade created, by one Part of the Kingdom ſupplying the other with their diſtinct Manufactures. This will give full Employment to the whole Kingdom; and an univerſal Chearfulneſs to every body: For the Poor are never happier, nor their Minds eaſier, than when they have full Employment; and when they are employed, Riches is diffuſed throughout the whole Nation.

It is a common Opinion, that we have above a Million of People in the three Nations deſtitute of Work; but if thoſe rough Materials (ſo often mentioned in this Diſcourſe) ſhould come to be raiſed in our Plantations, there need not be one idle Perſon: Now, ſuppoſe one Million of People were put upon manufacturing thoſe rough Materials, and each Perſon earned but one Penny a Day, and allowing but three hundred Working-days in the Year, it would amount to one Million two hundred and fifty thouſand Pounds: A prodigious Advantage to the Nation, which is ſtill greatly heightened by conſidering that theſe People would be then employed, at leaſt in part, and ſo far as they were employed, would be the better Subjects. That all this might be brought about with leſs Trouble than has been given the Nation by one *Baltick* or *Mediterranean* Expedition, and at the tenth Part of the Expence of a Campaign in *Flanders*, is a thing will be acknowledged by all who are capable of judging of this Subject; and therefore that it ought to be done, is a Point that cannot be diſputed. I would not miſlead my Reader by the Compariſon, into a bad Opinion of ſuch Expeditions or Campaigns; that is not my Buſineſs, or my Intention; the Juſtice of my Compariſon turns upon this, that the Motives to ſuch Expeditions and Campaigns are, comparatively ſpeaking, near and at hand; whereas we are leſs acquainted, or at leaſt leſs affected by the Connection between our Intereſts and thoſe of the Plantations; though, from what has been ſaid, I think it will plainly appear, that they concern us as much, and as nearly, as any Intereſts can do without the Limits of our Iſland.

15. But it is now time to bring this Section to a cloſe, and after having given the Reader, from the beſt Authorities I could find, as clear an Account as I was capable of giving of theſe noble Settlements, I come next to add a few general Remarks, not upon this or that Plantation, but upon the whole Body of our *American* Settlements taken together. We have ſhewn how the Out-lines were drawn, ſo early as in the Reigns of King *Henry* VII. and *Henry* VIII. We have taken notice of the Schemes and Preparations that were made for ſettling the Countries we had a Title to in the Reign of Queen *Elizabeth*. We have given an Account how far theſe were carried into Execution in the ſucceeding Reigns. And in this Section, we have plainly exhibited the Manner in which this laſt Plan was fully accompliſhed. By this Means the Reader ſees, that the Diſcoveries of the *Cabots*, though treated by ſome unſkilful Writers as trifling Things, and Matters of no great Moment, were in Reality the Grounds of our Pretenſions, now converted into the actual Poſſeſſion of that vaſt Tract of Country from the Northern Coaſt of *Hudſon's Streights*, down to the Southern Limits of the new Colony of *Georgia*, or of the old Colony of *Carolina*; for the Limits are the ſame. As for the Iſlands, I take the Settlement of them to have been occaſioned by the old Rout to *Florida*, which has been ſo much ridiculed; but which, notwithſtanding, ſeems to have been the true Source of our Acquiſitions in the *Leeward Iſlands*. *Jamaica* is ours by Conqueſt, and which is another Circumſtance worth remembering, became ſo, in a great meaſure, by a Force raiſed in our Plantations. Whether it be our Intereſt to think of making ſuch Expeditions for the future, I ſhall not determine; but Care ought ſurely to be firſt taken of the Colonies we have; which it never can be till the Importance of our Plantations in general is thoroughly underſtood, by the Bulk of this Nation. This is the Point I have principally laboured in this Work, and I ſhall cloſe all I have to ſay with the Conſideration of three Points; which I hope will make the Matter plain to every Underſtanding.

The firſt of theſe Points is, *What the Condition of this Country was before we had any Plantations?* In regard to this, I think I may ſafely affirm that it was very low and deſpicable. In the victorious Reign of *Edward* the IIId. there was a Ballance of Trade ſtruck, and delivered into the Exchequer, by which it appeared that the Exports of one Year exceeded the Imports by two hundred fifty-five thouſand two hundred and fourteen Pounds thirteen Shillings and Eight-pence, which for that Time was a great deal. At the Time Queen *Elizabeth* entered upon the Government, the Cuſtoms produced thirty-ſix thouſand Pouuds a Year; at the Reſtoration they were lett to Farm for four hundred thouſand Pounds; and produced conſiderably above double that Sum before the Revolution. The People of *London*, before we had any Plantations, and but very little Trade, were computed at about one hundred thouſand; at the Death of Queen *Elizabeth* they were increaſed to one hundred and fifty thouſand, and are now about ſix times that Number. In thoſe Days we had not only our Naval Stores, but our Ships from our Neighbours. *Germany* furniſhed us with all things made of Metal, even to Nails; Wine, Paper, Linen, and a thouſand other things came from *France*. *Portugal* furniſhed us with Sugars; all the Produce of *America* was poured into us from *Spain*; and the *Venetians* and *Genoeſe* retailed to us the Commodities of the *Eaſt Indies* at their own Price. In ſhort, the legal Intereſt of Money was twelve *per Cent.* and the common Price of our Lands ten or twelve Years Purchaſe. We may add that our Manufactures were few, and thoſe but indifferent; the Number of *Engliſh* Merchants very ſmall, and our Shipping much inferior to what now belongs to the Northern Colonies. Theſe are plain and certain Facts: But as ſoon as we began to extend our Trade, and to make Settlements abroad, the Face of our Affairs changed; the Inhabitants of the City of *London* were doubled by the End of the laſt Period, and were again doubled before the End of this; our Shippihg increaſed in a ſtill greater Proportion; we coined within twenty Years after that Queen's Death about five Millions at the Tower, in twenty Years after that ſeven, and in the next twenty Years eight, which are indubitable Proofs that we had gained a prodigious Ballance of Trade in our Favour.

The next Point I ſhall conſider is, *What our Condition has been ſince?* And, with reſpect to this, I may boldly affirm that it has altered for the better; almoſt to a Degree beyond Credibility or Computation. Our Manufactures are prodigiouſly increaſed, chiefly by the Demand for them in the Plantations, where they at leaſt take off one half, and furniſh us with many valuable Commodities for Exportation. Inſtead of taking the Quantities we were wont to do of Goods from other Nations, we actually export thoſe very Goods, and ſometimes to the very ſame Nations; Sugar, Rum, and Tobacco, are the Sources of private Wealth and public Revenue, which would have been ſo many Drains, that would have beggared us, had they not been raiſed in our Plantations. It is no longer in the Power of the *Ruſſians* to make us pay what they pleaſe for Flax or Hemp. The *Swedes* cannot compel us to pay their own Price, and that too in ready Money, for Pitch and Tar, nor would it be in their Power to diſtreſs us, ſhould they attempt it by raiſing the Price of Copper and Iron. Logwood is ſunk ſeventy-five *per Cent.* Indico, and other dyeing Materials, are in our Power, and at moderate Prices. In ſhort, the Advantages are infinite that redound to us from our *American* Empire, where we have, at leaſt, a Million of *Britiſh* Subjects, and between fifteen hundred and two thouſand ſail of Ships conſtantly employed. Such have been the Fruits, ſuch is the Condition of our Plantations, and let any Man doubt of the Benefits reſulting from them to this Nations if he can; or when he reflects on the Numbers maintained here by their Induſtry, and even by their Luxury, let him deny or envy their Wealth if it is in his Power.

When our Plantations were in their Infancy, they were ſome Burthen and Charge to this Nation, and then it was that ſome wiſe and public-ſpirited Perſons took upon them to become Advocates for a thing which they foreſaw would prove highly uſeful and advantageous. I have read many of their Diſcourſes with great Pleaſure, becauſe I conſidered them as written with a kind of prophetic Spirit, in which their Authors have exhibited to the Eye of the Ages in which they wrote, a very juſt Picture of what has paſſed in ſucceeding Times; but with this remarkable Circumſtance, that though ſeveral of them were Men as remarkable for bold Flights of Imagination, as for Penetrations and Judgment, yet in this Caſe they have not reached the Truth; the preſent State of the Plantations exceeding vaſtly all that they promiſed, or even hoped from them; the Reaſon of which I conceive to be their framing Conjectures from the State the Nation was then in, and our Trade was at that Time ſo inconſiderable in Compariſon of what it is at preſent, that I think there is no wonder the Writers who flouriſhed in thoſe Days ſhould fall ſo much ſhort in their Expectations from our Settlements in *America*. But, perhaps, it may be objected, that though they did not foreſee many things that have ſince fallen out in thoſe Parts of the World, yet it is very evident that they believed many Advantages would ariſe from thoſe Colonies that have never yet come to paſs; which leads me to the third Point I propoſe to mention in theſe Remarks.

This third Point is, *The Improvements and additional Benefits that may be ſtill made in, and accrue from our Plantations.* We ought, in this reſpect, to conſider of what a vaſt Extent that Country is, which we actually poſſeſs in the New World, to which I will be bold to ſay this Iſland does not bear a greater Proportion than the County of *Norfolk*, to the whole Kingdom of *England*; whence we may eaſily conceive what room there is for making new Improvements in ſuch a vaſt Tract of Country. It is, indeed, true, that ſome of our Settlements on the Continent, ſuch as *New England*, *New York*, *Penſylvania*, *Maryland*, and *Virginia*, are already tolerably well peopled; but then *Nova Scotia* is ſcarce ſettled. *New Britain* is a vaſt Country, and capable of being turned to our Advantage; is ſo far from being ſettled, that it is ſcarce known to us; and the ſame thing may be ſaid of all the Country bordering upon *Hudſon's Bay*. As to the Southern Colonies, by which I mean the two *Carolina's* and *Georgia*, they are very thinly peopled, and very little improved, though beyond all Compariſon the moſt valuable Poſſeſſions we have in thoſe Parts. In regard to the Iſlands of *Bermudas* and *Barbadoes*, they are thoroughly peopled, and moſt of the *Leeward Iſlands* tolerably inhabited; but then there are ſeveral Iſlands to which we have as clear and as good a Title, as to any of theſe, that are not ſettled at all, though from the Nature of their Climate, Soil, and Situation, they are not inferior to any, but on the conrrary, ſuperior to moſt of thoſe of which we are poſſeſſed, as will be hereafter ſhewn. The noble Iſland of *Jamaica*, which of itſelf might ſerve to inrich any Country to which it belonged, is not a third Part cultivated, ſo that there is every where room for us to exert our Induſtry, for the Honour and Advantage of the *Britiſh* Nation; which as it has already drawn ſuch immenſe Profits from its Settlements in *America*, ſo beyond all Queſtion we may ſtill draw much greater, if we proceed with the ſame Spirit and Vigour that our Anceſtors did, having much more Power in our Hands, much fairer Opportunities than they had, beſides the Light and Authority of Experience, to guide, encourage, and ſupport us.

In order to this, and that we may actually add theſe Advantages in proſpect to thoſe which we at preſent poſſeſs, the Steps neceſſary to be taken fall under the two following Heads: The firſt is, *Improving ſuch of our Colonies as are already well ſettled*; and the next, *Providing for the thorough Planting ſuch as are at preſent but very indifferently, or ſcarce at all, peopled.* It would require a large Treatiſe to expatiate fully on theſe Heads, and therefore I ſhall content myſelf with only a few Hints as to each of them. In reſpect to the firſt, I cannot conceive that any thing would be more advantageous than providing every Colony with ſome Staple Commodity, which would infallibly produce the following deſirable Conſequences: It would make the Inhabitants of thoſe Colonies perfectly eaſy, and at the ſame Time it would vaſtly inrich us. As for *Virginia* and *Maryland* they are poſſeſſed of the Tobacco Trade, in which, if any Eaſe, Encouragement, or Advantage can be granted them, they moſt certainly deſerve it: But with reſpect to *New England*, *Penſylvania*, *New York*, and the *Jerſeys*, Ways and

Means might be found to increaſe their Commerce with *England* directly, by promoting their Inclinations to furniſh us with all kinds of Naval Stores, and with Iron. There was, as to Pitch and Tar, a conſiderable Bounty given, and it is very remarkble for many Years this produced no Effect, which might poſſibly countenance an Opinion that the Friends to the Plantations were too ſanguine in their Notions on this Head; but Experience afterwards ſhewed the contrary. For the Circumſtances of the Public making it neceſſary to try how far this might be practicable, it very ſoon appeared that the thing could be eaſily done by; and upon ſending over Perſons well acquainted with the Methods of making Pitch and Tar, the People in the Colonies ſoon fell into it, and ſuch Quantities were imported, as not only ſupplied our Wants, but enabled us alſo to ſupply thoſe of our Neighbours; and then upon a Suppoſition that the Trade was effectually eſtabliſhed, the Bounty was diſcontinued. The Conquence of this was, that the Importation of theſe Commodities from *Ruſſia*, *Sweden*, and *Norway*, was revived; for the People of thoſe Countries building large bulky Ships, peculiarly proper for tranſporting thoſe Commodities, by navigating theſe Ships cheaper than we can do ours, are thereby able to underſell our Countrymen in the Colonies, by three or four Shillings in a Barrel; ſo that to keep this Trade there grew a Neceſſity of granting a new Bounty upon Pitch and Tar from *America*, or laying a new Duty upon what was imported from the North.

We may ſay the ſame thing with regard to Iron, of which, at preſent, we import very near double as much from *Sweden*, as is ſold to all the reſt of *Europe*, for which we pay moſtly in ready Money; and yet no Queſtion can be made of its being very practicable to bring the beſt Part of the Iron we want from our Plantations, which has been hitherto prevented by Notions ſo frivolous, that I do not care to mention them. Hemp and Flax have been ſufficiently inſiſted upon already, and to theſe we may add Pot-aſhes; ſo that the Reader will eaſily diſcern that there is no Difficulty at all in the Way of enabling the Northern Colonies to pay us for our Manufactures, and prevent their ſetting up Manufactures themſelves, but our ſetting heartily about it. The ſame Thoughts may, in a great Meaſure, ſerve for our Southern Colonies, in which Tar may certainly be made as good as any in the World; but then there are other things peculiar to thoſe Colonies, ſuch as the planting Coffee, Tea, Cocoa, Indico, and the Shrub that produces Cochineal; but above all, we ought to think of Silk, for Reaſons that ſhall be given when we come to treat of the Colony of *Georgia*: At preſent we ſhall only ſay that there is this great and extraordinary Conveniency attends the Cultivation of the laſt mentioned Commodity, that as it is proper for the ſame Soil and Climate, as Hemp and Flax, ſo they may be both carried on together; the Silk Harveſt, as they call it, being over before Hemp and Flax are ripe.

As to the Sugar Iſlands, though they have already a Staple Commodity of very great Value, yet this ſhould not hinder us from conſidering how that Commodity may be ſtill rendered more uſeful, I mean to the Planters and to us; and how far other things are capable in the ſame Countries of being improved. It was the Opinion of Sir *Joſiah Child* (and I think the Subject well conſidered it is not eaſy to produce a better Opinion) that Sugar may be as much made the Commodity of this Nation, as the Gold and Silver of *Peru* and *Mexico* are the peculiar Treaſures of *Spain*. The Reaſons he gives are very ſtrong, but it is very certain that we have not fallen upon the right Method of bringing his Doctrine into Practice; ſince inſtead of exporting one half of the Sugar we bring home, as we formerly did, we do not now export above a ſixth, and this not from falling off of the Demand, but becauſe new Markets have been found, at which Foreigners can buy cheaper. To alter this all Heads ſhould be ſet to work, and all Arts tryed; and till theſe ſucceed, it may not be amiſs that the Inhabitants of the Sugar Colonies would try to bring ſome other Goods to Market.

Thus much for the firſt Head, now for the ſecond: It has been computed, by ſome, that there is a Million and a half of white People in our Plantations, which Computation has been judged by others ſomewhat of the higheſt; perhaps it may be ſo, but without all doubt it would be our Intereſt to have two Millions of white People there; nor do I think that there is any Reaſon to fear that this would either drain the *Britiſh* Dominions, or at all indanger the Dependency of the Colonies. I am, on the contrary, very firmly perſuaded, that the Increaſe of People in the Colonies, as it would certainly increaſe our Trade, ſo it muſt neceſſarily increaſe the Number of our People at home; and that the Methods proper to be taken for the better peopling our Colonies, and improving them, would infallibly render them more dependent.

But to come cloſely to the Point, and ſhew how this may be done. Give me Leave to obſerve, that though the general Propoſition that the Number of the People is the Riches of a Country be true, yet it is true only of induſtrious and uſeful People; and it is in this Senſe, that the Number of the People in *Holland* is quoted as an Example; ſo that if there be in any Country Numbers of People uſeleſs, they are ſo far from contributing to the Wealth of that Country, that they are in Fact, the Cauſes of its Poverty. Now, it is certain, that though this Nation might become more powerful and more rich, by being more numerous than it is; yet there is not any more probable Method of bringing this about than by employing our uſeful Hands, which perhaps may be eaſier done abroad than at home. We have vaſt Numbers of Vagabonds throughout the Kingdom, who many of them live by Pity, but moſt of them by the Folly of better People than themſelves; there cannot therefore be any Cruelty in ſending theſe People where they muſt work, and conſequently maintain themſelves and be uſeful to others. We have many People convicted of ſmall Crimes, and from the Ignominy of the Conviction and Puniſhment rendered deſperate; it would certainly be a great Charity to provide for theſe. We find Multitudes releaſed from Time to Time out of Priſons by Acts of Grace, which ſet them at Liberty, 'tis true; but at the ſame Time, leaves them at little better more than the Liberty of ſtarving; and who can ſay, that it would not be highly laudable to find out ſome Means for giving theſe People Bread as well as Freedom? I humbly conceive, that if a proper Fund was aſſigned for ſending theſe People abroad, not like Tranſports or Negroes, but like unhappy *Engliſhmen*, with due Proviſion for their comfortable Maintenance in their Paſſage, and a proper Reception in the Places they are ſent to, this might be found an effectual way of eaſing our Poors-Rates, ſtocking our Colonies, and enlarging the Trade of the Nation.

But in doing this, great Conſideration is to be us'd, there ought to be nothing in it of Shame, and as little of Force as may be. The Terms ought to be ſuch as may encourage People in Diſtreſs to except them, and the accepting them might be in the Nature of a Superſedeas to all Criminal Proſecutions, not of a Capital Nature. They ſhould be ſent abroad for a Term of Years, or till they could repay a certain Sum of Money to the Corporation intruſted with the Management of this Scheme, and conſiderable Rewards ſhould be given to ſuch as behaved well, and gained a competent Settlement during the Time limited for their remaining abroad; and if to this certain honorary Preferments were added, it would be ſo much the better. Theſe are the Outlines only of a great Deſign, worthy the Attention of the Legiſlature, who perhaps may think a Tax on public Diverſions a reaſonable Fund for ſuch a Service, there being nothing more juſt than that Luxury ſhould contribute to relieve Neceſſity, and that thoſe who are able to be idle ſhould be made willing to help thoſe that muſt work.

Such, at leaſt, are my Notions of theſe Matters, and of the Means by which our Plantations might be improved, and the Advantages we derive from them increaſed and extended. If what I have ſaid be rational and practicable, or without much Difficulty may be altered in ſuch a Manner as to become ſo, I hope it will be thought worthy of Conſideration; but if otherwiſe, let ſome Perſon better verſed in theſe Things, and more capable of treating this Subject ariſe, and ſet it in its true Point of Light. For this is the critical Time, the Seaſon when the Friends of Trade and the Plantations ſhould exert themſelves before a Peace takes Place, and a new Scene opens, of which it will be impoſſible to give our Judgment immediately, and as impoſſible to think of executing thoſe Schemes then, that are eaſy as well as practicable now.

SECTION XX.

The Hiſtory of the BRITISH *Colonies in* America, *from the Revolution to the Death of his late Majeſty King* George I.

1. *The Artifices of the* French, *under the Reign of* James II. *defeated by the Probity of Colonel* Dungan, *Governor of* New York. 2. *The* Indians, *by their Inſtigation, and with their Aſſiſtance, attack the People of* New England *in* 1690, *and are repulſed with Loſs.* 3. *An Account of Sir* William Phipps's *unfortunate Expedition againſt* Quebec. 4. *The Hiſtory of the* Indian *War continued to its Cloſe, with other remarkable Occurrences.* 5. *The Society for the Propagation of the Goſpel incorporated by King* William III. *and the many Advantages flowing from that excellent Eſtabliſhment.* 6. *The Affairs of the* Britiſh *Colonies, during the Reign of Queen* Anne, *briefly conſidered.* 7. *The unfortunate Expedition againſt* Canada, *under General* Hill *and Sir* Hovenden Walker. 8. *The Methods taken by the* French *for the Benefit of their own Commerce, at the Expence of ours to the Treaty of* Utrecht. 9. *An Account of his Grace the Duke of* Montague's *Scheme for ſettling the Iſlands of* St. Lucia *and* St. Vincent. 10. *The Hiſtory of the Expedition for that Purpoſe, under Captain* Uring, *and his Relation of its Miſcarriage.* 11. *Colonel* Braithwaite's *Report of his being forced to abandon the Settlement of* St. Vincent. 12. *The indubitable Title of the Crown of* Great Britain *to thoſe Iſlands aſſerted, and the Importance of maintaining it demonſtrated.* 13. *Remarks and Obſervations on the moſt remarkable Paſſages in the foregoing Section.*

IT is generally agreed, that the very worſt Part of King *James*'s Government was the Inclination that he had to *French* Counſels, and his falling too readily into *French* Meaſures, which is the more extraordinary in Matters relating to Commerce; becauſe never any Prince underſtood them better than King *James*. It muſt therefore have been his violent Zeal for promoting the *Popiſh* Cauſe, that induced him to go the Lengths he did, in Favour of *France*; contrary moſt certainly to the Intereſt of this Nation, as he would have ſeen ſooner than any body, if that Zeal of his had not hindered him. But from hence we ſee the Difference between *Engliſh* and *French* Popery. Our deluded Prince, though he underſtood Trade, was inclined to ſacrifice it, in ſome Meaſure, for the Sake of his Religion; the *French* King, though of the ſame Religion, and pretending to be as zealous for it as King *James*, made uſe of it as a Colour to promote his own ambitious Deſigns, and the Trade of his Subjects at our Expence. I know that this is a delicate Subject to handle, and I ſhould not have mentioned it at all, but from a juſt Senſe of its Conſequence, and a ſincere Love for Truth, and the Intereſt of my Country.

The *French*, in the Beginning of King *James*'s Reign, finding their Colony of *Canada* in the utmoſt Danger from the *Iroquois*, a very warlike *Indian* Nation, jealous of their Liberties, and very capable of defending them by Force of Arms, reſolved, ſince Force had hitherto failed, to try what might be done towards ſubduing them by the gentler Method of Converſion; in order to which they not only employed a Multitude of artful Jeſuits, but contrived likewiſe, under Pretence of extending the Chriſtian Faith, to engage King *James* to countenance and aſſiſt this Project. In order to this an *Iriſh* Gentleman, Colonel *Dungan*, Son to the Earl of *Limerick*, was made Governor of *New York*; and he was directed, by his Maſter, to permit the *French Jeſuits* to preach to, and convert the *Indians* under the Protection of his Government. The Scheme was certainly well laid, and one would wonder how it came not to take effect; which if it had done, muſt have proved the Ruin of that Colony at leaſt, the Conqueſt of which had been for a long Time the Object of the *French* Policy. But this Colonel *Dungan*, unfortunately for the *French*, was a Man of very good Senſe, and of ſtrict Honour; he obeyed his Maſter's Commands, though unwillingly, but he kept ſo ſtrict an Eye upon the *French Jeſuits*, that he very ſoon ſaw to the Bottom of their Deſigns; and, finding them incompatible with the Welfare of the Colony he governed, he obliged them to retire; telling them that they came to promote the Commerce, rather than the Religion of their Nation; and that if his good Friends the *Indians* were ſo much in love with *Jeſuits*, that they could not be without them, he would ſupply them with thoſe who ſhould make them good *Chriſtians* and good *Engliſhmen* at the ſame Time.

This greatly provoked the *French* Governor of *Canada*, Mr. *Denonville*, who threatened him with the Diſpleaſure of his own Maſter, and of the *Moſt Chriſtian* King; but this had no Effect upon Colonel *Dungan*, who would not be either cheated or bullied; and therefore when the *French* Governor had trepanned ſome of the *Indian* Chiefs, and ſent them over to be made Slaves in the *French* Galleys, by the moſt notorious Breach of Faith that ever Man was guilty of; the Colonel aſſiſted them in the War occaſioned thereby, which brought the *French* Colony within a Hair's Breadth of Ruin. This Story, which is very remarkable, we have from *French* as well as *Engliſh* Authors, and which is no leſs extraordinary, they agree in every Circumſtance of it. Only the former are ſo partial, as to treat the Colonel's Character very ill, becauſe he would not ſacrifice the Intereſt of his Country, his own Honour and Conſcience to their Views. After the Revolution, when he was become Earl of *Limerick*, King *William*, who was very well informed of his Proceedings, procured an Offer to be made him of a very conſiderable Command in the *Spaniſh* Service, but he declined it; and though he liked not the Meaſures, choſe to follow the Fortunes of his Maſter King *James*.

The *French*, by the ſame kind of Artifices, had very near diſpoſſeſſed the *Hudſon's Bay* Company of that Country entirely; and, as ſoon as the War broke out, they actually did ſo, as we have already ſhewn. They alſo made a bold Attempt upon the Colony of *New York*, with the Aſſiſtance of the *Indians* in their Intereſts, but were repulſed; and Colonel *Peter Schuyler*, with three hundred *Engliſh*, and the ſame Number of *Iroquois*, bravely marched from *Fort Albany* to *Quebec*, which is four hundred Miles; and finding the *French* Governor with ſeven hundred regular Troops, and as many *Hurons*, an *Indian* Nation always at their Devotion in the Field, they boldly attacked them, and killed three hundred Men, and thirty Officers, with very little Loſs to themſelves; but having no Artillery, and the *French* retiring into their Forts, the Colonel made a very honourable Retreat, ſatisfied with the Blow he had ſtruck, and ſecuring his own Country from any farther Depredations. But it was not only on this Side that the *French* attacked our Colonies at that Time, on the contrary they had framed a Deſign of greater Conſequence againſt the People of *New England*, of which, as it is a Matter of great Importance, we will give as full and clear an Account of it as we can; for tho' their Intrigues began ſomewhat earlier than the Period aſſigned for this Section, yet as our Expedition was not made till after the Revolution, it comes in very properly here.

2. The *French*, in a Time of full Peace, and when, as we have obſerved, they were ſoliciting and obtaining Favours from King *James*, excited the *Indians* on the Frontiers of *New England*, to ſurpriſe ſeveral Out-ſettlements, where they committed ſeveral great Barbarities: Of this Complaints were made to the *French* Governor at *Quebec*, who gave very good Words, pretending that he knew nothing of what had happened; but promiſed to interpoſe and check the Deſigns of the *Indians* as far as was in his Power, which Promiſe was very indifferently performed. The *Engliſh* thereupon tried what fair Means, and a peaceable Negociation with the *Indians* would do; in this likewiſe they were deceived and amuſed, while their Enemies ſtill perſiſted in their Depredations, though they continued to treat, and pretended that all Diſputes ſhould be amicably ſettled, well knowing that the Colony would take any Meaſures rather than engage in an *Indian* War. During theſe Tranſactions, the *French* and *Indians* entered into farther Engagements againſt the *Engliſh*, who did what they could with Honour and Juſtice, to bring Matters to a peaceable Iſſue, which was rendered very difficult by the Intrigues of the *French*, who upon King *James*'s withdrawing to *France*, repreſented the *Engliſh* Nation as in a rebellious and perilous Condition, which was ſufficient Encouragement for the *Indians* to continue the War, having the Promiſe of powerful Aſſiſtance from *Quebec*.

They ſurpriſed the Garriſon of *Quachecho*, by the Treachery of *Meſandonit*, a Sachem, whom Major *Waldern*, who commanded there, had generouſly entertained the Night before; and that Traitor lying in his Houſe, opened the Gates in the Morning to a Party of Savages, that lay in Ambuſh not far off, and ruſhing in killed the Major and twenty-two Men, burnt four or five of the beſt Houſes, and carried away twenty-nine Perſons into Captivity, killing Mr. *Broughton* in their Retreat. The Government ordered Capt. *Noyes*, with a ſtrong Party, to march to *Penocook*, and clear the Country of the Savages; but they cleared it themſelves by running away as ſoon as they heard News of his coming. Captain *Noyes* purſued them, cut down all their Corn, burnt their Wigwams, and laid every thing waſte. A Party from *Saco* was ſurrounded by a great Body of *Indians*, and eſcaped with Difficulty, having loſt ſix of their Number; they afterwards maſtered *Pemmaquid Fort*, by Help of Intelligence given them by one Mr. *Starkey*, who falling into their Hands thought to get out of them by that Service, and told of the weak Condition the Fort was in by the Abſence of Mr. *Giles*, and Part of the Garriſon; upon whom they fell at *Giles*'s Farm, and killed him and fourteen Men. They then got upon a Rock, when they miſerably galled the *Engliſh*, and obliged the Governor, Capt. *Weems*, to ſurrender on Promiſe of Life and Liberty. But the Savages broke the Capitulation, and butchered the greateſt Part of them, as alſo Capt. *Skinner* and Capt. *Farnham*, who were coming to the Relief of the Garriſon, and Mr. *Pediſhall*, as he lay in his Sloop in the *Barbran*. Theſe Loſſes cauſed the Inhabitants of *Sheepſcot* and *Kennebeck* to abandon thoſe Places, and return to *Falmouth*.

It was time for the Government of *New England* to look about them, and think of oppoſing vigorouſly thoſe Murders and Depredations of the *Indians*: They ſent Major *Swayne* with five hundred Men from *Maſſachuſet*, and Major *Church*, one of their beſt Officers, from *Plymouth*, with five hundred more, againſt the Enemy in the Eaſt, where they had intercepted Lieut. *Hutchin*, who had drawn off a Garriſon he had in thoſe Parts, to ſet them to work in the Field. The Savages coming unexpectedly upon them cut them to pieces, being ſeventeen in Number, and then came to the Fort, where were only two Boys, and ſome Women and Children; the Boys defended it againſt them, wounded ſeveral; and when they found that the *Barbarians* were about to ſet fire to the Houſe that was in the Fort, and to burn them out, they would not yield but on Terms of Life; which theſe inhuman Wretches granted, and afterwards killed three or four of the Children, with one of the Boys; the other made his Eſcape. Capt. *Garner* purſued the Enemy, but they were too nimble for him. Another Party of them aſſaulted *Cano*, killed Capt. *Brooks*, and had put the whole Town to the Sword, had not Capt. *Hall* come opportunely with Relief. The Deſigns of Major *Swayne* and Major *Church* were fruſtrated by the Treachery of ſome *Indian* Confederates, who being ſent out as Scouts, diſcovered all that they knew to the Enemy; who underſtanding the Number of the *Engliſh*, fled to their inacceſſible Woods and Swamps: So Major *Swayne*, having garriſoned *Blew Point*, retired to Winter-Quarters. I enter not into the Particulars of the barbarous Treatment the *Engliſh* Captives met with from the Savages, there being nothing in it but what might be expected from their Rage and Cruelty, and there was no likelihood of their learning Humanity towards the *Engliſh*, by Leſſons from their new Allies the *French*, who were very active in inſtructing and diſciplining them for the better Management of the War.

It is plain they had improved in it, both in Arms and in Action, and had continual Aſſiſtance from *Quebec*, without which the *Engliſh* would ſoon have chaſtiſed them for their Inſolence, and taught them to be quiet. To make the *French* ſome Returns for the many Miſchiefs the *Engliſh* had ſuffered by their Means, it was reſolved in *New England* to carry the War home to them. In purſuance of this Reſolution Sir *William Phipps*, who commanded the Fleet and Forces, ſailed from *New England* the 28th of *April*, 1690, and on the 11th of *May* following arrived before *Port Royal*. The *French* had then a very flouriſhing Colony in *Acadia*, or, as we call it, *New Scotland*, conſiſting of no leſs than ſix thouſand People, who got a Living at leaſt by their Trade in Lumber, Fiſh, and Skins; but for all that the Place was ſo miſerably provided for Defence, the Town being covered only by a ſlight Palliſade, and a little Fort of no Force, that it was very ſoon reduced; and Sir *William Phipps* had the Honour of recovering this Country to the Crown of *Britain*. The People in *Nova Scotia* had Leave by the Capitulation, either to retire to *Canada*, or remain in the Country; and about two thouſand choſe the latter: So that Sir *William* not only acquired a Country, but a People; yet we did not keep the Poſſeſſion of either, for any Length of Time. To revenge theſe Loſſes, Monſieur *Artel*, a *French* Officer from *Canada*, and one *Hoophood* a Leader among the *Huron Indians*, Confederates with the *French*, with Men of both Nations, aſſaulted *Salmon Falls*, killed thirty Perſons, and carried away fifty into Captivity; which terribly alarmed all *New England*, it being the firſt time that the *French* had acted openly with the *Barbarians*. And as *Quebec* was thought to be the Source of all their Calamities in this War, it was therefore reſolved to attack that Place, which being reduced, the *French* would have no City to reſt in, and carry on their ill Deſigns againſt their Chriſtian Neighbours.

3. The Succeſs Sir *William Phipps* ſo lately had, recommended him to the chief Command in this Expedition; but it ſeems to have been as ill laid and managed as the other was well contrived; for it is certain, he had a Strength with him ſufficient to have driven the *French* out of *Canada*, had it been well uſed: He had thirty-two Sail of Ships, and they had aboard two thouſand Men, a prodigious Armament for ſuch a Colony, and ſailed from *Hull* near *Boſton* the 9th of *Auguſt*; but came not within Sight of *Quebec* till the 5th of *October*. Thus they were eight Weeks in a Voyage, that with good Winds and Weather might have been made in two or three. The *Engliſh* were ſo long making up the River *St. Laurence*, that the Governor, Count *de Fontenac*, had time enough to prepare for his Defence by drawing all the Strength of the Colony to *Quebec*, which Sir *William* expected would have been divided by an Army marching over Land, and attacking *Mount Royal* Fort on the Frontiers of *Canada*, while he fell upon the Capital.

This Army was to conſiſt of two thouſand Men from *New*

New York, *Connecticut*, and *Plymouth* Colonies, and one thouſand five hundred *Indians*, to whom the *French* gave the Name of *Iroquois*; but the *Engliſh* diſtinguiſhed them by the Names of their ſeveral Nations. The *Engliſh* marched as far as the great Lake of *Canada*; but as there were no Canoes provided for them to paſs it, they returned; and it is very ſtrange that there ſhould have been no Proviſion for their Paſſage ſecured, ſince the Succeſs of the Enterprize ſo much depended upon it.

When Sir *William* arrived within Sight of the Place, he fancied that the Conqueſt would have been as eaſy as that which he had made of *Nova Scotia*, and therefore he drew up a Paper in the Nature of a Summons to ſurrender, conceived in very rough Terms; for Sir *William* was originally a Carpenter, and afterwards a Sailor; ſo that he was very blunt and unpoliſhed, though a very honeſt, and very brave Man: But the *French* Governor, Count *Fontenac*, was ſo offended at the Style and Subject, that he cauſed a Gibbet to be ſet up, and would have hanged the Major that brought the Paper, had it not been for the Biſhop's Interceſſion. He returned, however, a very inſolent Anſwer, calling *Phipps* and his Company *Heretics* and *Traitors*.

On the 8th of *October* the *Engliſh* landed, under Lieutenant-General *Whalley*, to the Number of one thouſand four hundred, for to theſe they were reduced by the Small-Pox, and other Diſeaſes; but had their full Complement been preſerved, what were two thouſand on board the Ships to four thouſand within the City; for ſo many Men *Fontenac* had now with him? Which *Whalley* underſtanding, he re-embarked his Troops, though they would very fain have attempted one Aſſault: But their Bravery was ill-timed, conſidering the Inequality of their Number to that of the Enemy. Some Writers make the Loſs of the *Engliſh* from the Oppoſition they met with on Shore, to be ſix hundred Men; but, I believe, that Oppoſition is heightened for the Credit of our Nation, that the Troops might not be thought to abandon this Enterprize without looking the Enemy in the Face. The beſt Accounts given by the *French* Writers of this Matter, do not aſcribe the Deliverance of *Quebec* more to the Courage of their own People than to the Want of Conduct and Diſcipline in the *Engliſh*. The Truth of the Matter is, the Scheme was well enough laid, but thoſe who undertook to execute it had not Capacities ſuitable to a Deſign of this Nature; and beſides, there fell out ſome Accidents that were fatal to them, as well as wholly unforeſeen, and to which in a great Meaſure we may juſtly attribute their Diſappointment.

The Small-Pox did not only carry off Numbers in Sir *William Phipps*'s Fleet, but broke out alſo in the other Army, that was to have marched by Land to attack *Mount Royal*; and this Malady infecting the *Iroquois*, was the true Reaſon why that Expedition was abandoned; and this being ſoon known to the *French*, gave them an Opportunity of throwing their whole Force into *Quebec*, which was much too great for Sir *William Phipps* to ſtruggle with, if he and thoſe who attended him, had been better Officers than they really were; ſo that there is no great Wonder the whole Expedition miſcarried. This ſhews, that Matters of a military Nature cannot be carried on, eſpecially againſt the *French*, but by military Men and Officers well acquainted with Service; yet the Zeal and Courage of the People of *New England*, in undertaking and puſhing this Project of theirs ſo far as they did, deſerves great Applauſe, as it fully demonſtrates the Spirit of the People, and very plainly proves that with proper Encouragement and proper Aſſiſtance, they are both willing to endeavour and able to perform all that in their Circumſtances a *Britiſh* Government can expect from *Britiſh* Subjects. In the preſent Caſe, their Efforts rather exceeded than fell ſhort of their Abilities, for their Fleet and Army were numerous enough, well provided, and well paid; the Expence of this fruitleſs Attempt falling little ſhort of one hundred and fifty thouſand Pounds, every Penny of which was furniſhed by the Inhabitants of this Colony, or, which was worſe, they ran in Debt for it, and were left to pay it: Here at home we do not ſufficiently reflect upon the Inconveniencies that ſuch Misfortunes as theſe bring upon our Settlements, but are too apt to charge them with want of Vigour, want of Application, and want of public Spirit; whereas, in Truth, theſe Wants, generally ſpeaking, lie on our Side the Water; and it is to cover our own Neglects, that we pretend to find Faults in them of which they were never guilty.

The Ships in their Return met with no better Fortune at Sea than the Men had done by Land; ſome of them were driven as far as the *Leeward Iſlands*; one was wrecked, another was never heard of, a third foundered with all her Crew in her, a fourth was driven aſhore on the deſolate Iſland of *Anticoſta*, where Captain *Rinsford* and his Crew, forty at firſt, were reduced through Want and Weather to half the Number in a Month's Time, and then ſaved almoſt miraculouſly. The Loſs of Men in this unſucceſsful Enterprize amounted to one thouſand, and thoſe as uſeful Hands as any in the Country. During the Progreſs of this miſerable Expedition, a Party under Lieut. *Clark*, venturing out of *Caſco*, to look for the Enemy, met with a Body of four or five hundred *Indians* and *French*, who killed the Lieutenant and thirteen of his Men; the reſt eſcaping into the Town, were purſued by the *Indians* and *French*, who entering the Place reduced it to Aſhes. The Garriſon ſurrendered the Fort upon Conditions of ſafe Conduct to the next *Engliſh* Town; but the *French* baſely broke the Capitulation, and made them Priſoners of War under a very fooliſh Pretence of their being Rebels to their lawful King.

The Governor, Major *Davis*, and ſome of his Men, were ſent to *Quebec*; the reſt were murdered by the Savages. The Garriſons of *Papocodack*, *Pamwick*, *Black Point*, and *Blue Point*, drew off to *Caco*, twenty Miles within *Caſco*, terrified with the Fate of that Place: Their Terror infected that Garriſon alſo, and half of them fled. *Hoophood*, the *Huron*, purſued them and deſtroyed all the Country, burnt ſeveral Houſes at *Berwick*, killed thirteen or fourteen Men at *Fort Point*, and carried off ſix Priſoners; but Capt. *Floyd*, and Capt. *Greenleaf* coming up with him routed his Party, wounded and drove him off to a great Diſtance. He was afterwards fallen on by the *French Indians*, who taking him for an *Iroquois*, killed him and almoſt all that were with him. The *Indians* and *French* had after that an Advantage over the *Engliſh* under Capt. *Wiſwell*, whom they killed with fifteen of his Soldiers near *Wheelwright Pond*, the reſt were brought off by Capt. *Floyd*. Fluſhed with this Succeſs the *Indians* and *French* made a Deſcent upon *Ameſbury*, near to the *Maſſachuſets*, ſurpriſed Capt. *Foot* and tortured him to Death; but the Townſmen returning into the Fort, maintained it againſt them. Major *Church* paſſed by Sea with three hundred Men to *Caſco Bay*, where he landed, and paſſed directly *Pechpyſot*, an *Indian* Fort, which he found deſerted, thence to *Amonoſcoggin Fort*, forty Miles up *Caſco* River, which he burnt after having killed twenty *Indians*, all that ſtaid in it, and releaſed ſeven *Engliſh* Captives. Having Notice that the *Indians* had agreed to rendezvous on *Pechyſet* Plain, in order to attack *Wells*, he haſtened thither to give them Battle; which the Savages avoided, and the *Engliſh* went into Winter Quarters. Capt. *Convers* and Capt. *Plaiſtead*, with one hundred Men remaining in thoſe Parts, to ſcour the Woods; and as the *Engliſh* had no Reaſon to be content with the Succeſs of the War, ſo they were well pleaſed at the Sight of a Flag of Truce, with which the *Indians* came to *Wells*, and a Ceſſation of Arms till the *May* following was agreed on by Commiſſioners on both Sides.

The Time of the Ceſſation of Arms with the *Indians* was ſcarce expired, but the Savages, inſtead of coming as they had engaged, to reſtore the Captives, and turn the Truce into a Peace, began to commit new Hoſtilities, and killed ſeveral *Engliſh* at *Berwick*, *Exeter*, and *Cape Nidduck*. To prevent further Miſchief, Capt. *March*, Capt. *King*, Capt. *Sherburn*, and Capt. *Waters*, with four hundred Men, landed at *Macquoit*, and marched to *Speaky*; but theſe Forces not meeting the Enemy, grew ſecure, and ſtraggled out in Parties, which the *Indians* obſerving, gathered in a Body, attacked them and drove them

them to their Ships, with the Loſs of Capt. *Sherburn* and ſeveral Men, who could not get aboard in Time. They killed ſeven Perſons at *Berwick*, twenty-one at *Sandy-Bear*, a Family at *Rowly*, another at *Haverhill*, both in *Eſſex* County. Thus we find them drawing Southward, and extending themſelves into the *Maſſachuſets*, which they had not done before. The Garriſon of *Cape Nidduck* was ſo thinned by Draughts from it, that the Remainder thought fit to deſert it, though a ſtrong Fort. A Party of Popiſh *Indians* aſſaulted the Town of *York*, killed fifty *Engliſh*, and drove away one hundred into Slavery, and the reſt fortified themſelves; and though they were but a Handful, yet the Savages, who were ſeveral Hundreds, durſt not attack them. Here Mr. *Shubaal Dunner*, the Miniſter, was ſhot at his own Door, to the great Joy of the *French* Papiſts. A Ship was immediately diſpatched to *Sagadohook*, with a Commiſſion, and Effects to redeem the Captives, and thoſe Men who remained in the Town were now thinking of abandoning it.

Major *Hutchinſon* was in *June* 1692 ſent with a ſtrong Party under Capt. *Convers*, Capt. *Floyd*, and Capt. *Thaxter*, to aſſiſt them, and other *Engliſhmen* on the Frontiers. Capt. *Convers* was poſted at *Wells* with only fifteen Men in the ſlight Fort there, and fifteen more in two Sloops in the River to be aſſiſting to the others upon Occaſion. Againſt him came no leſs than four *Indian* Kings, *Modenkawando*, *Moxus*, *Edgerement*, *Warumbo*, and ſtill two greater Men, Monſieur *Labrocree* and Monſieur *Barniff*, with ſome *French* Soldiers, and five hundred *Hurons*. *Moxus* had not long before attacked *Wells* with two hundred *Indians*, and had been repulſed by Capt. *Convers*, who had not a Quarter of that Number of Men with him, which *Modenkawando* hearing, he ſaid, my Brother *Moxus* has miſſed it now, but I will go myſelf the next Year, and have the Dog *Convers* out of his Hole. But he was miſtaken, for the *Engliſhmen* in the Fort, and Chiefs in the Sloops, behaved ſo gallantly, following the Example of their brave Commander *Convers*, that after ſeveral fruitleſs Attempts of the *Indians* and *French* to maſter them by Land and by Water, Monſieur *Barniff*, and the four *Indian* confederate Princes, were obliged to retire. But Monſieur *Labrocree* did not live to bear the Reproach of ſo ſcandalous a Retreat, being killed in the firſt of it. The Enemy happened here to take one *John Diamond* Priſoner, whom they uſed ſo barbarouſly, that it would occaſion too much Horror in the Reader to relate it.

Things continued, however, in this Situation, till Sir *William Phipps* came over in Quality of Governor of *New England*, who immediately began to think of erecting a new Fort at *Pemmaquid*, to cover the Frontiers, which he compleated in ſix Month's Time, though it was one of the ſtrongeſt Places in *America*; but the Expence which this occaſioned, made the People uneaſy; who, it ſeems, never forgave the raiſing of the Money it coſt, though they could not but be ſenſible, that it was entirely laid out for their Safety: But it ſeems in *New* as well as *Old England*, and indeed in all other Countries, it is a much eaſier Thing to ſerve a Society, than to make that Society ſenſible of one's Service. In the preſent Caſe one might have expected Things ſhould have taken another Turn, ſince by the Care Sir *William Phipps* took, the Frontiers of the Plantation were better ſecured than in Times paſt, and the *Indians* more than once defeated in general Engagements; if the Diſputes of between two and three hundred Men of a Side may be called ſo, and I ſee no Reaſon why they ſhould not, if we conſider that the Conſequences of theſe Engagements were of the ſame Importance to both Nations as if they had been fought by thouſands; and I conceive, that it is the Importance of a War, and not the Number of Men employed in it, that renders it worthy of Notice.

Theſe Succeſſes, the building the Forts in the Eaſt, and the augmenting the Forces there, inclined the Savages to think in earneſt of Peace, eſpecially upon hearing the *Macquas* threatened to fall upon them, for killing ſome of their Squas or Princeſſes on *Whortle-bury Plain*. The *Indian* Sachems had a *French* Embaſſador at their Courts, who was a Friar, to ſtir them up againſt the *Engliſh*, and keep them in Heart. This Prieſt did his utmoſt to perſuade them to continue the War. But the *French* not aſſiſting them with Men, Arms, and Ammunition, as they promiſed, the Friar could not hinder them from begging a Peace, which was concluded at *Fort Pammaquid*, by thirteen Segamores and the *Engliſh* Commiſſioners, who ſet their Names to the Inſtrument, *Auguſt* 11, 1693. By this Treaty the *Indians* renounced their Allegiance with the *French*, owned themſelves Subjects to the Crown of *England*, confirmed the *Engliſh* in the Poſſeſſion of all the Lands they had acquired, and ſubmitted the Regulation of their Trade to the next general Aſſembly, which gave great Satisfaction to the People of *New England*; the rather, becauſe hitherto the *Indians* had very honeſtly kept their Treaties, but it was not long before it appeared that their new ſpiritual Guides the *French* had taught them other Principles.

4. It was not above a Year before the Jeſuits excited their new Converts to break this Peace concluded with Heretics; it is true, there was then a War with *France*, ſo that as Stateſmen and Politicians the Jeſuits may be juſtified, but then they muſt lay aſide all Pretences to Chriſtianity; for it is certain, there is nothing in our Religion that countenances a Behaviour of this Kind, and therefore we may ſafely ſay, that all their Labours tended to make theſe poor People rather Tools to *France* than Chriſtians. The firſt breaking out of the new War, which happened in the Spring of 1694, was without any previous Declaration, or even Complaint that the Terms had not been kept on the Side of the *Engliſh*, nor indeed was this ever ſo much as pretended. A Body of *Indians* and *French* fell ſuddenly on *Oyſter River Town*, and ſeized near one hundred Perſons, twenty of which were of the Trained-Bands. One *Blachford* courageouſly defended his Houſe againſt them, who deſpairing to reduce him before Succours came, left him, and going to Mrs. *Cuts*'s Farm near *Piſcataway*, they murdered her and her Family. They made an Incurſion into *Middleſex* County, and aſſaulted *Groton*, but were bravely repulſed by Lieutenant *Lukin*, upon which they fell to plundering the Plantations thereabouts, killed twenty Priſoners, and carried twenty more into Captivity. They killed one of the Children of Mr. *Greſham Hobert*, the Miniſter, and carried off another with them; they murdered three Perſons at work near *Spruce-Creek* and eight more at *Kittery*, where they barbarouſly uſed a Daughter of Mr. *Downing*. The Savages ſcalped this young Woman and left her for dead, but ſhe recovered, and was living twenty Years after. Mr. *Joſeph Pike*, of *Newbury*, Under-Sheriff of *Eſſex*, was murdered by them, between *Ameſbury* and *Haverhill* in that County.

To balance theſe Loſſes the *Engliſh* ſeized *Bommaſeen*, a famous Segamore, one of thoſe that ſigned the laſt Treaty. He pretended to be juſt come from *Canada*, and that he came on Purpoſe to put an End to theſe Hoſtilities. But it being proved, that he was a principal Actor in the late Murders, he was ſent Priſoner to *Boſton*. The taking of *Bommaſeen* ſtunned the *Indians* a little, and they were quiet for ſix or ſeven Months. At laſt a Fleet of Canoes came to an Iſland a League from *Pemmaquid*, and ſent Propoſals of Peace to the Garriſon. They owned their Guilt in breaking the laſt Articles, but threw the Blame of it on the *French*. As a Proof of their Sincerity now they delivered up eight Captives, when they had above one hundred ſtill in Captivity. However, a Truce was granted for thirty Days, and Colonel *Philips*, the gallant Major *Convers*, and Lieutenant Colonel *Howthorn*, were appointed Commiſſioners, to treat with them on the Part of the *Indians*; but becauſe they brought not *Bommaſeen* with them, whoſe Releaſement was all they wanted, the *Indian* Commiſſioners broke off the Conference, and went away in diſguſt. They had left the *Engliſh* Planters in their Captivity contrary to their Promiſe to releaſe them as a Preliminary, which was a plain Indication they were not in earneſt. Advice was ſent immediately to all the *Engliſh* Garriſons in the Eaſt to be upon their Guard: Notwithſtanding which, Major *Hammond*, of *Kittery*, fell into an Ambuſcade, and was taken Priſoner;

ſoner; but having the good Fortune to be tranſported to *Canada*, he was very civilly treated by Count *Frontenac*, who bought him of his *Indian* Maſter, and ſent him to *Boſton* by a Veſſel that came to *Quebec* for exchange of Priſoners. In *Auguſt* a Party of *Indians* came down to *Bellerica* on Horſeback; this was pretty far within the *Maſſachuſets*. They killed and took fifteen Perſons, and plundered Mr. *Rogers*'s Houſe. This was the firſt Time the *Indians* ever made uſe of Horſes. They took nine People out of *Newbury* in *Eſſex*, and being cloſely purſued by Captain *Greenleaf*, a valiant and diligent Officer, they ſo wounded them when they found they could not keep them, that they all died except one Lad, which was a ſignal Proof of their Barbarity.

Captain *March*, Governor of *Pemmaquid Fort*, deſiring to lay down his Commiſſion towards the latter End of the Year, he was ſucceeded in it by Captain *Chub*. He ſhewed the Baſeneſs of his Spirit, as well as the Weakneſs of his Underſtanding, in one of his firſt Exploits, after he had the Command of this Garriſon, by murdering *Edgeremet* and *Abenquid*, and two other principal Segamores, who had ſigned the laſt Treaty, and came to him on Aſſurance of Security, to confer about a new one. In *Auguſt* the *French* landed ſome Soldiers out of a Man of War, the *Newport*, which they had taken from the *Engliſh*, to aſſiſt the *Indians* in his Neighbourhood.

This News ſo frightened the Traitor *Chub*, that he ſurrendered the new and ſtrong Fort of *Pemmaquid*, without the firing one Gun, within or without, though he had near one hundred Men in it double-armed. The ſurprizing News of this Loſs cauſed a mighty Conſternation at *Boſton*, and all over *New England*. Governor *Stoughton*, and the Council, immediately ordered three Men of War in purſuit of the *French*, though it was not probable that theſe Ships could be fitted for that Service time enough to come up with the Enemy, who having done their Buſineſs at *Pemmaquid* better than they could hope for, were gone far enough out of the reach of the *Engliſh*. Colonel *Gedney* marched with five hundred Men to the Eaſt, but the *Indians* were gone home, and he could do nothing but ſtrengthen the Garriſons there. The Savages, before their Retreat, killed five Soldiers belonging to *Saco Fort*, who muſt not be with their Garriſon. And one may obſerve, that the greateſt Miſchief the *Indians* do, is by theſe Ambuſhes and Surprizes, which, conſidering how they were almoſt intermixed with them, it is ſtrange they ſhould not be aware of, and guard againſt; for the Country muſt by this Time, and this Means, be, in a Manner, as well known to them as to the Savages. Colonel *Gedney* arreſted *Chub*, and brought him to *Boſton*; but nothing treaſonable being proved againſt him, the Government only took away his Commiſſion, and ſent him thence to his Houſe at *Andover*, in *Eſſex County*.

Some Time after this the *Indians* entered *Haverhill*, and carried off thirty Captives, one of which was *Hannah Dunſtan*, a Woman of a maſculine Spirit. She had lain in not above a Week, yet ſhe and her Nurſe walked one hundred and fifty Miles on Foot, to the Town where the *Indian* ſhe was to ſerve lived. This Woman being afterwards to travel with her Maſter and his Family to a Rendezvous of the Army of the Savages, where, according to the diabolical Cuſtom of them, ſhe, her Nurſe, and other *Engliſh* Priſoners, where to run the Gantlet; *Hannah* watched her Opportunity in the Night, and having animated her Nurſe, and an *Engliſh* Boy who was with her, they three killed ten of the *Indians* with their own Weapons, and made their Eſcapes; for which Action they received a Reward of fifty Pound from the General Aſſembly, and Preſents from particular Perſons to a good Value. The *Indians* continuing their Inroads killed a Man at *York*, another at *Hatfield*, a third at *Groton*, and a fourth at *Exeter*; which ſhews us that the *New England* People were in conſtant Danger, and harraſſed on every Side. The *Indians* grew every Day more barbarous and more implacable, as having the Intrigues of the *Jeſuits* added to their own Fierceneſs and Thirſt of Blood.

They ſurprized and ſhot Major *Froſt*, and his two Sons, at *Berwick*, as they were coming from Church one *Sunday*, and going to his own Houſe about five Miles off. Two Men that rid Poſt to carry this unwelcome News to the Governor of *Wells*, fell into an Ambuſcade as they were returning, and were killed, as were three Men near *Nechawannic*, and a dreadful Deſolation threatened the whole Province; certainly more for want of Management than of Power. The Savages roaſted a Man to Death a Mile and a half from *Wells*. Three Soldiers, at *Saco Fort*, as they were cutting Fire-wood for the Fort at *Caco Iſland*, were ſhot dead, while Lieutenant *Fletcher*, with his two Sons, who were appointed for their Guard, were a fowling in the Woods: But the Lieutenant and his Sons paid dearly for their Negligence, for they fell into an Ambuſcade as they returned, and were all three taken Priſoners. The Father, and one of his Sons, died in Captivity, and the other made his Eſcape.

In the Beginning of 1697 the Government of *New England* was alarmed with Advice that the *French* in *Canada* intended to make a Deſcent there; that a Squadron of Men of War was come from *France* to ſupport the Army of the *Indians* and *French*, that was to attack the *Engliſh* by Land. The Lieutenant-Governor and Council prepared for a vigorous Defence; the Forts about *Boſton* were repaired; the Militia throughout the whole Province were raiſed and well diſciplined. Major *March* was ordered to the Eaſt, with five hundred, to ſcour the Woods; the *Indians*, who were gathering together about *Caſco Bay*, retired as he approached them; but the Major having put his Men aboard ſome Ships, ſailed up among the Eaſtern Iſlands, and landed on the Banks of *Damaſcatos River*; a very prudent Meaſure, for he could not have overtaken the *Indians* by Land, before they had been got into their Faſtneſſes. The *Indians* ſeeing this, fell upon his Men as they were getting aſhore, but could not hinder their Landing; upon which a ſharp Engagement enſued, and the *Engliſh* drove the Enemy to their Canoes, a Fleet of which was in the River to receive them. The *Engliſh* had about twelve Men killed, and as many wounded; the Enemies Loſs was much greater; but the main Advantage to the *Engliſh* was, preventing the *Indians* joining the *French*, who were approaching with the Ships of War and Tranſports for a Deſcent; but hearing of the Rout of their Confederates, they made the beſt of their Way home to *Europe*, with the *French* Troops on board, to their no ſmall Diſcredit.

A Party of Savages made an Incurſion into *Middleſex*, and plundered *Lancaſter*, killing twenty Men, among whom was the Reverend Mr. *John Whiting*, the Miniſter, and carried five into Captivity. A Month after they killed a poor Man in the Woods, near *Oyſter River*. In the Beginning of the next Year they made a D[illegible] upon *Andover*, and killed Captain *Chub* and his Family. They alſo killed Colonel *Dudley Bradſtreet*, took his whole Family, and were carrying them off; but being cloſely purſued, they releaſed them without doing them any Miſchief. The Savages were now in Motion to the Weſtward, and killed a Man and a Boy in the Meadows near *Hatfield*. They were purſued by a Party of *Engliſh* from *Deerfield*, of which one was killed by the *Indians*, who, after that, ran to the Woods. They had attempted *Deerfield* on *Connecticut River*, but were beaten off by the Inhabitants, headed by their Miniſter, Mr. *John Williams*. Theſe ſmall Actions ſeemed to preſage the End of this War, of which the Savages were as weary as the *Engliſh*, and had no Proſpect of making any thing of it againſt a People ſo much ſuperior to them in Numbers, Arms and Stores; but they ended it with the better Grace, by Means of the Peace of *Ryſwick*, between *England* and *France*. Upon which Count *Frontenac* ſent to the Sachem of the *Hurons*, and told them he was no longer to ſupport them in their War againſt the *Engliſh*, and adviſed them to make the beſt Terms they could for themſelves.

The Earl of *Bellamont* was by this Time arrived at *New York*, and a Treaty of Peace with the *Indians* being ſet on Foot, he diſpatched Major *Convers*, and Colonel *Philips*, to confer with the *Indian* Sachems at *Penobſcot*. They began the Conferences *October* the 6th, in which the Sachems excuſed themſelves for breaking the Peace, ſaying, The Jeſuits would not let them alone till they had done it; and if the Earl of *Bellamont*, and Count *Frontenac*, would not baniſh theſe Devils, they could not promiſe the next Peace would laſt long. Major *Convers*, and Colonel *Philips*, concluded it with them on the Foot with the laſt Treaty; to which they added a more formal Submiſſion to the Sovereignty of the Crown of *England*; wherein, after acknowledging themſelves guilty of breaking the laſt Peace, and in not fulfilling their Engagements entered into thereby, while they enjoyed the Benefit of it, which they charge upon the evil Councils and Inſtigations of the *French*, they proceed thus:

"Wherefore we, whoſe Names are hereunto ſubſcribed, Segamores, Captains, and principal Men of the *Indians*, belonging to the Rivers of *Kennebeck*, *Amonoſcoggin*, *Saco*, and Parts adjacent, being ſenſible of our great Offence and Folly, in not complying with the aforeſaid Submiſſion and Agreement, and alſo of the Sufferings and Miſchiefs that we have hereby expoſed ourſelves unto; do, in all humble and ſubmiſſive Manner, caſt ourſelves upon his Majeſty's Mercy, for the Pardon of all our Rebellions and Violations of our Promiſes; praying to be received into his Majeſty's Grace and Protection; and for, and in Behalf of ourſelves, and of all the other *Indians* belonging to the ſeveral Rivers and Places aforeſaid, within the Sovereignty of his Majeſty of *Great-Britain*, do again acknowledge and profeſs our hearty and ſincere Obedience to the Crown of *England*; and do ſolemnly renew, ratify, and confirm, all, and every the Articles and Agreements contained in the aforeſaid recited Submiſſion; and in Teſtimony hereof, we, the ſaid Segamores, Captains, and principal Men, have hereunto ſet our Hands and Seals, at *Caſco Bay*, near *Mares Point*, the 7th Day of *January*, in the tenth Year of the Reign of his Majeſty King *William* III. *A. D.* 1698-9. Subſcribed by *Moxus*, and the reſt of the Segamores and petty Princes."

Thus ended, to the mutual Satisfaction of both Parties, the *Indian* War, with reſpect to which the *French* Writers have undoubtedly given a very falſe Account, and a ſtill more falſe Account of the Peace; for they ſay poſitively that the *Indians* inſiſted upon it, that they were not ſubject to the Crown of *Great-Britain*; that they declared againſt their occupying any of their Lands; and that they openly profeſſed they were, and would be, Friends to the *French*; every Tittle of which, as is manifeſt by their Inſtrument above recited, and cited for that Purpoſe, appears to be a direct Falſhood; but in one thing I believe the *French* Writers ſpeak Truth, which is, with regard to the Policy of the *Indians*, who made uſe of the Small-Pox for a Pretence to quit the *Engliſh* Army in its March to attack the *French* Colony of *Canada* by Land, from a Foreſight that if this Expedition had been attended with Succeſs, the *French* muſt have abandoned their Country, and they were unwilling to be left wholly at the Mercy of the *Engliſh*.

Many of our Authors, indeed, repreſent the *Indians* as not capable of ſo great a Stroke in Politics, but I have ſeen Papers of Governor *Dudley*, and *William Penn*, who were very well acquainted with them, that ſeem to countenance this Opinion; for they ſay, they have ſtrong natural Parts, underſtand their own Intereſt thoroughly, and do every thing with great Deliberation. It is indeed certain, that they are wedded to their own Sentiments, and to their own Manner of living, and therefore we muſt refer their Politics to their Maxims, and not pretend to judge of them by our own, with which they have not the leaſt Affinity or Connection.

5. We have, in the Courſe of this Work, given ſo full and clear an Account of the Manner in which all our Colonies were ſettled, and of the Motives upon which different Sorts of People reſorted to them, that the Reader cannot be ſurprized at hearing their religious Affairs were in a very indifferent Situation, when in reſpect to temporal Concerns their Condition was moſt flouriſhing. Several worthy Perſons, in the Reign of King *Charles* II. had uſed their Endeavours to correct this Evil, but their pious Deſires did not meet with proportionable Succeſs, which, however, was far from diſcouraging others from following their Example; but though they were ſomewhat more fortunate, chiefly from the Aſſiſtance given them by the pious Queen *Mary*, whoſe Character for Religion and Virtue will live as long as there is either Religion or Virtue in the World, yet it was at laſt found that nothing could be effectually done, unleſs the Encouragers of this noble Deſign of ſpreading the Chriſtian Faith through the *Britiſh* Dominions in *America*, were incorporated by Charter, the Neceſſity and Expediency of which Dr. *Thomas Teniſon*, then Archbiſhop of *Canterbury*, undertook to repreſent to King *William* III. and upon his Repreſentation a Charter was obtained, dated the 16th of *June*, in the 13th Year of his Reign, by which ſeveral Perſons, equally diſtinguiſhed by their Titles and Virtues, were incorporated for that Purpoſe, under the moſt honourable of all Names, *The Society for the Propagation of the* GOSPEL *in foreign Parts*.

This truly, ſays the Author of the Hiſtory of this Society, Dr. *Humphreys*, was an Action ſuitable to Archbiſhop *Teniſon*'s public Spirit and honeſt Zeal for the Proteſtant Religion, and exceedingly becoming his high Station and Authority in the Church. The *American* Colonies, ſure, can never, without the greateſt Veneration and Gratitude, remember him, when they ſhall, many Ages hereafter, feel the happy Effects of having the Chriſtian Religion planted among them; and reflect how hearty and forward Archbiſhop *Teniſon* appeared to obtain that Charter, which gave Life and Authority to ſo glorious an Undertaking: Nay, that his Zeal and Spirit did not reſt here, he continued to promote and guide, by his wiſe Councils, the Affairs of the Society; he paid them an annual Bounty of fifty Pounds, during his Life, and at his Death bequeathed them a thouſand Pounds, towards the Maintenance of the firſt Biſhop that ſhould be ſettled in *America*. A Charter being thus obtained, the next Endeavour was to carry their laudable Deſign into Execution; accordingly his Grace the Archbiſhop, as impowered by the Charter, cauſed Summons to be iſſued for the Members of the Corporation, to meet within the Time limited; and ſeveral met at the Place appointed, on the 27th of *June* 1701, and choſe proper Officers for tranſacting the Buſineſs. At following Meetings they made divers Rules and Orders for their more regular Proceedings in the Adminiſtrations of their Truſt, and ſubſcribed, among themſelves, near two hundred Pounds; for defraying the Charges of paſſing the Charter, making the common Seal, and other neceſſary Expences; they alſo ordered five hundred Copies of the Charter to be printed forthwith, and diſtributed amongſt the Members, to be ſhewed by them to all proper Perſons, the farther to notify the Deſign they were engaged in, and to invite more Perſons of Ability and Piety to aſſiſt in carrying it on.

This Step was but an Opening of the Matter to the Public; the Society were diligent to conſider of farther and more effectual Ways and Means to obtain Subſcriptions and Contributions ſufficient to enable them to maintain the Expence of ſending many Miſſionaries abroad. They immediately agreed that the beſt Argument to Mankind was Example, and the moſt effectual Means to engage others to contribute, was to lead the Way themſelves, by ſubſcribing towards the Support of the Work. Accordingly Archbiſhop *Teniſon*, the Preſident, the Vice-Preſidents, all the Biſhops and Members then preſent, did ſubſcribe a yearly Sum to be paid to the Treaſurer of the Society for the public Uſes, according to the Form of Subſcription drawn up for that Purpoſe; having now made this Advance themſelves, they gave out Deputations, under their common Seal, to ſeveral of their Members, and other Perſons of Figure and Intereſt in the Counties of *England* and *Wales*, ſignifying their being conſtituted and appointed by the Corporation to take Subſcriptions, and to receive all Sums of Money which ſhould be ſubſcribed or advanced for the Purpoſes mentioned in the Charter; and here it is to be gratefully acknowledged, that ſeveral worthy Perſons did, with a public Spirit, take theſe Deputations to help on with a Work ſo truly for the national Intereſt, and the Honour of common chriſtianity; and did, by their Example and

Inſtances, ſo influence ſeveral well diſpoſed Perſons, that conſiderable Remittances of Benefactions to the Corporation were ſoon made, which enabled them to enter on the Work with Succeſs. There were likewiſe ſeveral conſiderable Sums of Money ſent in to the Society by Perſons who deſired to conceal their Names; and the ſame Spirit and Ardour has continued; neither has the Society wanted the Encouragement and Protection of the Succeſſors of their Royal Founder, particularly his late Majeſty King *George* I. and the Society have ſtill increaſing Views of Succeſs through the Favour of his Majeſty now reigning, from his known Zeal for the Proteſtant Religion, and Royal Care for the Colonies, ſo conſiderable a Branch of the *Britiſh* Monarchy.

It is a Thing that will certainly excite Wonder in the Minds of all calm and conſiderate People, let their religious Sentiments or Perſuaſions be what they will; that this Society, with ſcarce any ſettled Fund, ſhould be able to maintain, for between forty and fifty Years, ſo extenſive a Scheme as that of their Charter, which tends to correct almoſt all the Errors and Miſtakes that have hitherto happened in the Management of our Colonies; for by their prudent and pious Care, great Check has been given to Atheiſm and Irreligion, a Thing of great Conſequence in our Settlements, conſidered in a political, as well as Chriſtian Light; for without it there is no reſtraining the *Indian* Traders from being guilty of ſuch Immoralities, as render us deſpicable in the Eyes of the Heathen *Indians*; which, as may be eaſily conceived, muſt tend vaſtly to our Diſadvantage, more eſpecially, if at the ſame Time we reflect on the Management of the *French* in this Particular, who are very careful in their Endeavours to convert the *Indians*, and keep up a great outward Appearance of Zeal for Religion, which makes ſtrong Impreſſions on the Minds of the Savages, even though they are not converted, nor have any Inclination to become Papiſts. If by ſuch Methods they ſhould ſo far compaſs their Ends, as to convert many of the *Indians*, and by that Means awe and influence the reſt; it muſt be accompanied with Circumſtances very diſagreeable to the Inhabitants of our Colonies, as from the foregoing Hiſtory of the *Indian* War will appear.

But beſides the many and great Advantages that would reſult from the thorough Eſtabliſhment of the Proteſtant Religion through the Colonies, with regard to the Conduct and Behaviour of the People, and the great Enlargement of Power that would follow in Caſe the Converſion of the *Indians* was undertaken by Practice as well as Preaching, by the Example of the Laymen, as well as the Exhortations of the few Clergy that are ſent thither; there is yet another Point that deſerves as ſerious Regard. The Negroes in the Service of our Planters, are a prodigious Body of People, and as there are but too many juſt Cauſes given for apprehending the Deſtruction of whole Countries from their Plots and Conſpiracies, which have been ſometimes prevented by accidental, or rather providential Diſcoveries, when they were upon the very Point of being executed; ſo it is certain, that if theſe People, or the greateſt Part of them, could be converted, it would not only prove a Means of taking away theſe Apprehenſions, but would alſo add a great Strength to the Colonies, in which they are obliged to make uſe of Negroes; for theſe People would then conceive new Notions of their Condition, and conſider their being Servants to Chriſtians in the Light rather of a Bleſſing than a Calamity; it would not only make them eaſy, but chearful in their Servitude, and by Degrees would be attended with more Advantages than we can foreſee, and yet a very ordinary Degree of Foreſight will not fail to ſhew us a great many. That this is, and muſt be, attended with many Difficulties, will be readily granted, but that it is very far from being impracticable, will appear from what Dr. *Humphreys* tells us has been in this Reſpect already done, and which I take to be as material a Point as any that occurs in the Hiſtory of this Period.

The Negroe Slaves, ſays he, even in theſe Colonies, where the Society ſend Miſſionaries, amount to many thouſands of Perſons of both Sexes, and all Ages, and moſt of them are very capable of receiving Inſtructions; even the grown Perſons, brought from *Guinea*, quickly learn *Engliſh* enough to be underſtood in ordinary Matters; but the Children born of Negroe Parents in the Colonies are bred up entirely in the *Engliſh* Language. The Society looking upon the Inſtruction and Converſion of the Negroes, as a principal Branch of their Care, eſteeming it a great Reproach to the Chriſtian Name, that ſo many thouſands of Perſons ſhould continue in the ſame State of Pagan Darkneſs under a Chriſtian Government, and living in Chriſtian Families, as they lay before under in their own Heathen Countries; the Society, immediately, from their firſt Inſtitution, ſtrove to promote their Converſion, and inſomuch as their Income would not enable them to ſend Numbers of Catechiſts ſufficient to inſtruct the Negroes, yet they reſolved to do their utmoſt, and at leaſt to give this Work the Mark of their higheſt Approbation. They wrote therefore to all their Miſſionaries, that they ſhould uſe their beſt Endeavours, at proper Times, to inſtruct the Negroes; and ſhould eſpecially take occaſion to recommend it zealouſly to the Maſters, to order their Slaves, at convenient Times, to come to them, that they might be inſtructed.

Theſe Directions had a good Effect, and ſome hundreds of Negroes have been inſtructed, received Baptiſm, and been brought to the Communion, and lived very orderly Lives. It is a Matter of Commendation to the Clergy, that they have done thus much in ſo great and difficult a Work. But alas! what is the Inſtruction of a few hundreds in ſeveral Years, with reſpect to the many thouſands uninſtructed, unconverted, living and dying downright Pagans? It muſt be confeſſed, what hath been done is as nothing, with regard to what a true Chriſtian would hope to ſee effected. But the Difficulties the Clergy meet with in this good Work, are exceeding great. The firſt is, the Negroes want Time to receive Inſtructions; ſeveral Maſters allow their Negroes only *Sundays* for Reſt, and then the Miniſter of the Pariſhes are fully employed in other Duties, and cannot attend them. Many Planters, in order to free themſelves from the Trouble and Charge of feeding and cloathing their Slaves, allow them one Day in a Week to clear Ground and plant it, to ſubſiſt themſelves and Families; ſome allow all *Saturday*, ſome half *Saturday* and *Sunday*; others allow only *Sunday*. How can the Negroe attend for Inſtruction, who, on half *Saturday* and *Sunday*, is to provide Food and Raiment for himſelf and Family for the Week following: The Negroe will urge in his own Excuſe, that the Support of himſelf and all that is dear to him, doth abſolutely depend upon this his neceſſary Labour on *Saturday* and *Sunday*; but if this be not ſtrictly juſtifiable, yet it is certain the miſerable Man's Plea will engage the Reader's Compaſſion.

This is the Caſe in ſome Colonies, in others it differs. In ſome Places the Negroes do the whole Labour of the Country in the Field, in others they are uſed only as Houſe Servants. Another Difficulty ariſes from the Habitations and Settlements of the Maſters being at a great Diſtance from each other in moſt Places in the Colonies, for which Reaſon neither can a Miniſter go to many Families, if the Negroes were allowed Time to attend him, nor can a proper Number of them aſſembled together at one Place, without a conſiderable Loſs of Time to their Maſters. But the greateſt Obſtruction is, the Maſters themſelves do not conſider enough the Obligation which lies upon them, to have their Slaves inſtructed. Some have been ſo weak as to argue the Negroes had no Souls, others that they grew worſe by being taught and made Chriſtians. I would not mention theſe, if they were not popular Arguments ſtill, becauſe they have no Foundation in Reaſon or Truth.

After the Society had given the general Order mentioned before to all their Miſſionaries, for the Inſtruction of the Slaves, they agreed to uſe another Method, which they believed would more ſucceſsfully promote this Work. They opened a catechiſing School for the Slaves at *New York*, in the Year 1704, in which City there were computed to be about one thouſand five hundred Negroe and *Indian* Slaves, and many of their Maſters well diſpoſed to have them made Chriſtians. The Society hoped this Example ſet, might kindle a Zeal in ſome other good People, to carry on this Work which they were unable to effect, and to erect Schools for the Inſtruction of the Negroes, and to employ Catechiſts to teach them at appointed Times; and that the Legiſlature of the Colonies would by a Law oblige all Slaves to attend for Inſtruction. The Society found ſoon, it was not eaſy to procure a Perſon proper to be a Catechiſt: Mr. *Elias Neau*, a Laymen, then living in *New York* City as a Trader, was preſented to be the propereſt Perſon for that Office. He was by Nation a *Frenchman*, and made a Confeſſion of the Proteſtant Religion in *France*, for which he had been confined many Years in Priſon, and ſeven Years in the Galleys: When he got releaſed, he went to *New York*, and traded there; and had the Character, from People of all Perſuaſions, of a Man of Piety, of ſober Deportment and ſerious Life. He accepted of the Offer of being Catechiſt; and his former Sufferings on Account of his Religion did, with great Advantage, recommend him to be a Teacher of the Chriſtian Faith, and his Humility enabled him to bear with the many Inconveniencies in teaching theſe poor People.

He entered upon his Office in the Year 1704 with great Diligence. At firſt he was obliged to go from Houſe to Houſe to inſtruct the Negroes; this was out of meaſure laborious; afterwards he got Leave that they ſhould come to his Houſe; this was a conſiderable Relief. There were two Obſtructions ſtill; the Time was much too ſhort, and the Place inconvenient, for teaching the great Number of Negroes; a little Time in the Duſk of the Evening, after hard Labour all Day, was the whole Time allowed them for Learning and for Relaxation, and to viſit their Wives and Children, which were generally in other Families, not in their Maſters. At this Time their Bodies were ſo fatigued that their Attention could not be great. They were dull and ſleepy, and remembered they muſt riſe early the next Day to their Labour; the Place alſo was incommodious, being the uppermoſt Floor of Mr. *Neau*'s Houſe, and was not able to hold conveniently a ſmall Part of the Slaves that might reſort thither. Beſides, the Negroes were much diſcouraged from embracing the Chriſtian Religion, upon account of the very little Regard ſhewed them in any religious Reſpect. Their Marriages were performed by mutual Conſent only, without the Bleſſing of the Church; they were buried by thoſe of their own Country, or Complexion, in the common Field, without any Chriſtian Office, perhaps ſome ridiculous Heathen Rites were performed at the Grave by ſome of their own People. No Notice was given of their being ſick that they might be viſited; on the contrary, frequent Diſcourſes were made in Converſation that they had no Souls, and periſhed as Beaſts.

Mr. *Neau* contended with theſe Difficulties, and notwithſtanding all proved an Inſtrument of bringing many to the Knowledge of the Chriſtian Faith: He took great Pains in reading to them, in making ſhort Collections out of Books on the Catechiſm, and in making an Abſtract of the hiſtorical Part of the Scriptures; ſo that many who could not read, could yet, by Memory, repeat the Hiſtory of the Creation of the World, the Flood, the giving of the Law, the Birth, Miracles, and Crucifixion of our Lord, and the chief Articles, and Doctrines of Chriſtianity. This was a Work of great Pains and Humanity. Mr. *Neau* performed it diligently, diſcourſing familiarly with thoſe poor People, and labouring earneſtly to accommodate his Diſcourſe to their Capacities. His Labours were very ſucceſsful. A conſiderable Number of the Slaves could give a ſufficient Account of the Grounds of their Faith, as ſeveral of the Clergy, who examined them publickly, before they gave them Baptiſm, have acquainted the Society. In the mean Time, while the Society was thinking of farther Ways to advance this Work, a Calamity appeared, which mightily diſcouraged this Country from promoting the Inſtruction of their Slaves.

In the Year 1712 a conſiderable Number of the Negroes of the *Carmantee* and *Pappa* Nations, formed a Plot to deſtroy all the *Engliſh*, in order to obtain their Liberty, and kept their Conſpiracy ſo ſecret that there was no Suſpicion of it, till it came to the very Execution: However, the Blow was, by God's Aſſiſtance, happily defeated. The Plot was this: The Negroes ſet Fire to a Houſe in *York* City, on a *Sunday* Night in *April*, about the going down of the Moon: The Fire alarmed the Town, who from all Parts run to it. The Conſpirators planted themſelves in ſeveral Streets and Lanes leading to the Fire, and ſhot or ſtabbed the People as they were running to it. Some of the wounded eſcaped and acquainted the Government, and preſently by the firing a great Gun from the Fort, the Inhabitants were called under Arms, and prevented from running to the Fire; a Body of Men was ſoon raiſed, which eaſily ſcattered the Negroes; they had killed about eight Perſons, and wounded twelve more. In their Flight ſome of them ſhot themſelves, others their Wives, and then themſelves; ſome abſconded a few Days, and then killed themſelves, for fear of being taken, but a great many were taken, and eighteen ſuffered Death. This wicked Conſpiracy was at firſt apprehended to be general among all the Negroes, and opened the Mouths of many to ſpeak againſt giving the Negroes Inſtruction. Mr. *Neau* durſt hardly appear abroad for ſome Days, his School was blamed, as the main Occaſion of this barbarous Plot. But upon the Trial of the Wretches there were but two of all his School ſo much as charged with the Plot, and only one was a baptized Man; and in the Peoples Heat, upon ſlender Evidence, perhaps, too haſtily condemned; for ſoon after he was acknowledged to be innocent by the common Voice; the other was not baptized. It appeared plain that he was in the Conſpiracy, but guiltleſs of his Maſter's Murder, who was *Hooglands*, an eminent Merchant. Upon full Trial, the guilty Negroes were found to be ſuch as never came to *Neau*'s School; and what is very obſervable, the Perſons whoſe Negroes were found to be moſt guilty, were ſuch as were the declared Opposers of making them Chriſtians: However, a great Jealouſy was now raiſed, and the common Cry was very loud againſt inſtructing the Negroes.

The Common-Council of *New York* City made an Order, forbidding the Negroes to go about the Streets after Sun-ſet without Lanthorns and Candles. This was in effect, forbidding them to go to Mr. *Neau*'s School; for none of them could get Lanthorns, or come to him before Sun-ſet; but ſome Time after, the more ſerious and moderate People abated of this Violence; it appearing to be a Plot of a few only, not a general one of all the Negroes, no Conſequence attended the Action, and the People grew more compoſed. *Robert Hunter*, Eſq; the Governor of the Province, obſerved their Fears were ill-grounded, and that Mr. *Neau*'s Scholars were not the guilty Negroes; and therefore, in order to ſupport the Deſign of inſtructing them, he was pleaſed to viſit his School, attended by the Society's Miſſionaries and ſeveral Perſons of Note, and publickly declared his Approbation of the Deſign; and afterwards, by a Proclamation put out againſt Immoralities and Vice; he recommended to the Clergy of the Country, to exhort their Congregations from the Pulpit, to promote the Inſtruction of the Negroes. This gave new Life again to the Work, and the Negroes frequented Mr. *Neau*'s School as before; ſeveral were inſtructed, and afterwards examined publickly in the Church before the Congregation, by the Reverend Mr. *Veſey*; and gave a very ſatisfactory Account of their Faith, and received Baptiſm.

The Society had Accounts from Time to Time of Mr. *Neau*'s Diligence and Succeſs, particularly one very ample Teſtimonial, ſigned by the Governor (*Robert Hunter*, Eſq;) the Council, the Lord Mayor, and Recorder of *New York*, and the two chief Juſtices, ſetting forth, that Mr. *Neau* had demeaned himſelf in all Things as a good Chriſtian, and a good Subject: That in the Station of Catechiſt he had, to the great Advancement of Religion in general, and the particular Benefit of the Free *Indians*, Negroe Slaves, and other Heathens in thoſe Parts, with indefatigable Zeal and Application, performed that Service three times a Week: And, that they did ſincerely believe, that as a Catechiſt, he did in a very eminent Degree deſerve the Countenance, Favour, and Protection of the Society. The Society were fully ſatisfied with Mr. *Neau*'s Behaviour, and continued to ſend him Numbers of *Catechiſms* and ſmall Tracts of Devotion and Inſtruction, to give among the Slaves and Servants at his Diſcretion. Mr. *Neau* perſevered with the ſame Diligence till the Year 1722, in which he died, much regretted by all who knew his Labours.

The Society have been very careful in carrying on that great and good Work, as far as in their Power lay, ever ſince; and though they have not been ſo ſucceſsful as they could have wiſhed, yet their Diſappointments have not been of a Nature to make them deſpair, and we may reaſonably preſume, that by Degrees, and by a conſtant Perſeverance, they will, in Proceſs of Time, overcome all Difficulties.

6. After the Acceſſion of Queen *Anne* to the Crown, and this Nation's engaging in another general War againſt *France*, it was thought a thing of very great Conſequence to ſecure the five *Indian* Nations bordering upon *New England* and *New York*; and therefore, inſtead of waiting for an Application from the Society, an Order was directed to them from the Privy Council upon this Subject; and they were directed to ſend over Miſſionaries without delay, with a Promiſe that they ſhould be properly ſupported; and this in Terms that very plainly ſhewed the Government looked upon it as a Matter that did not only regard the Church, but the State. The Society, upon this, ſent over, very ſoon after, one Mr. *Moor*, and intended to have ſent over other Miſſionaries if his Endeavours had met with any Succeſs. The Scheme was very wiſe and very good, yet it did not anſwer in the Execution, for want, as I conceive, of proper Expence about it. In a national Concern like this, Money ſhould not have been ſpared, and great Care ought to have been taken in Preparations before any thing had been hazarded in the Execution; ſo that a Number of Miſſionaries ſhould have entered the *Indian* Countries at once, ſome or other of which would certainly have fallen upon the right Way of gaining the Affection of theſe People, which it ſeems was not the good Fortune of Mr. *Moor*; who arriving at *New York* in 1704, was very well received by Lord *Cornbury*, who was then Governor of that Colony, and who alſo gave him all the Aſſiſtance he could deſire in his Miſſion; but the *Mohocks*, to whom he addreſſed himſelf, did not treat him as he expected; for at firſt they ſeemed to expreſs very great Satisfaction at his Arrival, and to be extremely well pleaſed with his Concern for their Salvation; but they trifled with him afterwards, and at laſt gave him plainly to underſtand, that his coming amongſt them would be to little Purpoſe; for under Pretence that Religion was a public Concern, in which all their Families and little Clans had an equal Concern, ſo that he could not be received by any without the common Conſent, they put him off from Time to Time, and would have put him off for ever, if, after a Years waiting, he had not returned to *New York*; where he embarked on board a Ship for *England*, but was unhappily loſt in his Paſſage.

Thus was the Attempt fruſtrated; but the Society received Accounts that this ill Succeſs was owing not only to the Averſion of the *Indians* to Chriſtianity, but was very much occaſioned by the Artifices of the *French* Jeſuits, who induſtriouſly obſtructed the Labours of the *Engliſh* Miſſionaries among them, and left no Means untried to ſeduce them from their Fidelity to the Crown of *England*, and keep them in a continual War with the *Engliſh*. And indeed all the Evils that the *Engliſh* Colonies have undergone during the laſt War, have been occaſioned by the *Indians*, that is, thoſe *Indians* which the Jeſuits have by their Artifices corrupted; for among the five Nations there is a great Number of *French* Jeſuits, who are incorporated, by Adoption, into their Tribes, and as ſuch they oſtentatiouſly aſſume *Iroquois*, Names; and the Chief of the poor ſilly *Indians*, conſidering them as Perſons of their own Blood, do intirely confide in them, and admit them into their Councils, from whence one may eaſily imagine what Diſorders the Jeſuits make in their Affairs. Beſides, the *Indians* bordering on *New England* are the moſt cruel and barbarous of all the Savage Nations, and have deſtroyed all their innocent Neighbours. They are always unfixed, either rambling for ſeveral Months together, or hunting, or upon warlike Expeditions, and at their Return to their Villages, have generally forgot all their former Inſtructions, and it is impoſſible for any Miniſter to accompany them in their Rambles of three or four hundred Leagues at a Time. After this good Endeavour was defeated, the *Indians* remained without Inſtruction, except that ſome few were taught by the *Dutch* Miniſter at *Albany*. But the Year 1709 produced an Event, which the Society hoped might have had very happy Conſequences, and fixed Chriſtianity among the *Iroquois*. Four Sachems, or four chief Perſons of four Nations of the *Iroquois*, came in the Nature of Embaſſadors to *England*, confirming the Peace made with the Governor of *New York*, and requeſting her Majeſty would be pleaſed to direct that their Subjects might be inſtructed in Chriſtianity, and Miniſters might be ſent to reſide amongſt them.

The Archbiſhop of *Canterbury* received thereupon, the following Letter from the Earl of *Sunderland*, then one of her Majeſty's principal Secretaries of State.

" My Lord, *Whitehall April* 20, 1710.

" The incloſed being a Copy of what has been given
" to the Queen, by the Embaſſadors lately arrived from
" the five *Indian* Nations; I am order'd by her Majeſty
" to tranſmit it to your Grace, and to ſignify to you her
" Pleaſure, that you lay it before the Society for propa-
" gating Religion, that they may conſider what may be
" the moſt proper Ways of cultivating that good Diſ-
" poſition theſe *Indians* ſeem to be in for receiving the
" Chriſtian Faith, and for ſending thither fit Perſons for
" that Purpoſe, and to report their Opinion without
" Loſs of Time, that the ſame may be laid before her
" Majeſty. *I am*, &c.

Sunderland, &c."

The Archbiſhop was then much indiſpoſed, and confined to his Houſe with the Gout, and therefore ſignified to the Secretary of the Society to call a Committee to meet at *Lambeth*; a Committee met, and it was agreed there, and afterwards by the Society at a general Meeting, that two Miſſionaries ſhould be ſent to the *Mohock* and *Oneydes*'s *Indians*, with a Salary of one hundred and fifty Pounds Sterling each, together with an Interpreter and School-maſter, to teach the young *Indians*; and this Opinion was humbly laid before the Queen; her Majeſty was farther pleaſed to direct that a Fort ſhould be built among the *Mohocks*, at the Government's Expence, with a Chapel and a Manſion-houſe for the Miniſter, for his greater Conveniency and Security, and that the religious Offices might be performed with due Decency; a Fort was ſoon after built one hundred and fifty Feet Square, and garriſoned with twenty Soldiers and an Officer, and a Houſe and Chapel compleated. The reverend Mr. *Andrews* was appointed Miſſionary, and Mr. *Clauſen*, who had been ſeveral Years employed as Interpreter by the Government of *New York*, in Tranſactions with the *Indians*, was received as Interpreter to Mr. *Andrews*, and Mr. *Oliver* made School-maſter. Mr. *Andrews* was particularly directed by the Society, to uſe all poſſible Means to perſuade the *Indians* to let their Children learn *Engliſh*; and the School-maſter was to make it his whole Buſineſs to teach them. The Society was now in good Hopes this Attempt would prove ſucceſsful, ſince her Majeſty was ſo graciouſly pleaſed to provide for the Security of the Miſſionary, by building a Fort juſt by the *Mohock*'s Caſtle, to which the Men and Children might eaſily reſort to be inſtructed; and the Sachems, the chief Perſons of this People, had been in *England*, received many Marks of Royal Favour, had been Eye-witneſſes of the Greatneſs of the Nation, had been nobly entertained here, and carried home to their own Countries ſafely and honourably, and had themſelves alſo deſired their People might be inſtructed in the Chriſtian Faith.

Mr. *Andrews* arrived at *Albany* in *November*, 1712. The Sachems who had been carried home before he went from *England*, were convened by Order of the Governor of *New York*, to meet Mr. *Andrews* and the Commiſſioners for *Indian* Affairs at *Albany*, in order to give a public Authority and Sanction to Mr. *Andrews's* Miſſion, and that the Sachems might receive him their Miniſter with greater Solemnity. The Sachems came to *Albany*, met the Commiſſioners for *Indian* Affairs, and Mr. *Andrews*, the Miſſionary, made a long Speech to the Sachems, reminding them how gracious her Majeſty was in building a Fort, ſending a Miniſter to them; put them in mind how earneſtly they had requeſted it; and ſet forth what Advantages they and their Children would reap by being taught our Religion and Learning. A Letter from the Archbiſhop of *Canterbury* was delivered to them, and afterwards read to them in *Indian* by Mr. *Clauſen*, the Interpreter of the Province. Some of the Sachems made Speeches, and returned Thanks to the Queen, expreſſed a great Satisfaction in having a Miniſter ſent them, and received Mr. *Andrews* as ſuch, and promiſed him all civil and kind Uſage.

The whole Affair was tranſacted with much Ceremony, the Sachems returned home, Mr. *Andrews* ſtaid ſome time at *Albany* to refreſh himſelf; ſoon after he went up to the Fort, two hundred Miles from *New York*, accompanied by *Robert Livingſton*, Eſq; the Mayor of *Albany*, Capt. *Mathews*, Mr. *Stroopman* of *Schenectady*, the Reverend Mr. *Barclay*, and ſeveral other Gentlemen: He was preſently viſited by a great many *Indians*, Men, Women, and Children, who ſaluted him with abundance of Joy, and bid him welcome to their Country. The Caſtle or chief Town of theſe *Mohocks* is neighbouring to the Queen's Fort, conſiſting of about fifty Wigwams or Houſes: Theſe Wigwams are Huts made of Mats, or Barks of Trees put together with Poles about three or four Yards high. The *Mohocks* Cloathing is a ſhort Cloke, like a Mantle, made of a Blanket, or Bear-ſkin. Their Bed is a Mat, or Skin, laid on the Ground. They paint and greaſe themſelves very much with Bears Fat clarified. They cut the Hair off from one Side of their Heads, and tie up ſome of that on the other Side in Knots, on the Crown, with Feathers. The Men are very ſlothful, the Women very laborious, mere Servants to their Huſbands. They carry all Burthens, fetch the Veniſon home their Huſbands kill (the Men are too lazy to bring it), get in the Wood to burn and dreſs it; carry their Children on their Backs in their Rambles of many hundreds of Miles; hoe the Ground and plant all the *Indian* Corn that is raiſed. The Language of theſe People is very difficult, their Ideas are very few, and their Words therefore not many, but as long as Sentences, expreſſing by a long rumbling Sound what we do in a ſhort Word. There is here no manner of Conveniency of Life for a Miſſionary; for four or five Months in the Year there is ſcarce any ſtirring abroad, by reaſon of the extraordinary Coldneſs of the Weather, and the deep Snows that fall; and in the Summer time, the Flies and Muſketoes are almoſt intolerable, and the Rattleſnakes very dangerous: The neareſt Place of getting any Proviſions is at *Schenectady*, twenty-four Miles diſtant, or from *Albany* forty-four Miles off. The Road to theſe Places is, for the moſt Part, only a ſmall, rough *Indian* Path through vaſt Woods, where riding is very dangerous, by reaſon of the Road being in many Places, ſtopped with fallen Trees, Roots, Stones, and Holes; beſides many ſteep Hills, and dead Swamps or Bogs in the Way; there was nothing deſirable to be ſeen; the Face of the Earth rude and uncultivated, like the wild Inhabitants; no Pleaſure to be found but that of doing good to the miſerable Natives.

Theſe were the Circumſtances of the Place and People, whither Mr. *Andrews* was appointed; and notwithſtanding all theſe Inconveniencies he reſided there, and invited the *Indians* to come to him; many came: He uſed very often to diſcourſe with them, inſtructing them in the chief Articles of Faith, and giving them ſhort general Accounts of our Religion. This was done by the Help of Mr. *Clauſen*, who always attended and interpreted to the *Indians*. Mr. *Clauſen* had been formerly taken Priſoner by the *Indians*, lived long among them, and underſtood their Language ſufficiently. Mr. *Andrews* uſed to draw up ſhort Accounts of the Chriſtian Doctrines, and ſome hiſtorical Parts of the *Bible*; particularly the Creation of the World, and Miracles of the Lord. The Interpreter uſed to read them to the *Indians*, and divine Service uſed to be performed in *Engliſh* to the Soldiers in the Garriſon. The School-maſter, Mr. *Oliver*, opened his School; the *Indians*, at firſt, ſent many of their Children; he began to teach them *Engliſh*; the Parents obſtinately refuſed to have them taught *Engliſh*; all poſſible Endeavours were uſed to perſuade them, they ſtill perſiſted. Mr. *Andrews* ſent this Account to the Society, and rather than quite break with the *Indians*, the School-maſter, and Interpeter, began to teach the Children a little in *Indian*. The Society were forced to comply with the *Indians* Obſtinacy: They procured an Impreſſion of *Hornbooks* and *Primmers* in *Indian*, for the Children, ſent them great Numbers, as alſo Leathern Ink-horns, Pen-knives, a Quantity of Paper of ſeveral ſorts, and ſeveral other little Neceſſaries. The Children were now taught in *Indian*, and were treated with great Kindneſs; no Correction dared to be uſed, for the Parents were ſo fond of their Children, and valued Learning ſo little they thought it not worth gaining, at the leaſt diſpleaſing of their Children.

To engage them farther to learn, Mr. *Andrews* uſed to give the Children who came to School Victuals, and ſome ſmall Utenſils for their Parents. The Children uſed often to come for the ſake of getting Victuals, for the *Indians* are frequently drove to great Extremities on account of their making little or no Proviſion before-hand. The Children had a good natural Capacity, and an Aptneſs for Learning; many of them begun to read, and ſome to write. This Method of giving them Victuals, engaged the Parents to ſend them for ſome time to School. In the mean time Mr. *Andrews* proceeded to inſtruct the grown *Indians* by help of the Interpreter, in ſome of the chief Articles of Faith, and Rules of Life; Divine Service was conſtantly performed on *Sundays* and *Holidays* in *Engliſh* to the Soldiers, and ſuch *Indians* as underſtood any *Engliſh* frequently attended in the Chapel: The Chapel was very decently adorned; Queen *Anne* had given a handſome Furniture for the Communion-Table, the Imperial Arms of *England* painted on Canvas were fixed up in the Chapel. Archbiſhop *Teniſon* gave twelve large *Bibles* very finely bound, for the Uſe of the Chapel, with painted Tables containing the Creed; Lord's Prayer, and Ten Commandments. Mr. *Andrews* was very civil to all the *Indians* who came to hear him; uſed frequently to entertain them at his Houſe, and give them Proviſions home with them when they wanted very much, and that they often did

The Society, ſince they could by no Means prevail with the *Indians* to learn *Engliſh*, neither young nor old, laboured to get ſome good Tranſlations made of Parts of the Scripture, at leaſt, into the *Indian* Language, though exceeding improper to convey a due Idea of the Chriſtian Doctrines; as being willing, by all Methods of Compliance, to gain ſomething upon them: The Society were much aſſiſted in this by Mr. *Freeman*, a very worthy *Calviniſt* Miniſter; he had been five Years Miniſter at *Schenectady*, to a *Dutch* Congregation, and had been employed by the Earl of *Bellamont*, in the Year 1700, to convert the *Indians*. He had a good Knowledge of the Dialect of the *Mohocks* which is underſtood by all the *Iroquois*, who reach near four hundred Miles beyond *Albany*. The Society applied to him for any proper Papers wrote in that Language, which he might have. He acquainted the Society, that he had tranſlated into *Indian*, the Morning and Evening Prayers from our Liturgy, the whole Goſpel of St. *Matthew*, the three firſt Chapters of *Geneſis*, ſeveral Chapters of *Exodus*, ſeveral *Pſalms*, many Portions of the Scripture relating to the Birth, Paſſion, Reſurrection, and Aſcenſion of our Lord; and ſeveral Chapters of the *firſt Epiſtle to the* Corinthians, particularly the fifteenth Chapter, proving the Reſurrection of the Dead. He very frankly gave the Society a Copy of theſe Tranſlations, which were ſent to Mr. *Andrews* for his

Help, and they were a great Help to him. He uſed frequently to read ſome of theſe to the *Indians*, and they could comprehend well enough by his reading. But the Society were deſirous ſome Part of the Scriptures might be printed in *Indian*, and the Copies given to the *Indians*, and they taught at leaſt to read that; accordingly the Morning and Evening Prayer, the Litany, the Church Catechiſm, Family Prayer, and ſeveral Chapters of the *Old* and *New Teſtament* were printed at *New York*. The Copies were ſent to Mr. *Andrews*, and he gave them to ſuch of the *Indians* as knew any Thing of Letters.

He had Hopes now of ſome Succeſs in his Miſſion; ſeveral of the Women and ſome Men began to lead more orderly Lives. They were inſtructed, and retained well in their Memory what the chief Articles of our Faith are, and Rules of Life; a good Number were baptized, and particular Accounts were ſent regularly to the Society. Mr. *Andrews* was willing to try what good he could do in another Nation of the *Indians*; he travelled to the Caſtle of *Onydans*, one hundred Miles diſtant from the *Mohocks*; the Country all the Way was a vaſt Wilderneſs of Wood, and the Road through it was a narrow Path. He was forced to carry all Neceſſaries with him, and at Night to lie upon a Bear's Skin. When he arrived at the Caſtle he was viſited by more than one hundred People, who ſeemed all glad to ſee him; he read ſeveral Papers to them, ſtaid ſome Time with them, and, after Inſtruction, baptized ſeveral, whoſe Names have been tranſmitted to the Society. Mr. *Andrews* afterwards returned to the *Mohocks*, his Place of Reſidence. In a ſhort Time the *Indians* grew weary of Inſtruction: The Men grown would go out in Bodies a hunting for ſeveral Months, and forget all they had been taught; and the young Boys, when they grew up, were taken out by their Fathers to hunt, and ſo loſt all they had got. This roving Life utterly deſtroyed all the Miſſionary's and School-maſter's Labours.

But beſides this Difficulty, and the natural Averſeneſs of the *Indians* to Learning, two Misfortunes happened which created a Jealouſy, and afterwards a Hatred in the *Indians* againſt all the *Engliſh* as well as againſt their Religion. Some Jeſuits, Emiſſaries from *Quebec* among the *Canada Indians*, adjoining to the *Iroquois*, had infuſed into the Minds of thoſe People, that the *Engliſh* did not intend, by building a Fort among the *Iroquois*, to teach them their Religion, but to cut them all off at a proper Juncture; and that a Box had been found accidentally, left by the *Engliſh* when they attempted *Quebec*, containing Papers which diſcovered this Intention of the *Engliſh*. The *Canada Indians* believed this idle Story, and ſpread it among all the *Iroquois*. This ſtirred up ſome Jealouſy, but a farther Misfortune quite ſet the *Indians* againſt the *Engliſh*; ſome of the *Tuſcararo Indians* who had fled from *North Carolina* after the War there with the *Engliſh*, came and ſettled in the Country of the *Onontages*, one of the *Iroquois* Nations bordering on the *Mohocks*. Theſe People being enraged at the *Engliſh*, ſtirred up the *Onontages* againſt them, telling them they had been moſt barbarouſly uſed and drove out of their Country, and the *Engliſh* watched only for an Opportunity to extirpate them too. The other *Indians* were too eaſily perſuaded to believe every Thing the *Tuſcararo Indians* told them; ſo that when any of theſe People came by the *Mohocks* Caſtle, and the Queen's Fort, in their Way to *Albany*, to trade and buy themſelves Neceſſaries, they uſed only to mock at Mr. *Andrews* when he would offer to talk to them about Religion, and when he proffered to go to their Abode they abſolutely forbad him.

In a little Time the old *Mohocks* left off coming to the Chapel to Mr. *Andrews*, and the Children came no more to School. Mr. *Andrews* wrote the Society Word of the ill Succeſs of his Miſſion, though he had ſpared no Pains; that the hopeful Beginnings proved of no Effect at laſt; and that he began to deſpair of converting the *Indians*. The Society found now, from ſeveral Accounts, that the Miſſion among the *Indians* proved fruitleſs; that it was not poſſible to teach them the Chriſtian Religion, before they were in ſome Degree civilized; and they found the following Difficulties did only hinder that. No Way could be found to engage the *Indians* to lead a ſettled Life, to apply themſelves to cultivate the Ground, to build Towns, and to raiſe Cattle; they would ſtill rove through their vaſt Woods many hundreds of Miles, depending for their Subſiſtence upon the Game they could kill. They would eat all Sorts of Carrion, and in ſome long Rambles, when by various Accidents they could get no Game, would kill and eat one another, even their Wives, and that without any Concern or Remorſe. Generally half of a Hord or Nation went out a hunting or a warring upon a neighbouring Nation together, and on thoſe Expeditions forgot all the little they had learned, and at their Return were as mere Savages as ever. They could not be diſſuaded from taking Wives and leaving them at their Pleaſure; this not only hindered Religion from being fixed among them, but was the Cauſe that a great many aged Men and Women periſhed miſerably, as having no one to take any Care of them.

They would, in their Wars, uſe the greateſt Barbarities, and deſtroy all the Priſoners they could take, by ſuch extreme Tortures, it would move too much Horror in the Reader to repeat in this Place. It is true, they were very fond of their Children, but they perverted even ſo good a Principle; they would not oblige them to learn any manual Art, or our Language, but let them live a lazy beſtial Life: Nay ſome of the young Children who have by Chance fallen into the *Engliſh* Hands, and lived in Families, been taught our Language, learnt a decent Behaviour, and known ſomething of Tillage or Handycraft; when they have grown up have run wild again, have thrown off their Cloaths, and choſe rather to ramble naked almoſt in the Woods with their own People, than to live a ſober and ſettled Life. But the greateſt Obſtruction to their being civilized, was their Greedineſs of ſtrong Liquours, eſpecially Rum, and the fatal Effect Drunkenneſs hath upon them. When they drink they will never leave off till they have gone to the greateſt Exceſs, and in this Condition they are moſt wretched Objects. They grow quite mad, burn their own little Huts, murder their Wives and Children, or one another; ſo that their Wives are forced to hide their Guns or Hatchets, and themſelves too, for fear of Miſchief. And if the Men, through this Exceſs, fall into any Sickneſs, they periſh miſerably, as having no Methods of helping themſelves by Phyſic or otherwiſe.

It is, indeed, Matter of great Wonder, that theſe wretched People who have lived joining to the *Engliſh* Settlements ſo many Years, and cannot but obſerve that the *Engliſh*, by Agriculture, raiſe Proviſions out of a ſmall Spot of Ground, to ſupport in Plenty great Numbers of People; whereas they, by their hunting, cannot get a wretched Subſiſtence out of all their Wilderneſſes of ſeveral hundred Leagues in Extent, ſhould ſtill refuſe to till their Ground or learn any manual Art; ſhould ſtill live a brutal Life, inſenſible of Shame or Honour. It is true, the *Engliſh* have taken from them exceeding large Countries, yet this, far from being a Prejudice, would be a vaſt Advantage to them, if they would but learn the *Engliſh* Language, Arts, and Induſtry. They have ſtill an immenſe Extent of Land, Part of which, if duly cultivated, is able to maintain many Millions of People more than there are. It might have been imagined the Sachems, that is, thoſe petty Kings who were in *England* in the late Queen's Time, ſhould have been ſo ſtrongly affected with ſeeing the Grandeur, Pleaſure, and Plenty of this Nation, that when they came to their own Countries, they would have tried to reduce their People to a polite Life; would have employed their whole Power to expel that rude Barbariſm, and introduce Arts, Manners, and Religion; but the contrary happened; they ſunk themſelves into their old brutal Life; and though they had ſeen this great City, when they came to their own Woods they grew all ſavage again.

Mr. *Andrews* wrote ſeveral Accounts more in 1718, that all his Labours proved ineffectual. That the *Indians* would not ſend their Children to School, and no body came to the Chapel; that the four other Nations of the *Iroquois*, as they came by the *Mohocks* Caſtle, inſulted and threatened him; that the Interpreter and School maſter perceived all their Labour was loſt, and that they were frequently in Danger of their Lives if they went out of the Fort. The Society received theſe Accounts with much Diſſatisfaction, as being extremely contrary to what their good Deſires had made them hope. However, they were ſo unwilling to abandon this wretched People to themſelves, that they would not diſmiſs Mr. *Andrews* from his Miſſion, upon his own Repreſentation of his ill Succeſs. They wrote to the Governor of *New York*, *Rober Hunter*, Eſq; acquainted him with the Accounts they had received, and requeſted the Favour of his Excellency to cauſe an Inquiry to be made, whether Mr. *Andrews*'s Labours were ſo fruitleſs among the *Indians*, and ſubmitted to his Judgment to diſmiſs Mr. *Andrews* if they ſhould be ſo found. The Accounts tranſmitted hither were found true upon Examination, and Mr. *Andrews* left that miſerable Race of Men.

We have choſen to give the whole of this remarkable Account together, that the Reader may ſee, and be fully appriſed of the many and great Obſtacles that lie in the Way of our bringing the *Indians* to embrace our Intereſt together with our Religion; but there are ſtill Hopes, that as the Society proceeds in the great Deſign of ſettling a regular Clergy in our Colonies, and thereby influencing the Planters, not only to profeſs, but to ſhew, themſelves Chriſtians; theſe Obſtacles will be leſſened by Degrees, and the *Indians* come to have a better Opinion of our Faith, in the ſame Proportion that they grow better pleaſed with the Juſtice and Regularity of our Behaviour towards them; but in the mean Time what has been related ſhews that this important Taſk has not remained unattempted, and that if it has been in ſome Meaſure interrupted, this Interruption was occaſioned by Accidents unforeſeen, inevitable, and in their Nature hitherto unconquerable.

7. But it is now Time for us to proceed to that great and ſingular Expedition, undertaken in the Queen's Reign, for diſpoſſeſſing the *French* of *Quebec*, and driving them entirely out of *Canada*. This was firſt conceived practicable, and Meaſures taken for putting it in Execution, in the Year 1707, at which Time the Earl of *Sunderland*, then Secretary of State, wrote to the Government of *New England*, to prepare for giving what Aſſiſtance lay in their Power, towards a Deſign of ſuch Importance to, and ſo often recommended by, the People of that Colony; who from the Time Sir *William Phipps* miſcarried in it, were continually wiſhing for an Opportunity to recover their Credit, and to revenge their Loſs upon the *French*, by renewing their Attempts upon *Canada*. The Perſon then intended to command the Land Troops, was General *Maccartney*, and every Thing was ſettled with reſpect to his Voyage, when the fatal Battle of *Almanza*, in *Spain*, made it abſolutely neceſſary to ſend the Troops deſigned for this Service into that Country, to prevent the total Ruin of the late Emperor's, then King *Charles*, Affairs. The Circumſtances of the War in ſucceeding Years hindered the Revival of this Project till the Change of the Miniſtry, and then it was reſolved upon afreſh, as the moſt effectual Means of forcing *France* into a ſpeedy and ſolid Peace.

How it was executed is a very hard Taſk to ſay; but we will make uſe of the Account publiſhed by the Secretary of the Admiralty, who had it in his Power to give the fulleſt and faireſt Relation of this Matter; and if he has not done ſo, we know not where to find a better. He tells us the Queen's Inſtructions to Sir *Hovenden Walker*, Rear Admiral of the White, were dated the 11th Day of *April*, 1711, by which he was ordered to take under his Command, the *Torbay*, a Ship of eighty Guns, the *Edgar*, *Swiftſure*, and *Monmouth*, of ſeventy Guns; and *Dunkirk*, *Sunderland*, *Kingſton*, and *Montague*, of ſixty Guns, with two Bomb Veſſels; as alſo the *Leopard* and *Saphire*, one of fifty and the other of thirty Guns, ſent before to *North America*; with all theſe, except the two laſt, together with the Store-ſhips and Tranſports deſigned on the Expedition, he was, as ſoon as might be, to rendezvous at *Spithead*; and when Mr. *Hill*, General and Commander in chief of the Forces, ſhould be embarked, and the Troops on board, he was, with the firſt Opportunity of the Wind, to proceed to *Boſton* in *New England*, without touching at any Iſland, Country, or Place, if it could poſſibly be avoided; and as he was required to appoint proper Signals and Places for Rendezvous, in caſe of Separation, ſo was he to give ſtrict Orders to the Captains of the Ships under his Command, that if they happened to be ſo ſeparated, they ſhould not inform the Enemy, or any other, on what Deſign they were going.

In his Paſſage to *Boſton*, the chief Town in *New England*, he was, when himſelf and the General ſhould judge it moſt proper, to detach one Ship of War or more to convoy directly to *New York* the Tranſport Ships, in which were laden Artillery, Silks, Cloaths, and Accoutrements, with other Things, for the Uſe of Forces to be raiſed there, as well as in the *Jerſeys* and *Penſylvania*; the ſame to be delivered as the General ſhould direct; and then the Ships of War were to be ordered to return to *Boſton*: But if it ſhould not be judged proper to make ſuch Detachment, the Tranſports were to be ſent to *New York*, under a ſufficient Convoy, when he arrived at *Boſton*; and the ſaid Convoy, to bring there ſuch Neceſſaries and Stores as ſhould be provided for the Squadron and Forces. When he arrived at *New England*, he was to take the *Leopard* and *Saphire* under his Command, and conſider whether it might be neceſſary to make any Addition to the Squadron by the Convoy to the *New England* Maſt Ships or others ſtationed on the Coaſt of *America*, which he was impowered to do; and if the General ſhould, upon adviſing with him, think it practicable to ſend any of the Tranſports with ſome of the new raiſed Troops in *New England*, to garriſon *Annapolis Royal*, lately called *Port Royal*; and to bring from thence the Marines left there, or any Part of them, or the Artillery, or Stores of War, he was to appoint a ſufficient Convoy, with Directions for them to return forthwith to *New England*.

He was, then at *Boſton*, to take under his Care all Tranſport Veſſels, Ketches, Hoys, Boats, and other Neceſſaries provided in *New England*; and as ſoon as the Forces from thence, and thoſe raiſed there, ſhould be on board, he was to ſail with them into the River of *St. Laurence* up to *Quebec*, in order to attack that Place; and being arrived, to make a proper Diſpoſition of the Ships for that Purpoſe, as well of ſuch as might be fit to be employed before the Town, as others; upon conſulting with the General to paſs the Place, and proceed up the River towards the Lake, not only to prevent any Communication with *Quebec*, but to protect the Canoes and Boats with the Forces from *New York*, to which End he was empowered to convert ſome of the ſmall Veſſels ſent from thence to *New England* into Frigates, ſuitable to the Navigation of the upper Part of the River, and to man and arm them accordingly at *New England*, or elſewhere; he was to aſſiſt the General with Veſſels and Boats proper for landing the Forces and embarking them again, but more eſpecially upon his arrival at *Quebec*, or freſh tranſporting them from Place to Place.

He was alſo ordered to ſend to the General ſuch Marine Soldiers as ſhould be on board the Squadron, when he ſhould demand the ſame; which he was to have the Command of while employed on Shore: Beſides which, he was to aid him with ſuch a Number of Seamen, Gunners, Guns, Ammunition, and other Stores from the Ships, as he ſhould demand for the Land Service; which Seamen were to aſſiſt in drawing and mounting the Cannon, or otherwiſe, as ſhould be found neceſſary. He was ſtrictly required to loſe no Time in proceeding to *New England*, and proceeding from thence to the River *St. Laurence*; nor in putting in Execution the Service at *Quebec*; but that on his Part, all Expedition ſhould be uſed in the Reduction of the Place, and of the Country of *Canada*, or *New France*; and in the ſeaſonable Return of the Squadron and Tranſports. Her Majeſty impowered him to direct the Commiſſary of the War Stores to deliver to any Ship or Veſſel, whether of War or otherwiſe, any Proviſions or Liquors under his Care: He was likewiſe to provide any other naval Stores for the Uſe of the Squadron; and in caſe of Succeſs it ſhould be found neceſſary by him and the General to have a naval Force left in the River of *St. Laurence*, he was to appoint ſuch Part of the Squadron to remain there as might be judged proper for taking Care to make ſuitable Proviſion for the Maintenance and Repair of ſuch Ships; and the like Liberty was given as to any of the ſmaller Veſſels, ſuch as Tranſports or otherwiſe, or to make uſe of any of the Enemy's Ships that might be taken, if proper, to bring into *Europe* ſuch Governors, regular Troops, religious Perſons, or others whom the General, by his Inſtructions, was directed to ſend away from *Canada*, with Commiſſaries, Stores, and Proviſions for their Tranſportation.

Theſe Services being directed, he was to take on board the General, if he ſhould think fit to return, and ſuch of the Forces as might not be left in *Canada*, and haſten with the Squadron and Tranſports out of the River; and if the Seaſon of the Year would permit, he was to proceed to, and ſummon and attack *Placentia* in *Newfoundland*, in ſuch manner as General *Hill* ſhould direct; which Service being over, he was to order ſuch Ships of War as did not properly belong to the Squadron under his Command, to return to their ſeveral Stations, directing the Maſters of the Tranſports which he ſhould have no Occaſion for, to go and ſeek Freight either upon the Continent of *America* or in the Iſlands, to eaſe the Public of the farther Charge of them, and for the Benefit of the Trade of *Great-Britain*. Laſtly: It was recommended to him, as it was to the General of the Land Forces, to maintain a conſtant good Underſtanding and Agreement, and on all Occaſions to render each other all neceſſary and requiſite Aſſiſtance; and if any Differences ſhould ariſe between them, upon any Conſtruction of Command, or the Nature of Command in the Service, or otherwiſe howſoever, the Queen was pleaſed to reſerve the Determination of the ſame to herſelf, at their Return to *Great-Britain*, without Prejudice to either of them in ſubmitting to each other for the Good of her Majeſty's Service.

And that he might be ſufficiently informed of her Majeſty's Deſign upon *Canada*, and of the Preparations directed to be made for the carrying it on, to the Governors of *New York* and *Maſſachuſets Bay*, and *New Hants*; as alſo of the additional Inſtructions to the Governors of *New York*, and of thoſe to *Francis Nicholſon*, Eſq; and the ſeveral Governors of the Colonies of *Connecticut*, *Rhode Iſland*, *Providence* Plantation, and *Penſylvania*.

Theſe were the Contents of the Queen's Orders to Sir *Hovenden Walker*, prepared without ſo much as conſulting the then Lords Commiſſioners of the Admiralty, either as to the Fitneſs of the Ships appointed for the Expedition, or the Nature of the Navigation; but on the contrary, the Deſign on which they were bound was rather induſtriouſly hid from them, as may appear by ſome Letters to Sir *Hovenden Walker*, before he ſailed from *Spithead*, by which the Secretary ſeemed to value himſelf very much, that a Deſign of this Nature was kept a Secret from the Admiralty, who, had they been conſulted, would not, I am apt to think, have adviſed the ſending Ships of eighty and ſeventy Guns to *Quebec*, ſince the Navigation up the River of *St. Laurence*, was generally eſteemed to be very dangerous; nor were their Lordſhips permitted to know any thing of this Matter, at leaſt not in Form, until Advice received, that the *French* were equipping a conſiderable Squadron at *Breſt*, which ſome of the Miniſtry might be apprehenſive were deſigned to intercept Sir *Hovenden Walker*, but it was too late to take any proper Meaſures for preventing it, if the Enemy had really had any ſuch Intention. Having thus given a brief Account of what Steps were taken to ſet forth this Squadron, which, ere it returned, put the Nation to a very conſiderable Expence, it remains that we accompany them on the Expedition, and I ſhall give as particular an Account of their Proceedings as the Papers which I have before me, will enable me to do.

Sir *Hovenden Walker* was under Sail with the Ships of War and Tranſports off of *Dunnoſe* on the 29th of *April*, 1711; but coming off of the *Start* the 1ſt of the next Month, a weſterly Wind obliged him to put in at *Plymouth*; being the Length of the *Dead Man* the 4th, he met with the *Kent*, *Eſſex*, and *Plymouth*, which Ships he took with him ſome Leagues into the Sea, and then left them to their former Service of cruizing from the Soundings. The 24th of *June* he arrived at *Nantaſket*, near *Boſton* in *New England*, having then with him five Ships of the third Rate, ſix of the Fourth, one of the Fifth, and two Bomb-Veſſels. But not meeting with that ready Aſſiſtance which was expected from the Government and People of that Country, it was the 30th of *July* before he ſailed from thence, and then he was on his Way to *Quebec*, with the *Britiſh* and *New England* Forces. The 14th of *Auguſt* he got the Length of the *Bird Iſlands* which lie about two hundred and fifty Leagues from *Cape Ann*; and having ſent the *Cheſter*, *Leopard*, and *Saphire*, to cruize between *Placentia* and *Cape Breton*, on the Iſland oppoſite to *Newfoundland*, expected their joining him in his Paſſage to *Quebec*; the former of which Ships had taken and ſent into *Boſton*, before he ſailed thence, a Ship of about one hundred and twenty Tons, with ten Guns, and had ſeventy Men on board, whereof thirty were Soldiers for the Garriſon of *Quebec*.

The *Leoſtoff*, *Feverſham's Enterprize*, and *Tryton's Prize*, all ſmall Veſſels, which were ſtationed at *New York* and *Virginia*, he ordered to join him off of *Cape Breton*, being impowered by her Majeſty's Orders ſo to do, if he ſhould find it neceſſary, and this the rather becauſe they might be of good uſe to him in his proceeding up the River to *Quebec*, which Navigation moſt of the People with whom he had ſpoken repreſented to be very dangerous; and therefore he rightly judged the *Humber* and *Devonſhire*, which mounted eighty Guns each, too big to be ventured thither; for which Reaſon he ſent them home, and ſhifted his Flag on board the *Edgar*, a Ship of ſeventy Guns, General *Hill* removing into the *Windſor*, which carried ten leſs; but ſince he had Information that a Ship of ſixty Guns, and another of thirty, were expected from *France* very ſhortly, he ordered the aforeſaid Ships, *Humber* and *Devonſhire*, to cruize in the Opening of the Bay of *St. Laurence*, until the laſt of *Auguſt*, and then to purſue their Voyage home.

He had very fair Weather until he got into the aforeſaid Bay, when it came changeable, ſometimes thick and foggy, and other while calm and little Winds, and the Navigation appeared to be intricate and hazardous. The 18th of *Auguſt*, when he was off *Gaſpe Bay*, near the Entrance of the River *Canada*, it blew freſh at North-weſt, and leſt the Tranſports ſhould be ſeparated, and blown to Leeward, he anchored in that Bay; where, ſtaying for an Opportunity to proceed up the River, he burnt a *French* Ship which was a fiſhing, not being able to bring her off. The Wind veering weſterly the 20th of *Auguſt*, he had Hopes of gaining his Paſſage; but the next Day Afternoon it proved foggy, and continned ſo all Night and the Day following, with very little Wind till the Afternoon, when there was an extreme thick Fog, and it began to blow hard at Eaſt-ſouth-eaſt, which rendered it impoſſible to ſteer any Courſe with Safety, having neither Sight of Land or Soundings, or Anchorage; he, by the Advice of the Pilots then on board him, both *Engliſh* and *French*, who were the beſt in the Fleet, made the Signal for the Ships to bring to with their Heads Southward, at which Time it was about eight at Night, believing that in that Poſture they ſhould not come near the North Shore, but rather have driven with the Stream in the Mid-channel; but on the contrary, as they lay with their Heads Southwards, and the Wind eaſterly, in two Hours Time he found himſelf on the North Shore among the Rocks and Iſlands, at leaſt fifteen Leagues farther than the Log-line gave, where the whole Fleet had like to have been loſt, the Men of War eſcaping with the utmoſt Difficulty; but eight Tranſport Ships were caſt away, and almoſt nine hundred Officers, Soldiers, and Seamen periſhed.

The *French* Pilot, who, as it was ſaid, had been forty Voyages in this River, and eighteen of them in Command, informed him, that when it happens to be ſo foggy as to prevent the Sight of the Land, it is impoſſible to judge of the Currents, or to ſteer by any Courſe; for he himſelf had loſt two Ships, and been himſelf near the South, inſomuch

ſomuch that it was extremely difficult to procure Men in *France* to proceed on ſo dangerous a Navigation, ſince almoſt every Year they ſuffered Shipwreck. Thus it appeared how things had been miſrepreſented in *Great-Britain*, by thoſe who pretend to aver that Fleets of Ships might ſafely proceed up the River to *Quebec*; and it was demonſtrable that the People of *Boſton* knew not any thing of what they propoſed, when Schemes were laid for ſuch an Expedition. After this unhappy Diſaſter, and when Sir *Hovenden Walker* had plied two Days with very freſh Gales, between the Weſt and the South, to ſave what Men and other things he could, he called a Council of War, and upon enquiring of the Pilots (who had been forced on board the Ships by the Government of *New England*) and duly examining into every Circumſtance, it was judged impracticable for a Fleet to get up to *Quebec*, ſince there were ſo many apparent Dangers, and no Pilots qualified to take the Charge; beſides it was the Opinion of them all, both *Engliſh* and *French*, that had the Squadron been higher up the River, with the hard Gales they met with, all the Ships would have been inevitably loſt. At this Council of War there were, beſides the Rear Admiral, Captain *Joſeph Soames*, Captain *John Mitchel*, Captain *Robert Arris*, Captain *George Walton*, Captain *Henry Gore*, Captain *George Paddon*, Captain *John Cockburn*, and Captain *Auguſtine Rouſe*. The Conſultation being over, the *Saphire* was ſent to *Boſton*, with an Account of the Misfortune, and the *Montague*, to find out the *Humber* and *Devonſhire*, and to ſtop all Ships bound up to *Quebec*; and the *Leopard* being left with ſome Sloops and Brigantines, to take any Men from the Shore that might be ſaved, and to endeavour to weigh ſome Anchors left behind, he proceeded to *Spaniſh River*, in the Iſland of *Breton*, the Rendezvous he had appointed, there to be perfectly informed of the State of the Army and Fleet, and to ſettle Matters for their farther Proceedings.

But all the Ships did not join till the 7th of *September*; the Day following, by Conſent of the General, he called a Council of War of Sea and Land Officers, where it was conſidered, whether under their preſent Circumſtances it was practicable to attempt any thing againſt *Placentia*, which all of them very much inclined to; but upon examining into the State of the Proviſions on board the Men of War and Tranſports, it was found there was but ten Weeks Proviſion, at ſhort Allowance, in the former, and in the latter much leſs, ſo that it was unanimouſly agreed not any thing of that kind could be undertaken; but that it was neceſſary the Squadron and Tranſports ſhould proceed to *Great-Britain*, ſince they had but barely Proviſions ſufficient for the Voyage, and that there was not any Proſpect of a Supply from *New England*, and the Seaſon of the Year being too far advanced for navigating ſafely in thoſe Parts of the World. At this Council of War there were, beſides the Sea Officers of the laſt, General *Hill*, Colonel *Charles Churchill*, Colonel *William Windreſſe*, Colonel *Campenfelt*, Colonel *Clayton*, Colonel *Kirk*, together with Colonel *Vetch*, and Colonel *Walton*, who commanded the Forces raiſed in *New England*.

It was in purſuance of this Reſolution taken in *Spaniſh River*, that he ſailed on the 16th of *September* for *England*, where he arrived the 9th of *October* following, and not long after his Return, the *Edgar*, a ſeventy-gun Ship, on board of which he hoiſted his Flag, took fire, and blew up at *Spithead*, by ſome Accident, the Cauſe of which was never known; and thus ended an Expedition every Way unfortunate, and which brought nothing but Diſcredit and Blame upon thoſe who contrived, and thoſe who were concerned in the executing it, and particularly Sir *Hovenden Walker*, a very honeſt plain-ſpoken Man; who, if there was any dark Secret in this Buſineſs, was moſt certainly ignorant of it. His Opinion always was, and he died in the full Belief it, that though the Expedition might be juſtly ſtiled unfortunate, inaſmuch as it miſcarried, and the Fleet never reached *Quebec*; yet it would have been much more ſo, if they had got up the River of *St. Laurence*, and had actually landed their Men, as they were by their Inſtructions directed to do; and the Reaſons he gave for it are very well worth the hearing, eſpecially at this Juncture, when an Expedition of the ſame kind is ſaid to be under Conſideration. The Reaſons that he gave for it were theſe: That in Caſe the *French* had retired from *Quebec*, they would have carried their Proviſions with them, and have deſtroyed what they could not carry, ſo that the *Engliſh* would have had nothing but a wild, barren, uncultivated Country before them, with the Conqueſt of which they might pleaſe themſelves; but in which, nevertheleſs, they would find it impoſſible to ſubſiſt.

"For, continues he, our Peoples Proviſions would "have been reduced to eight or nine (perhaps to ſix) "Weeks, at ſhort Allowance; no Relief could poſſibly "be hoped for in leſs than ten Months, if ſo ſoon; the "*Feverſham*, and three Store-ſhips, laden with the Pro-"viſions deſigned for their Supply, being caſt away in "their Paſſage; ſo that if they had eſcaped Shipwreck, "which would have been a very great Chance, between "ten and twelve thouſand Men muſt inevitably have "periſhed with Hunger and Cold, and the Ships have "become a Prey to the returning Enemy. On the other "hand, had the Enemy held out till our People had "ſpent all their Proviſions, they muſt have laid down "their Arms, and have ſurrendered to the *French* at "Diſcretion, to avoid Death in its moſt frightful Shape, "Famine; or if they had taken the Place, either by "Storm or Capitulation, the remaining Proviſions of a "ſmall Garriſon would not have gone far towards ſub-"ſiſting ſo large a Number; nor could they, at that "Seaſon of the Year, have marched through the Coun-"try in ſearch of more: And this would have been the "Caſe, had they afterwards attempted *Placentia*."

How far this Gentleman might be in the Right or in the Wrong, I ſhall not at preſent deſire the Reader to enquire; but, moſt certainly, what he ſays, has at the firſt Sight the Appearance of Sincerity and Truth, and therefore we ought to be very cautious of running any freſh Hazards of this Nature: But the driving the *French* from *Canada* is moſt certainly a Thing very poſſible and very practicable, provided the Scheme be laid by thoſe who are well acquainted with the State and Force of our Colonies, the Navigation of the River of *St. Laurence*, and the Condition of the Colony we propoſe to diſlodge; and if it be executed by Seamen and Officers of Experience in their reſpective Profeſſions, and who found the Hopes of promoting their private Intereſt on the ſolid Baſis of exerting their utmoſt Abilities in the public Service.

8. The *French*, during the whole Courſe of the laſt War, were particularly attentive to the Preſervation of their own Colonies, and annoying of ours, in both which Schemes they were but too ſucceſsful, which however was not owing ſo much either to the Wiſdom of their Councils or the Vigour of their Arms, as to the Faults in our Meeaſures, and the Miſcarriages of our Sea Officers. I ſhall not pretend to enter into a ſtrict Detail of theſe diſagreeable Points, but ſhall content myſelf with a few general Points which I flatter myſelf will be ſufficient for my Purpoſe. At the very Beginning of the War, the gallant old Admiral *Benbow* was ſacrificed by ſome of his Officers who had a Pique to him. He was a Man of great Honour and ſtrict Diſcipline, but had ſome of the Roughneſs of a Tar about him, which rendered him very diſagreeable to the fine Gentlemen of the Navy, amongſt whom were three of the Captains that deſerted him; their Conduct indeed had the Look of Cowardice, and of that they were found guilty by a Court Martial, and ſuffered Death for it very deſervedly; but they only acted the Cowards and were not ſo, for they had behaved gallantly upon other Occaſions, and never Man looked Death in the Face with more Intrepidity than Capt. *Kirby* did, which however was ſo far from extenuating, that in my Opinion it heightened his Offence.

The executing ſevere Juſtice upon thoſe three Gentlemen, which certainly was a very wiſe and right Step, and was taken by the mildeſt Government this or perhaps any other Nation ever ſaw, had a very good Effect, and taught the People to fear the Juſtice of the Nation, in caſe they ſacrificed the Concerns of the Public to their particular Reſentments or private Views; but that it did not entirely put an End to the Evil is very certain, ſince ſomething of the ſame kind happened afterwards to Sir *Charles Wager*, and prevented his taking at leaſt another Galleon. The Admirals alſo, and great Sea Officers, that were ſtationed at *Jamaica* for the Protection of the Iſland and Security of Commerce, did not behave ſo well as they might have done, as appears from thoſe authentic Regiſters the Votes of the Houſe of Commons, where the Reader will find, that, after long and ſtrict Enquiries, in which the Merchants were admitted to make particular Charges, and allowed to ſupport them by Evidence, Cenſures were paſſed upon thoſe Officers who appeared to be guilty; and both Houſes ſhewed a warm Zeal for redreſſing thoſe Miſchiefs occaſioned by the ill Conduct of the Navy, and thereby left ample Teſtimony of their Regard for the Public, though it was not attended with that Succeſs that might have been wiſhed.

In the mean time the *French* went on in quite a different way; and, when they found their Fleets were able to do little againſt ours, they very wiſely declined waſting their Naval Force in Combats at Sea, and applied it almoſt entirely to the protecting their own Trade, and diſtreſſing ours. They undertook the eſcorting the *Spaniſh* Plate Fleets, and were, generally ſpeaking, but too ſucceſsful in that Undertaking. Notwithſtanding our ſuperior Force, they attempted a Commerce with the *Spaniſh* Settlements in the *South-Seas*; and in this too they ſucceeded, notwithſtanding the dangerous Navigation round *Cape Horn*, and from thence they reaped two great Advantages, *viz.* maintaining and improving their Manufactures, even in a time of War; and bringing vaſt Sums into *France*, without which ſhe could not poſſibly have continued the War.

Yet, in ſome reſpects, it manifeſtly appeared that her Force was very inſufficient for ſupporting her Views in the *Weſt Indies*, ſince, in an Attempt they made upon *Carolina* in 1706, they were ſhamefully repulſed by the natural Force of that Colony, without any Aſſiſtance from hence. And, on the other hand, our People ſucceeded in their Attempt to drive the *French* out of what they poſſeſſed in the Iſland of *St. Chriſtopher's*; which plainly ſhewed what might have been done, in that War, towards deſtroying their Sugar Colonies, if, as our Intereſts moſt certainly led us, we had conſidered that Point more attentively than we did ſome others, which did not concern us near ſo much. For, had we uſed the Opportunity that was given us to have driven the *French* out of all or moſt of their Iſlands, it muſt have turned ſo much to our Advantage, in Point of Trade, that, in all human Probability, we ſhould have had no Reaſon to regret the vaſt Expences of that long and conſuming War.

But, inſtead of doing this, our Views were almoſt entirely confined to *Europe*, where our Succeſs was indeed very honourable for our Arms, but was very far from procuring us any Advantages in reſpect to Trade; which I do not ſay with any Deſign of reflecting on the Miniſters by whom that War was managed, who perhaps might mean us well, and did for us as much as was in their Power; but to ſhew where the Fault really lay, which was our entering into many Engagements that were either uſeleſs or detrimental to our Commerical Intereſts.

Whereas the *French*, who had but very lately entertained any Thoughts of Trade, kept that continually in view, both in their Operations during the War, and in their Negociations for bringing about a Peace. In reſpect to the former, beſides what they did againſt us in the *Weſt Indies*, they attacked the *Portugueſe* in *Brazil*, ruined the Commerce between the *Dutch* and *Spaniards*, and eſtabliſhed their own; and, beſides all this, when they had actually begun to treat with us, and our Court conſidered them in a manner as Friends, they ſent a Fleet to diſtreſs us in the *Leeward Iſlands*; which exceſſively provoked our Miniſtry, though they were too far advanced in their pacific Meaſures to retreat.

At the Concluſion of the Treaty, the *French* ſhewed the ſame Care for, and the ſame Steadineſs in, ſupporting their Commerce. It was with Difficulty that they were prevailed upon to reſtore what they had taken from our *Hudſon's Bay* Company. *Nova Scotia* we had, and, becauſe they could not take it from us, they left it to us; but they plainly cheated us out of *Cape Breton*. And tho' they pretended to renounce all Pretenſions on *Newfoundland*, yet they preſerved what they never had any Title to, and what, with reſpect to that Country, was all they ever wanted. By theſe Arts they ſecured great Advantages to themſelves, which were all at our Expence; brought a heavy Load of Reproach on the Miniſters who tranſacted with them, and left the Treaty of *Utrecht* as a Memorial to all ſucceeding Miniſters of the Danger of entering into any ſeparate Negociations with *France*.

9. After the Acceſſion of his late Majeſty King *George* I. to the *Britiſh* Throne, there followed ſeveral Diſturbances at home and abroad, which might very well hinder the Miniſters from contriving any new Schemes for the Advantage of our Colonies, or from perfecting thoſe which had been formerly laid for that Purpoſe. The Rebellion in *Scotland* firſt, and after that the Quadruple Alliance, and the Meaſures which preceded and followed it, ſufficiently occupied their Thoughts, and if they went on in the ordinary way, in protecting them, and providing for their Security, they might very well be excuſed for poſtponing Thoughts or Projects of another Nature to more favourable Times.

But the *French*, always watchful for their own Advantage, at the very time when they ſeemed moſt ſolicitous in cultivating the Friendſhip of *Britain*, and were daily receiving Benefits from it, projected the Settlement of the Iſland of *St. Lucia*, which had been always included in the Commiſſion of the Governor of *Barbadoes*; and for that Purpoſe the *French* King thought fit, in the Year 1719, to make a Grant of that Iſland to the Marſhal *d'Etree*, who immediately made the neceſſary Diſpoſitions for eſtabliſhing a Colony in that Iſland, and ſent over People for that Purpoſe. The Governor of *Barbadoes*, as it was his Duty, oppoſed this Settlement vigorouſly, and declared roundly, That, if the *French* perſiſted in ſettling, he ſhould find himſelf under a Neceſſity of driving them off that Iſland, which belonged to the King his Maſter, by Force.

At the ſame time our Miniſter at the Court of *Paris* preſented a Memorial, in which he ſet forth the Title the Crown of *Great-Britain* had to this Iſland, and, conſequently, the great Injuſtice of the *French* King's Grant, which was very apparent from the following Particulars in relation to the Hiſtory of this Iſland, in which both *Engliſh* and *French* Writers agree. The *Engliſh* ſettled on the Iſland of *St. Lucia* in 1639, and lived there near two Years without any Interruption or Diſturbance; but in 1640 they were driven off from the ſaid Iſland, and the Governor and moſt of the Inhabitants killed by the *Caribbeans*, and, as the *Engliſh* ſuſpected, by the Inſtigation and Encouragement of the *French*; which the *French* Generals, *Parquet* and *de Poincy*, however, both diſowned. Nor did the *French*, at that time, or any other time, make any ſort of Pretenſion to the Iſland. A tacit Acknowledgment undoubtedly of the Right of the *Engliſh*.

The Civil Wars in *England* breaking out, the *Engliſh* neglected this Settlement; and Monſ. *du Parquet* ſent thirty or forty *Frenchmen* to take Poſſeſſion of the Iſland. The Sieur *de Rouſſelan* governed here till 1694, and was ſucceeded by *de la Riviere*, whom the *Caribbeans* killed with ſeveral of his Men, and carried off his Wife and two of his Children. He was ſucceeded by Monſ. *le Breton*, he by Monſ. *Agremont*, who was alſo deſtroyed by the *Caribbeans*. After this the *Engliſh* made a Treaty with the *Caribbeans* for the purchaſing the Iſland from them; and, in 1663, ſent fourteen or fifteen hundred Men on board of five Men of War, who, being joined by ſix hundred of the *Caribbeans* in ſeventeen Canoes, came before the Iſland in *June* 1664, which was delivered to them without Reſiſtance, on Condition that the *French* Governor and Garriſon in the Fort, which amounted only to fourteen Men, ſhould be tranſported to *Martinico*, with their Cannon, Arms, and Baggage. In 1666 the *Engliſh* Governor, Mr. *Robert Cook*, by reaſon of the Mortality of his People, Want of Neceſſaries, *&c.* abandoned the Iſland, and ſet fire to the Fort; yet, two Days afterwards, a Bark arrived from Lord *Willoughby*, Governor and Captain-General of *Barbadoes*, and the other *Engliſh Caribbee Iſlands*, to Windward of *Guardaloupa*, with Proviſions, Ammunition, and all Neceſſaries for the Colony. In this deſerted Condition it remained thenceforward, but was always conſidered as a Part of the *Britiſh* Dominions. The Interpoſition of our Miniſter produced the deſired Effect, and the *French* deſiſted at that time from their Settlement.

10. This Attempt, however, ſo much alarmed our Court, that the Duke of *Montague* reſolved, at a vaſt Expence, to ſettle that Iſland and *St. Vincent*, which was ſo agreeable to the Miniſtry and to his late Majeſty, that by Letters Patent, dated the 22d of *June*, 1722, both thoſe Iſlands were granted to his Grace, that he might be encouraged to put ſo generous and public-ſpirited a Deſign in Execution; and for the farther Benefit and Advantage of the new Colonies which he was to ſettle, the Duke was alſo conſtituted Captain-General of the Iſlands of *St. Lucia* and *St. Vincent*, which till that Time were included in the Commiſſion, and remained under the Government of the Governors of *Barbadoes*. His Grace, having appointed Capt. *Uring* his Deputy-Governor, and provided ſeven Ships and Veſſels to carry over the Planters, with ſuch Proviſions and Neceſſaries as were requiſite to ſettle Colonies in thoſe Iſlands, obtained of his Majeſty the *Winchelſea* Man of War, commanded by Capt. *Orme*, to convoy, attend, and protect the Planters.

Mr. *Uring* embarked on board the *Winchelſea*, on the 10th of *September* 1722, and ſailing to *Ireland* to take in Proviſions, made it the 15th of *December* before he arrived at *St. Lucia*. Being come to an Anchor in *Pidgeon Iſland* Bay, a *Barbadoes* Sloop ſoon after arrived from *Martinico*, the Maſter whereof communicated to Mr. *Uring* the Copy of a Mandate by the King of *France*, which he ſaid was publiſhed by Order of the *French* General in all the Churches of that Iſland, and in all the Towns by beat of Drum; which contained in Subſtance, That if the *Engliſh* did not leave the Iſland in the Space of fifteen Days, they were to be expelled by Force of Arms. The next Morning Mr. *Uring* weighed from *Pidgeon Iſland* Bay, and ſtood for the Harbour of *Petite Careenage*, which they found to be a very good one, and in it ſeveral Places fit for careening Ships, ſheltered from every Wind; in one of which, Ships of ſixty Guns and upwards may careen very conveniently: The Land is very hilly all round the Harbour, and in moſt Places ſteep, aſcending from the Water-ſide. At two in the Afternoon we landed fifty Men to cut down the Trees and Buſhes on the Point, that lay fit for a Battery of Guns to command the Entrance of the Harbour. The ſame Day he ſent Mr. *Faulkner* to *Martinico*, with Letters from the Duke of *Montague* and the Admiralty directed to Capt. *Charles Brown*, Commander of the *Feverſham* Man of War, and Capt. *Brand* Commander of the *Hector*, who were then at *Martinico*; and acquainted them, that the Duke had appointed him Deputy-Governor of *St. Lucia* and *St. Vincent*, and being come to ſettle thoſe Iſlands under the Protection of the *Winchelſea* Man of War, he deſired that in purſuance of the Orders they had received from the Admiralty for that Purpoſe, they would join him as ſoon as poſſible, being apprehenſive the Governor of *Martinico* deſigned to moleſt the Colony. In the mean time he proceeded to land his People, Guns, Tools, Planks, and Stores, to fortify the Harbour, and build a large Houſe to ſhelter the Workmen.

On the 22d of *December* Capt. *Brand*, and Captain *Brown*, arrived from *Martinico* with his Majeſty's Ships the *Hector* and *Feverſham*, and ſoon after a *French* Sloop, which brought a Letter from the *French* General, to acquaint Mr. *Uring* that he had heard of his landing *Engliſh* Forces in the Iſland of *St. Lucia*, and deſired to know his Intentions; and at the ſame Time he received the following Copy of the *French* King's Mandate, *viz.* A Mandate *of the* King *to the Sieur Chevalier* de Feuquire, Governor *and* Lieutenant General *of the* Windward Iſlands *in America*. “His Majeſty having been informed that the King of *England* has given the Iſlands of *St. Vincent* and *St. Lucia*, to the Duke of *Montague*, has made his Complaint of it to the Court of *England*, and has alledged that neither the one nor the other of theſe Iſlands belong to that Crown. The firſt of them ought to remain to the *Caribbees*, according to Conventions made with that People; and the ſecond does belong to *France*, who has been willing to ſuſpend the Settlement of that Iſland on the requeſt of the King of *England*; notwithſtanding thoſe Reaſons, his Majeſty hath not been informed that there has not been any Revocation of this Grant; on the contrary, he underſtands that the Duke of *Montague* is repairing to ſend and take Poſſeſſion of thoſe Iſlands, and to tranſport Numbers of Families thither. This Undertaking being contrary to the Rights of his Majeſty, his Intention is, That in Caſe the *Engliſh* ſhould take Poſſeſſion of *St. Lucia*, and ſettle there, the Sieur Chevalier *de Feuquire* ſhall ſummon them to retire in fifteen Days, in regard that Iſland belongs to *France*; and if they do not depart, he ſhall compel them to it by Force of Arms. He ſhall take Care to charge ſome of the wiſeſt and moſt experienced of his Officers with this Expedition. His Majeſty deſires there ſhould be as little Effuſion of Blood as poſſible, nor will he have any Pillage made; he only wiſhes the *Engliſh* would retire, and not poſſeſs themſelves of a Country which belongs to him. Done at *Verſailles* the 21ſt of *September* 1722, ſigned, *&c.*”

Upon reading the Mandate, and the *French* Governor's Letter, in which it was incloſed, Mr. *Uring* ſent to Captain *Brand*, and Captain *Brown*, to know if he might depend upon their Aſſiſtance if he was attacked by the *French*; but they would give him no poſitive Anſwer, and ſoon after ſailed to *Barbadoes*; he alſo ſent a Letter to the Governor of *Martinico*, to acquaint him that he had Orders from the Duke of *Montague*, the Lord Proprietor, under his *Britiſh* Majeſty's Patent, to plant *St. Lucia* and defend it, but propoſed ſuſpending all Acts of Hoſtility, till they could hear from their reſpective Courts of *Great-Britain* and *France*. Mr. *Uring* alſo thought fit to write to the Preſident of *Barbadoes*, that the Governor of *Martinico* had threatened to drive the *Engliſh* from the Iſland, if they did not depart in fifteen Days, and to deſire his Aſſiſtance to ſupport this Part of his Majeſty's Dominions. To which the Preſident anſwered, That he was ready to give him all the Aſſiſtance in his Power.

But the Captains *Brown* and *Brand* remained ſo long abſent from *St. Lucia*, that the *French* had an Opportunity of ſending between two and three thouſand Men from *Martinico*, and landing them on the Iſland; the Captains of the Men of War alſo refuſed to give him Aſſiſtance, towards fortifying and defending the Colony by Land, and a great many of the Planters falling ſick, and others deſerting over to the *French* at the ſame Time, Mr. *Uring* had not fourſcore left to bear Arms, which compelled him at length to come to a Treaty with the *French* General, the Marquiſs of *Champigny*; and the following Articles, were concluded between them: Firſt, That the *Engliſh* ſhould quit the Iſland of *St. Lucia* within ſeven Days, provided that the Ships of the *Engliſh* Nation ſhould at all times have Liberty to come into the Ports of the ſaid Iſland, and wood and water there, and ſerve their other Occaſions, as the *French* alſo might. Secondly, That the *Engliſh* Colony ſhould be at Liberty to reimbark all their Cannon, Stores, Arms, Baggage, and every thing belonging to them, without Moleſtation. Thirdly, That all Deſerters ſhould be given up. And laſtly, That immediately after the *Engliſh* had evacuated the Iſland, the *French* Forces alſo ſhould evacuate it, and that the Iſland ſhould remain in the ſame State it was, till the Controverſies between the two Crowns, relating to this Iſland, were decided. In purſuance of which Agreement Mr. *Uring* embarked with his People, and failed to *Antigua*, ſending the *Winchelſea* Man of War, and Captain *Braithwaite*, in the *Griffin* Sloop, to take a View of the Iſland of *St. Vincent*, and ſee if it was practicable to make a Settlement there. In the mean Time a conſiderable Reinforcement arrived at *Barbadoes*, from the Duke of *Montague*, with Ammunition and Proviſions, and Orders to attempt a Settlement upon *St. Vincent*, if the Planters were driven from *St. Lucia*.

11. In order to this he had Inſtructions, and a Commiſſion given him by Mr. *Uring*, which were perfectly well adjuſted to the Deſign upon which he was ſent; and in the mean Time Governor *Uring* remained at *Antigua*, where he had all the Civilities paid him, and all the Services done him by the Governor, and other Perſons in Authority, that he could either deſire or expect; which, in ſome Meaſure, mitigated his ſharp Senſe of the Miſfortunes he had met with; for he was both a capable and an honeſt Man; one who had the Service very much at Heart, and who diſcharged his Duty ſo punctually, even in this diſaſtrous Undertaking, as to preſerve his Reputation, and to merit a kind Reception from his generous Maſter the Duke of *Montague*, who was ſo wiſe as to expect no more from a Man than was in his Power, and ſo good as to commend and reward him who did that, though it was not attended with the happy Conſequences that might have been expected from it. This Gentleman did not remain long at *Antigua*, before he was made ſenſible that there was as little, or rather leſs Hopes of making a Settlement at *St. Vincent*, than he by Experience had found there was of fixing a Colony on *St. Lucia*; for Capt. *John Braithwaite*, returning from his unſucceſsful Expedition, delivered to Governor *Uring*, in Juſtification of his own Conduct, and for the Satisfaction of his Grace the Duke of *Montague*, the following Account of the Meaſures he had taken for executing the Commiſſion granted to him, in order to fix a Settlement on his Majeſty's Iſland of *St. Vincent*. This Paper being equally curious and important, and alſo entirely hiſtorical, we ſhall give the Reader an Extract of it in that Gentleman's own Words.

The REPORT *of Capt.* John Braithwaite *to* Nathaniel Uring, *Eſq;*

“In Purſuance of a Reſolution in Council, and your Order for ſo doing the Day you ſailed with his Grace's Colony for *Antigua*, I ſailed with the *Griffin* Sloop, in Company with his Majeſty's Ship the *Winchelſea*, to *St. Vincent:* We made the Iſland that Night, and the next Morning run along the Shore, and ſaw ſeveral *Indian* Huts, but as yet no *Indians* came off to us, nor could we get aſhore to them, by reaſon there was no Ground to anchor in. Towards the Evening two *Indians* came on board, and told us we might anchor in a Bay to leeward, and when we were at Anchor they would bring their General on board. Here we came to an Anchor in deep Water, and very dangerous for the Sloop. One whom they called General came on board with ſeveral others, to the Number of twenty-two. I entertained them very handſomely, and made the Chief ſome trifling Preſents; but found him to be a Perſon of no Conſequence, and that they called him Chief to get ſome Preſent from me. Here two of the *Indians* were ſo drunk that they would not go aſhore, but ſtaid on board ſome Days, and were well entertained. After this, little Winds and great Currents drove us off for ſeveral Days, but at laſt we came to an Anchor in a ſpacious Bay to the leeward of all the Iſland, the Draught of which I ordered to be taken by our Surveyor, for your better underſtanding the Place, being the only one where a Setlement could be made. The Ship and Sloop were ſcarce come to an Anchor before the Strand of the Shore was covered with *Indians*, and amongſt them we could diſcover a white Man, who proved to be a *Frenchman*. I took Captain *Watſon* in the Boat with me, with a *Frenchman*, and immediately went on Shore. As ſoon as I came amongſt them, I aſked why they appeared all armed, for every Man had a Cutlaſs; ſome had Muſkets, Piſtols, Bows and Arrows, *&c.* They with very little Ceremony encloſed me, and carried me up the Country for about a Mile, over a little Rivulet, where I was told I was to ſee their General: I found him ſitting amidſt a Guard of about an hundred *Indians*; thoſe neareſt his Perſon had all Muſkets, the reſt Bows and Arrows; and all obſerved a great Silence: He ordered me a Seat, and a *Frenchman* ſtood at his Right-hand, for an Interpreter: He demanded of me, What brought me into his Country, and of what Nation? I told him, *Engliſh*; and I was put in to wood and water, as not caring to ſay any thing elſe before the *Frenchman*; but told him, if he would be pleaſed to come on board our Ships, I would leave *Engliſhmen* in Hoſtage for thoſe he ſhould be pleaſed to take along with him. But I could not prevail with him either to come on board, or ſuffer me to have Wood or Water. He ſaid, he was informed we were come to force a Settlement. And we had no way to remove that Jealouſy but by getting under ſail. As ſoon as I found what Influence the *Frenchman*'s Company had upon him I took my Leave, after making ſuch Replies as I thought proper, and returned to my Boat, under a Guard; and when I came to the Shore, I found the Guard was increaſed by a Number of Negroes, all armed with Fuzees. I got into my Boat without any Injury, and went on board to Captain *Orme*, and told him my ill Succeſs. Immediately after I ſent aſhore the Sloop's Boat with a Mate, with Rum, Beef, Bread, *&c.* with ſome Cutlaſſes; and ordered a *Frenchman* who went with the Mate, to deſire the Guard to conduct them to their General, and to tell him, that though he denied me the common Good of Water, and a little uſeleſs Wood, nevertheleſs I had ſent him ſuch Refreſhments as our Ships afforded. Our People found the *Frenchman* gone, and that then the *Indian* General ſeemed pleaſed, and received what was ſent him; and in return ſent me Bows and Arrows. Our People had not been long returned but the General ſent a Canoe with ten Chief *Indians*, who ſpoke very good *French*, to thank me for my Preſents, and to aſk Pardon for his refuſing me Wood and Water, and aſſured me I might have what I pleaſed; and they had Orders to tell me, if I pleaſed to go aſhore again, they were to remain Hoſtages for my civil Treatment. I ſent them on board the Man of War; and with Captain *Watſon* went aſhore. I was well received, and conducted as before: But now I found the Brother, the Chief of the Negroes, was arrived with five hundred Negroes, moſt armed with Fuzees. They told my Interpreter, they were ſure we were come to force a Settlement, or elſe they would not have denied me what they never before had denied any *Engliſh*, *viz.* Wood and Water; but, if I thought fit, I might take what I pleaſed under a Guard. Finding them in ſo good a Humour, I once more introduced the Deſire I had to entertain them on board our Ships, and with ſome Difficulty I prevailed with them by leaving Captain *Watſon* aſhore under their Guard as a Hoſtage. I carried them on board the King's Ship, where they were well entertained by Capt. *Orme*, who gave the *Indian* General a fine Fuzee of his own, and to the Chief of the Negroes ſomething that pleaſed him. Captain *Orme* aſſured them of the Friendſhip of the King of *England*, &c. The Negro Chief ſpoke excellent *French*, and made Anſwers with all the *French* Compliments. Afterwards I carried them on board the Duke's Sloop; and after opening their Hearts with Wine, for they ſcorned to drink Rum, I thought it a good time to tell them my Commiſſion, and what brought me upon their Coaſt. They told me, it was well I had not mentioned it on Shore, for their Power could not have protected me; that it was impoſſible; the *Dutch* had before attempted it, but were glad to retire. They likewiſe told me, that two *French* Sloops had, the Day before we came, been amongſt them, and gave them Arms and Ammunition, and aſſured them of the whole Force of *Martinico* for their Protection againſt us: They told them alſo, that they had driven us from *St. Lucia*; and that we were come now to endeavour a Settlement there; and notwithſtanding all our ſpecious Pretences, when we had Power we ſhould enſlave them; but they declared they would truſt no *Europeans:* That they owned themſelves under the Protection of the *French*, but would as ſoon oppoſe their ſettling among them, or any Act of Force from them, as us. They had

“ lately given an Example, by killing ſeveral; and they further told me it was by very large Preſents the *French* ever got in their Favour again, but they reſolved never to put it in their Power, or of any *Europeans*, to hurt them: They adviſed me to think what they ſaid was an Act of Friendſhip. This being all I could get from them, I diſmiſſed them with ſuch Preſents as his Grace ordered for that Service, with a Diſcharge of Cannon; and received in Return, as regular Vollies of ſmall Shot as I ever heard. In the Night the *Winchelſea* drove from her Anchors, which as ſoon as I perceived, and had received Capt. *Watſon* from the Shore, I got under Sail, and ſtood to the Man of War; this is a faithful Report of all I *John Braithwaite* can recollect.”

12. Mr. *Uring* having read the above Report of Captain *Braithwaite*, he judged there was like to be little good done at *St. Vincent*, and the ſecond Scheme on *St. Lucia* being laid aſide, he determined to unload all the Stores, and diſcharge the Veſſels, and propoſed to Lieutenant General *Matthews* to do it at *Antigua*; which he ſaid he thought could be done with more Eaſe and Security, and in much leſs Time, and would ſave a great deal of Charge and Trouble, and leſs Hazard than at *St. Chriſtopher's*; the Lieutenant General anſwered, that in his Houſe at *St. Chriſtopher's* was room enough to hold all the Duke's Stores, and ſhould coſt his Grace nothing; and, that as he had the Government of that Iſland, he had ſuch an Influence over the People, that the Duke's Servants would be more ſecure there, and that he could better provide for the Officers, than at *Antigua*; and further ſaid, that the Servants could be kept together in *Charles-Fort*, where they might have an Opportunity to diſcipline them againſt any new Undertaking; and accordingly aſked Leave of General *Hart* to diſcipline them, which was granted. Mr. *Uring* taking Notice of the Advantages that the Lieutenant General propoſed, and ſeeing him ſo very earneſt for the Stores to be lodged at *St. Chriſtopher's*, agreed to it, and accordingly ordered them down thither, during their attending the *Griffin*'s Return from her Errand to *St. Vincent* and *Martinico*.

Mr. *Uring* frequently viſited the Tranſports, to ſee things were in good Order; Lieutenant-General *Matthews* went in the *Charles* and *Freemaſon*, to *St. Chriſtopher's*, with them; and as ſoon as they arrived at that Iſland, he, in Concert with Mr. *Uring*, cantoned the Officers in ſeveral Places, as there was Conveniency, and they were ordered to their reſpective Quarters. They had now four Veſſels to unload at the ſame Time, and at a conſiderable Diſtance, and a difficult Way to carry the Stores to the Store houſes. Mr. *Uring* ordered ſuch a Number of Servants aſhore from the Veſſels, as he thought uſeful for carrying up the Stores; and Officers were appointed at different Places in the Avenues, to keep the People from running into the Country; but notwithſtanding all the Care they could take, great Part of them were gone by Night. He ordered more aſhore next Day, and continued landing the Stores, Cannon, Arms, Ammunition, *&c.* and as the Caſks very often came to Pieces in getting up to the Store-houſes, Mr. *Uring*, for the moſt Part, ſtood by till they were repaired, and was, at leaſt, thirty times a Day from the Landing-place to the Store-houſes, in order to prevent any Embezzlement, and to haſten the Work. The Officers thinking the Work too hard for them all Day, though they generally ſtood in one Place, Mr. *Uring* divided them, the one half to attend in the Morning, and the other in the Afternoon; though he was obliged to attend the whole Day, in order to preſerve the Stores, which he hoped was in a good Meaſure done; the Goods landing from ſo many Veſſels at one and the ſame Time, ſo many Sorts looſe, as well as in Caſks, made it no eaſy Matter to keep an exact Account.

The whole Care of every thing, as well as the Stores, was upon Mr. *Uring*. However the Goods were landed and ſtored, and after the Ships were unloaded, he ſearched every Ship by Warrant, to ſee if there remained any thing belonging to the Duke of *Montague* on board them, which the Maſters ſaid there did not: Several Proviſions were found on board the *Charles* and *Freemaſon*, which were put aſhore. When every thing was landed out of the ſeveral Ships, his next Care was to put them in good Order; many of the Caſks being broken, they would not hold the Weight in them, therefore they ſtarted them into other ſound Caſks and Cheſts, which were made for that Uſe. He alſo cauſed all the Proviſions to be turned out of the Store-houſes and looked over, and ſuch as were in Caſks, or wanted Pickle, were put into better, and new pickled; and he directed the worſt to be firſt ſpent. He fitted up a Smith's Shop, kept the Smiths and Armourers at Work, and cleaning the Arms. The Men were diſciplined, ſo that they could do their Exerciſe very well, and made as regular Fires as the King's Troops.

Mr. *Uring* paid off ſeveral of the Seamen belonging to the *Griffin* Sloop, to eaſe the Charge, and ordered ſuch Servants on board her as were Seamen, and as many more as he dared truſt. By that Time they had put things into tolerable Order, the *Hopewell* arrived, with about ninety Servants and ſeveral Officers, a great Quantity of Proviſions, with Cannon, Ammunition, and warlike Stores, which were alſo landed under the Care of Mr. *Uring*, who had Letters by this Ship from the Duke of *Montague*, which informed him, that his Grace was in Treaty for five hundred *Engliſh* Families, and five hundred *Iriſh*, which he intended to tranſport to *St. Lucia* as ſoon as poſſible. The *Hopewell* brought from *Barbadoes* a Number of live Sheep, which had been carried thither by the *Leopard*, which was arrived at that Iſland, laden with Boards, Plank, and Frames of Houſes, for the Uſe of the Colony.

When Lieutenant-General *Matthews* returned to *Antigua*, he left Mr. *Uring* his Houſe to live in, where was Room for moſt of the Officers. He ſent then to acquaint them, that he had Conveniency for them, and deſigned to keep a Table for their Entertainment, conſidering it would be much more convenient and leſs Charge to his Grace, for them to keep together, than be ſeparated. All the Servants that were not lent to the Planters were lodged in the Out-houſes, and due Care was taken both of the Sick and the Well, to have their Proviſions at proper times, and well ordered. Mr. *Uring* ſeldom went to Dinner before he ſaw all the Sick provided, and well ſerved with freſh Meat and Broth, which was for the moſt Part four times a Week, and thoſe that were ſick, every Day. The Lame, though there were a great many of them, he dreſſed himſelf for ſeveral Days, when he had no Surgeon. The Servants were all well ſupplied out of the Duke's Stores, with Cloathing and Neceſſaries, though they often ſtrayed about the Country and ſold them, and then complained to the Planters that they were naked; for which they were puniſhed and again ſupplied. He frequently ſent out the Serjeants with Parties to bring in the Stragglers, and had no little Trouble to keep them in a tolerable Decorum; he alſo put up Advertiſements at all the Port Towns, to warn the Maſter of Ships from entertaining or carrying any of them off the Iſland; and in the Beginning of *May* ſent Captain *King* in the *Griffin* Sloop to *Barbadoes*, to bring down the Runaways from thence, and ſuch Letters as were lodged there from the Duke of *Montague* for him; and after her return he ordered Captain *Watſon* to careen her, in doing of which ſhe ſunk.

Mr. *Uring* having Notice thereof, went to ſee her Condition, and hired two Sloops to weigh her, and the *Griffin* was made again fit for the Sea. Mr. *Uring* having been informed that many of his Grace's Servants had made their Eſcape to *St. Euſtatia*, he wrote ſeveral Letters to the Governor of that Iſland, by Officers of the Duke's, which were ſent for that purpoſe, to acquaint him therewith, and to deſire him to ſecure them, that they might be returned to *St. Chriſtopher's*, and accordingly two Men were brought back from thence. He had ordered the *Griffin* Sloop to *Antigua*, to lie there during the hurricane Months; when he had a Letter from Lieutenant-General *Matthews*, which adviſed him that the Duke of *Montague* had impowered him to have the ſole Diſpoſal of all his Affairs in the *Weſt Indies*, and ſent him a Copy thereof. Mr. *Uring* then obſerved his Directions, until his Grace had wholly laid aſide the Thoughts of any new Settlement; and had given him Orders to deliver up every thing belonging to him, into the Hands of the Lieutenant-General, to whom his Grace had given Direction to diſcharge all, and pay them their Salaries to that Time, with an Allowance for their Paſſages for *England*. After Mr. *Uring* had delivered up all Stores, Arms, Cannon, *&c.* to the Agent of Lieutenant-General *Matthews*, he went up to *Antigua*, to finiſh his Affairs with him, and from thence to *Barbadoes*, where he was received very kindly by Mr. *Worſley*. He ſtaid a Week at that Iſland, and then returned to *Antigua*, and from thence to *St. Chriſtopher's*, where he took a Paſſage for *England*, and arrived at *Dover* the 28th of *May* 1724.

Thus we have given a large and circumſtantial Account of this Expedition, from the Beginning to the End of it, from the authentic Papers of the two Gentlemen chiefly concerned in it, and very frequently in their own Words. From whence it appears, that it was in all reſpects the greateſt and moſt expenſive Scheme that was ever undertaken by a Subject of this Crown, or of any other; for beſides the Ships, naval and military Stores, Cannon, ſmall Arms, *&c.* he maintained four hundred and twenty-five Servants for a Year and a Half, beſides eighty-five Tradeſmen and Arificers of ſeveral ſorts, who had from twenty to thirty Pounds a Year Wages; and upwards of fifty Officers, with Salaries from fifty to four hundred Pounds a Year, all duly paid, and themſelves victualled in a very dear Part of the World, during the greateſt Part of the Time. The computing therefore of the Duke of *Montague's* Expence at forty thouſand Pounds is rather under than over doing the Buſineſs; and nothing can induce us to ſuſpect the Largeneſs of the Sum but the very ſingular Circumſtance that attends it, of its coming out of a private Purſe for the public Service. This indeed, and the Time at which this Expedition was undertaken, renders it almoſt incredible; but whoever conſiders that in Seaſons of the greateſt Corruption (as ſurely that of the *South-Sea*, and the Bubbles that attended it, was here) Providence uſually raiſes up ſome extraordinary Inſtances of a contrary Spirit, ſuch as *Phocion* in the Decline of the *Athenian* Commonwealth, and the younger *Cato* when the *Roman* Republic was on the Point of Ruin, will the more readily credit this, and admire it the more. I ſhould inſiſt farther upon this noble and memorable Example but for two Reaſons; the firſt is, that as the illuſtrious Perſon to whom it relates is living, amongſt the many Inſtances of Freedom of Speech that may be met with in this Work, I ſhould be aſhamed to mix any thing that might be ſuſpected of Flattery. The ſecond Reaſon is, that the Virtues of the Duke are ſo well known, and ſo univerſally confeſſed, that I could do no Honour to any but myſelf, by endeavouring to celebrate them.

But though I am willing to decline a Taſk to which I confeſs myſelf unequal, I ſhall not be afraid of obſerving that this is the only proper time of reviving our Claim to thoſe Iſlands, at leaſt to that of *St. Lucia*, to which our Title is unqueſtionable. If we were not the firſt Diſcoverers, we were at leaſt the firſt Planters of that Iſland, and beſides the Title which this gives us, we have another, and perhaps a better, *viz.* that of Purchaſe from the Natives, and original Inhabitants of it. The *French*, it is true, have alſo ſettled upon that Iſland, but as Intruders only, and as ſuch were obliged to quit it in the Reign of King *Charles* II. ſince which our Rights to that Iſland have been confirmed by Treaties. But their laſt quitting it, in 1719, is the ſtrongeſt and cleareſt Proof of all. For had they not been ſenſible of their having no juſt Pretenſions to *St. Lucia*, it is impoſſible to ſuppoſe that Men who ſo vigorouſly exerted themſelves to prevent our Eſtabliſhment, would ſo tamely have given up their own. What their Motives might be to ſo ſtrange a Conduct, in the Compaſs of ſo ſhort a time, I ſhall not pretend to gueſs, but this I may ſafely and honeſtly ſay, that no Change in their Conduct could poſſibly create a Change in their Title or ours: If our Right in 1719 was certain, it muſt have been as certain in 1722, and if certain then, it muſt be ſo ſtill; which gives us a fair Demand to have this Right of ours acknowledged by the next Treaty of Peace, that can never be concluded on good Terms for this Nation, if while we ſtruggle to make *France* do Juſtice to others, we ſuffer her to perſiſt in Acts of Injuſtice to ourſelves. We ſee very clearly that the general Expreſſions contained in former Treaties avails nothing againſt *France* in a Time of full Peace, and therefore common Senſe teaches us, and a due Concern for the Good of our Country requires, that we ſhould have Juſtice done us on this Head before the Concluſion of the preſent War, becauſe unleſs it be done now, paſt Experience ſhews us that we can never expect it for the future: That we may very rationally hope for it now, appears to every Man of tolerable Underſtanding, who reflects that *France*, in this Reſpect, gives us nothing of which ſhe is in Poſſeſſion, or to which, in her own Opinion, ſhe has any juſt Title; ſo that to refuſe it when ſhe pretends to be in a pacific Temper, muſt be a plain Proof that ſhe diſſembles, and then it would be Madneſs to truſt her.

There is, however, one Particular in relation to this Affair that ought to be diſcuſſed before we leave it, which is, what Proceedings have ſince happened between the two Crowns in relation to this Iſland, after the Expedition before-mentioned; and as to theſe, I have received two remarkable Papers while this was printing, which I ſhall give the Reader immediately. In the mean time it is requiſite to obſerve, that his preſent Majeſty King *George* II. having conſtituted and appointed *Henry Worſley*, Eſq; Governor and Commander in chief of this Iſland, as all his Predeceſſors had been, who were Governors of *Barbadoes*, he was graciouſly pleaſed to ſend him the following Inſtruction, in reference to the Diſputes that had happened about it.

GEORGE R.

“ Truſty and well beloved, we greet you well: Whereas the *French* for ſome Years have claimed the Iſland of *St. Lucia*, and do inſiſt that the Right to the Iſlands of *St. Vincent* and *St. Dominico*, under your Government, is in the *Caribbeeans*, now inhabiting the ſame, although we have an undoubted Right to all the ſaid Iſlands; yet we have thought fit to agree with the *French* Court, that until our Right be determined the ſaid Iſlands ſhall be entirely evacuated by both Nations. It is therefore our Will and Pleaſure, and you are accordingly to ſignify the ſame to ſuch of our Subjects as ſhall be found inhabiting any of our ſaid Iſlands, that they do forthwith quit the ſame until the Right ſhall be determined, as aforeſaid; and that they do comply with this our Order within thirty Days from the Publication hereof in each of the ſaid Iſlands reſpectively, under Pain of our higheſt Diſpleaſure; and you are to uſe your beſt Endeavours that no Ships of our Subjects, or of any other Nation, do frequent the ſaid Iſlands during the time aforeſaid, except coming for Wood or Water. But it is our Will and Pleaſure, that you do not execute this our Order until the *French* Governor of *Martinico* ſhall have received the like Direction from the *French* Court, and ſhall, jointly with you, put the ſame in Execution without any Exception. And you are hereby further ordered to tranſmit to us, by the firſt Opportunity, a full Account of your Proceedings, as likewiſe of thoſe of the *French* in this Behalf, taking Care by all Opportunities to inform yourſelf whether our Subjects, and thoſe of the *French* King, do comply punctually with the true Intent and Meaning of this Agreement, until ſuch time as the Right to the ſaid Iſlands ſhall be abſolutely determined as aforeſaid. And for your ſo doing this ſhall be your Warrant. And ſo we bid you farwel. Given at our Court at *St. James's* the 30th Day of *November*, in the fourth Year of our Reign, by his Majeſty's Command.

Holles Newcaſtle.

It appears plainly from this Inſtruction, and it will appear ſtill more clearly from the *French* King's Letter upon this Head, that the two Courts had come to an

Agreement about this Matter, that is, about the immediate Settlement, not as to their Rights; for our King declares fully and plainly, that he looked upon his to be wholly unimpeached by this Diſpute; and ſo to be ſure it was, and is. But let us ſee the Inſtructions from *France*, which are referred to in the foregoing Paper, which were conceived in the Words following:

The French *King's* LETTER *or* MANDATE, *to the Governor of* Martinico, *dated* December 26, 1730.

Monſieur DE CHAMPIGNY,

"The *Engliſh* have, for ſome time paſt, laid Pretenſions to the Iſland of *St. Lucia*, which belongs to me, and to which I have an inconteſtable Right. The ſame Pretenſions they have laid to the Iſlands of *St. Vincent* and *St. Dominico*, ſaid to belong to the *Caribbeeans*, Natives of the Country, according to the Treaty of the 31ſt of *March*, 1660; and in the Poſſeſſion of which it is my Intention to ſupport them. I have, nevertheleſs, agreed with the Court of *England*, that until theſe Pretenſions ſhall be determined, the ſaid Iſlands ſhall be evacuated by both Nations. And this is to acquaint you, that it is my Pleaſure, that you make it known, *&c.*" As in the former.

Upon theſe Papers I ſhall make but one Remark, which is, that they clearly unravelled and expoſed the true Intention and Deſign, and, indeed, the whole Workings and Policy of the Court of *France*. There were many who ſaw and ſaid this at the Time, but thought it indecent and improper to publiſh ſo much, when our Court had conſented to accept of this Expedient. But now that Reaſon is removed, and we are at full Liberty to ſay whatever can be ſaid with Truth upon this Subject, I cannot avoid doing ſo, and ſhall diſpatch it in very few Words. The *French* had not, in their own Opinion, any Title to the Iſland of *St. Lucia*, but what aroſe from Expediency. They ſaw it lay near them, and they very well knew the Conſequences that would follow from its being ſettled by the *Engliſh*, and this, more than any Advantages they expected from it, put them upon the Attempt to ſettle it.

The Reader may poſſibly imagine that I only aſſert this, but the Fact is otherwiſe; I can really prove it. The *French* Writers on Geography and Trade, nay the *French* Politicians, never dreamed of any ſuch thing, as appears from their Books; and the famous Mr. *Savary*, in his *Dictionary of Commerce*, tells us plainly, that the *French* poſſeſs or claim ten of the *Caribbee Iſlands*, eight entirely, and two in Conjunction with the *Dutch*; all of which he names, but does not include *St. Lucia*; which ſhews that ſuch People in *France*, as muſt ſooneſt have heard of this Claim, if they had any, knew nothing about it. When I ſay that this Settlement was made to prevent our gaining the Iſland, rather than from any great Hopes of Profit, I mean that theſe were the Motives of the *French* Miniſtry, becauſe they had been long of Opinion that *Hiſpaniola*, or *St. Domingo*, ought to be the great Object of their Concern in thoſe Parts of the World, for many Reaſons, which will fall properly in another Place. All therefore that they deſired, with reſpect to the Iſlands, was to prevent our ſettling upon them, which, beſides an immediate Loſs, might prejudice their future Views; and therefore they were willing to take Poſſeſſion of *St. Lucia* as an Out work. If they kept it, it was well, but if they kept it only from us it was better; and this was the true Reaſon of their propoſing the Expedient contained in the foregoing Papers, which actually anſwered their Ends better than if the Iſland had been abſolutely yielded to them by us.

But if the Situation of Affairs in *Europe* fifteen Years ago was ſuch, as made it reaſonable for us to ſuſpend our Right, which I lay down as a Suppoſition, but am far from aſſerting as a Fact; the Face of Affairs is ſince changed, and gives us now the faireſt Opportunity to eſtabliſh that Right; if the War continues we may, and we ought to do it by Force; and whenever there comes a Peace, the *French* can aſſign no Colour or Pretence whatever, againſt the confirming that Right, by renouncing their unjuſt and ill founded Claim, to the preventing our ſettling on it. If they took Advantage of a paſt Conjuncture, when it was not convenient for us to break with them, it is our Buſineſs, as I hinted before, to take the Benefit of the preſent Conjuncture; when, without Queſtion, it is the Intereſt, and will be conſequently the Buſineſs, of *France* to deny us nothing of this Kind, if we inſiſt upon it, that is to ſay, if we ſhew we have it at Heart; and that we are determined to exert our naval Power, and to employ our Negociations for the Service of our own Country, for the promoting our Trade, ſecuring our Navagation, and extending our Intereſt in the *Weſt-Indies*.

But the Queſtion may be aſked, what is the real Value and Importance of the thing for which you would have us contend? What is this *St. Lucia* worth? What can be made of it? Why ſhould we trouble ourſelves about it? In anſwer to this, I can only ſay, in few Words, that it has been computed, that the Product and Commerce of this Iſland might, in a few Years, be brought to yield *Great-Britain*, an annual Rent of two hundred thouſand Pounds; but to ſhew the Poſſibility, or rather the Probability, if not the Certainty, of this Calculation, I ſhall give the Reader Captain *Uring*'s Deſcription of this Iſland, who went thither on purpoſe to ſettle it; who was a Man of great Underſtanding in Matters of this Nature, and whoſe Honeſty was as little queſtioned as his Capacity; ſo that I cannot diſcern any Objection that can be reaſonably made to his Account, which is alſo remarkably plain and ſuccinct, and with which, as to this Subject, I ſhall conclude.

"*St. Lucia* is about twenty-two Miles in Length, and eleven broad; the greateſt Part of it very good Land, and in many Places hilly and many rich Valleys very well watered with fine Rivers all through the Iſland, which makes it exceedingly pleaſant and delightful, and it muſt be very healthful, by its being ſo narrow; and the Hills being not ſo high to intercept the continual Trade-winds, that always fan it from the Eaſtward, whereby the Heat of the Climate is mitigated, and made rather agreeable than troubleſome. The Variety of Situations that it affords by the Hills and Vales, makes it both convenient and delightful, as well as the Pleaſantneſs of the Proſpects; and it is full of all Trees, amongſt which are great Quantities of good Timber, fit for building Houſes and Windmills; from whence both *Barbadoes* and *Martinico* have been furniſhed with very great Quantities, and are ſtill; the Cacao, or Chocolate Nut grows here very well, and there grows alſo a great deal of Fuſtic, and there is abundance of wild Fowl. It lies Weſt-north-weſt from the Iſland of *Barbadoes*, about twenty-four Leagues; South from *Martinico* about ſeven Leagues; and the ſame Diſtance North by Eaſt from *St. Vincent*; and hath ſeveral good Bays, and excellent Harbours for Ships to anchor in: One of which is the *Petite Careenage*, where we deſigned the firſt Settlement. This Harbour is on the North-weſt Part of the Iſland, and is much the fineſt, and moſt convenient in all the *Caribbee Iſlands*; great Numbers of Ships may be there ſafe in all kinds of Weather, and it is very commodious for careening Ships of War and other Veſſels. If this Iſland had been ſettled, as was intended by his Grace the Duke of *Montague*, proper Forts built, and Garriſons placed therein, for the Protection and Defence thereof, it would have been of the greateſt Importance for the ſecuring the *Leeward Iſlands*, and even *Barbadoes*, from being invaded by *France* in Time of War; for no Armament can be made, nor any Expedition carried on by the *French* at *Martinico*, againſt any of thoſe Colonies, but muſt be known at *St. Lucia*, almoſt as ſoon as the Deſign is formed, by the Nearneſs of its Neighbourhood to that Iſland; from whence, likewiſe, *Barbadoes* and the *Leeward Iſlands* might have Notice to provide for their better Defence. If *St. Lucia* were well inhabited by the *Engliſh*, the People of *Martinico* would know their Intereſt better than to enter upon any Expedition

“ againſt *Barbadoes* or the *Leeward Iſlands*, when they “ had an Enemy ſo near them; for they muſt needs “ conſider, if their Men were ſent off that Iſland to invade the *Leeward Iſlands*, the *Barbadians* would join “ the People of *St. Lucia*, and fall upon *Martinico* in the “ Abſence of their Men; which would endanger the “ Loſs of that Iſland, or at leaſt the Plunder or ſpoiling “ of it; and would be more Damage to them than any “ Benefit they can propoſe to themſelves, by invading “ the *Leeward Iſlands*, and ſo the ſame if their Deſign “ is againſt *Barbadoes*; the *Leeward Iſlands* People joining theſe of *St. Lucia*, *Martinico* will be in the ſame “ Danger, and by that Means our Plantations, in thoſe “ Parts, will be entirely ſecured by the Poſſeſſion of *St.* “ *Lucia*, and it will alſo be in the Power of the *Engliſh* “ to diſturb the *French*, and not in the Power of the “ *French* to hurt the *Engliſh*. But if both Nations ſhould “ ſit ſtill without hurting each other, yet *St. Lucia* will “ be of the greateſt Advantage to *Great-Britain*, if it “ were appointed the Place of Rendezvous for his Majeſty's Ships of War; from whence they might continually relieve each other, if need were, and keep “ always cruizing on the *French*, that they could not be “ able to have a Veſſel go in or out of their Harbour, “ but what might be intercepted by the King's Ships, “ and ſo the Trade of our Plantations would thereby “ become ſecured, and the *Martinicans* would have no “ Reaſon to boaſt as they did in the late War, that they “ maintained their Iſlands chiefly by privateering on the “ *Engliſh*, which is too well known to the Merchants “ that have been Traders to thoſe Parts. But in caſe *St.* “ *Lucia* was ſettled, and proper Meaſures purſued, it “ would entirely prevent ſuch Miſchiefs for the future, “ and the *Engliſh* would ſoon grow too powerful for the “ *French*, who at preſent have greatly the Advantage of “ the *Engliſh*; and the *Leeward Iſlands* are in the greateſt “ Danger, in caſe of a War with *France*, of being invaded, which the *Engliſh* Planters are moſt ſenſible of, “ and it is what the wiſeſt of them apprehend every “ Day.”

13. The Remarks that have been already made in the Courſe of this Section, upon the ſeveral Subjects to which it relates, make it unneceſſary for me to detain the Reader very long with Obſervations at the Cloſe. But, however, ſome Things are both fit and requiſite to be ſaid here, for the Information of my Readers in general; and for reminding thoſe in particular, who have it in their Power to be uſeful to the Colonies. It is certain, that from the very Time Sir *Walter Raleigh*, the Father of our *Engliſh* Colonies, and his Aſſociates, firſt projected thoſe Eſtabliſhments, there have been many who have either found an Intereſt, or took a Pleaſure, in miſrepreſenting or leſſening the Value of them. When the Intention of improving theſe diſtant Countries, and the Advantages that were hoped for from it, were firſt ſet forth, there were ſome who treated them not only as chimerical, but as dangerous: They ſaid that it was very uncertain whether we might meet with Succeſs, and if we did, it might diſpeople the Nation. Theſe, and many other Objections, flowing partly from a Narrowneſs of Underſtanding, but I am afraid chiefly from a Narrowneſs of Heart, have been diſproved by Experience, which has ſhewn that what was then propoſed was practicable in itſelf, profitable in its Conſequences, and attended with none of thoſe Miſchiefs that theſe timorous or ill-intentioned People either apprehended or ſeemed to apprehend.

The Difficulties which attended, and which will always attend, Settlements at the Beginning, proved a new Cauſe of Clamour; and many ſpiteful Things were ſaid about the ſacrificing ſo many *Engliſhmen*, to the obſtinate Deſire of fixing Colonies in Countries, which at that Time did not produce any great Advantages. But by Degrees, as theſe Difficulties were overcome, thoſe Complaints likewiſe ceaſed, and we heard no more of theſe pretended Hardſhips; which, in reality, were no other than the ſending ſuch, as from the Perverſeneſs of their own Diſpoſitions were capable only of doing Miſchief here; ſuch as the Severity of their Creditors would have deſtined to perpetual Impriſonment; and ſuch as, either from Lazineſs or Indigence, would have periſhed in our Streets, to be uſeful to themſelves and to the Community in the Colonies.

But when theſe Complaints ceaſed, others roſe in their ſtead; and when it could be no longer ſaid that the Colonies were uſeleſs, it was alledged that they were not uſeful enough to their Mother Country; that while we were loaded with Taxes, they were abſolutely free, and that the Planters lived like Princes, while the Inhabitants of *Great-Britain* laboured hard for a tolerable Subſiſtence. This produced Cuſtoms and Impoſitions upon all Plantation Commodities, which if they are grievous to the Inhabitants of the Plantations, muſt turn to our Diſadvantage as well as theirs, and conſequently become a great Prejudice to both. At preſent there is a vaſt Change in the Face of Affairs in theſe Parts of the World, which has conſequently produced a Change in the Notions and Sentiments of thoſe who are ſettled there, and ought likewiſe to produce a Change in our Conduct. The principal Point in this Change is, the ſurpriſing Growth of the *French* Power in *America*, from whence we have had many Warnings given us, which certainly were not received with ſo much Attention as they ought to have been. If we had conſidered, that in the Reign of King *Charles* II. when *France* had very little Trade, and her Colonies were of no great Conſequence, ſhe was almoſt a Match for all *Europe* beſide, and that too when the maritime Powers were in their moſt flouriſhing Condition; we might have eaſily foreſeen to what a Height her Power would increaſe with the Help of Colonies and Commerce: But either we did not foreſee it, or we ſuff red ourſelves to be ſo much taken up with nearer Objects, that we did not ſufficiently provide againſt an Evil, which of all others we ought moſt to apprehend.

The very Thing that has hitherto hindered us from conceiving as we ought to do of our Danger, in this Reſpect, would have convinced us moſt fully, if we had viewed it on the right Side, and reaſoned upon it as became us. If we find that in Conjunction with the greateſt Powers upon the Continent, we have not been able for fifty Years paſt, to ſet any Bounds to the Ambition of *France* in *Europe*, what Limits are we like to ſet to her Power in *America*, when it comes to bear any Proportion there, to what ſhe has attained here, and towards which, as we ſee ſhe has already made large Strides?

It may be anſwered, that at preſent ſhe is very far from being equal to us in Strength in that Part of the World; that the Colonies are very apt to think themſelves in Danger, long before they are ſo; and that if their Fears were really ſo great as they would ſometimes repreſent them, as they have a Force ſufficient, it is ſcarce to be doubted that they would at length find a Will to help and relieve themſelves. We may anſwer to this, that if the *French* had a Power in *America*, in any Degree approaching ours, our Care might probably come too late, eſpecially conſidering the great Change that has happened there, where, inſtead of having all the World for Allies, we have hardly ſo much as a Friend in Appearance, the *Spaniards* being become Friends to *France*, and the *Dutch* having neither Force, nor, perhaps, Inclination to aſſiſt us. The Nature of their Government alſo, though it makes their Subjects leſs happy, makes their Colonies more formidable, and enables the Prince to protect them more effectually, and to grant them from Time to Time greater Encouragements; ſo that we need not Wonder they have overcome ſo many Difficulties, or that the Trade of the *French* Iſlands ſhould be ſo much more conſiderable now, than it was at the Peace of *Utrecht*. We may be likewiſe ſure of this, that the more their Trade increaſes, the more it will be encouraged, becauſe the *French* Miniſtry pay a particular Regard thereto; and as we have already ſhewn in our Hiſtory of the *Eaſt-India* Company, they are never wanting to ſuch as are not wanting to themſelves; but from the great Principle of promoting the Grandeur of *France*, yield all the Aſſiſtance they can to what they viſibly perceive will increaſe the Wealth, and augment the naval Power, of the Kingdom.

Agreement about this Matter, that is, about the immediate Settlement, not as to their Rights; for our King declares fully and plainly, that he looked upon his to be wholly unimpeached by this Diſpute; and ſo to be ſure it was, and is. But let us ſee the Inſtructions from *France*, which are referred to in the foregoing Paper, which were conceived in the Words following:

The French *King's* LETTER *or* MANDATE, *to the Governor of* Martinico, *dated* December 26, 1730.

Monſieur DE CHAMPIGNY,

" The *Engliſh* have, for ſome time paſt, laid Pre- " tenſions to the Iſland of *St. Lucia*, which belongs to " me, and to which I have an inconteſtable Right. " The ſame Pretenſions they have laid to the Iſlands of " *St. Vincent* and *St. Dominico*, ſaid to belong to the " *Caribbeeans*, Natives of the Country, according to the " Treaty of the 31ſt of *March*, 1660; and in the Poſ- " ſeſſion of which it is my Intention to ſupport them. I " have, nevertheleſs, agreed with the Court of *England*, " that until theſe Pretenſions ſhall be determined, the ſaid " Iſlands ſhall be evacuated by both Nations. And this " is to acquaint you, that it is my Pleaſure, that you " make it known, *&c.*" As in the former.

Upon theſe Papers I ſhall make but one Remark, which is, that they clearly unravelled and expoſed the true Intention and Deſign, and, indeed, the whole Workings and Policy of the Court of *France*. There were many who ſaw and ſaid this at the Time, but thought it indecent and improper to publiſh ſo much, when our Court had conſented to accept of this Expedient. But now that Reaſon is removed, and we are at full Liberty to ſay whatever can be ſaid with Truth upon this Subject, I cannot avoid doing ſo, and ſhall diſpatch it in very few Words. The *French* had not, in their own Opinion, any Title to the Iſland of *St. Lucia*, but what aroſe from Expediency. They ſaw it lay near them, and they very well knew the Conſequences that would follow from its being ſettled by the *Engliſh*, and this, more than any Advantages they expected from it, put them upon the Attempt to ſettle it.

The Reader may poſſibly imagine that I only aſſert this, but the Fact is otherwiſe; I can really prove it. The *French* Writers on Geography and Trade, nay the *French* Politicians, never dreamed of any ſuch thing, as appears from their Books; and the famous Mr. *Savary*, in his *Dictionary of Commerce*, tells us plainly, that the *French* poſſeſs or claim ten of the *Caribbee Iſlands*, eight entirely, and two in Conjunction with the *Dutch*; all of which he names, but does not include *St. Lucia*; which ſhews that ſuch People in *France*, as muſt ſooneſt have heard of this Claim, if they had any, knew nothing about it. When I ſay that this Settlement was made to prevent our gaining the Iſland, rather than from any great Hopes of Profit, I mean that theſe were the Motives of the *French* Miniſtry, becauſe they had been long of Opinion that *Hiſpaniola*, or *St. Domingo*, ought to be the great Object of their Concern in thoſe Parts of the World, for many Reaſons, which will fall properly in another Place. All therefore that they deſired, with reſpect to the Iſlands, was to prevent our ſettling upon them, which, beſides an immediate Loſs, might prejudice their future Views; and therefore they were willing to take Poſſeſſion of *St. Lucia* as an Out work. If they kept it, it was well, but if they kept it only from us it was better; and this was the true Reaſon of their propoſing the Expedient contained in the foregoing Papers, which actually anſwered their Ends better than if the Iſland had been abſolutely yielded to them by us.

But if the Situation of Affairs in *Europe* fifteen Years ago was ſuch, as made it reaſonable for us to ſuſpend our Right, which I lay down as a Suppoſition, but am far from aſſerting as a Fact; the Face of Affairs is ſince changed, and gives us now the faireſt Opportunity to eſtabliſh that Right; if the War continues we may, and we ought to do it by Force; and whenever there comes a Peace, the *French* can aſſign no Colour or Pretence whatever, againſt the confirming that Right, by renouncing their unjuſt and ill founded Claim, to the preventing our ſettling on it. If they took Advantage of a paſt Conjuncture, when it was not convenient for us to break with them, it is our Buſineſs, as I hinted before, to take the Benefit of the preſent Conjuncture; when, without Queſtion, it is the Intereſt, and will be conſequently the Buſineſs, of *France* to deny us nothing of this Kind, if we inſiſt upon it, that is to ſay, if we ſhew we have it at Heart; and that we are determined to exert our naval Power, and to employ our Negociations for the Service of our own Country, for the promoting our Trade, ſecuring our Navagation, and extending our Intereſt in the *Weſt-Indies*.

But the Queſtion may be aſked, what is the real Value and Importance of the thing for which you would have us contend? What is this *St. Lucia* worth? What can be made of it? Why ſhould we trouble ourſelves about it? In anſwer to this, I can only ſay, in few Words, that it has been computed, that the Product and Commerce of this Iſland might, in a few Years, be brought to yield *Great-Britain*, an annual Rent of two hundred thouſand Pounds; but to ſhew the Poſſibility, or rather the Probability, if not the Certainty, of this Calculation, I ſhall give the Reader Captain *Uring*'s Deſcription of this Iſland, who went thither on purpoſe to ſettle it; who was a Man of great Underſtanding in Matters of this Nature, and whoſe Honeſty was as little queſtioned as his Capacity; ſo that I cannot diſcern any Objection that can be reaſonably made to his Account, which is alſo remarkably plain and ſuccinct, and with which, as to this Subject, I ſhall conclude.

If *St. Lucia* were well inhabited by " the *Engliſh*, the People of *Martinico* would know their " Intereſt better than to enter upon any Expedition

“ againſt *Barbadoes* or the *Leeward Iſlands*, when they had an Enemy ſo near them; for they muſt needs conſider, if their Men were ſent off that Iſland to invade the *Leeward Iſlands*, the *Barbadians* would join the People of *St. Lucia*, and fall upon *Martinico* in the Abſence of their Men; which would endanger the Loſs of that Iſland, or at leaſt the Plunder or ſpoiling of it; and would be more Damage to them than any Benefit they can propoſe to themſelves, by invading the *Leeward Iſlands*, and ſo the ſame if their Deſign is againſt *Barbadoes*; the *Leeward Iſlands* People joining theſe of *St. Lucia*, *Martinico* will be in the ſame Danger, and by that Means our Plantations, in thoſe Parts, will be entirely ſecured by the Poſſeſſion of *St. Lucia*, and it will alſo be in the Power of the *Engliſh* to diſturb the *French*, and not in the Power of the *French* to hurt the *Engliſh*. But if both Nations ſhould ſit ſtill without hurting each other, yet *St. Lucia* will be of the greateſt Advantage to *Great-Britain*, if it were appointed the Place of Rendezvous for his Majeſty's Ships of War; from whence they might continually relieve each other, if need were, and keep always cruizing on the *French*, that they could not be able to have a Veſſel go in or out of their Harbour, but what might be intercepted by the King's Ships, and ſo the Trade of our Plantations would thereby become ſecured, and the *Martinicans* would have no Reaſon to boaſt as they did in the late War, that they maintained their Iſlands chiefly by privateering on the *Engliſh*, which is too well known to the Merchants that have been Traders to thoſe Parts. But in caſe *St. Lucia* was ſettled, and proper Meaſures purſued, it would entirely prevent ſuch Miſchiefs for the future, and the *Engliſh* would ſoon grow too powerful for the *French*, who at preſent have greatly the Advantage of the *Engliſh*; and the *Leeward Iſlands* are in the greateſt Danger, in caſe of a War with *France*, of being invaded, which the *Engliſh* Planters are moſt ſenſible of, and it is what the wiſeſt of them apprehend every Day.”

13. The Remarks that have been already made in the Courſe of this Section, upon the ſeveral Subjects to which it relates, make it unneceſſary for me to detain the Reader very long with Obſervations at the Cloſe. But, however, ſome Things are both fit and requiſite to be ſaid here, for the Information of my Readers in general; and for reminding thoſe in particular, who have it in their Power to be uſeful to the Colonies. It is certain, that from the very Time Sir *Walter Raleigh*, the Father of our *Engliſh* Colonies, and his Aſſociates, firſt projected thoſe Eſtabliſhments, there have been many who have either found an Intereſt, or took a Pleaſure, in miſrepreſenting or leſſening the Value of them. When the Intention of improving theſe diſtant Countries, and the Advantages that were hoped for from it, were firſt ſet forth, there were ſome who treated them not only as chimerical, but as dangerous: They ſaid that it was very uncertain whether we might meet with Succeſs, and if we did, it might diſpeople the Nation. Theſe, and many other Objections, flowing partly from a Narrowneſs of Underſtanding, but I am afraid chiefly from a Narrowneſs of Heart, have been diſproved by Experience, which has ſhewn that what was then propoſed was practicable in itſelf, profitable in its Conſequences, and attended with none of thoſe Miſchiefs that theſe timorous or ill-intentioned People either apprehended or ſeemed to apprehend.

The Difficulties which attended, and which will always attend, Settlements at the Beginning, proved a new Cauſe of Clamour; and many ſpiteful Things were ſaid about the ſacrificing ſo many *Engliſhmen*, to the obſtinate Deſire of fixing Colonies in Countries, which at that Time did not produce any great Advantages. But by Degrees, as theſe Difficulties were overcome, thoſe Complaints likewiſe ceaſed, and we heard no more of theſe pretended Hardſhips; which, in reality, were no other than the ſending ſuch, as from the Perverſeneſs of their own Diſpoſitions were capable only of doing Miſchief here; ſuch as the Severity of their Creditors would have deſtined to perpetual Impriſonment; and ſuch as, either from Lazineſs or Indigence, would have periſhed in our Streets, to be uſeful to themſelves and to the Community in the Colonies.

But when theſe Complaints ceaſed, others roſe in their ſtead; and when it could be no longer ſaid that the Colonies were uſeleſs, it was alledged that they were not uſeful enough to their Mother Country; that while we were loaded with Taxes, they were abſolutely free, and that the Planters lived like Princes, while the Inhabitants of *Great-Britain* laboured hard for a tolerable Subſiſtence. This produced Cuſtoms and Impoſitions upon all Plantation Commodities, which if they are grievous to the Inhabitants of the Plantations, muſt turn to our Diſadvantage as well as theirs, and conſequently become a great Prejudice to both. At preſent there is a vaſt Change in the Face of Affairs in theſe Parts of the World, which has conſequently produced a Change in the Notions and Sentiments of thoſe who are ſettled there, and ought likewiſe to produce a Change in our Conduct. The principal Point in this Change is, the ſurpriſing Growth of the *French* Power in *America*, from whence we have had many Warnings given us, which certainly were not received with ſo much Attention as they ought to have been. If we had conſidered, that in the Reign of King *Charles* II. when *France* had very little Trade, and her Colonies were of no great Conſequence, ſhe was almoſt a Match for all *Europe* beſide, and that too when the maritime Powers were in their moſt flouriſhing Condition; we might have eaſily foreſeen to what a Height her Power would increaſe with the Help of Colonies and Commerce: But either we did not foreſee it, or we ſuffered ourſelves to be ſo much taken up with nearer Objects, that we did not ſufficiently provide againſt an Evil, which of all others we ought moſt to apprehend.

The very Thing that has hitherto hindered us from conceiving as we ought to do of our Danger, in this Reſpect, would have convinced us moſt fully, if we had viewed it on the right Side, and reaſoned upon it as became us. If we find that in Conjunction with the greateſt Powers upon the Continent, we have not been able for fifty Years paſt, to ſet any Bounds to the Ambition of *France* in *Europe*, what Limits are we like to ſet to her Power in *America*, when it comes to bear any Proportion there, to what ſhe has attained here, and towards which, as we ſee ſhe has already made large Strides?

It may be anſwered, that at preſent ſhe is very far from being equal to us in Strength in that Part of the World; that the Colonies are very apt to think themſelves in Danger, long before they are ſo; and that if their Fears were really ſo great as they would ſometimes repreſent them, as they have a Force ſufficient, it is ſcarce to be doubted that they would at length find a Will to help and relieve themſelves. We may anſwer to this, that if the *French* had a Power in *America*, in any Degree approaching ours, our Care might probably come too late, eſpecially conſidering the great Change that has happened there, where, inſtead of having all the World for Allies, we have hardly ſo much as a Friend in Appearance, the *Spaniards* being become Friends to *France*, and the *Dutch* having neither Force, nor, perhaps, Inclination to aſſiſt us. The Nature of their Government alſo, though it makes their Subjects leſs happy, makes their Colonies more formidable, and enables the Prince to protect them more effectually, and to grant them from Time to Time greater Encouragements; ſo that we need not Wonder they have overcome ſo many Difficulties, or that the Trade of the *French* Iſlands ſhould be ſo much more conſiderable now, than it was at the Peace of *Utrecht*. We may be likewiſe ſure of this, that the more their Trade increaſes, the more it will be encouraged, becauſe the *French* Miniſtry pay a particular Regard thereto; and as we have already ſhewn in our Hiſtory of the *Eaſt-India* Company, they are never wanting to ſuch as are not wanting to themſelves; but from the great Principle of promoting the Grandeur of *France*, yield all the Aſſiſtance they can to what they viſibly perceive will increaſe the Wealth, and augment the naval Power, of the Kingdom.

As to the Apprehenſions of the Colonies, Time has ſhewn they are but two well founded; our Settlements upon the Continent are, in a Manner, ſurrounded by them; the Correſpondence between *Canada* and *Louiſiana* is in ſome Meaſure ſettled; and, though a great length of Time may be neceſſary to perfect the Deſigns they may have formed on that Side, yet if we do not interpoſe, as indeed we might eaſily do, they will be ſome time or other perfected, and then we ſhall find our Circumſtances very uneaſy. This to every Man who will but turn his Thoughts upon the Subject, muſt appear very plain and very certain; we ſhould not therefore wonder that thoſe who both ſee and feel it, expreſs themſelves with ſome Warmth upon this Topic: And at the worſt, our Colonies had better alarm us too ſoon than ſlumber themſelves, and ſuffer us to ſlumber till it is too late. The *French* have already a great Power in the Iſlands, and if ever they ſhould become entirely Maſters of *Hiſpaniola*, which we know not how ſoon they may, the Effects would be fatal to us. We have, at preſent, no Idea of the Importance of that Iſland, or at leaſt no adequate Idea of it; becauſe the *Spaniards*, who are poſſeſſed of the greateſt Part of it, either from their Lazineſs or their Weakneſs, make no Uſe of it; but we ſhould find it quite otherwiſe if the whole was in *French* Hands; and therefore amongſt all our Guarantees, it would be very right to have a general Guarantee for the *Spaniſh* Dominions in the *Weſt-Indies*.

As to our Colonies helping themſelves, there is no Doubt they do ſo, or their Situation would be very bad. We hear daily of great Things done by their Privateers, but our Squadrons perform very little; and whoever compares the Exploits done by the *Buccaneers*, who were but *Weſt-Indian* Privateers, with what has been done by a regular naval Force, would ſcarce believe they were of the ſame Nation: Men of War in their Ports, and Commodores and Captains on Shore, do our Colonies very little Service; for they neither protect our own Trade, nor diſtreſs that of the Enemy; ſo that whatever Expence this may create to us we ought not to charge it upon them. If any Expedition is concerted here, we find the People in *Jamaica* and the *Leeward Iſlands*, ready enough to expend both their Treaſure and their Blood in the Execution of it; and in Caſe of Miſcarriages, we have ſeldom had Reaſon to lay the Blame at their Doors. As to the Northern Colonies, we have known them do ſome, and attempt many, great Things; ſo that it is barbarous to accuſe them of being wanting to themſelves.

The Truth is, we want a proper Military Force in *America*; and I have often wondered that ſome Way was not contrived to ſend our Half-pay Officers thither: I do not mean to ſend them thither upon Half-pay; but to take ſuch Meaſures as that they ſhould have Whole-pay, one Half from home, and the other raiſed there. We might likewiſe make it worth the Attention of our Invalids, both Soldiers and Seamen, who, if they have common Senſe, would like a comfortable Eſtabliſhment in *New York*, *Penſylvania*, or *Virginia*, with their Wives and Families, full as well as an Apartment in any College, or being cooped up in our Garriſons, or in the *Scilly* Iſlands. If by theſe, or by any other Methods, we could eſtabliſh a regular Military Force, and even in time of Peace keep the Men ſome way or other in Action and Diſcipline, our Colonies would be a Match or Over-match for the *French*, as Experience ſhews from the Colony of *Georgia*, where we have been always a Match, and once an Over-match for the *Spaniards*, by mere Dint of Military Diſcipline, though we had but a very Handful of People.

Theſe are Things that demand immediate and general Conſideration. Our Colonies were always of great Conſequence, but they are now of the greateſt Conſequence, to the Nation; for at leaſt one Half of our Commerce depends upon them, as the whole of our Strength and Happineſs depends upon it: Our Wealth produces Liberty, and our Wealth was produced by Trade; whatever leſſens that will therefore effect theſe, and if ever it ſhould be taken away, we muſt certainly feel what we felt before, Poverty and arbitrary Power. The wiſeſt Uſe therefore that we can make of Wealth while we have it is to ſecure its Sources, by employing our Fleet in that Part of the World where their Succeſs muſt be attended with certain and immediate Advantages, for diſtreſſing the Trade of the *French* muſt benefit ours. In King *William*'s War we had *Spain* for an Ally, and therefore we could not then take any Advantage from her Weakneſs. In the next general War we were neither her Friend nor Foe; we did her ſome Hurt, and ourſelves no Good. But the *French* have been Gainers by both Wars; they had plundered the *Spaniards* in the firſt, as open Enemies; they ſtripped them of their Money in the laſt, by being pretended Friends. In the preſent War we have done pretty well, and the *French* have perhaps been no great Gainers by their Friendſhip with *Spain*. This ought to teach us the Wiſdom of living with that Nation always either upon the beſt Terms or the worſt; as cordial Allies or as open Enemies; for whenever we are between both of theſe we are ſure to be the Sufferers, and the *French* and *Dutch* run away with all.

It is our Buſineſs therefore to continue always armed in this Part of the World, where we have a ſuperior Force, and where we ſhould be ever ready to exert it, not againſt innocent and inoffenſive Neighbours, but againſt falſe Friends and treacherous Allies. If our legal Trade with the *Spaniſh Weſt-Indies* were reſtored, we ought to make it our Buſineſs to ſee that it be a legal Trade; for it is certain that the Nation neither gets nor loſes, while the ſame Quantity of Goods are diſpoſed of by different Hands: We ought therefore to convince the Crown of *Spain*, that we can treat, and mean to treat, them well; and at the ſame Time, we ſhould ſhew them, that as it is not their Intereſt to treat us ill, ſo it is not our Nature to bear it: Illicit Trade and Conventions may do well enough for a feeble Republic, but are beneath a powerful Kingdom; that, as it owes its Power to, ought to be always able and willing to protect, its Trade. Such are the Sentiments which ought to inſpire the Breaſts of *Britiſh* Stateſmen. The reſt of the World are convinced that we have not the Talents of Negociation; we ought therefore to convince them, that we do not ſtand in need of ſuch Talents; but that we can do our Buſineſs without them. The *Dutch*, whatever Language they may uſe in *Europe*, have always talked in this Tone in the *Eaſt-Indies*, and we ought to uſe it in the *Weſt*; while our Power is great there, we ſhould exert and increaſe it; when once it begins to decline, Advice will come too late, and therefore no Man can be blamed for giving it in time, whether it be followed or not. It is the Privilege of every Freeman to ſpeak and write for the Service of his Country, and the Privilege only of a few to act; but if the former excite, and the latter will perform, nothing is clearer, than that our Country muſt be ſerved; which in this World is the worthieſt End of Men, and therefore what we ſhould all purſue.

SECTION XXI.

The Hiſtory of the RISE, PROGRESS, *and* PRESENT STATE *of the Colony of* GEORGIA; *with the Attempt made upon it by the* Spaniards, *and their total Defeat. Interſperſed with Original Papers.*

1. *An introductory Account of the Motives which gave Riſe to this Deſign of ſettling to the South of* Carolina, *and the Nature of the Colony propoſed.* 2. *A large Extract of the Charter granted by his preſent Majeſty, for incorporating the Truſtees, and enabling them to carry their Deſign into Execution.* 3. *The Reſolution taken by the Truſtees when incoporated, for ſecuring Eſtates in Land to the original Planters and their Heirs Male, and for the perpetual Excluſion of Negroes.* 4. *The firſt Colony ſent over under the Direction of* James Oglethorpe, *Eſq; the Town of* Savannah *laid out, and the firſt Treaty with the* Creek Indians. 5. *The Return of Mr.* Oglethorpe *to* England, *in* 1734, *and his bringing with him* Tomochichi *and other* Indians; *the Acts prepared by the Truſtees for the Government of* Georgia, *approved by the Lords of Trade and Plantations, and ratified by his Majeſty.* 6. *The great Embarkation, in the Year* 1735, *on the extraordinary Grant of twenty-five thouſands Pounds by Parliament, grounded upon a Memorial from* South Carolina; *with a Copy of that Memorial.* 7. *The Hiſtory of the Colony farther continued, together with an Account of the Improvement made therein, and Indulgencies granted to the Planters by the Truſtees.* 8. *The ſame Subject purſued to the Year* 1740, *and a View of the Number of People ſent over by the Truſtees, from the Time their Charter was granted to the Cloſe of that Year.* 9. *A Proſpect of the Country of* Georgia *as it is now ſettled, the Number, Situation, and Importance of the Towns, Forts,* &c. *erected there; with various other Particulars.* 10. *The Condition of the People in this Colony on the breaking out of the War with* Spain, *and the Reſolution taken of acting in Conjunction with the* Carolinians, *offenſively, againſt the* Spaniards. 11. *A ſuccinct Account of the Expedition againſt* Fort St. Auguſtin, *and the Conſequences of that Expedition.* 12. *The Grand Invaſion on that Colony by the whole Force of* New Spain, *and the true End of this extraordinary Armament.* 13. *The total and wonderful Defeat of that great Force by his Majeſty's Forces, under the Command of General* Oglethorpe. 14. *The Congratulations on the News of this important and deciſive Action, from the Governors of our ſeveral Colonies, to General* Oglethorpe; *which ſhews their Senſe of the Conſequences of this happy Repulſe.* 15. *The preſent State of the Colony of* Georgia *conſidered, and its Importance demonſtrated, as a Frontier againſt the* French *and* Spaniards, *as an Aſylum for diſtreſſed* Engliſhmen, *and foreign Proteſtants; as a neceſſary Means for maintaining a good Correſpondence with all the* Indian Nations, *as an excellent Support to the Iſlands of* Jamaica *and* Barbadoes, *and as a Colony from whence we may reaſonably expect Silk, Wine, Pot-aſhes,* &c.

1. THE laſt of the *Britiſh* Colonies in Point of Settlement, and of which hitherto we have had no accurate or juſt Account, much leſs a clear and authentic Hiſtory of *Georgia*; of which I intend to treat with as much Perſpicuity as poſſible, that the Reader may apprehend the Nature of the Country, the Importance of its Situation, the Motives upon which it was ſettled, the Progreſs of that Deſign, the Attempts and Diſappointments of the *Spaniards*, the preſent Situation of Things there, and the Hopes that we may rationally entertain as to its Fate and Succeſs. This is certainly a very extenſive Plan; but at the ſame time it is the only Plan upon which we can proceed, in order to give the inquiſitive and public-ſpirited Reader, a true Notion of the Nature and Importance of this new Settlement; which is undoubtedly of far greater Conſequence to this Nation than hitherto it has been generally conceived to be: And therefore ſuch a Hiſtory as we propoſe will be equally neceſſary and entertaining; neceſſary, as it effectually compleats the Hiſtory of the *Britiſh America*, of which this is not only the laſt Colony in Point of Time, but the laſt alſo in reſpect to Situation, inaſmuch as it extends as far ſouthward as we claim any Right to, and fills up entirely the Diſcoveries of the *Cabots*, which have been ſo often mentioned; entertaining, as it conſiſts almoſt wholly of new Matter, and as it ſhews that even in this Age, when Luxury and all its Attendants, ſeem to be ſo firmly eſtabliſhed in *Europe*, a Scheme has been formed for erecting in the pleaſanteſt and moſt fruitful Part of *North America*, a *Britiſh* Settlement, upon the trueſt Principles of Virtue, Induſtry, and Freedom, which cannot fail of ſtriking firm and deep Root, and of flouriſhing in ſuch a manner as to do Honour to thoſe worthy, diſintereſted, and public-ſpirited Perſons who were firſt concerned in laying the Foundation of this Deſign, and by whoſe hearty and vigorous Endeavours it has been ſo far as it is carried into Execution.

In order to proceed regularly, it is requiſite to obſerve, that about fourteen Years ago, when this Nation enjoyed a profound Peace, and when there appeared no juſt Cauſe to apprehend its being ſpeedily interrupted, ſome Perſons of great Diſtinction, from Principles of true Patriotiſm, and Love to Mankind, obſerving what great Numbers of People there were in theſe Kingdoms, who from a Variety of Misfortunes and untoward Accidents, found themſelves in no Condition of ſubſiſting, at leaſt of ſubſiſting in ſuch a Way as to be uſeful to themſelves and the Community, which is the ſole Means whereby a Number of People become a Bleſſing, generouſly turned their Thoughts towards the Means of employing ſuch Multitudes of diſtreſſed and indigent Perſons for their own and the public Good. Theſe Speculations produced at firſt ſome Thoughts of improving the moſt northern Parts of our Plantations on the Continent of *America*; but upon more mature Reflection, and for very good Reaſons, they changed their Purpoſes, and turned their Thoughts to the South, particularly to that Part of *America* which makes properly our Frontier towards the *Spaniards* and the *French*, and which, though within the Bounds of the Province of *Carolina*, as deſcribed in its Charter, was in reality no Part of it, as not being at all ſettled; and for that Reaſon, rather a Burthen than an Advantage to the Province to which it belonged. Upon confining their Thoughts to this Country, they very quickly perceived, that though it had been ſo long neglected, it was nevertheleſs the moſt valuable Part of our Poſſeſſions in *North America*, and the moſt capable of being made a fruitful, populous, and uſeful Country, though at that time lying entirely waſte, overgrown with vaſt Woods, which gave Shelter to a few *Indians*, run-away Negroes, and other Banditti; affording great Advantages to the *Spaniards* in time of War, and upon the Extremities of which great Incroachments might be made before this Nation could have proper Intelligence of them. They ſaw that as to Climate and Situation no Country could claim a better, that it extended ſeventy Miles from North to South, and that it was three hundred Miles from the Midſt of the Coaſt to the *Apalachian* Mountains, the Country widening all the way; they were convinced that when a little opened and cleared, there could not be a pleaſanter or healthier Country upon the Face of the Globe; that the Soil would prove fruitful, and eaſy to be cultivated; that therefore People might ſubſiſt there upon very moderate Labour; which Circumſtances induced them to think, there could be no Place more proper found for the Habitation of the unhappy People before-mentioned.

But beſides theſe Sentiments of private Pity, they were influenced likewiſe by Motives of public Utility: They foreſaw that if this Project could be brought to bear, it would turn vaſtly to the Advantage of *North* and *South Carolina*, then lately purchaſed by the Crown, by providing an effectual Frontier againſt the *Spaniards* and the *French*, which they had hitherto wanted, and of the Want of which they had loudly complained: They judged by this Means, that new Alliances might be contracted with the *Indians*; or in caſe that could not be effected, the new Colony muſt certainly keep them in Awe, and prevent their being ſo terrible as within a few Years before they had been to the People of *Carolina*: And they ſaw juſt Reaſons to believe that this new Colony, when eſtabliſhed, might cultivate many rich and valuable Commodities for the Service of *Great-Britain*. Theſe, and many other Reaſons of like Nature, engaged them to think ſeriouſly of bringing ſo compaſſionate, ſo practicable, and ſo uſeful a Project to bear; in order to which they found it neceſſary to apply themſelves to the Crown for ſufficient Powers, to enable them to ſet this Undertaking on foot. They did ſo, and received all the Countenance and Encouragement they could deſire or expect, as will appear by the following Extract from the Inſtrument by which they were incorporated, and ſo put into a Condition of legally executing what they had ſo charitably projected.

2. “ His Majeſty King *George* II. by his Letters Patent, bearing Date the 9th Day of *June*, 1732, reciting, amongſt other things, that many of his poor Subjects were, through Misfortunes, and want of Employment, reduced to great Neceſſities, and would be glad to be ſettled in any of his Majeſty's Provinces in *America*; where, by cultivating the Lands waſte and deſolate, they may not only gain a comfortable Subſiſtence, but alſo ſtrengthen his Majeſty's Colonies, and increaſe the Trade, Navigation, and Wealth of his Majeſty's Realms; and that the Provinces in *North America* had been frequently ravaged by *Indian* Enemies, more eſpecially that of *South Carolina*, whoſe Southern Frontier continued unſettled, and lay open to the neighbouring Savages; and that to relieve the Wants of the ſaid poor People, and to protect the Subjects of *South Carolina*, a regular Colony of the ſaid poor People ſhould be ſettled and eſtabliſhed in the Southern Frontiers of *Carolina*; and for the Conſiderations aforeſaid, conſtitute a Corporation by the Name of *the Truſtees, for eſtabliſhing the Colony of* Georgia *in* America, with Capacity to purchaſe and take Lands; to ſue and to be ſued; to have a common Seal, and to chuſe Members in the ſaid Corporation on the third *Thurſday* in *March* yearly; with reſtraining Clauſes that no Member of the ſaid Corporation ſhould have any Salary, Fee, Perquiſite, Benefit, or Profit, whatſoever, for acting therein; or ſhould have any Office, Place, or Employment of Profit, under the ſaid Corporation; with Direction to the ſaid Corporation, every Year to lay an Account in Writing before the Lord Chancellor, Chief Juſtice of the King's Bench, Maſter of the Rolls, Chief Juſtice of the Common Pleas, and Chief Baron of the Exchequer, or any two of them, of all Money or Effects by them received or expended, for carrying on the good Purpoſes aforeſaid; with a Power to make Bye-Laws, Conſtitutions, Orders, and Ordinances; and granted, amongſt other things, to the ſaid Corporation, and their Succeſſors, under the Reſervations therein mentioned, ſeven undivided Parts (the whole into eight equal Parts to be divided) of all theſe Lands, Countries, and Territories, ſituate, lying, and being, in that Part of *South-Carolina* in *America*, which lies from the moſt Northermoſt Stream of a River there, called the *Savannah*, along the Sea Coaſt to the Southward, unto the moſt Southern Stream of a certain other great Water or River, called the *Alatamaha*, and Weſtward from the Head of the ſaid Rivers, reſpectively in direct Lines to the *South Seas*. To have and to hold the ſame to them, the ſaid Corporation, and their Succeſſors for ever; for the better Support of the ſaid Colony, under the yearly Rent of four Shillings Proclamation Money of *South Carolina*, for every hundred Acres of the ſaid Lands, for every of which the ſaid Corporation ſhould Grant, Demiſe, Plant, or Settle, but not to commence until ten Years after ſuch Grant, Demiſe, Planting or Settling; and erected and created the ſaid Lands, Countries, and Territories, into one independent and ſeparate Province, by the Name of *Georgia*; and made the Inhabitants who ſhould reſide therein free, and not ſubject to any of the Laws, Orders, Statutes, or Conſtitutions of *South Carolina*, except the Commander in chief of the Militia; and authorized the ſaid Corporation, for the Term of twenty-one Years, from the Date of the ſaid Letters Patent, to form and prepare Laws, Statutes, and Ordinances, for the Government of the ſaid Colony, not repugnant to the Laws and Statutes of *England*; to be preſented under their common Seal to his Majeſty in Council, for his Approbation or Diſallowance; and that the ſaid Laws ſo approved of, ſhould be in full Force and Virtue, within the ſaid Province. And impowered the ſaid Council for the Time being of the ſaid Corporation, or the major Part of them, to diſpoſe of, expend, and apply all the Money and Effects belonging to the ſaid Corporation, and to make Contracts for carrying on and effecting the good Purpoſes therein intended; and that they ſhould from Time to Time appoint a Treaſurer, Secretary, and ſuch other Officers, Miniſters, and Servants of the ſaid Corporation, as they ſhould ſee proper for the good Management of their Affairs, and at their Pleaſure to remove them, and appoint others in their ſtead; and that they ſhould appoint reaſonable Salaries, Perquiſites, and other Rewards for their Labour or Services; and that ſuch Officers ſhould be ſworn before they act, for the faithful and due Execution of their reſpective Offices and Places; and declared that the Treaſurer and Secretary for the Time being, ſhould be incapable of being Members of the ſaid Corporation; and granted to the ſaid Corporation, that it ſhould be lawful for them, their Officers and Agents, to tranſport and convey, into the ſaid Province, ſuch of his Majeſty's Subjects, and Foreigners, as were willing to go and inhabit, and reſide there; and declared all Perſons born within the ſaid Province, and their Children, and their Poſterity, to be free Denizens, as if they had been born within any of his Majeſty's Dominions; and impowered the ſaid Common Council, in the Name of the Corporation, and under their common Seal, to diſtribute, aſſign, transfer, and ſet over ſuch particular Portions of the ſaid Lands, Tenements, and Hereditaments, unto ſuch of his Majeſty's Subjects and others, willing to live in the ſaid Colony, upon ſuch Terms, and for ſuch Eſtates, and upon ſuch Rents, Reſervations, and Conditions, as the ſame might lawfully be granted; and as to the ſaid Common Council, or the major Part of them, ſhould ſeem fit and proper, provided no Grant ſhould be made of any Part of the ſaid Lands, unto, or in truſt for, or for the Benefit of, any Member of the ſaid Corporation; and that no greater Quantity of the ſaid Lands be granted, either entirely or in Parcels, to, or to the Uſe of, or in truſt for, any one Perſon, than five hundred Acres; and declared that all Grants made contrary to the true Intent and Meaning thereof, ſhould be abſolutely null and void. And granted, that the ſaid Corporation, for the Term of twenty-one Years, from the Date of the ſaid Letters Patent, ſhould have Power to erect and conſtitute Judicatures, and Courts of Record, or other Courts to be held in his Majeſty's Name, for the hearing and determining all Manner of Crimes, Offences, Pleas, Proceſſes, Plaints, Actions, Matters, Cauſes, and

“ things whatſoever ariſing or happening within the ſaid Province, or between Perſons inhabiting or reſiding there; and for awarding and making out Executions thereupon, and directing the ſaid Corporation to regiſter, or cauſe to be regiſtered, all Leaſes, Grants, Plantings, Conveyances, Settlements, and Improvements whatſover, as ſhould at any Time be made of any Lands, Tenements, or Hereditaments, within the ſaid Province; and yearly to tranſmit authentic Accounts thereof, unto the Auditor of the Plantations, or his Deputy, and to the Surveyor of *South Carolina*, to inſpect and ſurvey the ſame, to aſcertain the Quit-rents, which ſhould become due according to the Reſervation before mentioned. But not to have or take any Gratuity, Fee, or Reward, for ſuch Survey or Inſpection, on Forfeiture of their Office; with a Proviſo that all Leaſes, Grants, and Conveyances, to be made of any Lands within the ſaid Province, or a Memorial containing the Subſtance thereof, ſhould be regiſtered with the Auditors of the Plantations, within one Year from the Date thereof; otherwiſe that the ſame ſhould be void. And directed that all Rents, Iſſues, or Profits, which ſhould come to the ſaid Corporation, iſſuing or ariſing out of, or from, the ſaid Province, ſhould be laid out and applied in ſuch Manner, as would moſt improve and enlarge the ſaid Colony, and beſt anſwer the good Purpoſes therein mentioned, and for defraying all other Charges about the ſame. And directed the ſaid Corporation, from Time to Time, to give in to one of the Secretaries of State, and to the Commiſſioners of Trade and Plantations, Accounts of the Progreſs of the ſaid Colony. And directed that the ſaid Common Council ſhould, from Time to Time, for the ſaid Term of twenty-one Years, from the Date of the ſaid Letters Patent, have Power to appoint all ſuch Governors, Judges, Magiſtrates, Miniſters, and Officers, Civil and Military, both by Sea and Land, within the ſaid Diſtrict, as they ſhould think fit and needful for the Government of the ſaid Colony (except ſuch Officers as ſhould be appointed for managing, collecting, and receiving ſuch of his Majeſty's Revenues, as ſhould ariſe within the ſaid Province) with a Proviſo that every Governor, ſo appointed, ſhould be approved by his Majeſty, and qualify himſelf as other Governors in *America* are by Law required to do, and give Security for obſerving the Acts of Parliament relating to Trade and Navigation, and obeying all Inſtructions from his Majeſty, or any acting under his Authority, purſuant to the ſaid Acts. And granted, that the ſaid Corporation, for the ſaid Term of twenty-one Years, from the Date of the ſaid Letters Patent, ſhould have Power by any Commander, or other Officer, for that Purpoſe appointed, to train, intruſt, exerciſe, and govern a Militia for the ſpecial Defence and Safety of the ſaid Colony, to aſſemble in martial Array; and put in Warlike Poſture the Inhabitants of the ſaid Colony; and in Time of actual War, Invaſion, or Rebellion, to uſe and exerciſe the Law Martial, and alſo to erect Forts, and fortify any Place within the ſaid Colony; and the ſame to furniſh with all neceſſary Ammunition, Proviſion, and Stores of War, for Offence and Defence, and from Time to Time to commit the Cuſtody and Government of them to ſuch Perſon or Perſons as to them ſhould ſeem meet; declaring that the Governor or Commander in Chief of *South Carolina*, ſhould have the chief Command of the Militia of *Georgia*, and that they ſhould obſerve his Orders. And granted, that the ſaid Corporation ſhould have Power to import and export their Goods, at and from any Port or Ports that ſhould be appointed by his Majeſty, within the ſaid Province, for that Purpoſe, without being obliged to touch at any other Port in *South Carolina*. And declared, that after the End of the ſaid twenty-one Years, ſuch Form of Government, and making of Laws and Statutes, and Ordinances, for the Government of the ſaid Province and its Inhabitants, ſhould be eſtabliſhed and obſerved within the ſame, as his Majeſty, his Heirs and Succeſſors, ſhould ordain and appoint, and ſhould be agreeable to Law; and that after the End of the ſaid twenty-one Years, the Governor, and all Officers, civil and military, within the ſaid Province, ſhould be appointed by his Majeſty, his Heirs and Succeſſors.”

3. As ſoon as they had obtained this gracious and extenſive Charter, the following noble and honourable Perſons undertook, in Quality of Truſtees, to engage vigorouſly in the Execution of this Deſign, *viz. Anthony* Earl of *Shaftſbury*, *John* Lord Viſcount *Percival*, ſince created Earl of *Egmont*, *John* Lord Viſcount *Tyrconnel*, *James* Lord Viſcount *Limerick*, *George* Lord *Carpenter*, *Edward Digby*, Eſq; *James Oglethorpe*, Eſq; *George Heathcoate*, Eſq; *Thomas Tower*, Eſq; *Robert More*, Eſq; *Robert Hucks*, Eſq; *William Sloper*, Eſq; *Francis Eyles*, Eſq; *John Laroche*, Eſq; *James Vernon*, Eſq; *Stephen Hales*, A. M. *Richard Chandler*, Eſq; *Thomas Frederick*, Eſq; *Henry L'Apoſtre*, Eſq; *William Heathcoate*, Eſq; *John White*, Eſq; *Robert Kendal*, Eſq; *Richard Bundy*, D. D. Their firſt Care was to obtain a Fund ſufficient for the ſending over a conſiderable Number of People, and providing them with all kinds of Neceſſaries, towards which they ſubſcribed liberally themſelves; obtained conſiderable Sums by way of Collection from well-diſpoſed People, and had beſides a Grant from the Parliament of 10,000 *l.*

They next turned their Thoughts, as to the moſt proper Method of ſettling theſe People, when ſent over to *Georgia*, ſo as that they might be enabled to live comfortably themſelves, and at the ſame Time anſwer all the Ends for which they were ſent thither; it being judged highly reaſonable, that thoſe who were thus provided for, at the public Expence, ſhould be made in every Reſpect, as uſeful to the Public as poſſible. They reſolved therefore to conſider each Inhabitant in a double Capacity, as a Planter, and as a Soldier, who were conſequently to be provided with Arms for their Defence, as well as Tools for the Cultivation of their Land, and taught the Exerciſe of both. They alſo reſolved, that upon the firſt ſettling of this Colony, Towns ſhould be laid out, and Lands allotted each of them for their Maintenance, as near thoſe Towns as poſſible; that the former might ſerve for their Defence, and the latter for their Subſiſtence. In Conſequence of theſe Reſolutions, it was agreed that every Lot or Portion of Land ſhould conſiſt of fifty Acres; and that it ſhould be granted them in Tale Male, as the propereſt Tenure for the Colony in its Infancy, and the fitteſt to preſerve it from thoſe Inconveniencies to which it was moſt obnoxious; and with reſpect to any Hardſhips that might ariſe from this Tenure, they determined to remedy them occaſionally, till ſuch Time as the Condition of the Colony ſhould render an Alteration neceſſary.

They likewiſe determined to prohibit Negroes, the Uſe of them ſeeming abſolutely inconſiſtent with the Deſign of this Colony, and beſides this, in many reſpects, inconvenient and dangerous. Inconvenient, as the firſt Coſt of a Negro is about thirty Pounds; a Sum, that it was not to be ſuppoſed many of the People ſent to *Georgia* could lay out for themſelves; nor was it fit that the Truſtees ſhould do it for them, ſince this would pay the Paſſage, provide Tools, and defray the Expence of a white Man's Subſiſtence for a Year, who would then become a Security to the Province. It was foreſeen, that if a white Man kept a Negro, he would be leſs willing and leſs able to labour himſelf. If ſuch as were in Circumſtances to go over at their own Expence, were allowed to make uſe of Negroes, it was judged that this would diſpirit the poor Planters, would incline ſuch as were poſſeſſed of Negroes to abſent themſelves, as in other Provinces, might enable them, if ſucceſsful, to eat up and oppreſs their poorer Neighbours, or tempt them, if unſucceſsful, to mortgage or ſell their Lands to the Negro Merchants. Theſe were apparent and great Inconveniencies, but the Dangers were ſtill more numerous and more certain. In the firſt Place, it was evident that as the Planters in *Georgia* were to be ſent over with their Families, if Negroes were allowed, whenever the Men were abſent from their Plantations upon any Duty, their

Wives and Children would be at the Mercy of theſe Negroes; and thus, beſides the Caſe of ſecuring themſelves againſt foreign Invaſions, they would be likewiſe under a Neceſſity of providing for their domeſtic Safety. In the next Place, it was foreſeen that the *Spaniards* at *St. Auguſtin* would be continually enticing away the Negroes, or inciting them to Inſurrections; the former of which would have been very eaſy, as they had only a ſmall River or two to ſwim over, which they might do ſingly as well as in Parties; the latter was ſo much the more to be dreaded, as an Attempt or two of this kind muſt have greatly diſcouraged, if not totally ſubverted, the *Engliſh* Colony; and the Certainty of theſe Evils was the greater, becauſe in a Time of profound Peace, the *Spaniards* had practiſed both in regard to the Colony of *South Carolina*, though at a greater Diſtance, from whence Negroes had often fled in little Boats to the *Spaniards*, and been protected; and they have likewiſe been incited to riſe in large Bodies, to the great Terror of the Inhabitants, and to the no ſmall Hazard of the Loſs of that Province: Beſides, the allowing Negroes in *Georgia* would have facilitated the Deſertion of the *Carolina* Negroes, through this new Province; and conſequently the Colony, inſtead of proving, as it was intended, a Frontier, and thereby adding Strength to the Province of *South Carolina*, would have proved a Means of drawing away their Slaves, to the great Prejudice of the Planters; and which was much worſe, would add thereby to the Strength of their Enemies at *St. Auguſtin*. So that taking theſe Conſiderations together, *viz.* that Wine, Silk, Pot-aſhes, and other Produces, which were expected from the new Colony, did not at all require Negroes; as the Introduction of them ſo near to a Garriſon of the *Spaniards* would weaken, rather than ſtrengthen the Barrier; and as they would introduce with them a greater Propenſity to Idleneſs among the Planters, and too great an Inequality among the People; it was thought proper to make the Prohibition of them a fundamental Article of the Conſtitution.

When the Truſtees had made theſe Diſpoſitions, and were enabled, by Benefactions from the Public, and ſeveral private Perſons, on the 3d of *October* 1732, it was reſolved to ſend over one hundred and fourteen Perſons, Men, Women, and Children, being ſuch as were in decayed Circumſtances, and thereby diſabled from following any Buſineſs in *England*; and who, if in Debt, had leave from their Creditors to go; and ſuch as were recommended by the Miniſter and Church-Wardens, and Overſeers of their reſpective Pariſhes; and *James Oglethorpe*, Eſq; one of the Truſtees went with them at his own Expence, to ſettle them. On the 24th of the ſame Month, the People were examined, whether any of them had any Objections to the Terms and Conditions propoſed to them, which they all declared they had not, but that they were fully ſatisfied with them; and executed Articles under their Hands and Seals, teſtifying their Conſents thereto, which are now in the public Office belonging to the Truſtees. But four of them deſiring their Daughters might inherit as well as their Sons, and that their Widow's Dower might be conſidered, the Truſtees immediately reſolved, that every Perſon who ſhould deſire the ſame, ſhould have the Privilege of naming a Succeſſor to the Lands granted to him; who, in Caſe the Poſſeſſor ſhould die without Iſſue Male, ſhould hold the ſame to them and their Heirs Male for ever; and that the Widows ſhould have their Thirds, as in *England*; with which Reſolution the People being all acquainted, were very well ſatisfied.

The Truſtees prepared Forms of Government, agreeable to the Powers given them by the Charter; they eſtabliſhed under their Seal a Court of Judicature, for trying Cauſes as well criminal as civil, in the Town of *Savannah* (the Name which was given to the firſt Town to be raiſed) by the Name and Stile of the Town Court. They alſo appointed Magiſtrates there, *viz.* three Bailiffs and a Recorder, and inferior Officers, *viz.* two Conſtables and two tything Men. They choſe for Magiſtrates, ſuch as appeared to them the moſt prudent and diſcreet; but amongſt a Number of People, who were all upon a Level at the firſt ſetting out, it was impoſſible to make any Choice or Diſtinction, which would not create ſome future Uneaſineſs among them. As I have no Relation to, or Connection with, the Truſtees of *Georgia*, I ſhall take the Liberty of making ſome Remarks upon their Proceedings, which otherwiſe I ſhould not have thought becoming either them or me. The Scheme of their Incorporation is entirely new, as was the Project of Mr. *Oglethorpe*'s going over at his own Expence, and purely to ſee theſe People put into a Way of living without him, whom he had extricated out of ſo many Difficulties, and who, but for this Condeſcenſion in him, muſt have fallen back into thoſe Difficulties again. The Attempts of Sir *Walter Raleigh*, for ſettling of *Virginia*, were of this Nature with reſpect to him; that is to ſay, what he did was from a Motive of public Spirit; but what the *Virginia* Company did, was from a Principle of Gain; whereas this whole Deſign roſe from the charitable and beneficent Diſpoſition of a few worthy and good Men, and has been hitherto conducted according to the ſame Diſpoſition, for the Benefit of the Colony, and of the Public; and from no other View or Intereſt in the Truſtees, but the making themſelves happy from the Conſciouſneſs of well doing; which at the ſame Time that it reflects Reputation upon them, does the higheſt Honour to this Age and Country, in which the Deſire I have to have ſome ſmall Share, produced the Pains taken in this Section, which I flatter myſelf will, like its Subject, prove of great Utility to the Public.

4. On the 15th of *November* Mr. *Oglethorpe* ſet out for *Graveſend*, from whence he ſoon ſailed for *Carolina*, where they arrived on the 15th of *January* following, and were received at *Charles Town* by the Governor, with great Kindneſs and Civility; who ordered Mr. *Middleton*, the King's Pilot, to carry the Ship into *Port Royal*, and ſmall Craft to convey the Colony from thence to the River *Savannah*. In ten Hours they proceeded to *Port Royal*. On the 18th Mr. *Oglethorpe* went aſhore upon *French's Iſland*, and left a Guard upon *John's*, being a Point of that Iſland, which commands the Channel, and is about half Way between *Beaufort* and the River *Savannah*. They had Orders to prepare Huts, for the Reception of the People in their Paſſage from thence. Mr. *Oglethorpe* went to *Beaufort Town*, and was ſaluted with a Diſcharge of the Artillery, and had a new Barrack fitted up, where the Colony landed on the 20th, and were chearfully aſſiſted by Lieutenant *Watts*, and Enſign *Farrington*, and the other Officers of the independent Company; as alſo by Mr. *Ledebar*, and other Gentlemen of the Neighbourhood; from thence he went to view the *Savannah* River, and pitched upon a convenient Spot of Ground, ten Miles up the River, on which he deſigned to build a Town. The Reader will obſerve that this was exactly agreeable to the Reſolutions taken by the Truſtees at home; and as there was no Time left in fixing upon the Place, ſo on the 9th of *February* the Town was marked out, and the firſt Houſe begun.

The chief Reaſons that determined Mr. *Oglethorpe* in the Choice of this Place were, Health, Pleaſure, and Conveniency. Before his Arrival in the Country, it had the Name of an *Indian* Nation, *viz. Yammacraw*, who inhabited here, under the Command of the Chief, *Tomochichi*, and who readily gave them Place, and entered into a cloſe Friendſhip with him; ſo much the more agreeable to both Parties, as there was no other *Indian* Nation within fifty Miles. But Mr. *Oglethorpe* called the Town by the Name of the River *Savannah*. It lies, according to Captain *Gaſcoign*'s Obſervations, in the Latitude of 31 Degrees 58 Minutes, which he took off *Tybee*, an Iſland that lies at the Mouth of the *Savannah* *River*. It is diſtant from *Charles Town* South-weſt, according to the Courſe and Windings of the Rivers and Creeks, about one hundred and forty Miles, but by a direct Courſe ſeventy-ſeven, allowing *Sullivan's Iſland* to be in the Latitude of 32 Degrees 47 Minutes; from *Auguſtin* North-eaſt and by Eaſt about one hundred and forty Miles; and by the Courſe of the Rivers is diſtant from *Fort Moore* three hundred Miles; but upon a direct Line but one hundred and fifteen Miles North-weſt and by Weſt; this Bluff is diſtant ten Miles from the Mouth of the River on the South-ſide; and *Parryſburgh* is twenty four Miles above it, on the North, and is ſo ſituated as to have a beautiful Proſpect, both up and down the River. It is very ſandy and barren, and conſequently a wholeſome Place for a Town or City, if *Savannah* ſhould ever grow up and rival *Philadelphia.*

After putting things into order here, and aſſigning every Man his proper Station and Employment, Mr. *Oglethorpe*, in Company with Colonel *Bull*, who came from *Charles Town* to pay him a Viſit, and teſtified great Satisfaction at the Progreſs they made, ſet out for *Charles Town* to ſollicit Succours for his Colony. Before we take Notice of the Succeſs he met with on that Occaſion, it may not be amiſs to tranſcribe a Paragraph from the *South Carolina* Gazette, dated *Charles Town, March* the 22d, 1732, in which there is an Account given of a Journey to *Georgia*, which will ſhew the Sentiments of the People of that Colony, at a Time when they were freed from all Prejudices, Apprehenſions, and Prepoſſeſſions. After deſcribing the Town in the Manner we have done, they ſay, “When they, that is the new Colony, arrived, there was ſtanding on it, *viz.* the Place where Town now ſtands, a great Quantity of the beſt Sorts of Pines, moſt of which are already cut down on the Spot where the Town is laid out to build. The Land is barren about a Mile back, when you come into very rich Ground; and on both Sides, within a Quarter of a Mile of the Town, is choice good planting Land. Colonel *Bull* told me that he had been ſeven Miles back, and found it extraordinary good. Mr. *Oglethorpe* is indefatigable, takes a vaſt deal of Pains; his Fare is but indifferent, having little elſe at preſent but ſalt Proviſions: He is extremely well beloved by all his People. The general Title they give him is *Father*. If any of them are ſick, he immediately viſits them, and takes a great deal of Care of them. If any Differences ariſe, he is the Perſon that decides them: Two happened while I was there, and in my Preſence, and all the Parties went away, to outward Appearance, ſatisfied and contented with his Determination. He keeps a ſtrict Diſcipline; I never ſaw one of his People drunk nor heard one ſwear, all the Time I was there. He does not allow them Rum, but in lieu gives them *Engliſh* Beer. It is ſurpriſing to ſee how chearfully the Men go to work, conſidering they have not be been bred to it. There are no Idlers there, even the Boys and Girls do their Parts. There are four Houſes already up, but none finiſhed; and he hopes when he has got more Sawyers, which I ſuppoſe he will have in a ſhort time, to finiſh two Houſes in a Week. He has plowed up ſome Land, Part of which he ſowed with Wheat, which is come up, and looks promiſing. He has two or three Gardens, which he has ſowed with divers Sorts of Seeds; and planted Thyme, with other Sorts of Pot-herbs, Sage, Leeks, Scallions, Celery, Liquorice, &c. and ſeveral Sorts of Fruit-Trees. He was palliſading the Town, and incloſing ſome Part of the Common, which I do ſuppoſe may be finiſhed in a Fortnight's time. In ſhort, he has done a vaſt deal of Work for the Time; and I think his Name ought to be immortalized.”

This ſufficiently ſhews how well pleaſed the People at *Carolina* were, as indeed they had Reaſon to be, with this new Settlement; as a further Teſtimony of which, not only the Aſſembly, but the People in general, contributed largely to the Aſſiſtance of the new Comers; five hundred Pounds of which Money Mr. *Oglethorpe* laid out immediately in Cattle, and having given other Directions for providing at *Charles Town* what his People might have Occaſion for, he very ſpeedily ſet out on his return for *Savannah*, and on his Way lay at Colonel *Bull*'s Houſe on *Aſhly River*. There the Reverend Mr. *Guy*, Rector of *St. John*'s *Pariſh*, waited on him, and told him his Pariſhioners had raiſed a handſome Contribution. Being arrived at *Savannah*, he found that Mr. *Wiggan*, the Interpreter, with the chief Men of the *Lower Creek* Nation, had been to treat of an Alliance with the new Colony. The *Lower Creeks* are a Nation of *Indians*, who formerly conſiſted of ten, but now are reduced to eight Tribes, who have each their different Government, but are allied together, and ſpeak the ſame Language. They claim from the *Savannah River* as far as *St. Auguſtin* and up *Flint River*, which falls into the Bay of *Mexico*. *Tomochichi*, Mico, and the *Indians* of *Yammacraw* were of the *Creek* Nation and Language.

Mr. *Oglethorpe* received the *Indians* in one of the new Houſes. They were as follows: From the Tribe of *Coweeta*, *Yahan Lakee*, their King or Mico, *Eſſaboo*, their Warrior, the Son of *Old Brim*, lately dead; whom the *Spaniards* called Emperor of the *Creeks*, with eight Men and two Women Attendants. From the Tribe of *Cuſſetas*, *Cuſſeta*, their Mico, *Tatchiquatchi*, their Head Warrior, with four Attendants. From the Tribe of *Owſeecheys*, *Ogeeſe*, the Mico or War King; *Neathlouthko* and *Ougachi* two chief Men, with three Attendants. From the Tribe of *Cheechaws*, *Outhleteboa*, their Mico, *Thlautho-thlukee*, *Figeer*, *Sootamilla*, War Captains, with three Attendants. From the Tribe of *Echetas Chutabeeche* and *Robin*, two War Captains (the latter was bred among the *Engliſh*) with four Attendants. From the Tribe of *Polachucolas*, *Gillattee*, their Head Warrior, and five Attendants. From the Tribe of *Oconas*, *Oueekachumpa*, called by the *Engliſh Long King*, *Koowoo*, a Warrior. From the Tribe of *Euſaule*, *Tomaumi*, Head Warrior, and three Attendants.

The *Indians* being all ſeated, *Oueekachumpa*, a very tall old Man, ſtood, and made a Speech, which was interpreted by Mr. *Wiggan* and Mr. *Muſgrove*, and was to the following Purpoſe: He firſt claimed all the Lands to the Southward of the River *Savannah*, as belonging to the *Creek Indians*. They then ſaid, though they were but poor and ignorant, he that had given the *Engliſh* Breath had given them Breath alſo. That he that had made both had given more Wiſdom to the White Men. That they were perſuaded that the great Power which dwelt in Heaven, and all around, (and then he ſpread out his Hands and lengthened the Sounds of his Words) and which hath given Breath to all Men, had ſent the *Engliſh* thither, for the Inſtruction of them, their Wives and Children: That, therefore, they gave them up freely their Right to all the Land they did not uſe themſelves. That this was not only his Opinion, but the Opinion of the eight Towns of the *Creeks*, each of whom having conſulted together, had ſent ſome of their chief Men with Skins, which is their Wealth.

Then the chief Men brought a Bundle of Buck-Skins, and laid eight from the eight Towns before Mr. *Oglethorpe*. He ſaid theſe were the beſt Things they had, and that they gave them with a good Heart. He concluded with thanking him for his Kindneſs to *Tomochichi*, Mico, and his *Indians*, to whom he ſaid he was related, and though *Tomochichi* was baniſhed from his Nation, that he was a good Man, and had been a great Warrior; and it was for his Wiſdom and Juſtice that the baniſhed Men had choſe him King. He alſo ſaid, that he had heard that the *Cherokees* had killed ſome *Engliſhmen*, and that if Mr. *Oglethorpe* would command them, they would enter their whole Force into the *Cherokee* Country, deſtroy their Harveſt, kill the People, and revenge the *Engliſh*. When he had done ſpeaking, *Tomochichi* came in with the *Yammacraw Indians*, and making a low Obeiſance, ſaid, I was a baniſhed Man, and I came here poor and helpleſs to look for good Land near the Tombs of my Anceſtors, and when the *Engliſh* came to this Place I feared you would drive us away; for we were weak and wanted Corn. But you confirmed our Land to us, and gave us Food. Then the Chiefs of the other Nation made Speeches to the ſame Purpoſe as *Oueekachumpa*'s.

After which they agreed with Mr. *Oglethorpe* on a Treaty of Alliance and Commerce, which was ſigned by him and them. A laced Coat, a laced Hat, and a Shirt, were given to each King, and to each of the Warriors a Gun, a Mantle of Duffils, and to all their Attendants coarſe Cloth for cloathing, and other things. The Articles of Agreement were, I. The Truſtees agreed to let their People carry into the *Indian* Towns all Sorts of Goods fitting to Trade at Rates and Prices ſettled by the Treaty. II. Reſtitution and Reparation to be made for Injuries on both Sides, and Criminals to be tried and puniſhed according to the *Engliſh* Law. III. Trade to be withdrawn from any *Indian* Town offending againſt Treaty. IV. The *Engliſh* to poſſeſs all Lands not uſed by the *Indians*, provided, that upon ſettling of every new Town the *Engliſh* ſhould ſet out for the Uſe of their Nation, ſuch Lands as ſhould be agreed on between the *Engliſh* beloved Men, aad the Head-Men of their Nation. V. To reſtore all runaway Negroes, and carry them either to *Charles Town*, the *Savannah*, or *Petachuchula* Garriſon, upon being paid for every ſuch Negro four Blankets, or two Guns, or the Value thereof in other Goods, if taken on the other Side *Ocorivy River*; and one Blanket if the Negro is killed in taking or endeavouring to make his Eſcape. VI. Laſtly, They promiſe, with ſtrait Hearts and Love to their Brother *Engliſh*, to give no Encouragement to any other white People to ſettle there, and to all this they ſet the Marks of their Families. This Treaty being concluded, Mr. *Oglethorpe* thought fit to return into *England*, as well to report the Situation things were in, in that Country, as to procure the neceſſary Supplies for promoting the new Colony.

5. In the Month of *June* 1734, Mr. *Oglethorpe* arrived ſafely in *England*, bringing with him *Tomochichi*, Mico or King of the *Yammacraws*; *Senawki*, his Conſort, and *Toonakowi*, the Prince his Nephew, as alſo *Hilliſpilli*, a War Captain, and *Apakowtſki*, *Stimalechi*, *Sintouchi*, *Hinguithi*, and *Umphychi*, five other *Indian* Chiefs, with their Interpeter. They were lodged at the *Georgia-Office*, *Old-Palace-Yard*, where they were handſomely entertained; and being ſuitably dreſſed, were introduced to the Court, then at *Kenſington*. *Tomochichi* preſented to the King ſeveral Eagles Feathers; which, according to their Cuſtom, is the moſt reſpectful Gift he could offer, and made the following Speech to his Majeſty. “ This Day I ſee the Majeſty of your Face, and “ Greatneſs of your Houſe, and the Number of your “ People; I am come for the Good of the whole Na- “ tion called the *Creeks*, to renew the Peace they had “ long ago with the *Engliſh*. I am come over in my “ old Days; though I cannot live to ſee any Advantage “ to myſelf. I am come for the Good of the Children “ of all the Nations of the *Upper* and *Lower Creeks*, that “ they may be inſtructed in the Knowledge of the *Engliſh*. “ Theſe are the Feathers of the Eagle, which is “ the ſwifteſt of Birds, and who flieth all round our “ Nations. Theſe Feathers are a Sign of Peace in our “ Land, and we have brought them over to leave them “ with you, O! great King, as a Sign of everlaſting “ Peace. O! great King, whatſoever Words you ſhall “ ſay unto me I will tell them faithfuly to all the Kings “ of the *Creek* Nations.” To which his Majeſty made a gracious Anſwer, aſſuring thoſe Nations of his Protection and Regard.

Theſe *Indians*, but more eſpecially their Mico or Prince, gave evident Marks, during their Stay in *England*, of good Senſe, and of a ſincere Inclination to carry on a friendly Correſpondence between their own Nation and ours; and therefore they deſired of the Truſtees, that the Meaſures, Prices, and Qualities of Goods to be purchaſed by them, with their Deer-Skins, might be ſettled, as likewiſe the Weights; that no body might be allowed to trade with the *Indians* in *Georgia*, without a Licence from the Truſtees, in order, that if they were in any reſpect injured, or defrauded by the Traders, they might know where to complain. And they further deſired, that there might be but one Store-houſe in each *Indian* Town, for ſupplying them with the Goods they might want to purchaſe, from whence the Traders ſhould be obliged to ſupply them at their fixed Prices. The Reaſon which the *Indians* gave for this Application was, becauſe the Traders with them had often, in an arbitrary Manner, raiſed the Price of Goods, and defrauded them in the Weights and Meaſures; and, by their Impoſitions, had often created Animoſities between the *Engliſh* and *Indians*, which had frequently ended in Wars between them, prejudicial to both.

In Compliance with this Requeſt of theirs, the Truſtees prepared a Law, intitled, *An Act for maintaining the Peace with the* Indians *in the Province of* Georgia; which contained the ſame Regulations and Proviſions that were made in an Act paſſed by the Council and Aſſembly in *South Carolina*, in the Year 1731, which Act would have reached the Country now called *Georgia*, if it had not been erected into a ſeparate Province. They likewiſe prepared another Law, calculated for the ſame ſalutary Purpoſe, I mean the preventing any Dangers from the *Indians*, by the pernicious Effects of ſpirituous Liquors, as well as the Health of the People already ſettled, and that might be ſettled, in their new Colony, which was intitled *An Act to prevent the Importation and Uſe of Rum and Brandies in the Province of* Georgia *or any kind of Spirits, or ſtrong Waters whatſoever*. They likewiſe prepared a third Law, upon a very mature Deliberation, and for the Reaſons before-mentioned, intitled, *An Act for rendering the Colony of* Georgia, *more defenſibie, by prohibiting the Importation of Black Slaves, or Negroes, in the ſame*. Theſe three Acts were laid before the King in Council, in the Month of *January* following; and after a Report from the Board of Trade, That they were proper to receive his Majeſty's Approbation, they were accordingly ratified. Two Embarkations were made this Year, whoſe Numbers are hereafter mentioned, which conſiſted chiefly or *Saltſburghers*, who with the *Saltſburghers* that went before, were ſettled in a Town called by them *Ebenezer*, upon the River *Savannah*, at ſome Diſtance above the Town; and by the Sobriety and Induſtry of the People, they prove a very thriving Settlement.

6. In the ſucceeding Year, 1735, the Truſtees were encouraged by an extraordinary Supply of twenty-ſix thouſand Pounds, granted by Parliament, and very conſiderable Benefactions, as well in *Carolina* as in *England*, to think of making very conſiderable Embarkations for ſtrengthening the ſouthern Part of *Georgia*; and to obviate any Objection that might be made, as in Undertakings of this Nature Objections will never be wanting, of their ſending uſeful Poor from hence, it was reſolved, That theſe Embarkations ſhould conſiſt moſtly of People from the North of *Scotland*, and perſecuted *German* Proteſtants. The Reader will obſerve, that by the Care taken in this Reſpect, the Nation gained a very conſiderable Advantage, ſince by this Means the Overflowings of all the Northern Countries of *Europe*, which are known to breed robuſt, hardy and induſtrious People, were ſecured for our Service, and carried over and ſettled in that Part of his Majeſty's Dominions where ſuch People were wanted moſt; where, from their Circumſtances, they were obliged to fulfil (as indeed they have always done) the Ends for which they were ſent thither; and ſo became an Acceſſion of Strength of great Conſequence and Advantage, at a very ſmall and inconſiderable Expence. But that the Reader may be fully apprized of, and perfectly comprehend, the true Reaſons which induced the Parliament to grant ſo much Money, for the Settlement and Improvement of the Colony this Year, and may likewiſe be enabled to judge of the Weight and Importance of theſe Reaſons, it is requiſite to inform him, that the Colony of *South Carolina* drew up a Memorial, dated the 9th of *April* 1734, ſigned by *Robert Johnſon*, Eſq; their Governor, *Thomas Broughton*, Preſident of the Council; and *Paul Jenys*, Speaker of the Commons; containing a Repreſentation of the State and Condition of that Province, and therein ſo full, ſo clear, and ſo authentic an Account of Facts, equally curious and important, that it is impoſſible to ſet them down either in fewer or better Words than are uſed in that Memorial; Part of which therefore we ſhall give here, and ſhould very willingly have given the whole, if the Nature of our Work would have allowed us Room.

“ Your Majeſty's Subjects of this Province, having “ often felt, with Hearts full of Gratitude, the many “ ſignal Inſtances of your moſt ſacred Majeſty's peculiar “ Favour and Protection to theſe diſtant Parts of your “ Dominions, and eſpecially thoſe late Proofs of your “ Majeſty's moſt gracious and benign Care, ſo wiſely “ calculated for the Protection of this your Majeſty's “ Frontier-Province on the Continent of *America*, by “ your royal Charter to the Truſtees for eſtabliſhing “ the Colony of *Georgia*; and your great Goodneſs ſo rightly and timely applied in protecting the Settlement of the *Swiſs* at *Purryſburg*. Encouraged by ſuch Views of your Majeſty's wiſe and paternal Care, extended to your remoteſt Subjects; and excited by the Duty which we owe to your moſt ſacred Majeſty, to be always watchful for the Support and Security of your Majeſty's Intereſt, eſpecially at this very critical Juncture, when the Flame of a War breaking out in *Europe*, may very ſpeedily be lighted here, in this your Majeſty's Frontier Province, which by its Situation is known to be of the utmoſt Importance to the general Trade and Traffic of *America*: We therefore, your Majeſty's moſt faithful Governor, Council, and Commons, convened in your Majeſty's Province of *South Carolina*, crave Leave with great Humility to repreſent to your Majeſty the preſent State and Condition of this your Province, and how greatly it ſtands in need of your Majeſty's gracious and timely Succour in Caſe of a War, to aſſiſt our Defence againſt the *French* and *Spaniards*, or any other Enemies to your Majeſty's Dominions, as well as againſt the many Nations of Savages, which ſo nearly threaten the Safety of your Majeſty's Subjects.

“ The Province of *Carolina*, and the new Colony of *Georgia*, are the ſouthern Frontiers of all your Majeſty's Dominions on the Continent of *America*; to the South and South-weſt of which is ſituate the ſtrong Caſtle of *St. Auguſtin*, garriſoned by four hundred *Spaniards*, who have ſeveral Nations of *Indians* living under their Subjection, beſides ſeveral other ſmall Settlements and Garriſons near the *Appellaches*, ſome of which are not eighty Miles diſtant from the Colony of *Georgia*. To the South-weſt and Weſt of us, the *French* have already erected a conſiderable Town near *Fort Thoulouſe* on the *Moville* River, and ſeveral other Forts and Garriſons, ſome not above three hundred Miles diſtant from our Settlements; and at *New Orleans* on the *Miſſiſſippi* River, ſince her late Majeſty Queen *Anne*'s War, they have exceedingly increaſed their Strength and Traffic, and have now many Forts and Garriſons on both Sides of that large River, for ſeveral hundred Miles up the ſame. And ſince his moſt Chriſtian Majeſty has taken out of the *Miſſiſſippi* Company the Government of that Country into his own Hands, the *French* Natives of *Canada* come daily down in Shoals, to ſettle all along that River, where many regular Forces have been ſent over by the King, to ſtrengthen the Garriſons of thoſe Places; and according to our beſt and lateſt Advices, they have five hundred Men in Pay conſtantly employed as Wood-Rangers, to keep the neighbouring *Indians* in Subjection, and to prevent the diſtant ones from diſturbing their Settlements; which Management of the *French* has ſo well ſucceeded, that we are very well aſſured they have wholly now in their Poſſeſſion, and under their Influence, the ſeveral numerous Nations of *Indians* that are ſituate near the *Miſſiſſippi* River; one of which, called the *Choctaws*, by Eſtimation, conſiſting of about five thouſand fighting Men, and who were always deemed a very warlike Nation, lies on this Side the River, not above four hundred Miles diſtant from our Out-ſettlements. Among whom, and ſeveral other Nations of *Indians*, many *French Europeans* have been ſent to ſettle, whom the Prieſts and Miſſionaries among them encourage to take *Indian* Wives, and uſe divers other alluring Methods to attach the *Indians* the better to the *French* Alliance: By which Means the *French* are become thoroughly acquainted with the *Indian* Way of warring and living in the Woods, and have now a great Number of white Men among them, able to perform a long March, with an Army of *Indians*, upon any Expedition.

“ We further beg Leave to inform your Majeſty, That if the Meaſures of *France* ſhould provoke your Majeſty to a State of Hoſtility againſt it in *Europe*, we have great Reaſons to expect an Invaſion will be here made upon your Majeſty's Subjects, by the *French* and the *Indians*, from theſe *Miſſiſſippi* Settlements: They have already paved a Way for a Deſign of that Nature, by erecting a Fort called the *Albama Fort*, *alias Fort Louis*, in the Middle of the *Upper Creek Indians*, upon a navigable River leading to *Moville*, which they have kept well garriſoned, and mounted with fourteen Pieces of Cannon; and have already been prevented from erecting a ſecond nearer to us in that Quarter. The *Creeks* are a Nation very bold, active, and daring, conſiſting of about thirteen hundred fighting Men (and not above one hundred and fifty Miles diſtant from the *Choctaws*) whom though we heretofore have traded with, claimed, and held in our Alliance, yet the *French*, on account of that Fort, and a ſuperior Ability to make them liberal Preſents, have been for ſome time ſtriving to gain them over to their Intereſt, and have ſucceeded with ſome of the Towns of the *Creeks*, which if they can be ſecured in your Majeſty's Intereſt, are the only Nation which your Majeſty's Subjects here can depend upon, as their beſt Barrier againſt any Attempts, either of the *French* or their confederate *Indians*.

“ We moſt humbly pray Leave further to inform your Majeſty, that the *French* at *Moville*, perceiving that they could not gain the *Indians* to their Intereſt without buying their Deer Skins, which is the only Commodity the *Indians* have to purchaſe Neceſſaries with, and the *French* not being able to diſpoſe of thoſe Skins, by reaſon of their having no Vent for them in *Old France*, have found Means to encourage Veſſels from hence, *New York*, and other Places which are not prohibited by the Acts of Trade, to truck thoſe Skins with them for *Indian* trading Goods, eſpecially the *Britiſh* Woollen Manufactures, which the *French* diſpoſe of to the *Creeks* and *Choctaws*, and other *Indians*; by which Means the *Indians* are much more alienated from our Intereſt; and, on every Occaſion, object to us, that the *French* can ſupply them with Shrouds and Blankets as well as the *Engliſh*; which would have the contrary Effect, if they were wholly furniſhed with thoſe Commodities by your Majeſty's Subjects trading among them. If a Stop were therefore put to that pernicious Trade with the *French*, the *Creek Indians* chief Dependance would be on this Government, and that of *Georgia*, to ſupply them with Goods; by which Means great Part of the *Chactaws* living next the *Creeks*, would ſee the Advantage the *Creek Indians* enjoyed, by having *Britiſh* Woollen Manufactures wholly from your Majeſty's Subjects, and thereby be invited, in a ſhort time, to enter into a Treaty of Commerce with us, which they have lately made ſome Offers for, and which, if effected, will ſoon leſſen the Intereſt of the *French* with theſe *Indians*, and by Degrees attach them to that of your Majeſty.

“ The only Expedient we can propoſe to recover and confirm that Nation to your Majeſty's Intereſt, is by ſpeedily making them Preſents, to withdraw them from the *French* Alliance, and by building ſome Forts among them. Your Majeſty may be put into ſuch a Situation, that on the firſt Notice of Hoſtilities with the *French*, your Majeſty may be able to reduce at once the *Albama Fort*, and we may then ſtand againſt the *French* and their *Indians*; which if not timely prepared for, before a War breaks out, we have too much Reaſon to fear we may be ſoon over-run by the united Strength of the *French*, and the *Creeks* and *Choctaws*, with many other Nations of their *Indian* Allies: For ſhould the *Creeks* become wholly our Enemies, who are well acquainted with all our Settlements, we probably ſhould alſo ſoon be deſerted by the *Cherokees*, and a few other ſmall Tribes of *Indians*; who, for the Sake of our Booty, would readily join to make us a Prey to the *French* and *Savages*. Ever ſince the late *Indian* War, the Offences then given us by the *Creeks*, have made that Nation jealous of your Majeſty's Subjects of this Province. We have therefore concerted Meaſures with the Honourable *James Oglethorpe*, Eſq; who being at the Head of a new Colony, will, we hope, be ſucceſsful for your Majeſty's Intereſt among that People. He has already, by Preſents, attached the *Lower Creeks* to the Service of your Majeſty, and has laudibly undertaken to endeavour the fixing a Garriſon among the *Upper Creeks*; the Expence of which is already in Part provided for, in this Seſſion of the general Aſſembly of this Province. We hope therefore to prevent the *French* from incroaching farther on your Majeſty's Territories, until your Majeſty is graciouſly pleaſed further to ſtrengthen and ſecure the ſame.

“We find the *Cherokee* Nation has lately become very inſolent to your Majeſty's Subjects trading among them, notwithſtanding the many Favours which the Chiefs of that Nation received from your Majeſty in *Great Britain*; beſides a conſiderable Expence which your Majeſty's Subjects have been at, in making them Preſents, which inclines us to believe that the *French*, by their *Indians*, have been tampering with them. We therefore beg Leave to inform your Majeſty, that the building and mounting ſome Forts alſo among the *Cherokees*, and making them Preſents, will be highly neceſſary to keep them ſteady in their Duty to your Majeſty, leſt the *French* may prevail in ſeducing that Nation; which they may the more readily be inclined to, from the Proſpect of getting conſiderable Plunder in Slaves, Cattle, and Commodities, which they very well know they have among us. Several other Forts will be indiſpenſibly neceſſary, to be a Cover to your Majeſty's Subjects ſettled backwards in this Province, as alſo to thoſe of the Colony of *Georgia*, both which in Length are very extenſive. For though the Truſtees for eſtabliſhing the Colony of *Georgia*, by a particular Scheme of good Management, faithfully conducted by the Gentleman engaged here in that charitable Enterprize, have put that ſmall Part of the Colony which he has yet been able to eſtabliſh, in a tenable Condition againſt the *Spaniards* of *Florida*, which lie to the Southward; yet the back Expoſition of thoſe Colonies to the vaſt Number of *French* and *Indians*, which border on the Weſtward, muſt, in caſe of a War, cry greatly aloud for your Majeſty's gracious and timely Succour. The Expence of our Safety on ſuch an Occaſion, we muſt, in all Humility, acquaint your Majeſty, either for Men or Money, can never be effected by your Majeſty's Subjects of this Province, who, in Conjunction with *Georgia*, do not, in the whole, amount to more than three thouſand five hundred Men that compoſe the Militia, and wholly conſiſt of Planters, Traders, and other Men in Buſineſs.”

There are ſome other Paragraphs in this Memorial which are ſtill more worthy of Notice, and which therefore we ſhall give the Reader in the Words thereof.

“We muſt further beg Leave to inform your Majeſty, that amidſt our other perilous Circumſtances, we are ſubject to many inteſtine Dangers, from the great Number of Negroes that are now among us, who amount, at leaſt, to twenty-two thouſand Perſons, and are three to one of all your Majeſty's white Subjects, in this Province. Inſurrections againſt us have been often attempted, and would at any Time prove very fatal, if the *French* ſhould inſtigate them by artfully giving them an Expectation of Freedom. In ſuch a Situation we moſt humbly crave Leave to acquaint your Majeſty, that even the preſent ordinary Expences, neceſſary for the Care and Support of this your Majeſty's Province and Government, cannot be provided for by your Majeſty's Subjects of this Province, without your Majeſty's gracious Pleaſure to continue thoſe Laws, for eſtabliſhing the Tax on Negroes, and other Duties for ſeven Years, and for appropriating the Laws which now lie before your Majeſty, for your Royal Aſſent and Approbation; and the further Expences that will be requiſite for the erecting ſome Forts, and eſtabliſhing Garriſons in the ſeveral neceſſary Places, ſo as to form a Barrier for the Security of this your Majeſty's Province, we moſt humbly ſubmit to your Majeſty.

“Your Majeſty's Subjects of this Province, with Fulneſs of Zeal, Duty, and Affection, to your moſt gracious and ſacred Majeſty, are ſo highly ſenſible of the great Importance of this Province to the *French*, that we muſt conceive it more than probable, if a War ſhould happen, they will uſe all Endeavours to bring this Country under their Subjection. They would thereby be able to ſupply their Sugar Iſlands with all Sorts of Proviſions and Lumber, by an eaſy Navigation Trade, which, to our great Advantage, is now not ſo practicable from the preſent *French* Colonies: Beſides the Facility of gaining then to their Intereſt moſt of the *Indian* Trade on the Northern Continent, they might alſo eaſily unite the *Canadees* and *Choctaws*, with the many other Nations of *Indians* which are now in their Intereſt. And the ſeveral Ports and Harbours of *Carolina* and *Georgia*, which now enable your Majeſty to be abſolutely Maſter of the Paſſage through the *Gulph* of *Florida*, and to impede, at your Pleaſure, the Tranſportation Home of the *Spaniſh* Treaſure, would then prove ſo many convenient Harbours for your Majeſty's Enemies, by their Privateers or Ships of War, to annoy a great Part of the *Britiſh* Trade to *America*, as well as that which is carried on through the *Gulph* from *Jamaica*, beſides the Loſs which *Great Britain* muſt feel in ſo conſiderable a Part of its Navigation, as well as the Exports of Maſts, Pitch, Tar, and Turpentine, which, without any Dependence on the Northern Powers of *Europe*, are from hence plentifully ſupplied for the Uſe of the *Britiſh* Shipping.

“This is the preſent State and Condition of your Majeſty's Province of *South Carolina*, utterly uncapable of finding Funds ſufficient for the Defence of this wide Frontier, and ſo deſtitute of white Men, that even Money itſelf cannot here raiſe a ſufficient Body of them.” The great Length of this Memorial prevents our making many Remarks thereon; ſome few, however, are abſolutely requiſite.

The Reader will, from hence, ſee how well timed, and how well contrived, the new Settlement of *Georgia* was, in the Opinion of thoſe who were the beſt Judges; how juſt and how prudent the Precaution of the Truſtees in prohibiting Negroes; and how wiſely and happily for the public Service they contrived to ſend over, both from our own Country, and other Parts of *Europe*, white People, and Proteſtants, by which they effectually provided for the Security of all the Northern Colonies behind it; which, whenever this Country comes to be thoroughly peopled, as it may be in a very few Years Time in Days of Peace, if due Attention be had thereto, will be ſuch a Barrier, as neither *Spaniards* nor *French* can ever break through, and conſequently will for ever put an End to thoſe Terrors and Apprehenſions, that are ſo ſtrongly and ſo emphatically expreſſed in the foregoing Paper. But to proceed in our Hiſtory.

In the Month of *January*, 1735, the *Highlanders* arrived in *Georgia* (and with them ſeveral of the ſame Country, as Servants to private Grantees). They were ſettled on the *Alatamaha River*, about ſixteen Miles diſtant by Water from the Iſland of *St. Simon*, which is at the Mouth of the River. They ſoon raiſed convenient Huts till their Houſes could be built; and the Town, at their own Deſire, was called *Darien*, which Name that Diſtrict ſtill retains; but the Town which they afterwards built they thought fit to call *New Inverneſs*.

On the 6th of *February* following the great Embarkation, under the Direction of Mr. *Oglethorpe*, arrived, and the People were ſettled upon the Iſland of *St. Simon*. The *Creek Indians* who came down upon this Occaſion, in conſequence of their claiming a Right to the Country, were treated with, and agreed that the *Engliſh* ſhould poſſeſs that, and all the Iſlands adjacent, which neceſſary Step being taken, the Town of *Frederica* was ſoon laid out, and the People ſet to work in building Houſes. When I call this the great Embarkation, it ſeems but reaſonable that I ſhould expreſs the Number of Perſons ſent over, which were four hundred and ſeventy; and it is likewiſe fit to ſay ſomething of the Iſland upon which they were ſettled. In Point of Situation, a better could hardly be wiſhed for in that Part of the World, lying as it does at the Mouth of a very fine River; the Size of it too was very convenient, being about forty-five Miles in

Extent, the Soil rich and fruitful, full of Oak and Hickery Trees, intermixed with Meadows and old *Indian* Fields.

As ſoon as this Settlement was made, Care was taken for its Security, and for the Fortification of the Southern Barrier, with which View a regular Fortreſs, ſtrengthened by four Baſtions and a Spur-work, towards the River, was erected at *Frederica*, and ſeveral Pieces of Cannon mounted thereon; a ſtrong Battery was alſo raiſed for the Protection of *Iekyll Sound*, where ten or twelve Forty-gun Ships may ſafely ride. Another Fort was built on the South-weſt Part of *Cumberland Iſland*, where are ſeveral Pieces of Cannon pointed towards the River, ſo as to command all Sloops and Small-craft navigating that Paſſage; within the Palliſade which ſurrounds the Fort there are fine Springs of Water, and likewiſe a well framed Timber-houſe, with large and convenient Magazines under it for Ammunition and Proviſions. But while ſo much Care was taken of the South Frontier, agreeable as it was conceived to the Deſign of the Parliament's Grant, and the Prayer of the before-mentioned Memorial; the Northern Part of the Colony was not neglected, ſince Orders were given for erecting a Fort at *Auguſta*, a Place ſituated on the River *Savannah*, which is now become a very thriving Place; where the Traders with the *Indians*, from *South Carolina* and *Georgia*, reſort, on Account of its Conveniency for that Purpoſe; and where there are large Warehouſes furniſhed with ſuch Goods as the *Indians* want, the Deer Skins taken in Exchange being ſent two hundred and thirty Miles down the River, to the Town of *Savannah*, in Boats, which carry each about nine thouſand Weight. It may be eaſily conceived from hence, how neceſſary a thing it was to have a good Fort here, which was both erected and garriſoned at the Expence of the Truſtees for ſome Time; and a Horſe-Road was made from thence to the Town of *Savannah* one Way, and to the Dwellings of the *Cherokee Indians*, who live above the Town of *Auguſta*, the other. By theſe Precautions the Trade of both Colonies, with theſe *Indians*, was facilitated, and the Country on that Side ſecured againſt any ſudden Attempts of an Enemy, which was all that could be expected in ſo ſhort a Time, and in a Tract of Land in Compariſon of the Colony, of ſo large an Extent.

7. The Preſence of Mr. *Oglethorpe* contributed greatly to the ſettling and Preſervation of the Colony; which was already become conſiderable enough, not only to draw the Attention, but to exite the Jealouſy, of the *Spaniards*; who, without all Queſtion, would have been glad to have overpowered, and driven out theſe new-come Neighbours, if it had been a thing in their Power; and if they had not been apprehenſive of the ill Conſequences that muſt have attended the breaking out of a War between the two Nations, on Account of the Diſputes between theſe Frontier Provinces; which Circumſtances were ſo well approved by Mr. *Oglethorpe*, and the *Indians* who had entered into Friendſhip with the new Settlement were ſo ſtrongly attached to the *Engliſh* Intereſt, that the Governor of *St. Auguſtin*, upon mature Deliberation, found it more expedient to enter into a Negociation, and to endeavour to conclude an amicable Agreement with the *Engliſh* Colony; which Mr. *Oglethorpe* alſo knowing to be very convenient for the Security of *Georgia*, he negociated, and concluded a Treaty, upon very juſt and reaſonable, as well as ſafe and advantageous, Terms; as will appear from the following Copy of the Treaty itſelf, and the Powers by him given for concluding and ſigning it.

“ To CHARLES DEMPSEY, *Eſq*;

“ I have impowered you, by Procuration, dated the 23d of *June*, 1736, to treat and conclude, concerning certain Matters of Importance, relating to theſe Provinces, with his Excellency *Don Franciſco del Moral Sanches*, Captain General of *Florida*, and Governor of *St. Auguſtin*, and the Council of War of the ſaid Garriſon; and having, ſince the Dates of theſe Letters, received Advice from the Governor of *St. Auguſtin*, as alſo a Meſſage from his Excellency *Don Juan Franciſco Geumes de Horçaſitas*, Major General in his Catholic Majeſty's Service, Captain General of the Iſland above, and Governor of *Havanna*, by Don *Antonio de Arredondo*, they both impowering him to treat concerning the ſaid Matters, I do hereby impower, conſtitute, and appoint you, to treat, conclude, and ſign the following Articles; and deliver the ſame unto the Governor and Council of *St. Auguſtin*, they ſigning, ſealing, and interchanging the ſaid Articles.

“ Firſt, That his Excellency the Governor of *St. Auguſtin*, ſhall reſtrain his *Indians*, Subjects to the King of *Spain*, from committing any Hoſtilities upon the Subjects of the King of *Great-Britain*. I will reſtrain the *Indian* Subjects to the King of *Great-Britain* in this Province, from any Hoſtilities upon the Subjects of his Catholic Majeſty.

“ Secondly, That in reſpect to the Nations of free *Indians* called *Creeks*, I will uſe my utmoſt amicable Endeavours upon any reaſonable Satisfaction given them, to prevail with them to abſtain from any Hoſtilities whatſoever, with the Subjects of his Catholic Majeſty.

“ Thirdly, That with reſpect to the Fort built on the Iſland of *St. George*, I will draw off that Garriſon, together with the Artillery, and all other things by me poſted there; provided that none of his Catholic Majeſty's Subjects, nor any other Perſon, ſhall inhabit, people, or fortify, the ſaid Iſland; provided alſo that no Prejudice ſhall ariſe to the Right of the King my Maſter, to the ſaid Iſland, nor to any other Dominions or Claim that his Britannic Majeſty hath upon this Continent. But that his Right ſhall remain to the ſaid Iſland, and to all other Places whatſoever; as if the ſaid Garriſon had never been withdrawn; and the ſaid Garriſon ſhall withdraw within fourteen Days after the Ratification of theſe Articles.

“ Fourthly, I will agree with his Excellency the Governor of *St. Auguſtin*, and the Council of War, That his Britannic Majeſty's Subjects, under my Command, ſhall not moleſt, in any Manner whatſoever, any of his Catholic Majeſty's Subjects, provided that his Catholic Majeſty's Subjects do not moleſt any of his Britannic Majeſty's Subjects, nor his Allies.

“ Fifthly, That concerning any Differences that have or ſhall ariſe, concerning the Limits of the reſpective Government and Dominions of the two Crowns, ſuch Differences ſhall remain undecided, till the Determination of the reſpective Courts; and that the Subjects, of each Crown here, ſhall remain in profound Peace, and not in any Manner moleſt each other, until the Determination of the reſpective Courts on this Subject.

“ Laſtly, That no Perſon ſhall be received from any Garriſon in either Government, without a Paſſport from the Governor to whom ſuch Perſons belong.

“ Given under my Hand and Seal, at *Frederica*
in *Georgia*, the 27th Day of *September*, 1736.

“ By the Power to me given, by his Excellency *James Oglethorpe*, Eſq; Governor and Director General of the new Colony of *Georgia*, by his Excellency's Procuration, bearing Date the 27th Day of *October*, in the tenth Year of the Reign of our Sovereign Lord *George* the Second, by the Grace of God of *Great-Britain*, *France*, and *Ireland*, King, Defender of the Faith, &c. and in the Year of our Lord 1736: I do hereby confirm and ratify the above Articles, with his Excellency Don *Franciſco del Moral Sanches Villegas*, Captain General and Governor of *St. Auguſtin* of *Florida*, and with the Council of War of the ſaid Garriſon of *St. Auguſtin*; as witneſs my Hand and Seal, this 26th Day of *October*, 1736.”

The Counter-part of this Treaty, executed by the Governor of *St. Auguſtin*, by the Advice, and with the Conſent, of a Council of War, was certified by *Bartholomew Niotto*, Notary-Public, and I have it before me; but as it contains only a Repetition of the foregoing Articles, it ſeems unneceſſary to inſert it here, ſince what we have already given the Reader very ſufficiently explains the

Nature of this Treaty: But it ſeems the Governor of *St. Auguſtin* was not in the Secret of the Court; for the *Spaniſh* Miniſtry at Home were very far from being deſirous that a fair Correſpondence ſhould be eſtabliſhed between the two Colonies. On the contrary, they aimed at obliging us to deſiſt from our Deſign of ſettling the Colony of *Georgia*; and with this View Sir *Thomas Geraldino*, on the 1ſt of *September*, preſented a Memorial to his Grace the Duke of *Newcaſtle*, in which, among other Things, he was pleaſed to ſay, It is indiſputable that the Colony of *Georgia* was ſettled upon his Maſter's Dominions; ſo that a plainer Proof cannot be had, that the *Spaniards* were determined, if poſſible, to oblige the Crown of *Great-Britain* to give up this Settlement.

"But as was not very probable, that we ſhould be induced to do this by Sir *Thomas Geraldino*'s Memorial, the *Spaniſh* Miniſtry were contriving to do it by Force, and by tranſporting Troops into the *Spaniſh Florida*, from the adjacent Iſland of *Cuba*, and other Parts of their Dominions. It is true, that theſe Orders were moſtly given before they had any Intelligence of the proviſional Treaty concluded between the Governor of *St. Auguſtin* and Mr. *Oglethorpe*; but when they did know of it, they were ſo far from laying aſide their former Deſign, or even from ſuſpending it, that they highly diſapproved of the Governor's Behaviour in that Particular, the rather perhaps becauſe it was altogether inconſiſtent with their own Projects and Pretenſions. It is alſo very probable, that as the *Spaniſh* Councils were at that time wholly guided by thoſe of *France*, this might contribute not a little to their forming Views of expelling us from *Georgia*, which the *French* without doubt conſider as equally dangerous to them and their Schemes, or rather more ſo, than to the *Spaniards*, who on their Side have much more Reaſon to be offended with the *French* Settlements on the River *Miſſiſſippi*, than at our new Colony of *Georgia*. But be this as it will, the Preparations they made were in their Nature ſo open and extraordinary, that it was not long they could be concealed from our Governors, and other Officers in the *Weſt Indies*, whoſe Duty it was to obſerve, and tranſmit Intelligence hither of Things of that Nature.

The Lieutenant Governor of *South Carolina*, having heretofore acquainted the Truſtees by a Letter, dated from the Council-Chamber in *Charles Town*, the 7th of *February*, 1736-7, That he had received Advice from Commodore *Dent*, of Preparations made by the *Spaniards* at *St. Auguſtin* and the *Havanna*, in order to make an Attack on the Colony of *Georgia*; and the Truſtees having, in a Memorial to his Majeſty, ſet forth the Inability of the Colony to protect themſelves againſt ſuch a Force as was preparing at the *Havanna* and *St. Auguſtin*; his Majeſty was graciouſly pleaſed to order a Regiment of ſix hundred effective Men to be raiſed, and ſent to *Georgia*, for the Defence and Protection of it.

As an Encouragement for the Soldiers good Behaviour, the Truſtees reſolved to give each of them a Property in the Colony, and therefore made a Grant in Truſt, for an Allotment of five Acres of Land to each Soldier of the Regiment, to cultivate for his own Uſe and Benefit, and to hold the ſame during his Continuance in his Majeſty's Service. And for a further Encouragement, they reſolved, That each Soldier who at the End of ſeven Years Service, from the Time of his inliſting in the Regiment, ſhould be deſirous of quitting his Majeſty's Service, and ſhould have his regular Diſcharge, and would ſettle in the Colony, ſhould, on his Commanding Officer's Cerficate of his good Behaviour, be entitled to a Grant of twenty Acres of Land.

The Parliament having taken into Conſideration the great Expences which the Truſtees had been at in making Roads through the Province, and the ſeveral Fortifications in it, and the Preſents made to the *Indians* to engage them firmer in the *Britiſh* Intereſt, and likewiſe the Preparations that were making by the *Spaniards* in order to take or diſtreſs the Colony; granted thereupon for this Year the Sum of twenty thouſand Pounds, for the further ſettling and ſecuring the Colony, the Truſtees made another Embarkation, which conſiſted chiefly of perſecuted *German* Proteſtants,

In Conſequence of ſo conſiderable an Augmentation of People, all the Towns laid out in *Georgia* began to be improved, and to receive conſiderable Supplies; and ſo mindful they were of their Security, that even at *Savannah*, which was leaſt expoſed to Danger, they traced out, and began to build, a conſiderable Fort; and in all the Frontier Places, the utmoſt Care was taken to put the Fortifications into the beſt Poſture of Defence that the Circumſtances of the Province would allow. On the Arrival of the Regiment, of which Mr. *Oglethorpe* was appointed Colonel, he diſtributed them in the propereſt manner for the Service of the Colony; but notwithſtanding this was of great Eaſe to the Truſtees, and a vaſt Security to the Inhabitants; yet Colonel *Oglethorpe* ſtill kept up the ſame Diſcipline, and took as much Care to form and regulate the Inhabitants with reſpect to military Affairs as ever. He provided likewiſe different Corps for different Services; ſome for ranging the Woods; others, light-armed, for ſudden Expeditions; and he likewiſe provided Veſſels for ſcouring the Sea Coaſt, and for gaining Intelligence. In all which Services he gave at the ſame time his Orders and his Example; there being nothing he did not, which he directed others to do; ſo that if he was the firſt Man in the Colony, his Pre-eminence was founded upon old *Homer*'s Maxims: He was the moſt fatigued, and the firſt in Danger, diſtinguiſhed by his Cares and his Labours, not by any exterior Marks of Grandeur, more eaſily diſpenſed with, ſince they were certainly needleſs.

The ſtrict Attention ſhewn by the Truſtees for their infant Settlement was ſo remarkable, and their Punctuality in ſupplying what was neceſſary, ſo generally known throughout *America*, that it was not long before it created ſome Inconvenience from the Addreſs of ſuch as were deſirous of turning ſuch Inſtances of public Spirit to their private Advantage; for ſeveral Merchants, and Captains of Ships, had, for their own Intereſt, carried into the Colony from *New York* and other Places, large Cargoes of Proviſions, &c. great Part of which (to ſave Merchants from Loſſes) were taken at the Store, without proper Authority from the Truſtees, and an Expence created thereby, which the Truſtees could not eſtimate, nor have Ability to diſcharge, and for which certified Accounts were returned to them; and therefore the Truſtees publiſhed an Advertiſement in the *London Gazette*, and ordered it to be publiſhed in the *South Carolina Gazette*, and to be affixed on the Doors of the Store-houſes at *Savannah* and *Frederica*, that out of a due Regard to public Credit they had reſolved, That all Expences which they had ordered, or ſhould order, to be made in *America*, for the Uſe of the Colony, ſhould be defrayed and paid for in *Georgia*, in Sola Bills of Exchange only, under their Seal; and they gave Notice, that no Perſon whatſoever had any Authority from them, or in their Name, or on their Account, to purchaſe or receive any Cargo of Proviſions, Stores, or Neceſſaries, without paying for them in the ſaid Sola Bills.

Yet they were as ready as ever in expending Money, where it was neceſſary and ſerviceable to the Colony; for upon a Petition of one *Abraham de Lyon*, a Freeholder of *Savannah* in *Georgia*, That he had expended a great Sum in the Cultivation of Vines, which he had carried from *Portugal*, and had brought to great Perfection; and ſeveral Certificates being produced of his great Improvements, and of the Goodneſs of his Grapes, and their thriving in the moſt barren Lands in the Province, the Truſtees aſſiſted him to proceed in his Improvements. But, to be more able to ſupply theſe Expences, they took Care to be frugal, where it was practicable. And the Security of the Colony being provided for by the Regiment ſent over by his Majeſty, the Parliament gave eight thouſand Pounds for the further ſettling the Colony; therefore the Truſtees ſent over an Eſtimate of all the Expences which they allowed to be made in the Province; by which ſeveral military Expences which they had been engaged in for the Defence of the Colony, and which were very great, were reduced.

In the Year 1738 the Truſtees ſent over the Reverend Mr. *Norris* to *Frederica* with a Salary of 50*l.* a Year, and Orders that a Houſe ſhould be built for him, and another provided for the Performance of public Worſhip, till ſuch Time as a Church could be erected. But while their Cares were thus employed, they met with ſome Interruption from unforeſeen Accidents, both without and within the Province: In reſpect to the former, the Aſſembly of *South Carolina*, having the laſt Year paſſed an Ordinance for raiſing a Sum to indemnify their Traders, in Oppoſition to the Act, which was approved of by his Majeſty in Council, for maintaining the Peace with the *Indians* in the Province of *Georgia*; upon a Memorial from the Truſtees, complaining of the ſaid Ordinance; and upon the Petition of the Council and Aſſembly of *South Carolina*, againſt the ſaid Act, there was a ſolemn Hearing before the Lords Commiſſioners for Trade and Plantations; and afterwards before a Committee of the Lords of his Majeſty's Privy Council: Whereupon his Majeſty was pleaſed to order, that the ſaid Ordinance of Aſſembly of *South Carolina* ſhould be repealed, and declared void; and was pleaſed to ſend an Inſtruction to the Truſtees, to prepare a proper Act, or Ordinance, for ſettling the Trade, carried on by the Provinces of *South Carolina* and *Georgia* with the *Indians*, on ſuch a Footing, as might be for the mutual Benefit and Satisfaction of both Provinces. And his Majeſty, at the ſame Time, was graciouſly pleaſed to give an Inſtruction to *Samuel Horſey*, Eſq; Governor, and Lieutenant General of *South Carolina*, to recommend to the Council and Aſſembly there, to paſs a Law for that Purpoſe, in that Province. But *Samuel Horſey*, Eſq; dying ſoon after, and no other Governor having ſince gone to *South Carolina*, that Affair remained unſettled. The Truſtees immediately ſent to Colonel *Oglethorpe* a Copy of his Majeſty's Inſtructions, and deſired that he would conſult with Lieutenant Governor *Bull* in *South Carolina*; that Plans of proper Acts might be prepared, and ſent over to the Truſtees, for their Conſideration, in order to anſwer the Purpoſes of his Majeſty's Inſtructions; and that, in the mean Time, the Commiſſioners of *South Carolina*, and the Commiſſioners of *Georgia*, might proceed in their reſpective Provinces, in concert with each other, to carry on a mutual Trade to the *Indians* in both Provinces.

In Reference to the other Sources of Diſturbance and domeſtic Diſquiets, they were of different Kinds; but the greateſt was owing to a Number of Perſons enjoying the Benevolence due to the Colony, without any real Merit in themſelves, or juſt Title thereto; for which, however, a Remedy was ſpeedily provided. The Truſtees, both by their Letters and Inſtructions to the Magiſtrates, had conſtantly exhorted and encouraged the People to a Cultivation of their Lands, on which they were to depend for their Support; and as they found that many (as well of thoſe whom they had ſent over as Objects of Charity, as of others, who at different Times had gone into the Country from other Colonies, for their temporary Maintenance) ſtill continued in their Idleneſs, and were a Burden upon the Truſtees; they gave Orders for ſtriking off the Store, all ſuch as having had Time to cultivate their Lands had neglected it. This carried from the Colony many of thoſe who had gone thither, or joined it from other Parts of *America*, to gain a Subſiſtance for a Year or two, and of others who had not conſidered the Hardſhips attending the firſt Settlement of a Country, and were weary of their Labour. The Truſtees receiving an Account, dated *February* 12, 1738, from their Secretary of the Province, of an Uneaſineſs among ſeveral Perſons, upon the Tenor of their Lots being confined to Heirs Male; and they, conſidering that the Colony had been ſome Time eſtabliſhed, the People grew more numerous, and a Regiment being ſtationed in it, for its Defence, whereby the former Tenures became leſs neceſſary; did, on the 15th of *March* following, at their anniverſary Meeting, reſolve, that in Default of Iſſue Male, the legal Poſſeſſor of Land, might, by a Deed in Writing, or by his laſt Will and Teſtament, appoint his Daughter as his Succeſſor, or any other Female Relation; with a Proviſo that the Succeſſor ſhould, in the proper Court in *Georgia*, perſonally claim the Lot granted and deviſed within eighteen Months after the Death of the Grantor or Diviſor. This was ſoon after extended to every legal Poſſeſſor being impowered to appoint any other Perſon as his Succeſſor.

The mildeſt Governments are often but too ſubject to Diſcontents; and though the whole Study of the Truſtees was to make their People as eaſy in their private Capacities, as their Duty to, and Concern for, the Public, would permit. Yet this did not hinder ignorant and malicious Perſons, who either could not, or would not, comprehend the true Intereſts of the Colony, from endeavouring to raiſe freſh Diſturbances, for the ſake of obtaining what they thought might be of Service to them; and which, if they had judged rationally, they muſt have perceived would have turned to their Ruin. In ſhort, Part of the People ſettled in *Georgia* ſent over a Memorial to the Truſtees, complaining of the Want of a Fee-ſimple in their Lands, and of not being permitted the Uſe of Negroes. But thoſe who were ſettled on the Frontier, and conſequently moſt expoſed to the *Spaniards* and others, who, by their own Induſtry, had improved their Plantations, ſo as to draw from them a comfortable Subſiſtence, ſent over a contrary Memorial; in which they repreſented the Diſadvantages and Dangers that would ariſe from the Permiſſion of Negroes.

It likewiſe fell out, that at the very Time ſome of the People of *Savannah* were ſo clamorous for Negroes (for ſeventy-five Land and Freeholders, of whom fifty-two were Freeholders, did not apply for them) the Province of *South Carolina* was under frequent Alarms, upon Account of the Negroes there. They had Intelligence that a Conſpiracy was formed by the Negroes in *South Carolina* to riſe, and forcibly make their Way out of the Province, to put themſelves under the Protection of the *Spaniards*; who had proclaimed Freedom to all that ſhould run to them from their Owners. This Conſpiracy was diſcovered at *Winyaw*, the moſt Northern Part of that Province, from whence, as the Negroes muſt bend their Courſe, it argued, that the other Parts of the Province, muſt be privy to it, and that the riſing was to be univerſal; whereupon the whole Province were upon their Guard; the Number of Negroes in *South Carolina* being computed to be about forty thouſand, and the Number of white Men, at moſt, not above five thouſand. As ſeveral Negroes who were employed in Perryauguas, and other like Craft (which they carried off with them) had taken the Benefit of the *Spaniards* Proclamation, and gone to *St. Auguſtin*, the Government of *South Carolina* ſent a ſolemn Deputation to demand their Slaves. This Deputation conſiſted of Mr. *Braithwaite*, a Member of the Council; Mr. *Rudlidge*, one of the Aſſembly; and Mr. *Binian*, Clerk of the Aſſembly. But the Governor of *St. Auguſtin*, though in Time of profound Peace, peremptorily refuſed to deliver them up; and declared he had Orders to receive all ſuch as ſhould come thither, and protect them. Upon this, and the Petitions which were ſent from the *Highlanders* at *Darien*, and the *Saltzburghers* at *Ebenezer*, repreſenting the Danger, and the Inconvenience of the Introduction of Negroes; the Truſtees ſent under their Seal, an Anſwer to the Repreſentation from ſome of the Inhabitants of *Savannah*.

In this Anſwer, which is dated *June* the 20th, 1739, the Truſtees ſay, “ That they ſhould deem themſelves “ very unfit for the Truſt repoſed in them by his Ma- “ jeſty on their Behalf, if they could be prevailed on by “ any ſuch irrational Attempt, to give up a Conſtitu- “ tion framed with the greateſt Caution, for the Preſer- “ vation of Liberty and Property; and of which the “ Laws againſt the Uſe of Slaves, and for the Entail of “ Lands, are the ſureſt Foundations; and the Truſtees “ are the more confirmed in their Opinions of the Un- “ reaſonableneſs of this Demand, and that they have re- “ ceived Notions from *Darien*, and the other Parts of “ the Province, repreſenting the Inconvenience and “ Danger which muſt ariſe to the good People of the “ Province, from the Introduction of Negroes; and as “ the Truſtees themſelves are fully convinced, that be- “ ſides the Hazards attending of that Introduction, it

“ would deſtroy all Induſtry among the white Inhabitants, and that, by giving them a Power to alien their Lands, the Colony would ſoon be too like its Neighbours, void of white Inhabitants, filled with Blacks, and reduced to be the precarious Property of a few, equally expoſed to domeſtic Treachery, and foreign Invaſion; and therefore the Truſtees cannot be ſuppoſed to be in any Diſpoſition of granting this Requeſt; and if they have not, before this, ſignified their Diſlike of it, their Delay is to be imputed to no other Motives but the Hopes they had conceived, that Time and Experience would bring the Complainants to a better Mind. And the Truſtees readily join Iſſue with them, in their Appeal to Poſterity, who ſhall judge between them, who were their beſt Friends, thoſe who endeavoured to preſerve for them a Property in their Lands, by tying up the Hands of their unthrifty Progenitors, or they who wanted a Power to mortgage or alien them? Who were the beſt Friends to the Colony, thoſe who, with great Labour and Coſt, had endeavoured to form a Colony of his Majeſty's Subjects, and perſecuted Proteſtants from other Parts of *Europe*, had placed them on a fruitful Soil, and ſtrove to ſecure them in their Poſſeſſions by thoſe Arts, which naturally tend to keep the Colony full of uſeful and induſtrious People, capable both to cultivate and defend it; or thoſe, who to gratify the greedy and ambitious Views of a few Negro-Merchants, would put it into their Power to become ſole Owners of the Province, by introducing their baneful Commodity; which it is well known, by ſad Experience, has brought our Neighbour Colonies to the Brink of Ruin, by driving out their white Inhabitants, who were their Glory and Strength, to make room for black, who are now become the Terror of their unadviſed Maſters?”

The Truſtees had great Reaſon for proceeding as they did in this Reſpect; ſince among the Perſons to whom Grants were made, in order to their ſettling at their own Expence in the Colony, ſome never went over to take them up, or to ſettle at all; others were Gentlemen of *Carolina*, who neglected the Proſecution of their Grants, and never ſo much as deſired to have their Lands laid out; and of the reſt, ſeveral had quitted their Plantations, and the laborious Life of Planters, to go and reſide more at their Eaſe at *Savannah*; where, by the Exerciſe of their ſeveral Trades and Profeſſions, they brought many of the People in Debt; and beſides all this, Horſe-Races and other Diverſions were ſet on foot, and ſuch a Spirit of Idleneſs began to prevail, as very eaſily accounted for their Eagerneſs in deſiring to have Negroes granted them; and plainly ſhewed with what fatal Conſequences it muſt have been attended, if the Truſtees had not remained firm to their firſt Reſolutions, and had not given ſuch an Anſwer as ſhewed they were reſolved to preſerve that Spirit in the Colony upon which it was ſettled, and which could alone render it worth that Care, which had been hitherto taken of it by the Public. However, to make the People as eaſy and contented as they could, they publiſhed an Advertiſement in the *London Gazette*, the 8th of *September*, 1739, and other Papers, which were continued for ſeveral Days, and ordered it to be publiſhed in the *South Carolina Gazette*; that they had reſolved to enlarge their Grants on Failure of Iſſue Male, and to make a certain Proviſion for the Widows of the Grantees, in the following Manner, *viz.* That the Lands already granted, and ſuch as ſhould hereafter be granted, ſhould, on Failure of Iſſue Male, deſcend to the Daughters of ſuch Grantees; and in caſe there ſhould be no Iſſue Male or Female, that the Grantees might deviſe ſuch Lands; and for want of ſuch Deviſe, that ſuch Lands ſhould deſcend to their Heirs at Law, with a Proviſo that the Poſſeſſion of the Perſon who ſhould enjoy ſuch Deviſe, ſhould not be increaſed to more than five hundred Acres; and that the Widows of the Grantees ſhould hold and enjoy the dwelling Houſe, Garden, and one Moiety of the Lands their Huſband ſhould die poſſeſſed of, for, and during the Term of, their Lives. The Truſtees directed in the Advertiſement, that thoſe who intended to have the Benefit given them, ſhould enter their reſpective Claims, in order that proper Grants and Conveyances in the Law might be forthwith prepared and executed for that Purpoſe; and that no Fee or Reward was to be taken for the entering any ſuch Claim, directly or indirectly, by any Perſon or Perſons whatſoever. It appears clearly from theſe Conceſſions, how very deſirous the Truſtees were of giving the People, ſettled in *Georgia*, all imaginable Satisfaction, conſiſtent with the Scheme they had formed of ſecuring theſe Lands to the actual Planters, and thereby prevent thoſe Inconveniencies, to which others, particularly the ſouthern Colonies, were liable, and which would have been ſo much the more fatal in a Colony, the chief Inducement to eſtabliſh which, was the making a ſtrong Frontier.

9. The *French*, who by degrees, grew more and more uneaſy at the Settlement of *Georgia*, and our Intercourſe with the *Indians*, began to make uſe of every Method they could deviſe, in order to create Differences and Jealouſies between us and the *Creeks*, which was no ſooner known, than it greatly alarmed, not only the People ſettled in *Georgia*, but the whole Province of *Carolina*, from a juſt Senſe of the Danger they ſhould be in, if the *French*, either by their Artifices or Preſents, ſhould draw over the *Creek Indians* to their Party, as appears by their Applications, both to Colonel *Oglethorpe*; and to the Government at home. Upon this Mr. *Oglethorpe* thought it neceſſary to enter into a cloſe Alliance with this Nation; and therefore reſolved upon a Journey to the *Coweta* Town, though at the Diſtance of no leſs than five hundred Miles from *Frederica*, where he then was, and through a Country very little known to, and very difficult for *Europeans* to travel. He provided him, however, with Horſes and Preſents fit for the Purpoſe; ſet out for that Place, and after a painful and fatiguing Journey, reached it in Safety, where he was received by the *Indians* with all imaginable Marks of Friendſhip and Reſpect; and where he had an Opportunity of conferring not only with the Chiefs of all the Tribes of this Nation, but alſo with Deputies of the *Choctaws* and *Chickeſaws*, who lie between the *Engliſh* and *French* Settlements, and who had ſent their Deputies thither with that View. The Conſequence of this Meeting was, the making a new, more full, and explicit Treaty with the *Lower Creeks*, than the former; which was of ſo great Conſequence, that Colonel *Bull*, Lieutenant-Governor of *Carolina*, declared, that if the *Creeks* could be ſecured, they ſhould be under no Apprehenſions from the Intrigues of the *French* with the other Nations; and, that this was effectually done, the Reader will perceive from the Peruſal of the Treaty then concluded with that Nation; of which the following is a Copy from an Inſtrument, containing the Exemplification of the ſaid Treaty, under the Seal of the Province of *Georgia*, with all the neceſſary Certificates from the Magiſtrates, indorſed thereupon; and which ought therefore to be conſidered as the moſt authentic Evidence of that Gentleman's Diligence, Zeal, and Succeſs, in the Service of his Country, and of the *Britiſh* Colonies in *America*.

Proceedings of the aſſembled Eſtates of all the Lower Creek *Nations, held on* Saturday, *the* 11*th Day of* Auguſt, Anno Domini 1739.

“ By Powers from his moſt ſacred Majeſty *George* the Second, by the Grace of God King of *Great Britain*, *France*, and *Ireland*, &c. General *James Oglethorpe* being appointed Commiſſioner, was preſent in the Behalf of his Majeſty, and opened the Aſſembly by a Speech. There were alſo preſent at the ſaid Aſſembly of Eſtates, the Mico, or King, of the *Coweta* Town; *Chickley Ninia*, Mico of the ſaid Town; *Malachi*, Mico, Son of *Brim*, late Emperor of the *Creek* Nation, and the chief Men and Warriors of the *Coweta* Town; the Mico, or chief King, of the *Cuſſitas*; and *Sciſkeligo*, Mico, next to the King of the *Cuſſitas*; *Iſkeigo*, third chief Man of the *Cuſſitas*, and the other chief Men and Warriors of the ſaid Town; and alſo *Ocakcha-*

“ *pacho*, and the chief Men of the Town of *Polachuchulas*; *Kolatto*, chief War-Captain, and other chief Men and Warriors; being Deputies, ſent with full Powers to conclude all Things neceſſary for the ſaid Town. *Tawmawme*, Mico of the *Uſawles*, with ſeveral other chief Men and Warriors; being Deputies ſent with full Powers to conclude all Things neceſſary for the ſaid Town. *Metalcheko*, War-Captain of the *Echetees*, with ſeveral other chief Men and Warriors; being Deputies ſent with full Powers to conclude all Things for the ſaid Town. *Neathacklo*, chief Man of *Ocſachees*, with ſeveral other chief Men and Warriors, ſent with full Powers to conclude all Things for the ſaid Town. *Occullaveche*, chief Man of the *Checaws*, with ſeveral other chief Men and Warriors; being Deputies ſent with full Powers to conclude all Things for the ſaid Town. *Howanawge Thalacko*, chief Man of the *Oxmulges*, with ſeveral other chief Men and Warriors; being Deputies ſent with Powers to conclude all Things for the ſaid Town. The Mico, or chief King, of the *Occonys*, with ſeveral chief Men and Warriors, having full Powers to conclude all Things for the ſaid Town. *Nealhoclo*, a ſecond chief Man of the *Swales*, with ſeveral other chief Men and Warriors; being Deputies ſent with full Powers to conclude all Things for the ſaid Town. The ſaid Eſtates being ſolemnly held, and opened at the great Square in the Town of *Coweta*, and adjourned from thence to the Town *Cuſſitas*; and the Deputies having drank black Drink together, according to the ancient Cuſtom of their Nation (being a religious Form, tranſmitted down by their Anceſtors) the whole Eſtates declared, by a general Conſent, without one Negative, that they adhered in their ancient Love to the King of *Great Britain*, and to their Agreements made in the Year one thouſand ſeven hundred and thirty-three, with the Truſtees for eſtabliſhing the Colony of *Georgia* in *America*; a Counter-part of which Agreement was then delivered to each Town; and the Deputies of the ſeveral Towns produced the ſame; and farther declared, That all the Dominions, Territories and Lands, from the River *Savannah*, to the River *St. John's*, and all the Iſlands between the ſaid Rivers; and from the River *St. John's* to the Bay *Appallache*, within which is all the *Appallache* old Fields; and from the ſaid Bay of *Appallache*, to the Mountains, doth by ancient Right belong to the *Creek* Nation, and they have maintained Poſſeſſion of the ſaid Right, againſt all Oppoſers by War; and can ſhew the Heaps of Bones of their Enemies ſlain by them, in Defence of the ſaid Lands. And the ſaid Eſtates further declare, that the *Creek* Nation hath, for Ages, had the Protection of the Kings and Queens of *England*, and that the *Spaniards*, nor no other Nation, have any Right to any of the ſaid Lands, and that they will not ſuffer them, or any other Perſon, except the Truſtees for eſtabliſhing the Colony of *Georgia* in *America*, to ſettle on the ſaid Lands. And they do acknowledge, by the Grant they have already made to the Truſtees for eſtabliſhing a Colony of *Georgia* in *America*, all the Lands upon the *Savannah* River, as far as the River *Ogeeche*; and all the Lands along the Sea Coaſt, as far as the River *St. John's*, and as high as the Tide flows, and all the Iſlands as far as the ſaid River, particularly the Iſlands of *Frederica*, *Cumberland*, and *Amelia*, to which they have given the Names of his Majeſty's Family, out of Gratitude to him. But they declare, that they did and do reſerve to the *Creek* Nation, all the Lands from *Pipemakes Bluff*, to *Havannah* and the Iſlands of *St. Catharina*, *Oſſebaw*, and *Sappalo*. And they further declare, That the ſaid Lands are held by the *Creek* Nation as Tenants in common. And the ſaid Commiſſioner doth declare, That the *Engliſh* ſhall not enlarge, or take up any other Lands except theſe granted as above by the *Creek Indian* Nation, to the Truſtees: And doth promiſe and covenant, That he will puniſh any Perſon that ſhall intrude upon the ſaid Lands which the *Creek* Nation hath reſerved, as above. Given under my Hand and Seal this 21ſt Day of *Auguſt*, at the *Coweta* Town, 1739.

James Oglethorpe.

At this Diſtance, it is a very difficult, if not impracticable, Thing, to give the Reader a clear and diſtinct Intelligence of the Difficulties ſurmounted, and the Advantages acquired by Mr. *Oglethorpe*'s Journey, and his Succeſs in concluding this Alliance: We will, however, endeavour to repreſent them as clearly and as fully as we can. In the firſt place, his making ſuch a Journey as this, gained him a great Reputation with the *Indians*; impreſſed upon them Sentiments of deep Reſpect for the *Engliſh* Nation, and of particular Affection for the Colony of *Georgia*. At the ſame time it ſtruck the *French* with Amazement; ſome of their Governors of *Canada* had indeed made conſiderable Journeys from *Quebec*, in order to confer with the *Indians*, and to conclude Treaties with them; but then they always thought it requiſite to be well attended, and never made theſe Excurſions but at the Head of a conſiderable Body of regular Troops. Whereas General *Oglethorpe* had no ſuch Attendants, but relied entirely on the good Faith of the *Indians*, and of his own Behaviour towards them. He knew the Conſequence of their living in ſincere Amity with the *Engliſh*; and he was willing to run any perſonal Hazard neceſſary to eſtabliſh it. In ſhort, he found it requiſite for the Welfare of the Colony which he had ſettled, that they ſhould be able to place an intire Confidence in the *Indians*, and the *Indians* in them; which reciprocal Confidence he actually procured, by repoſing himſelf entirely on their Faith; and by the Treaty that he concluded with them.

His coming to the *Coweta* Town diſſipated all their Fears, and extinguiſhed all their Jealouſies; they told him ſo fairly in their firſt Conferences. They ſaid it had been inſinuated to them, that he was come into that Country to deprive them of their Land; and that they had been aſſured, he was actually preparing to invade them; but they were now convinced that theſe were all Falſhoods and Calumnies; that he really meant them all the Good they could expect; and that inſtead of injuring them by the Settlement he was making, it would prove a new Security to them, as well as to the *Engliſh*; and put it out of the Power of their common Enemies to hurt either. For which Reaſon they were, on their Parts, ready to do all that he could expect from them, and were perfectly ſatisfied that he would perform his Engagements towards them, with the like Punctuality. There is no Wonder therefore, if the *French* were exceſſively alarmed on the News of this Conference, and of the Alliance which General *Oglethorpe* had concluded; ſince they could conſider it in no other light, than as the firſt Step to a general Confederacy with all the *Indian* Nations that had met at, or ſent Deputies to, the *Coweta* Town; from whence they foreſaw many and great Inconveniences to themſelves; for, in the firſt Place, this new Treaty with the *Creeks*, defeated all the Meaſures they had been taking, unravelled all their Deſigns, and connected that Nation more cloſely than ever with the *Engliſh*, which in itſelf was a very great and unlooked for Diſappointment.

But that was not all, they clearly comprehended that by this Means we ſhould not only keep our old Friends, but draw off alſo ſome of theirs. Of all the Nations that bordered upon them; they are moſt afraid of the *Chickeſaws*, whom they look upon as the fierceſt and braveſt Race of *Indians* in *America*, with whom they have never been upon good Terms, more eſpecially ſince the Year 1731, when they diſcovered, or pretended to diſcover, a Deſign they had formed, to ſurpriſe and deſtroy all their advanced Settlements. They were alſo in a very great Fear of the *Choctaws*, or as the *French* call them *Tchoctas*, both becauſe they are a very numerous Nation, and are ſo ſituated as to be able, at any time, to diſturb and diſquiet their Settlements. But it ſoon appeared by Experience, that the new Treaty operated ſucceſsfully, ſince the Governor of *New York*, having given Information to Colonel *Bull*, of *Carolina*, of the March of a Body of

French Troops, and *Indians* from *Quebec*, with Intent to attack the *Indians* in Friendſhip with *England*; but though this put the People of *Carolina* and *Georgia* upon their Guard, there followed nothing from it; for the *French* found the *Indians* well prepared and diſpoſed to receive them, and therefore deſiſted from their Deſign, for fear it ſhould produce a general War, that might prove fatal to the Colonies on the *Miſſiſippi* River; the People of which were exceſſively apprehenſive of what might happen from the general Confederacy of the neighbouring *Indians* againſt them.

The Truſtees proceeded as vigorouſly as it was poſſible in the Execution of every Part of their Scheme; and having, with ſuch unwearied Diligence, provided for the Settlement of a new Colony, and for the Security of its Frontiers, they began next to employ their Skill and Pains, to promote all kinds of Improvements; and were eſpecially ſollicitous to obtain from thence ſome Specimens of the Poſſibility of raiſing, in that Country, the Commodities that were expected from it. They very well knew that this required hard Labour, and that nothing had accrued to *Great Britain* worth ſpeaking of, from any of the Colonies in *America*, in many Years longer than this Settlement of *Georgia* had been made. But on the other Hand, they alſo knew that the *Engliſh* Nation was naturally impatient; that great Sums of Money had been iſſued for the Service of this Colony; that great Expectations were had of it; and that, if nothing ſoon appeared, however certain in themſelves, and juſt in their Nature, no Excuſes would prevail. They therefore recommended it to their Servants in *Georgia*, to uſe their utmoſt Skill and Diligence in promoting the Culture of Mulberry Trees and Silk, ſo that it might be, at leaſt, demonſtrated, that they were not deceived in their Expectations; but that in due Time, and with reaſonable Encouragement, the Nation might hope to ſee a full Return in that Commodity, for the Expence ſhe had been, and muſt be at, in bringing the Colony of *Georgia* to Perfection. For they perſuaded themſelves, that from the Methods they had uſed in ſending over proper Perſons for the Management of that Buſineſs, their Demands, with a due Degree of Care and Diligence in their Servants, might be anſwered, which would afford them an Anſwer to all Objections.

A Parcel of raw Silk was accordingly brought this Year from *Georgia*, by Mr. *Samuel Augſpourguer*, who made an Affidavit, before a Maſter in Chancery, that he received it from the Hands of Mr. *Thomas Jones*, the Truſtees Store-keeper at *Savannah*, who told him it was the Produce of *Georgia*; and the ſaid *Samuel Augſpourguer*, who reſided in the Southern Part of the Province, ſaid, That when at *Savannah*, he ſaw the *Italian* Family there winding off Silk from the Coquons. The Silk was ſhewed at the Truſtees Office, to Mr. *John Zacary*, an eminent Raw-Silk Merchant, and Mr. *Booth*, one of the greateſt Silk Weavers in *England*, who declared it was as fine as any *Italian* Silk; and that it was worth, at leaſt, twenty Shillings a Pound. This Mr. *Samuel Augſpourguer*, who joined the Colony in the beginning of the Year 1736, left it in *July* 1739, with two Men Servants and their Children, on his Plantation, and came over to obtain a Grant of five hundred Acres of Land, and to get ſome of his Countrymen from the *Canton of Bern* in *Switzerland*, to go with him as Servants, on his return to *Georgia*, in order to proceed more effectually in the Cultivation of his Lands.

The Truſtees, this Year, alſo took further Methods for the Satisfaction of the People in the Province. They extended the Tenures, by which the Daughter of a Grantee, or any other Perſon, was made capable of enjoying, by Deviſe, or Inheritance, any Quantity of Lands which did not increaſe her or his Poſſeſſion, to more than two thouſand Acres. A Licence was alſo granted for all the preſent Poſſeſſors of Land in *Georgia*, to make Leaſes of any Part of their Lots, for any Term not exceeding three Years, to any Perſon reſiding in *Georgia*, and who ſhould reſide there, during the Term of ſuch Leaſe. A general Releaſe was likewiſe paſſed, by which no Advantage was to be taken againſt any of the preſent Poſſeſſors of Land in *Georgia*, for any Forfeiture incurred at any Time before *Chriſtmas* 1740, to the Tenure or Cultivation of Land; and the Poſſeſſors of fifty Acres were not obliged to cultivate more than five Acres thereof, in ten Years from their Grants; and thoſe of under fifty Acres in Proportion; and the Poſſeſſors of five hundred Acres of Land were not obliged to cultivate more than one hundred and twenty Acres thereof, in twenty Years from their Grants; and thoſe of under five hundred Acres, and above fifty Acres in proportion, to prevent any Forfeiture for want of cultivating the Quantities required. Under theſe Circumſtances it is preſumed that no Complaint can now, with Reaſon, be made againſt the Tenure, by which the Inhabitants at this Time hold their Lands, ſince they have more Power than is generally given by Marriage Settlements, in which the Grantees are only Tenants for Life, incapable of mortgaging, or alienating, or making any Diſpoſition by their laſt Will: Whereas the Freeholders in *Georgia* are now become Tenants in Tail-general, and may, with the Licence of the Common Council of the Truſtees, upon Application made to them for that Purpoſe, mortgage, or alien, and further, without Application, have it abſolutely in their Power, on Failure of Iſſue in Tail, to diſpoſe thereof by their laſt Will. At leaſt this was all the Truſtees thought themſelves at Liberty to do, conſidering the Obligation they were under to the Public, as well as to the Settlement; and that they were as much bound to provide, that the Nation had a juſt Satisfaction for what ſhe diſburſed in Favour of the Colony, as that the Inhabitants of *Georgia* ſhould be made eaſy in their Settlements, and meet with ſufficient Encouragement to proceed with Induſtry in all their Undertakings; and with this double View, to the Service of the Public, and the Welfare of the Settlement, all their Applications at home, and all their Directions abroad, are to be referred.

9. We have now run through the Hiſtory of this Province for above ſeven Years, that is, from the time of projecting ſuch a Settlement as this on the South Frontier of *Carolina*, to the carrying that Deſign into Execution, and bringing the new Province into ſome tolerable Degree of Order; and, in the Courſe of our Hiſtory, we have had occaſion to obſerve, from time to time, what Care and Circumſpection has been uſed, to render it uſeful to thoſe Ends for which it was intended. We have taken notice of the Senſe which the whole Province of *Carolina* had of the Neceſſity, as well as Expedience, of ſuch a Settlement. We have ſhewn, that thoſe who were ſent over were diſciplined in ſuch a manner, as to be able to defend, as well as acquire Property. We have ſet down the Reaſons why Negroes were prohibited; and thoſe Reaſons very clearly prove, that the Colony could not have anſwered any of thoſe Ends for which it was eſtabliſhed, if Negroes had been permitted. We have given ſome Account, and, if the Bounds of this Section would have permitted, we ſhould have given a farther Account of the Jealouſies entertained by the *Spaniards* and the *French* on Account of this Settlement, which we conceive to be ſo many demonſtrative Proofs of its Utility. We have given the Reader a large Extract from the Memorial of the Aſſembly of *South-Carolina*, ſetting forth, in the cleareſt and ſtrongeſt Terms, the Wants of that Province, and the Points in which they ſtood in need of Aſſiſtance. We have ſhewn, by a plain Narrative of Facts, how agreeable the Conduct of General *Oglethorpe* was to the Demands of that Memorial; and how far, by the happy Succeſs attending thoſe Endeavours, they have been anſwered, more eſpecially by his laſt Treaty with the *Creek Indians*, which, as we ſhall have Occaſion to ſhew hereafter, has effectually anſwered his Ends and theirs, ſo as not only to come up to, but even to exceed and go beyond their Expectations. We have likewiſe, from time to time, exhibited the Alterations that, in Compliance with the Peoples Deſires, the Truſtees have thought fit to make in their Conſtitution, for the Eaſe and Encouragement of the Planters. And we have likewiſe given an Inſtance, that they have not been diſap-

pointed in their Views as to the Produce of this new Colony; but that it is both poſſible and practicable to raiſe therein as good Silk as we can purchaſe with Money (which is, generally ſpeaking, the Caſe at preſent) from any Part of the World.

It remains, according to the Plan that we have laid down, to give a Deſcription of this new Province in the Manner it is now ſettled, that the Reader may ſee what the Fruits have been of the Care and Expence of the Legiſlature, the Prudence and Attention of the Truſtees, and the Vigilance and Activity of thoſe intruſted by them in the Management of their Affairs in this Part of the World. And though, as yet, they have not received ſo copious and ſo exact a Deſcription of their new Colony as they expect; yet, from what we are enabled to ſay upon this Subject, it will inconteſtibly appear, that much has been done, that many Towns have been ſettled, great Improvements made in the Neighbourhood of each of them, ſeveral Fortreſſes erected, due Care taken of the Frontiers, and, in a Word, as much performed as could be rationally expected in ſo ſhort a Space of Time, and all Circumſtances conſidered.

The Town of *Savannah* is about ten Miles up the River *Savannah*. There are, beſides Warehouſes and Huts, at leaſt one hundred and thirty Houſes in the Town. As theſe, for the ſake of Air, and to prevent the ſpreading of any Fire, are built at ſome Diſtance from each other, they make ſeveral ſpacious Squares and wide Streets. There is a regular Magiſtracy ſettled in the Town, which the Truſtees are obliged to be at the Expence of ſupporting, till the Colony arrives at ſufficient Strength to do it. There are, in the Town, a Court-houſe, a Store-houſe, a Goal, a Houſe for the Truſtees Servants, a Wharf, a Guard-houſe, and ſome other public Buildings. A Church is at preſent building, and a Clergyman is ſettled there. The Town is excellently ſituated for Trade, the Navigation of the River being very ſecure, and Ships of three hundred Tons can lie within ſix Yards of the Town, and the Worm does not eat into them. About four Miles from *Savannah*, inland from the River, are the two Villages, *Highgate* and *Hamſtead*, which lie at about a Mile diſtance from each other: The People ſettled there apply themſelves chiefly to Gardening, and ſupply the Town of *Savannah* with Quantities of Greens, and Garden-ſtuff: There are twenty Plantations within twenty Miles round *Savannah*, which have each of them from five to thirty Acres of Land, ſhared.

About fifteen Miles from *Savannah* is a Village called *Abercorn*; about twenty Miles further up the River is the Town of *Ebenezer*, where the *Saltburghers* are ſettled with two Miniſters; one of whom computed, that the Number of his Congregation, in *July* 1738, conſiſted of one hundred and forty-ſix; therefore, as the Infants could not be reckoned in the Computation, and as ſeven more have ſince been ſent and ſettled with them, it is believed the Numbers have increaſed, eſpecially ſince the Town is ſo healthy, that by a Letter ſent to the Society for promoting Chriſtian Knowledge, by the Reverend Mr. *Bolzius*, one of the Miniſters at *Ebenezer*, dated the 26th of *June* 1740, he declared, That in a Year's time one Perſon only had died, which was a Child fourteen Years old. The People are induſtrious and ſober, they raiſe not only a ſufficient Quantity of Corn and other Produce for their own Subſiſtence; but they ſell great Quantities to thoſe at *Savannah*, who have not been ſo careful of their Plantations. They have great Herds of Cattle, and are in ſo thriving a Condition that not one Perſon has abandoned his Settlement, or ſent over the leaſt Complaint about the Tenures, or the Want of Negroes: On the contrary, they in a Body petitioned againſt the Uſe of Negroes; and their Miniſters have declared, that their ſigning that Petition was a voluntary Act; and at their Deſire another Embarkation of their Countrymen, who are willing to go from *Germany* and join them, is deſigned to be ſent with all convenient Speed.

About ten Miles from hence, upon a River running into *Savannah*, is a Place called *Old Ebenezer*, where is a Cow-Pen, and a great Number of Cattle for the Uſe of the Public, and for Breeding. At a conſiderable Diſtance from hence is the Town of *Auguſta*, before deſcribed; which, from the great Reſort of Traders and *Indians*, is in a thriving Condition, and is, and will be, a great Protection to both the Provinces of *Carolina* and *Georgia* againſt any Deſigns of the *French*. In the ſouthern Part of the Province is the Town of *New Inverneſs*, upon the River *Altamaha*, where the *Highlanders* are ſettled. And about twenty Miles from hence, on the Iſland of *St. Simon*, near the Sea, is the Town of *Frederica*, with a regular Magiſtracy, as at *Savannah*, ſupported at the Expence of the Truſtees: Strong Fortifications round the Town are almoſt finiſhed. And at the South-eaſt Point of the Iſland, are Barracks for three hundred and thirty Men. There are Settlements on the Iſlands of *Iekyl* and *Cumberland*, which lie a ſmall Diſtance from each other to the ſouthward of *Frederica*; and on the laſt two Forts are built, one of which was deſcribed before; and the other was finiſhed in *April* 1740.

Upon the South-end of the Iſland it commands the Inlet of *Amelia Sound*, is ſtrongly palliſaded with Flankets, and is defended by eight Pieces of Cannon: Barracks are built upon this Iſland for two hundred and twenty Men, with Store-houſes, which were finiſhed in *October* 1738. There are ſix Forts in the Province, and a Battery of Cannon erected to ſecure the Harbour at *St. Simon's*, under which Ships may ſafely lie. The *Indians*, from the Preſents which they have annually received from the Truſtees, and from the Juſtice and Humanity with which they have been treated, are ſecured in the *Britiſh* Intereſt, notwithſtanding the Arts both of the *French* and the *Spaniards* to ſeduce them. By this, *South Carolina* has been free from Wars, in which (as the Preamble to his Majeſty's Charter ſet forth) they had frequently ſuffered, and ſo late as the Year 1715 had been laid almoſt waſte with Fire and Sword; and by the Security which *South Carolina* received by ſuch a Frontier as *Georgia* is to it, very large Tracts of Land have been cultivated in the ſouthern Part of that Province, which no Perſon would venture to ſettle on before; and a great Quantity of Rice raiſed thereon.

This is a clear Proof of the Injuſtice of ſuppoſing that the Nation hath hitherto received no Advantage from this Colony; ſince whatever has been gained by *Carolina*, in virtue of the Protection ſhe enjoys by the Settlement of this new Province, ought to be looked upon and conſidered as the Produce of *Georgia*; and though even this may not be any great Matter hitherto, yet as it is an Inſtance of the Benefits to be expected from this Colony, it ought to be kindly accepted, as an Earneſt of better Things. As to the Number of People ſent over to, and ſettled in, *Georgia*, within the Space of eight Years, they amounted to upwards of two thouſand, taking in thoſe that went at their own Expence, which, if compared with the ſmall Number of People that were in *Carolina*, after it had been ſettled forty Years, will enable us to diſtinguiſh between the Conſequence of Attention to private Profit, and Concern for the public Good: To ſay the Truth; of all the Methods that have been hitherto tried, in fixing Colonies in diſtant Parts of the World, this may very truly and on good grounds be pronounced the beſt; becauſe by it due Proviſion is made, that the People ſent over ſhall all be carefully ſettled and well taken Care of, and ſupported from time to time with proper Supplies; that this Care ſhould not ceaſe immediately, on their having Plantations, but be continued till the People are in a Condition to ſupport themſelves.

By this Method Towns are formed, not at Random and by Chance, but in proper Situations, and for good Reaſons; not purely for the ſake of immediate Advantages, but with Views to the general Good, and future Benefit of the Colony. By this Means, every Step made by the riſing Plantation may be directed to public Uſe, and every Meaſure be calculated for the Service of the Mother-country; which cannot be expected where Grants are made to the Uſe, and for the Service, of particular People, where Numbers of Men tranſport themſelves for the ſake of a better Livelihood, at their own Expence, or where People are tranſported againſt their Will; ſince in all theſe Caſes it is to be preſumed, that Men will follow the Bias of their Inclinations or Intereſts; but as in this Caſe, where the Public is at the Expence, and where the Management is intruſted with Perſons of Diſtinction for the Benefit of the Public, nothing of this kind can happen; they will be ſure to diſcharge their Duty, and in Proportion, as the Colony increaſes and anſwers the Ends of thoſe who compoſe it, it will be likewiſe ſure to anſwer thoſe Ends for which it was ſettled. Beſides all this, the Form of Government, the enacting proper Laws, and the Spirit originally infuſed into the People, will render ſuch a Colony more dutiful and obſervant to her Mother-country, than any that want theſe Advantages.

Laſtly, we may be ſure that in ſuch a Colony, the Produce will be managed moſt to the Advantage of the Country from whence it is ſettled; as for Inſtance in this of which we are ſpeaking, due Care will be certainly taken that they do not run into the Cultivation of ſuch Commodities as are already produced in the neighbouring Colonies, but bend their Endeavours to the promoting of ſuch as have not been yet raiſed to any great Advantage in thoſe Colonies, though perhaps their Soil and Climate were ſufficiently fit for them. Flax, which as we have before ſhewn, may be cultivated here to the greateſt Advantage, will be certainly attended to; and ſo alſo Pot-aſhes and Silk, which above all Things claim our Care, of which we had formerly great Hopes from *Virginia*; and with a View of obtaining of which *Carolina* was actually ſettled; but in both we are diſappointed for want of ſome proper Authority to direct a continued Application in the Planters ſettled there for that Purpoſe, without which nothing that does not turn to large Profit immediately can be brought to Perfection; but in Colonies ſettled by Truſtees, their Recommendation will go far, their Authority farther enforce what they deſire, and Premiums enable them with Certainty to procure Succeſs; as we ſhall have Occaſion to ſhew hereafter.

Our Aim at preſent is to prove the Excellency of this Method of Settling, which far ſurpaſſes that of eſtabliſhing excluſive Companies, as will be evident if we conſider that they regard their own Profit ſolely, and as ſoon as they have fallen into Ways of promoting it effectually, they forget the Obligation received from the Public, as is but too evident in many Caſes, and has juſtly occaſioned almoſt a general Outcry againſt ſuch Companies; whereas a Board of Truſtees conſtituted for a limited Time, inſpect the Concerns, and promote the Welfare, of a riſing Colony, and by their Commiſſion ceaſe to have Power over it when their Care is no longer neceſſary; but as for Companies, they keep all who belong to them continually in Leading-ſtrings, and never conſider how Trading may be made beneficial to a Nation in general; but how it may be ordered ſo as to become moſt beneficial to themſelves. But it is time to quit theſe Reflections, in order to reſume the Thread of our Hiſtory, and to ſhew how, after a few Years Peace, this Colony became ſtrong enough, not only to hold up her Head and preſerve her Being; but to repulſe her Enemies, and prove a Security to all her Neighbours in time of War; a Thing wonderful in all Reſpects, and of which Poſterity will ſpeak with Admiration, though from an unaccountable Negligence, and want of Attention, in the preſent Age, we are ſcarce ſo well acquainted with that Tranſaction as it deſerves.

11. The Government in *Great Britain*, having, after many repeated Inſults and Provocations, found themſelves under a Neceſſity of obtaining Satisfaction from *Spain* by Force, a Squadron for that Purpoſe was ſent to the *Weſt-Indies*, and Orders iſſued to the Governors of our reſpective Colonies, and others his Majeſty's Officers in *America*, to annoy the *Spaniards* by all Methods poſſible. Theſe Orders were received by Mr. *Oglethorpe*, in Quality of general Commander in chief, in the latter End of the Month of *September*, 1739. Whereupon he immediately conſidered of Ways and Means for putting them in execution; in order to which he put his own Regiment, and all the Forces he could raiſe in *Georgia*, into the beſt Condition poſſible. He ſent to inform the *Cherokees*, and other *Indian* Allies, of the Situation that Affairs were in, and to impower them to enter into the *Spaniſh* Territories. He alſo ſent up to *Charles-Town*, to acquaint the Governor and Aſſembly with the preſent Poſture of Things; and to acquaint them with his Readineſs to undertake an Expedition againſt *St. Auguſtin*, for the joint Service of *Carolina* and *Georgia*. The plain Reaſon that he was deſirous of beginning to act offenſively againſt the *Spaniards* was, to raiſe the Spirits of his own People, to divert the *Spaniards* from the Deſigns which they were forming to our Prejudice, and to keep the War at the greateſt Diſtance poſſible.

It is very clear, that from the Situation of Things in *Georgia*, it was altogether impoſſible for him to obtain a Force ſufficient for the Execution of theſe Deſigns, without the Aſſiſtance of the Province of *Carolina*; and as it was of equal Importance to that Province, that thoſe Deſigns ſhould be carried into Execution, it was but reaſonable for him to expect, that all the Aſſiſtance poſſible ſhould be given him. Governor *Bull*, upon the General's Application, acquainted the Aſſembly of *Carolina* with what had been propoſed; and as they were very ſenſible of the Importance of the Undertaking, of the Views the *Spaniards* had to their Prejudice, and of the Preparations they were making to annoy both Provinces, they ſhewed a Diſpoſition to give him what Aſſiſtance was in their Power.

But at the ſame time that they had theſe Inclinations, they could not help conſidering the Situation of the Province, which under its Circumſtances at that time, was very far from being in a Condition to enter into a large Expence, unleſs there was a great Probability of Succeſs; by which it ſeems they underſtood the reducing the Fortreſs of *St. Auguſtin*, with the Strength of which, as it was a regular Fortification, had always in it a good Garriſon, and was highly conſidered by the *Spaniards*, they were very well acquainted; and they knew, beſides, that ſeveral former Attempts upon that Place had been diſappointed. That they might act therefore in ſuch a manner as might equally ſhew their Zeal for his Majeſty's Service, and their Regard for the Welfare of their Conſtituents, the Aſſembly directed, that General *Oglethorpe* ſhould be deſired to explain himſelf fully, as to the Nature of the Aſſiſtance he expected, and the Ends he conceived it might anſwer, in caſe they ſhould agree to grant him the Aſſiſtance he required.

Upon which the General, by the following Letter, dated at *Frederica*, *December* the 29th, 1739, laboured to give them all the Satisfaction that was poſſible, as well in Regard to the Matters under their Conſideration, as with reſpect to his own Conduct, in Reference to the Deſigns he had in View, and the Aſſiſtance he expected. This Letter was conceived in the following Terms, *viz.*

“ I ſend up with this an Officer to concert Meaſures for
“ the Siege of *St. Auguſtin*; it will be neceſſary to have
“ twelve Cannons of eighteen Pounders each, with two
“ hundred Shot for each Gun, and Powder proportionable;
“ one Mortar-Piece, and Bombs, with Powder
“ ſufficient; eight hundred Pioneers, Negroes, or white
“ Men, with Tools ſufficient for that Number of Men;
“ ſuch as Spades, Hoes, Axes, and Hatchets, to dig
“ Trenches, make Gabelines, and Faſcines. If they
“ are Negroes, there muſt be white Men ſufficient to
“ guard them, and overſee them; Veſſels and Boats
“ ſufficient to carry the Artillery-Men, Proviſions, &c.
“ We ſhall have one thouſand *Indians*; ſix thouſand
“ Buſhels of Corn will be neceſſary to feed them, or Rice
“ proportionable; alſo as many Horſemen as can be
“ had, who may paſs over the River *Savannah*, and paſſing
“ the *Oakmulgy*, and *Orony*, and from thence to the
“ Ferry, on the River *Alata*, where they may paſs over
“ into the *Spaniſh Florida*. Captain *M'Pherſon*, or Mr.
“ *Jones* of *Ponpon*, can ſhew them the Path; for I
“ ſhould think the People of *Carolina* would do very well
“ to raiſe a Troop of Rangers, under the Command of
“ Captain *M'Pherſon*, who is a very good Officer. Captain
“ *Warren* aſſured me that he would be very willing
“ to aſſiſt in convoying the Veſſels, and in carrying
“ Cannon, &c. The *Cherokee Indians* have promiſed
“ me to be down in *March*; I have not heard from the
“ *Creek* Nation lately, but I expect them down about

“ the ſame Time, and have had a Party of them with me for ſome Months. I can march four hundred Men of the Regiment, and leave ſufficient for the Garriſons behind me. I have ordered three Troops of twenty Men each to be raiſed, but I have been diſappointed of Horſes by Capt. *Cuthbert*'s Death, ſo I have got yet only twelve. If the *Carolina* People will pay them, I believe they may raiſe fifty very good Men at *Puriſburg*. I ſhould deſire four Months Proviſions for four hundred Men of the Regiment, of Rice and Meat, with Boats for carrying it to *St. Auguſtin*, at the Rate of one Pound of each *per Diem* for each Man. I have thirty-ſix Cohorns, and about eighteen hundred Shells: Of the People of the Province of *Georgia* I cannot draught many, becauſe I muſt not leave the Country naked; and, as they are poor, if they neglect their planting Seaſon, it will be difficult for them to ſubſiſt; therefore I would only raiſe two hundred, which is equal to the Number of Soldiers I ſhall leave behind, and this I cannot do unleſs I can pay them. I believe they will be content with 9 *l.* *Carolina* Currency *per* Month, and ſix Pounds of Meat, and ſix Pounds of Rice, each *per* Week, beſides which there muſt be Pay to the Officers. Therefore if the Aſſembly ſhould grant me a Sum ſufficient to pay them, and the Proviſions, I would raiſe the Men. This is my Opinion with relation to the Preparations for diſlodging the *Spaniards* at *St. Auguſtin*, without which we certainly cannot do it. The legiſlative Power of *Carolina* will be the beſt Judges of the Service it will be to them. For my own Part, I think that if we do not take this happy Opportunity of attacking *St. Auguſtin* whilſt it is weak, the *Havanna* being blocked up by our Men of War, which renders them incapable of receiving Succours from *Cuba*, all *North America*, as well as *Carolina* and this Province, will feel it ſeverely. As ſoon as the Sea is free, they will ſend a large Body of Troops from *Cuba*. You remember the Account you ſent to *England*, of the Preparations ſome Time ſince made at *Havanna*; every thing is there ſtill, and if they ſhould come up and land in *Florida*, we muſt then make a defenſive War, and they may then chuſe who they will attack ſeparately. They may moleſt all *North America* with their Privateers, and if they can by any Means get the ſtart of tbe Men of War, they can run into Shole-Water, where they cannot follow them. I am willing myſelf to do all I poſſibly can for annoying the Enemy as his Majeſty has ordered, and ſhall ſpare no perſonal Labour or Danger towards freeing *Carolina* of a Place from whence their Negroes are encouraged to maſſacre their Maſters, and are openly harboured after ſuch Attempts. The *Spaniards* attacked the Iſland of *Amelia*, and murdered two Men there: I, to return their Civility, landed in *Florida*; the *Spaniſh* Horſe with a Party of Negroes and *Indians* advanced as if they intended to attack us; but before they were within two Miles of us went very faſt off. Our *Indians* purſued them to their Forts, and killed one of the Negroes who had run away from *Carolina*, within a few Miles of *St. Auguſtin*. I hope you will excuſe this long Letter, and believe me to be, *&c.*”

It is very clear from this Letter, that the General meant to make the Aſſembly of *Carolina* perfectly acquainted with his Intentions, and with every thing relating to the Execution of them; and that this might be more fully and effectually done, he went himſelf to *Charles Town*, where, after many Conferences, and much Deliberation on both Sides, a Scheme of Action was agreed upon, and an Act of Aſſembly was paſſed *April* the 5th 1740, for carrying the ſame into Execution; the *Carolina* Regiment for this Service was raiſed, and put under the Command of Colonel *Vanderduſſed*, and Mr. *Oglethorpe*, as General and Commander in Chief, publiſhed a Proclamation, ſettling the Terms of the Expedition, and amongſt other things, declared that he would give whatever Share of Plunder came to him as Commander in Chief, towards the Relief of ſuch Men as might happen to be maimed or wounded, towards the Aſſiſtance of the Widows and Children of ſuch as might be killed, and towards rewarding thoſe that might diſtinguiſh themſelves in the Service. All things being prepared for entering upon this Expedition, with the Troops of both Provinces; the Rendezvous for all the Forces was appointed at the Mouth of *St. John*'s River, where, accordingly, moſt of them arrived the 9th of *May*. But ſome Time before this the General had attacked and taken *St. Francis de Pupa*, a little *Spaniſh* Fort, wherein were a Serjeant and twelve Soldiers, about ſeventeen Miles from *St. Auguſtin.*

From the Mouth of *St. John*'s *River* the Army marched on the 10th of *May* to attack *Fort Diego*, about twenty Miles diſtant; which Fort had nine Swivels, two Carriage Guns of two Pound Shot, and fifty Men; and having ſurrounded it, on the 12th they ſent in a *Spaniſh* Priſoner with a Drum, to ſummon the Garriſon, who immediately capitulated on the following Conditions: 1ſt, The Garriſon to ſurrender Priſoners of War, and deliver up the Fort, with the Guns and Stores, to the King of *Great-Britain.* 2dly, That they ſhould have Liberty to keep their Baggage, and not be plundered. 3dly, That Seignior *Diego Spinoſa*, to whom the Fort belonged, being built at his Expence, and on his Lands, ſhould hold his Lands, Slaves, and ſuch other Effects as were not already plundered in the Field. 4thly, That no Deſerters or Runaways from *Carolina*, ſhould have the Benefit of this Capitulation, but be ſurrendered at Diſcretion. This Fort was garriſoned by ſixty of the General's Forces; and from thence they returned to the Place of Rendezvous, where they were joined by Colonel *Vanderduſſen*, with the reſt of the *Carolina* Regiment, on the 19th of *May*, whence they marched again to *Diego* the 31ſt; and from thence, in two Days, to *Fort Mooſa*, in view of, and near two Miles diſtant from *St. Auguſtin*, and twenty-three from *Diego*. The *Spaniards* having deſerted *Mooſa*, the General ordered the Gates to be burnt, and three Breeches to be made in the Walls, which was plainly with a Deſign to prevent any of his own People from taking Poſt within the Place.

They then proceeded with the whole Army to reconnoitre the Town and Caſtle, after which they returned back to *Diego*; from thence the General ordered Colonel *Vanderduſſen* to march with his Regiment, and take Poſſeſſion of *Point Quartell*, lying to the North of the Bar, and ſeparated from *Port Mooſa* by a Creek; while the General with about two hundred and ſixty Men of his Regiment, and the greateſt Part of the *Indians* embarked on board the Men of War, and arrived at the Iſland of *Anaſtatia*, oppoſite to the Caſtle; leaving behind him on the *Main* but between ninety and one hundred white Men, *Highlanders* and others, in his Pay, with forty-two *Indians*, and two commiſſioned Officers, to alarm the *Spaniards* on that Side; but he gave a verbal Command of the whole to Colonel *Palmer*, a Volunteer from that Province. About the ſame Time two hundred Sailors, from the Ships, were landed upon that Iſland, which the *Spaniards* directly abandoned, under the Command of Captain *Warren*, Captain *Law*, and the Honourable Captain *Townſend*, who were all very inſtrumental in that Service.

While Things were in this Situation, the *Spaniards*, on the 15th of *June*, marched a very conſiderable Body of their Forces from *St. Auguſtin*, in the Grey of the Morning, in order to attack the People, under Colonel *Palmer*, at *Mooſa*, in which they were but too ſucceſsful; ſince they ſurprized the People that were there, cut many of them to Pieces, and took Part of the reſt Priſoners, which was owing to the Neglect of the Orders given them not to ſhut themſelves up in a Place which had been diſmantled and ruined, on purpoſe to ſhew that the General did not intend to keep or uſe it as a Fortification. But the Conveniency of lying under Cover, tempted them to forget thoſe ſalutary Inſtructions, which brought on their Miſfortune, and gave the General inexpreſſible Concern, more eſpecially for Colonel *Palmer*, who was a Gentleman of Experience and Intereſt, as well as a Volunteer, who ſerved purely out of Zeal for the public Good, and therefore juſtly eſteemed.

To prevent any Accident of the like Nature, and the more effectually to block up the Place, which for want of Numbers they were not able regularly to inveſt, the *Carolina* Regiment was ſent over to *Anaſtatia*. In this Iſland there were three Batteries erected, all above a Mile from *St. Auguſtin*: But, however, they fired from them warmly, with ſome Prejudice to the Place; from whence they were as warmly anſwered, but were moſt hurt from the Fire from ſix *Spaniſh* Half-Galleys that lay within the Harbour. This induced a Propoſal to the Captains of the three Men of War, to attempt the burning of theſe Half-Galleys; and upon a Conſultation between them and the Land Officers, this was agreed to; but afterwards the Sea-Captains declared they thought it impracticable, for want of ſufficient Depth of Water at the Entrance: Yet this was diſproved on the 27th of *June*, by the going in of Captain *Robert Tyrrel*, and his coming out again on board a Schooner, who reported that there was Water enough; yet the Majority voted the Deſign ſtill impracticable, which hindered any Attempt to carry it into Execution, though the Land Officers conſidered it as a Point that would have greatly contributed to the reducing of the Place.

When it was firſt propoſed to attack the Galleys, it was projected in the following Manner, *viz.* the General was to make a Diverſion on the *Main*, by attacking the Town; Colonel *Vanderduſſen*, with Part of the Regiment, was to keep a continual Fire on the Town and Caſtle, from the Batteries, while Captain *Tyrrel* was to have ſet upon the Galleys, with the Seamen and the reſt of the Colonel's Regiment. The General was accordingly on the *Main* with his Troops, expecting that Service; but the Commodore diſapproving this, and it being yet a ſecond Time agreed to be attempted, upon the Remonſtrances of Colonel *Vanderduſſen*, and Captain *Warren*; when the Commodore's Lieutenant was to have commanded the Attack, new Difficulties were further ſtarted when they came on Shore, and ſo it was ſtill unattempted. Yet it appears, that ſoon after the Men of War ſlipping their Cables, and putting out to Sea in a Storm, the Colonel endeavoured to revive the Attempt on the Galleys in their Abſence: But propoſing it to the Commodore's Lieutenant. Mr. *Swanton*, who appeared to be a Gentleman of Spirit, and commanded the Seamen left on Shore, he was told, "He had Orders left not to venture any of them before the Return of the Shipping."

Towards the End of *June*, ſome Sloops, with a Supply of Proviſions for the Garriſon, got in ſafe at the South Entrance, to the Harbour of *St. Auguſtin*, called the *Metanſas*, without having been diſcovered by any of our Men of War, till it was too late to intercept them. How this happened has not been hitherto accounted for, but it was a ſeaſonable Relief to the Garriſon, who had not then above three Days Proviſion of Bread-kind in the Place; and the Hurricane Seaſon coming on, the Commodore gave Notice to the General, that he muſt leave his Station, and ſail away with the King's Ships on the 5th of *July*. Upon this it was repreſented, "That ſince the Men of War were obliged to ſail away, it would be neceſſary to ſend the two Men of War Sloops into the *Metanſas*, to guard that, and either ſecure the Retreat of the Forces to *Anaſtatia*, if they ſhould be reduced to one, or aſſiſt in continuing the Blockade, till they ſhould be enabled to act more offenſively, by a further Aſſiſtance."

To this Propoſal it was agreed, provided the Sloops of War had Water enough to get in there; and a Council was held *July* the 3d, wherein ſome of the Pilots that had been ſent to ſound, declared upon Oath, "There was not Water enough on the Bar of the *Metanſas* for the Sloops to go in, and if they could go in, they could not lie ſafe there from a Hurricane, nor could they fight above one a-breaſt, in caſe they were attacked by the Galleys."

But the Commodore, afterwards aſking Mr. *Blomfield Barradel*, Lieutenant of the *Wolf* Sloop, who had been along with the Pilots, and happened to be aboard his Ship that Night, with ſome Captains, what he had to ſay in that Affair? he replied, that the Pilots had given their Opinion, and that he was not then to be examined; but if they aſked his Opinion, he would give it. They then deſired he would; he affirmed, "That there was Water enough on the Bar for the Sloops to get in; that they could lie ſafe from a Hurricane when in; and that there was alſo ſufficient Room, when in, to fight three a-breaſt, in caſe they were attacked." Upon the Pilots afterwards objecting to their lying ſafe, he aſked them, "Whether they remembred to have ſeen ſuch an Iſland when they were there?" And when they acknowledged they did, he replied, "That they ought to know they could lie ſafe from a Hurricane under that Iſland." Notwithſtanding which, it was reſolved afterwards in Council, that they ſhould take off all their Men, and ſail away, leaving Captain *Townſend* at *Frederica*; which put an End to the Enterprize.

Thus ended this Expedition, which, though not attended with the Succeſs ſome expected from it, I mean the taking the Fortreſs of *St. Auguſtin*, was nevertheleſs of very great Conſequence, inaſmuch as it kept the *Spaniards* for a long Time upon the defenſive; when if the Siege had not been undertaken, they would certainly have been otherwiſe employed; it laid all the Country open, ſo that the *Indians*, in Friendſhip with us, made Excurſions up to the Gates of the Fortreſs; and the War being carried on in this Manner for a length of Time, and in Conjunction with the *Indians*, bound them ſo ſtrongly to the *Engliſh* Intereſt, that with a very little Aſſiſtance from the People of *Georgia*, they kept the War at a Diſtance; ſo that the Inhabitants of *Carolina* felt none of its Effects as a Colony, except the Loſſes ſuffered by their Privateers, till the *Spaniards* executed their long projected Invaſion, in 1742; in which they employed the whole of their Strength, and from which they expected to have changed the whole Face of Affairs on the Continent of *America*; and even then the People of *Carolina* ſuffered only by their Fears.

12. This Expedition of the *Spaniards*, as has been already hinted to the Reader, was really meditated before the War commenced, and had very probably taken place, if Repriſals had not been made upon the *Spaniards*, on Account of the Depredations committed by their *Guarda Coſtas*; at leaſt we have Reaſon to judge ſo, from the Memorial of Sir *Thomas Fitzgerald*, before-mentioned; in which he aſſerted, that *Georgia* belonged to the Crown of *Spain*, and which he repeated in a ſubſequent Memorial. But the Operations of our Fleet in the *Weſt Indies*, under Admiral *Vernon*, put a Stop to their Preparations at the *Havanna*; and the Siege of *St. Auguſtin*, and its Conſequences, retarded them likewiſe for ſome time. Yet as the *Spaniards* are not apt to deſiſt from Projects they have once formed, and as the Miniſtry at *Madrid* had very high Expectations from the Execution of this, they ſtill kept it on foot, and only waited for a favourable Opportunity for performing what they imagined would have entirely changed the Scene of Things in *North America*. As to the Manner in which they executed it at laſt, and the amazing Diſappointment they met with notwithſtanding the vaſt Force they employed, and the ſmallneſs of that by which they were aſſiſted, we had ſo full, ſo clear, and ſo authentic an Account publiſhed by Authority, that I know of no Method more fit to convey an Idea of it, or leſs liable to any Exceptions, than tranſcribing it, the rather becauſe as it ſtands here connected with the Hiſtory of *Georgia*, the Reader will have all the Lights that are neceſſary to render every Circumſtance in it perfectly intelligible. Thus then that Account, tranſmitted to us by General *Oglethorpe*, ran: "The Beginning of *May* laſt the *Spaniards* fitted out their Fleet from the *Havanna*, conſiſting of fifty-ſix Sail and between ſeven and eight thouſand Men, with an Intent to invade *Georgia* and *South-Carolina*, and the other northern Colonies. At their firſt ſetting out, in turning the *Moor* Caſtle, they loſt a large Settee with one hundred and fifty Men, and a few Days after the Fleet was diſperſed by a Storm; ſo that all the Shipping did not arrive at *St. Auguſtin*. The latter end of *May*, or beginning of *June*, Capt. *Haymer* of the *Flamborough*, in his Cruiſe to the Southward, ſent in to General *Oglethorpe*

Oglethorpe for Intelligence; who acquainted him, that he would probably meet with ſome *Spaniſh* Veſſels to the Southward of *St. Auguſtin*; which he accordingly did, and engaged ten Sail of the *Moſquetos* and drove ſome of them aſhore; but in the Action loſt ſeventeen of his Men. He on his return acquainted the General with what had happened, and could not then come in for the Defence of *Georgia*, but proceeded to *Charles-Town*, to clean his Ship. The General thereupon ſent Lieutenant *Maxwell* by Water, and Lieutenant *Hugh Mackay* over Land to *Carolina*, with Advice to the Governor, but no Aſſiſtance came from thence till after the Retreat of the *Spaniards*. Lieutenant-Colonel *Cook* was at *Charles-Town*, in his Way to *London*, when Lieutenant *Maxwell* arrived with the ſaid Advice.

“ The 21ſt of *June*, nine Sail endeavoured to come into *Amelia* Sound; but the eighteen Pounders from *Fort-William*, and the Guard-Schooner with eighty Men, commanded by Capt. *Dunbar*, fired ſo briſkly, that they ſheered off as faſt as they could. The General, on this Advice, reſolving to ſupport the Forts on *Cumberland*, ſet out with a Detachment of the Regiment on board his Boats; ſent Capt. *Horton* with his Company of Grenadiers before, and was himſelf obliged to fight his Way with two Boats, through fourteen Sail of *Spaniſh* Veſſels which endeavoured to intercept him in *Cumberland* Sound. In this Engagement, ſeveral of the *Spaniards* being killed, the ſaid Veſſels ſet out to Sea, and did not join their Fleet till the Day before they left *St. Simon's* Sound. Lieutenant *Tolſon*, who commanded the Boat of the greateſt Strength, inſtead of following the General, run into a Marſh, where he remained till next Morning, when he returned to *St. Simon's*; for which Behaviour he was put in Arreſt, in order to be tried. Major *Heron*, from the Shore, ſeeing the General ſurrounded by the Enemy, and hid in Smoke, concluded him loſt; but next Day, to the great Joy of the People, he returned in the Guard-Schooner to *St. Simon's*, after having drawn the Command from *St. Andrew's*, and the Stores and Artillery that were there, and reinforced *Fort William*, where he left one of the Boats he had with him.

“ He having laid an Embargo on all Veſſels in the Harbour, took Capt. *Thomſon*'s Ship, which mounted twenty Guns, into the King's Service, and manned her out of the ſmall Veſſels which were of no Force. He alſo called in the *Highland* Company from *Darien*. Capt. *Carr*'s Company of Marines, and the Rangers, from where they were differently detached; and ſent Mr. *Mullryne* to *Carolina*, to get all the Men he could. The 28th of *June* the *Spaniſh* Fleet came to Anchor off *St. Simon's* Bar, who were diverted from coming in, or landing any of their Troops, for ſeveral Days; in which time the General raiſed another Troop of Rangers; and by rewarding thoſe who did extraordinary Duty, and promiſing great Encouragement to all who ſhould ſignalize themſelves on this Occaſion, he kept up the Spirits of the People, and increaſed their Numbers daily. The 5th of *July*, with the Tide of Flood, and a briſk Gale, thirty-ſix *Spaniſh* Veſſels entred *St. Simon's* Harbour, nine of which were large Top-maſt Veſſels. We received them with a briſk Fire from our Batteries and Ships, killed ſome of them with our eighteen Pounders from the Fort, and our four Pounders from the lower Battery. The *Spaniſh* Commodore, on board a Ship of twenty-two Guns, with a Settee, with an eighteen Pounder and two nine Pounders in her Bow, attempted to board Captain *Thomſon*'s Ship; but he with his great Guns, Captain *Carr* with his Company of Marines, Lieutenant *Wall* and Enſign *Otterbridge* with a Party of the Regiment, made ſo brave a Defence, that the *Spaniards* were obliged to retire with Loſs. A Snow of ſixteen Guns at the ſame time attempted to board our Guard-Schooner, but was alſo repulſed by Captain *Dunbar*; the Engagement laſted upwards of three Hours, in which the Enemy loſt ſeventeen Men, and had ten wounded. They paſſed all our Veſſels and proceeded up the River, upon which the General held a Council of War at the Head of his Regiment, where it was the Opinion of the whole immediately to march up to *Frederica*, for the Defence of that Place.

“ The General accordingly gave Orders for the Regiment to march, and ordered all the Troops, that were on board the Veſſels, to come aſhore, and directed Captain *Thompſon*, with the Guard-Schooner and Prize Sloop, to make the beſt of their Way to *Charles-Town*; and this was all done in Sight of the Enemy. The General, during this Action, being obliged to be ſometimes on Shipboard, ſometimes at the Batteries, and to act as Engineer, found himſelf under a Neceſſity of having a Lieutenant-Colonel with the Regiment; he therefore appointed Major *Alexander Heron* Lieutenant-Colonel, in the Abſence of Lieutenant-Colonel *Cook*, who was alſo Engineer, and the Sub-engineer, having attended him to *Charles-Town*, was alſo abſent. Late at Night the General arrived at *Frederica*, after having deſtroyed all the Stores at *St. Simon's*, and ſunk the Veſſels that might be of Uſe to the Enemy, and rendered the Guns incapable of Service, and ordered the Wounded to be carried off on Horſeback. That Night the Enemy landed their Forces on a dry Marſh, about a Mile and an half from the Camp, under Cover of their great Guns. They lay all that Night under Arms, and the next Morning took Poſſeſſion of the Camp which we left.

“ 13. About Noon the *Creek Indians* brought us five *Spaniſh* Priſoners, from whom we had Intelligence, that Don *Manuel de Monteano*, Governor of *St. Auguſtin*, commanded in chief the Expedition; and that Major-General *Antonio de Redondo* chief Engineer, and two Brigadiers, came with the Forces from *Cuba*; that their whole Number conſiſted of about five thouſand, and that the Night before they had landed about four thouſand three hundred Men. One of the Priſoners the General ſent with Mr. *Bedon* to *Charles-Town*. The 7th of *July*, at nine in the Morning, a Ranger of the Patrol brought an Account, that the Enemy were marching within a Mile and an Half of the Town. Whereupon the General immediately ordered four Platoons of the Regiment to march, and in the mean time went himſelf with the *Highland* Company, who was then under Arms. The *Indians*, and a Party of Rangers, came up with the Enemy about a Mile from the Town, as they were entring the *Savannah* to take Poſſeſſion of a Ditch they had a Mind to uſe as an Intrenchment, but the Enemy were attacked ſo briſkly that the General ſoon overcame them; moſt of their Party, which conſiſted of one hundred and twenty of their beſt Woods-Men, and forty *Indians*, being killed or taken Priſoners. The General took two Priſoners with his own Hands; Lieutenant *Scroggs* of the Rangers took Capt. *Sebaſtian Sachio*, Priſoner, who commanded the Party. *Tocanoeowi*, being ſhot through his Right Arm by Capt. *Mageleto*, drew his Piſtol with the Left, and ſhot him through the Head.

“ The General purſued the Enemy near two Miles, and halted on an advantageous Piece of Ground until the Party of the Regiment came up; he poſted them with the *Highlanders* in a Wood, with a large Savannah or Meadow in the Front, over which the *Spaniards* muſt paſs in their Way to *Frederica*. After which he haſtened back to *Frederica*, and ordered the Rangers and Company of Men, to make ready. In the mean time two Companies of *Spaniards* of fifty Men each, and two hundred more of the Enemy's beſt Troops, came up with Shouts, and Drums beating; whereupon the General hearing Platoons firing, immediately made haſte that way, and met three of the Platoons, who in the Smoke and drizling Rain had retreated in Diſorder, and the Fire continuing, he ordered his Men to rally and follow him, who haſtening on, found that Lieutenant *Sutherland*, with his Platoon, and Lieutenant *Charles Mackay*, with the *Highlanders*, had intirely defeated the ſaid three hundred of the Enemy, in which Action Don *Antonio Barba* was made Priſoner, and mortally wounded; ſeveral others were killed, and two Grenadiers were taken Priſoners. Capt. *Demeret*,

“ and Enſign *Gibbon*, rallied their Platoons, and came up to the Ground. Captain *Carr*, with his Company of Marines, and Lieutenat *Cadogan*, with a Party of the Regiment, came up at the ſame time, and were followed by Major *Heron*, with the Body of the Regiment. In both Actions the Enemy loſt two Captains, one Lieutenant, and two Sergeants; two Drummers, and about one hundred and ſixty private Men; and one Captain and nineteen Men were taken Priſoners. The General, with the Regiment, halted all Night, about a Mile and a Half from the Enemy's Camp, to intercept thoſe who had ſtraggled in the Woods; and expecting the Enemy to make a ſecond Attempt to march in the Morning; but the General having advanced with a Party of *Indians*, before Day-break, towards the *Spaniſh* Camp, found them all retreated into the Ruins of the Fort, and under Cover of their Cannon.

“ Next Morning, the 8th of *July*, the General and his Men returned to *Frederica*, and he appointed a General Staff, *viz.* Lieutenant *Primroſe Maxwell*, and *Hugh Mackay*, Aids de Camp; Lieutenant *Sutherland*, Brigade-Major; and Sergeant *John Stuart*, ſecond Enſign, for his brave Behaviour in the late Engagement. The 9th and 10th of *July* all Hands were employed in the Works at *Frederica*, and the *Indians* brought in ſome Scalps and Priſoners. The 11th of *July* a Settee and two Quarter-Galleys came within Gun-ſhot of the Town; but on our firing ſome Guns and Bombs from the Fort, and the General going towards them with his Boats, they returned to their Fleet, and with the reſt drew up in Line of Battle. The next Morning, being the 12th of *July*, an *Engliſh* Priſoner eſcaped from them, who informed us, that the Enemy, on their landing, had reſolved to give no Quarter; but from the Day their Grenadiers were defeated, they were in great Terror, and intrenched themſelves, and gave Orders that none ſhould go without their Sentinels, for fear of being ſurprized by the *Indians*. By other Priſoners and Deſerters we were alſo told, that upon their calling over their Rolls, there were two hundred and forty Men and nineteen of their *Indians* miſſing; that there were great Diviſions among them, inſomuch that Don *Antonio de Redondo*, who commanded the *Cuba* Forces, encamped ſeparate from thoſe of *St. Auguſtin*, and that the Commodore had ordered all his Seamen on board. That Night the General and five hundred Men marched within a Mile of the Enemy's Camp, intending to ſurprize them, but was prevented by the Treachery of a *Frenchman*, who was got among the Company of Boatmen, and fired his Piece, and gave Alarm to the Enemy, and then deſerted to them. When the General found his Intention diſcovered, he ordered all his Drums to beat the Grenadiers March, and then returned to *Frederica*.

“ The General the next Day, being the 13th of *July*, in order to defeat the Information of the *French* Deſerter, directed a Letter to be wrote, and ſent by a *Spaniſh* Priſoner, who, for the ſake of Money the General gave him, and the Promiſe of Liberty, undertook to deliver it to the ſaid *Frenchman*, wherein he was inſtructed to acquaint the Enemy's commanding Officer of the defenceleſs State of *Frederica*, and encourage them to come up by Water under his Pilotage; which Letter the *Spaniſh* Priſoner delivered to the Governor of *St. Auguſtin*, and it had ſo good an Effect, that the ſaid *Frenchman* was immediately taken into Cuſtody, and looked upon as a double Spy, and thereupon put into Irons. The next Morning, being the 14th of *July*, the *Spaniards* burnt the Barracks and Officers Houſes at *St. Simon's*, and Captain *Horton*'s Houſe on *Iekyll*; and the ſame Night they reimbarked with ſo much Precipitation, that they left a Quantity of Ammunition, Proviſions, and ſome Guns, behind them. On the 15th all the large Veſſels with the *Cuba* Forces on board ſailed Southward, and the Governor and Troops from *St. Auguſtin* on board the ſmall Craft, went within Land, and encamped in *St. Andrew's*, and caught fifty Horſes, with a Deſign to carry them away; but on the General's appearing in his Boats, the Enemy ſhot the ſaid Horſes, and burnt the Fort and Houſes at *St. Andrew's*. The General the next Day, being the 16th of *July*, followed the *Spaniards* with all his ſmall Craft, but was not ſtrong enough to attack them. He landed a Man out of his Boat on *Cumberland*, who that Night paſſed the Enemy's Camp, and early the next Morning came to *Fort-William*, with Advice to Enſign *Stuart* that the *Spaniards* were beat off *St. Simon's*, and that the General was coming with Succours, and ordered him to defend the Fort to the utmoſt. On the 18th of *July* twenty-eight Sail of *Spaniſh* appeared off *Fort-William*, fourteen of which came within Land, and attacked the Fort from their Galleys and other Veſſels, and attempted to land, but were repulſed by a Party of Rangers from behind the Sand-Hills. Enſign *Stuart*, who commanded with ſixty Men in the Fort, defended it ſo bravely, that after an Attack of upwards of three Hours, they were obliged to put to Sea with conſiderable Loſs.

“ The Eighteen Pounders there diſabled two of their Galleys. The 19th of *July* the General was on his Way to *Fort-William*. The 20th of *July* the General arrived at *Fort-William*, and ſent his Boats and Rangers as far as the River *St. John*, who returned next Day, and brought Advice that the Enemy was quite gone: Upon which the General gave the neceſſary Orders for repairing *Fort-William*, and on the 22d returned to *Frederica*. A few Days afterwards the Men of War from *Charles-Town* came off *St. Simon's* Bar, and Capt. *Thompſon* with ſome Volunteers from *Carolina*; our Guard-Schooner and two Galleys came into *St. Simon*'s Harbour; and Capt. *Hardy*, of the *Rye* Man of War, receiving a Meſſage from the General, by Lieutenant *Maxwell*, who went on board him, ſent for Anſwer, that he would take a Cruize with the reſt of the King's Ships. But the General apprehending the *Spaniards*, upon recovering their Fright, might return with more Courage and better Conduct, continued Capt. *Thompſon*'s Ship in the King's Service, and ſent Expreſſes over Land to the Northern Provinces on this Occaſion.

“ Theſe Forces were commanded by Don *Manuel de Monteano*, Governor of *St. Auguſtin*, Commander in Chief of the Expedition; Major-General *Antonio de Redondo* Engineer-General, two Colonels with Brevits of Brigadiers; and conſiſted of one Regiment of Dragoons diſmounted, with their Saddles and Bridles; the Regiment called the Battalion of the *Havanna*, ten Companies, of fifty Men each, draughted off from ſeveral Regiments at the *Havanna*; one Regiment of the *Havanna* Militia, conſiſting of ten Companies of 100 Men each; one Regiment of Negroes, regularly officered by Negroes; one ditto of Mulattoes, and one Company of Miquelets; one Company of Train, with proper Artillery; *Auguſtin* Forces conſiſting of about three hundred Men, ninety *Indians* and fifteen Negroes, who run away from *South Carolina*. To theſe Accounts I ſhall add the following Depoſition of *Samuel Cloake*, formerly belonging to his Majeſty's Ship the *Flamborough*, and taken Priſoner off *St. Auguſtin* by the *Spaniards* in *May* 1742.

Frederica in
Georgia, ſs.

“ This Deponent, being duly ſworn, ſaith, That he was put Priſoner on board a Ship called the *Pretty Nancy*, taken by the *Spaniards* from the *Engliſh*, fitted out with ten Carriage and ſix Swivel Guns, which was Part of the Fleet that carried the Troops from *St. Auguſtin* for the Invaſion of *Georgia* and *South Carolina*: That ſhe had one hundred and fifty Soldiers on board, beſides Sailors: That he counted forty-four Sail, beſides the Launches and thoſe that went in Land, and Pettiauguas which carried the *Indians*: That they ſailed from *St. Auguſtin* the Beginning of *June*, and met with very hard Gales for three Days, which diſperſed the Fleet: That the chief Pilot on board the Commodore was one

“ *Parris* belonging to *Port Royal* in *South Carolina*, and
“ who was married there, and had a Plantation in that Province:
“ That they came to an Anchor with Part of the
“ Fleet off *Frederica* Bar, to the Northward of it; and the
“ *Spaniards* ſaid that they ſhould not have found out
“ *Georgia*, had it not been been for *Parris* their Pilot: That
“ they lay ſeveral Days at Anchor off the Bar, during
“ which Time the Men were put into ſmall Boats in order
“ to land; but ſeeing ſeveral Men marching on the Beach,
“ they were afraid to land as they intended, and came
“ on board again; for about three Days after, holding
“ a Council of War, they reſolved not to land any Man
“ till they had made themſelves Maſters of the Harbour.
“ During the Time they lay off this Bar, the *Spaniards*
“ often whetted their Swords, and held their Knives to
“ this Deponent's and other *Engliſh* Priſoners Throats,
“ ſaying, they would cut the Throats of thoſe they
“ ſhould take at *Georgia*. They ſailed on the 5th
“ of *July* with a ſtrong Eaſterly Wind and Tide of
“ Flood: That the *Engliſh* fired from the Batteries and
“ Ships very briſkly, and the *Spaniards* ſaid that the
“ *Engliſh* ſtood very well: That a Four-Pound Shot
“ hulled the Ship where the Deponent was; and one
“ Eighteen-Pound Shot from the Battery killed ſeven
“ Men on board the large Ship: That there were of the
“ *Spaniards* eight Three-Maſts Ships; the Commodore's
“ was a Twenty-Gun Ship; there was alſo a Snow with
“ fourteen Nine-Pounders, and a Galley with three large
“ Guns, one of which he heard was a Twelve Pounder,
“ which was manned with above one hundred Men;
“ there were alſo ſeveral Privateers, ſome of them with
“ ten Guns, and ſome with eight: That the *Spaniards*
“ and ſome *Iriſhmen* on board told him, that in the whole
“ Fleet there were about five or ſix thouſand Men, and
“ were come with a Deſign to take *Georgia*, and after
“ that to go to *Port Royal* in *South Carolina*. He farther
“ ſays, that they had a whole Regiment of Negroes,
“ with a Company of Grenadiers, in the ſame Manner
“ as other Regiments have, and cloathed in the ſame
“ Livery as other *Spaniſh* Regiments; they were commanded
“ by Negro Officers, and he ſaw the Officers
“ walking along with the Governor of *St. Auguſtine* aſhore;
“ that they were dreſſed in gold and ſilver-laced Cloaths,
“ like other Officers, and that they were kept in the
“ ſame Pay as the other Regiments. He further ſaith,
“ that the Ship where this Deponent was, was loaded
“ with Grenadiers and Dragoons, who had on board
“ Saddles, Bridles, Piſtols, and all Accoutrements:
“ That they landed all them from on board his Ship,
“ and put a ſmall Guard of ten Men on board: That
“ two or three Days afterwards one of the Captains and
“ one Sergeant of the Grenadiers came on board, and
“ this Deponent aſking the Sergeant whether he had been
“ at *Frederica*, he anſwered, that the Woods were ſo full
“ of *Indians* that the Devil could not go through them,
“ and that the *Indians* had killed about one hundred and
“ fifty of their beſt Men, and that there were but very
“ few Soldiers: Thoſe who came on board were ſo downhearted
“ that they could hardly ſpeak a Word: That
“ upon this they were ordered to get Water on board, in
“ order to get to Sea in a Hurry, which this Deponent
“ took the Advantage of, and made his Eſcape to
“ General *Oglethorpe*.

Mark
SAMUEL × CLOAKE.

14. It may be truly ſaid, that there never happened in this Part of the World, any thing more honourable for the *Engliſh* Nation, or more likely to ſtrike a Terror into their Enemies, than this entire and total Defeat of ſo formidable an Invaſion, by ſuch a Handful of Forces. Inſtead of raiſing and heightening this Succeſs, to do Honour to the General's Character, we ought rather to leſſen or diminiſh ſome of its Circumſtances, to render it in ſuch an Age as this more credible; but we have taken no Liberties at all, the Facts are repreſented Step by Step as they happened; and the Reader is left to judge how far it appears from hence that *Georgia* is a true Frontier, in reſpect to *Carolina*; and what Advantages are to be hoped for in caſe the new Colony ſhould increaſe in a reaſonable Proportion, for twenty Years to come; but to help the Reader's Judgment in this Reſpect, and to ſhew him in what Light this Tranſaction was conſidered by all our Colonies in *America*; the Inhabitants of which were certainly the ableſt, and moſt equitable Judges; it is requiſite to obſerve, that *John Tinker*, Eſq; Governor of the *Bahama Iſlands*; *Lewis Morris*, Eſq; Governor of *New Jerſey*; *William Gooch*, Eſq; Governor of *Virginia*; *George Clark*, Eſq; Lieutenant-Governor of *New York*; *Gabriel Johnſon*, Eſq; Governor of *North Carolina*; *Thomas Bladen*, Eſq; Governor of *Maryland*; and *George Thomas*, Eſq; Governor of *Penſylvania*; all wrote to General *Oglethorpe* upon this memorable Occaſion, to congratulate him upon being the happy Inſtrument in ſo honourable and ſo important a Service; to aſſure him of the Share they took in the Honour he had acquired, and of the true Senſe they had of the great Deliverance that Providence had wrought for all the *Britiſh* Colonies in *North America*, by his Conduct and Courage. Stronger Teſtimonies than theſe, with reſpect to the Conſequence of the Action he had performed, it was impoſſible for him to receive, and better Evidence than theſe Letters afford it is likewiſe impoſſible that we ſhould have here at home; and therefore to ſet this Fact in its true Light, and that the People of *Great-Britain* may have a juſt Notion of the Advantages ariſing from this wiſe and well conducted Defence, in which the Bravery of *Britiſh* Soldiers, their Affection for, and Confidence in, their Commander, is ſo clearly expreſſed, I thought it reaſonable to annex the Copies of the Letters written by the three firſt mentioned Gentlemen, as being equally honourable for them, and for the Perſon to whom they are addreſſed; and if I add no more, it is to avoid being tedious, and that I may have an Opportuity of cloſing the hiſtorical Part of this Section, with Papers that do ſo much Honour to the new Colony of which it treats.

Copy of a Letter from his Excellency JOHN TINKER, *Eſq; Governor of the* Bahama Iſlands, *to General* JAMES OGLETHORPE.

S I R, *N. Providence*, *Nov.* 6, 1742.

I am favoured with both of your Excellency's Letters, of the 31ſt of *July* and 16th of *September*, with an incloſed Account of the *Spaniards* Deſcent upon your Province, and your fortunate Victory over them: Upon which I beg leave to congratulate you, and to aſſure you none of your Acquaintance can receive more real Satisfaction at an Event that muſt contribute ſo much to your Honour and Reputation as this laſt. I rejoice too for the Public, becauſe I am ſure if you had not given ſo good an Account of them, the neighbouring Provinces would have been in imminent Danger. I know the General had Orders to attack this Iſland upon their Return, ſo I may juſtly thank you for ſaving me a great deal of Trouble.

If there is any thing in this Government that can contribute to your Pleaſure, and facilitate the Continuance of our Friendſhip and future Correſpondence, I ſhall, with Joy, embrace the Propoſition. The Bearer has been a long Time here, and can give you an exact Account of the *Carte du Pais*. We are, at preſent, employed in repairing the Fortifications, and making ſome additional ones, which will, I hope, be compleated this Winter. I have the Honour to be, with great Regard and Truth,

Your Excellency's

moſt obedient humble Servant,

(ſigned) JOHN TINKER.

Copy of a Letter from his Excellency LEWIS MORRIS, *Eſq; Governor of* New Jerſey, *to General* JAMES OGLETHORPE.

S I R, *Burlington*, the 2d of *Nov.* 1742.

I received the Honour of yours of the 31ſt of *July* laſt, by the Expreſs you ſent along the Continent, who is now got thus far back in his Return to you. The Contents of it gave me very great Pleaſure, as it informed me of your Health, and of the great (or rather wonderful) Succeſs God has been pleaſed to give to his Majeſty's Arms under your Conduct: And I doubt not has effectually convinced the Aggreſſors how unable they are to cope with reſolute *Britiſh* Troops; and I hope will be a ſufficient Diſcouragement to a ſecond Attempt of that kind; which, if the firſt had ſucceded, might prove of dangerous Conſequence to his Majeſty's Plantations on the Continent, eſpecially the moſt ſouthern ones.

You have gathered unenvied Laurels, and well deſerve to wear them. I take Leave to aſſure you no body can be better pleaſed with your Succeſs, than,

S I R,

Your moſt humble,

and obedient Servant,

(ſigned) LEWIS MORRIS.

Extract of a Letter from the honourable WILLIAM GOOCH *Eſq; Governor of* Virginia, *to General* JAMES OGLETHORPE.

S I R, *October* the 12th, 1742.

I received the Letter of the 31ſt of *July* your Excellency honoured me with, by the Hands of your truſty Courier, Mr. *Watkins*, and with it a very ſenſible Satiſfaction: I rejoice to hear your Courage and Conduct have had their deſerved Succeſs in ſo unequal a Trial. Your prudential Behaviour on the Occaſion, cannot be too much applauded, nor Actions ſo truly laudable too much admired. The whole Continent is under laſting Obligations to you, for your extraordinary Vigilance and Magnanimity, when, not thinking your Services to your King and Country compleated, nor your Valour ſufficiently proved in the Defence of your infant Settlement, againſt the repeated Attacks of cruel and inhuman Foes, more than could be expected, conſidering their Numbers; with an uncommon Reſolution you forced them in the Field to a precipitate Retreat, and effectually defeated the deſperate Deſigns of an Enemy that had the Vanity to flatter themſelves with the Hopes of making an eaſy Conqueſt of ſome, at leaſt, of the *Britiſh* Provinces.

As theſe great Actions are to be attributed to your Fortitude, ſo in my Judgment the unexpected and vigorous Oppoſition they met with, ending in ſo ſevere a Rebuff, has thrown them into ſuch Diſorder, that I am confident thoſe Troops, were they all together in *St. Auguſtin*, could not ſo ſoon recover ſufficient Courage to animate them to the like Undertaking: The Confuſion and Hurry in which they reimbarked, are ſuch evident Tokens of their being terrified and diſmayed, that with your uſual Watchfulneſs you may reſt ſecure from further Diſturbance, *&c.*

I am,

S I R,

Your moſt obedient,

and moſt humble Servant,

(ſigned) WILLIAM GOOCH.

15. We have now compleated the Hiſtory of the *Engliſh* Colonies in *America*, in ſuch a Manner, that the Reader cannot help diſcerning their intrinſic Value and great Importance; there is therefore no Neceſſity of our adding any thing on this Subject here, and therefore we will confine our Remarks entirely to the Colony of *Georgia*, and endeavour to ſhew from what Views, upon what Hopes, and in how great a Degree the Public is intereſted in the Maintenance and Support of this new Colony. In the firſt Place, we have ſeen that the Truſtees originally deſigned it for a Boundary or Frontier to cover the other Provinces upon the Continent; that it was extremely proper for this, the very Situation of it ſhews; that it was extremely wanted we may gather from the Hiſtories of the other Provinces, in which we find various Inſtances of the Ruin of their advanced Settlements; from their leaving ſo large a Country as *Georgia* uncultivated, a plain Sign of their Fear of becoming nearer Neighbours to the *Spaniards*; and from the Names of Places, ſuch as *Bloody Point*, which commemorate the Maſſacres that have been heretofore committed in thoſe Parts; but the ſtrongeſt and cleareſt Proof of all, is the Memorial from the Aſſembly of *Carolina*, in which the Reader has ſeen this Matter ſtated in the fulleſt and faireſt Light; from all which I infer, that the eſtabliſhing of ſuch a Barrier, was a Point worthy of public Attention; and that the Benefits accruing from it to *Carolina*, and all the Provinces to the Northward, might very well be conſidered as a ſufficient Recompence for any Expence that might attend the eſtabliſhing of ſuch a Frontier. That the Public were not amuſed in the Hopes that were given them by the Truſtees of *Georgia*, in this reſpect; that the ſending a Regiment thither, was not a needleſs or uſeleſs Expence; and that the Money employed in fortifying there, was not either waſted or thrown away, manifeſtly appears by their repulſing the *Spaniards* in the late Invaſion. If this was ſolely owing to the Bravery, Firmneſs, and Strength of the new Colony, then ſurely there is no room to find Fault with it; and if the Province is as ſome People would have it, thinly peopled, and very little capable of Defence, what Applauſe is due to the General? Who, without the leaſt Aſſiſtance from any other Place, could repel ſuch a Force, and thereby ſecure all our Colonies in *North America*: Take it either Way, we are ſure of a Barrier while we have *Georgia* under his Direction.

In the ſecond Place, this Country was deſigned as an Aſylum for diſtreſſed People in our own Country, and for ſuch induſtrious foreign Proteſtants as ſhould be willing to go thither. If we conſider the thing in this Light, the ſupporting this Deſign was no Favour in the Government; for it is the Duty of every Government to provide for ſuch of its poor Subjects as are willing to work; and the leaſt they can do, is to ſend them to the Colonies, ſince it muſt be owing to their Miſmanagement that they have not Employment at home; but it is not their Duty only, it is their Intereſt alſo; for Men active and induſtrious, who can find nothing to do, and are at a Loſs to find any thing to eat, are not apt to remain long in ſuch a Condition: And ſurely it is better to ſend ſuch People abroad, though at a ſmall Expence, than ſee them, for want of ſuch Care, ſend themſelves to the Gallows. In Times of general and continued Peace, there will, however, be ſuch Overflowings in moſt Nations; under arbitrary Princes from Mens Averſion to Slavery, under free Governments from a ſuperabundance of People. In both Caſes that Government is to be commended, which laying hold of theſe Overflowings, applies them to its own Uſe. To give ſuch People Territories, is to acquire, though it ſeems a Solecism in Speech, the very Territories you give; for Land without People is of no Uſe; but Land inhabited and cultivated by white People, let it lie where it will, is of great Value; and that Value is much enhanced when that Land is cultivated, and thoſe People are ſettled preciſely where you want them moſt. This is the Caſe of *Georgia*; for the *Carolina* Memorial tells us, that white Men were not to be raiſed there for Money; which was the ſame thing as if they had told the Government, that the beſt Way they could employ their Money, was in ſending of white People thither. But when we conſider the Expence of ſending white Men, and compare it with the Purchaſe of Negroes, the Caſe appears ſtill more advantageous: Since the white Men come cheaper, and are of much greater Advantage: By ſettling them you acquire uſeful Subjects, and conſequently increaſe your Force; by purchaſing Negroes, you only gain ſo many Slaves that increaſe your Danger and Terror, by leſſening your Force. Your own People and foreign Proteſtants, that will be always yours, but Negroes are any Body's that will but promiſe them better Conditions than they have under you, which may be very eaſily done; and of what ill Conſequence this may prove, appears from the Negro Regiment in the *Spaniſh* Service; for had they ſucceeded in their Invaſion, and once penetrated into a Colony full of Negroes, they might have raiſed new Regiments by barely beating their Drums; Regiments that would have been equally terrible to us, and uſeful to them, from their Knowledge of the Country, and from their Hatred of their old Maſters.

There was a third Advantage propoſed in the ſettling this new Colony where it is ſettled, and from the Terms upon which it was ſettled; and that was, the ſecuring the Nations of *Indians* which inhabited the vaſt Countries to the South and South-weſt of *Georgia*, in the *Britiſh* Intereſt. A thing ſo much the more neceſſary, conſidering the Views that the *French* had of the ſame kind; and of vaſt Importance to all the Colonies, as the maintaining of Friendſhip with theſe Nations, muſt neceſſarily interrupt the Correſpondence between the *French* Colonies of *Canada* and *Louviſiana*, upon which their being formidable to us *North America* abſolutely depends; ſince if ever they complete it, every Child that can be brought to comprehend a Map, will ſee that they will ſurround all our Colonies on the Main, from *Nova Scotia* to *Georgia*; but by this laſt Colony, we have bid fair for the interrupting their Deſign by engaging in our Intereſt thoſe *Indian* Nations moſt capable of doing us good, and them hurt: As for Inſtance, the *Lower* and *Upper Creeks*, a Nation ſo called from their Country being interſected with Rivers, which Country extends from the River *Savannah* to the Lakes of *Florida*, Southward and Weſtward, the *Cherokee Mountains*, and the River *Couſa*; ſo that we may eaſily diſcern how uſeful their Friendſhip muſt be to the Colonies of *Georgia* and *Carolina*, more eſpecially when it is conſidered that they are a very brave, a very numerous, and a very faithful Nation, as appears from their Conduct in the preſent War; in which they have ſhewn as heroic Courage as any the *Greek* Hiſtory records, and a Fidelity to their Allies, equal to that of the early *Romans*, which has been owing to Alliances concluded with Equity and ſupported by Integrity, and the ſame Conduct conſtantly purſued towards them, will for ever bind them to our Service.

The *Cherokees* poſſeſs the mountainous Country Weſtwards to the River *Miſſiſſippi*, as the *Chickeſaws* do the Plains to the South-weſt of the Country of the *Chorokees*, hath brave and numerous Nations, enthuſiaſtically fond of Liberty; in which it is our Intereſt to ſupport and maintain them againſt the *French*. Hence it appears, that in this Light the Truſtees were both well informed, and have happily ſucceeded; the Reaſon of the thing, and the Hiſtory of the Country plainly proves this; and, beſides, they have the only kind of Evidence in Credit with the Moderns; I mean, that all they promiſed themſelves has been verified by the Event.

By the happy Situation of this Country, the Inhabitants of it will not only be enabled to protect and defend the Northern Colonies that lay behind it, but may be alſo of great Uſe to *Jamaica* and the *Leeward Iſlands*. I am ſenſible that there are many that will affect to treat the firſt Part of this Aſſertion as ridiculous, and to ſneer at the latter as chimerical; but I have conſidered very well what I have aſſerted, and am from thence convinced of the Truth of what I ſay. I can very eaſily foreſee that it may be objected, my own Book ſhews that there are thouſands and ten thouſands in *Virginia*, *Penſylvania*, *New York*, the *Jerſeys*, and *New England*; and therefore it is a Jeſt to ſay that theſe great and populous Countries are to be protected by a handful of poor People juſt ſettled in *Georgia*: Yet for all this the Fact muſt be true, or that Colony abandoned. If we, here at home, continue to protect and to ſupport the People of *Georgia*, and in Conſequence of that Protection and Support induce them to conſult their private Intereſt, by purſuing ſuch Schemes as are moſt for the public Advantage, *Georgia* will very ſoon be full of People, and of uſeful People, who muſt have their Tools, their Cloathing, and other Neceſſaries from hence; and who will be in a Condition to pay us plentifully for all they have. *Georgia* if attended to, may become as populous as *Barbadoes*, or the *Bahama Iſlands*, and that in a very ſhort Space of Time; for if a large Bounty were given for a certain Number of Years, upon every Pound of Silk imported from thence, we ſhould ſee it a rich and thriving Colony, and People would flock thither from all Parts; who, by maintaining their Treaties with the *Indians*, might eſtabliſh an effectual Barrier againſt both the *French* and *Spaniards*, with all their *Indian* Allies. All this is highly poſſible and practicable, nay, and very probable too; and when once it comes to be a Fact, there will be no Sort of Abſurdity in ſaying the People of this Colony, and their *Indian* Allies, will afford Shelter and Protection to the Settlements that lie to the North of them. But this is not all, for, as I obſerved before, if the Inhabitants of *Georgia* once become numerous, they will then. in Conſequence of their Situation, be moſt able to help *Jamaica*, by a Supply of ſtout, well diſciplined, white Men, in Caſe of any Attack by the *French* or *Spaniards*; or, which is an Evil they are not altogether ſecure from, any ſudden Inſurrection of their Negroes. I very readily grant that I argue from an Uncertainty, that is to ſay, we are not ſure that this Colony will be ſo protected and ſupported; but if it be, the Conſequences are abſolutely certain; and the Conſideration of theſe Conſequences ought to be no mean Argument with our Government to maintain and ſupport it.

We are now come to the very laſt Article of our Remarks, which is the Hopes that may be rationally entertained of the Produce of this Country. We will begin with what the Truſtees certainly deſigned ſhould be the Staple Commodity of *Georgia*; I mean Silk: that this Country is very happily ſituated, that its Soil and Climate render it very fit for producing Silk, cannot be denied by any who are at all acquainted with this rich Branch of Commerce, which ſome very good Judges have affirmed to be much more conſiderable than either the Linen or the Woollen Manufacture. This Country lies along the Sea-ſide, is well watered within Land, has a Soil extremely proper for the Culture of the Mulberry-Tree, and is ſeated in a Latitude and Climate we might judge would prove agreeable to the Silk-worm. Theſe Circumſtances might very naturally lead one to expect that the Inhabitants might ſet about the Production of Silk in this Country, for their own Advantage. With a View to this, proper Perſons have been ſent thither: The Experiment has been tried, Silk made in *Georgia* has been ſent over, and Sir *Thomas Lombe*, and other excellent Judges of that Commodity have declared, that it is in all Reſpects as good, and works to the full as well, or better, than any *Piedmont* Silk, which ſtands us in twenty Shillings a Pound. At the very Time that this Section is under my Hand a Letter has been received from the Reverend Miniſter of the Proteſtant Congregation at *Ebenezer*, by which it plainly appears, that Silk may be produced in the greateſt Perfection, and without any conſiderable Difficulty in this Country, provided the People had proper Encouragement. We are not to underſtand by this, that the People in that Country affect to make Terms with us, and refuſe to raiſe Silk unleſs we will give them more for it than it is worth; for the Fact is quite otherwiſe, the Encouragement they demand, is not ſo much on their own Behalf as for the ſake of the Commodity.

All Beginnings are hard, and theſe People, in undertaking this Work, are beginning two Things at the ſame time, *viz.* to raiſe Silk, and to raiſe a Subſtance: If theſe interfere with each other, 'tis very plain that the former muſt give way to the latter. It is natural for People to wiſh to live well, but it is neceſſary that they ſhould live ſome way or other; and therefore this poor Clergyman honeſtly tells us, that his People having now got into a Way of winding the Silk off the Cocones, they would apply themſelves more diligently to this Buſineſs, if they were not called off by other Cares, that is, to get wherewithal to live upon. If therefore we really mean to promote the raiſing of Silk in general, and aim, inſtead of Curioſity, to make it a Commodity, we need only declare a Bounty upon it: This would ſpeedily do the Bufineſs; it would encourage every body there to turn their Hands to this Work, and it is a Work to which all Hands may be turned, Women and Children as well as Men; and no ſuch hard Labour as to render Slaves neceſſary. What this might produce we may in ſome meaſure gueſs, from what the Culture of Silk produces in *Italy*; where four and five Pounds an Acre are common Prices for Lands that bear Mulberry-Trees, where the Leaves are ſold at a high Rate, and where the poor People willingly give their Time and Labour, in feeding and attending the Worms, for half the Price of the Silk; which is but divided between the Labourer and the Landholder; amounting commonly to between three and four Pounds a Tree. If once this Buſineſs was effectually ſet a-going, there is no Queſtion but the Progreſs would be very ſpeedy, and the Bounty paid for a few Years, would moſt effectually eſtabliſh both Commodity and Colony.

On the other Hand it ought to be conſidered, that the Price of *Georgia* Silk, and the Bounty upon it, would be both paid in our own Commodities, whereas we pay now for *Piedmont* Silk wholly in ready Money; ſo that the Difference to the Nation will be but a very Trifle; perhaps I ſhould not carry the Thing too far, if I ſaid nothing. It is very poſſible, that when this Trade came to flouriſh in *Georgia*, it might alſo be ſet up in *Carolina*, and even in *Virginia*, there being no ſort of Doubt, that with due Attention and Application, Silk might be produced in both theſe Colonies; neither is this any new Diſcovery, but what has been obſerved by all the Writers upon the Affairs of the Plantations for many Years paſt; but if it ſhould be the Caſe, it would not be at all detrimental to this Nation; but on the contrary, this very Thing will lay us under a new Obligation to *Georgia*, for then we ſhould have the Silk Manufacture as much in our Hands, if not more, than we have the Woollen; and how vaſt an Alteration this would make in the Balance of our Trade, may be eaſily ſhewn.

It is to be obſerved, that in all Silk Manufactures there are two Kinds of Silk employed, one for the Warp or Cane, which is the very Silk that our Colonies would produce; but before this Silk can be uſed, it muſt be thrown by an Engine into what is called Organzine, for which there is at preſent but one Engine in this Kingdom, which is the famous Silk-mill at *Derby*; ſince the erecting of which his *Sardinian* Majeſty has prohibited the Exportation of raw Silk from his Dominions; ſo that what we have from his Country is Organzine. He has done ſtill more for the Benefit of his Subjects; for he has laid ſuch high Duties upon our Manufactures, as amount almoſt to a Prohibition; ſo that as I have more than once ſaid, we are obliged to pay for this Silk in ready Money, for it is ſo neceſſary to us, that our Silk Manufactures cannot be carried on without it; and by this Means his Subjects take annually from this Nation about two hundred thouſand Pounds in Money. Beſides what we receive from *Piedmont*, we have likewiſe conſiderable Quantities of raw Silk of the ſame Kind with that from *Genoa*, and other Parts of *Italy*; which is thrown into Organzine by the Engine at *Derby*.

As to the other Kind of Silk, which makes the Woof, or Shute, it comes to us from many Places, but particularly by the Way of *Turkey*; ſo that if we had the former Kind of Silk from our Plantations, it would enable us to conſume a much greater Quantity of this other Silk that cometh to us by the Way of *Turkey*, for which we pay in our Woollen Manufactures: So that here is plainly a double Advantage; firſt, of ſaving the ready Money which is paid for one Kind of Silk; and next increaſing the Exportation of our own Goods, for which we bring Home in exchange that other Kind of Silk; and if once we were in poſſeſſion of theſe Advantages, there would follow a third, equal, if not ſuperior, to both; for we ſhould be then inconteſtibly able to fabricate all Kinds of wrought Silks at ſo cheap a Rate as to under-ſell moſt Parts of *Europe*; which would draw a Demand from *Germany*, *Flanders*, *Spain*, and *Portugal*, to the inconceivable Benefit of the Merchants and Manufacturers of this Kingdom, who are beyond all Queſtion, in conjunction with the Seamen, who muſt thrive when they do, the moſt valuable People in it, and by whoſe Induſtry the reſt are maintained. Thus we ſee that the Deſign of eſtabliſhing the Buſineſs of raiſing Silk in *Georgia*, is in itſelf a Matter of vaſt Moment, not to the Truſtees or the Inhabitants of that new Colony only, but to the whole Nation; a Thing that would give a new Turn to our Trade; employ a Multitude of Hands at Home, by promoting both the Silk and Woollen Manufactures; enlarge our Commerce Abroad; increaſe our Shipping; augment the Number of our Seamen, and enable us the better to bear thoſe vaſt Expences into which, it is ſaid, the Circumſtances of Affairs Abroad have neceſſarily plunged us.

Before I part with this Subject, I think it becomes me to add ſomewhat with reſpect to the Conduct of the King of *Sardinia*, which, from what I have ſaid above, may be thought in ſome meaſure unkind towards this Nation; whereas, properly underſtood, nothing of that ſort will appear. The firſt and great Concern of every Prince, or at leaſt of every wiſe and good Prince, is the Welfare of his own Subjects; and with reſpect to the Monarch of whom we are ſpeaking, he has purſued it with great Steadineſs and Prudence. His Duties upon *French* Commodities are very low; ſo that his Subjects are furniſhed from thence with Woollen Manufactures at very reaſonable Rates, and by putting our Goods under a very high Cuſtom, his Subjects ſell their Silk dear, and for ready Money: And thus, by the Interpoſition of the Government, they make the moſt of their Goods, and are as rich as the Nature and Extent of their Country will permit them to be. It muſt indeed be allowed, that as Things ſtand at preſent, his *Sardinian* Majeſty's political and commercial Concerns are in a manner oppoſite to each other; but this does not hinder him from purſuing both. The Balance of Power in *Italy* is a Thing of vaſt Importance to him, ſince, if it ſhould be loſt, he would ſcarce be able to keep his Dominions; but the Trade of his Subjects is likewiſe of very great Importance, for without that his Dominions would be hardly worth keeping. His Conduct therefore, in both Reſpects, is wiſe and juſt, though it falls out to be in ſome meaſure prejudicial to us, and that too in our tendereſt Concerns, our Manufactures and our Trade.

But what then, ought we to differ with or blame him? Nothing like it: We ought, on the contrary, to admire and imitate him; we ought to make the ſame Diſtinction that he does, between our political and commercial Intereſts; we ought to ſhew ourſelves firm in ſupporting the former, and in order to it we muſt be vigorous in promoting the latter. We ſee very plainly and clearly, or at leaſt we may ſee it if we will, that there is nothing more practicable in the World, than the raiſing the Silk Trade in *Georgia*; the Country is fit for it, the Climate is fit for it; we have raiſed, and may raiſe, what Quantities of Mulberry-Trees we will: The Silkworm thrives there wonderfully well, which however is the Caſe of very few Countries; and the Silk brought from thence has been found excellent. If all this does not paſs for Demonſtration in a Matter of this Nature, it is in vain to look for Demonſtration. On the other hand, that the raiſing of Silk in *Georgia* would fill that Country with White People; would ſecure to us the Affection, and the Aſſiſtance of the neighbouring *Indian* Nations, and ſo render it an effectual Frontier, is beyond all Diſpute; and that the Advantages accruing to this Kingdom, by enabling that Plantation to furniſh us with Silk equal in Quality to the *Italian*, are ſo plain and certain that I make no Scruple of affirming, that if due Care was taken in this Reſpect, all the Expence neceſſary to eſtabliſh the Silk Trade there, would not amount to above one Year's Purchaſe of the Profits, five and twenty Years hence: By which I mean, that the Advantages accruing from this Colony to *Great-Britain*, in 1771, ſuppoſing the Silk Trade immediately ſettled there, and by immediately, I mean no more than as ſoon as poſſible, will equal all that the Public has, or may lay out upon the Settlement before it becomes able to maintain itſelf. We manure our Lands before we expect Crops from them; we manufacture our Goods before we ſend them to Market; we educate our Children before we expect they ſhould provide for themſelves; and why ſhould not we take the ſame Care of this Colony, before we expect public Advantages from thence?

It has been already ſhewn what may be expected from the different Method purſued in the eſtabliſhing this and other Colonies; and how eaſily, and how entirely, it may be turned to the Service of *Great Britain*, ſo as in the Compaſs of a few Years to anſwer national Expectations, better than Colonies that have been much longer ſettled. But we muſt keep theſe Points in View; we muſt proceed as we have begun, or all that we have hitherto done will be thrown away; and if it ſhould, we can blame no body but ourſelves. We have ſeen the Silk Trade planted there; we have ſeen it take Root, and even bring forth Bloſſoms, which, if the beſt Judges may be truſted, promiſe the faireſt Fruit; let it not then be loſt for a little Care or a little Expence, if that be neceſſary, in pruning and watering it.

I might likewiſe take Notice of the raiſing Wine here; indeed I have promiſed it, but I have inſiſted ſo long upon Silk, that I can be but ſhort upon this Head; yet ſomething I will ſay. There were great Hopes that this Improvement might ſoon have been brought to Perfection, but ſome Difficulties have been found in the Way, and they are chiefly theſe: The Coat of the natural Grape is not ſtrong enough, and therefore when it grows ripe they burſt. The Froſt, about the vernal Equinox, frequently kills the Vines when they are ſhooting; and as to the *European* Grapes, it is found that the Inſects of the Country deſtroy them. Yet Experience has ſhewn, that by grafting the *European* on the wild Vine, all theſe Inconveniencies are in a great Meaſure prevented; for then it ſhoots later, and ſo eſcapes the Froſt better; the Grape Skins become thicker and ſtronger, and Inſects do it leſs Prejudice: So that there are ſtill Hopes that Wine may be made there, both in great Plenty, and in great Perfection; and if we reflect on the Miſtake we made, with reſpect to the *Cape of Good Hope*, which we abandoned as worth nothing, and which the *Dutch*, by their Induſtry, have made one of the fineſt and moſt valuable Plantations in the World; we ſhall not be haſty in ſlighting theſe Hopes.

Beſides, there is nothing wanting in this Country but a ſufficient Number of Inhabitants, to render it, in every reſpect, a fertile and pleaſant Settlement. They reap very good Wheat here in *May*; they mow their Graſs in *June*; they might cultivate Rice here to great Advantage, if that was judged proper, which, however, for many good Reaſons is thought not ſo; Olives flouriſh there in the greateſt Perfection; and ſo do Oranges in the South Part of the Province, where (I ſpeak on the Credit of Eye-witneſſes) an Orange Tree has been known, in ſeven Years Time, to have been fifteen Foot from the Root to the Branches.

Theſe Conſiderations, with Reſpect to the Conſequences that may follow from the Improvement of this laſt Settlement, which I look upon to be the Honour of the preſent Age, have proceeded ſolely from a regard to Truth, and to the public Service, which are the ſame Motives that have directed me through the Courſe of this Undertaking. It appeared to me that there were many things, in relation to moſt of the Colonies, and particularly in reſpect to this, about which the World in general was either miſinformed or not informed at all; and therefore I thought it would be doing ſome Service to Trade, to the Colonies, and to the Public, if theſe Points were fully and fairly treated; for which Purpoſe I took Pains to procure the beſt Materials I could, and have digeſted them in the beſt Method I was able, but in ſuch a way that the principal Facts appear all along with their proper Authorities; ſo that the Reader ſees to what he gives Credit, and is not obliged to take any thing upon Truſt from me; all my Reaſonings being ſubmitted, as they ought to be, to his Judgment, with full Liberty to admit as little or as much as he thinks fit, when he has duly weighed the Arguments that are offered in ſupport of them. It is in this way, and in this way only, that ſedentary Perſons can make themſelves uſeful to Society, and in this way they may be very uſeful, by furniſhing others with an Opportunity of viewing and reflecting upon things which otherwiſe might never have come to their Notice.

One thing more I muſt obſerve before I conclude this Section, which is, that if there be any thing in it, or indeed in any of thoſe relating to the *Britiſh* Plantations, which ought, in a particular Manner, to claim the Attention of the Public; it is, in a great Meaſure, due to the Lights afforded by the Honourable *James Oglethorpe*, Eſq; from whom, if the Author has caught any Part of that generous Spirit, which inclines a Man to bend all his Thoughts, and turn all his Labours to the Service of his Country, it is but juſt that he ſhould acknowledge it; and this he is the more ready to do, becauſe if there be any Merit in his Performance, capable of making it known to, and eſteemed by, Poſterity; he would willingly conſecrate it as a Mark of his Eſteem and Gratitude, for the many Informations he has received, and the right Turn that has been given to his Inquiries, by that knowing and worthy Perſon, who is equally happy in rendering the greateſt perſonal Services himſelf to the Community, and by infuſing the like Diſpoſition in thers, both by his Example and Converſation.

There remains, in order to complete our Hiſtory of the *Weſt Indies*, no more than an Account of the *French* and *Dutch* Settlements in that Part of the World, in reference to which we may have leave to be the ſhorter in our Relations, as we have already taken Occaſion to deliver many things concerning the former, and there cannot be a great deal ſaid with reſpect to the latter. In treating both, however, we ſhall endeavour to repreſent all things fairly and agreeable to Truth, without exaggerating, as ſome have done, the Power of the *French*, or as others, the Induſtry of the *Dutch*: Both indeed are worthy our Notice and our Attention, but neither as things ſtand at preſent can juſtly provoke our Envy, ſince there is no Compariſon between our Condition and theirs; nor can we juſtly apprehend any conſiderable Alteration in our Circumſtances but what muſt follow from our own Negligence, rather than from any Attempts of theirs; though it muſt be confeſſed that both are ready enough to catch at any Advantages for promoting their Intereſts in that Part of the World, though it ſhould be at the Expence of their Neighbours; things that ought to teach us Care and Circumſpection, which are as neceſſary to ſecure Proſperity, as to obtain it.

SECTION

SECTION XXII.

A ſuccinct Hiſtory of the DISCOVERIES, SETTLEMENTS, *and* CONQUESTS, *made by the* FRENCH *in* America; *a View of their Policy, Numbers, Commerce, and Strength in that Part of the World; and ſome Conjectures as to the Event of their Deſigns; extracted chiefly from their own Authors.*

1. *An introductory Account of the firſt Voyages made, or ſaid to be made, by the* French *to* America, *with a more particular Detail of that of* John Verazzano, *or* Verazani, *under the Reign of* Francis I. 2. *The Voyage of* James Cartier *of* St. Malo's, *who diſcovered* Canada; *and a curious Account of the Etymology of that Word.* 3. *The firſt Eſtabliſhment of the* French *on the Banks of the River of* St. Laurence; *the building of the Town of* Quebec, *and the Difficulties found in fixing a Colony in thoſe Parts.* 4. *A Deſcription of the Savages, Natives of* Canada, *their Cuſtoms, Manners, Superſtitions, and enthuſiaſtic Fondneſs for their own Way of Life.* 5. *A conciſe Account of the* Illinois, *by Mr.* Joutel; *and a larger Relation of the Cuſtoms and Manners of the ſame Nation, by Father* Marquette. 6. *A more particular Deſcription of the Colony of* Canada, *or* New France, *the City of* Quebec, *and other Places therein, with an Account of the* French *Commerce with the* Indians, *and their Force in thoſe Parts.* 7. *The preſent State of that Colony, its Strength, Produce, Shipping, and Importance to* France, *fairly repreſented.* 8. *The Conſequence of* Acadia, Placentia, *and* Iſle Royal *to* France, *in reſpect to their Fiſhery,* &c. *ſet in its true Light.* 9. *The firſt Expeditions of the* French *to the* Weſt Indies, *their Views, and the Conſequences of thoſe Expeditions in relation to Commerce.* 10. *The Settlements made by that Nation in the* Leeward Iſlands; *the Situation, Extent, Produce, Strength and Importance of thoſe Iſlands.* 11. *Their Trade with our Northern Colonies, their own directly to* France, *and the Value of the Sugars they export, with other Particulars.* 12. *A brief Relation of the firſt ſettling of the Subjects of* France *on the Iſland of* Hiſpaniola, *or* St. Domingo; *the amazing Progreſs of their Colony there; a true Repreſentation of its preſent Condition and vaſt Importance.* 13. *A ſhort Account of the various Attempts of the* French, *to ſeize Part of the Southern Coaſts of* Florida; *their repeated Diſappointments; and new Project of finding the Courſe and Mouth of the great River of* Miſſiſſippi. 14. *The Conſequences of theſe Inquiries; the making this Affair a Bubble; the Reſolution of ſettling* Louviſiana *owing to that Bubble; the Nature of that Settlement, and what may be probably expected from it in Time, both as to the Benefit and Diſadvantage of the* French *Trade.* 15. *A fair Proſpect of the preſent Situation of the* French *Colonies, Affairs and Commerce throughout all* America, *with ſome ſhort Obſervations and Remarks, in order to ſet the Subject of this Section in the cleareſt and juſteſt Light poſſible.*

1. THE national Vanity of the *French* is in nothing more viſible, than in the Accounts that ſome of their Authors have given us of their Settlements in *America*. *William Poſtel* has had the Aſſurance to aſſert, that the *French* were not only the firſt Diſcoverers of *America*, but that the ancient *Gauls* carried on the Fiſhery on the Banks of *Newfoundland*, before the coming of *Jeſus Chriſt*; but, that finding thoſe Countries without Corn, without Cities, and but very thinly inhabited, they deſpiſed and neglected theſe Diſcoveries; which Dream of his is as ridiculous and abſurd, as it is groundleſs and without Foundation. We have ſome Accounts of *Frenchmen* who viſited *North America* at the Cloſe of the fifteenth, and the Beginning of the ſixteenth, Century; but the Relations we have are very uncertain, and at moſt prove no more than this, that ſome *French* Seamen and Pilots that had been employed in the *Newfoundland* Fiſhery, had ſome Knowledge of the adjacent Continent, which is not a thing of very great Conſequence.

At length, in 1523, *Francis* the Iſt, one of the wiſeſt and greateſt Monarchs the *French* ever had, began to think of making Eſtabliſhments on the Coaſt of *America*; and with this View he fitted out *John Verazzano*, a *Florentine*, who had, under his Command, only one Ship, with fifty Men on board, and Proviſions for eight Months; he returned to *Dieppe* in *July* 1524; but we know nothing of his Diſcoveries at that Time. He ſailed, towards the latter end of the ſucceeding Year, on the ſame Deſign, and arrived on the Coaſt of *North America*, and it is not very clear upon what Part of that Coaſt he arrived. He ſeems to have been a timorous Navigator; for he did not care to venture himſelf within any of the Bays or Ports that he ſaw before him; but wanting Water, and lying in a Road very near the Shore, he perſuaded one of his Seamen to ſwim thither; and by the Help of Preſents, with which he furniſhed him, procure what they ſtood in need of from the Natives, who came down in Crouds upon the Strand, to gaze upon the Ship. The poor Fellow, when he got on Shore, and came to have a nearer View of the Savages, was ſo exceſſively amazed at their uncouth Appearance, that throwing his Preſents down upon the Ground, he ran as faſt as he could to throw himſelf again into the Sea, that without loſs of Time he might recover his Ship. But the Waves diſappointing his Deſign, threw him back upon the Shore, with ſuch Force, that he lay breathleſs upon the Sands, and had, in all probability, been drowned, if the Savages had not haſtened to his Relief; they took him up, carried him in their Arms to a Place at ſome Diſtance, and took all the Pains they could to bring him to himſelf.

But when he recovered his Senſes a little, and ſaw there were none but Savages about him, he ſet up ſuch a Cry, as made the Woods ring; and the poor *Indians*, hoping to quiet him, cried as loud or louder than he, which terrified him ſtill more. At laſt they began to make a great Fire, before which they undreſſed him, admiring greatly the Whiteneſs of his Skin, and the Hair on ſeveral Parts of his Body; the Seaman taking it for granted, that they were going to eat him, or burn him, trembled exceſſively, and thoſe on board the Ship were alſo very much frightened, for they ſaw every thing that was done, and expected every Moment when he ſhould have been ſacrificed; by degrees, however, they were all ſatisfied that the Savages meant him no manner of Harm; for after drying his Cloaths, they ſuffered him to put them on again, and having given him ſomething to eat, conducted him, at his Requeſt, to the Sea-ſide, and, retiring to ſome Diſtance, looked on till he ſwam ſafely aboard the Ship, and then quietly departed; as for *Verazzano*, he returned home to *France*, reported nothing but this Story, and that it happened in the Latitude of fifty Degrees. This very plainly ſhews, that neither he nor his People were of a Diſpoſition fit for the Taſk they had undertaken.

However, they engaged the next Year in a third Voyage, but what became of him was very uncertain; ſome ſay that he was loſt; others, that he went aſhore with Part of his Crew, and that falling into the Hands of the Savages, they killed and eat them, which, however, is very improbable; certain it is, that in this Voyage he was loſt: And from what the Reader has ſeen, he will be of Opinion that the *French* have no great Cauſe to boaſt of his Expeditions, which were thirty Years later than thoſe of the *Cabots*.

2. After this unlucky Adventure, it was ſome Years before the *French* thought of fitting out any more Ships for Diſcovery; but at length Admiral *Chabot* prevailed upon *James Cartier*, an experienced Pilot of *St. Malo*'s, to undertake another Expedition: Upon which he ſailed from that Port the 20th of *April* 1734, with two Ships of ſixty Ton's each, and one hundred and twenty Men. He arrived on the 10th of *May* on the Coaſt of *Newfoundland*, and finding the Country covered with Ice and Snow, ſailed to the Southward, and entered into a Bay, which bears, at preſent, the Name of *Spaniſh Harbour*; where, liking both the Country and the People, he went aſhore. It is reported that the *Spaniards* had long before viſited this Coaſt, and there are ſome Authorities to prove it; but finding no Signs of any Minerals, they were in a Hurry to go off again, crying out in their Language *Aca Nada!* that is, *there is nothing here*, meaning the Country was good for nothing; which Words the *Indians* retained, and when the *French* came aſhore, cried out *Aca Nada! Aca Nada!* which they took for the Name of the Country, ſo that it has been called *Canada* ever ſince. This is a very ſtrange Derivation, but as we find it in the beſt *French* Authors, it is worth ſetting down.

He afterwards diſcovered a good Part of the Gulph of *St. Laurence*, and of the Iſlands that are ſituated therein; after which he returned to *France*, where he arrived ſafely on the 5th of *September*. The next Year he was ſent again with three large Ships, in order to make a Settlement; and becauſe he entered the Gulph on the Feaſt of *St. Laurence*, he gave it that Name, which was afterwards extended to the River, which in his firſt Voyage he had called the River of *Canada*. He was very ſucceſsful in this Expedition, and went up as high as the Fall of *St. Louis*, giving Names to the Iſlands and Rivers as he thought proper; and it is certain that he ſhewed himſelf, in the Courſe of this Voyage, a very expert Seaman. But though at firſt he was extremely well pleaſed with the Country, yet the Scurvy getting among his People, and bringing them into a very low Condition, ſo that twenty-five of them died in a very ſhort Space of Time; he began to alter his Sentiments, and to fancy that it was a very unwholeſome and bad Climate. At laſt, however, when he found himſelf attacked with this Diſtemper, he applied to the Inhabitants, and enquired of them, as well as he could, whether they knew of any Cure for this Diſtemper? Upon which they taught him to make an Infuſion of the Leaves and Bark of the White-thorn-tree, by which they were all very ſpeedily recovered.

As ſoon as the Seaſon of the Year would permit, he returned into *France*, where he arrived in the Spring of 1536; but there is no obtaining any Certainty as to the Account he gave of the Country which he had diſcovered: If we truſt to his written Memoirs, it will appear, that he gave King *Francis* I. a very juſt and fair Account of the Places he had viſited, and repreſented the ſettling a Colony in that Part of the World, as an Action extremely worthy of the moſt Chriſtian King; but if we adhere to what is generally reported in *France*, either he, or ſome who came home with him, acted a very different Part, and gave ſo diſcouraging a View of this new-found Country, that the King looked upon it as not worth the keeping, or troubling himſelf about.

However, three or four Years after, the Project of ſettling in this Country began again to be talked of, and a Gentleman of *Picardy*, whoſe Name was *Francis de la Roque*, Lord of *Roberval*, undertook to accompliſh this Deſign; to qualify him for which, King *Francis* I. by Letters Patent, dated *January* 15, 1540, granted him abundance of fine Titles, ſuch as Viceroy, and Lieutenant General in *Canada*, *Hockelaga*, *Saguenay*, *Newfoundland*, *Belliſle*, *Cape Breton*, *Labrador*; the grand Bay and Coaſt of *Baccaloes*; giving him the ſame Power and Authority in thoſe Places that he had himſelf, which was very eaſily done, ſince there was not a *Frenchman*, or a Cottage, in any one of the Places, nor had he any more Title to moſt of them, than to Lands in the Moon. However this Gentleman, who had a good Eſtate, and was a Man of Family, reſolved to purſue this Expedition, and prevailed upon *James Cartier*, by the large Promiſes he made him, to undertake another Voyage to the Coaſt of *Canada* in Quality of his Pilot.

3. It was this Gentleman that, in two or three Voyages he made, firſt fixed ſome *French* Settlements in *America*, which however were afterwards abandoned. After this Time the Navigation of the River *St. Laurence* fell into different Hands, and from time to time Voyages were made thither to very little Purpoſe. In 1608, or thereabouts, they laid the Foundation of the City of *Quebec*, after having ſettled, and abandoned, ſeveral other Places. It was ſome time after, that *Champlain* beſtowed the Name of *New France* upon this Country; but then he took in likewiſe *Acadia*, and other Coaſts, that had long before been diſcovered by us; for the *French*, according to a Maxim natural enough with them, thought every Country which they had not ſeen before unknown to all the reſt of the World, and ſo ſet up Croſſes and the *French* Arms, to ſhew that they had taken Poſſeſſion of them. It muſt be obſerved, that moſt of theſe Expeditions were made in the Reign of our King *James* I. when the *Engliſh* Colonies were but thin, and far enough from being ſtrong; and yet his Subjects aſſerted their prior Rights to thoſe Places of which the *French* had taken Poſſeſſion, demoliſhed their Croſſes, drove away the People where they found them, and forced them to confine their Views to the Gulph and River of *St. Laurence*, where, with much-a-do, in the Space of twenty Years, they raiſed three or four Settlements, of which *Quebec* was, as it ſtill is, the chief.

In 1629 the *Engliſh*, under the Command of Sir *David Kerk*, followed them even thither, as looking upon *Canada* to be within the Limits of the *Engliſh* Dominions, and made themſelves Maſters of *Quebec*, and of all their Settlements. When this News arrived in *France*, that new diſcovered Country was looked upon to be of ſo little Conſequence, that it was long debated in the *French* Councils, whether they ſhould demand the Reſtitution of this Colony, though they already had eſtabliſhed a Company for managing that Commerce; but at laſt it was reſolved, that it ſhould be demanded; and it was accordingly reſtored by the Treaty of 1632, but in a very bad Condition, and as a Place hardly worth the keeping. Mr. *Champlain* was the firſt Governor after it fell again into the Hands of the *French*, and from this Time forward they purſued their Diſcoveries and Settlements in thoſe Parts, without any Moleſtation from us, but ſtill with many and great Difficulties; ſo that though they have often changed their Manner of conducting their Affairs in theſe Parts of the World; have applied to, and received the Protection of the ableſt of their Miniſters; and have had Company after Company ſet up, on purpoſe to promote and encourage their Commerce, yet have they been able to make no greater Matter of it, though, beſides their Pains and Attention, theſe Settlements in *Canada* have actually coſt the *French* vaſt Sums of Money.

The Reaſons of theſe many and great Difficulties are very eaſy to be found; for with reſpect to *France* itſelf, though it be a very large Country, and tolerably well peopled, yet it is the Inhabitants only of Part of its Coaſts, that are inclined to naval Expeditions, or, to ſay the Truth, are capable of them, and they have not a Force ſufficient for any great Undertakings. In the next place, the Country of *Canada* is very far from being agreeable to *French* Conſtitutions, more eſpecially before there were any regular Settlements made there; ſo that of Numbers of People ſent thither, a great Part periſhed by the Hardſhips they endured; many of them took the firſt Opportunity of returning; and at their Return gave ſuch a dreadful Account of the Colony they had left, as diſcouraged others from going thither, and made the Miniſtry repent of the Pains they had taken about it; but the greateſt Obſtacle of all was, their continual Wars with the Natives, of which they have given us very large Accounts, that in my Opinion, do no great Honour either to the particular Perſons who have had the Direction of their Affairs in thoſe Colonies, or the *French* Nation in general. Before we proceed, however, to an exact Deſcription of this Country, it will be very requiſite to ſay ſomething of its original Inhabitants, their Cuſtoms, and Manners, and the rather becauſe what we ſhall offer on that Subject, will be equally uſeful and entertaining.

4. Among all the *French* Writers who have taken upon them to treat of this Subject, and to deſcribe the *Indians* with whom they had converſed, the moſt ſenſible and moſt worthy of Credit that I have met with is Mr. *Joutel*, who accompanied the famous Monſ. *de Sale*, in his Diſcoveries on the River *Miſſiſſippi*. He behaved himſelf in every reſpect ſo as to obtain an eſtabliſhed Reputation; and as no body had better Opportunities than he to be acquainted with the Nations he deſcribes, ſo I ſee not the leaſt Reaſon to doubt of what he has delivered about them. As to the Accounts of *Lahontain*, and Father *Hennepin*, they have been formerly very much admired, yet we are now very well ſatisfied that they are rather Romances than Relations, and that their Authors had their particular Schemes ſo much in View, that they have made no manner of Scruple of abuſing the Confidence of Mankind; ſo that if we except ſome Parts of their Writings which relate to Matters in which they could not ſo well deceive their Readers, they are not much to be depended upon. But for Mr. *Joutel*, he did not ſet up for a great Politician, but confined himſelf barely to the reporting what he ſaw; which he does in a very plain, natural Way: Whereas moſt of the Miſſionaries either magnify the Savages at the Expence of *Europeans*, or elſe run them down, as if they were very little better than Beaſts. Our Author comes neareſt to the latter Opinion, which by comparing him with the later Writers, appears to be moſt conſiſtent with Truth; and if we follow the Lights he gives us, we muſt regard them as Men as much diſtinguiſhed from the reſt of the human Race, as the Country they live in is from the reſt of the World: He ſpeaks of them thus:

Allowing, ſays he, that there are ſome *Barbarians* leſs wicked and brutal than the others; yet there are none good, nor thoroughly capable of knowing ſuch Things as are above the Reach of our Senſes: There is no relying on them; there is always Cauſe to ſuſpect them: And in ſhort, before a Savage can be made a Chriſtian, it is requiſite to make him a Man; and we look upon theſe Savages as having neither King nor Laws, and, what is moſt deplorable, no God; for if we rightly examine their Sentiments and their Actions, it does not appear they have any ſort of Religion, or well formed Notion of a Deity; if ſome of them, upon certain Occaſions, do ſometimes own a firſt or ſovereign Being, or pay ſome Veneration to the Sun; as to the firſt Article, they deliver themſelves in ſuch a confuſed manner, and with ſo many Contradictions and Extravagancies that it plainly appears they neither know or believe any thing of it; and as for the ſecond, it is only bare Cuſtom, without any ſerious Reflections on their Part. The ſame Traveller, ſpeaking of an Interview he had with the Chiefs of another Nation, to the weſtward of the River *Miſſiſſippi*, ſays, their Elders came to meet us in their Formalities, which conſiſted in ſome Goat-ſkins dreſſed, and painted of ſeveral Colours; which they wore on their Shoulders like Belts, and Plumes of Feathers of ſeveral Colours on their Heads like Coronets; ſix or ſeven of them had ſquare Sword-Blades, like the *Spaniſh*, on the Hilts whereof they had faſtened great Plumes of Feathers, and Hawks-bells; ſome of them had Clubs, which they called Head-breakers; ſome only their Bows and Arrows; others Pieces of white Linen, reaching from Shoulder to Shoulder: All their Faces were daubed with black and red: There were twelve Elders, who walked in the Middle, and the Youth and Warriors in Ranks, on the right and left of the old Men. Being come up to us in that Manner, he that conducted us made a Sign for us to halt, which, when he had done, all the old Men lifted up their right Hand above their Heads, crying in a moſt ridiculous Manner; but it behoved us to have a care of Laughing. That done, they came and embraced us, uſing all Sorts of Endearments. The whole Company conducted us, afterwards, to their Chief's Cottage, and after we had ſtaid there a ſhort Time, they led us to a larger Cottage, a quarter of a League from thence, being the Hut in which they had their public Rejoicings, and great Aſſemblies: We found it furniſhed with Mats for us to ſit on. The Elders ſeated themſelves round about it, and they brought us to eat ſome Sagamite, which is their Pottage, little Beans, Bread made of *Indian* Corn, and another Sort they made with boiled Flour; and at laſt they made us ſmoak. The Cottages that are inhabited, are not each of them for a private Family, for in ſome of them there are fifteen or twenty, each of which has its Nook, or Corner-bed, and other Utenſils to itſelf, but without any Partition to ſeparate it from the reſt: However, they have nothing in common beſides the Fire, which is in the Midſt of the Hut, and never goes out: It is made of great Trees, the Ends whereof are laid together, ſo that when once lighted, it laſts a long Time, and the firſt Comer takes Care to keep it up.

The Cottages are round at the Top, after the manner of a Bee-Hive, or a Rick of Hay; ſome of them are ſix Foot in Diameter: In order to build them they ſet up long Poles as thick as a Man's Leg, tall and ſtrait; and placing them in a Circle, join the Tops together; then they faſten and cover them with Weeds. When they remove their Dwellings, they generally burn the Cottages, and build new ones on the Ground they deſign to inhabit. Their Moveables are ſome Buffaloes or Bullocks Skins well cured, ſome Mats cloſe wove, wherewith they adorn their Huts, and ſome Earthen Veſſels, which they are very ſkilful in making, and wherein they boil their Fleſh, Roots, and Sagamite Pottage. They have alſo ſome ſmall Baſkets made of Canes, ſerving to put their Fruit and other Proviſions in. Their Beds are made of Canes, raiſed two or three Feet above the Ground, handſomely fitted with Mats and Bullocks Hides, or Goats Skins, which ſerve them inſtead of Feather-beds, Quilts and Blankets, and theſe Beds are parted one from another by Mats hung up. Their Tillage conſiſts in breaking up juſt the Surface of the Earth with a wooden Inſtrument like a Pick-ax, which they make by ſplitting the End of a thick Piece of Wood, which ſerves for the Handle, and putting another Piece of Wood ſharp-pointed at one End into the Slit. This Inſtrument ſerves them inſtead of a Hoe or Spade; for they have no Iron Tools. When the Land has been thus broke up, the Women ſow and plant the *Indian* Corn, Beans, Pompions, Water-Melons, and other Grain and Garden-Stuff. The *Indians* are generally handſome, but diſfigure themſelves by making Streaks on their Jaws, from the Top of their Forehead down the Noſe to the Tip of the Chin, which is done by pricking the Skin till it bleeds, and then ſtrewing fine Charcoal on the Skin, which ſinks in and mixes with the Blood. They alſo make, after the ſame Manner, the Figures of living Creatures, of Leaves and Flowers, on their Shoulders, Thighs, and other Parts of their Bodies; and paint themſelves, as has been ſaid before, with Black and Red, and ſometimes both together. The Women are generally well-ſhaped, and would not be diſagreeable did they adhere to Nature; but they diſguiſe themſelves as ridiculouſly as the Men, not only with the Streaks they have like them down their Faces, but by other Figures they make at the Corner of their Eyes and on their Bodies, particularly on their Boſoms. The Women do all the Work in the Cottage, either in pounding the *Indian* Corn and baking their Bread, and dreſſing their other Proviſion, drying, parching, and ſmoaking their Fleſh, fetching the Wood they have Occaſion for, or the Fleſh of wild Beaſts killed by their Huſbands in the Woods, which are often at a great Diſtance. I did not obſerve that their Women were naturally given to Leudneſs; but their Virtue is not Proof againſt ſome of our Toys when preſented to them, as Needles, Knives, and more particularly Strings of Beads, whereof they make Necklaces and Bracelets: That Temptation is rarely reſiſted by them; and the leſs, becauſe they have no Religion or Law to prohibit that Practice. It is true, their Huſbands, when they take them in the Fact, ſometimes do puniſh them, either by Separation, or otherwiſe.

The Country of theſe *Indians* being generally warm, almoſt all of them go naked, unleſs when the North Wind blows; then they cover themſelves with a Buffalo's Hide, or a Goat's ſkin Card. The Women wear nothing but a Skin or ſome Sort of Clout, hanging round them like a Petticoat, and reaching half way down their Legs before and behind: On their Heads they wear nothing but their Hair platted and knotted behind. As for their Temper, it may be ſaid of theſe as of all other *Indians* of that great Continent, that they are not miſchievous, unleſs wronged or attacked, in which Caſe they are fierce and revengeful. They watch all Opportunities to be revenged, and never let any ſlip when offered, which is the Cauſe of their being continually at War with their Neighbours, and of that martial Humour ſo predominant among them. As to the Knowledge of God, they did not ſeem to us to have any fixed Notion of him; it is true, we met with ſome in our Way, who, as far as we could judge, believed there was ſome ſuperior Being which was above all things, and this they teſtified by lifting up their Hands and Eyes to Heaven, yet without any Manner of Concern, or believing that the ſaid exalted Being does regard at all what is done here below. However, none of them having any Places of Worſhip, Ceremonies, or Prayers, to manifeſt their Devotion, it may be ſaid of them all, that they have no Religion at all, at leaſt, thoſe that we ſaw. They obſerve ſome Ceremonies it is true, but whether they have any Regard to a ſuperior Being, or whether they are only popular, and proceeding from Cuſtom, is what we were not able to diſcover. Thoſe Ceremonies are as follow: When the Corn is ripe, they gather a certain Quantity in a Baſket, which is placed on a Stool dedicated to that Uſe, and ſerving only upon theſe myſterious Occaſions, which they have a great Veneration for. The Baſket with the Corn being placed on the venerated Stool, one of the Elders holds out his Hands over it, and talks a long Time; after which, the ſaid old Man diſtributes the Corn among the Women, and no Perſon is allowed to eat of the new Corn till eight Days after the Ceremony. This ſeems to be in the Nature of offering, or bleſſing, the firſt Fruits of their Harveſt.

At their Aſſemblies, when the Sagamite, or Pottage, which is the moſt eſſential Part of their Meal, is boiled in a great Pot, they place that Pot on the Stool abovementioned, and one of the Elders ſtretches out his Hands over it, muttering ſome Words between his Teeth for a conſiderable Time, after which they fall to eating. When the young Folks firſt take upon them to be Soldiers, their Garment, conſiſting of ſome Skin or Clout, together with their Bow, Quiver, and Arrows, are placed on the ſame Stool, an old Man ſtretching out his Hands over them, muttering the conſecrating Words, and then the Garments, Bows, Quivers, and Arrows, are given to the Perſons they belong to. Theſe ſame Ceremonies are uſed by them in the cultivating their Grain and Product, but of the Tobacco particularly.

There is one Particular relating to theſe People, which he does not mention; and that is, the ſtrong and general Paſſion for Liberty, which prevails through the whole Nation; which is born, and grows up, with them, governs all their Actions, and is never to be extinguiſhed but with their Lives. It is their Notion of Liberty, that induces them to prefer their own Manner of living, to that of the *Europeans:* and they ſay ſometimes, what is not altogether deſtitute of good Senſe, that if they poſſeſs fewer Conveniences, they have the leſs Trouble in acquiring what they think neceſſary, and conſequently the more Time to themſelves, which their middle-aged and old Men uſually ſpend in converſing together; and if we may truſt to ſome of our own Country, as well as the *French* Writers, there are as great Politicians among them, as in any Nation in *Europe*, the *Italians* themſelves not excepted. There is another *Indian* Nation of whom Mr. *Joutel* has given us a Relation, which deſerves to be conſidered, becauſe they are thought to be very different in their Manners from the *Iroquois*.

5. As for the Manners and Cuſtoms of the *Illinois*, they are, in many Particulars, the ſame as thoſe of the other Nations before-mentioned; they are naturally fierce and revengeful, and among them, the Toil of ſowing, planting, carrying of Burdens, and doing all other things that belong to the Support of Life, appertains peculiarly to the Women; the Men have no other Buſineſs, but going to the Wars and hunting. The Nations I have ſpoken of before, are not at all, or very little, addicted to thieving, but it was not ſo with the *Illinois*; it behoves every Man to watch their Feet as well as their Hands, for they know how to turn any thing out of the Way very dextrouſly. They are ſubject to the general Vice of other *Indians*, which is, to boaſt very much of their warlike Exploits, that is the main Subject of their Diſcourſe, and they are very great Liars. They pay a Reſpect to the Dead, as appears by their Care in burying them: This is alſo practiſed among the *Accanceas*, but they differ in this Particular: That the *Accanceas* weep and make their Complaints for ſome Days, whereas the *Chabouanous*, and other People of the *Illinois* Nation, do juſt the contrary; for when any of them die, they wrap them up in Skins, and then put them into Coffins, made of the Barks of Trees; then ſing and dance about them for four and twenty Hours; thoſe Dancers tying Gourds about their Bodies, with ſome *Indian* Wheat in them, to rattle and make a Noiſe; and ſome of them have a Drum, made of a great earthen Pot, on which they extend a Goat-ſkin, and beat thereon with a Stick; during that rejoicing, they throw their Preſents on the Coffin; ſuch as Bracelets, Pendants, or Pieces of Earthen-ware, and Strings of Beads, encouraging the Singers to perform their Duty well. If any Friend happens to come thither at that Time, he immediately throws down his Preſents, and falls a ſinging and dancing like the reſt. When the Ceremony is over, they bury the Body with Part of the Preſents, making Choice of ſuch as may be moſt proper for it: They alſo bury with it ſome Store of *Indian* Wheat, with a Pot to boil it in, and repeat the ſame Ceremony at the Year's End.

With reſpect to this People, there is a very large and curious Account in the Travels of Father *Marquette*, a Man of good Senſe and fair Character; and therefore I ſhall ſubjoin it, that we may not be obliged to dwell longer upon this Subject. His Account in his own Words runs thus: “ The Word *Illinois*, in their Language, ſignifies Men, as if they ſhould look upon the other Savages as Beaſts; and truly it may be confeſſed, that they are not altogether in the wrong, for they have more Humanity than all the other Nations that I have ſeen in *America*; the ſhort Time I remained with them, did not permit me to inform myſelf as much as I deſired of their Cuſtoms and Manners, but here is what I was able to obſerve: They are divided into ſeveral Villages, whereof ſome are very remote from thoſe that I have ſeen, they call them *Perouarea*. But as they live ſo far one from the other, their Language is alſo very different: However, it is a Dialect of the *Algonquin*, and therefore we were able to underſtand what they ſaid, and to converſe with them. They are good-natured Men, tractable and eaſy. They keep ſeveral Wives, and yet they are exceeding jealous; they obſerve with very great Care their Behaviour, and if they find them in any Fault as to their Chaſtity, they cut their Noſes and Ears; and I ſaw ſeveral of them, who carried upon their Faces theſe Marks of their Infidelity.

“ The *Illinois* are very well ſhaped, and very dextrous. They are good Marks-men with their Arrows and ſmall Guns, with which they are ſupplied by the Savages, and have a Commerce with the *Europeans*. This makes them formidable to the other Nations, inhabiting to the Weſtward, who have no Arms. The *Illinois* knowing how much they are frighted at the Noiſe of their Guns, make Excurſions very far to the Weſtward, and bring Slaves from thence, which they barter with other Nations for the Commodities they want. Thoſe Nations are altogether ignorant of Iron Tools, and their Knives, Axes, and other Inſtruments, are made of Flints, and other ſharp Stones. When the *Illinois* go upon any Expedition, the whole Village muſt have Notice of it, and therefore they uſe to make an Out-cry at the Door of their Huts the Evening before they go, and the Morning they are to ſet out. Their Captains are diſtinguiſhed from the Soldiers by red Scarfs, made with the Hair of Bears, or wild Oxen, that are curiouſly wrought. They have abundance of Game; and their Soil is ſo fertile, that their *Indian* Corn never fails, and therefore they never labour under Famine. They ſow Beans and Melons, which are excellent, and eſpecially thoſe whoſe Seed is red.

“ They eſteem much their Citruls, though they are none of the beſt; they dry them up and keep them till the Winter and Spring. Their Cabbins are very large, they are made covered, and paved with Mats of Marſh Ruſhes. Their Diſhes are of Wood, but their Spoons are made with the Bones of the Sculls of wild Oxen, which they cut ſo as to make them very convenient to eat their Sagamite. They have Phyſicians amongſt them, towards whom they are very liberal when they are ſick, thinking that the Operation of the Remedies they take, is proportionable to the Preſents they make unto them, who have preſcribed them. They have no other Clothes but Skins of Beaſts, which ſerve to cover their Women, for the Men go moſt of the Year ſtark naked. I don't know by what Superſtition ſome of the *Illinois*, and *Nadoneſſians*, wear Womens Apparel; when they have taken the ſame, which they do in their Youth, they never leave it off. And certainly there muſt be ſome Myſtery in this Matter, for they never marry, and work in the Cabbins with Women, which other Men think it below them to do. They may go, however, to the Wars, but they muſt uſe only a Club, and not Bows and Arrows, which are fit, as they ſay, only for Men. They aſſiſt at all the Superſtitions of their Jugglers, and their ſolemn Dances in honour of the Calumet, at which they may ſing, but it is not lawful for them to dance. They are called to their Councils, and nothing is determined without their Advice; for becauſe of their extraordinary way of living, they are looked upon as Manitoas, or, at leaſt, for great and incomparable Genii.

“ I muſt ſpeak here of the Calumet, the moſt extraordinary thing in the World. The Scepters of our Kings are not ſo much reſpected; for the Savages have ſuch a Deference for this Pipe, that one may call it the God of Peace and War, and the Arbiter of Life and Death. One, with this Calumet, may venture among his Enemies, and in the hotteſt Engagements, they lay down their Arms before this ſacred Pipe. The *Illinois* preſented me with one of them, which was very uſeful to us in our Voyage. Their Calumet of Peace is different from the Calumet of War. They make uſe of the former to ſeal their Alliances and Treaties, to travel with Safety, and receive Strangers; and the other is to proclaim War. It is made of a red Stone, like our Marble: The Head is like our common Tobacco-Pipes, but larger; and it is fixed to a hollow Reed to hold it for ſmoaking. They adorn it with fine Feathers of ſeveral Colours, and they call it the Calumet of the Sun, to whom they preſent it, eſpecially when they want fair Weather, or Rain; thinking that that Planet can have no leſs Reſpect for it than Men have, and therefore that they ſhall obtain their Deſires. They dare not waſh themſelves in Rivers in the Beginning of the Summer, or taſte the new Fruit of Trees, before they have danced the Calumet, which they do in the follow Manner:

“ This Dance of the Calumet, is a ſolemn Ceremony amongſt the Savages, which they perform upon important Occaſions, to confirm an Alliance, or make Peace with their Neighbours. They uſe it alſo to entertain any Nation that comes to viſit them; and in this Caſe we may conſider it as their Balls. They perform it in Winter-time in their Cabbins, and in open Fields in the Summer. They chuſe for this Purpoſe a ſet Place among Trees, to ſhelter themſelves againſt the Heat of the Sun, and lay in the Middle a large Mat, as a Carpet, and ſet upon it the God of the Chief of the Company who gave the Ball; for every one has his peculiar God, whom they call *Manitoa*: It is ſometimes a Stone, a Bird, a Serpent, or any Thing elſe that they dream of in their Sleep; for they think that this Manitoa will proſper their Undertakings, as Fiſhing, Hunting, and other Enterprizes. To the Right of their Manitoa they place the Calumet, their great Deity, making round about it a kind of Trophy with their Arms, *viz.* their Clubs, Axes, Bows, Quivers, and Arrows. Things being thus diſpoſed, and the Hour of Danceing coming on, thoſe who are to ſing take the moſt honourable Seats under the Shadow of the Trees, or green Arbours they make, in caſe the Trees be not thick enough to ſhadow them. They chuſe for this Service the beſt Wits amongſt them, either Men or Women. Every body ſits down afterwards round about, as they come, having firſt of all ſaluted the Manitoa, which they do by the blowing the Smoke of their Tobacco upon it, which is as much as offering to it Frankincenſe; every body, one after another, takes the Calumet, and holds it with his two Hands, dances with it, following the Cadence of the Songs.

“ This Preludium being over, he who is to begin the Dance appears in the Middle of the Aſſembly, and having taken the Calumet preſents it to the Sun, as if he would invite him to ſmoke; then he moves it into an infinite Number of Poſtures, ſometimes laying it near the Ground, then ſtretching its Wings as if he would make it fly, and then preſents it to the Spectators, who ſmoke with it one after another, dancing all the while: This is the firſt Scene of this famous Ball. The ſecond is, a Fight, with Vocal and Inſtrumental Muſic; for they have a kind of Drum, which agrees pretty well with the Voices; the Perſon who dances with the Calumet gives a Signal to one of their Warriors, who takes a Bow and Arrows with an Ax from the Trophies already mentioned, and fights the other, who defends himſelf with the Calumet alone, both of them dancing all the while. The Fight being over, he who holds the Calumet makes a Speech, wherein he gives an Account of the Battles he has fought and the Priſoners he has taken, and then receives a Gown, or any other Preſent, from the Chief of the Ball: He gives then the Calumet to another, who having acted his Part, gives it to another; and ſo to all the others, till the Calumet returns to the Captain, who preſents it to the Nation invited unto the Feaſt, as a Mark of their Friendſhip, and a Confirmation of their Alliance. I cannot pretend to be ſo much Maſter of the Language, as to judge of their Songs; but methinks they are very lively and witty.”

6. This Country of *Canada*, as we find it deſcribed by the beſt *French* Writers, is ſaid to be half as big as *Europe*, reaching from the Latitude of 39 Degrees to that of 65; that is, from the Lake of *Errie* to the North of *Hudſon's-Bay*, and from the Longitude of 248 Degrees to 336; *viz.* from the River *Miſſiſſippi* to that Part of the Continent which fronts *Cape Raſe* in *Newfoundland*. According to this Deſcription, it has *Hudſon*'s Bay on the North, the Sea on the Eaſt, the *Engliſh* Colonies on the South, *Louviſiana* on the South-eaſt, and the Territories of the Crown of *Spain* on the Weſt. This we muſt allow is a very large and noble Plan of *New France*, if it were in any Degree in the Poſſeſſions of the Subjects of that Crown; but the Truth of the Matter is, that a great Part of this Tract is not ſo much as known to them, and, at the very moſt, there is not a twentieth Part of the Country that can with any Propriety be ſaid to be under their Juriſdiction. The great River of *St. Laurence*

rence, which at its Mouth is about ſixty Miles big, and runs through the Middle of this Country, but the Source of it is ſtill unknown, though ſome of the *French* Buccaneers affirm, that they have gone eight hundred Leagues up it; but then they take it for granted, that it paſſes through five or ſix great Lakes, which are thoſe of *Frontiniac*, *Errie*, the Lake of the *Hurons*, the *Upper Lake*, the Lake of *Leuemipagon*, and that of the *Aſſinipouals*; beyond which the *Indians* tell them there is another Lake ſtill greater than any of theſe, out of which this River originally comes.

But the Truth however ſeems to be, that the River of *St. Laurence* flows from the Lake of *Frontiniac*, and from thence runs a Courſe of two hundred Leagues, to the Sea. At the Mouth of the River of *St. Laurence* lies the Iſland of *Anticoſty*, which ſome ſay was formed, but all agree, was very much enlarged by an Earthquake; the *French* have a very ſmall Settlement upon this Iſland, for the ſake of trading with the *Indian* Nations on both Sides, for Seal-ſkins and Furs; in exchange for which they give them Fire-arms and Ammunition. The Town or City of *Quebec* lies upon the great River of *St. Laurence*, at the Diſtance of about a hundred and ten Leagues from the Sea. The Foundation of it was laid, as we ſaid before, in the Year 1608; and that which is now called the *Lower Town*, was formerly the Bed of the River, which has ſince ſunk ſo far below this Place. It muſt be allowed to be both a large Town and a ſtrong one, for beſides a Fortreſs or kind of Citadel, in which the Governor reſides, the whole Extent of the Place is covered by a regular Fortification, with ſeveral Redoubts well furniſhed with Artillery; there is a Cathedral, and epiſcopal Palace, which are very ſtately Buildings; the Jeſuits have a fine College here, and there are ſeveral other religious Houſes; but after all, if we conſider that this is not only the Capital, but almoſt the only Town in *New France*, it is no great Affair, ſince according to the laſt Account which the *French* themſelves have publiſhed of it, there are not in it above ſeven thouſand Inhabitants, and none of theſe are ſaid to be very rich.

From *Quebec*, which lies in the Latitude of 47 Degrees 56 Minutes, to *Montreal*, which is in the Latitude of 44 Degrees 30 Minutes, the Banks of the River are pretty well ſettled; but without either Towns or Villages; and the *French* diſtinguiſh this Part of the Country by the Name of the Coaſts. Some of their Writers, indeed, making uſe of that Licence which is allowed to Travellers, ſpeak of two Villages between *Quebec* and the Iſland of *Montreal*, each of fifty Leagues in Extent, by which they mean, that both Sides of the River are ſo thoroughly planted, that the whole on each Bank may be conſidered as a Village. The Town of *Montreal* is ſtrong by Situation, but is only ſurrounded with a Palliſado, and is looked upon to have about a third as many Inhabitants as *Quebec*. The Savages come down hither in Boats, and ſell their Skins; for the ſake of which Trade the Place was built; but this Commerce is not now any thing comparable to what it was.

The Manner in which this is carried on is ſingular enough to deſerve Notice: When the Savages who are in Amity with the *French* come thither to trade, their Chief, firſt of all, demands Audience of the Governor-General, and if he is not there, of the Governor of *Montreal*, to which he is with great Ceremony admitted. This Audience is generally given in the great Square or Court, in the Middle of the Town; where a Chair of State is placed for the Governor, and the ſeveral *Indian* Nations, each by itſelf, take their Places round him, with their Pipes in their Mouths: After a due Silence kept, the oldeſt Chief of the *Indians* lays down his Pipe, then ſtands up and addreſſes himſelf to the Governor, to this Purpoſe: "He tells him, that his Brethren are "come to viſit him, and to renew their ancient League "and Friendſhip with his Nation: He adds, that having "nothing in View but the Eaſe and the Advantage of "the *French*, they have brought down with them good "Quantities of Skins and Furs, being ſenſible that the "*French* could not obtain ſo many, or ſo good, if they "did not bring them down to their Settlements; that "they are ſenſible how much theſe Things are valued "and eſteemed in *France*, and know, that what they "are to take in Exchange are but paltry Things, and of "little Value; but however, that their good Friends, "the *French*, may not be without Furs, they are content to deal with them; and therefore hope, that in "order to enable them to bring a greater Plenty of their "Goods the next Year, as well as to put them into a "Condition to fall upon the *Iroquois*, in caſe they "ſhould attack or diſturb their good Friends, they will let "them have Guns, Powder and Ball, upon reaſonable "Terms." At the Cloſe of his Speech he lays a String of Beads, and a Packet of Skins, at the Governor's Feet, and deſires "that he will ſecure them a free and "fair Trade, and protect them from Thieves." Then retires to his Place, and takes up his Pipe again. The Governor ſpeaks next, aſſures them of his Protection, and makes them a Preſent in return. The next Day the Trade begins, and is ſoon over; by which the *French* gain very conſiderably; but they are not allowed to ſell either Wine or Brandy to the Savages, becauſe they are extremely apt to drink to Exceſs, and are then furious and mad, and at ſuch times, if they do any Miſchief to one another, or to the *French*, they can ſcarce be brought to give any Satisfaction; for they affirm, it was the Liquor, and not the Man that did the Miſchief; and that it is unjuſt to puniſh a Perſon for what he does when he is out of his Senſes.

Chambli was formerly as great a Place of Trade as *Montreal*, and there was a pretty good Town there, but now the *French* have only a Port, to hinder the Natives, and their own People, from trading with the *Engliſh*. They have, beſides, three other Towns, none of them of any great Size, at the three Rivers, at a Place called *Tadouſas*, and at *Richlieu*; and yet, according to their Computation, there are two hundred thouſand Souls in *Canada*, but perhaps this is pretty largely reckoned; but their regular Troops and Militia, which are able Men and well diſciplined, amount to eight or ten thouſand, and this renders them formidable to their Neighbours, both of the *Engliſh* Colonies, and *Indians*. They ſometimes talk of drawing Lines, and extending a Chain of Fortifications from their advanced Settlements to the River *Miſſiſſippi*; but whoever conſiders the Extent of that Country, and compares it with their Force even as ſtated by themſelves, will plainly ſee that this is impoſſible and impracticable, or rather, to place it in its true Light, abſurd and ridiculous. But this, however, is no Reaſon that we ſhould grow careleſs or negligent; for there is no doubt they will extend themſelves as faſt as they can, and therefore it is our Buſineſs to interrupt their Deſigns as much as it lies in our Power.

7. Though this Country of *Canada* is ſituated in the midſt of the North temperate Zone, yet the Air of it is exceſſively ſharp, ſo that their Winter, which ſets in about the Middle of *November*, and laſts to the Middle of *May*, is exceſſively ſevere. It is not very difficult to aſſign the Cauſes of this Cold, which ſeems ſo little conſiſtent with the Climate; for we ought to conſider, in the firſt Place, that the Winds which blow from *Hudſon's Bay*, and from the Ocean, that is, from at leaſt half the Points of the Compaſs, paſs over vaſt Tracts of Snow and Ice, and are conſequently loaded with prodigious Quantities of nitrous Particles, which is one great Cauſe of their rigorous Seaſons. Secondly, there are vaſt Foreſts in this Country, of which, but a very ſmall Part is cultivated, and this is another great Cauſe of Cold; becauſe, as Experience ſhews us, in all northern Countries, where the Lands are well broken and tilled, the Climate becomes milder, by the ſulphureous Exhalations from the Earth, which are totally bound up in barren Soils, by the Influence of the Cold. I reſtrain this to the northern Countries, becauſe Experience has alſo ſhewn in the *Weſt Indies*, that the cutting down of the Wood alters the Seaſons, and where it is done without Judgment, has a very bad Effect, which is owing to the different Degree of Heat. A third cauſe of Cold is, the too great Quantity of Water; the Exhalations from thoſe vaſt Lakes and Rivers, which are found in this Country, occaſion

Fogs, Miſts, and Rains, which are extremely prejudicial. But notwithſtanding theſe Inconveniencies, the *French* boaſt very much of the Fertility of this Country, and, indeed, where it is cultivated, it yeilds *Indian*, and other Sorts of Corn, Peas, Beans, and, in ſhort, all kinds of Herbs, and Vegetables in great Plenty.

As for Trees and Fruits, they are much the ſame here as in *New England*, and the like may be ſaid of Animals; ſo that with a reaſonable Degree of Labour, there is no Doubt that People may ſubſiſt there tolerably well; and as they are not burthened with Taxes, and as the Gentry are allowed great Privileges in their Eſtates, the People of *Canada* live, as the *French* Authors themſelves expreſs it, very much at their Eaſe, and exerciſe a generous kind of Hoſpitality, which is very laudable, and makes them ſome amends for living, as it were, out of the World. As to the Produce of this Colony, it conſiſts of Furs, eſpecially Caſtors, which they purchaſe from the *Indians*; in ſeveral kind of Hides or Skins, which they likewiſe purchaſe from the Natives; in Fiſheries, which, however, are of no great Conſequence; in ſome Sorts of Drugs, and in what we call Lumber, that is, Planks, Pipe-ſtaves, and other things of that Nature. The greateſt Part of the Commerce of the Country is carried on in light Canoes, made of Bark, proper for the navigating their Lakes and Rivers, incumbered with Water-falls, which render them unfit for other kind of Veſſels; ſo that whatever Improvements are made here, no Increaſe of Shipping or Seamen can poſſibly be expected from them. In Winter they make uſe of a kind of Sledges, which are drawn either by Horſes, or by Dogs, and are very proper for paſſing over vaſt Tracts of Snow and Ice, and enable them to continue their Commerce with the *Indians* all the Winter; which, however, the *French* tell us, is attended with one great Inconveniency.

The Perſons who carry on this Trade muſt have Licences granted by the Governors, which are confined to a certain Number every Year; and though this brings them in large Sums, yet by hindering the Reſort of *Indians* to their Fairs in the Summer, when every Man is at Liberty to make the moſt of his Goods, this Practice turns to the Prejudice of the Colony in general. The *Normans* were the firſt who ingroſſed the Trade of *Canada*, and for many Years there were no Ships ſeen in the River of *St. Laurence*, but from *Rouen*, *Dieppe*, and *Havre de Grace*. The Trade then fell into the Hands of the Inhabitants of *St. Malo*'s and *Nantes*, and laſt of all it is become, in a great Meaſure, the Property of the People of *Rochelle*, except that ſome Ships are ſent from *Bourdeaux* and *Bayonne*, which are freighted with Wines, Brandies, Tobacco, and all Sorts of Iron and Steel Wares.

There are two Seaſons in which Ships ſail from *France* to this Country, *viz.* towards the End of *April*, or the Beginning of *May*, and at the Cloſe of *Auguſt*, or Beginning of *September*; the Reaſon of which is, that they may arrive as the Ice is juſt broke, or a little before it is formed, for with reſpect to the reſt of the Year, there is no going thither. The Veſſels employed in this Trade export all their Goods from *France* Cuſtom-free, neither are they liable to any Duties in *Canada*, except for Brazil Tobacco; upon which there is five Pence a Pound, or about twenty Shillings Sterling *per* hundred Weight; the Cargo of theſe Veſſels is pretty much the ſame with what is ſent to the *French* Iſlands, and as we ſhall ſpeak of them hereafter, there is no heed of mentioning them here; but it is proper to obſerve, that Tobacco, Sugar, and ſome other *Weſt Indian* Commodities, make a Part of thoſe Cargoes, the Soil and Climate of *Canada* not allowing its Inhabitants to raiſe any of theſe Commodities for their own Uſe; and we muſt likewiſe remark, that for the ſame Reaſon there is a Difference in the Woollen Goods exported thither, coarſe Cloths being ſent to *Canada*, and thin and light Stuffs to the Iſlands; the Profits upon theſe Goods are very large, ſeldom leſs than fifty *per Cent.* and thoſe that go off beſt are of leaſt Uſe, ſuch as Ribbands, Laces, Snuff-Boxes, Watches, Rings, Necklaces, and ſuch kind of things, of which there are never too many, though they are commonly ſold for four times their Worth, all Charges included.

As ſoon as the Veſſels arrive at *Quebec*, the Merchants there ſend away the greateſt Part of their Cargoes that are fit for the *Indian* Trade to *Montreal*, and the three Rivers, where they have Factors; but the fineſt Goods, more eſpecially thoſe before-mentioned, remain at *Quebec*, and are ſold amongſt the *French* themſelves; all theſe different Sorts of Merchandize are paid for in Money, in Bills of Exchange upon the Merchants of *Rochelle*, in Furs, or in Lumber.

It muſt, however, be obſerved, that it is ſeldom or never theſe Ships return full laden into *France*, becauſe the Colony does not produce what is ſufficient for that Purpoſe; and therefore, that their Voyages may turn to Account, they generally run down to *Cape Breton*, and there take on board a large Quantity of Coal for the *French* Sugar Iſlands, where they are ſure to complete their Cargoes with Eaſe. We may gather from all this, that whatever our own, or the *French*, Writers may ſay upon this Head, the Advantages received from *Canada*, by the *French*, are very far from being ſo great as moſt People imagine. If ever there is any Money in the Colony, it comes thither from *France*, in virtue of the Eſtabliſhment on the King's Account; this amounts to about one hundred thouſand Crowns of their Money, which makes ſomewhat more than twelve thouſand Pounds of ours, which is generally drawn off again by the Over-Balance of their Trade with *Old France*. This royal Eſtabliſhment accounts likewiſe, for the Bills of Exchange, but at the ſame Time it moſt evidently ſhews that this cannot be accounted a thriving Colony, when it cannot bear its own Expences, or even keep a Part of the Money that is ſent thither to pay the King's Officers; for it appears by the beſt Accounts that can be had from thence, that the running Caſh of *Canada* amounts but to a very inconſiderable Sum, and is ſometimes reduced even ſo low as a thouſand Crowns, and there is always three fourths of that at *Quebec*. The Calculations of the whole Trade of *Canada* are ſo various, that there is no reckoning upon any of them with tolerable Security; but I perſuade myſelf that I rather exceed than fall ſhort, in my Computation, when I eſtimate the Amount of this Trade at eight hundred thouſand Livres a Year, or at thirty-five or thirty-ſix thouſand Pounds Sterling.

The Reader will eaſily ſee from hence, that the Calculations, with reſpect to the People in *Canada*, which we have taken from *French* Authors, are exceſſive, and that after all there cannot be above half the Number of Souls they ſpeak of. The Danger, therefore, of our Colonies, does not at all ariſe from the Trade carried on between *Old* and *New France*, but from the Number of Inhabitants in the latter; who, while they can ſubſiſt themſelves there, will be always very dangerous and troubleſome Neighbours, and therefore we need not wonder that the People of *New England* are ſo uneaſy about them; but could we once people *Nova Scotia*, and ſecure the Poſſeſſion of the Iſland of *Cape Breton*, I muſt confeſs that, in my Opinion, our Fears would be ſoon over, ſince the Trade between *Old* and *New France*, in the Space of a few Years, would be leſſened half, and perhaps in a few Years more would decline to little or nothing.

8. While the *French* were in Poſſeſſion of *Acadia*, or *Nova Scotia*, they raiſed that Colony to a much greater Degree of Perfection, than they are ever like to do *Canada*; and, indeed, a great Part of the Trade of the latter was owing to the former, and to the Settlement of *Cape Breton*; the Loſs that the *French* have ſuffered by the Ceſſions made to us by the Treaty of *Utrecht*, and the true State of their Affairs in this Part of the World and ours, will beſt appear from the following Account taken from Father *Charlevoix*, who is, beyond Compariſon, the moſt accurate Writer that I have ever met with upon this Subject; the Perſon who knew moſt, and has ſhewn the greateſt Sincerity in ſpeaking what he knew, and not over-valuing things, as is the Cuſtom with moſt of

the Writers of his Nation, and, indeed, of all other Nations, when ſpeaking of their own Concerns.

By the Ceſſion of *Acadia* and *Placentia*, ſays he, to the *Engliſh*, there remained to *France* no other Place to carry on the Fiſhery of Cod Fiſh, or at leaſt to dry their Fiſh in, but the Iſland of *Cape Breton*, which is now only known by the Name of *Iſle Royal*; this Iſland is ſituated between 45 and 47 Degrees of North Latitude, and forms with the Iſland of *Newfoundland* (from which it is diſtant but about fifteen Leagues) the Entrance of the Gulph of *St. Laurence*; the Streight which ſeparates *Cape Breton* from *Acadia*, is about five common Leagues of *France* in Length, and about one in Breadth, it is called the Paſſage of *Fronſac*. The Length of the Iſland, from North-eaſt to South-weſt, is not quite fifty Leagues; its Figure is irregular, and it is in ſuch a Manner cut through by Lakes and Rivers, that the two principal Parts of it hold together only by an Iſthmus of about eight hundred Paces in Breadth, which Neck of Land ſeparates the Bottom of *Port Toulouſe* from ſeveral Lakes, which are called *Labrador*. The Lakes empty themſelves into the Sea to the Eaſt, by two Channels of unequal Breadth, which are formed by the Iſlands *Verderronne*, and *la Boularderie*, which is from ſeven to eight Leagues long. The Climate of this Iſland is pretty much the ſame with that of *Quebec*, and although Miſts and Fogs are more frequent here, yet no one complains that the Air is unwholeſome. All the Lands here are not good, nevertheleſs they produce Trees of all Sorts. There are Oaks of a prodigious Size, Pines for Maſts, and all Sorts of Timber fit for Carpenters Work; the moſt common Sorts, beſides the Oak, are the Cedar, Aſh, Maple, Plane Tree, and Aſpin; Fruits, particularly Apples, Pulſe, Herbs, and Roots; Wheat, and all other Grain neceſſary for Suſtenance; Hemp and Flax abound here leſs, but are every whit as good as in *Canada*.

It has been obſerved, that the Mountains may be cultivated up to the Tops, that the good Soil inclines always towards the South, and that it is covered from the North and North-weſt Winds by the Mountains which border upon the River *St. Laurence*. All the domeſtic Animals, ſuch as Horſes, Horned-cattle, Hogs, Sheep, Goats, and Poultry, pick up a good Living here. What is got by Hunting, Shooting, and Fiſhing, is able to maintain the Inhabitants a good Part of the Year. This Iſland abounds in Coal-pits, which are in the Mountains, conſequently the Trouble and Expence of digging deep, and making Drains to carry off the Water, are generally ſaved; here is likewiſe Plaiſter in great Abundance; 'tis ſaid that there is no Part of the World where more Cod-fiſh is caught, nor where there is ſo good Conveniency for drying it; formerly this Iſland was full of Deer, they are now very ſcarce, particularly Elks; Partridges are here almoſt as large as Pheaſants, and in their Feathers not unlike them: In a Word, the Fiſhery of Sea Pike, Porpoiſes, *&c.* is in great Abundance here, and carried on with great Eaſe.

All its Ports open to the Eaſt, turning a little to the South, and within the Space of fifty-five Leagues, beginning at *Port Dauphin*, and continuing to *Port Toulouſe*, which is almoſt at the Entrance of the Paſſage of *Fronſac*. In all other Ports of the Iſland it is difficult to find Anchorage for ſmall Veſſels, in ſmall Creeks, or amongſt the Iſlands. All the Northern Coaſts are very high, and almoſt inacceſſible; and it is very difficult to land on the Weſtern Coaſt, till you come to the Paſſage of *Fronſac*, out of which you are no ſooner got, but you meet with the *Port Toulouſe*, known formerly by the Name of *St. Peter*. This Port is ſtrictly between a kind of Gulph (which is called *Little St. Peter's*) and the Iſland *St. Peter* over againſt the Iſlands *Madame*, or *Maurepas*. From thence aſcending towards the South-eaſt, you find the Bay of *Gaborie*, of which the Entrance (which is near twenty Leagues Diſtance from *St. Peter's* Iſland) is a League broad, between Iſlands and Rocks. It is not very ſafe to come near theſe Iſlands, ſome of which advance a League and a half into the Sea. This Bay is two Leagues deep, and the Anchorage very good.

The Harbour of *Louiſburgh*, formerly called the *Engliſh Harbour*, is not above a League from the above Bay, and is, perhaps, one of the fineſt in *America*; it is near four Leagues in Circumference, and every where there are ſix or ſeven Fathom Water; the Anchorage is very good, and you may, without Danger, run a Ship aground upon the Mud. The Entrance is not above two hundred Fathoms wide, and lies between two ſmall Iſlands: It is diſcovered at the Diſtance of twelve Leagues at Sea, by the Cape of *Lorembec*, which is but at a ſmall Diſtance from it, to the North-eaſt. Two Leagues farther up is the *Port de la Baleine*, the Entrance of which is very difficult, occaſioned by many Rocks which the Sea covers when it runs high; no Ships of greater Burden than three hundred Tons can go into it, but they are quite ſafe there when they are got in. From thence, in leſs than the Diſtance of two Leagues, you come to the Bay of *Penadou*, or *Medanou*, the Entrance of which is about a League broad, and the Bay itſelf is about two Leagues deep. Almoſt over againſt this Bay, is the Iſland *Scatari* (formerly called *Little Cape Breton*) which is above two Leagues long; the Bay of *Mire* is ſeparated from it by a very narrow Neck of Land; the Entrance of this Bay is likewiſe near two Leagues wide, and it is, at leaſt, eight Leagues deep: It grows narrower the further you go into it; however, large Ships may go into it about ſix Leagues, and find there good Anchorage under Cover of the Hills.

Beſides the Iſland of *Scatari*, there are many other ſmall ones, and Rocks, which the Sea never covers, but may be diſcovered a great Way off. The largeſt of the Rocks is called the *Forillon*; the Bay of *Morienne* is higher up, ſeparated from the Bay of *Mire*, by the *Cape Brule*; and a little higher is *l' Iſle Plate*, or *l' Iſle a Pierre de Fuſil*, directly in the Longitude of 46 Degrees 8 Minutes. There is, between all theſe Iſlands and Rocks, very good Shelter, and you may go amongſt them, and near them, without Fear or Danger. From hence proceeding for about three Leagues to the North weſt, you find a very good Harbour, which is called *l'Indiane*, but is fit only for ſmall Veſſels; from thence to the Bay *des Eſpagnols* there are two Leagues. This Bay is a very fine Harbour; its Entrance is but about one thouſand Paces wide, but it grows wider, and at the Height of a League divides itſelf into two Branches, which may be ſailed up for two Leagues; both theſe Branches are excellent Ports, which might be made better at a very ſmall Expence. From this Bay, to the leſſer Entrance of *Labrador*, is a Gulph about twenty Leagues long, and is above three or four wide in its greateſt Breadth. It is counted a League and a half from the large Entrance of *Labrador* to *Port Dauphin*, or *St. Anne*, and you may come to an Anchor almoſt any where amongſt the Iſlands of *Cibou*; a Neck of Land almoſt entirely covers the Port, and leaves Room for no more than for one Ship at a Time to go in. The *Port Dauphin* is about two Leagues in Circumference, and Ships hardly feel the Wind there, by reaſon of the Height of the Mountains which ſurround it. They may come as near the Shore as they pleaſe. All the Harbours and Ports being ſo near each other, it would be very eaſy to make Roads by Land from one to the other; and nothing could be more advantageous to the Inhabitants, than theſe Communications, which would ſave them the Trouble in the Winter Seaſon of going ſo far about by Sea.

This is the Deſcription given of this Iſland in general, by the above-mentioned Jeſuit, who has been a long time there, pretends to be very exact in his Enquiries, and publiſhed his Hiſtory a very little while before this important Iſland was conquered by the *Engliſh* Nation: He afterwards proceeds to deſcribe more particularly ſome of the above Ports, ſuch as that of *Louiſburgh*, and that of *St. Anne* or *Port Dauphin*.

After the Ceſſion of *Placentia* and *Acadia* to the Crown of *England*, it is certain, the *French* had no other Place where they could dry their Fiſh, or even fiſh in Safety, but the Iſland of *Cape Breton*; they were therefore drove by Neceſſity to ſettle an Eſtabliſhment there, and to fortify it. They began by changing its Name, and called it the *Royal*; they next debated upon the Choice of a proper Place to ſettle the general Quarters in, and they were for a long time divided between *Louiſburgh* and *Port Dauphin*. It has been already ſaid, that the former is one of the fineſt Harbours in all *America*, that it has near four Leagues in Circumference, that there is Anchorage that is good, and that one may run a Ship a-ground in the Mud, without Danger. Its Entrance is not two hundred Fathoms wide between two little Iſlands, which may eaſily defend it, by having Batteries erected on them.

The Cod-fiſhing is there very abundant, and one may fiſh from the Beginning of the Month of *April* to the End of *December*; but then it was ſaid, that the Land about this Port is barren, and that it would coſt immenſe Sums to fortify it, becauſe all the Materials muſt be brought a great way; beſides which it had it ſeems been remarked, that there was no ſandy Bottom in this Harbour for more than about forty fiſhing Veſſels. It has likewiſe been obſerved, that the Port *St. Anne*, or *Dauphin*, has a ſure and ſafe Road for Ships at its Entrance, amongſt the Iſlands of *Cibou*; and that a Neck of Land, almoſt entirely ſhuts up the Port, leaving a Paſſage for no more than one Veſſel at a time.

This Port, thus ſhut up, has near two Leagues Circumference, in an oval Form; Ships may here lie juſt as they pleaſe; for the Land and the Mountains that ſurround it, keep off the Winds in ſuch a manner that they are hardly felt. They who were for opening this Port for the chief Settlement alledged, that it might be rendered impregnable at an eaſy Rate; that more might be done here for two thouſand Livres, than at *Louiſburgh* for two hundred thouſand; becauſe every thing neceſſary for building a large City, and fortifying it, was at Hand. It is further certain, that this ſandy Bottom is as extenſive here as at *Placentia*; that the Fiſhing is very good; that there is a great Quantity of excellent Timber about this Place, ſuch as Maple, Beech, and Wild Cherry-tree, but above all, Oaks of above thirty Feet high, fit for Building, *&c.* It is likewiſe true, that Marble is here very common; that the Lands are generally good; that about the great and ſmaller Entrances of *Labrador*, which are about the Diſtance of a League and a Half, its Soil is very good. In a Word, this Port is but four Leagues from the Bay of *Eſpaniola*, which is likewiſe a very good Harbour, where the Lands are excellent, and covered with Woods, fit for almoſt all Uſes: It is true, that here is no fiſhing in ſmall Boats, on Account of the weſterly Winds which generally blow here, but one may fiſh here, as in *New England*, in large ones; the only Inconveniency in *Port St. Anne* is, that the Entrance is difficult, and this Inconveniency alone determined the Controverſy in favour of *Louiſburgh*, where, ſays he, neither Pains nor Expence have been ſpared to render it both convenient and impregnable. With reſpect to the former, this Author was right; but in regard to the latter, Experience ſhews us that he was abſolutely in the wrong.

The *French* reaped many great Advantages from their Poſſeſſion of this Iſland, and promiſed themſelves many more; which might, however, be all reduced to theſe three Points: Firſt, That this Iſland might be planted to great Advantage, as containing in itſelf Commodities of conſiderable Value; ſuch as Cod-fiſh, Oil, Coals, Plaiſter, Timber, and other Things. Secondly, it was capable of being made a Magazine, or Staple, between *Old* and *New France*, and of becoming thereby of very great Advantage to both. And laſtly, a Fiſhery might be erected there, or rather ſeveral Fiſheries, from whence vaſt Benefits might be derived. It was with a View to the Execution of all theſe Projects, that ſo great Care was taken of this Iſland, ſuch mighty Fortifications erected at a very large Expence, and ſuch Encouragement given to thoſe who would ſettle there. And as their Plan was well laid, I think there is very good Reaſon to believe that the *French* were actually great Gainers with reſpect to every one of the three Heads before laid down, but more eſpecially with regard to the laſt, though I am alſo of Opinion, that the Calculations that have been made of their Profits by their Fiſhery, the Numbers of their Ships, and Seamen employed therein, very much exceed the Truth; but at the ſame time I readily admit, that in the Space of a few Years, thoſe Calculations would have been made good.

The Inferences I would draw from all that has been ſaid on this Subject, are three, which I eſteem of very great Conſequence, as being perfectly ſatisfied in regard to the Truth of every one of them: The firſt is, that *Canada* conſidered independently, and by itſelf, never was, or ever can be, of any great Conſequence to the *French*, either as to its Product, its Commerce, or the Number of Shipping and Seamen that are, or can be, employed thereby. My next is, that *Nova Scotia* and *Cape Breton*, which I eſteem but one, the latter being but Part of the former, and belonged to us of Right as much as any of our Colonies, were of far greater Uſe and Benefit to *France*, than *Canada*, and the Poſſeſſion of them all that could poſſibly have rendered *Canada* itſelf of any Uſe or Importance, and were, therefore, very dangerous to us, and what we could never ſuffer to remain in *French* Hands, without being wanting to ourſelves, and ſacrificing, at once, our Honour and our Intereſt. Our Honour, as theſe Places were indiſputably Part of our *American* Dominions; our Intereſt, as they were the only Countries by the Poſſeſſion of which the *French* might be able to increaſe their naval Power, and become troubleſome to us in that Part of the World. The third Obſervation I have to make is, That as Providence has put it in our Power to remove theſe Inconveniencies, and to rid ourſelves of theſe Dangers, it would be inexcuſable in us not to take the utmoſt Care to improve the Advantages gained in this War, or to neglect ſecuring them, when a general Peace ſhall be made; becauſe by this means we may be entirely ſafe, and *France* can have no Right to expect we ſhould reſtore what we always claimed as our own, and what ſhe kept only by deceiving or deluding our Miniſters, at the making the laſt general Peace at *Utrecht*. A thing ſo notorious to this Nation, that there is no great Reaſon to fear any other Miniſtry will ever be guilty of the like Miſtake, with which Remarks I ſhall cloſe this Part of my Subject.

9. We have already obſerved, in the Account we gave of the Iſland of *St. Chriſtopher's*, that the *Engliſh* and *French* took Poſſeſſion of that Iſland the ſame Day, and from thence we are to date the Power of the *French* in the *Weſt Indies*. The Reader muſt remember, that the *Leeward Iſlands* were originally diſcovered by the great *Columbus*; but after the *Spaniards* had ſettled themſelves in *Cuba*, *Hiſpaniola*, *Porto Rico*, and other great Iſlands, they neglected the reſt; and it was the Knowledge that the *Engliſh* and *French* had of this that induced them to think of ſettling theſe leſſer Iſlands. It was in the Year 1625, that Sir *Thomas Warner*, on our Part, and Mr. *Deſnambue*, for the *French*, took Poſſeſſion of this Iſland; but, in the Space of two Years, both the *Engliſh* and the *French*, who agreed very well together, were attacked and driven out of the Iſland by the *Spaniards*, and this was more fatal to the *French* than to us; for our Colony, after a ſhort Time, returned; the *French* being once ſeparated, ſcattered themſelves through all the adjacent Iſlands, and began to apply themſelves to the very worſt Sort of Methods, in order to get a Living; and from this Accident, as the *French* Writers with great Probability affirm, ſprung up two Sorts of People, that proved afterwards the Curſe and Plague of the *Weſt Indies*. We generally ſpeak of them under one Name; but the *French* Writers ſeem to have diſtinguiſhed them rightly enough into *Boucaniers*, or, as we write it, *Buccaneers*, and *Flibruſtiers*, whom we call *Freebooters*. The firſt of theſe were a kind of Huntſmen, and conſiſted of ſuch of theſe People as ſettled on the North-ſide of the Iſland of *Hiſpaniola*, where, by killing wild Cattle of all ſorts, they obtained an indifferent Livelihood; but ſome of theſe People growing weary of the Hardſhips to which they were expoſed, applied themſelves to the *Dutch*, to whom they ſold their Skins, to furniſh them with Veſſels to cruize upon the *Spaniards*, which they very readily did, and thoſe Veſſels being originally Flyboats, the Privateers who made Uſe of them received their *French* Name from thoſe Veſſels; whereas we affirm from the Trade

they carry on of robbing and ſpoiling all they meet with, they had the Name of *Freebooters*, which, as I apprehend, means pretty much the ſame thing with Pirates.

But Mr. *Deſnambuc*, who was a Gentleman of a very good Family, was very far from being guilty of any thing of this ſort; but with thoſe that remained faithful to him returned to *St. Chriſtopher*'s, fortified himſelf there, and laid the Foundations of a good Colony, for the Support of which there was a Company already formed in *France*. He ſaw with extreme Regret, that Sir *Thomas Warner* had got the Start of him; that the *Engliſh* Colony was in a much better Condition than his own, and that they had already made themſelves Maſters of ſeveral of the adjacent Iſlands. He reſolved therefore, and indeed he had no other Choice to make, to ſend over ſome of the principal Perſons in his Colony to *France*, that they might ſecure Supplies, and chiefly with a View of ſettling the Iſland of *Guardaloupe*. Amongſt the Perſons he ſent over there was one Mr. *Olive*, a bold enterprizing Man, and one who had nothing in View but his own Intereſt. He had it ſeems ſome Notice of the *French* Governor's Deſign, in which he reſolved to ſupplant him; and having entered for that Purpoſe into a Treaty with one Mr. *du Pleſſis*, and ſome other Merchants of *Dieppe*, who formed a Company for the Support of this Scheme; theſe two were ſent over Governors, with joint Authority to the Iſland of *Guardaloupe*, where they arrived on the 8th of *June* 1635, with about five hundred Men. It ſo fell out that in the very Beginning of their Enterprize they committed two Miſtakes; the firſt was, they ſettled on the wrong Side the Iſland, where the Soil was very bad; the ſecond, that they fell out with the Natives before their Colony was in a Condition to ſubſiſt. The bad Conſequences that actually attended theſe Errors, and the Foreſight he had of what muſt certainly follow, ſoon broke the Heart of Mr. *du Pleſſis*. As for Mr. *Olive*, who was now ſole Governor, his Haughtineſs and Pride had certainly brought the Colony to Ruin, if he had not fallen blind. Upon which the Company ſent over one Mr. *Aubert*, a very diſcreet and prudent Gentleman, who, in a few Years time, put the Affairs of this Colony into Order, and eſtabliſhed it ſo effectually, that the Inhabitants have ſubſiſted very happily ever ſince. But though Mr. *Deſnambuc* had the Misfortune to ſee this Country thus taken out of his Hands; yet he had the Pleaſure before his Death to ſettle the Iſland of *Martinico*, of which, by that Means, he became Proprietor, and by his Laſt Will and Teſtament left it to his Family.

At this time Cardinal *Richlieu* came to the Head of the *French* Councils; and having received an Account of the Advantages that were like to ariſe from the ſettling of theſe Iſlands, he thought proper to ſend over a Perſon of Diſtinction, to take the Direction of the whole Iſland, and accordingly made choice of Mr. *de Poincy*, a Knight of *Malta*, whom he ſent over thither, with the Title of Governor and Lieutenant General of the Iſlands in *America*: He embarked at *Dieppe* on the 15th of *January*, 1639, and after a very ſhort Paſſage arrived at *Martinico*, from whence he went to *Guardaloupe*, and afterwards to *St. Chriſtopher*'s. He was a Man of very great Parts, had read much, and was well acquainted with the World; and with all this he had the Qualities that rendered him the fitteſt Man in the World for his Office: He was very ſevere in the Execution of his Authority againſt thoſe who were for making haſty Eſtates, at the Expence of the Public: He was extremely kind and good to the induſtrious Part of the Inhabitants who were willing to diſcharge their Duty, and let their private fortunes depend upon the flouriſhing State of the Colonies: He had a true Notion of Religion, cauſed Churches to be built in all the Iſlands, took care that the Prieſts were well maintained; but would have no Monaſteries or Monks: He eſtabliſhed alſo an excellent Form of Juſtice, granted Commiſſions to Privateers, and hanged up Pirates with very little Ceremony. His Concern for the public Good was ſo apparent, that without any Aſſiſtance from the *French* Government he was in a manner abſolute, and his Orders were obeyed with the utmoſt Alacrity, becauſe the People were ſenſible that he had nothing in view but their Intereſt. In ſhort, he changed the whole Face of Things in that Part of the World, ſettled deſart Iſlands, and though he made many hundreds of People rich and happy, contented himſelf with the Pleaſure of doing it, without making any Fortune of his own.

But after the Death of Cardinal *Richlieu*, and the Diſturbances that followed in *France*, the Colonies ſunk, by the ill Management of the Company; and then the Chevalier *de Poincy*, in the Year 1651 purchaſed the Iſlands of *St. Chriſtopher*, *St. Bartholomew*, *St. Martin*, and of the *Holy Croſs*, for the Order of *Malta*. In the like Manner other Iſlands were diſpoſed of by the *French* Company, to ſuch as would give any thing for them; which, as may be eaſily conceived, was of very bad Conſequence, and brought the Affairs of the *French*, in that Part of the World, into a very ſtrange Situation. The *Dutch*, always attentive to their own Intereſt, takeing notice of the Condition things were in, eſtabliſhed Magazines at *Fluſhing* and *Middlebourgh*, for *Weſt India* Commodities; and employed, in the Trade of the *French* Iſlands, upwards of one hundred Ships every Year. This continued till about the Year 1664, when a new Company was ſet up in *France*, which, with the Aſſiſtance of the Government, purchaſed back from the Iſland of *Malta*, and from the other Proprietors, the Rights that they had acquired, put an End to the *Dutch* Trade, and brought the Commerce of the Colonies once more into a right Channel, which was what the Government had chiefly at Heart; for when after ten Years Poſſeſſion of their Grant, they began to increaſe their own Profit, by Methods prejudicial to the People, the Miniſtry thought fit to interpoſe again; and as they had made uſe of the Company to deliver the Inhabitants from the Oppreſſion of Foreigners; ſo when once it was diſcovered, that they meant to become Oppreſſors themſelves, that was put out of their Power, and every thing ſo ſettled, that ſuch as were diligent and induſtrious might be ſecure of reaping the Fruits of their own Labours, and the Profits of the Trade in general be ſecured to the *French* Nation. Theſe new Regulations took Place about the Year 1680; ſince which, the *French* Iſlands have been in a very flouriſhing Condition, and are, at this Day, of very high Conſequence to the Crown of *France*, as they contribute greatly to the promoting Manufactures at home, and are the Source of a very extenſive and profitable Commerce abroad.

10. This general View of the Manner in which theſe Iſlands were firſt ſettled and ſecured to *France* being given, we ſhall next proceed to a very ſhort Account of the Iſlands themſelves, as they lie from South to North; and then we ſhall give a more particular Detail of their Commodities, which will ſhew the general Value and Importance of theſe Settlements, and rectify ſome Miſtakes that have been made about them; a thing as uſeful and neceſſary to us, as to the *French* themſelves.

To begin then with *Granada*; it is ſituated in 12 Degrees North Latitude, about thirty Leagues South-weſt of *Barbadoes*, and about the ſame Diſtance North of *Caribiana*, or *New Andaluſia*; this Iſland is twenty-five Leagues in Circumference, and has ſeveral good Bays and Harbours, ſome of which are fortified. It is eſteemed a fruitful Soil, and well watered; producing Sugar, and ſuch other Plants as are found in the reſt of the *Caribbee Iſlands*; there are abundance of very ſmall Iſlands that lie at the North End of *Granada*, which are called the *Granadillas*.

Martinico is ſituated between 14 and 15 Degrees of North Latitude, and in 61 Degrees of Weſtern Longitude, lying about forty Leagues North-weſt of *Barbadoes*. It is twenty Leagues in Length, but of an unequal Breadth; the inland Part of it hilly, and, at a Diſtance, appears like three diſtinct Mountains, being exceedingly well watered by numerous Rivulets, which fall from the Hills; and there are ſeveral commodious Bays and Harbours on the Coaſt, ſome of them ſo well fortified, that they bid defiance to the *Engliſh*, when they made a Deſcent there, with ſeveral thouſand Men in the laſt War. They were forced to return to the Ships after they had burnt and plundered ſome Plantations in the open Country. The Produce of this Iſland is the ſame with that of *Barbadoes*, *viz.* Sugar, Cotton, Ginger, Indico, Aloes, Piemento, *&c.* and as it is much larger, it has many more Inhabitants, and produces greater Quantities of Sugar than *Barbadoes*. This Iſland was repleniſhed with *Indians*, when the *French* firſt attempted to ſettle here, *anno* 1635, and many Battles were fought between them and the Natives, with various Succeſs. But the *French*, at laſt, overpowered and extirpated the ancient Inhabitants, and it is now the Chief of all the *French Caribbee Iſlands*, and the Seat of their Governor-General.

Marigalante is ſituated in 16 Degrees North Latitude, a little to the South-weſt of *Guardaloupe*, and is about five Leagues in Length, and four in Breadth: It was diſcovered by *Columbus*, in his ſecond Voyage to *America*, *anno* 1493, and named by him *Marigalante*, or the *Gallant Mary*, after the Name of his Ship. The *French* began to ſend Colonies thither about the Year 1647; and having expelled the Natives, after ſeveral Years Wars, the *French* remained in the peaceable Poſſeſſion of this Iſland, the Produce of which is the ſame with the reſt of the *Caribbees*.

Guardaloupe, ſo named by *Columbus*, from its Hills reſembling thoſe of that Name in *Spain*, is ſituated in 16 Degrees North Latitude, and 61 Degrees of Weſtern Longitude, about thirty Leagues North of *Martinico*, and almoſt as much South of *Antigua*. It is ſaid to be the largeſt of all the *Caribbee Iſlands*, being twenty-two Leagues in Length, and half as much in Breadth at each End; but almoſt cut in two by a deep Gulph or Bay on each Side, ſo that the Ends are joined together by a narrow Iſthmus. This, like *Martinico*, abounds in Sugar, Cotton, Indigo, Ginger, *&c.* and is in a very flouriſhing Condition, and agreeable to the Conſequence it is of to the *French*, they have taken Care to fortify it with ſeveral regular Forts and Redoubts, which were in ſo good a Condition, when the *Engliſh* Admiral *Benbow* made a Deſcent here, with a conſiderable Body of Land Forces, *anno* 1702, that he did not think fit to attack them; but he deſtroyed a great many of their Plantations, and open Villages. The *French* began to ſend Colonies to this Iſland about the Year 1632, but knew ſo little what the Soil was good for then, that for many Years they were in Danger of ſtarving; and afterwards the Planters, by their Diviſions, almoſt ruined one another; ſo that this Iſland did not make any great Figure till the preſent Century; ſince the Beginning of which it has vaſtly increaſed, and makes more Sugar now than any of the *Britiſh Iſlands*, except *Jamaica*.

Deſiada or *Deſerada*, the deſirable Iſland, ſo called by *Columbus*, becauſe it was the firſt Land he diſcovered in his ſecond Voyage to *America*, *anno* 1493. It is ſituated about ten Leagues North-eaſt of *Guardaloupe*, a little inconſiderable Iſland, not ſo fruitful as ſome others which belong to the *French*. *St. Bartholomew*'s is a ſmall Iſland, about ten Leagues North of *St. Chriſtopher*'s, taken by the *Engliſh*, under the Command of Sir *Timothy Thornhill*, in the Year 1689, but reſtored to the *French* at the Peace of *Ryſwick*. *St. Croix*, or *Santa Cruz*, another ſmall Iſland, ſituate in 17 Degrees 30 Minutes North Latitude, about twenty Leagues Eaſt of *St. Chriſtopher*'s, and has been contended for by the *Engliſh*, *Dutch*, *Spaniards*, and *French*; but it is now in the peaceable Poſſeſſion of the *French Weſt India* Company. *St. Martin*'s, another Iſland of no great Conſequence, belonging to the *French*, ſituate a little to the North-weſt of *St. Bartholomew*'s.

The Iſland of *Martinico* is the chief of the *French* Settlements: The Governor-General, and Intendant, reſide there; it is alſo the Seat of the ſovereign Council, which has Juriſdiction, not only throughout the *Antilles*, but alſo over the *French* Settlements in *St. Domingo* and *Tortugo*. The Number of People in this Iſland, by which we are obliged to compute the reſt, are affirmed to be ten thouſand Whites, and twenty thouſand Negroes. It appears from hence, that the *French* are very numerous in theſe Iſlands, and though they have been expoſed to many and great Difficulties in raiſing and eſtabliſhing theſe Plantations, yet they are now brought to a very fair and flouriſhing Condition, carry on a great Trade, and are daily improved. The principal Commodity they raiſe at preſent in theſe Iſlands, is Sugar, whereas formerly it was Tobacco. Mr. *de Poincy*, before-mentioned, was the firſt who taught them the Art of raiſing the Sugar-cane, and curing the Juice of it. He was a Man of ſuch extraordinary Genius, that he improved upon the Methods then in Uſe at *Brazil*, and the *Madeiras*; the Mills he cauſed to be erected, were ſtronger, neater, and better fitted for Uſe; and his Furnaces likewiſe were contrived to much greater Advantage; ſo that he not only introduced it, but carried the Art of Sugar-making to a very high Degree of Perfection. Beſides Sugar, they raiſe alſo a great deal of Indigo, in which they did not ſo ſoon ſucceed as in Sugar; which, I find, the *French* Writers attribute to the intolerable Stench with which the making that Commodity is attended. But they were more happy in raiſing Cotton, which requires very little Pains or Labour.

They alſo cultivate Cacao to great Advantage, and draw conſiderable Profit from the Ginger, Caſſia, and Piemento, which is what we call *Jamaica* Pepper, or All-ſpice, of which they export conſiderable Quantities. They likewiſe manufacture Rocou, for the Uſe of Dyers, and ſend home Variety of medicinal Gums, and wet Sweet-meats of ſeveral kinds. Theſe Iſlands produce alſo ſeveral kinds of valuable Woods, which are uſed for dying, inlaying, and Cabinet-work; ſuch as Roſe-wood, which, when wrought and poliſhed, has a very beautiful Appearance, as well as a fine Smell. The *Indian* Wood is alſo of the ſame Nature, and the Iron Wood, ſo called from its being exceſſively hard, is eſteemed preferable either to Cedar or Cypreſs; Brazil-Wood they have in great Quantities, and Brazilleto, yellow Wood, or Fuſtick, and green Ebony, which is both uſed by the Cabinet-Makers and the Dyers. We may add to theſe Commodities, raw Hides, and Tortoiſe-ſhell, and then the Reader will have a tolerable Comprehenſion of all the Wealth and Riches of the *French Weſt Indies*. But to execute our Deſign effectually, it is neceſſary we ſhould give an Account of the Commerce of theſe Iſlands, which is what we ſhall endeavour to do in as few Words as poſſible, and in ſuch a Method, as may take in the full Extent of their Trade, a thing that has not hitherto been attempted, at leaſt in our Language.

11. In the firſt Place then, it is to be conſidered, that though theſe Iſlands produce ſo many rich and valuable Commodities, yet they ſtand in need of very large Supplies of various Kinds of Neceſſaries, without which they could not poſſibly ſubſiſt, ſuch as Horſes, and Cattle of all Kinds; Corn, Roots, dry Fiſh, and all ſorts of Lumber, of which they receive conſiderable Quantities from *Canada*, and the reſt from our Northern Colonies, in Exchange for Sugar, Tobacco, Indigo, and other Goods, which are ſent to *Canada*, and for Melaſſes or Moloſſes, to our Colonies, where it is diſtilled into Rum, of which Kind of Commerce we have ſpoken largely elſewhere, and therefore there is no need that we ſhould dwell upon it here. The Inhabitants of this Iſland ſtand always in want of Negroes, with which they were formerly ſupplied by their own *African* and *Senegal* Companies, which, as we have already ſhewn, have been long ago united to the *French Eaſt-India* Company, by whom this Slave-Trade is now carried on with great Regularity, and much Profit. The Negroes are ſent to *Martinico*, where they are purchaſed by the Inhabitants of the other Iſlands, at a ſettled Price of ſo many Hogſheads of Sugar a Head, as in the *Spaniſh* Ports they are bought for ſo many Pieces of Eight.

Before we ſpeak of the direct Trade between thoſe Iſlands and *France*, it will be proper to give a ſhort Account of the Quantities of Sugar, that, according to the beſt Computations, are raiſed in them; becauſe this being the Staple Commodity, it will enable us to form ſome ſort of Notion of the whole Extent and Value of their Exports. In *Martinico* it is computed that they make, one Year with another, ten thouſand Hogſheads of Sugar, each of about ſix hundred Weight; in *Guardaloupe*, about four thouſand Hogſheads; and in the other Iſlands, about one thouſand Hogſheads all together. The *French* employ in this Trade annually between two and three hundred Ships, from the Burden of one hundred to three hundred Tons. The time in which they ſail from *France* is between *September* and *February*, that they may avoid as much as poſſible the Hurricanes, and arrive in a fit Seaſon for compleating their Cargoes.

The Veſſels from *Rochelle* and *Bourdeaux* are, generally ſpeaking, laden with ſalt Beef and Pork, Flour, Brandy, all ſorts of Wines of the Growth of that Part of *France*, and alſo *Madeira*, which they take in at that Iſland; dried Cod, pickled Herrings, Oil, Cheeſe, Butter, Tallow, Iron, Linen, and moſt ſorts of Mercery Goods. The Ships from *Rouen* ſeldom carry Proviſions, but are freighted with Woollen and Linen Goods, Silk, Ribbons, Shoes, Stockings of all Sorts, Hats, Tin, Copper, and Braſs Ware; ſmall Arms, and Sword Blades, Pewter, Pins, Needles, Paper, Pens, Cards, and an infinite Number of other Things of the ſame Kind. The Ships from *Marſeilles* and *Toulon* are freighted with Oils, dried Fruit, Wines, and ſeveral Kinds of light Stuffs, that are manufactured in *Provence*. Thus we ſee what prodigious Advantages theſe Settlements bring to *France*, by encouraging Induſtry, employing a large Number of Ships, and conſequently raiſing and maintaining many hundreds of Seamen. It is no Wonder therefore that the *French* Government pay ſo much Attention to this important Branch of their Traffic, and are ſo careful in taking every poſſible Method to encourage theſe Colonies, and to protect their Trade, which, however, ſuffered conſiderably in the two laſt Wars, and ſtill more conſiderably at the Beginning of this.

As to the general Amount of their Trade, it is a very difficult thing to make ſo much as a probable Calculation, but if we may depend upon that of Mr. *Savary*, who was allowed to underſtand theſe Matters as well as any Man in *France*, the Goods exported from that Country riſe to the Value of about four Millions of Livres, or two hundred thouſand Pounds of our Money, annually; for which he computes they bring home very near double the Value in *Weſt India* Commodities; and if we take in the other Branches of Trade before-mentioned, we may fairly compute the Profits of theſe Iſlands at half a Million Sterling, provided the Calculations before-mentioned are tolerably exact.

We may venture, before we quit this Subject, to make ſome few Remarks, for the Service of the *Engliſh* Reader: As for inſtance, That it appears clearly from this Account, we were very conſiderable Gainers, by ſecuring to ourſelves that Part of the Iſland of *St. Chriſtopher*, which had been almoſt one hundred Years in the Poſſeſſion of the *French*, and in their Part of which they raiſed more and better Sugars than in any of the Iſlands they now poſſeſs, *Martinico* and *Guardaloupe* excepted; and perhaps we ſhould not carry the Matter too far, if we ſaid, more Sugar than in all their Iſlands, excluſive of thoſe before-mentioned. We may likewiſe obſerve of how great Conſequence it would be to us to plant the other Iſlands to which we lay claim; as this would increaſe our Trade and our Strength in that Part of the World, at the ſame time; and contribute alſo, in the time of a *French* War, to curb and annoy our Enemies. The *French* themſelves, for Reaſons that have been already aſſigned, do not ſeem very deſirous of extending their Plantations, and therefore cannot offer any juſt Reaſons why we ſhould be debarred any longer from ſettling thoſe Iſlands that belong to us, and which they do not deſire to ſettle themſelves. We may alſo conſider it as a Thing very practicable in any *French* War, to reduce theſe Iſlands to the greateſt Extremity, by the proper Diſtribution of our naval Force in the *Weſt Indies*, which in Proportion to the Value of their Commerce, would diſtreſs the Merchants in *France* to the laſt Degree, and give our own Colonies vaſt Advantages in ſupplying thoſe Markets which are at preſent ſupplied by the *French*; and there are ſome who are very good Judges of our Strength and theirs, who think theſe Iſlands might be entirely ruined by us in a few Years.

12. We reſerved the Iſland of *St. Domingo* to be treated of ſeparately, as being a diſtinct Government, and indeed a diſtinct Concern to the *French* from all their other Iſlands. When this Country was firſt diſcovered by *Columbus*, in 1492, it was called by the Inhabitants in their own Language *Ayty*; but their Followers gave it the Name of *Hiſpaniola*, or Little *Spain*; the Admiral himſelf intended to call it *Iſabella*; but the City he founded in 1494 being dedicated to St. *Dominic*, the Name was firſt extended to that Quarter, and, in Length of Time, to the whole Iſland; ſo that it is now equally well known in *Europe* and the *Weſt Indies*, by the Appellation of *St. Domingo*, and is generally ſo called in Charts: This Iſland is reckoned four hundred Leagues in Circumference; but if all the Creeks, Inlets, and Bays, be meaſured, it will be found ſix hundred at leaſt; it is allowed to be the moſt fruitful, and by much the pleaſanteſt, in the *Weſt Indies*; the Foreſts are vaſt in Extent, and the Trees taller and larger, the Fruit more lovely to the Eye, and better taſted than in the other Iſlands; the Meadows or Savannahs, as they are called, are extremely large, and in a manner boundleſs, in which there are innumerable Herds of Black Cattle that belong to the Country, as alſo wild Horſes, and wild Hogs, produced from the Stock of thoſe Animals brought over by the *Spaniards*. There is ſcarce a Country in the World better watered, either by ſmall Brooks or by navigable Rivers, all of which are full of Fiſh. Add to this, that there are many rich Mines of Gold, Silver, and Copper, which were formerly wrought with great Profit; but the *Spaniards* being now too weak to carry them on for their own Advantage, conceal them with all imaginable Care, to prevent any other Nation's driving them out, and reaping the Advantage of thoſe Treaſures which by their Indolence and ill Management are no longer in their Power.

The Reaſons that induced that Nation to abandon ſo rich and valuable a Country, were chiefly theſe: Firſt, the Severity of the Government; for the ſovereign Council of the *Indies* being eſtabliſhed at *St. Domingo*, kept the Inhabitants more within Bounds than in other Places. Secondly, the vaſt Riches gained by their Countrymen in *Mexico*, the Noiſe of which drew Numbers to forſake this Iſland, in Hopes of coming in for a Share of this Wealth that was to be had elſewhere. Thirdly, the great Demands for People to maintain and ſecure their Conqueſts on the Continent. Fourthly, the Deſtruction of the *Indians*, which put it out of the Power of the *Spaniards* to cultivate their Lands; for as yet, the Uſe of Negroes had not reached the *Spaniſh* Settlements; but was confined intirely to the *Portugueſe* in *Brazil*. And, laſtly, the Deſcents of the *Engliſh* and *French* on the weſtern Part of the Iſland, which by Degrees obliged the *Spaniards* to abandon all the Country between *Montchriſto* and *Cape Mongon*.

This made Way for the Settlement of the *Buccaneers* in thoſe Parts, but chiefly in the little Iſland of *Tortugo*, where they ſoon raiſed a kind of Settlement, which, however, the *Spaniards* deſtroyed in the Year 1638, with inexorable Cruelty; notwithſtanding which the *Buccaneers* were not hindred from returning, and reſettling in that Iſland, under the Command of Captain *Willes*, an *Engliſhman* of eſtabliſhed Reputation, whoſe Courage and Conduct ſoon put them out of Fear of being diſturbed by the *Spaniards*. It was not long however that they continued in this Situation, for Monſ. *de Poincy*, whom we have ſo often mentioned, thought fit to ſecure this Iſland for the *French*; and with that View ſent thither one Mr. *Vaſſeur*, with whom the *French Buccaneers* that were already in the Iſland joining, Capt. *Willes*, with the Forces under his Command, found himſelf under an abſolute Neceſſity of abandoning the Place.

This put the *French* in Poſſeſſion of it for that Time; but the *Spaniards* haraſſed them for many Years, and drove them out of the Iſland more than once; however, being conſtantly ſupported from their Iſlands, and being joined from Time to Time by Adventurers of all Nations, they ſtill kept up their Claim, and not only fixed themſelves effectually upon this little Iſland, but began alſo to make Settlements upon the Weſt End of *St. Domingo*; where, in twenty Years Time, they became ſo ſtrong, that the *Spaniards* were glad to live upon good Terms with them. Yet they never conſider them in any other Light, than as Uſurpers, and Men whom Force maintained in a Country to which they had no manner of Right. The Way in which the *French* ſettled themſelves was very ſingular, for they might well be divided, and, indeed, the *French* Hiſtorians have divided them into three very diſtinct Sorts of People.

Firſt, The *Buccaneers*, or Hunters, who, for the Conveniency of killing black Cattle, and ſelling their Skins, fixed upon the Continent of *Hiſpaniola*, and built ſome Villages for their Retreat, and ſeveral Fortreſſes for their Security. *Flibuſtiers*, or *Privateers*, who were furniſhed by Commiſſions from the *French* Governor of *Petit Guaves*, to cruize upon the *Spaniards*, and who were moſtly at Sea, ſometimes in ſmall Veſſels, every Crew upon its own Account, and ſometimes in large Squadrons with fifteen hundred or two thouſand Men on board them, but of all Nations, and who reſorted from Time to Time into the *French* Ports, to careen their Ships, diſpoſe of their Prizes, and to recruit. The third Sort of People were, Men of a more ſober way of Living, who ſettled in the Country, laid out Plantations, in which they raiſed Tobacco, and other valuable Commodities, whom the *French* therefore ſtile *Inhabitants*. Theſe three Sorts of People were very uſeful to each other; for the *Hunters* furniſhed Proviſions and Hides in vaſt Quantities; the *Privateers* brought in Prizes of great Value, and ſpent their Money very freely; and by enriching increaſed the Number of Inhabitants, ſo that in a ſhort Space of Time, the *French* extended their Settlements all along the South-weſt Coaſt of *St. Domingo*; and as for the Tortoiſe Iſland, ſo called from its being thought to reſemble that Animal, it was very thoroughly planted, and the Tobacco they raiſed there was very good, and grew into great Eſteem.

It is true, that in Time of Peace, both the *Spaniards* and the *Engliſh* complained loudly of the Conduct of the *French* Governors, under Colour of whoſe Commiſſions the Privateers committed great Diſorders, took Ships of all Nations, and diſturbed the whole Commerce of *America*. But the *French* did not give themſelves much Pain upon this Head; on the contrary, though they ſometimes gave good Words, and promiſed ſome Redreſs, yet they ſuffered the Governors to go on in the ſame Way, becauſe they found that it drew Numbers of People to their Settlements, and was like to ſecure them the Poſſeſſion of the Weſtern Part of *St. Domingo*. In 1664 they ſet up a particular Company for managing the Trade of theſe Parts, but that was ſoon found ineffectual; and therefore in about two Years Time they let it fall. It was not till the Year 1697 that they gained a legal Poſſeſſion of this Country, by the Treaty of *Ryſwick*, by which the *Spaniards* yielded to them one half of the Iſland; and the Boundaries between them and the *French* were ſettled, by a Line drawn croſs the Country, from North to South; ſo that the *French* enjoy all the Weſtern half of *St. Domingo*, which they have ſettled very effectually. In the Year 1726 the Number of People there was computed at thirty thouſand Whites, and one hundred thouſand Negroes, and Mulattoes. The principal Place they have on the North Side of the Iſland is *Cape Francoiſe*, which is very happily ſituated, and has a very good Port; the Town is large and well peopled, and is thought to contain four thouſand white, and as many Negro, Inhabitants; on the Weſt Side they have the Town and Port of *Leogane*, which is the Seat of the Government; and, beſides theſe, they have ſeveral other good Ports and great Towns.

The principal Trade of *St. Domingo*, for many Years, conſiſted in Tobacco, in which it is ſaid there have been from ſixty to one hundred Ships employed; but upon the eſtabliſhing an excluſive Farm of this Commodity in *France*, the Trade of *St. Domingo*, for that Commodity began to decline, and is, at laſt, ſunk to nothing. Inſtead of Tobacco, they fell to planting of Sugar, and though at firſt they met with ſome Difficulties, which was occaſioned by the too great Fertility of the Soil, yet theſe were ſoon got over, and Sugar became, in a ſhort Space of Time, the ſtaple Commodity of the Iſland; it is, in the Opinion of ſome, the very beſt Sugar made in the *Weſt Indies*, and, generally ſpeaking, yields three or four Shillings a hundred more, than the Sugar from any of their other Iſlands, which has occaſioned a ſurprizing Progreſs in the Cultivation of this Commodity in *St. Domingo*, which, in 1726, ſtood thus: There were then two hundred Sugar Works in the Iſland, which, it was computed, yielded, one with another, four hundred Hogſheads of Sugar, each Hogſhead of about five hundred Weight. At this Time Sugar yielded, upon the Spot, from twelve to thirteen Livres *per* hundred Weight; ſo that from this Computation, it appears that the Sugar of this Iſland produced the *French*, annually, about two hundred thouſand Pounds, and the Indigo is ſaid to produce near half as much; they raiſe, likewiſe, Cacao Ginger, and Cotton. Coffee grows there very well, and ſome are of Opinion, that Cinnamon, Clove, and Nutmeg Trees might be raiſed in this warm Climate; but the great Profit the Inhabitants make at preſent of their Sugar and Indigo, hinders them from running into any new Improvements; and as the *French* Ships that come hither return well laden with the Commodities beforementioned, and raw Hides, it is very probable they will continue to go on in the Way they are in, till ſuch Time as the Price of the Sugar falls conſiderably. The *French* are thoroughly perſuaded that there are conſiderable Mines of ſeveral Sorts in their Part of the Iſland, but as one of their Writers expreſſes it, while the Sugar Mine, and the Indigo Mine, produce ſo much, and with ſuch Certainty, they are never like to look for any other Mines.

Corn has been ſown here, but is ſaid to ripen at different Times, ſo that it cannot be reaped with any Profit; and though their Grapes are very fine, yet it is pretended they will neither make Wine, nor Raiſins; but the Truth of the Matter ſeems to be, that the Government diſcourages raiſing either, and this from very juſt and reaſonable Motives; for ſay they, if *France* takes off all the Sugar and Indigo, made by the Inhabitrnts of *St. Domingo*, it is but reaſonable that the People of that Colony ſhould take Corn and Wine from *France*; we may very well ſuppoſe, that from the ſame Motive they diſcourage Silk, of which the *Spaniards* made great Quantities, and very good. It is very apparent, from what has been ſaid of this Iſland, and what might be ſaid of it, that it is, beyond Compariſon, the moſt conſiderable, and moſt important, Colony, that the *French* have; which is the Reaſon they are ſo deſirous of obtaining the Ceſſion of the other half from the *Spaniards*; which, ſome Time or other, it is more than probable they will obtain, unleſs the other Powers of *Europe* provide againſt it, by a ſpecial Clauſe in their Treaties with the Houſe of *Bourbon*, which appears to me a Matter of the greateſt Conſequence.

For ſhould the *French* once carry their Point, and become ſole Maſters of this Iſland, we may very reaſonably believe, that in the Space of fifty or ſixty Years, it would become the richeſt and moſt valuable Country in that Part of the World, eſpecially if the *French* ſhould abandon their other Iſlands, and tranſport their Inhabitants thither; and even in that Caſe, there would be no Danger of its being over-peopled, and its Fertility is ſuch, that they would all find Room to exerciſe their Induſtry, and that Induſtry would be richly rewarded; beſides, this would afford them many Advantages; for whereas their other Iſlands are ſubject to many Inconveniencies, but more eſpecially the Want of Proviſions; theſe would be all remedied there, and it would afford them an Opportunity of increaſing their Strength to ſuch a Degree, as would put it out of the Power of any of their Neighbours to give them much Diſturbance; on the contrary, they would ſoon become formidable, both to us and to the *Spaniards*; which is an Evil, that as it has been foreſeen in Time, it is hoped Care will be taken to prevent its ever coming to paſs.

Before we quit this Subject, it is neceſſary to obſerve, that on the South Side of the *French* Part of *St. Domingo*, there lies a little Iſland, called *Avache*, at the Diſtance of about twelve Leagues from the Continent; this Iſland is about nine Leagues in Compaſs, the Soil very good, and there are two or three tolerable Ports, one of which is capable of receiving Ships of three hundred Ton. This Iſland lies very convenient for carrying on Trade with the *Spaniſh* Colonies on the Continent of *America*, and ſooner or later the *French* will, in that reſpect, make it turn to good Account. It is alſo very commodious for maintaining an Intercourſe with the only Settlement they have on the Coaſt of *South America*, I mean the Iſland of *Cayenne*, of which it is requiſite that we ſhould next give the Reader an Hiſtory, and ſhort Deſcription; becauſe that in Time, likewiſe, this may become a troubleſome Settlement, though hitherto the *French* have not drawn from it any very conſiderable Advantages.

The Iſland of *Cayenne* has been a *French* Colony ever ſince the Year 1625, it lies cloſe by the Continent of *Guiana*, and only cut off and made an Iſland by the Rivers *Ovia* on the Eaſt, and *Cayenne* on the Weſt, from which laſt it takes its Name, as may be ſeen in the Map. The Town and Fort where the great Road is, at the Mouth of the River *Guiana*, are exactly in 4 Degrees 50 Minutes of North Latitude, and 332 Degrees of Eaſt Longitude from *Ferro*. It is reckoned about eighteen or twenty Leagues in Compaſs, ſtanding high on the Coaſt, and looks, at a Diſtance, like Part of the Continent. The Length of the Iſland, from the River of *Ovia*, to the River *Cayenne*, is about ſeven Leagues, and the Breadth about three. The River *Cayenne* falls into the North Sea, on the Weſt Side of it, dividing the Country of the *Carribbees*, from that of the *Galibis*. The Iſland forms three principal Capes or Promontories, being thoſe of *Fort Lewis*, *Seperon*, and *Matiuri*; it has much meadow and paſture Ground in ſeveral Parts, the reſt is low and marſhy, eſpecially in the Middle, ſo as to be almoſt impaſſable. The Edges of it are moſtly covered with Trees, which we call Mangroves, having that peculiar Quality of growing in Salt Water, ſo deep, thick, and wide rooted, that from theſe very Roots other Trees riſe up without End, ſo wonderful cloſe, interwoven with one another, that in ſome Parts of the Iſland a Man may walk Leagues on them without touching the Ground.

About ſix Years ago the Iſland was extraordinary unhealthy, by reaſon of the long Rains, which laſted above nine Months in twelve, but eſpecially from *December* till *June*; as alſo becauſe the Ground was cloſe wooded, and ſo marſhy, that it occaſioned ſeveral Sorts of Diſeaſes among the Inhabitants, which in a more particular Manner affected young Infants, inſomuch that many died almoſt as ſoon as born, and others at a very tender Age; for which Reaſon the moſt ſubſtantial Planters uſed to ſend them over to *France* very young, to preſerve them from the Malignity of that bad Air; which is now nothing near ſo pernicious to thoſe young Babes, ſince the Land has been grubbed up, ſo that they grow up healthy and ſtrong; beſides, the Women are ſafer in Child-bed, and the generality of the Inhabitants are leſs ſubject to the Diſtempers than they were before the Iſland was cleared of moſt of the Wood; however, it is ſtill and always will be, an uncomfortable Place to be in, becauſe of the long rainy Seaſon every Year, and ſcorching cloſe Air Night and Day, which diſ-ſpirits a Man; and the heavy Showers and Vapours exhaled from the ſwampy Grounds, which ſtill occaſion Diſorders in Men and Beaſts, though not ſo much as formerly; large Cattle, particularly, can ſcarce live there. They are alſo continually tormented with Gnats, Flies, and Worms, Ants, Bugs, and other Sorts of Vermin, all which, together, render the Place very diſagreeable and uneaſy; for which Reaſon ſeveral Planters, when grown rich, retire into *France*, and lett their Plantations.

The Soil of *Cayenne*, by reaſon of the continual Rains, produces plenty of Sugar Canes, which, though ſmall and ſhort jointed, yield very plentifully; alſo Mandioca, or Caſſibi, *Indian* Wheat, Rocou, Cotton, Accajou-Apples, Banillas, Pete, Ebony, Letter, and Violet Wood, Ananas, Tuberoſes, very fine and large Papaias and ſeveral Sorts of *American* and *European* Grain and Seeds, beſides Lemons, Oranges, Indigo, and Figs, *&c.* The Country abounds in wild Boars, called there Packs, Deer, Agontils, Woodcocks, Ortolans, Nightingales, Arras, Occos, Toucans, Parrots, Parroquets, and other Birds, only remarkable for their Feathers: Alſo Flamingos, Birds about as big as a Hen, flying in Swarms like Ducks or Cranes; large wild Ducks with red Tufts on their Heads, Lizards, Cameleons, and very large Serpents, ſome of them above twenty-five Feet long, beſides many ſmaller. The chief Town of *Cayenne* ſtands on the Weſt Part of the Iſland, in an advantageous Situation, Nature and Art having equally contributed to the fortifiing of it. It is of an irregular hexagon Figure; the Fortifications of the Town, which are extenſive, were moſtly caſt up with Earth by the *Hollanders*, after they had driven the *French* from the Iſland, and have ſeveral Batteries mounted with Cannon, and a dry Ditch quite round, beſides rows of Trees that ſurround it in a Triangle, which makes a handſome Proſpect at a Diſtance; within this ſlight Fortification ſtand above two hundred Houſes, diſpoſed in ſuch a Manner, as to make two different Streets or Lanes; all built with Planks of a certain Tree, by the *French* called *Poirier*, and of other Sort of Timber, and thatched: Which is the Reaſon they are now and then burned down ſo faſt, that nothing can be ſaved, to the great Loſs and Damage, not only of the Owners, but of ſeveral Inhabitants round the Town. On the North-eaſt Part of it, towards the Gate of *Armire*, the Jeſuits have a little Chapel ſtanding in an open Place by itſelf, and before it a Grove of Lemon Trees, which afford a pleaſant Shade to walk under; the Chapel is adorned with a ſmall Spire of Planks, with good Bells.

On a pretty ſteep Hill, or Eminence, ſtands the Fort of *St. Lewis de Caperoux*, built by order of *Lewis* XIII. King of *France*, on the Sea-ſide, commanding every Way, mounted with forty-two Iron Guns; the Garriſon whereof commonly conſiſts of four Companies of regular Forces, beſides near five hundred Inhabitants, moſtly *French*, and divers *Indians*, who retire into the Iſland with their Canoes, and there make their Cottages and Carbets, living either in the Town, or on the Iſland round about, as far as mount *Sincry*, becauſe of the Goodneſs of the Soil, and the Wholeſomeneſs of the Air, as it lies much higher than the Iſland. Theſe, upon the leaſt Alarm, are obliged to ſtand to their Arms; the Signal to give Notice to them to come together, being to fire off ſome Cannon, eſpecially in the Night-time. The weakeſt Places of this Iſland are alſo defended by ſome Batteries and Guns. The next Town in the Iſland to this, is *Armire*, diſtant about three Leagues Eaſtward, but ſmall and thinly peopled, where the Jeſuits have a Chapel alſo for the Conveniency of the Inhabitants of that Part of the Iſland: and about a League farther Eaſt is the Point *Maturi*, and near it a very fine Plantation for Sugar, and is a fit Place to land at. Weſt of this Plantation ſtands an *Indian* Carbet. Theſe are all the remarkable Towns of *Cayenne*, except here and there ſome few Cottages and Plantations about the Iſland; the fourth Part of which is ſtored with fine large Meadows or paſture Ground, called *Savannahs*, and three Rivulets; they have uſually a Watch-houſe, and a Battery of ſome Iron Guns at *Armire*, to give Signals when they diſcover Ships coming from the Eaſtward. *Fort Lewis* commands both the Town and the Sea; the anchoring Place for Ships is under the Cannon of the Fort, within Muſket-ſhot from Land, in three Fathom and a half muddy Ground, South-weſt of the Water-gate, which has four good Guns to defend the Road.

The Colony is partly ſubſiſted by Proviſions brought from *France* in Merchant Ships by way of Trade, which commonly are Wine, Brandy, Meal, and powdered or ſalt Meats, for Beef is very ſcarce there, beſides that they are not allowed to kill any, nor Calves neither, without Leave of the Governor, or his Subſtitutes, that Cattle may multiply in the Iſland: All ſorts of Linen-Cloathing, Stuffs, Silks, Shoes, and other wearing Apparel, are alſo carried thither from *France*, for the Uſe of Men, Women, and Children; and all ſorts of Tools, and ſmall Wares, either for the Service of the Colony, or for the *Amazons* and *Indian* Trades, are barter'd for Sugar, Rocou, Indigo, Tortoiſe-ſhells, Tyger-ſkins, and other inconſiderable Curioſities of the Country, which did once turn to great Profit to the Traders there. The other neceſſary Proviſion of the Product of the Iſland are Mantada or Caſſibi, and *Indian* Wheat, of which each Planter ſows large Quantities, both for the Subſiſtance of their own Families and Slaves, and to ſell to the other inferior Inhabitants. The Sea and River Fiſh, Poultry, Pidgeons, Queſts, or Ring-doves, whereof there is great Plenty, and delicate Turkeys, Veniſon, Hares, Agontils, Hogs, and Packs, that is, wild Boars, are alſo a Part of their Subſiſtance.

But Lamentins and Sea-Tortoiſes are their chief Proviſions, and may be well called the *Manna* to the poorer ſort; the Manati's Fleſh uſed at *Cayenne* is brought ready ſalted from the River of the *Amazons*, ſeveral of the principal Inhabitants ſending the Barks and Brigantines thither with Men and Salt, to buy it of the *Indians* for Beads, Knives with white Hafts of a low Price, ſome Linen, Toys and Iron Tools. When theſe Veſſels have entered the River of the *Amazons*, the *Indians*, who always follow the Manati-fiſhery, go on board, take the Salt, and with it run up the River in Canoes or Frigates, to catch the Manaties, which they cut in Pieces, and ſalt as taken, returning with that ſalt Fiſh to the Brigantines, which go not up, becauſe the *Portugueſe* who dwell to the eaſtward, at *Para*, and other Places of *Brazil*, claim the Sovereignty of the North ſide of that River, and give no Quarter to the *French*, or other *Europeans*, they can take in their Liberties; which has occaſioned many Diſputes and Quarrels between them. That Controverſy was decided by the Treaty of *Utrecht*, in the Year 1713, which fixed that Boundary.

They have ever ſince been uſing all the Arts imaginable, to render this Colony of ſome Uſe, but hitherto they have been able to make no great Matter of it, the Expence being ſo large, that by their hardeſt Labour the Inhabitants find it difficult to gain wherewithal to purchaſe their Subſiſtance. As for the Trade carried on from *France*, it conſiſts chiefly in Proviſions, ſuch as ſalt Meats, Flour, Wine, Brandy, Linen, Stuffs, and Mercery Goods; in return for which they export Sugar, Dying-woods, and for the moſt part, the ſame Kind of Commodities they do from the *Leeward Iſlands*. It is thought, that the Number of Whites upon this Iſland may amount to twelve or fifteen hundred, and that the whole Number of the People, taking in Soldiers and Slaves, may amount to three thouſand, or there-abouts; amongſt theſe there are ſixty or ſeventy *Jews*, who, beſides cultivating their Plantations, carry on a kind of underhand Trade with the *Dutch* and the *Portugueſe*; and what little Quantity of Gold and Silver they have in that Country is in the Hands of theſe People, who notwithſtanding are far enough from being rich.

13. We have already, in the Hiſtory of the *French Eaſt India* Company, mentioned the ſeveral Attempts made by Monſ. *de la Salle*, for the Diſcovery of the *Miſſiſſippi*, and therefore we may be allowed to be the ſhorter here. This Gentleman was certainly a Perſon of great Worth and good Underſtanding; and the Notion he had of fixing Colonies in this Part of the World, was, in general, well enough founded; but it does not appear that he was ſo well qualified to govern or conduct a Colony: He had paſſed down the River he ſought, in the Spring of the Year 1683, to the very Mouth of it; he afterwards remounted that River, and returned to *Canada*, in the Month of *October* the ſame Year; from whence he took his Paſſage back to *France*, where he gave a large Account of the mighty Advantages that would certainly accrue from the ſettling of a Colony in thoſe Parts; upon which a new Company was formed in the Beginning of the ſucceeding Year, for the carrying thoſe great Deſigns into Execution; and on the 24th of *June*, 1684, he ſailed with a Squadron conſiſting of four Veſſels, having on board a ſufficient Number of Perſons, and all kind of Goods and Proviſions neceſſary for the Service of the new Colony, which he propoſed to fix at the Mouth of the *Miſſiſſippi*; but when he arrived in the Bay of *Mexico* he was not able to find the Mouth of the River, as he expected, and therefore attempted to fix a Colony at the Bay of *St. Lewis*, which is one hundred Miles to the Weſt of the River *Miſſiſſippi*; where they endured ſuch Hardſhips that moſt of them periſhed miſerably; while Monſ. *de la Salle*, ſtill intent upon Diſcoveries, made various Excurſions with ſuch of his Company as were ſtill able to move: in one of which he was barbarouſly murdered by two of his own People, which put an End to the Deſign for the preſent.

Seven Years after, Monſ. *d' Ibberville* undertook to perform all that Monſ. *de la Salle* had promiſed; and, as he was a Man who had already performed great Things, the Court encouraged him; and he was really as good as his Word. He carried his People very ſafely and happily to the Mouth of the great River, and there laid the Foundations of the firſt Colony the *French* ever had on the *Miſſiſſippi*. He took Care to provide them with every Thing neceſſary for their Subſiſtance, and obliged them to erect a ſtrong Fort, for their Protection againſt the *Indians*, before he would return to *France* in order to obtain Supplies. The Succeſs of his Voyage made him extremely welcome to the King, who promiſed him all the Aſſiſtance he could deſire; ſo that he was ſoon in a Condition to put to Sea again; and his ſecond Voyage was as fortunate as the firſt; but very unluckily for his Colony, he fell ſick and died, as he was preparing for the third. This had very near overturned the whole Deſign, if it had not been for the Generoſity and public Spirit of a private Man, who undertook to ſupport it at his own Expence, receiving from the Government an Authority to act.

In the Grant of *Louviſiana* to Mr. *Crozat*, by *Lewis* XIV, *anno* 1712, the Bounds of it are ſaid to be the River and Lake of *Illinois* on the North, *Carolina* on the Eaſt, the Gulph of *Mexico* on the South, and *New Mexico* on the Weſt. As to *Canada*, or *New France*, the *French* would ſcarce admit it had any Bounds to the North on this Side the Pole, till they were limited on that Side by an Article in the Treaty of *Utrecht*; which aſſigns *New Britain* and *Hudſon's Bay* on the North of *Canada* to *Great-Britain*; and Commiſſioners afterwards on both Sides, aſcertained the Limits by an imaginary Line, running from a Cape or Promontory of *New-Britain* to the *Atlantic Ocean*, in 38 Degrees 30 Seconds, North Latitude, and running from thence South-weſt to the Lake *Miſcoſink* or *Miſtaſim*, and from thence farther South-weſt directly to the Latitude of 49 Degrees. All the Lands to the North of the ſaid Line, being aſſigned to *Great-Britain*; and all the South of that Line, as far as the River of *St. Laurence* to the *French*. Theſe are the true Limits of *Louviſiana* and *Canada*.

This Grant to Mr. *Crozat* did not ſubſiſt long, for it being neceſſary to have ſome plauſible Pretence for ſetting on Foot a Project for changing the Face of public Affairs in *France*, this Settlement was thought the moſt convenient; and therefore all imaginable Pains were taken to repreſent it as a Paradiſe, and a Place from whence inexhauſtible Riches might be derived, provided due Encouragement could be obtained from the Government; and for this Purpoſe it was thought requiſite, that a new Company ſhould be erected; to make Way for which Mr. *Crozat* was to reſign his Grant, and this he accordingly did, as we have hinted in another Place.

14. This occaſioned that Noiſe that was made about the *Miſſiſſippi*, not in *France* only, but throughout all *Europe*, which was filled with romantic Stories of the vaſt Fruitfulneſs of the Banks of this great River, and the incredible Wealth that was like to flow from thence. It was theſe *Indies* in the *North Seas* that produced our Notions of finding *Indies* in the *South*; but in the End both proved Bubbles, partly from the Falſhood of thoſe Relations, and partly from there being no fixed and ſettled Reſolutions of promoting the Trade to either. This *Miſſiſſippi* or River of *St. Lewis*, according to the *French* Account, riſes in the North-weſt Part of *Canada*, taking its Courſe firſt to the South-eaſt, and in 45 Degrees, turning almoſt due South, continues that Courſe till it diſcharges itſelf into the Gulph of *Mexico* in 30 Degrees

North Latitude, and 95 Degrees of weſtern Longitude. By four or five Mouths of ſeveral large Rivers falling into it, both from the Eaſt and Weſt, the *Miſſiſſippi* is ſwelled into a very large deep River; and ſome *French* Writers add, that it is a gentle Stream, and navigable for large Veſſels from the Source almoſt to the Mouth; but other *French* Writers, and ſome *Engliſh* Seamen, affirm, that it has a very rapid Stream; and that there are Cataracts in ſeveral Parts of it, which obſtruct the Navigation, and that there are ſuch Shoals at the Mouth of the River, that large Ships cannot enter it.

The Country upon the Banks of this great River has nothing very extraordinary to recommend it, except that the Air is milder,, and the Soil more fruitful than that of *Canada*, which might be reaſonably expected from its Situation. There is no ſort of Queſtion that People may live there with the Help of their own Induſtry, in Peace and Plenty; but perhaps they might live with as little Pains and Trouble in *France* itſelf. But as to what was pretended when ſuch a Noiſe was made about the *Miſſiſſippi*, that the Country abounds with Silver Mines, and that it was not improbable that Gold might be found here, it was a mere Fable; and thoſe that have been ſent from *France* to make Trial of the Mines have reported, That they are far from being valuable, and that it would be very difficult, if not impracticable, to work them; ſo that now we hear no more of the Metals in this Country; but they are content to talk of Furs, raw Hides, Tobacco, Corn, and Silk, of which indeed there is more Probability; but no very great Progreſs has been hitherto made in raiſing any of them. As this Country lies in the Middle between the *Spaniſh* Settlements on one Side, and the *Engliſh* on the other, the *French* have fancied to themſelves a Poſſibility of driving out both; but this muſt certainly ariſe from their national Vanity, ſince there is no great Probability of their becoming in ſome Ages very formidable to either, unleſs both ſhould become very negligent, and the *French* more happy than they have hitherto been in their Improvements.

At preſent they have divided this Country into nine Provinces, in each of which they have ſome ſmall Poſts, but the only Place they have of any Conſequence is, *New Orleans*, ſo called from the late Regent, who was the Parent of this new Settlement. It is ſeated about one hundred and twenty Miles from the Mouth of the *Miſſiſſippi*, in a very fruitful Part of the Country, where the Inhabitants raiſe Corn ſufficient for their Subſiſtance, and ſome Tobacco. The Expence they have been at from time to time about their Colonies in this Country has been very large, but the Profits drawn from them very inconſiderable, and no way anſwerable to their Expectations; yet it muſt be allowed, that in its preſent Situation, *New Orleans* is a conſiderable Place, both with reſpect to its Size and Strength, and the Jeſuits ſent from *Europe* thither have taken a great deal of Pains to bring over the *Indian* Nations to the *French* Intereſt, the only Means by which they can become troubleſome to their Neighbours; but notwithſtanding this, they are not able to rely much upon their new Converts, there having been frequent Inſtances of their revolting, attacking, and deſtroying, their new Maſters or Allies, when they leaſt expected it: So that on what Grounds they build their Hopes of eſtabliſhing a powerful Empire in this Part of *America*, muſt be left to their own Writers to declare.

To ſay the Truth, I ſee but one Way that any Thing worth mentioning can ever be brought about here; and that is at the Expence of their own Colony of *Canada*; for if it ſhould ever appear that an eaſier Livelihood is to be gained in the Colonies on the Banks of *Miſſiſſippi*, than in thoſe on the River of *St. Laurence*, it is not at all impoſſible, that the People ſettled on the one may by Degrees remove to the other. This would become daily more and more practicable, and perhaps more neceſſary, if we proceed in the Settlement of *Nova Scotia*, and preſerve the Poſſeſſion of the Iſland of *Cape Breton*; for then, as I have before obſerved, *Canada* will rather become a Burden than an Advantage to *France*; and the wiſeſt Step ſhe could take would be to remove the Inhabitants hither. At the ſame time that I ſay this, I deſire the Reader will conſider it as a pure Conjecture, and as a Thing barely poſſible; and not at all as a Deſign thought of by the *French*, or that is ever likely to come to paſs: But, however, this we may be allowed to affirm, that if they do not take this Step, it is not at all likely that either of thoſe Colonies will become more conſiderable than they are at preſent. We have already obſerved, that the Computations they have given the World of the Inhabitants of *Canada* are very extravagant, and much beyond the Truth; and I doubt the ſame Thing may be with equal Truth affirmed, of what they report as to the Numbers of thoſe ſettled in *Louviſiana*, which ſome of their Authors raiſe to twelve thouſand Souls, while many intelligent People think there are not much above half that Number.

15. The Obſervations and Remarks upon this Period may be the more conciſe, ſince we have already taken Occaſion to deliver ſomething of that Nature, in reſpect to each of the Colonies we have mentioned. The *French* have not been very fortunate in the Management of their Intereſts in this Part of the World; for their Settlements are as unconnected and ill placed, as their Enemies could wiſh them. *Canada* is at a vaſt Diſtance from their Iſlands, and the Navigation of the River of *St. Laurence* ſo difficult, that they cannot make above two Voyages in a Year. We may ſay the ſame with reſpect to the Iſland of *Cayenne*, which lies out of the way of all the reſt of their Colonies, and for that Reaſon has little or no Correſpondence with any of them; and it is pretty much the ſame with their Settlements on the *Miſſiſſippi*, which is a great Diſadvantage to them; as may appear from the Conſideration of our own Colonies, that ſtrengthen and ſupport each other, by their mutual Commerce, there being ſeveral hundred Veſſels employed in the *American* Trade only, in which the *French* employ very few or none. We may, therefore, with ſtrict Regard to Truth, divide the *French* Settlements into thoſe which are profitable, and thoſe which are not; the former including their Iſlands, and the latter all the reſt.

It muſt, indeed, be owned, that it is very poſſible to raiſe ſeveral Commodities of Value, both on the River of *St. Laurence*, and on the *Miſſiſſippi*; but, as the *French* are at preſent circumſtanced, it may very well be doubted, whether they will be ever able to do this, becauſe it does not appear that they could do it to their own Advantage. While our Northern Colonies ſupply their Sugar Iſlands with Lumber, in Exchange for their Moloſſes, it will hinder their taking, except in Time of War, thoſe kind of Goods, even from their own Colonies, and nothing but an open and advantageous Market can tempt the Inhabitants to raiſe them. As for Tobacco, Wine, and Silk, in *Louviſiana*, they may ſerve to talk of, but there is little Reaſon to ſuppoſe they will ever apply to the Cultivation of them in earneſt. For, firſt, in regard to Tobacco, it is not at all likely that they ſhould raiſe it better or cheaper than in *Virginia*, from whence the *French* take that Commodity at preſent, in Preference to what might be raiſed in *St. Domingo*, and the adjacent Iſlands; and, with reſpect to Wine and Silk, though they would be valuable Commodities to us, they could ſcarce be ſo to them; conſidering how much of their own Wine they export to the Colonies, and what Quantities of Silk they raiſe in their own *European* Dominions. It is their Iſlands therefore that the *French* chiefly concern themſelves about; and as to the reſt, it is rather for the Credit of their Crown, and for the Sake of diſtant and very improbable Expectations, that they make a Point of maintaining their other Colonies.

It may be, if they were to transfer the People of *Canada* to their Settlements in *Louviſiana*, and be at ſome Pains to eſtabliſh a Correſpondence between that and their Sugar Iſlands, they might render both more beneficial than they are at preſent; but even in that Caſe, perhaps ſome inſurmountable Difficulties might be found, which are not at preſent foreſeen; and though they are not, yet even the Poſſeſſion of *St. Domingo* entire, if ever they ſhould obtain it, would make that Commerce decline. Upon the whole, though the *French* have great Views in *America*, and ſeem indefatigable in purſuing thoſe Views, yet, to ſpeak impartially, there is very little Ground to believe, if we mind our own Affairs, and could once come to a right Underſtanding with *Spain*, they will be ever able to ſucceed. I may add farther, that if ever we come to form right Notions of the Importance of the Sugar Trade, and in Conſequence thereof give all neceſſary Encouragement to the Inhabitants of our Iſlands, in Time of Peace, and make it our Buſineſs, in Time of War, to diſtreſs the *French* in this tender Point; it is poſſible we may drive them out of a great Part of that Trade, which would be the happieſt Event that could be for us, as well as the greateſt Diſappointment to them.

SECTION XXIII.

The DISCOVERIES, CONQUESTS, SETTLEMENTS, *and* PRESENT STATE *of the* DUTCH *Colonies in* America; *the Nature and Value of their Commerce with the* Spaniards, *and the Manner in which their Returns are made to* Europe; *to which is added an Account of the* Daniſh *Settlement*; *the whole collected chiefly from the* Dutch *Writers.*

1. *A ſhort View of the Scheme formed by Count* Maurice *of* Naſſau, *for erecting a* Dutch *Empire in* America, *equal, if not ſuperior, to that of the* Spaniards. 2. *The Expedition of General* Brewer, *in order to the Execution of that Scheme; and his Succeſſes in* Chili, *to the Time of his Death.* 3. *The Hiſtory of that Expedition continued, in which the principal Cauſes of its Miſcarriage are clearly pointed out.* 4. *The* Dutch *Settlements on the Continent of* South America, *at* Surinam, Boron, Berbice, *and* Approwack, *deſcribed; together with an Account of the Commodities raiſed there, and the Importance of thoſe Settlements.* 5. *A View of the Iſlands poſſeſſed by the* Dutch *in the* Weſt Indies, *viz.* Tabago, St. Euſtachius, St. Martin, Curacao, *and its Dependencies; their Produce, and the Nature of their Commerce with* Holland. 6. *A large and exact Relation of the clandeſtine Trade, carried on by the Inhabitants of theſe Iſlands, with the* Spaniards. 7. *The preſent State of the* Weſt India *Company in* Holland, *and the Cauſes of its declining Trade.* 8. *A Deſcription of the Iſland of* St. Thomas, *of the* Daniſh *Settlement there; its Produce, Commerce, and Importance.* 9. *Obſervations and Remarks on the foregoing Section, which concludes the Hiſtory and preſent State of the Continent of* America *and the* Weſt Indies.

1. WE have, in ſeveral former Sections, taken ſome Pains to explain the Riſe, Progreſs, and Extent of the *Dutch* naval Power; which, if I am not altogether miſtaken in my Judgment, was much ſuperior to any thing of the ſame Kind, that we read of in ancient or mordern Hiſtory; ſo that if their Project of eſtabliſhing a *Weſt India* Company had ſucceeded, as well as that did for erecting one for managing the Trade of the *Eaſt Indies*, I ſee no Reaſon to doubt of their becoming the moſt formidable Power in *Europe*. It would take up a great deal of Time, which we have not to ſpare, to ſhew how this miſcarried; but there is a particular Incident, which falls in with the Subject of this Section, that will fully prove the Truth of both theſe Aſſertions. The Reader may remember that we inſiſted in the Hiſtory of *Brazil* very largely, on the Conduct and Meaſures of Prince *Maurice* of *Naſſau*, as able a Captain, as great a Stateſman, and I muſt have leave to ſay, becauſe I am convinced of it, the honeſteſt Man, and the beſt Patriot, that Family ever produced. In that Section we clearly proved, that the running him down by the republican Faction in *Holland*, was the Ruin of their Affairs in *Brazil*, and, at preſent, it ſhall be our Buſineſs to ſhew, that it loſt an Opportunity of making them as great in the *Weſt Indies*, as they are now in the *Eaſt*; for that Prince had formed a Scheme of raiſing ſuch an Empire at once in *America*, as, had it been as ſteadily purſued as it was wiſely projected, would have defied the Rage of Enemies, defeated the Power of Accidents, and, perhaps, would have eſcaped the Teeth of Time itſelf.

He ſaw plainly, that their Eſtabliſhment in *Brazil*, as fair and as flouriſhing as it ſeemed, under his wiſe and glorious Adminiſtration, would ſink to nothing, if it was not ſupported by new Acquiſitions; for he knew that a naval Power is, of all others, leaſt at a ſtay; and that if it did not proceed, it would decline with the ſame Rapidity with which it roſe; and, to prevent this, he formed Project after Project, all of which ſucceeded but one; and, had that one ſucceeded, he knew that there had been need of no more. This Project we are to give an Account of here, and in few Words; it was this: He was informed that the Inhabitants of *Chili*, which lies at the back of *Brazil*, fronting the *South Seas*, as this does the North, and the richeſt Country in *America*, had revolted from, and driven out the *Spaniards*; he conceived therefore a deſign of fixing a *Dutch* Colony there, which he thought might be eaſily done, under the plauſible Pretences of aſſiſting the Natives againſt their late imperious Lords the *Spaniards*.

He communicated this Deſign to the States General; he ſhewed them the Utility of it; he explained to them the Advantages with which it would be attended, and which were chiefly three. Firſt, That it would give them the Poſſeſſion of a large, fruitful, and agreeable Country, abounding with the Neceſſaries of Life, and with what is capable of ſupplying Neceſſaries in any and all Countries, the richeſt Gold Mines in the World. Secondly, That it would humble the *Spaniards*, by diſtreſſing them in the tendereſt Part; ſecure, as well as open, a Commerce in the South Seas; and render their two great Empires in *Mexico* and *Peru* precarious, unleſs ſecured by a Peace with the *Dutch*. Thirdly, That it would complete, and firmly cement, the Circle of their Commerce; for the Slaves, procured by their Settlements in *Africa*, would be taken off by that Colony and by *Brazil*. The Paſſage from thence to the *Eaſt Indies*, and from them round to *Europe*, would, in Time, become common; that this new Trade would fill that Country with People, and facilitate a Correſpondence between their Dominions on both Sides the Continent of *South America*; which would ſoon put them in a Condition of rooting out all their Enemies, and enable them to keep the beſt and moſt valuable Part of the new World entirely to themſelves. Vaſt and prodigious as this Deſign was, every competent Judge will, at firſt Sight, perceive, that in the State things were then, it was both poſſible and practicable, and therefore we need not at all wonder that the States General readily embraced it, and chearfully diſpoſed all things requiſite for the carrying it into Execution, without much regarding either the Difficulty or the Expence.

2. The States, however, thought it requiſite, that a great Part of the Charge ſhould be borne by their *Weſt India* Company, becauſe in Caſe of Succeſs they were to reap the greateſt Part of the Benefit, ſince, in Virtue of their Charter, the new conquered Country was to belong to them; but, however, the regular Troops that were to ſerve in this Expedition were to remain in the Pay of the States. The Perſon fixed upon to command in chief, with the Title of General, was Captain *Henry Brewer*, a Man of great Abilities, and remarkable for his perſonal Courage; which had, however, a ſtrong Tincture of

what the *Dutch* called Severity, which, in any other Language, would have been denominated Cruelty. He had ſerved with Reputation in the *Eaſt Indies*, and was allowed to have a ſurprizing Power over the Seamen. He had under him four Captains of eſtabliſhed Character, and his Squadron conſiſted of five Sail of ſtout Ships, on board of which he had eighteen hundred Men, with every thing that was thought neceſſary, either for making a Deſcent, or for eſtabliſhing a Colony.

General *Brewer*, and his Squadron, ſailed from the *Texel* the 6th of *November*, 1642, and arrived at *Fernambuco* on the Coaſt of *Brazil*, in 9 Degrees of South Latitude, on the 22d of *December* following; where, having conſulted with Count *Maurice* of *Naſſau*, General and Commander in chief for the *Dutch* in *Brazil*, he ſailed from *Fernambuco* with five Ships well equipped, and provided with Neceſſaries, on the 16th of *January* 1642-3; and, on the 5th of *March*, they came in Sight of the Streights of *La Maire*, as they were then called, which is only a Paſſage between *States Iſland* and the moſt Eaſterly Point of *Terra del Fugo*, in 45 Degrees ſome Minutes South Latitude, and ſince ſtiled *Brewer's-Streights*, in Memory of this Expedition. They came to an Anchor in a Bay of *States Iſland*, to the Eaſtward of the Streights of *La Maire*; where, having remained till the 25th of *March*, they ſailed round *Cape Horn*, ſuffering pretty much by ſtormy Weather; and loſing the Company of one of their Ships, called the *Orange Tree*, and arrived with the other four on the Coaſt of *Chili*, on the 30th of *April* 1643; and on the 9th of *May* they came to an Anchor in a Bay of the South Sea, in 41 Degrees 30 Minutes South Latitude, to which they gave the Name of *Brewer's-Haven*.

An Officer being ſent on Shore with a Company of Soldiers, they diſcovered great Herds of Oxen, Sheep, and Horſes, and ſome Houſes; but the Inhabitants were fled. However, they ſuppoſed that Part of the Country to be in the Poſſeſſion of the *Spaniards*, by the large wooden Croſſes they ſaw fixed at the Entrance of the Houſes; and going aſhore the next Day they diſcovered a Party of *Spaniſh* Horſe, and ſome Cannon-ſhot were fired at the Boat. A Company of fifty Soldiers being ſent aſhore again, the 20th of *May*, they diſcovered the Town of *Carelmappa*, and had a ſmart Engagement with a *Spaniſh* Party, conſiſting of ninety Men, Horſe and Foot, whom they defeated; whereupon the *Spaniards* abandoned the Town of *Carelmappa*, and the *Dutch* took Poſſeſſion of it, where they remained till the 25th, and then ſetting fire to the Town, and killing the Horſes they had taken in the Engagement, they retired to their Ships. They afterwards ſailed to the Town of *Caſtro*, on the Iſland of *Chiloe*, where they arrived on the 6th of *June*.

There appeared a good Body of *Spaniſh* Horſe and Foot on Shore; but the *Dutch* no ſooner landed ſome Soldiers, than the Inhabitants ſet fire to the Town, and abandoned it, having before carried away every Thing that was valuable. This Place, called *Caſtro*, had been a fine *Spaniſh* Town, adorned with magnificent Buildings pleaſantly ſituated on a Hill, ſurrounded with fruitful Orchards and Gardens, and the Fields beyond well cultivated, and at the Time when the *Dutch* arrived there, the Fruit then remained on many of the Trees, though it was in the Beginning of their Winter. The *Dutch*, taking an hundred Sheep and ſome Hogs off the Iſland, re-embarked on the 17th of *June* and returned to *Brewer's-Harbour*. From hence they propoſed to ſail to the River *Baldivia*; but the North Wind blowing hard in their Teeth, they altered their Minds, and came before *Carelmappa* again; where landing a Company of Soldiers, on the 16th of *July*, they took three *Spaniſh* Priſoners, who informed them, that the Winters on that Coaſt were uſually tempeſtuous, but that the moſt ſtormy Month was paſt: That there were Gold Mines at *Orſorno*, and more at *Baldivia*; but that the Mines were not wrought of late, and that at *Caſtro* there were none to be ſeen, the *Indians* not having been compelled to work in the Mines ſince the general Revolt in 1595.

They learned alſo, from an old *Spaniſh* Woman they had taken, that before the ſaid general Revolt, the *Spaniards* lived in great Splendor at *Orſorno*, that the meaneſt of them had three hundred *Indian* Vaſſals at leaſt, who were compelled to pay their reſpective Lords a certain weekly Tribute in Gold, and were uſed ſo cruelly by the *Spaniards*, that the *Chileſe* aroſe as one Man, drove them from *Orſorno*, and other *Spaniſh* Towns; and they poſſeſſed little more in this Part of *Chili*, than *Carelmappa* and *St. Michael de Calembuco*; ſince which, however, the *Indians* of *Orſorno*, *Baldivia*, *Villarica*, *Imperial*, *Jucapel*, *Aurauco*, and *Puren*, had lived in a pretty good Intelligence with the *Spaniards* till very lately, when the *Indians* took up Arms again, and they were actually here in a State of War with the *Spaniards*, which was confirmed by five *Indian* Caziques, who came on board the 20th of *July*, and aſſured the *Dutch* they were extremely rejoiced that they were come to aſſiſt them againſt their ancient Enemies the *Spaniards*.

The *Dutch* anſwered, they had brought good Store of Arms to exchange with their Country men of *Orſorno*, *Baldavia*, and other Places, for ſuch Merchandize as *Chili* afforded, that they might be enabled to carry on that War againſt the *Spaniards*, and were ready to aſſiſt them to the utmoſt of their Power. The *Chileſe* replied, They lived very uneaſy under the *Spaniſh* Government of *Carelmappa*, and were contriving how to get to their Friends at *Orſorno* and *Baldivia*; but the *Spaniards* had poſſeſſed all the Paſſes, and the Country was ſo overflowed by the Winter Rains, that they found it impracticable to go by Land at preſent; and therefore deſired the *Dutch*, that they would carry them to *Baldivia* in their Ships; which the General agreeing to, they returned aſhore, to give their Friends an Account of it, and make Preparations for their Voyage. The next Day, more *Chileſe* went on board, and one of them brought the Head of a *Spaniard* with him whom he had killed, and declared they were determined to ſhake off the *Spaniſh* Yoke. Whereupon the General made a Preſent to them of ſome Spears and Swords, as alſo Muſkets with Powder and Ball; and the *Chileſe* ſent ſome black Cattle on board in Return.

3. Thus far this Expedition had ſucceeded perfectly well, as being entirely under the Management of one who was altogether equal to the Project he went upon; for it is eſſential to great Deſigns that ſucceed, that they are contrived and concerted by great Men, and that they are executed by great Men alſo; for when once People of mean Parts and narrow Underſtandings come to be lifted up into Employments beyond their Capacities, they ſoon ruin all that wiſer Heads have been long framing; and this, notwithſtanding they do their beſt, and uſe their utmoſt Endeavours to proſecute their Predeceſſor's Plan.

The *Dutch* Officers, who perhaps never conſidered this Maxim, were experimentally taught the Truth of it, by the Death of their General *Henry Brewer*, which happened the 7th of *Auguſt*; a fatal Day to them, though they did not perceive it at the Time. He had ſet his Heart upon the Undertaking, and died in the full Perſuaſion, that it might have been accompliſhed. Though Captain *Hackerman*, who ſucceeded him in the Command, might have no leſs Zeal to ſerve his Country, yet he certainly miſcarried for want of proper Addreſs. He too ſoon diſcovered to the Natives with what View the *Hollanders* viſited their Coaſts, and created Jealouſies in them, which he found it impoſſible afterwards to remove, as will appear hereafter. The late General was ſo confident of the Succeſs of the Enterprize, that he directed his Countrymen to take his Corpſe with them, and bury it at *Baldivia*, which he had intended to fortify; and appointed the *Chileſe* to rendezvous there and meet the Fleet, not doubting of a general Revolt in their Favour. His great Ambition was, to have a Tomb erected in that Place, which might perpetuate the Memory of his being the Author of ſo great a Good to his Country. But to proceed: The *Dutch* having taken four hundred and ſeventy *Chileſe* on board, who had furniſhed themſelves with Corn and Cattle, and other Proviſions for the Voyage, ſet ſail for the River *Baldivia* on the 21ſt of *Auguſt*, where they arrived the 24th of the ſame Month.

The River is about a League over at the Mouth, and the *Dutch* having ſailed half a League up it, they obſerved three Channels, of which, taking the Middlemoſt, they run aground, and it was two or three Days before they could get all their Ships afloat again; ſo that it was the 28th before they arrived at the Town of *Baldivia*, where they only found the Ruins of the ancient Gates, which were very high, and ſtrong built; but the Place was now over-run with Buſhes and Weeds, and more like a Wilderneſs than a City: Here they found three or four hundred *Chileſe* Horſe and Foot armed with Spears, eighteen Foot long, ſome of whom came on board, and welcomed them at their Arrival. The *Dutch* General harangued them by an Interpreter, and acquainted them, That the *Hollanders* were now in the Poſſeſſion of *Brazil*, upon the ſame Continent, not above two Months ſail from them, and were in a Condition to ſupply them from time to time with Arms and Ammunition, and would aſſiſt them to drive their Enemies, the *Spaniards*, out of the Country, deſiring they would enter into a League offenſive and defenſive with them. He alſo preſented them with the Letters from the Prince of *Orange*, of the like Tenour, which were interpreted to the *Indians*; for it is to be remarked here, that neither the People of the *Eaſt* or *Weſt Indies* have any Notion of a Republican Form of Government, and therefore the *Hollanders*, in all Negociations with thoſe diſtant Nations, pretended to be authorized to treat with them by the Prince of *Orange*, or ſome ſingle Perſon, whom they inſinuated to be their Monarch.

The Caziques gave the General no other Anſwer to his Propoſitions at preſent, but, That they would conſult their Brethren of *Orſorno* and *Coneo*, and then return to *Baldivia*. Whereupon the *Dutch* proceeded to land their Soldiers on the 2d of *September*, and the General took a View of the Ground, in order to erect a Fort. The ſame Evening arrived above one thouſand *Chileſe* from *Orſorno* and *Coneo*, to treat with the *Hollanders*; and the next Day the General, by his Interpreter, made them another Speech: He acquainted them, That the chief Motive of their Voyage was to aſſiſt the *Chileſe*, the Fame of whoſe great Actions had reached as far as *Holland*: That the *Dutch* had been at War with the *Spaniards* for upwards of fourſcore Years, as well as the *Chileſe*, for the Preſervation of their Liberties, and had met with the like Succeſs, extending their Conqueſts as far as *Brazil*; and if the *Chileſe* would now enter into a Confederacy with the *Hollanders*, they were ready to ſupply them with Cannon, ſmall Arms, and Ammunition; which they would exchange for the Product of their Country; and the *Chileſe* would be enabled thereby, not only to defend themſelves, but to expel the *Spaniards* from their Coaſts. After which a Letter was delivered to every one of the Caziques, as ſent them from the Prince of *Orange*. To which the Caziques anſwered, That they thought themſelves extremely fortunate to meet with a Supply of Arms from ſo diſtant a Country as *Holland*, at a Time when the War with the *Spaniards* was revived; and that they would conſider of what was propoſed.

The *Dutch* thereupon enquired if the *Chileſe* could ſupply their Fleet with Fleſh and other Proviſions, if they continued on their Coaſt to protect them againſt the *Spaniards?* To which they unanimouſly anſwered, They would not fail to bring them all the Proviſions they wanted, for they had Plenty of Corn and Cattle: provided the Fleet did not ſtir from the Coaſt. And they readily entered into a verbal Alliance Offenſive and Defenſive, with the *Hollanders* againſt the *Spaniards*; but would not be perſuaded to execute written Articles, which were offered, and interpreted to them; declaring, That this was not cuſtomary amongſt them; but, that Promiſes were ever looked upon as ſacred, and of equal Obligation with written Contracts. The *Hollanders* then proceeded to build a Fort at *Baldivia*, for their Security; which the Natives did not ſeem to oppoſe; but when the *Dutch* propoſed the Trafficking with the *Chileſe*, and exchanging Arms for their Gold, the Caziques immediately appeared jealous of their new Allies; and declared, they had no Gold Mines, nor was there any ſuch Thing as Gold in Uſe amongſt them: They remembred indeed that, heretofore, they had been obliged to pay heavy Taxes to the *Spaniards* in Gold, on Pain of loſing their Ears and Noſes, as many of them actually did who could not procure as much as was expected; and this had given them ſuch an Abhorrence of that Metal, that they could not bear to hear it named amongſt them; that they were very far from valuing or coveting it as they found all Strangers did; and that it was the Cauſe of many Miſchiefs to them, from which the *Indians* were free.

The General finding the Natives were not ignorant of his Views, replied they were not come to exact any thing of them, as the *Spaniards* had done; but were ready to pay them with Arms, or whatever Merchandize they liked beſt for their Gold; and every one was at Liberty to exchange what he pleaſed. Whereupon the Caziques ſtared at one another without returning one Word of Anſwer; and the *Dutch* relate, they did not think fit to urge them any farther on that Head, leſt they ſhould imagine they had a Mind to ſerve them as the *Spaniards* had done, though they were certain there were very rich Mines in that Part of the Country. The *Dutch* General, therefore, ſeeing now he could expect but little Aſſiſtance from the Natives, and that it would be impoſſible to maintain his Ground long againſt the *Spaniards*, and the reſt of the *Chileſe* in Alliance with them, diſpatched Captain *Chriſpinſon*, with two of his Ships, to *Fernambuco*, in *Brazil*, to give their Friends an Account of the State of their Affairs, and to deſire a further Reinforcement; and, in the mean Time, continued to fortify the Poſt he had taken at *Baldivia*, where he hoped to defend himſelf till thoſe Supplies arrived. In the Letter the *Dutch* General ſent by Capt. *Chriſpinſon* to *Brazil*, he informs the Government, that the *Spaniards* had not more than fifteen hundred Soldiers, either on the Continent or Iſlands of *Chili*, viz. three hundred in *Valperiſo* and *St. Jago*; one hundred in *Serena* or *Coquimbo*; one hundred on the Bank of *Riolio*; eighty in *Tucupel*; five hundred in the Forts in the Valley of *Arauco*; one hundred and twenty in the Iſland of *Chiloe*, *Carelmappa*, and *Calembuco*; what the Number of the *Spaniſh* Inhabitants were, he does not ſay, only that they were more numerous than the Garriſon Soldiers; and it is evident, that many of the *Chileſe* profeſſed the Chriſtian Religion, and were intermarried with the *Spaniards* at this Time; and therefore were, in a Manner, one People with them, and that ſome Tribes or Clans that were not under the *Spaniſh* Government, were in Alliance with them, though moſt of them were in a State of War with the *Spaniards*. And in thoſe Circumſtances the *Dutch* General informs the Government of *Brazil*, that in Caſe ten Ships, and three Yachts, with eight hundred Soldiers, Seamen, Cannon, and Ammunition in Proportion, were ſent to his Aſſiſtance, he did not doubt of making himſelf Maſter of all the *Spaniſh* Settlements above-mentioned; and ſhould have no Occaſion to be afraid of all the Force the *Spaniards* had, either in *Chili* or *Peru*; and if he could make himſelf Maſter of *Chili*, by this Means, it might encourage the Natives of *Peru* to throw off the *Spaniſh* Yoke.

Theſe *Indians* having entertained an inconceivable Averſion to the *Spaniards*, he informs his Employers alſo, that they had received the Advice, that the Natives of the neighbouring Provinces of *La Plata*, had roſe upon the Jeſuits (the then Sovereigns or Uſurpers of that Country) and had murdered many of thoſe Fathers, which was looked upon as an Indication of a general Revolution againſt the *Spaniards*; and then repeating his Importunities for a ſpeedy and effectual Supply, concludes, that when the War was once kindled on that Side, it might ſpread over all the *Spaniſh Weſt Indies*; and the *Hollanders* might ſupplant them in the *Weſt*, as they had done the *Portugueſe* in the *Eaſt Indies* and *Brazil*. This Expreſs had not been diſpatched a Week, before the *Dutch* General became ſenſible of his Miſtake; and that whatever Miſunderſtanding there might be between the *Chileſe* and the *Spaniards*, the Natives were much more afraid of the *Hollanders*, than of their ancient Enemies, and would probably join with the *Spaniards* to expel them their Country. For the next Conference he had with the Caziques, they gave him to underſtand, that he muſt expect no Proviſions

viſions from them; and endeavoured to terrify the *Dutch*, by reporting that the *Spaniards* were aſſembling their Forces by Sea and Land, to drive them from *Baldivia*; and it is probable that the *Dutch* General expected no Aſſiſtance from their new Alliance, but were rather apprehenſive they would betray them to the *Spaniards*; for he ſoon after demoliſhed his new erected Fortification; and, having reimbarked his People, ſet ſail for *Brazil* on the 28th of *October*, 1643; and, having doubled *Cape Horn*, repaſſed the Streights of *La Maire* on the 21ſt of *November*; and on the 28th of *December* arrived at *Fernambuco* in *Brazil*; ſo that they were but juſt two Months in their Voyage from *Baldivia* to the northern Part of *Brazil*.

This ſhews how eaſily the Communication might have been maintained between the two Colonies, if the *Dutch* had been ſo fortunate as to have eſtabliſhed themſelves in *Chili*; but at the Time the Fleet arrived at *Brazil*, Prince *Maurice* had reſigned the Government; ſo that they were no longer at a Loſs for the Reaſon of their not being ſupported in Time, as with great Juſtice they expected, and as the Importance of the Enterprize deſerved. We have been more particular and circumſtantial in the Hiſtory of this Expedition, becauſe it appears to have been of the higheſt Conſequence in itſelf, and in all reſpects the beſt concerted and contrived, of any in which the *Dutch* were ever concerned; and in Caſe it had ſucceeded, would abſolutely have been a Means of giving, not only a new Face to their Affairs, but to the general Situation of things in *America*; nor is it eaſy to ſay with what Conſequences it might have been attended. But it is Time to proceed from this Detail of the Ruin of their projected Empire, to an Account of the ſmall Remains of their Territories in *America*; which, though they would be of very little Uſe to any other Nation, are, notwithſtanding, highly beneficial to them.

4. We will begin with their Settlements upon the Continent; the firſt, and moſt conſiderable of which, is *Surinam*, that formerly belonged to us, and was the ſole Remains of Sir *Walter Raleigh*'s Diſcoveries in *Virginia*, of which we have given an Account already, and of the Manner in which it was exchanged for *New York*, which we had taken from the *Dutch*; this Settlement of *Surinam*, while in our Hands, was a Place of very little Conſequence or Advantage; but, however, we met with very little Difficulty in keeping it, as living upon very good Terms with the Natives; whereas the *Dutch* have been always upon ſo bad a footing with them, that they have been obliged to erect a ſtrong Fort, and to keep in it a good Garriſon, in order to cover their Settlements; without the Limit of which, if the *Indians* meet with any *Dutchman*, they are ſure to give him no Quarter. The Commodities they raiſe, are Sugar, Indigo, Ginger, and Cotton; for the Improvement of which they have conſtant Supplies of Negroes from their Colonies in *Africa*; where a Part of their Goods likewiſe are taken off, and when it amounts to more than the Value of their Negroes, the Ballance is commonly paid in Gold Duſt. This, however, returns into *Europe*, in Payment for the Goods ſent over to the Colony, by the Merchants of *Amſterdam*, who have ingroſſed almoſt all this Trade to themſelves.

They have, beſides this Settlement, three others upon the Continent, *viz. Boron*, *Berbice*, and *Approwack*, which are at no great Diſtance from each other; and in which they raiſe, for the moſt Part, the ſame Commodities as in *Surinam*, except that at *Berbice*, beſides an extraordinary Quantity of Cotton, they have likewiſe the Advantage of preparing of a very rich Dye, called *Orlane*, from an Herb of the ſame Name, much in the like Manner as they prepare Indigo. They have likewiſe the good Fortune to have for their Neighbours in that Colony, a Race of mild and good natured *Indians*, with whom they trade for Proviſions, Hides, and other kind of Merchandize.

But as theſe Colonies lie on the Frontiers of the Country of *Guiana*, the Reader will, very probably, be well pleaſed to ſee ſome Account of this Region, from thoſe who actually inhabit it; and the Relations they give us of it, amount to this: That this Country is, in many Parts, very wild and thinly peopled, eſpecially the loweſt Lands, which are often overflowed by the Rivers; but the upper hilly Countries are very populous, the Soil being watered by ſo many Rivers, very commodious for Travellers. The Air in that Up-land Country is much colder than towards the Coaſt; and the Hills are very rich in Mines of ſeveral Sorts. Fruit is very plentiful and good; and all Sorts of Grain grow there all the Year round, except Wheat, coming up in a ſhort Time, and with little or no Diſtinction of Seaſons; for there being no Winter, the Trees are always green and full of Leaves, Bloſſoms, and Fruit. Though this Country is between the Line and the Tropic of Cancer, that is, within the Torrid Zone, the Climate is pretty temperate, and the Air wholeſome; the Heats being generally allayed by a freſh eaſterly Wind, which reigns the greateſt Part of the Year, during the Day; and at Night the Land Breezes prevail, but do not reach to two or three Leagues out at Sea. The Waters are, likewiſe, excellent, and of ſuch a particular Nature, that they will keep ſweet and freſh during the longeſt Voyages, as has been often found by Experience. On the Sea-Coaſts, which, as has been ſaid, are generally low, there are many large Iſlands, fit, if improved, to feed Cattle.

The Sea, about the Coaſts, abounds in Fiſh, the moſt common is that which the *French* call Machoran, and the *Engliſh* Cat-fiſh, being of a yellow Colour, and very large, ſweet Mullets, and Thorn-backs, Lamentynes, and Sea-Tortoiſes. Fowl is alſo very plentiful, either tame or wild, and other Game, with all which they ſupply the *European* Settlements at the Sea Coaſts, exchanging for Toys and Iron. This Country produces divers Sorts of Phyſical Gums, Woods, and Roots, as well as ſeveral Sorts of Woods for dying, and for making of Cabinets, and inlaid Works; among which is the Letter-wood, by the *French* called *Bois de la Chine*, and which grows no where in the World but here. Yet the Natives cut and carry it quite to the Water-ſide, ſo cheap, that a Tun Weight of it does not coſt above ten Shillings; and in *Europe*, a Tun of that Wood has formerly yielded fifty Pounds Sterling, or more, and never under twenty-five or thirty Pounds to this Day. There is Ebony of a different Sort from the Letter-wood, and one Sort called *Bois de Violet*, and ſeveral others very common. There are alſo prodigious large Trees, whereof the *Indians* make Canoes, which carry twelve or thirteen Tuns in Caſks; beſides a prodigious Store of very lofty large Trees, the Wood of which is exceſſively hard and weighty, but has the Advantage of reſiſting Worms in Salt-water.

Here are alſo incredible Numbers of Monkeys of divers Sorts, among which is the Sort, called by the *Indians*, and after them by the *French*, *Sapajous*; a kind of little yellowiſh Ape, with large Eyes, a white Face, and black Chin: It is of a low Stature, and of a lively and diverting Nature; but ſo tender in cold Weather, that it is, with great difficulty, they can carry ſome over to *Europe* alive; where they are much eſteemed, and yield a conſiderable Price among Perſons of Quality. There are Tamerinds, Sagovias, Parrots, Cameleons, Agontils, Arras, Ocos, Tocaus, or Toucans, Flamans, and wild large Ducks, with red Feathers at their Head, but not in great plenty, which eat very well, being ſtewed, and ſeveral other Birds, which have nothing remarkable in them beſides their Feathers. It likewiſe abounds in ſmall Tygers, Deer, Pigs, little Porcupines, large and monſtrous Serpents, and divers other Sorts of Animals.

As to Fruits, beſides Sugar Canes (which grow very well in *Guiana*) the Caſia, Papaye, Accajou-Apples, Vanillas, Tobacco, Pete, and Rocou, it produces alſo *Indian* Wheat, Mandioca, Cotton, Indigo, and the other Fruits common in *Brazil*, and ſeveral others among the Plants, which the *Indians* cultivate in their Plantations. Cotton is one that abounds moſt, and is uſed by the Women, who adorn themſelves with it, and can ſpin it as fine as they pleaſe. There is ſuch Plenty of it every where, that if it were poſſible to have Women enough there to ſpin it, to ſave the great Trouble and Expence of tranſporting it in the Wool to *Europe*, which renders the Profit very inconſiderable to the Planters, it might furniſh all *Europe*, without coſting the *Dutch* any other Trouble than purchaſing it of the *Indians*, for very inconſiderable Toys, and Haberdaſhery Ware of little Value. The *Indians* eſteeming a Grain of Cryſtal, to adorn their Necks or Ears, as much as a Diamond of the ſame Bigneſs is valued among the *Europeans*; and if the Diſorders which have happened in the *European* Settlements in *Guiana*, at ſeveral Times, had not hindered the eſtabliſhing a regular Commerce, this advantageous Trade would have been already ſettled, and a vaſt Number of People enriched by it; but in a more peculiar Manner the Inhabitants of *Cayenne*, becauſe of the Situation of their Iſland, their Sea-port Town, and great Intereſt with the *Indians*.

The Pete is an Herb that can be peeled, as Hemp and Nettles with us, but the Threads are finer than Silk, and would have long ſince ſupplanted it, if it had been allowed to be tranſported into *Europe*. The Vanilla is a Weed that creeps up Trees as Ivy does; the Leaves are of a bright Green, long, ſtrait, thick, and pointed at the Ends. When it has been ſeven Years ſet in the Ground, it begins to bear a kind of Huſks, full of an oily Matter, and Seed much ſmaller than that of Poppy, which they uſe there to perfume Liquors and Tobacco, and is uſed in ſome Parts of *Europe*, in Chocolate. The Papaye is a thick Fruit, taſting ſomewhat like a Cucumber, of a round Shape, the Stem tall, but ſlender, with large Leaves, cleft like Vine-leaves; the Tree is hollow, and grows fifteen Foot high in one Year. The Accajou-apple is long, thick, and of an Orange-red; it has a ſharp Taſte, and is commonly eaten baked. At the End of this Fruit is a green Nut, which taſtes like *Spaniſh* Nuts or Filberts, much in the Shape of a little Sheep's Kidney; the Shell whereof is oily; the Oil ſtaining the Skin black, ſo as it does not rub off in a long Time, and is medicinal and very laxative. The Plant is a round Sort of Tree like a Cheſnut Tree, and the Leaves in Shape and Form reſembling thoſe of the Bay-Laurel. The Wood is very fine, proper to make all Sorts of Houſhold Goods. The *Indians* make their long Canoes, which they call *Piraguas*, of it; though theſe are commonly forty or fifty Feet long. It has been obſerved that wherever the Juice of this Apple falls, the Stain cannot be taken away till the Seaſon of the Apple is quite over.

We will now proceed from the Country and its Produce, to the People, of whom the *Dutch* Writers ſpeak to this Purpoſe: The *Indians* are generally red, and of a middling or rather low Stature, of a robuſt ſtrong Conſtitution, having black, long, and lank Hair, going all naked, their Privy-Parts covered only with a little Cotton-wool hanging down to the Legs: The Women are ſhorter generally than the Men, and of a red Colour, but tolerably handſome; their Eyes for the moſt part blue, and very regular Features in their Faces, and well framed; they uſe a Piece of Cloth about ſix Inches ſquare, which they call *Camiſa*, uſually wove in Stripes of divers Colours, and eſpecially white, which is the moſt valued among them.

The Men cut off their Beards, dye their Faces with Rocou, and cover their Arms and Faces with ſeveral Folds of the kind of Cloth before-mentioned. They wear, by way of Ornament, a ſort of Crown, or Garland, of Feathers of ſundry Colours, and bore a Hole between their Noſtrils, where they hang a little Piece of Money or a large green Stone, or rather Cryſtal, brought from the River of the *Amazons*, which they put a great Value on. Theſe *Indians* are generally of ſuch a robuſt Conſtitution, and live ſo long, that they reckon a Man dies young at a hundred Years of Age. They are endued with pretty good Senſe, their long Lives ſerving them to gain Experience, and improve their Judgments in ſuch Things as are within the Reach of the Light of Nature; they are judicious, ingenious, patient, and ſkilful in fiſhing and hunting, and ſpend the greateſt Part of their Time in thoſe Exerciſes, and ſpare no Pains to get their Living, being more inclined to Peace than War, which yet they engage in, either upon a juſt Quarrel, or Revenge, in Point of Honour. They perform their Promiſes to each other exactly, and will not do to others what they would not have others do to them.

It once happened that ſeveral of thoſe Nations near the River of *Amazons* entered into a League againſt another, and were about a Year in making great Preparations for War, which at laſt ended in one Night's Expedition, by ſurprizing two or three Carbets, ſo they call their Hamlets or Villages, where they burnt about an hundred Perſons of all Sexes and Ages, and returned home as proud and fierce as if they had conquered the whole Country; other Wars are ſeldom concluded till they make forty or fifty of their Enemies Priſoners, whom afterwards they either kill, boil in their Pots, and eat as the *Noragues* do, or ſell them to the *Europeans* at the Coaſt, for Slaves. This Barbarity ſeems in them to be rather the Effect of an ancient ill Cuſtom, to eat the Fleſh of their Enemies, than a natural Diſpoſition; for they ſeem to be aſhamed of it, when the *Europeans* repreſent to them, in their Language, That by the Laws of God we are forbid to kill an Enemy when he is taken Priſoner, and much more to eat him. And they did not offer to reply to it, and ſome of the *Alquas* have appeared full of Indignation when they heard that ſome *Galibis* inſinuated, they would be roaſted by them, if the *Europeans* ſhould venture to travel through their Country. Whence it may be inferred, that though this barbarous inhumane Practice is ſo much eſtabliſhed and received among theſe *Aſcquas* and *Noragues*, yet it ſeems to be no difficult Matter to reſtrain them from it.

They are generally great Eaters, and drink little or nothing at their ordinary Meals till they have done, and then commonly drink one Draught; but when they aſſemble together for warlike Enterprizes, or to begin a Canoe, or to launch it, or to admit one into their Council after they have expoſed him to ſeveral hard Trials, they make extraordinary Rejoicings, which frequently hold three or four Days, continuing till they have drank up all their Liquors; for upon thoſe Occaſions they make three or four different ſorts of Drink, ſome of which become very ſtrong by Fermentation, as that which they call *Palinot*, which they make of Caſſibi, that is, baked more than ordinary; their common Diet is that they call *Caſſibi*, being Cakes made of the Mandioca Root baked on the Embers, as alſo *Indian* Wheat, Fiſh, and Fruit.

Theſe Particulars ſhew, that the Accounts formerly publiſhed, when it was propoſed to fix an *Engliſh* Colony on theſe Coaſts, were perfectly well founded, and that there are no very conſiderable Obſtacles to be ſurmounted by the *Dutch*, in order to render *Surinam*, and the reſt of the Places they poſſeſs on the Coaſt of *South America*, much more advantageous than they are at preſent; the greateſt Difficulty is, to quiet the Minds of the Natives; the greateſt Part of the Nations in *Guiana*, having conceived an exceſſive Hatred to the *Dutch*, which is believed to ariſe chiefly from the Stories told them by the *French* and *Portugueſe* Miſſionaries, who make no ſort of Scruple of affirming any thing that may ſerve their Turns, and hinder the *Indians* from converſing or trading with Heretics. We are told that the Natives pretend to this Day a great Eſteem and Veneration for the *Engliſh*; and that they tell a great many romantic Stories about them, which are ſuppoſed to be owing to the Correſpondencies formerly ſettled there by Sir *Walter Raleigh*. In a Time of profound Peace perhaps it might not be impoſſible to attempt, and ſucceed in, fixing an *Engliſh* Colony upon one of the two great Rivers, by which *Guiana* is bounded; at leaſt it is right to keep alive the Memory of our having a Right to do this, and that we have a much better Title to this large and agreeable Country than any other Nation in *Europe*.

5. The Iſland of *Tobaga* lies in the Latitude of 11 Degrees 15 Minutes North, and is the moſt to the Eaſt of all the Iſlands called *Antilles*: It is about twelve Leagues in Length, four in Breadth, and thirty in Circumference. It originally belonged to us; for in 1628 we find that King *Charles* I. granted it, together with *Trinity Iſland*, *Barbuda*, and *St. Bernard*, to *Philip* Earl of *Pembroke* and *Montgomery*; but it does not appear that ever any

Settlement was made thereon, in Conſequence of this Grant. In 1642, or thereabouts, the *Dutch* from *Fluſhing*, ſent a conſiderable Colony thither, who fixed themſelves very commodiouſly; and though at firſt they found the Climate ſickly and unwholeſome, yet by Degrees, as they cleared it, the Air agreed with them better, and they began to extend their Settlements. The *Spaniards*, however, from the Iſland of *Trinity*, in Conjunction with the *Savages* from *St. Vincent*, fell upon the *Dutch*, murdered them to a Man, and deſtroyed their Plantations: After which the Iſland lay for ſeveral Years deſert.

About the Year 1664 Mr. *Adrian Lampſin*, a *Dutch Eaſt India* Director, and his Brother Mr. *Cornelius Lampſin*, Burgomaſter of *Fluſhing*, one of the Deputies to the States-General from the Province of *Zealand*, formed a Deſign of re-ſettling this Iſland entirely at their own Expence. Mr. *Cornelius Lampſin*, after obtaining a Licence for that Purpoſe from the States, applied himſelf to the Crown of *France* in order to prevent, if poſſible, any Danger to his new Colony from the Subjects of that Kingdom; and *Lewis* XIV. out of his great Generoſity, from a Deſire of ſhewing his Affection to the *Dutch*, and from a Principle of Indulgence to Men of noble Diſpoſitions, created Mr. *Lampſin* Baron of *Tabago*, with all the Privileges of a Baron of *France*, and aſſigned him alſo a fair Coat of Arms ſprinkled plentifully with Flower-de-Luces. Upon theſe Encouragements the two Brothers proceeded, and entirely at their own Charge, and by their prudent Management, from a waſte and deſart Country, in the ſhort Space of eleven Years, rendered it the moſt flouriſhing for its Size of all the *Leeward Iſlands*; they called it, from one of the largeſt Iſles in the Province of *Zealand*, *New Walcheren*, raiſed a very good Town, and a ſtrong Fortreſs, called *Lampſinberg*, and two other good Forts, *Beveren* and *Belleviſte*; and, which is very amazing, they ſettled, during their Adminiſtration, twelve hundred white People in that Iſland, where they ſucceeded in raiſing all the Commodities that are brought from the *Weſt Indies*, viz. Tobacco, Sugar, Ginger, Indigo, Cotton, Caſſia, Cacao, Rocou, Fuſtic, Citrons, Oranges, Ananas, *&c.* And beſides theſe, they had ſome very valuable Commodities which were not in the other Iſlands; ſuch as an excellent Kind of Saſſafras, a Kind of wild Mace and Nutmegs, and a great Quantity of Gum Copal.

They raiſed, beſides, all ſorts of Grain and Proviſions in Quantities ſufficient for their own Uſe, and for Exportation to the other Iſlands. But in 1678 Marſhal *d'Eſtrees*, by the expreſs Command of his Maſter *Lewis* XIV. ſailed with a great Fleet to deſtroy this very Settlement, notwithſtanding it had been made under his Protection, and by his Encouragement; for it ſeems it is one of the Privileges of the Barons of *France* to be beggared and deſtroyed whenever their grand Monarch pleaſes, which with ſome Difficulty was accompliſhed; for the *Dutch* defended themſelves obſtinately; but after two hard-fought general Engagements, they were defeated or rather over-powered by Numbers, and the Colony totally ruined, not more to the Loſs of the induſtrious Planters than to the eternal Infamy of that barbarous Prince, who placed his Glory in making better Men than himſelf miſerable. This Iſland was reſtored to the *Dutch* by the Treaty of *Nimeguen*; and they have repaired ſome of their Settlements; but it is now a Place not worth ſpeaking of, and very probably will never be, in any Degree, reſtored to its primitive Condition, becauſe, lying within Reach of the Savages of *St. Vincent* and the Continent, it will be a very difficult Matter to ſettle there with Safety, unleſs a new Colony was undertaken in the ſame Manner, and carried on with the ſame Spirit, as the laſt.

The Iſland of *St. Euſtachius* lies to the North-weſt of *St. Chriſtopher*'s, in the Latitude of 17 Degrees 40 Minutes North. It is but ſmall, being no more than five Leagues in Compaſs; it appears, to the ſouthward, like a high Mountain riſing out of the Sea, but ſtretches out northward into an indifferent good Country. The *Dutch* took Poſſeſſion of it in the Year 1635, and the States granted the Propriety of it to Mr. *Vanree*, and ſome other Merchants of *Fluſhing*, who very ſoon ſettled a Colony there of about ſix hundred Families. In the Year 1665 the *Engliſh* in *Jamaica* diſpoſſeſſed the *Dutch*, and ſent Colonel *Morgan* with three hundred *Buccaneers* to keep Poſſeſſion of the Place. He ſoon after, making an Attempt upon the *French* Part of the Iſland of *St. Kit*'s, was killed; and the next Year the *Dutch* and *French*, both then engaged in a War againſt *Great-Britain*, attacked and made themſelves Maſters of this Iſland, which by the Treaty of *Breda* was reſtored to the *Dutch*.

In 1689 it was taken from them by the *French*, but was reſtored to them again by the Treaty of *Ryſwick*, ſince which they have remained in the peaceable and quiet Poſſeſſion thereof. The Number of Plantations thereon, and the comfortable Condition of its Inhabitants, do very great Honour to the *Dutch* Induſtry; for without Doubt in any other Hands it would be a very indifferent Place; all the Sides of the Hill are laid out into ſmall Settlements, and cultivated; the Houſes are well built and well furniſhed; moſt of the Inhabitants are in good Circumſtances, and have Warehouſes well filled with *European* Commodities, with which they ſupply their Neighbours at a round Price, whenever they are diſappointed of Supplies from *France* and *England*. They likewiſe raiſe great Quantities of excellent Tobacco, which comes to a good Market in *Holland*, and ſome other Commodities; yet there is not a Drop of Water in the Iſland, but what they are ſupplied with from the Clouds, which they preſerve ſo carefully in Ciſterns, that they are very ſeldom diſtreſſed. The Top of the Mountain is covered with a vaſt Wood, and in the Midſt of it, inſtead of the Point one would expect, as it riſes in the Form of a Sugar-loaf, there is a wide and deep Cavern, whence ſome have imagined that it was formerly a Vulcano, or burning Mountain.

To the North-weſt of this Iſland lies that of *Saba*, in the Latitude of 17 Degrees 35 Minutes, which appears at firſt Sight to be a Rock; but the *Dutch* Governors of *St. Euſtachius* have ſent a ſmall Colony thither, who have found a tolerable Valley, where they raiſe Tobacco, and other Things. It is a great Misfortune to both theſe Iſlands that they have not ſo much as a Port; but in the former there is a good Road, to command which there is a pretty ſtrong Fort, and there all the Ships ride.

The Iſland of *St. Martin* lies in the Latitude of 18 Degrees 15 Minutes, is in Length about ſeven Leagues, and in Breadth four: The Climate is very far from being wholeſome, and the Soil cannot be very fertile, ſince there are no Rivers, and very few Springs in the Iſland, which are alſo dried up in the hot Seaſons; and then the Inhabitants are forced to have recourſe to their Ciſterns of Rain-water; yet, as inſignificant as this Place may appear, it has been contended for by three, and is actually inhabited by two, powerful Nations; ſo that the Hiſtory of it is extremely curious, and very well deſerves our Notice. The *Spaniards* in Right of Conqueſt took Poſſeſſion of it, built a Fort there which was very ſtrong, not ſo much for the ſake of what they were able to make of the Iſland, as to prevent any other Nation from ſettling there; but when they perceived that the *French*, *Engliſh* and *Dutch*, had ſeized the more valuable Iſlands, they thought it ridiculous to be any longer at the Expence of keeping this, and therefore reſolved to quit it. This Reſolution was taken in the Year 1648, and was executed very ſoon after. They deſtroyed their Ciſterns, burnt their Houſes, blew up their Fort, and then retired to *Porto Rico*.

It ſo fell out, that in this Garriſon there were four *Frenchmen*, five *Dutch* and a *Mulatto*, and all theſe ten hid themſelves in a Wood, till the *Spaniards* were embarked, and then courageouſly ſallied out and took Poſſeſſion of the whole Iſland of *St. Martin*. But they very ſoon made choice of different Places to ſettle in, and, by a very ſolemn Treaty, agreed to divide the Country between the *French* and *Dutch* Nations. The *Dutch* made a little Canoe, and ſent one of their Number to *St. Euſtachius*, to inform the Governor of their Situation; and they promiſed the *French*, that Care ſhould be taken to ſend the like Notice to the Governor of *St. Chriſtopher*'s; the former, being their own Affair, was performed very exactly; but the latter, concerning their Neighbours only, ſlipped out of their Heads. The *Dutch* did not neglect this new Accquiſition; on the contrary, one *Martin Thomas* was ſent from *St. Euſtachius*, to take Poſſeſſion of their Part of the Iſland, with a conſiderable Number of new Planters. After this they began to treat the *French* but very indifferently, who, receiving no News from their Countrymen, began to ſuſpect the Reaſon; and therefore, though with ſome Difficulty, found the Means of ſending a Perſon to *St. Chriſtopher*'s, to inform M. *de Poincy* of the Agreement they had made, and the Hardſhips they laboured under; whereupon he ſent an Officer and thirty Men, to take Poſſeſſion for the Crown of *France*; but the *Dutch* would not ſuffer them to land, declaring that they looked upon themſelves as the legal Poſſeſſors of that Iſland.

They founded this Claim upon a prior Poſſeſſion; of which it may not be amiſs to ſay ſomething. The *French* were the firſt who attempted to ſettle this Iſland; but allowing the *Dutch* to trade with them, they ſurprized and drove them out of it, and built a Fort for their own Security; but the *Spaniards*, not liking their Neighbourhood, drove them out in their Turn, and erected a ſtrong Fortreſs on the Iſland, as has been before-mentioned. As ſoon as the *French* Officer returned to *St. Chriſtopher*'s, M. *de Poincy* ſent his Nephew, with three hundred Men, to put an End to this Diſpute, and he did it very effectually; ſo that the *Dutch* Governor was glad to ſettle the Diviſion of the Iſland, according to the firſt Agreement; by which all that Part of the Iſland which looks towards *Anguilla*, was to belong to the *French*; and the other Side of the Iſland, in which formerly ſtood the *Spaniſh* Fort, remained to the *Dutch*. The former was the better half in every Reſpect, except the Salt-pits, which belonged to the *Dutch*. The Contract was ſettled on the Top of an Hill, the higheſt on the Iſland, which was from thence called *la Montange des Acordes*.

From this Time to the War in the Year 1688, the two Nations lived together in ſtrict Friendſhip, till the *French* called off the greateſt Part of their Inhabitants to people that Part of the Iſland of *St. Chriſtopher*'s, out of which they had driven the *Engliſh*; and being afterwards driven out by them, theſe poor People were, for the moſt Part, undone; ſo that when they endevoured to perſuade them in the next general War, to take the ſame Step, they would not liſten to the Propoſal at all, but reſolved to remain where they were; and the *Dutch* and *French* lived, while that War laſted, in great Quiet and Tranquillity; neither would they ſuffer the Privateers of either Nation to injure the other. The *French* Settlement is of very little Conſequence; but the *Dutch* are in a mighty good Condition, have large Warehouſes, and carry on a conſiderable Trade, eſpecially in Tobacco, which is very much eſteemed, and the Place would be ſtill more conſiderable, if they had a tolerable good Port; but they have only a Road, where Ships are much expoſed, and, beſides, it lies ſomewhat out of the Way, as being too much to the Leeward, which renders the Commerce to the Windward Iſlands very difficult. There is great Plenty in this Iſland of a kind of Tree, which both the *Dutch* and *French* call *Candlewood*. When it grows dry, and fit to burn, it yields a very pleaſant Smell; and the ſmall Sticks of it, when lighted, ſerve for Candles; and at the ſame Time that they light the Room, yield a very pleaſant Scent, which ariſes from a fragrant Gum in the Tree, which cannot otherwiſe be extracted.

Theſe are all the Poſſeſſions of the *Dutch* in this Part of the World, and it is equally ſurprizing that they have kept theſe ſo long, and that they have not been able to acquire better; ſince it is certain, that they have ſucceeded as well as any Nation, in thoſe they have ſettled, and carry on a conſiderable Trade to *Holland*, in all kinds of *Weſt India* Commodities; as on the other Hand, they maintain a very conſiderable Commerce in *America*, from the great Warehouſes of *European* Commodities, which they keep always full, and have ſmall Veſſels ready to carry their Goods wherever they hear of a Market, more eſpecially in the Time of War between *Great-Britain* and *France*; for then they have an Opportunity of ſupplying the Colonies of both Nations, in exchange for Sugar, and other *Weſt India* Goods, which they tranſport in their own Veſſels into *Europe*; ſo that in a very few Years ſuch a War cannot fail of making all the *Dutch* Planters prodigiouſly rich. We are now to proceed to their other Iſlands, which lie nearer the *Spaniſh* Coaſt, and are conſequently of more Value to them.

Curaçao, or as the *Dutch* pronounce, and ſometimes write it, *Curaſſow*, is a ſmall Iſland in the Latitude of 12 Degrees 40 Minutes North, about nine or ten Leagues in Length, and about five in Breadth; the Soil of which is far enough from being fruitful, and the Climate ſtill farther from being either wholeſome or agreeable; but notwithſtanding theſe Diſadvantages, ſuch have been the Care and Induſtry of the *Dutch*, that they have always drawn great Advantages from this ſmall, and ſeemingly inconſiderable, Country, in which formerly there were large Paſtures, and a great Quantity of Cattle; but of late they have turned theſe into Sugar and Tobacco Plantations, ſo that at preſent it is thought the Proviſions of all Sorts, that are raiſed in this Iſland, would ſcarce maintain its Inhabitants for one Day; yet ſuch is the Prudence of the *Dutch* Government, that the Inhabitants are ſo far from being expoſed to Want, that there is not a more plentiful, or better provided, Place in the *Weſt Indies*; but, at the ſame Time it is to be underſtood that every thing fetches a high Price there, which is ſo far from being a Diſadvantage, that, in reality, it is the principal Source of the great Wealth of the Inhabitants. On the South-ſide of the Eaſt End of this Iſland, there is an Harbour called *Santa Barbara*; but the chief Harbour is about three Leagues from the South-eaſt End, on the South-ſide where the *Dutch* have a very good Town and a ſtrong Fort. Ships bound in thither muſt be ſure to keep cloſe to the Harbour's Mouth, and have a Hauſar, or Rope, ready to ſend one End aſhore to the Fort; for there is no anchoring at the Entrance of the Harbour, and the Current always ſets to the Weſtward; but, being got in, it is a very ſure Place for Ships either to careen or lie ſafe; at the Eaſt End are two Hills, one of them is higher than the other, and ſteepeſt towards the North ſide.

The *Dutch* Town, upon this Iſland, is, for its Size, one of the fairſt and fineſt in *America*; and there are in it every thing requiſite to render it commodious and agreeable, as far as the Climate and Soil will admit; public Buildings there are of all kinds, very neat and commodious; the Port is rendered as ſafe as it is poſſible, and though the Entry is dangerous, yet the Precautions taken for the Service of Strangers, by the Government, are ſuch as not only free them from all Difficulties, but render them alſo, in a great Meaſure, inſenſible of any Hazard; ſo that though Nature has made it as inacceſſable as any, yet, by the Skill and Induſtry of the *Dutch*, it is become one of the moſt frequented Ports in the *Weſt Indies*. All kind of Labour here is performed by Engines, and that with ſuch Dexterity, that Ships are lifted at once into the Dock, where they are carefully and effectually careened, and furniſhed with Proviſions, naval Stores, Ammunition, and even Artillery if they want it; and all this is done with equal Readineſs to all Nations, the *Dutch* being in perpetual Alliance with ready Money, let it be *Engliſh*, *French*, or *Spaniſh*; as appeared clearly in our late Expedition to *Laguira*, and *Porto Cavallo*, where they furniſhed us with Cables, Ammunition, and even Men, for attacking the *Spaniards*, who they had before furniſhed with Powder and Ball, ſufficient to render that Attack ineffectual, and, but for the Neighbourhood of this *Dutch* Settlement, the *Spaniſh* Fortreſſes before-mentioned had been infallibly reduced, and in our Poſſeſſion.

Bonaira and *Aruba* are two Iſlands likewiſe in the Poſſeſſion of the *Dutch*, and dependent upon the Iſland of *Curaçao*; the former, which is twice as big as *Curaçao*, lies ten Leagues to the Eaſtward of it, and is about ſeventeen in Compaſs; the *Dutch* have a Deputy-Governor here, a Guard of Soldiers, and conſiderable Number of *Indians*; of late Years there is a Fort built for the Protection and Security of the Place, in which the Soldiers do Duty. The *Indians* are Huſbandmen, and plant

Maize and *Guinea* Corn, and ſome Yams, and Potatoes; but their chiefeſt Buſineſs is about Cattle, for this Iſland is plentifully ſtocked with Goats, and they ſend great Quantities every Year in Salt to *Curaçao*. There are ſome Horſes, Bulls, and Cows, but no Sheep or Hogs all over the Iſland, or any Animals, but thoſe before-mentioned; the South-ſide is plain Low-land, and there are ſeveral Sorts of Trees, but none very large; there is a ſmall Spring of Water by the Houſes, which ſerves the Inhabitants, though it is brackiſh; at the Weſt-End of the Iſland there is a good Spring of freſh Water, and three or four *Indian* Families live there, but there is no Water or Houſes in any other Place.

On the South-ſide, near the Eaſt End, is a good Salt-pond, where *Dutch* Sloops come for Salt, which is now become a very conſiderable Commodity, and the *Dutch* are contriving Methods for turning it to ſtill greater Advantage. The Iſland of *Aruba* lies ſeven Leagues Weſt from *Curaçao*, and is not very conſiderable; however, they breed ſome Cattle there, and a great many Horſes, which makes it uſeful to their chief Colony; to which it alſo furniſhes a great Quantity of Garden-ſtuff, without which the People at *Curaçao* could not ſubſiſt; for amongſt other Methods they have of getting Money, one is, allowing Strangers to erect Hoſpitals aſhore for their Sick, in which they conſume a great many Greens and Roots, and pay for them very largely, as indeed they do for every other Conveniency.

6. As this Iſland is not above ſeven Leagues diſtant from the *Spaniſh* Coaſt, a more convenient Station cannot be wiſhed for the carrying on a clandeſtine Trade; it was firſt introduced by the Sale of Negroes, brought thither by the *Dutch*, from their numerous Settlements on the Coaſt of *Guinea*. Theſe the *Spaniards* brought, in a Manner, openly, and have tranſported, in their own Veſſels, fifteen hundred at a Time. But ſince the *Engliſh*, from *Jamaica*, have interfered in this Trade, it is ſunk very conſiderably, though they ſtill ſupply the neighbouring Provinces, and reap a great Profit thereby, becauſe no Body underſtands the Management of this Buſineſs better than they do, can bring Slaves at a cheaper Rate, or vend them at a higher Price. Some Writers have aſſerted, that in its moſt flouriſhing Condition, the Slave Trade alone drew from the *Spaniards* conſiderably above a Million of Pieces of Eight *per annum*.

The Dealers at *Curaçao*, and their Correſpondents in *Holland*, were too knowing, and too converſant in Buſineſs, to let the Declenſion of the Slave Trade rob them of the Benefit of this Iſland. In order to replace what was loſt by the *Engliſh* interfering with them, they built vaſt Magazines, and ſtored them with *European* Goods, which had a very good Effect: In the firſt Place, it preſerved to them the Remainder of their Slave Trade, for the *Spaniards* knowing that this, of all others, was moſt winked at by their Governors, reſolved to keep up a Pretence of buying Slaves, in order to have an Opportunity of purchaſing other Things. Secondly, It tempted the *Spaniards* to run all Hazards, that they might, at a reaſonable Price, obtain any Sort of *European* Merchandize they wanted, and that too whenever they pleaſe. It is incredible what vaſt Sums have been annually traded for in this Way; beſides, the Inhabitants of *Curaçao*, to keep up a good Correſpondence with their Neighbours, and, as far as poſſible, to fix their Affections, refuſed to ſuffer any Privateers to enter their Ports; nor would, upon any Terms, purchaſe their Plunder, which, at the ſame Time, was publickly ſold at *Jamaica*, where the Privateers uſually ſpent their Money; this Spirit of Self-denial, however, did not hinder the Traders of *Curaçao* from directing the Privateers to put into the Iſland of *St. Thomas*, whither they inſtantly ſent Sloops with Money and Agents on board them, to purchaſe what the Privateers had to ſell; taking Care to ſend the Effects as ſoon as poſſible to *Europe*, that the *Spaniards* might have no Intelligence of this Contrivance.

It is to be obſerved, that in reſpect to this clandeſtine Commerce, it is chiefly carried on by the *Spaniards* themſelves, who run all Hazards, come in Perſon to the Iſland, and carry away whatever they have bought in their own Ships. In proceſs of Time, however, ſome Merchants deviſed another Way of carrying on the ſame kind of Commerce, by Ships ſent directly from *Europe* to the *Spaniſh* Coaſts. Theſe Veſſels were of ſuch Force, that thoſe aboard them ſtood in no Fear of any Precautions the Governors could take; and, on the other Hand, as their Cargoes paſſed immediately from their original Owners to the *Spaniards*, they could be afforded conſiderably cheaper than thoſe conſigned to Factors in *America*. The Method of trading, was by a Signal from the Ships, or from the Shore. The Long-boat was then ſent off well manned, brought the Merchants aboard with their Money, and carried them back with their Goods. The Reader has been elſewhere told, with what Obſtinacy one of theſe Ships was defended againſt two Guarda Coſtas, and, to ſay the Truth, thoſe aboard them choſe rather to ſink than be taken; a very extraordinary kind of Courage, for which, however, it is not impoſſible to account; and, as it may be uſeful as well as pleaſant, I think it not amiſs to enter into the Particulars thereof.

At the Time one of theſe Ships is fitting out, Notice is given to all Sailors, that they may have an Opportunity of entering; which they do with great Alacrity, there being, generally ſpeaking, twice as many who offer themſelves, as can be made Uſe of; when the Proprietors have their Complement of picked Seamen, they not only allow every Man his proper Cargo to a certain Value, but alſo furniſh it themſelves on Credit, at prime Coſt; by this Means every private Man aboard becomes a Proprietor; and if the Ship is attacked, fights for his own Property, which is the Reaſon that he will drown ſoon than part with it, and is one Cauſe why Guarda Coſtas are not over-fond of meeting with thoſe Veſſels, but chuſe rather to prey on fair Traders who have fewer Men, and are of leſs Force. The Scheme I have mentioned is certainly a right one, though in a wrong Cauſe. The only Way to ſupport the Spirits, and fix the Affections, of ordinary People, is to conſult their Intereſt; and thoſe who imagine that Juſtice, Honour, or any thing elſe, will anſwer the ſame End, without a due regard to this, muſt not expect much Pity when they find their Miſtake; ſo true in all Caſes is that divine Maxim, *That the Children of this World are wiſer in their Generation than the Children of Light.*

In a Time of full Peace, it has been computed that the Trade of this Iſland did not produce leſs to the *Dutch* than five Millions of Florins *per annum*, which is about half a Million Sterling; and conſidering that they derive this from a Parcel of Rocks, that any but they would ſcarce think worth keeping, it is a prodigious thing, and muſt, in the Opinion of every competent Judge, paſs for the cleareſt Proof of the *Dutch* Skill and Induſtry that can poſſibly be given. In Time of War the Profit is much larger; for then every Article of their Commerce is vaſtly increaſed, they ſell more Slaves, more naval and military Stores, and more *European* Goods to the *Spaniards*; and the Governors are themſelves leſs ſtrict in Point of Licences; for theſe are things that muſt be had, and there is ſcarce any other Market. Beſides, at ſuch a Time, they drive a good Trade with the *Engliſh* Squadrons, that come upon thoſe Coaſts, and have alſo conſiderable Dealings with their Privateers, for which, in Time of War, they always keep a regular Factory at *St. Thomas*, as will be ſhewn hereafter.

The Reader may collect from hence the true Reaſon of thoſe Diſputes, ſo often mentioned in the *Dutch* Gazettes, between the Crown of *Spain* and the Republic; the former looking upon all the Commerce of *Curaçao* as a kind of contraband Trade, which ought to ſubject the Veſſels employed in it to frequent Seizures, by the Law of Nations, which the latter will by no Means allow, pretending that the Tobacco, Indigo, and Hides, aboard thoſe Veſſels, are the Produce of their own Colonies; and that the Silver found in them, is nothing more than the Balance of their Trade with other Nations. The *Spaniards*, indeed, know, but are not always able to prove, the contrary, and therefore are ſometimes obliged to releaſe the *Dutch* Ships, taken by the Guarda Coſtas, and for thoſe that are confiſcated, though the *Dutch* always make a great Noiſe about it, yet they are ſenſible enough, that they have not much Reaſon; and this is the true Cauſe, notwithſtanding all their loud Complaints, that they never proceed to Extremities upon this Subject, but are content with what Reſtitution they can get, and ſtill keeping up a Claim to what they know will never be reſtored.

7. We have, in ſeveral Parts of this Work, had Occaſion to ſpeak of the *Dutch Weſt India* Company, and therefore we ſhall not repeat here what has been already ſaid upon that Subject, but content ourſelves with obſerving, that the *Weſt India* Company, which ſubſiſts at preſent in that Country, is not the ſame that formerly made ſo great a Figure in the World, were Maſters of *Brazil*, and the Scourge of the *Spaniards*; but another Company erected on the Ruin of that, in the Year 1674, into which the Proprietors of the *Old Weſt India* Company were indeed admitted, but admitted upon ſuch Terms, as ſhewed plainly enough how low they were fallen, and how near becoming Bankrupts, for they were allowed no more than fiften *per Cent.* in the new Capital; that is to ſay, if a Member of the *Old Weſt India* Company was poſſeſſed there of one hundred Florins in Property, it gave him a Title to no more than fifteen Florins in the new Stock; neither could they think this hard, ſince ſome of their Creditors bore a great Proportion in the Loſs, Thoſe that had lent Money upon the Stock, had no more than thirty *per Cent.* allowed them; but as to the fair Creditors, with whom the Company had run in Debt for the Support of their Commerce, they had their Demands converted into Stock at par; ſo that the Proprietors of the New Company were three different Sorts of People, in Favour of whom the Republic granted all the Privileges and Emoluments which the Old Company had enjoyed; and they entered, likewiſe, into the Poſſeſſion of all the Fortreſſes and Colonies which belonged to the ſame Old Company.

The Affairs of this New Company were managed, as they ſtill are, by Directors, in the ſame Manner as thoſe of the *Eaſt India* Company; and though by ſeveral Calls they raiſed conſiderable Sums of Money, and carried on their Trade with tolerable Spirit for ſome Years, yet they could never retrieve their Affairs, but have been always endeavouring to unite themſelves to the *Eaſt India* Company, as the only Means left for preſerving their Settlements in *Africa* and the *Weſt Indies.* As for *Surinam*, there is a particular Company eſtabliſhed for the Management of its Commerce; and the Trade to *Curaçao* is managed by private Perſons, who pay the Company for their Licences, and a ſmall Duty upon all the Goods exported or imported. The only excluſive Trade they now enjoy, is that of Negroes, which of late is very much declined. The Reader will eaſily perceive, that the great Cauſe why this Company has ſunk ſo low, is the Loſs of the Colonies in the *Weſt Indies*; for if they had more Plantations there, and thoſe of greater Extent, it would occaſion a Demand for Negroes; and as the *African* Trade is ſtill in the Hands of this Company, they would be great Gainers thereby, and a conſiderable Part of the Commodities brought from the *Weſt Indies*, muſt neceſſarily enter their Warehouſes.

As it is, the *Dutch* drive a large and a beneficial Trade to that Part of the World, ſo that the Nation in general ſuffers very little, if any thing, by the Company's being in a low Condition; which, in all Probability, is the true Cauſe why the Republic is at ſo little Pains to recover, or reſtore, the Affairs of that Company; and, perhaps, would be glad to ſee it united to that of the *Eaſt Indies*, as a Means, and, indeed, the only Means, of reviving and ſupporting the Slave-Trade. There was a Probability, as we have ſhewn in another Place, of ſeeing this accompliſhed, upon the Propoſal made by the *Weſt India* Company for that Purpoſe, in 1714, when they made it appear, that their Funds amounted to near one hundred and fifty thouſand Florins a Year, excluſive of a legal Demand they have upon the Crown of *Portugal* for a large Sum of Money; but, ſince that Time, the Affair ſeems to have been no more thought of, or is it at all likely that it will hereafter be brought to a Concluſion. Upon the whole, therefore, we have very good Reaſon to ſuppoſe, that as their Affairs now ſtand, the *Dutch* will never make any great Progreſs in this Part of the World; for, except their Colonies upon the Continent, they have none that are either capable of being improved or extended. *Tabago* can hardly be reſettled, unleſs we ſhould expel the *Indians* out of *St. Vincent*. *St. Euſtachius* and *Saba* are down-right Rocks, of which it is wonderful that they make ſo much as they do, but it is impoſſible that they ſhould make more; and the ſame thing may be ſaid of *Curaçao*, and the Iſlands which depend upon it; ſo that how much ſoever private People may gain by the contraband Trade, carried on from thence with the *Spaniards*, yet it is not at all probable that they ſhould ever become formidable to us, or to the *French* in the *Weſt Indies*.

We may add to this, that even a great Part of that Trade is now carried on with the *Spaniards* from *Holland* directly; ſo that many of the Ships employed therein barely touch at *Curaçao*, that they may have a Pretence for ſtanding over to the *Spaniſh Main*, where, eſpecially in Time of War, they find a Way to trade, in the following Manner: They bear away directly for a *Spaniſh* Port, and as they enter it make Signals of Diſtreſs, pretending, commonly, that they have ſprung a Leak, and that they are in imminent Danger of periſhing at Sea, which obliges them to ſeek for Shelter and Protection in the Port of a Crown allied to the Republic. As ſoon as they come to an Anchor, the firſt thing that is done, is to give Notice to the Governor of their great Diſtreſs, and, as a full Proof thereof, to ſend a very conſiderable Preſent. By this Means Leave is obtained to come aſhore, to erect a Warehouſe, and to unload the Ship; but then all this is performed under the Eye of the King's Officers, and the Goods are regularly entered in the Regiſter, as they are brought into the Warehouſe, which, when full, is ſhut up, and the Doors ſealed; all theſe Precautions taken, the Buſineſs is effectually carried on in the Night, by a Back-door, and the *European* Goods being taken out, Indigo, Cochineal, Vanillas, Tobacco, and above all, Bars of Silver, and Pieces of Eight, are very exactly packed in the ſame Caſes, and placed as they ſtood before.

But then, that ſuch as have bought may be able to ſell publicly, a new Scheme takes place, a Petition is preſented to the Governor, ſetting forth the Strangers Want of Money to pay for Proviſions, building the Warehouſe, Timber for repairing the Ships, and a proportionable Number of public *Items*; in Conſideration of all which, Leave is deſired to diſpoſe of ſome ſmall Part of their Cargo, in order to diſcharge thoſe Debts; theſe being obtained in the uſual Manner, ſomething of each Sort of Goods, which has been privately ſold, is now publicly brought to Market, and purchaſed by thoſe Perſons reſpectively who had large Quantities in their Warehouſes before. Thus this whole Scene of Iniquity is tranſacted with all the formal Solemnity which could attend an Act of Juſtice and Compaſſion, The larger Concern the *Dutch* have in this Kind of Trade, the leſs they will be inclined to planting; that is to ſay, while they have this Channel for the bringing in of Wealth open, they will be the leſs ready to think of ſettling new Colonies, or of extending and improving thoſe that they already have; and indeed, if they were to think otherwiſe upon this Subject, they would find infinite Difficulties in the Execution of any Deſign of that Nature, at a Time when all the Nations in *Europe* are thoroughly convinced of the Importance of their *American* Settlements, and are extremely jealous of each other's Progreſs therein.

8. There remains now but one little Iſland more in this Part of the World, of which the Nature of our Deſign obliges us to give an Account: This is, the ſmall Iſland of *St. Thomas*, which lies in the Latitude of 18 Degrees North, and is one of the largeſt of that Cluſter of Iſlands which are called *the Virgins*. This Iſland is not above ſeven Leagues in Circumference, but has the Advantage of a very good Situation in all Reſpects: The Port is excellent, the Form of it an Oval, almoſt entirely

ſurrounded by two Promontories, which defend the Ships that lie within from almoſt all Winds. In the Centre of the Port there is a ſmall Fortreſs, which ſtands in the Middle of a Plain; it is a regular Square, with four good Baſtions though very little, but has neither Outworks or Ditch; and the only Security, beſides its Walls, is a Palliſade, with which it is ſurrounded. On the Right and Left of the Fort, there are two ſmall Eminences, which in our Plantations would be called *Bluffs*, and ſeem by Nature deſigned for Batteries, which would command the whole Harbour; but whether the *Danes* have miſtaken her Intention, or are unwilling to be at any Expence that may be avoided, certain it is, that there are no Batteries here. The Iſland belongs to the King of *Denmark*, who has a Governor and a Garriſon here; but there is beſides, a large Factory on the Iſland, which belongs to the *Brandenburghers*, or Subjects to the King of *Pruſſia*.

The Neighbourhood of the *Spaniſh* Iſland of *Porto Rico*, which is at no greater Diſtance than ſeventeen Leagues, ſecures the Inhabitants of *St. Thomas*, from any Danger of wanting Proviſions, to which otherwiſe they would not fail to be expoſed; for though the Soil of their Iſland be tolerably good, and every Foot of it cultivated, yet it would not produce ſufficient for the Maintenance of the Inhabitants, which for the Size of the Place, are very numerous. The Town of *St. Thomas* conſiſts of one long Street, at the End of which is the *Daniſh* Magazine, which is a very large, magnificent, and convenient Building, wherein there is room for Stores, Slaves, and Goods of all Sorts. The *Brandenburgh* Factory is alſo very conſiderable, and the Perſons belonging to it are chiefly *French* Refugees, who fled thither when the Proteſtants were expelled from the *French* Iſlands. The chief Produce of their Plantations here is Sugar, which is very fine-grained, but is made in ſmall Quantities, and the whole Amount cannot be very conſiderable; yet the *Daniſh* Governor is generally a Man of ſome Rank, lives in a Manner very ſuitable to his Character, and generally acquires a very good Fortune in that Station. The Director of the *Daniſh* Trade becomes likewiſe rich in a few Years; and the Inhabitants in general, by the Neatneſs of their Houſes, and the Condition of their Plantations, ſhew plainly enough that they are in eaſy Circumſtances.

All this is derived from their Trade, which is very large and extenſive, and of very different Kinds; of all which, however, we will do the beſt we can to give the Reader a tolerable Idea. In the firſt Place, the *Spaniards* ſend hither large Veſſels continually, for the Purchaſe of Slaves, which is the chief Support of the *Daniſh* and *Brandenburgh* Commerce, as they draw the Slaves which they ſell, from their Settlements upon the Coaſt of *Africa*, and which, if they had not this Vent for them, would long ago have become uſeleſs, and conſequently have been deſerted. But beſides Slaves, the *Spaniards* buy here, as at *Curaçao*, all Sorts of *European* Goods, of which there is always a vaſt Stock in the Magazine, which belong chiefly to the *Dutch*, who carry on a prodigious Commerce here, by which they are great Gainers. Beſides this Trade with the *Spaniards*, there is a very great Reſort of *Engliſh*, *French*, and *Dutch* Veſſels to this Port, where there is a common Market for them all; where they can always depend upon the Sale of ſuperfluous, and the Purchaſe of, neceſſary Commodities; and this cannot be done without conſiderable Advantage to the Inhabitants of the Place where theſe Dealings are tranſacted. But if in Time of Peace there is a vaſt deal of Buſineſs done at *St. Thomas*, and immenſe Sums of Money turned in the Space of a Year, in Time of War this is vaſtly increaſed; for being a neutral Port, the Privateers of all Nations reſort thither to ſell their Prizes; and the *Dutch*, who will not receive any thing taken from the *Spaniards* at *Curaçao*, buy theſe Goods without Scruple at *St. Thomas*, and have always an Agent and large Sums of Money there, ready for that Purpoſe.

This Manner of dealing, in Time of War, is ſo advantageous, that in Time of Peace the People of *St. Thomas* can hardly leave it off, but are a little too apt to deal with that Sort of Privateers, which, in plain *Engliſh*, are ſtiled Pirates. This paſſes in the Eye of the World for the Work of the *Danes*, but the Truth of the Matter is, that the greateſt Part of this Commerce is driven by their Neighbours, who are not ſcrupulous of dealing with any Sort of People, provided always they can deal to Advantage. It was here that the famous Capt. *Avery*, or ſome of his Companions, diſpoſed of the greateſt Part of the rich Goods, taken in a Ship belonging to the Mogul, about forty Years ago, when the Magazines at *St. Thomas*, were ſo exceſſively crouded with *Indian* Goods, that they were not entirely emptied in twenty Years after, though they generally ſold them at low Prices; and it was by this Accident, that Pieces of *Arabian* Gold, which were, properly ſpeaking, Pagodas, were long current in the *Weſt Indies*, under the Name of Sequins, for they knew not what to call them, at the Rate of about ſix Shillings, and Nutmegs, Cloves, Cinnamon, and Mace, were likewiſe bought there very cheap, for many Years after.

9. We have now run through the entire Hiſtory of *America*, from its firſt Diſcovery to the preſent Time: We have ſhewn how, when, and by whom all the different Parts of the Continent; and all the ſeveral Iſlands of this new World were diſcovered, planted, or conquered; but we have been more particularly careful to explain the preſent State of its Commerce, and the Importance of their Settlements to the ſeveral Nations in *Europe* which have Territories in that Country. All therefore that we have now to do is, to add ſomewhat by Way of Conjecture, as to what may be the future State of theſe vaſt Countries, and what Changes may poſſibly happen in the Affairs of their preſent Poſſeſſors. It is very certain, that a Writer runs a great Riſk, who hazards his Credit upon ſuch Contingencies, and is commonly but very little pitied, if he is ſo unfortunate as to fall into Miſtakes, becauſe he might have avoided, if he had been wiſe, the running any ſuch Riſk; but there is great Difference between an Author who has nothing ſo much in view as raiſing his own Character, and one who conſiders only the Benefit of his Readers, and the Advantages that may reſult from his Writings to others. The latter I freely own is all I aim at, and as I am very certain, that whether the Event juſtifies my Conjectures or not, the Public will be Gainers, I am very little concerned about my Character as a Writer, and therefore am very willing to take my Chance, whether what I am going to ſay upon this Subject may raiſe, or ruin, my Reputation.

The *Spaniards* have undoubtedly, the faireſt, largeſt, and richeſt Countries in *America*; but I am very far from thinking that they are the moſt powerful Nation in thoſe Parts, or that they draw greater Advantages from their Settlements, than are derived from their Colonies to the *Britiſh* Nation. This will appear to many an abſurd and ridiculous Aſſertion, and will appear to moſt a Paradox hardly to be maintained; but to me it ſeems a Truth, and therefore I venture to lay it down; and ſhall next offer my Reaſons in the Support of it. In the firſt Place, though the *Spaniſh* Empire in *America* be very wide, yet it is alſo very weak: In the Kingdom of *Mexico*, where they are ſtrongeſt, the Government is in a very ticklish Situation, the People in general are diſcontented, and even thoſe entruſted with the Government are far enough from being pleaſed; inſomuch that I am very certain, if any Attempt had been made with a reaſonable Force upon that Country, in the Beginning of the preſent War, a general Inſurrection would have enſued. In *Peru* or *South America* their Situation is much worſe, their Force being not near ſo great, and the Diſpoſition of the People not at all better; ſo that if any Notice had been taken of a Project publiſhed when we firſt declared War againſt that Nation, under the Title of *A Propoſal for humbling* SPAIN, we might have made ourſelves Maſters of *Buenos Ayres*, with as little Loſs as was ſuſtained in the fruitleſs Attempt upon *Laguira* and *Porto Cavallo*, which could not have turned to any great Account if we had ſucceeded. The *Spaniards*, on the contrary, had it not in their Power to hurt us, as appears from their being defeated in an Attempt upon the leaſt and weakeſt of our Colonies, with all the Force they were able to raiſe. Such is the Difference between the Strength of their Governments in that Part of the World, and ours.

But to enter more cloſely into the Matter, let us conſider the vaſt Extent of the Country they have, and the Number of People they have in it, and compare it with our own Territory and Force. The *Spaniards*, on one Side of the Continent, poſſeſs a Tract of Land, from 37 Degrees of North Latitude, to 53 Degrees of South; that is to ſay, from *Cape Sebaſtian*, the moſt northern Part of *California*, to the Streights of *Magellan*, which makes about two thouſand Leagues; and on the other Side of the Continent from the River of *Plate*, to the Head of the Bay of *Mexico*, their Territories lie directly along the Shore, or immediately behind it. Yet to guard this immenſe Tract of Ground, they have not above ſix hundred thouſand white People of all Ranks, Sexes, and Ages, and not above three Millions of Subjects of all Colours; and of theſe it is generally reckoned that a ſixth Part are Eccleſiaſtics, and conſequently uſeleſs to the State for its Defence; on the other Side we have five or ſix hundred Leagues Coaſt, in which we have very near as many white People as the *Spaniards*, and thoſe continually increaſing, both by the Number of Perſons bred and born in thoſe Countries, and by the Acceſſion of People from other Places, drawn thither by the Hopes of Profit. The *Spaniſh* Colonies have been always held dangerous and deſtructive to *Old Spain*, by draining that Country of its People; but this is ſo far from our Caſe, that, as I have already obſerved, our Numbers have not only increaſed, ſince we began to make Settlements in *America*, but have really been increaſed by them, that is, in Conſequence of the Navigation and Trade which thoſe Colonies have produced.

At the Time *Spain* diſcovered the *Weſt Indies*, and for ſome Time after, ſhe was the greateſt maritime Power in *Europe*; but the Maxims ſhe laid down for ſecuring her Dominions in the New World, ruined her naval Strength in the Old; ſo that inſtead of great Fleets and numerous Squadrons, ſhe is now reduced to a few Ships of War of no great Strength; and the whole Trade of her *Weſt Indies* is, as to Shipping and the breeding of Sailors, very inconſiderable. On the other Hand, our naval Power took Riſe from our Diſputes with them, grew in Proportion as theirs declined, and is, at this Day, ſupported and maintained by what has weakened them, our *American* Settlements, where, comparatively ſpeaking, we carry on as great a Trade, and employ as much Shipping, as in *Europe*.

The *Spaniſh* Subjects in *America* are, generally ſpeaking, a weak, lazy, and effeminate People; ſo that whatever Good is derived from them to their Mother Country, ariſes not from the Induſtry, but from the Labour and Pains of their tributary *Indians* or Negro Slaves. With reſpect to our People it is the very reverſe; they are generally active and buſy, engaged in different Methods of getting their Living, and very ſeldom remain fixed to one Spot for their whole Lives; and whenever there is a War in that Part of the World, and tolerable Encouragement given them, they are able to raiſe conſiderable Armies, and fit out Numbers of Privateers. The Weakneſs and Declenſion of the *Spaniſh* Power, is viſible in all Parts of their Empire; where ſeveral great and flouriſhing Cities, erected by their firſt Conquerors, are either ſunk into Villages, or totally deſerted; but is more eſpecially apparent in their Iſlands, which were formerly the beſt peopled, and the moſt flouriſhing Parts of their Dominions; whereas they are now fallen ſo low, that it is with Difficulty they keep them, and there is no direct Trade between them and *Old Spain* at all. Our Colonies are ſo far from being in ſuch a State, that they are daily increaſing; and ſome of them, ſuch as the Iſlands of *Bermudas*, are rather over than under peopled; and whenever a long Peace, and a wiſe Adminiſtration, with reſpect to our Settlements ſhall take Place, they will become infinitely ſtronger, and more conſiderable than they they are at preſent; and perhaps it will be found both practicable and expedient to make new Settlements, a thing unthought of by the *Spaniards*, who can ſcarce keep what they have.

Upon the whole, all theſe Circumſtances conſidered, I flatter myſelf it will not be thought the mere Effects of Partiality, in Favour of *Britain*, that have led me into this Notion, but rather a ſerious and attentive Conſideration of the Situation and Circumſtances of both Countries, with reſpect to their *American* Dominions. I am very well aware of one Objection, which is, the general Computations made of the Profits of both Colonies. It may be ſaid, what Proportion does the Trade, or rather the Balance of Trade, from the *Engliſh* Settlements, bear to forty Millions of Pieces of Eight, which in a Time of Peace, it is computed, are annually brought home by the *Spaniſh Flota* and *Galleons*; and how idle and ridiculous a thing is it, to compare ſuch immenſe Treaſures of Gold and Silver, with our Cargoes of Sugar, Tobacco, naval Stores, and Fiſh? But, perhaps, when we conſider this more attentively, it will neither appear ſo ridiculous, nor ſo much to our Diſadvantage, as at firſt Sight it may ſeem.

We might, in the firſt Place, diſpute the Matter of Fact; for it is certain, that if we examine it nicely, and require all the neceſſary Proofs, it can never be brought any thing near that Sum; but this we are content to wave, becauſe if the fraudulent, as well as fair, Trade, be taken in, it is not impoſſible, in Time of Peace, that there may be in Jewels, Gold, Silver, and Goods, the Value of Eight Millions of our Money exported in one Year, from *America* into *Old Spain*. But the next Queſtion is, does it remain there? Does this prodigious Wealth belong to the Subjects of *Spain*? Does it circulate through that Nation? All theſe Queſtions muſt be anſwered in the Negative, and I believe it will be allowed me, That to ſuppoſe two Millions Sterling, or, at moſt, ten Millions of Pieces of Eight, become *Spaniſh* Property, is over-doing the thing, and allowing them more Riches than really comes to their Share. But admitting the Caſe to ſtand thus, the Compariſon between what they gain by their Colonies, and we by ours, is far enough from appearing ridiculous.

But it may be objected, that we do not bring home Money or intrinſic Riches, which is all that can add to the real Wealth of a Nation. Yet this very Objection, which ſeems to ſet us farther back than ever, confirms our Argument. The Commodities we receive from our Colonies, are the Produce of Labour and Induſtry; they are returned us for what was the Produce of Labour and Induſtry here, become, when imported, the Objects of Labour and Induſtry again; and after ſupplying our home Conſumption, for the Supply of which we muſt otherwiſe have ſent out ready Money, the Overplus is once more exported, and actually produces ready Money. Now if we reflect, that every Fact, and every Circumſtance attending each of theſe Facts, is ſtrictly true, with reſpect to ourſelves, and that nothing can be replied to it on the Behalf of the *Spaniards*, who have the Goods and Manufactures they ſend to the *Weſt Indies* carried to them in foreign Veſſels, and the Money which pays for them again, exported from *Spain* in foreign Veſſels; we ſhall be ſatisfied that this is no deluſive Scheme of the Advantages derived to *Great-Britain* from her Colonies in *America*. No ſpecious Dream of imaginary Treaſures, but a clear and ſtrict Demonſtration that Labour, Induſtry, and Commerce, are more valuable Mines than any in *Mexico* or *Peru*.

But all this is not ſaid with any Deſign to lift us up, or render us proud, lazy, and negligent, but quite the contrary; it is exhibited to the View of the Reader, that he may ſee the real Value of Induſtry and Navigation, and why the Author is of Opinion that the *Engliſh* are as powerful as any Nation at preſent in *America*, and may become, out of Compariſon, more ſo, if they are not wanting to themſelves. The *French* come certainly next, but with regard only to their Iſlands; for as to their Plantations on the River of *St. Laurence*, I cannot believe they will ever turn much to their Advantage; and as to their Settlements on the *Miſſiſſippi*, I am perſuaded they will never inrich the preſent Generation, and a thouſand Accidents may fall out that will hinder their turning to the Advantage of Poſterity.

Two Points thoroughly laboured, would ſet us free from all Apprehenſions of the *French*, and conſequently of any other Nation in *America*. The firſt is, giving Relief to the Sugar Planters, which either muſt be done, or, by degrees, that Trade will be loſt, at leaſt as to us, and fall, entirely, into the Hands of the *French* and *Dutch*. People do not go into the *Weſt Indies* to work for others, but for themſelves; and if it once comes to paſs, that they find they cannot do this in our Colonies, they will go where they can; we have certainly no Power, and I think it very doubtful whether we have any Right, to hinder them. To oblige People to work for little or nothing, at ſo great a Diſtance from their Country, and in ſuch uncomfortable Climates, ſuppoſing it could be done, would be degrading them into white Negroes, which, except to ſome modern Governors, would not, I preſume, appear a thing reaſonable to any of the Inhabitants of the *Britiſh* Iſles. We are free by Birth, by the Law of Nature, and the Law of theſe Realms, and therefore Freedom is our Inheritance, in the moſt diſtant Part of the *Britiſh* Dominions, as well as in the County of *Middleſex*; and the Intereſts of *Britiſh* Subjects, wherever they are ſettled abroad, ought to be the Care of the Government at home, becauſe they are the Intereſts of the People at home; and therefore I take it for granted, that the Reports of laying new Duties upon Sugar are abſolutely falſe and groundleſs; and that as ſoon as the War is over, proper Meaſures will be taken for removing ſome of thoſe Duties that have been laid upon this Commodity already, which are juſt as ſerviceable to the *French*, as prejudicial to our own Subjects.

The other Point neceſſary to be conſidered is, the raiſing of Silk, which would open a new Branch of Trade, equal in Value perhaps, to half of what is now gained by our Trade to the *Weſt Indies*. It is very probable that the introducing and eſtabliſhing this Commodity, may coſt us a great deal of trouble and Expence; but if Silk can be raiſed in our Colonies, upon any Terms whatever, it is worth our while to be at all this Trouble and Expence; ſince if we once have it, we ſhall, in Time, moſt certainly have it cheap. It was with vaſt Difficulty that Silk was introduced into *France*, nor was it done without Trouble and Expence; but it has paid that Nation abundantly for both, and there is no doubt, could we but get it, it would pay us as well. Beſides, laying out our Money is nothing with us, we lay it out every Day, not only for ourſelves, but other People, and in ſome Caſes lay it out viſibly to our Prejudice; the only Queſtion therefore ought to be, when we are laying it out, what we lay it out for? And if, as in this Caſe, it can be anſwered, that we lay it out to get more, all is well. The Sugar Trade preſerved, and the Silk Trade acquired, I, for my Part, ſee no more that can be wiſhed, except it be the improving and preſerving them, in order to make us an active and wealthy, as well as keep us a free and happy, People.

But if we ſhould neglect theſe Advantages, I take it for granted that the *French* would grow upon us in the *Weſt Indies*; for if once they become Maſter of the Sugar Trade, it will be very difficult, if not impoſſible, to get it from them: Becauſe it is much eaſier to preſerve a flouriſhing, than to raiſe a declining Commerce. If they get the Sugar Trade, and the Iſland of *St. Domingo*, they will certainly rival us in the Tobacco; and as their Plantations grow rich and populous, the very Overflowings of them may, for any thing I know, make their Settlements on the River *Miſſiſſippi*, turn to a good Account; which, without ſome ſuch lucky and unforeſeen Accident, they never will. Thus I make the efficient Cauſe of the *French* Greatneſs, in thoſe Parts, our Negligence, and not their own Power or Abilities, for theſe can do nothing, unleſs we give them room to work; then, indeed, they may, and certainly will, prove dangerous; for where they have the Capacity, we know they never want Will to hurt us.

As for the *Dutch*, whatever they may be elſewhere, it is certain they need not be here the Objects of our Apprehenſions; for they can neither extend their own Trade to a Degree of provoking our Jealouſy, nor is there any juſt Reaſon to fear they will ever hurt ours, unleſs by our ill Management we drive the moſt induſtrious of our Sugar Planters to take Shelter in *Surinam*, which, with all its Inconveniencies they would be apt to prefer to nearer and better Countries, under an arbitrary and popiſh Government. To conclude the whole, I cannot forbear ſaying, that I look upon the *Spaniſh* Empire in *America*, as a decaying Structure which cannot ſubſiſt long, unleſs its Neighbours will charitably contribute to its Support, in which perhaps they may conſider their own Intereſt enough, to be ſufficiently compenſated for their Labour. I look upon the *Engliſh* Acquiſitions there, as the Glory of our Crown, and if we manage them prudently, the inexhauſtible Treaſures of the Nation. The *French*, in my Apprehenſion, thrive; but not in ſuch a Degree as to be very formidable hitherto. And as for the *Dutch*, I reckon their Trade more beneficial, but leſs valuable, than that of the *French*, as being more precarious, and depending entirely upon the good Pleaſure of *Spain*, which if her Diſputes were thoroughly adjuſted with *Great-Britain*, might prove but a ſandy Foundation.

We might eaſily ſtrengthen theſe Remarks if it was neceſſary, by many others of the ſame Nature, and perhaps it may not be amiſs, for the ſake of Perſpicuity, to give the Reader a few; the rather, becauſe they will ſerve to illuſtrate this Subject in many other Reſpects. The Inhabitants of the *Spaniſh America* have it certainly in their Power to make ſtill great Diſcoveries, and to extend their Conqueſts in that Country conſiderably, if they had Men, or if they had not addicted themſelves ſo much to their Mines, which has been equally the Ruin of their *Indian* Subjects, and of themſelves. In the Iſland of *Hiſpaniola* it is ſaid to have deſtroyed Millions, and many more Millions in *Mexico*, which is the true Source of their own Weakneſs; for had they performed what they pretended in their Applications to the Court of *Rome*, on the Subject of their Diſcoveries in the *Weſt Indies*, had they ſtudied the Converſion of the People to the Chriſtian Faith, inſtead of converting them into Slaves, and had they contented themſelves with Settlements upon the Coaſts, their Power would have been ſufficiently great; the Induſtry of the *Spaniſh* Nation had been encouraged, and their Navigation extended; whereas, in the preſent State of Things they are Lords indeed, but precarious Lords only of wide Territories, which are diminiſhing daily; and at the ſame time have the Mortification of ſeeing mighty Acquiſitions practicable, if they had but Force ſufficient to keep them; but inſtead of graſping theſe, they are forced to withdraw their Colonies in the more diſtant Parts of their Territories, to ſuſtain the main Body of their Dominions, which ſhew their Government to be in a kind of paralytic State, likely to ſubſiſt long, though paſt all Hopes of Recovery. The *Engliſh*, as they have Numbers of People in *America*, ſo taking Things generally, they are not at all in Danger of wanting Room for their Inhabitants. To the North they have *Nova Scotia* and the Country of *New Britain*; to the South they have *Carolina* and *Georgia*, thinly peopled. A great Part of the Iſland of *Jamaica* is ſtill uncultivated, and many of the *Leeward Iſlands* that we claim are unplanted; ſo that as our Power is greater than that of the *Spaniards*, by being more connected at preſent, ſo it is very eaſy for us to extend that Power by Degrees, without leſſening this neceſſary, this ſalutary Connection. The *French* have indeed Room enough, and to ſpare, in *Canada*; but the more People they ſend there, the more they loſe to their Country; for if that Colony was twice as numerous as it now is, it would be very little, if at all, more advantageous to *France*, unleſs ſhe conſiders its being troubleſome to us in the Light of an Advantage, and of ſuch an Advantage as may balance the vaſt Expence ſhe muſt be at in maintaining and ſupporting it. Her Iſlands are already as well peopled as ſhe can wiſh, unleſs ſhe knew better how to furniſh them with Proviſions,

viſions, their Wants often putting them entirely into the Power of their Neighbours, and rendering, not their Trade only, but their very Subſiſtance precarious. In *St. Domingo*, indeed, they have more Room, but, perhaps, there may be Reaſons why, unleſs they can procure the entire Poſſeſſion of the Iſland, they may be unwilling to ſend more People there, than they have in it already. Upon the River *Miſſiſſippi* they might certainly eſtabliſh twenty times the Number of People they have there, but this they will be hardly able to do, if they cannot give them better Encouragement than thoſe Planters have had they have ſent thither already; ſo that take it altogether, the *French* have conſiderable Difficulties to ſtruggle under, but more eſpecially theſe three: The firſt is, the great Diſtance of their Colonies from each other, and their being ſituated in ſuch a Manner, as to have their Correſpondence eaſily interrupted by an Enemy more powerful than themſelves at Sea. The ſecond is, the Dangers and Inconveniencies that attend their Navigation, from their reſpective Colonies to each other; ſo that even in Time of Peace, they are very far from being either ſafe, regular, or expeditious. Thirdly, their Want of proper Commodities in their moſt Northern, and moſt Southern Colonies, to create, or to continue ſuch a Commerce; which therefore is ſcarce to be apprehended, notwithſtanding the Power and Policy of the *French* will be always bent to promote it. As for the *Dutch* and *Danes*, they are at their *Ne Plus ultra*; they may, indeed, increaſe their Traffic occaſionally, and by Intervals; but it is impoſſible they ſhould extend their Dominions, or, conſequently, that their future Power, in thoſe Parts, ſhould ever become much greater than we now ſee it. And though it may inrich themſelves, it can give their Neighbours no Umbrage.

Thus in parting with the Subject, I have endeavoured to give the Reader a Proſpect of the future Condition, as in the foregoing Sections I have endeavoured to exhibit the preſent State of this great Country, the Diſcovery of which gave Chriſtians an Opportunity of propagating their Religion, which they miſerably abuſed. If any thing that is ſaid herein could contribute to the redreſſing this and other Evils, and inſpire Men with free and generous Sentiments of promoting Virtue, Induſtry, and Peace, it will fully anſwer the Author's Intention, and, which is of far greater Conſequence, tend to the Welfare and Benefit of the Human Species; which it is our Intereſt, our Duty, and our Glory, to promote, the only good Thing we can deſire here, or hope to be rewarded for hereafter.

It may be proper to Inform the Curious,
that in laying down the Geography of
Hudſons Bay, and the Neighbouring Coasts &c.
We have consulted, and in some respects followed
Capt. Middleton's Draught: But more particularly
that of Capt. Smith's and the Officers of the Furnace
Sloop and Discovery Pink from 57 to 67 Degrees North
Latitude. We have also perused, and derived some aſsistance
from a Chart of these parts lately published, Dedicated to
Arthur Dobbs Eſqr. The Authorities here referred to, are the
most authentick yet Extant but the publick is in great Expectation of
New Discoveries from the Expedition of the Dobbs Galley and the California
which paſsed by Yarmouth the 31st. of May 1746 under convoy of the Loo of 40
Guns, on their Voyage to Discover the N.W. paſsage by Hudson's Streights.

That there is a North West Paſsage to the South Sea and so to China and the East Indies, is more than probable from the following consideration, That the Western Coast of Hudſon's Bay abounds with Islands, having many large openings between them such as Raukin Inlet, Whale cove, Hopes Bay or Inlet &c. In some of these and in Pistol Bay the Hudson's Bay Company trade Annually for the Finn and Oil taken by the Natives to the Westward of these openings From Whales, which must come from the Western or South Sea; because it is agreed on all hands that there are no Whales in Hudson's Bay, but that they have been known to come in at Wagers Straits &c. with every Tide of Flood. This conjecture is confirmd by the Spanish Admiral De Fontes who by order of his Court made a Voyage from the South Sea to intercept any European Ships that should attempt a paſsage this way, after leaving his Ship at Anchor went on his Boat very near these Openings, and there met with and went on board of a Boston Ship commanded by Capt. Shapley and Mr. Gibbons, who were Trading for Furs in these parts. Therefore if the present Attempt 1746 made for the Parliamentary Reward of 20000 should fail, tis worth considering whether a Voyage by Cape Horn would not sooner determine this matter, for tho' tis a long way round, yet the Probability of Succeſs is much greater, as the desirable Paſsage, if any, will certainly show it self more naturally on the Western Side.

BOOK II.

VOYAGES and DISCOVERIES towards the NORTH, and through moſt of the Countries of *Europe.*

CHAP. I.

The DISCOVERIES made directly towards the NORTH, and the Attempts hitherto made for finding the NORTH-EAST and NORTH-WEST Paſſages.

SECTION I.

The HISTORY *of the Countries lying round the* NORTH POLE; *their Climate, Soil, and Produce; together with an Account of the Cuſtoms, Manners, and Trade of their Inhabitants.*

1. *A ſuccinct Introduction to the Hiſtory of the northern Parts of the World, ſhewing the Reaſon of conſidering them in this Part of the Work, rather than in any other.* 2. *The firſt Diſcovery, Situation, and Plantation of* Groenland, *or old* Greenland, *and the Accidents by which the Knowledge of that Country was afterwards loſt.* 3. *The ſeveral Voyages for the Recovery of that Country, from the Reverend* Mr. John Egede, *a* Daniſh *Miſſionary, who reſided there fifteen Years.* 4. *The Soil, Produce, Plants,* &c. *in this Country, and the Probability of its being anciently much more fruitful than at preſent.* 5. *The Climate, Seaſons, Length of the Days, Fogs, Mountains of Ice,* &c. *in this Country, and in the Seas adjacent.* 6. *Of the various Animals in* Groenland, *and of the Manner in which the Inhabitants hunt the Rain-Deer in the Inland Part of the Country.* 7. *The different Methods practiſed by the Inhabitants in Fiſhing, particularly the various Inventions made uſe of for catching Seals, and other amphibious Animals.* 8. *Their Ingenuity in making Hooks, Lines, and other fiſhing Tackle; their Method of conſtructing Boats of ſeveral Sorts, and their ſurprizing Manner of navigating them.* 9. *Their Houſes in which they live in Winter; their Beds, Lamps, Kettles, and other Furniture; their Tents in which they live in Summer, and their Manner of tranſporting them.* 10. *Their Cuſtoms, Manner of Living, Virtues, Vices, Civility to Strangers, and whatever elſe concerns the Behaviour of the Natives.* 11. *Their Cloathing, Neatneſs, and Conveniency of it; Difference in the Habits of Men and Women, and the Changes wrought in this Reſpect, by the ſettling a* Daniſh *Colony in that Country.* 12. *The Commodities and Commerce of* Groenland; *the Religion of the Inhabitants; their Notions of Aſtronomy, and ſurprizing Paſſion for Poetry.* 13. *Remarks upon the foregoing Particulars; and the Reaſons which induced the* Engliſh, Dutch, *and other*

other Nations, to make Voyages for Diſcovery in theſe northern Parts. 14. *The Diſcovery of* Spitzbergen, *or* Greenland, *more properly* New Greenland; *and a ſhort Account of the Diſpute between the* Engliſh *and* Dutch, *about that Diſcovery.* 15. *A Deſcription of this Country, its Iſlands, Bays, Sounds, Harbours, and the uſual Places where the* Engliſh *and* Dutch *fix themſelves aſhore, during the Whale Fiſhing.* 16. *The Soil, Climate, and Seaſons, in this Country; with ſome curious Remarks on the Colour of the Sea Water.* 17. *Of the Animals that are found here, particularly Deer, Bears, Foxes, &c. with the Method of dreſſing their Skins upon the Spot.* 18. *A diſtinct Account of the Whale; the Size, Strength, and Manner of Swimming of that Creature; and the vaſt Quantities of Oil extracted from the Fat, or Blubber.* 19. *An accurate Account of the Manner of catching the Whale, cutting up, and making Train Oil, and Bone, from it, as practiſed in this Fiſhery.* 20. *Of the other valuable Fiſh in theſe Seas, ſuch as the Fin-fiſh, Morſe, Horſe-whales, Dragon-fiſh, White-fiſh, Sword-fiſh, Sea-unicorn, Hay-fiſh, and the Profits derived from them.* 21. *Of the Countries adjacent to* Spitzbergen, *or* Greenland, *ſuch as* Mayen's Iſland, Nova Zembla, *&c. the Reaſons why they were formerly frequented, and have been ſince deſerted.* 22. *Of the Land of* Yedzo, *or* Jedzo, *ſubject to the Emperor of* Japon; *ſuppoſed to join to, or to be divided by a narrow Streight from the North Continent, either of* Greenland *or* Nova Zembla. 23. *Of the undiſcovered Parts of the World, from the Borders of the Land of* Yedzo, *to the Frontiers of* North America *towards* Hudſon's Bay. 24. *Of the Advantages that might attend the farther and more complete Knowledge of theſe Countries, towards the perfect underſtanding of the terreſtrial Globe, and the mutual Relation between its Parts.* 25. *A circumſtantial Account of the preſent State of the Whale-fiſhery, and a Computation, as near as may be, of the Share of ſeveral Nations in the annual Produce of that Fiſhery.*

1. THERE is hardly a general Rule that admits of fewer Exceptions than this; That no Sort of Knowledge is burthenſome, or appears, upon Reflection, not worth obtaining. If there were any ſuch dark and uſeleſs Spot in the noble Science of Coſmography, or general Knowledge of this Globe, one might expect it ſhould lie in this very Quarter, upon which we are now entring; I mean the Hiſtory of theſe northern Countries lying round the Pole, of which, hitherto, we cannot, with any Certainty, ſay whether they belong to this or that Quarter of the World, or whether they do not form a fifth Part diſtinct; that is to ſay, divided from *Europe*, *Aſia*, *Africa*, and *America*; and, if ſo, there may be, very probably, a ſixth Part lying in the like Manner round the South Pole.

But Experience has taught us, that the Knowledge of theſe dark and dreary Regions is very far from being uſeleſs and unprofitable, and ſtill farther from being dry or unentertaning. We have thrown them into a Section by themſelves, for the Reaſon before aſſigned; becauſe there is no Certainty of theſe Countries being joined to any Part of the known World, and we have choſen to place them at the Head of this Book, becauſe all we know of them is from their being viſited by *Europeans*.

It is for the ſame Reaſon that we begin with *Groenland*, which, for any thing that appears from Hiſtory, was the firſt of them that was diſcovered. The Reader is to obſerve, that though *Groenland* and *Greenland* be the ſame Words, the former being only the *Daniſh* Way of pronouncing and writing the latter, yet they are now made uſe of to denote two different Countries, ſometimes alſo diſtinguiſhed by the Names of *Old* and *New Greenland*; for want of attending to which, many modern Authors have fallen into great Miſtakes and Abſurdities. We ſhall begin with the firſt of theſe, and after giving the beſt Account of it we can, we ſhall then proceed to the latter.

2. *Groenland* lies but forty Miles to the Weſt off of *Iceland*, beginning from the 59th Degree 50 Minutes of North Latitude. The Eaſtern Coaſt extends itſelf to the North, as far, probably, as *Spitzbergen*, or *Greenland*, between 78 and 80 Degrees, which is thought to be an Iſland ſeparated from the Continent of *Groenland*. The Weſtern Shore is diſcovered as far as 71 or 72 Degrees. Whether it be a large Iſland, or borders upon Countries to the North is not yet found out. There ſeems great Reaſon to believe it is contiguous to *America* on the North-weſt Side, becauſe there we meet with the Bay or Inlet, which in the Sea Charts is called *Davis's Streight*, from that famous *Engliſhman*, who in the Year 1585, was the firſt Diſcoverer of it, and is yearly frequented by Ships of different Nations, on Account of the Whale Fiſhery, but no body, as yet, has been able to find out the Bottom of it. And according to the Notice we have endeavoured to gather from thoſe *Groenlanders*, who live fartheſt to the North, there is either but a very narrow Paſſage between *America* and *Groenland*, or, as is moſt likely, they are quite contiguous; and one is the more inclined to believe this, becauſe the farther you go Northwards in the ſaid Streight, the lower is the Land, contrary to what we obſerve where it borders on the Sea or main Ocean, where it never wants lofty Promontories.

It is ſaid to have been firſt diſcovered by a *Norwegian* named *Eric Rotcop*, who, having committed a Murder in *Iceland*, reſolved to fly to ſome ſtrange Country. He landed here, and becauſe of its Greenneſs, called it *Groenland*; he ſent his Son to *Olaus Trugeer*, King of *Norway*, to get his Pardon, which was obtained. Upon this many Gentlemen ventured to plant there, ſettled Chriſtianity, and built two Towns, called *Garde* and *Albe*. The King ſent thither a Viceroy, who had his Seat at *Albe*, which was alſo made a Biſhop's See, and had a Cathedral. They write alſo of a Monaſtery, dedicated to *St. Thomas*, which they pretended was built of Pumice-Stone, and that it had a Spring ſo hot, as to boil their Meat, and being conveyed into the Rooms by Pipes, warmed them as well as Stoves: But this ſeems fabulous. This ſmall Colony failed in 1349, whether by a Diſeaſe they call the Black Plague, or the Barbarity of the Natives, is not certain. In 1406 the Biſhop of *Drontheim* ſent one *Andreas* to bring an Account of the State of Chriſtianity there, but he never returned.

The fabulous Accounts after this Period are not worth preſerving, becauſe they contain nothing certain, uſeful, or entertaining; as to Sir *Martin Frobiſher*'s Voyages, we ſhall have Occaſion to mention them in another Place. It is ſufficient for our Purpoſe to take Notice here, that his Diſcoveries upon the Coaſt of *Groenland* put the *Danes* upon attempting ſomething on that Side alſo, but with very little Succeſs; what they have ſince done, from that Time to this, is much more within our Power, and worthy of the Reader's Notice; which therefore we ſhall give him in the Words of the Reverend Mr. *John Egede*, a *Daniſh* Miſſonary, who has written a Hiſtory of this Country from his own Knowledge, and in his own Language, wherein, as to that Matter, he gives us the following, curious, and authentic Account.

3. " After the Expeditions of *Frederick* II. *Chriſtian*
" IV. his Succeſſor, with great Coſt, ordered four dif-
" ferent Expeditions for this Diſcovery. The firſt was
" undertaken under the Command of *Godſke Lindenow*,
" with three Ships. And, as the Hiſtory tells, *Linde-*
" *now*, with his Ship, arrived upon the Eaſt Coaſt of
" *Groenland* (which I can hardly believe) and found
" none but wild, uncivilized, People there, like thoſe
" *Frobiſher* is ſaid firſt to have met with. He ſtaid
" there three Days, during which Time the wild *Groen-*
" *landers* came to trade with him, changing Furs, Skins,
" &c. and

and precious Stones, againſt all Kinds of ſmall Iron-ware; ſuch as Knives, Sciſſars, Needles, common Looking Glaſſes, and other ſuch Trifles. When he ſet ſail from thence, there were two *Groenlanders* remained in the Ship, whom he carried off, and brought them home with him. Theſe, as they endeavoured to get away from him, and ſometimes would have jumped into the Sea, they were obliged to tie and ſecure, which, when their Countrymen obſerved, who flocked together on the Shore, they made an hideous Out-cry and Howling, flung Stones, and ſhot their Arrows at the Sailors; upon which thoſe from the Ship fired a Gun, which frightened and diſperſed them, and ſo the Ship left them. The two other Ships that ſet ſail in Company, and under the Command, of *Lindenow*, after they had doubled *Cape Farewell*, ſteered directly for the Streight of *Davis*, in which Navigation they diſcovered many fine Harbours, delightful green Meadow Lands, but all the Inhabitants along the Coaſts wild and ſavage. It is pretended alſo, that they, in ſome Places, found Stones which contained ſome Silver Ore, which they took along with them; of which one hundred Pound yielded twenty-ſix Ounces of Silver. Theſe two Ships alſo brought four Savages home with them to *Copenhagen*.

“ The ſecond Expedition was made by Order of the ſame King, in the Year 1606, with five Ships, under the Conduct of the afore-mentioned Admiral *Lindenow*, carrying along with him three of the Savages (one of them dying in the Voyage) which they had brought off the Year before from *Groenland*. But this Time he directed his Courſe to the Weſtward of *Cape Farewell*, ſtanding for the Streight of *Davis*, where, coaſting along, he took the Survey of ſeveral Places, and then returned home again. The third and laſt Expedition of this glorious King, was only of two Ships, commanded by Captain *Carſten Richards*, an *Holſtenian* by Birth. He eſpied the Land, and its high and craggy Rocks afar off, but could not come near it on Account of the Ice, and ſo returned home. The fourth Expedition of King *Chriſtian* IV. under the Conduct of Captain *Jens Munck*, in the Year 1616, was not made for the diſcovering of *Groenland*, but to find out a Paſſage between *Groenland* and *America* to *China*, the Misfortunes of which Expedition are related by the ſaid Commander.

“ There were beſides theſe four Expeditions at the King's Coſt, a fifth, undertaken in the ſame King's Reign, by a Company ſettled in *Copenhagen*, in the Year 1636; of which Company, the Preſident was the Lord High Chancellor *Chriſtian Friis*. Two Ships, fitted out by this Company, directed their Courſe for the Weſtward of *Groenland*, fell in with the *Streight of Davis*, where they traded for a while with the *Savages*; but this was not the main Deſign of the Commander, who was acquainted with a Coaſt whoſe Sand had the Colour and Weight of Gold, which he accordingly did not miſs, and filled both their Ships with the ſame. After their Return to *Copenhagen*, the Goldſmiths were ordered to make a Trial whether this Sand would yield any Gold or no; who not being ſkilful enough to make ſuch a Trial, condemned it to be all thrown over-board; which was done by Order of the High Chancellor, Preſident of the Company. Some Part of the ſaid Sand was yet kept out of Curioſity, out of which an Artificer, who afterwards came to *Copenhagen*, did extract a good deal of pure Gold. The honeſt and well-meaning Commander who went upon this Adventure was turned out of Favour, and ſoon afterwards died of Grief, whereby not only the Treaſure they had brought home, but alſo the Knowledge of the Place where it was to be found was entirely loſt, as he kept this abſolutely a Secret to himſelf.

“ In the Year 1654, during the Reign of King *Frederick* III. a noble and wealthy Adventurer, *Henry Muller*, fitted out a Ship for *Groenland*, under the Command of *David de Nelles*, who arrived ſafe in that Country, and brought from thence three Women, whoſe Names were *Kunelick*, *Kabelau*, and *Sigokou*, who, according to the Opinion of Biſhop *Torlais*, who had peruſed the ſaid Captain's Journal, were taken in the Neigbhourhod of *Herjolſneſs*, on the eaſtern Shore; but which I cannot believe. My Opinion is, they were brought from the weſtern Shore near *Baal's* River, as ſome of the Inhabitants who are ſtill living had in freſh Remembrance, telling me their Names, as the[illegible] are laid down in the afore-mentioned Journal. The [illegible] Adventurer that was ſent upon the Diſcovery of *Groenland*, according to *Torfæus* in his *Hiſtory of Groenland*, was Capt. *Otto Oxelſon*, in the Year 1670, in the Reign of *Chriſtian* V. of glorious Memory; but what Succeſs this Adventurer met with he leaves us to gueſs; nevertheleſs we find, in a Manuſcript Deſcription of *Groenland*, written by *Arngrim Vidalen*, That his ſaid Majeſty did invite, and with great Privileges encourage, Mr. *George Tormunten*, Counſellor of Commerce at *Bergen*, to fit out Ships for the ſaid Diſcovery; whereupon the ſaid Counſellor, not only got ready Shipping well-ſtored for ſuch an Expedition, but alſo got together a Number of Paſſengers, who reſolved to go and ſettle in thoſe Parts; whom he provided with all Things neceſſary for that Purpoſe; both Proviſion and Ammunition, as well as Houſes made of Timber, ready to be erected in that Country; but this great Deſign miſcarried, the Ship being taken by the *French*, and carried into *Dunkirk*.

“ Thus for a long while it ſeemed that all Thought of *Groenland* was laid aſide, until the Year 1721, when, after many well-meant Invitations and Projects propoſed by me to the *Groenland* Company at *Bergen* in *Norway*, appproved and authorized by his late Majeſty *Frederick* IV. of glorious Memory, the Company thereupon reſolved, not only to ſend Ships, but alſo to ſettle a Colony in *Groenland* in the 64th Degree; when I went over with my whole Family, and remained there fifteen Years. During my Stay, I endeavoured to get all the Intelligence that could be, both by Sea and Land, of the preſent State of the Country, and did not loſe my Labour; for I found ſome Places that formerly were inhabited by the *Norwegians* on the weſtern Shore.

“ But whereas my main Drift and Endeavour has been all along to diſcover the eaſtern Diſtrict of *Groenland*, which always was reckoned the beſt of our ancient Colonies; accordingly I received a Letter from the above-mentioned *Groenland* Company at *Bergen*, in the Year 1723, in which I was told, that it was his Majeſty's Pleaſure, That the Eaſt Diſtrict might likewiſe be viſited, and diſcovered; which, the better to effect, I took the Reſolution to make this Voyage in Perſon, and accordingly I coaſted it ſouthwards as far as the *States Promontory*, looking out for the *Streight of Frobiſher*, which would have been my ſhorteſt Way according to thoſe Charts, which lay the ſaid Streight down in this Place; but ſuch a Streight I could not find. Now, as it grew too late in the Year for me to proceed further, the Month of *September* being near at an End, when the Winter Seaſon begun in thoſe Parts, accompanied with dreadful Storms, I was obliged to return. In the Year 1724 the Directors of the ſaid *Bergen* Company, according to his Majeſty's Good-will and Pleaſure, fitted out a Ship to attempt a Landing on the eaſtern Shore, as had been formerly practiſed on that Coaſt which lies oppoſite to *Iceland*; but the ſurpriſing Quantities of Ice which barricaded the Coaſt made the Enterprize abortive and quite miſcarry, as many others had done, as there was no Convenience for Ships to approach this Shore.

“ The ſame King, in the Year 1728, reſolved, beſides other very conſiderable Expences, to have Horſes tranſported to this Colony, in hopes that, with their Help, they might travel by Land to this eaſtern Diſtrict: But nothing was more impoſſible than this Project, on Account of the impaſſable, high and craggy Mountains, perpetually covered with Ice and Snows, which never thaw. Another new Attempt by Sea was, by Order of the ſame King, made in the Year 1729, by Lieutenant *Richard*, who with his

“ Ship paſſed the Winter near the new *Daniſh* Colony in *Groenland*; and in his Voyage back to *Denmark* made all the Endeavours he could, to come at the aforeſaid Shore oppoſite to *Iceland*, but to no Purpoſe, being herein diſappointed like the reſt before him.

“ All theſe Difficulties and continual Diſappointments have made moſt People loſe all Hopes of ſucceeding in this Attempt; nevertheleſs I flatter myſelf to have hit luckily on an Expedient, which to me ſeems not impracticable, though hitherto not tried, or at leaſt but ſlightly executed, *viz.* To endeavour to leave the Land, from the *States Promontory*, (or as we call it) *Cape Prince Chriſtian*, northwards. The Information I have had from ſome *Groenlanders*, who in their Boats have coaſted a great Part of the Eaſt-ſide, confirms me in my Opinion; for although an incredible Quantity of driven Ice, yearly comes from *Spitzbergen*, or *New Greenland*, along this Coaſt, and paſſes by the *States Promontory*, which hinders the approaching of Ships, as far as the Ice ſtretches, where about the beſt Part of the *Norwegian* Colonies were ſettled, yet there have been found Breaks, and an open Sea, near the Shore, through which Boats and ſmall Veſſels might paſs according to the Relation of the *Groenlanders*, as well as agreeable to my own Experience, the Current that comes out of the Bays and Inlets, always running along the Shore South-weſtwards, hinders the Ice from adhering to the Land, and keeps it a Diſtance from the Shore. By which Means the *Groenlanders* at certain Times, without any Hindrance, have paſſed and re-paſſed part of this Coaſt in their *Coneboats* (ſo they call their large Boats) though they have not been ſo far as where the old *Norway* Colonies had their Settlements, of which, no doubt, there are ſtill ſome Ruins to be ſeen on the Eaſtern Shore.

“ Furthermore: I have been credibly informed by *Dutch* Seamen that frequent thoſe Seas, That ſeveral of their Ships have at times found the Eaſt-ſide of *Groenland* cleared of the Ice as far as the 62d Degree; and they had tarried ſome time among the Out-rocks on that Coaſt, where they carried on a profitable Trade with the *Savages*; and I myſelf, in my Return from *Groenland* homewards, in the Year 1736, found it to be ſo when we paſſed the *States Promontory* and *Cape Farewell*, and ſtood in for the Shore, where at that time there was no Ice to be ſeen, which at other Times is very uncommon; but as this happens ſo ſeldom, it is very uncertain, and unſafe for any Ship to venture ſo far up under the Eaſtern Shore.

“ But, as I obſerved a little before, it is more ſafe and practicable to coaſt it from the Promontory along the Shore in ſmall Veſſels, eſpecially if there was a Lodge erected in the Latitude of between 60 and 61 Degrees; and it would be ſtill more convenient, if there could be Ways and Means found likewiſe to place a Lodge on the eaſtern Shore, in the ſame Latitude; for according to the Account the Ancients have left us of *Groenland*, the Diſtance of Ground that lies uncultivated, between the Weſt and Eaſt-ſide is but twelve *Norway* Miles, by Water; or, according to a later Computation, it is a Journey of ſix Days in a Boat; and as the Ruins of old Habitations, which I have diſcovered between 60 and 61 Degrees, are without doubt in the moſt ſoutherly Part of the Weſt-ſide, it of Neceſſity follows that the Diſtance cannot be very great from thence to the moſt ſoutherly Part of the eaſtern Side. Now, if it ſhould be found practicable at certain Times to paſs along the Shore with Boats or ſmall Ships to the Eaſt-ſide, to the Latitude of 63 and 64 Degrees, little Lodges might be made, though larger Ships could not yearly viſit one of them, but only touch at the moſt ſouthern ones. I am alſo perſuaded that the Thing is poſſible, if it ſhould pleaſe God in his Mercy to forward this Affair, Colonies might be eſtabliſhed here, which without great Trouble might be ſupplied yearly with all Neceſſaries.

4. As to the Soil, we are informed by ancient Hiſtories that the *Groenland* Colonies breed Cattle, which afforded Milk, Butter and Cheeſe, in ſuch abundance, that a great Quantity was brought over to *Norway*, and, for its particular Goodneſs, was ſet apart for the King's Kitchen, which was practiſed until the Reign of Queen *Margaret*. We alſo read that ſome Parts of the Country yielded the choiceſt Wheat; and in the Valleys the Oak Trees produced Acorns of the Bigneſs of an Apple, very good to eat. The Woods afforded plenty of Game, ſuch as Rain-Deers, *&c.* The Rivers, Bays, and Seas, furniſhed an infinite Number of Fiſhes, Seals, Morſes, and Whales, of which the Inhabitants made a conſiderable Trade. And though the Country, at preſent, cannot boaſt of the ſame Plenty, as it lies deſtitute and uncultivated, yet, no doubt, but the old dwelling Places, formerly inhabited and manured by the ancient *Norway* Colonies, might recover their former Fertility, if again peopled, as about theſe Places there grows fine Graſs, eſpecially from the Latitude of 60 to 65 Degrees.

In the great Bay, which at preſent is called the Bay of *Good Hope* (from the *Daniſh* Colony ſettled near the Entrance of this Inlet) there are on both Sides of the Colony many good Pieces of Meadow Ground, for the graſing of Numbers of Cattle; beſides plenty of Proviſions, which the Sea, as well as the Land, yields. Woods of any Conſideration are rarely to be met with, yet there are Underwoods, and Shrubs in great Quantity, eſpecially of Birch, Elm, and Willows, which afford ſufficient Fuel for the Uſe of the Inhabitants. The largeſt Wood is in the Latitude of 60 and 61 Degrees, where the Birch Trees are two or three Fathom high, ſomewhat thicker than a Man's Arm. Small Juniper Trees grow here in abundance; the Berries of which are of the Bigneſs of Grey-peaſe.

The Herb called *Quaun*, which is our Angelica, is very common, as well as wild Roſemary, which has the Taſte and Smell of Turpentine, from which is extracted a fine Oil and Spirit, of great Uſe in Medicine. That precious Herb Scurvy-graſs, the moſt excellent Remedy for the Cure of the Diſtemper which gives its Name, grows every where on the Sea-ſide, and has not ſo bitter a Taſte as in ſofter Climates. The Country alſo produces a Graſs with yellow Flowers, the Roots of which ſmell in the Spring like Roſes, and are very wholeſome. In the Bays and Inlets you have wild Thyme, on the Side of the Mountains, which, after Sunſet, yields a fragrant Smell. Here alſo you meet with the Herb Tormentil, and a great many other Herbs. Their moſt common Berries, are thoſe called Blew-Berries, Tittle-Berries, and Bramble-Berries; Mult-Berries, which are common in *Norway*, do not come here to any Perfection, on Account of the Fogs that hang upon the Iſland at the Time theſe Plants bud.

This Country yields the pleaſanteſt Proſpect about the Latitude 60 to 64 Degrees, and ſeems fit to be manured for the Produce of all Sorts of Grain, and there is to this Day Marks of arable Land to be obſerved. The Author, himſelf, made a Trial of ſowing Barley in the Bay joining to their new Colony, which ſprung up ſo faſt, that it ſtood in its full Ear towards the latter End of *July*; but did not ripen on Account of the Night Froſts which nipped it, and hindered its Growth. But as this Grain was brought over from *Bergen* in *Norway*, no doubt it wanted a longer Summer, and more Heat to ripen. Turnips and Cole are very good here, and of a ſweet Taſte, eſpecially the Turnips, which are very large. It is to be obſerved, that all that has been ſaid of the Fruitfulneſs of the *Groenland* Soil, is to be underſtood of the Latitude from 60 Degrees to 65 Degrees, and differs according to the different Degrees of Latitude; for in the moſt Northern Parts, you find neither Herbs nor Plants; ſo that the Inhabitants cannot gather Graſs enough to put in their Shoes to keep their Feet warm, but are obliged to buy it from the Southern Parts.

5. The Natives of *Groenland* have no Reaſon to complain of Storms or Rain, which ſeldom trouble them, eſpecially in the Bay of *Diſco*, in the 69th Degree of Latitude, where they commonly have clear and ſettled Weather during the whole Summer Seaſon. But when foul Weather falls in, it rages with an incredible Violence, chiefly when the Wind comes about Southerly, or South-

weſt, and the Storm is ſucceeded by fair Weather, as ſoon as the Wind ſhifts to the Weſt and North. The Country would be exceeding pleaſant and healthful in Summer-time, if it was not for the heavy Fogs, eſpecially near the Sea-Coaſt, for it is as warm here as any where, when the Air is clear, which happens when the Wind blows Eaſterly; and ſometimes it is ſo hot, that the Sea-Water, which, after the Ebbing, has remained in the hollow Places in the Rocks, before Night, by the bare Heat of the Sun, is coagulated into a fine white Salt.

Sometimes for three Months together they have fair ſettled Weather, and warm Sun-ſhiny Days, without any Rain; the Length of the Summer is, from the latter End of *May* to the Midſt of *September*; all the remaining Part of the Year is Winter, which is tolerable in the Latitude of 64 Degrees; but to the Northward of 68 Degrees, and even there, the Cold is ſo exceſſive, that the moſt ſpirituous Liquors, as *French* Brandy, will freeze near the Fire-ſide. At the End of *Auguſt* the Sea is all covered with Ice, which does not thaw before *April* or *May*, and ſometimes not till the latter End of *June*. It is remarkable, that on the Weſtern Coaſts of different Countries, lying in one and the ſame Latitude, it is much colder than on the Eaſtern, as in ſome Parts of *Groenland* and *Norway*. And though *Groenland* is much colder than *Norway*, yet the Snow never lies ſo high, eſpecially in the Bays, where it is ſeldom above half a Yard higher than the Ground; whereas the Inland Parts, and the Mountains, are perpetually covered with Ice and Snow, which never melt, and not a Spot is bare, but near the Shore and in the Bays; where, in the Summer, you are delighted with a charming Verdure, cauſed by the Heat of the Sun; reverberated from Side to Side, and concentred in thoſe lower Parts of the Valleys, ſurrounded by high Rocks and Mountains, for many Hours together, without Intermiſſion. But at Sun-ſet the Air is changed at once, and the cold Ice Mountains make you ſoon feel the Nearneſs of their Neighbourhood, and oblige you to put on your Furs.

Beſides the Ice that covers the whole Face of the Land, the Sea is almoſt choaked with it: Some large and flat Fields of Ice, and ſome prodigious Mountains of an aſtoniſhing Bigneſs, lying as deep under Water as they ſoar high in the Air. Theſe are Pieces of the Ice Mountains on Land, which lie near the Sea, and, burſting, tumble down into the Sea, and are carried off. They repreſent to the Beholders, afar off, many odd and ſtrange Figures, ſome of Churches, Caſtles with Spires and Turrets; others you would take to be Ships under ſail, and many have been deluded by them, thinking they were real Ships,. and going to board them. Nor do their Figures and Shape alone ſurprize, but alſo their Diverſity of Colours pleaſes the Sight; for ſome are like white Chryſtal, others as blue as Sapphires, and others again green as Emeralds. One would attribute the Cauſe of theſe Colours to Metals or Minerals, in Places where this Ice was formed, or of Waters of which it was coagulated; but Experience teaches, that the blue Ice is the Concretion of freſh Water, which at firſt is white, and at length hardens and turns blue. But the greeniſh Colour comes from Salt-water. For it is obſerved, that if you put the blue Ice near the Fire, and let it melt, and afterwards remove it to a colder Place to freeze again, it does not recover its former blue Colour, but becomes white; from whence it ſeems that the volatile Sulphur which the Ice had attracted from the Air, by its Reſolution into Water, exhales and vaniſhes.

Though the Summer-ſeaſon is very hot in *Groenland*, it ſeldom cauſes any Thunder and Lightning; the Reaſon of which may be the Coldneſs of the Night, which allays the Heat of the Day, and cauſes the ſulphureous Exhalations to fall again, with the heavy Dew, to the Ground; as for the ordinary Meteors, frequently ſeen in other Countries, they are common in *Groenland*, as the Rainbow, flying and ſhooting Stars, and the like; but what is more peculiar to the Climate, is the Northern Light, or Aurora Borealis, which, in the Spring of the Year, about the Time of the new Moon, darts Streams of Light all over the Sky, as quick as Lightening, eſpecially if it be a clear Night, with ſuch a Brightneſs, that you may read by it as by Day-light. The Air is not at all unhealthy, for if you except the Scurvy, and Diſtempers in the Breaſt, they know nothing here of many other Diſeaſes; and theſe pectoral Infirmities are the Effects of that naſty foggiſh Weather which this Country is ſubject to; which we may impute to the vaſt Quantities of Ice that cover the Land, and drive in the Sea, from the Beginning of *April* to the End of *July*, which is therefore called the foggy Seaſon, and from that Time the Fog decreaſes.

But as in the Summer-time they are troubled with the Fog, ſo in the Winter-ſeaſon they are likewiſe plagued with the Vapour, called Froſt-ſmoak, which, when the Cold is exceſſive, riſes out of the Sea, as the Smoak out of a Chimney, and is as thick as the thickeſt Miſt, eſpecially in Bays where there is any Opening in the Ice; 'tis very remarkable, that this Froſt Damp, or Smoak, if you come near it, will ſinge the very Skin off your Face and Hands; but when you are in it, you find no ſuch piercing or ſinging Sharpneſs, but warm and ſoft, only it leaves a white Froſt upon your Hair and Cloaths. There is a wonderful Correſpondence obſerved in *Groenland*, between Fountains and the main Sea, *viz.* That at Spring-tides, in new and full Moon, when the ſtrongeſt Ebbing is at Sea, the hidden Fountains or Springs of freſh Water break out on Shore, and diſcover themſelves often in Places where one could ſcarce expect to meet with any ſuch, eſpecially in Winter, when the Ground is covered with Ice and Snow. Yet at other Times there are no Water-ſprings at all in thoſe Places.

6. There are no venomous Serpents, or ravenous wild Beaſts, in *Groenland*, if you except the Bear, which ſome will have to be an amphibious Animal, as he lives chiefly upon the Ice, in the moſt Northern Parts, and feeds upon Seals and Fiſh. He very ſeldom appears near the Colony in which our Author lived. He is of a very large Size, and of a hideous and frightful Aſpect, with white long Hair, greedy of human Blood. Rain-Deer are, in ſome Places, in ſo great Numbers, that you will ſee whole Herds of them; and when they go and feed in Herds, they are dangerous to come at. The Natives ſpend the whole Summer-ſeaſon in hunting them, going up to the innermoſt Parts of the Bays, and carrying, for the moſt part, their Wives and Children along with them, where they remain till the Harveſt Seaſon comes on. In that Space, they, with ſo much Eagerneſs, purſue and deſtroy thoſe poor Deer, that they have no Place of Safety but what the *Groenlanders* know; and where they are in any Number, there they chaſe them by Clap-hunting, ruſhing upon them on all Sides, and ſurrounding them with all their Women and Children, to force them into Defiles and narrow Paſſages, where the Men lie in wait for them and kill them. And when they have not People enough to ſurround them, then they put up white Poles with Pieces of Turf to head them, which frightens the Deer and hinders them from eſcaping.

There are alſo vaſt Numbers of Hares which are white, Summer and Winter, very fat, and of a good Taſte. There are Foxes of different Colours, white, grey, and blewiſh; they are of a leſſer Size than thoſe of *Denmark* and *Norway*, and not ſo hairy, but more like Martens. The Natives commonly catch them alive in Traps built of Stones, like little Huts; the reſt of four-footed Animals, which ancient Hiſtorians tell us are found in *Groenland*, are Sables, Martens, Wolves, Loſſes, Ermins, and ſeveral others, but none on the Weſtern Side; domeſtic Animals there are none, but Dogs in great Numbers, and of a large Size, with white Hairs, or white and black, and ſtanding Ears. They are, in their Kind, as timorous as their Maſters, for they never bark, but howl only. In the Northern Parts they uſe them inſtead of Horſes to drag their Sledges, yoaking four or ſix, and ſometimes eight or ten to a Sledge, loaden with five or ſix of the largeſt Seals, with the Maſter ſitting upon them himſelf, who drives as faſt with them as we can do with good Horſes, for they often travel fifteen *German* Miles with them in a Winter Day, upon the Ice; and though the poor Dogs are of ſo great Service to them, yet they don't uſe them well: For they are left to ſubſiſt themſelves as wild Beaſts, feeding upon Muſcles thrown upon the Sea-ſide, or upon Berries in the Summer-ſeaſon; but when they catch a Multitude of Seals, they give them their Blood boiled, and their Entrails.

As for Land-Fowls, or Birds, *Groenland* knows of none but the Rypper, which is a ſort of large Partridge, white in Winter, and grey in Summer-time, and theſe they have in great Numbers; Ravens ſeem to be domeſtic Birds with them, for they are always about their Huts, hovering about the Carcaſes of Seals that lie upon the Ground. There are likewiſe very large Eagles, their Wings ſpread out, being a Fathom wide, but they are ſeldom ſeen in the Northern Parts of the Country; Falcons or Hawks, ſome grey, ſome of a whitiſh Plumage, and ſome ſpeckled, as alſo large ſpeckled Owls. There are different Sorts of little Sparrows, Snow-Birds, and Ice-Birds, and a little Bird not unlike the Linnet, which has a very melodious Note. Amongſt the Inſects of *Groenland*, the Gnats are the moſt troubleſome, whoſe Sting leaves a ſwelling and burning Pain behind it; and this Trouble they are moſt expoſed to in the hot Seaſon, againſt which there is no Shelter to be found. There are alſo Spiders, Flies, Humble-Bees, Waſps. They know nothing of any venomous Animals, as Serpents and the like; nor have they any Snakes, Toads, Frogs, Beatles, Ants, or Bees; neither are they plagued with Rats, Mice, or any ſuch Vermin. In regard to the Fiſh in theſe Seas, more eſpecially Whales, and other large Fiſh, valued for the Sake of Oil, we ſhall have Occaſion to ſpeak of them ſo fully, when we come to treat of the Whale-fiſhing hereafter, that for the Readers Benefit, as well as our own, we ſhall, to avoid Repetitions, forbear ſpeaking of them here, and proceed to the Manner of theſe Peoples living, providing for their own Subſiſtance, and acquiring wherewithal to trade with Strangers.

7. If we meaſure the good Senſe, prudent Behaviour, and polite Carriage of other Nations, by what is eſteemed Wiſdom, Prudence, and Politeneſs amongſt ourſelves, which is the ordinary Way of ſettling the Standard of thoſe things, it is very certain that theſe *Groenlanders* will paſs for a Race of ſtupid, barbarous, and brutiſh People. But if we meaſure their Conduct by the Situation of the Country in which they live, the Neceſſities they are under, and the Want of Communication with any other Race of Men but themſelves, which we may juſtly call the Standard of Nature; we ſhall find they are neither deſpicable with reſpect to their Capacities, nor liable to Reproach from their Manner of living, which, however oppoſite to ours, is very conſiſtent with their Circumſtances, and the Helps with which Providence has furniſhed them. Their ordinary Employments are Hunting and Fiſhing: On Shore they hunt the Rain-Deer, and at Sea they purſue the Whales, Morſes, Seals, and other Animals. As for their hunting, we have ſpoke of it already, and ſhall therefore only add here, that their Bow is commonly of Fir-Tree, which, in *Norway*, is called *Tenel*, and on the Back ſtrengthened with Strings made of Sinews of Animals, twiſted like Thread; the String is made of a good ſtrong Strap of Seal-ſkin, or of ſeveral Sinews twiſted together, and the Bow is a good Fathom long; the Head of the Arrow is armed with Iron, or a ſharp-pointed Bone, with one or more Hooks, that it may keep hold when ſhot into a Deer's Body. The Arrows they ſhoot Birds with are covered with one or more Pieces of Bone, blunt at the End that they may kill the Fowl without tearing the Fleſh. The Sea-Fowls are not ſhot with Arrows, but ſtruck with Darts, headed with Bones, or with Iron, which they throw very dextrouſly, and with ſo ſteady a Hand, at a great Diſtance, that no body can hit ſurer with a Gun.

They are more frequently employed at Sea than on Shore, and they ſurpaſs therein moſt other Nations; for their Way of taking Whales and other Sea-Animals is by far the moſt ſkilful and eaſy. When they go a Whale-catching they put on their beſt Apparel, as if they were going to a Wedding-Feaſt; the *Groenlanders* fancying that if they did not come cleanly and neatly dreſſed, the Whale would ſhun and fly from them. The Manner of their Expedition is thus: About fifty Perſons, Men and Women, ſet out together in one of the large Boats, called a *Cone-Boat*. The Women carry with them their Sewing Tackle, conſiſting of Needles and Thread, to ſew and mend their Huſbands Spring Coats or Jackets, if they ſhould be torn or pierced through, as alſo to mend the Boat in Caſe it ſhould receive any Damage. The Men go in ſearch of the Whale, and when they have found him, they ſtrike him with their Harpoons, to which are faſtened Lines or Straps, two or three Fathoms long, and made of Seal-Skins; at the End of which they tie a Bag of a whole Seal-Skin, filled with Air like a Bladder, that the Whale, when he finds himſelf wounded, and runs away with the Harpoon, may the ſooner be tired, the Air-Bag hindering him from keeping long under Water. When he grows tired, and loſes Strength, they attack him with Spears and Lances till he is killed, and then they put on their Spring-Coats, made of dreſſed Seal-Skin, all of one Piece, with Boots, Gloves, and Caps, laced ſo tight together, that no Water can penetrate them. In this Garb they jump into the Sea, and begin to ſlice the Fat of him all round the Body, even under the Water; for in theſe Coats they cannot ſink, becauſe they are always full of Air, ſo that they can, like the Seal, ſtand upright in the Sea; nay, they are ſometimes ſo daring, that they will get upon the Whale's Back while there is yet Life in him, to make an End of him, and cut away his Fat the ſooner.

They go much the ſame Way to work in killing the Seals, except that the Harpoon is leſs, to which is faſtened a Line of Seal-Skin ſix or ſeven Fathom long, and at the End is a Bladder or Bag, made of a Seal-Skin, filled with Air, to keep the Seal, when he is wounded, from diving under the Water and being loſt again. In the Northern Parts, where the Sea is all frozen over in the Winter, they uſe other Methods in catching of Seals. They firſt look out for the Holes which the Seals themſelves make with their Claws, about the Bigneſs of a Half-penny, that they may fetch their Breath; after they have found any Hole, they ſeat themſelves near it in a Chair made for that Purpoſe; and as ſoon as they perceive the Seal coming up to the Hole, and putting his Snout into it for Air, they immediately ſtrike him with a ſmall Harpoon, which they have ready in their Hand; to which Harpoon is faſtened a Strap of a Fathom long, which they hold in the other Hand. After he is ſtruck, and cannot eſcape, they cut the Hole ſo large that they may get him up through it; and as ſoon as they have got his Head above the Ice, they kill him with one Blow of the Fiſt. But beſides theſe there is a third Way of catching of Seals. They make a great Hole in the Ice, or in the Spring they find out Holes made by the Seals, through which they get upon the Ice to lie and baſk themſelves in the Sun. Near theſe Holes they place a low Bench, upon which they lie down upon their Belly, having firſt made a ſmall Hole near the large one, through which they let ſoftly down a Perch, ſixteen or twenty Yards long, headed with a Harpoon, a Strap being faſtened to it, which one holds in his Hand, while another, who lies upon the Bench with his Face downwards, watching the coming of the Seal, which, when he perceives, he cries *Kæ*, whereupon he who holds the Pole puſhes and ſtrikes the Seal. The fourth Way is this: In the Spring, when the Seals lie upon the Ice near Holes which themſelves make to get up and down, the *Groenlanders*, diſguiſed in Seal-Skins, and a long Perch in their Hand, creep along upon the Ice, moving their Head forwards and backwards, and ſnoring like a Seal, till they come ſo near him, that they can reach him with the Perch and ſtrike him. A fifth Manner of catching Seals is, when in the Spring the Current makes large Holes in the Ice, the Seals flocking in great Shoals there; the Natives watch their Opportunity to ſtrike them with their Harpoons, and hawl them upon the Ice. There is yet a ſixth Way of catching them; when the Ice is not covered with Snow, but clear and tranſparent, then they lay under their Feet Foxes or Dogs Tails, or a Piece of a Bear's Hide to ſtand upon, and watch the Animal; and when, by his blowing and ſnoring, they find what

Courſe he takes, they ſoftly follow, and ſtrike him. All theſe Methods prove, that the *Groenlanders* are ſo far from being ſtupid, that they are ſubtile and ingenious.

8. As this Affair of their Fiſhing is in a manner the ſole Concern of theſe People, ſo, from thence we are beſt enabled to judge of their Characters and Capacities. It is true, that this appears to us a very inſignificant Thing; but it is not ſo to them; for upon their Ability in Hunting and Fiſhing depends their Subſiſtance, both as Individuals, and as a Nation, which alters the Caſe extremely, ſince with reſpect to every People upon Earth, the right Management of their principal Concern is what contributes moſt to their own Happineſs, and ought conſequently to fix the Notions of the reſt of the World about them. In fiſhing they make Uſe of Hooks of Iron, or Bones; their Lines are made of Whalebones cut very ſmall and thin, and at the End tacked together; and with ſuch Lines they will draw a hundred Fiſh, to one that our People can catch with their Hemp-Lines; but to catch Holy-Butts, they make uſe of ſtrong Lines made of Seal-ſkins, or thick Hemp-Lines. Their Way of fiſhing for ſmall Salmon, or Sea-Trout, is this: At low Water they build ſmall Incloſures with Stone, near the River's Mouth, or any other Place where the Salmon runs along; and when it begins to flow, and the Tide comes in, the Salmon retreats to the River, and in high Water paſſes over the Incloſure, and remains in the River till the Water falls again; and then the Salmon ſtrives to return to the Sea; but the Fiſhermen way-lay him at the Incloſure, and ſtop his Paſſage; and ſoon after, when the Water is quite fallen, and it is low Ebb, the Salmon remains upon dry Land, and may be caught with Hand; and when they are left in Holes, they take them with an Inſtrument made for this Purpoſe, *viz.* a Perch headed with two ſharp-hooked Bones, or with one or two Iron Hooks.

The Rogn-fiſh, or Roe-fiſh, ſo named from the great Quantity of Roe that is found in it; as he is commonly found in ſhallow Water, and upon the Sands, ſo is catched like the Salmon with the afore-mentioned Inſtrument. There is ſuch abundance of theſe Fiſh that, as they cannot conſume them while freſh, they are obliged to dry them on the Rocks, and keep them for Winter Proviſion: When catching of them is over, which happens in the Month of *May*, the *Groenlanders* retire into the Bays and Creeks where the Stint-fiſhing then takes place; there are ſuch numberleſs Shoals of them near the Shore, that they catch them in a kind of Sieves faſtened upon long Poles, and throw them upon the Shore. They open and dry them upon the Rocks, keeping them for their Winter Stock. This Fiſh is not either agreeable or wholeſome when eaten freſh; beſides, they have a nauſeous Smell, but when dried they are tolerable; the Natives eat them with a Bit of Fat, or ſouſed in Train-oil, and ſo they do all other ſorts of Fiſhes. What the *Groenlanders* cannot conſume freſh, they dry upon the Rocks in the Sun, or in the Wind, and lay them up for Winter's Proviſions.

As to the *Groenlanders* Boats, there are two ſorts of them; the one, of which the Men alone make uſe, is a ſmall Veſſel, ſharp, and pointed at both Ends, three Fathom in Length, and at moſt but three Quarters of a Yard broad, with a great Hole in the Midſt, juſt large enough for a Man's Body to enter it and ſit down: The Inſide of the Boat is made of thin Rafts, tacked together with the Sinews of Animals, and the Outſide is covered with Seal-ſkin dreſſed, and without Hair; one only can ſit in it, who faſtens it ſo tight about his Waiſt, that no Water can enter it. In theſe ſmall Boats they go to Sea, managing them with one Oar of a Fathom's length broad at both Ends, with which they paddle, ſometimes on one Side, and ſometimes on the other, with ſo much Strength and Swiftneſs, that they are ſaid to row ten or twelve *Norway* Miles in a Day; they chiefly make uſe of them in catching of Seals and Sea fowls, which they can approach on a ſudden and unawares: Whereas in our large Boats we can very ſeldom come ſo near as to touch them. They have no fear in venturing out to Sea in them in the greateſt Storms, becauſe they ſwim as light upon the largeſt Waves as a Bird can fly; and when the Waves come upon them with all their Fury, they only turn the Side of their Boat towards them, to let them paſs without the leaſt Danger of being ſunk; for though they may be overſet, yet they eaſily raiſe themſelves up again with the Paddle; but if they are overſet unawares, as it often happens, and the Boat be not cloſe and tight about their Waiſt, they are inevitably drowned.

The other Kind of Boats are large and open, like ours, ſome of them twenty Yards long, and thoſe are called *Cone-Boats*, that is, Womens-Boats, becauſe the Women commonly row them, for they think it unbecoming a Man to row ſuch a Boat, unleſs great Neceſſity requires it. And when they firſt ſet out for the Whale-fiſhing, the Men ſit in a very negligent Poſture, with their Faces turned towards the Prow, pulling with their little ordinary Paddle; but the Women ſit in the ordinary Way, with their Faces towards the Stern, rowing with long Oars: The Inſide of thoſe Boats is compoſed of thin Rafts, and the Outſides covered with thick Seal-ſkins. In thoſe Boats they tranſport their Baggage, as Tents, and the little Houſhold Furniture, when they go to ſettle in ſome diſtant Places, for Conveniency of Proviſion; in theſe Boats they alſo carry Sails made of the Inſide of Seals-Guts, faſtened to the Deck at the lower End; ſo they neither want Braces, Bowlines, or Sheet-ropes, and with theſe Sails they ſail well enough with the Wind, but not otherwiſe: Theſe Boats as they are flat-bottomed, are ſoon overſet. The Men meddle, at home, with nothing but what concerns their Tools for hunting, and their Fiſhing-Tackle, *viz.* their Boats, Bows, Arrows, and the like; all other Work, even of building and repairing their Houſes, belong to the Women, who are to the full as induſtrious, dextrous, and fearleſs as the Men.

9. As to their Houſes, they have one for the Winter and another for the Summer-ſeaſon: Their Winter-habitation is a low Hut, built with Stone and Turf, two or three Yards high with a flat Roof: In this Hut the Windows are on one Side, made of Seals Guts dreſſed, and ſewed together, or of the Maws of Holy-butts, and are white and tranſparent: On the other Side the Beds are placed, which conſiſt of Shelves or Benches, made of Deal-Boards raiſed half a Yard from the Ground: Their Bedding is made of Seals and Rain-Deer Skins. Several Families live in one of theſe Huts, each Family occupying a Room by itſelf, ſeparated from the reſt by a wooden Poſt, by which the Roof is ſupported; before it there is a Hearth, in which there is a great Lamp, in the Form of a Half-Moon; on a Trivet, over this, are hung their Kettles, of Braſs, Copper, or Marble, in which they boil their Victuals; under the Roof, juſt above the Lamp, they have a ſort of a Shelf to put their wet Cloaths upon, to dry.

The Fore door, or Entry of the Houſe, is very low, ſo that they muſt creep upon their Hands and Feet to get in at it, which is contrived ſo to keep the cold Air out as much as it is poſſible; the Inſide of the Houſe is covered, or lined with old Skins, which before have ſerved for their Boats; ſome of theſe Houſes are ſo large that they afford Lodgings for ſeven or eight Families. Upon the Benches, or Shelves, where their Beds are placed, is the Seat of the Women, attending their Work of ſewing, and making up of the Cloathing. The Men, with their Sons, ſit on the foremoſt Parts of the Benches, turning their Backs to the Women. On the oppoſite Side, under the Windows, the Men belonging to the Family, or Strangers, take their Seats upon Benches, placed for that Purpoſe. I cannot forbear taking Notice, that though in one of theſe Houſes there are ten or twenty Train-Lamps, one does not perceive the Steam or Smoke thereof to fill theſe ſmall Cottages; the Reaſon probably is, the Care they take in trimming theſe Lamps, *viz.* They take dry Moſs rubbed very ſmall, which they lay on one Side of the Lamp, which, being lighted, burns ſoftly, and does not cauſe any Smoke if they do not lay it on too thick, or in Lumps. This Fire gives ſuch a Heat that it not only ſerves to boil their Victuals, but alſo heats their Rooms to that Degree, that they are as hot as a Bagnio; but to thoſe who are not uſed to this Method the Smell is very diſagreeable, as well by the Number of burning Lamps, all ſupplied with Train Oil, as on Account of diverſe Sorts of raw Meat; Fiſh, and Fat, which they heap up in their Habitations; but eſpecially their Urine-Tubs ſmell moſt inſufferably, and ſtrike one that is not accuſtomed to it, to the very Heart.

Thoſe Winter Habitations they reſort to immediately after *Michaelmas*, and leave them again at the Approach of Spring, which is commonly about the latter End of *March*; and all the warm Part of the Year lodge in Tents, which are their Summer Habitations. Theſe Tents are made of Rafts or long Poles, ſet in a circular Form, bending at the Top, and reſembling a Sugar-Loaf, fenced by a double Cover, of which the Innermoſt is of Seal or Rain-Deer Skins, with the hairy Side inward (if they be rich) and the Outermoſt alſo of the ſame Skin, without Hair, dreſſed with Fat, that the Rain may not penetrate them. In theſe Tents they have their Beds, Lamps to dreſs Meat, and a Curtain made of the Guts of Seals ſewed together, through which they receive the Day-light, inſtead of Windows. Every Maſter of a Family has ſuch a Tent, and a great Woman's Boat to tranſport their Tents and Luggage from Place to Place, where their Buſineſs calls them, in the Manner beforementioned.

10. They are, undoubtedly, as good-natured, and as inoffenſive People in their Behaviour, as any in the World; Hatred and Envy, Strife and Anger, are never heard of among them; and though it may happen that one bears a Grudge to the other, yet it never breaks out into any ſcolding and fighting; neither in their Language have they any Words to expreſs ſuch Paſſions. It has, indeed, happened, that a very wicked and malicious Fellow, out of a ſecret Grudge, has killed another, which none of the Neighbours have taken Notice of, but all let it paſs with a ſurprizing Indolence, ſave the next of Kin to the Dead, if he finds himſelf ſtrong enough, revenges his Relation's Death upon the Murderer: They know no other Puniſhment. But as for a Sort of old Women, called *Witches*, and ſuch as pretend to kill or hurt by their Conjuration, to ſuch they ſhew great Rigour, making nothing of deſtroying and killing them without Mercy. And they inſiſt on it, that it is very well done, thoſe People not deſerving to live, who by ſecret Arts can hurt others. They have as great an Abhorrence of ſtealing among themſelves, as any Nation upon Earth, and therefore they keep nothing under Lock and Key, but leave all free that every body can come at it, without Fear of loſing it.

This Vice is ſo much hated among them, that if a Maid ſhould ſteal any thing, ſhe would forfeit all Hopes of a good Match. Yet if they can lay Hands upon any thing belonging to Foreigners, they make no great Scruple of Conſcience about it. But as the *Danes* have now lived ſome Time in their Neighbourhood, and are looked upon as ſettled Inhabitants of the Country, they at laſt have forbore to moleſt them any more that Way. As to any Treſpaſſes in point of Chaſtity, either in Words or Deeds, they are never guilty, except what paſſes amongſt the married People in their public Diverſions. They never enter any Houſe where they are Strangers, unleſs they are invited; and when they come in, the Maſter of the Houſe, to whom they pay the Viſit, ſhews them the Place where they are to take their Seat. As ſoon as a Viſitor enters the Houſe, he is deſired to ſtrip ſtark naked, and ſit down in this Manner, like all the reſt; for this is the grand Faſhion with them to dry the Cloaths of all their Gueſts.

When Victuals are put before him, he takes Care not to fall to eating immediately, for fear of being looked upon as ſtarved, or of paſſing for a Glutton. He muſt ſtay till all the Family be gone to Bed before he can lie down, for to them it ſeems unbecoming, that the Gueſts ſhould go to Reſt before the Landlord. When ever a Stranger comes into a Houſe, he never aſks for Victuals, though never ſo hungry, nor is there any need he ſhould; for they exerciſe great Hoſpitality, and are very free with what they have, and, what is highly to be admired and Praiſe worthy, they have moſt things in common; and if there be any among them who cannot work or get his Livelihood, they do not let him ſtarve, but admit him freely to their Table; in which they ought to confound, with Shame, ſuch as are called Chriſtians, who ſuffer, notwithſtanding, ſo many poor and diſtreſſed Creatures to periſh for Want of Neceſſaries.

But after all, the *Groenlanders*, as to their Manners and common Way of Life, are very ſlovenly, naſty, and filthy; they ſeldom waſh themſelves; will eat out of Plates and Bowls after their Dogs, without cleaning them; and what is moſt nauſeous, they eat the Vermin which feed on them. They do not bluſh to ſet down and eaſe themſelves in the Preſence of others; every Family has an Urine-Tub placed before the Entry, in which they make Water, and leave it ſo ſtanding till it ſmells inſufferably; for they put all the wet Skins which are to be dreſſed, to ſteep in it, which affords a loathſome Scent; to the increaſing of which, the rotten Pieces of Fleſh and Fat, thrown under their Benches, contribute a great deal. Yet notwithſtanding this naſty and moſt beaſtly Way of Living, they are very good-natured and friendly in Converſation. They can be merry, and bear a Joke, provided it be within due Bounds; never any of them offered to hurt the *Danes*, unleſs provoked to it; but on the contrary, reverence them as a Nation ſuperior to themſelves.

11. The Reader will not ſuppoſe theſe Folks are overnice in their Apparel, and yet they are far from being deficient in that Point. Their Cloaths are, for the moſt Part, made of Rain-Deer and Seal Skin, as alſo of Birds Skin nicely dreſſed and prepared, for in this lies their greateſt Ingenuity. The Mens Dreſs are a Coat or Jacket, with a Cap or Hood ſewed to it, to cover the Head and Shoulders, in the Faſhion of a Domino or Monk's Hood. This Coat reaches down to the Knees; their Breeches are very ſmall, not coming above their Loins, that they may not hinder them in getting into their ſmall Boats; and as they wear no Linen, the Hair of the Skins the Coat is made of is turned inward, to keep them warm. Over this Coat they put a large Frock made of Seal Skin, dreſſed and tanned without Hair, to keep the Water out; and thus they are dreſſed when they go to Sea. Between the Leathern Frock and the under Coat they wear a Linen Shirt, or for want of Linen, one made of Seal-Guts, which alſo helps to keep out the Water from the under Coat; of late they appear ſometimes in more ſhewy Dreſſes, as Shirts made of ſtriped Linen, and Coats and Breeches of red and blue Stuffs, which they buy of *Daniſh* or *Dutch* Merchants, but faſhioned after their own Way. In theſe they make Parade when they keep Holidays aſhore. The Stockings they wore formerly were made of Rain-Deer or Seal Skin, but now they are better, ſuch as worſted Stockings of different Colours, white, blue, and red, which they buy of the *Danes*; their Shoes and Boots are made of Seal-Skins, red or yellow, well dreſſed or tanned. They are nicely wrought with Folds behind and before, without Heels, and ſet well upon the Feet.

The only Difference in Dreſs between the Men and the Women is, that the Womens Coats are higher on the Shoulders, and wider than the Mens, with higher and larger Hoods. The married Women, that have got Children, have got much larger Coats than the reſt, moſt like Gowns, becauſe they muſt carry their Children in them upon their Backs, having got no other Cradle or ſwaddling Cloths for them. They wear Drawers which reach to the Middle of their Thigh, and over them Breeches. The Drawers they always keep on, and ſleep in them. Their Breeches come down to the Knee; theſe they do not wear in the Summer, nor in the Winter, but when they go abroad, and as ſoon as they come home they pull them off.

Next to their Body they wear a Waiſtcoat, made of a young Fawn's Skin, with the hairy Side inward. The Coat, or upper Garment, is alſo made of fine coloured Swan-Skins, trimmed and edged with white, and nicely wrought in the Seams, and about the Edges, which looks very well. Their Shoes and Boots, with little Difference, are like thoſe of the Men. Their Hair, which is very long and thick, is braided, and tied up in a Knot, which becomes them; they commonly go bare-headed, as well without as within Doors; nor are they covered with Hoods, but in Caſe it rains or ſnows. Their chief Finery is to wear Glaſs-Beads of divers Colours, or Corals about their Neck and Arms, and Pendants in their Ears; they alſo wear Bracelets of black Skin ſet with Pearls, with which they alſo trim their Cloaths and Shoes.

The *Groenland* fair Sex have, beſides this, another Sort of Embelliſhment, *viz.* they make long black Strokes between the Eyes on the Forehead, upon the Chin, Arms, and Hands, and even upon the Thighs and Legs. Theſe they make with a Needle and Thread made black, and though this to others ſeems disfiguring and frightful, yet they think it very handſome and ornamental; and they ſay thoſe who do not thus decorate or deform their Faces, their Heads ſhall be turned into Train-Tubs, which are placed under the Lamps in Heaven, or rather in the Land of Souls. They keep their Cloaths pretty clean, though in other things, eſpecially in their Victuals, they are not ſo nice, particularly the Women who have got Children are very dirty, well knowing that they cannot be repudiated or divorced. But thoſe which are barren, or whoſe Children are dead, and do not know the Moment they may be ſent away, are obliged to be more careful in point of Cleanlineſs, that they may pleaſe their Huſbands, and enjoy Maintenance and Protection from them.

12. The Commodities *Groenland* affords, for the entertaining of Commerce, are Whale-Blubber or Fat, and Whale-Bones, Sea-Unicorn-Horns, Rain-Deer Skins, and Bears, Seal and Fox-Skins. Theſe Wares they uſed to barter againſt the following Mercandizes, *viz.* Coats and Shirts, made of white, blue, red, and ſtriped Linen or Woollen-Cloth: as alſo Knives, Hand-ſaws, Needles, Hooks to angle with, Looking-glaſſes, and ſuch other Merchandizes, or hard Wares; beſides what they buy of Wood, as Rafts, Poles, Deal-Boards, Cheſts; and of Braſs and Copper, as Kettles, and the like; Tin Diſhes and Plates, for which they pay to the full Price. At the Beginning of the *Daniſh* Settlements in thoſe Parts, the Trade was much briſker than at preſent, and much more profitable; for foreign Traders flocking there in great Numbers, ſo over-ſtocked them with Goods, and underſold one another, to draw the Natives to them from others, that the Trade is now conſtantly ſlackened and fallen. Yet, ſays Mr. *Egede*, from whom we take this, if we once become Maſters of this Trade, as it in juſtice belongs to us, by the Right the King of *Denmark* claims to theſe Countries, as much as to any Kingdom or Province ſubject to him; I truſt, continues he, that with this Proviſo, the Trade to *Groenland* would prove as profitable as any other Trade whatſoever, which has been evidenced not long ago; when, by his Majeſty's ſpecial Order, the foreign Trade has been prohibited within a certain Diſtance on each Side of the Colonies. For if the lading of ſome Ships with Fiſh and Train, from *Finmark*, and others with Fiſh, Train, Salt-Meat, and Butter, from *Iceland* and *Ferro*, bring to the Traders conſiderable Profit: who would queſtion but the ſame, or better Advantage, may be expected from the imported Quantities of Whale-Train, Whale-Bones, Rain-Deer Hides, Fox and Seal-Skins, which are of more Value than the *Iceland* or *Ferro* Commodities? And if the Produce of *Groenland* was formerly reckoned of that Importance, that it was eſteemed ſufficient to maintain the King's Table, why not alſo at preſent, provided *Groenland* may, by Settlements and Improvement, receive its former Abundance, which is not impoſſible?

If the old Lands, formerly inhabited and manured by the *Norway* Colonies, were again peopled with Men and ſtocked with Cattle, they would, without doubt, yield as much as either *Iceland* or *Ferro*, ſeeing there is as good Paſture Ground as in thoſe Iſlands. I ſhall forbear to mention Salmon and Cod-fiſhing, as it ſeems at preſent to be of little or no Importance, eſpecially on the Weſt-ſide; though I am credibly informed by the Natives, that on the Southern Coaſt they catch abundance of fine large Cods; yet this may be more than ſufficiently compenſated by the Whale fiſhery on the North, and the Capture of Seals on the South, which, if rightly undertaken, and with Vigour ſet on foot, will bring as much, nay far more, Profit than the Salmon and Cod catching does in other Places, chiefly the catching of Seal, which can be undertaken at very ſmall Expence, *viz.* at the Coaſt, with ſtrong Nets, with which they may catch many thouſands in *Groenland*, which if hitherto not practiſed, ought to be imputed to Negligence, and want of a good Regulation. In ſhort, *Groenland*, as we ſee, is very convenient for trading, and may be very well worth one's while to take in hand, but there is little to be done without an eſtabliſhed and formed Company of Men of Subſtance as well as Reſolution, it being altogether impoſſible for any private Man to maſter and go through with it.

The Ignorance ſhewn by theſe People of a Creator would make one believe they were Atheiſts or Naturaliſts; for when they have been aſked whence they thought that Heaven and Earth had their Original? they have anſwered nothing but that it had always been ſo; but if we conſider that they have ſome Notion of the Immortality of Souls, and that there is another much happier Life after this; as they are addicted to different kinds of Superſtition, and that they hold there is a Spirit, which they call *Torngarſuk*, to whom they aſcribe a ſupernatural Power, though not the Creation or the Production of Creatures, one would think they did own a God. But notwithſtanding all their Superſtitions are grounded upon the Notion they have of *Torngarſuk*, whom their lying Angekuts or Prophets hold for their Oracle; yet the Commonality know little or nothing of him, except the Name only; nay even the Angekuts themſelves are divided in their whimſical Ideas they have formed of his Being; ſome ſaying he is without any Form or Shape, others giving him that of a Bear, others again pretending he has a large Body, and but one Arm, and ſome make him as little as a Finger, *&c.*

They aſſign him his Abode in the lower Regions of the Earth, where they tell you there is conſtantly fine ſun-ſhiny Weather, good Water, Deer and Fowls in abundance. They alſo ſay he lives in the Water, wherefore when they come to any Water, of which they have not drunk before, and there is any old Man in the Company, they make him drink firſt, to take away its Torngarſuk, or the malignant Quality of the Water, which might make them ſick and kill them. They hold likewiſe that a Spirit reſides in the Air, which they name *Innertirrorſok* that is, the Moderator, or Reſtrainer, becauſe it is purſuant to his Order, that the Angekuts command the People to reſtrain or abſtain from certain earthly things or Actions, that they may not come into Harms-Way. According to their Theology, they are Spirits that govern all the Elements, and their Conjurers pretend to have familiar Spirits, and to be able to do great Matters. They are however, a Crew of Knaves and Lyars, and it would give very little Satisfaction to the Reader to inſert their Fables, which are not at all more falſe than they are fooliſh, and ſerve to ſhew us that tho' Reaſon may go a great Way in teaching Men how to manage their Affairs in this World, yet it is far from being ſtrong enough to penetrate into the Secrets of the other World, and of a future State.

Their Notions of the heavenly Bodies are very whimſical: They ſay the Moon was once a young Man, and the Sun a young Woman his Siſter, with whom he was familiar in the Dark; but that ſhe, being deſirous to find out her Lover, rubbed her hands with Soot, with which ſhe marked his white Deer-Skin Coat, and hence they ſay are the Spots in the Moon. The Sun, flying from his Embraces, aſcended into the Air, whither the Moon followed her, and ſtill continues to purſue, without being able to overtake her.

Yet for all this Nonſenſe, they have given Names to many of the Stars, and Conſtellations, *viz.* The three Stars in the Belt of *Orion* they name *Sicktur*, that is Separated, becauſe theſe three, they ſay, before their Metempſychoſis, or rather Metamorphoſis, were three honeſt

Groenlanders, who being out at Sea a Seal-catching, were bewildered, and not being able to find the Shore again, were taken up into Heaven. *Urſa Major*, the great Bear Star, is ſtiled by thoſe who dwell in the 64th Degree, *Tugto*, or Rain-Deer; while they that live in the Bay of *Diſco*, at 69 Degrees, call it *Aſſelluit*, the Name of a Tree to which they tie their Line when they ſhoot Seals. *Taurus*, the ſecond Sign in the *Zodiac*, is named *Kelluckturſet*, or *Kennel of Hounds*, who ſeem to have a Bear among them; by this Conſtellation they reckon their Hours by Night. *Iverſuk*, that is two Perſons that contend with Songs or Verſes in taunting one another, as is cuſtomary among the *Groenlanders*. Theſe two Stars are in the Conſtellation *Taurus*, of which we have already ſpoken, and there too is *Aldebarent*, or *Nennerroak*, that is, a Light who lights the two Singers.

Canis Major is called *Neleragnek*, which is a Name of a Man among them. This they ſay has got on a Coat of Rain-Deer Skin. Gemini, Auriga, and Cupella, are named *Killnaub Kuttuk*, that is the Breaſt-Bone of Heaven. When two Stars ſeem to meet together, they ſay they are viſiting one another; others will have it to be two Women, who being Rivals, take one another by the Hair. Concerning Thunder and Lightning, they ſay that two old Women live together in one Houſe in the Air, who now and then fall out and quarrel about a thick and ſtiff out-ſtretched Seal-Skin; becauſe ſuch a Skin, if beaten as a Drum, has ſome Likeneſs to the Noiſe of Thunder; whilſt they are thus by the Ears together, down comes the Houſe with great bouncing and racking, and the Lamps are broken, the Fires and broken Pieces fly about the Air, and this, in their Philoſophy, is Thunder and Lightning. In their aſtronomical Syſtem, the Heaven turns about the Point of a huge Rock.

The Snow, according to their Fancy, is the Blood of the Dead, on account that it turns reddiſh if you keep it in the Mouth. The Rain comes from a Ditch or River above in Heaven. When it overflows there, it rains here below. They have no Kalendar or Almanacks, nor do they compute or meaſure the Time by Weeks or Years, but only by Months, beginning their Computation from the Sun's firſt riſing above the Horizon in the Winter, from whence they tell the Month, in order to know exactly the Seaſon in which every ſort of Fiſh, Sea-Animals, or Birds, ſeek the Land, according to which they order their Buſineſs. As to their Diverſions, they have many, ſuch as Running, Leaping, Wreſtling, Foot-ball and Dancing.

The moſt ſingular Circumſtance however in this Reſpect is, their Talent for, and mighty Delight in, Poetry. In this, from the Specimens we have received in the Relations of *Groenland* lately publiſh'd, it appears that they are far from wanting either Genius or Method. The Poems they compoſe are a kind of Lyric Odes, the Harmony of which depends both upon Rhyme and Quantity, there being a viſible Regularity in the Number of Syllables of which their Verſes are compoſed, and a plain Regard to Cadence even in our Manner of reading them. They uſe this ſort of Poetry, which, all Things conſidered, is as far from being rude as it is from being exact, to expreſs all their Paſſions, ſuch as Love, Joy, Grief, but more eſpecially Anger; for when two People quarrel in this Country, they challenge each other not to fight, for that they never do but in Jeſt, or by way of Diverſion, but to contend in Verſe; and he who firſt wants Words to expreſs himſelf in this poetical Duel, is held to be conquered, and ſo the Controverſy ends without either Blood or Law-ſuit.

13. We have given this large Deſcription of this Country, and theſe People, becauſe both were very much wanted; nothing of this kind having occurred in any of our Collections of Voyages. It accounts for what happened to Capt. *Davis* and his People, which we have related in the former Book; as alſo, for what befel Capt. *Hudſon*'s Crew, after they had baſely deſerted their Captain. It ſhews how conſiſtent thoſe Relations may be with Truth, which ſeem to be inconſiſtent with themſelves, by ſhewing that *Savages*, that are gentle, kind, and humane to each other, may be faithleſs, thieviſh, and cruel to Strangers, as theſe People really are from Principle; becauſe they look upon the reſt of Mankind to be of a different Race, and therefore they don't think that they are obliged to treat them as they do one another.

We may likewiſe ſee from hence, how ingenious thoſe People are in providing Neceſſaries for themſelves, who diſcover, notwithſtanding, very little Genius or good Senſe in contriving for the Conveniences of Life. The Boats of the *Groenlanders* are very perfect in their Kind; their Cloaths not only ſufficient for Covering, and very warm and ſtrong, but alſo well ſhaped and neatly put together; and their Inſtruments for Hunting and Fiſhing admirably contrived in every reſpect; but then their Houſes are very poor, their Manner of living very wretched, and the Bounds of their Knowledge almoſt as confined as the Animals upon which they feed. Their Skill and Succeſs in former Inſtances plainly ſhew that they do not want Capacity; and the Rudeneſs of their Condition in other Reſpects, is plainly owing to their Want of Education; or, if I may be allowed to uſe the Word, becauſe it expreſſes my Meaning better, Cultivation: Their Minds are not barren, but produce few Things for Want of a Variety of Seed ſown in them; and this ſhews the Advantage of Commerce, not only for improving the Circumſtances, but for enlarging and bettering the Underſtandings, of any People.

Trade will not mend the Climate of *Groenland*, but it may enable the People to live more comfortably there: Fiſh, Train-Oil, Skins, Furs, and whatever elſe the Country produces, or can be made to produce, when converted into Commodities, will bring the Inhabitants Variety of Conveniencies, will enable them to convert their Huts into Houſes, and change their inhoſpitable Deſerts, not into a fine and pleaſant, but into a tolerable Country; and at the ſame time will enrich thoſe who take the Pains to trade with, and civilize, theſe People. If this could be done effectually, they might be made uſe of to perfect thoſe Diſcoveries, that politer and wiſer Nations have not hitherto been able to make. They may be employed to find out how far the Country behind them is inhabited to the North; and whether, after advancing nearer the Pole, the Climate continues to grow more rigorous, or, as ſome have imagined, not altogether without Reaſon, becomes milder.

Our general Notions, with reſpect to the Situation of the different Parts of the Globe, are not always confirmed by Experience: The Ancints thought the *Torrid Zone* uninhabitable, on the Score of Heat, but we now know with Certainty, that they were miſtaken: neither is it impoſſible that in thinking the Land or Sea abſolutely frozen under the Pole, we may be miſtaken likewiſe. That an Experiment of this Kind would not be impracticable to the *Groenlanders*, appears from hence; that as cold as their Country is in 69 Degrees, there are Perſons living, who have advanced full ten Degrees, farther North without finding the leaſt Inconveniency from the Cold, in the Day-time. Upon this Occaſion, I will take the Liberty of obſerving, that there is no Country in the World, the Inhabitants of which might make Diſcoveries of more Importance than the *Groenlanders*, as may appear from what the Reverend Mr. *Egede* tells us he learned among them: " According, ſays he, to the Relation
" and Opinion of thoſe that inhabit the *Gulph of Diſco*,
" their Country is an Iſland, which they incur from the
" ſtrong Current that runs from the North, and keeps
" the Ice open, even in the Midſt of the Sea. They will
" alſo tell you, they have ſpoken with People different
" from themſelves, on the other ſide of the Ice, and
" haled them. Their Language, they ſay, is the ſame,
" but the Perſons different: ſo that a ſmall Streight only
" divides *Groenland* from *America*. The Streights are
" ſo narrow, that Men on both Sides can ſhoot, at one
" and the ſame Fiſh. The Continent fartheſt to the
" North, is all covered with Ice, the Iſlands only un-
" covered, where Rain-Deer, Geeſe, and other wild
" Birds, are found in great Numbers."

I muſt confeſs, I am not very well ſatisfied with this Account, and believe that the *Danes* may, with little

Trouble, engage the *Groenlanders* to gain them in time a better, and more certain Account; for, without doubt, in one Summer, they might do more towards the ſettling the Poſſibility, or Impoſſibility, of finding a North-weſt Paſſage by their Diſcoveries on Land than we have been able to do, in upwards of one hundred and fifty Years, by Sea; beſides, they might alſo make Diſcoveries on the oppoſite Coaſt looking towards *Spitzbergen*; which would lead us to a Certainty, whether there be an open Sea on that Side, or not; a Thing which, as the Reader will ſee hereafter, is a Matter of far greater Importance than is commonly imagined. It was to penetrate into theſe Secrets of Nature, and to open to Mankind the entire Knowledge of the Univerſe, that ſo many Expeditions were made towards the North, by the *Engliſh* and *Dutch*, in the Beginning of the laſt Century; but which, after all, ſerved only to diſcover another Country to the Eaſt of *Groenland*, which, for any thing that is hitherto known, is abſolutely uninhabited, but muſt not therefore be left undeſcribed, eſpecially as we want not ſufficient Materials for that Purpoſe.

14. The Country of *Spitzbergen*, or *Greenland*, lies the neareſt to the North Pole of any yet examined by Seamen, that is, from 76 to 82 Degrees North Latitude; but whether it be Continent or Iſlands is not yet diſcovered. It received its Name of *Greenland* from the *Engliſh*, on Account of its being thought Part of *Old Greenland*; but the *Dutch* call it *Spitzbergen*, that is, ſharp Mountains, becauſe the icy Rocks of this Country mount like Pyramids, one behind, or rather above another, to marvellous Heights. There are great Diſputes as to the Diſcovery of this Place: For on the one hand, we aſſert that it was found out by Sir *Hugh Willoughby*, in 1553; which the *Dutch* deny, and have invented a Country called *Willoughby Land*, and placed it in their Maps, to quit themſelves of this Difficulty. He was afterwards frozen to death, with his Ship and Company, in the River *Arzana* in *Lapland*, leaving upon his Table an Account of his Diſcoveries, drawn up in very conciſe Terms: wherein he mentions ſailing for ſeveral Days on the Weſt-ſide of a Country, in a very high Latitude, which it is believed, and on very good Grounds, could be no other than *Greenland*. After this, Mr. *Stephen Burrows*, in the Year 1556, arrived in the Latitude of 78 Degrees, and ſailed along a Coaſt altogether deſolate, the Ice blue, and abounding with Birds, to the Latitude of 80 Degrees 11 Minutes; which was certainly no other than *Greenland*.

The *Dutch* Diſcoverers were *William Barentz*, and *John Cornelius*, who viſited this Country in 1595, and called it *Spitzbergen*. Our Maps differ from the *Dutch*, becauſe the Names of Places in them are all *Engliſh*; whereas, in the *Dutch* Maps, they are in their own Language; which however determines nothing as to the Matter of Fact, or who were the firſt Diſcoverers. If we decide the Points according to Evidence, the Diſcovery perhaps ought to be adjudged to the *Engliſh*; but the preſent Poſſeſſion, and the Profits reſulting from thence, are moſt undoubtedly wholly in the *Dutch*.

15. *Spitzbergen* is actually undiſcovered on the North, ſo that it is not poſſible to ſay with Certainty, how it is bounded: On the Weſt it has the Northern Ocean; on the South, the ſame Ocean between it and the *Muſcovite Lapland*; on the Eaſt an undiſcovered Country, to which it is joined by an Iſthmus; on the Weſt-ſide of it lies *Charles Iſland*, which is divided from the main Land by a narrow Streight called *Foreland Ford*, between which and *Muſcle Haven* are the higheſt Mountains, moſt of which are of a red Colour, and reflect the Sun-beams ſo as to ſeem all on fire; but ſeven of the Mountains, all of a remarkable Sharpneſs, are of a fine Sky-blue. *South-Haven* is the moſt commodious Place on the Iſland, affording all the Conveniencies neceſſary for repairing leaky or damaged Ships, and is ſo large that thirty or forty Sail may ride at Anchor there very conveniently; here alſo may be had freſh Water, from the melting of the Snows; for as to the Rivers they are brackiſh, as far as hitherto they have been diſcovered, and no Springs or Wells have been yet found.

The Mountains about *South Haven* are very high, eſpecially on the Left; and in the Midſt of the Harbour is an Iſland called *Deadman's Iſland*, becauſe ſuch as die in the Voyage are uſually buried here; if the Bodies can be preſerved from the Bears, they remain uncorrupt for many Years. There are ſeveral Iſlands in this Neighbourhood, called *Fowl Iſlands*, from the prodigious Number of Birds that are bred there. The next capacious Haven is that called by the *Dutch*, *Maurice Bay*, where ſome have wintered: Near this Place were a few Cottages built by the *Dutch*, for the Conveniency of making their Oil, and this Place they call *Smearbourg* or the *Haerlem Cookery*. In the North Bay there is an Iſland which the *Dutch* call *Voegelſang*, from the great Noiſe which the Fowls make when they take their Flight; whence ſome have imagined the famous Problem of our Birds of Paſſage may be eaſily ſolved, ſince they ſuppoſe they are bred in the *Fowl-Iſlands*, and at a certain Seaſon of the Year fly ſouthward from the Iſland before-mentioned. *Deer Sound* is ſo called from the Abundance of Deer which feed about it, though the Soil ſeems to be all Slates ſet edgewiſe. *Muſcle Haven* lies at the Mouth of the *Waygate*. *Martens*, a *Hamburgher*, who has given us the beſt Account of this Country, ſailed as high as 81 Degrees North, where the Ice hindered him from approaching.

16. The Soil of *Greenland* is for the moſt part nothing but Rocks, or Heaps of vaſt Stones, ſo very high, that half of them are loſt in Clouds; the Valleys between them are full of Stones and Ice, which fall from thoſe prodigious Mountains. Above *Deer Sound* and *Muſcle Haven* there is ſome low Land, which is alſo ſtony, and, for the moſt part, covered with Snow and Ice; and this being melted, as it ſometimes is in the Summer, diſcovers nothing but a barren Soil, covered with Heath, Moſs, and very few Plants. Such of the Mountains as are expoſed to the warm Air and Sun-beams are likewiſe covered with Heath and Moſs; and, in the Clifts of thoſe Rocks, there are infinite Numbers of Fowls, that reſt there all the Year.

The Dung of thoſe Birds, with the Moſs waſhed down by the melted Snow, makes a rich kind of Mould on ſome Places near the Shore, where it produces a kind of Lettuce, Scurvy-graſs, exceeding mild and pleaſant, Sorrel, Snakeweed, Mouſe-ear, Heart's-eaſe, wild Strawberries, Houſe-leeks, Wall-pepper, and ſome Plants unknown to us. The Sea is obſerved not to be ſo ſalt here as in other Places, and changes (as it does every where) its Colour with the Sky. If the Air be clear, the Sea is blue; if cloudy, green; if foggy, yellow; in ſtormy Weather, quite black: But there is one thing remarkable, which is, that, in fair Weather, the Sea is ſo clear, that you may ſee ten or twelve, or even fourteen Fathom deep. The Air is ſo cold, that there is almoſt a continual Froſt, which is ſtrongeſt in *April* and *May*, and then in a manner intolerable, eſpecially if the Wind blows from the North or Eaſt; South or Weſt Winds bring Snow or Rain, and moderate the Cold. In *June*, *July*, and *Auguſt* the Weather is uſually calm; and in the laſt two Months, but eſpecially in *July*, the Sun ſhines ſo hot, as to melt the Tar between the Seams of a Ship, if the Wind cannot come at it.

The Sun appears about the Middle of *February*, and diſappears about the 1ſt of *October*; but they have a Twylight when he comes near their Horizon. From the Beginning of *May* to the 1ſt of *Auguſt* the Sun never ſets; yet they reckon Day and Night very eaſily: for, when he is in the Weſt, they call it Night; and, when he comes about again to the Eaſt, they reckon another Day begins. It is obſerved, by *Martens*, that the Light of the Sun is then like that of the clear Moon, ſo that Men may look upon it without dazzling their Eyes.

17. The Beaſts of this Country are white Bears, very differently ſhaped from thoſe that are ſeen elſewhere; they have long Heads like Dogs, and bark like a Dog that is hoarſe. They are leaner and ſwifter than other Bears, and very bold. Some of them are ſix Feet high, and fourteen Feet long; and there has been ſometimes an hundred Weight of Fat taken out of one of them. When any of them are killed and not carried off, the reſt eat

them; but when they are attacked, and begin to howl, ſuch as are within hearing run to their Aſſiſtance, and the old ones will rather ſuffer themſelves to be killed, than deſert their Young. The largeſt are thoſe which are called Water-Bears, which live upon what they can get at Sea, and have been ſometimes found fourteen Miles from Shore. The Skins of thoſe Creatures make very comfortable Cloathing for ſuch as travel in the Winter, and are dreſſed at *Spitzbergen*, by treading them in hot Sawduſt.

The Deer in *Greenland* are grey and ſhaggy in Spring, afterwards of a duſky Colour, with cleſt Feet and Horns like a Hart, or Elk. They have three or four Branches on each Side, about two Inches broad, and a Foot long; their Ears are long, and their Tails ſhort. By feeding upon the yellow Moſs, they grow ſo very fat in three Months, that they cut ſometimes four Inches deep on the Ribs, which enables them to hold out during the Winter; and yet many of them are ſtarved, and in the Spring they are all very lean. At the Sight of a Man they fly; but, if he ſtops, they ſtop too, and this gives an Opportunity for ſhooting them. Their Fleſh is exceeding good roaſted. There are Foxes here of various Colours, and prodigious Numbers of Seals, or Sea-Dogs, and Sea-horſes, which are the ſame that, in the *South-Seas*, are called Sea-lions; Animals which we ſhall hereafter deſcribe. There are very few Land Fowl; but of Water Fowl abundance, yet none ſo curious as to merit a Deſcription here.

18. As for the Fiſh on this Coaſt, they deſerve Notice, becauſe the taking them is the ſole Motive that brings Ships into thoſe Seas, where the Whale-fiſhing is carried on with great Profit. The true large Whale differs from the reſt of the Fiſh ſo called by his having no Teeth, inſtead of which, on each Side of the upper Jaw, grows the Whale-bone, in four or five hundred different Blades, at equal Diſtances, ſome exceeding twelve Feet in Length, and a Foot broad at Bottom, growing narrow upwards, like the Sticks of a Fan inverted, the largeſt of them weighing about twenty Pounds.

He contracts and dilates the Diſtances of thoſe Blades at the ſhutting and opening his Mouth, making them ſerve as Strainers, to ſeparate the Water from the Shrimps, Prawns, and ſuch ſmall Fiſh as his Food conſiſts of; and, for the ſame Purpoſe, on the Inſide of the Bone, next the Tongue, grows a Quantity of Hair, to make ſtill a finer Percolation, which is the more neceſſary, becauſe, notwithſtanding the Bulk of a Whale's Body, the throat of the largeſt is not above a Foot wide. His Bones are hard, like thoſe of four-footed Beaſts; but, inſtead of having one large Cavity in the Middle, are porous, and full of Marrow. His Eyes meaſure about ſix Inches over, with Eye-lids and Hair like a Man's. His Belly and Back are quite red; his Fleſh is coarſe and hard, like that of a Bull, mixed with many Sinews, and is very dry and lean, becauſe the Fat lies between the Fleſh and the Skin. The Fat is mixed with Sinews, which holds the Oil as a Spunge does Water; the other ſtrong Sinews are about the Tail, with which he turns and winds himſelf, as a Ship is guided by a Rudder.

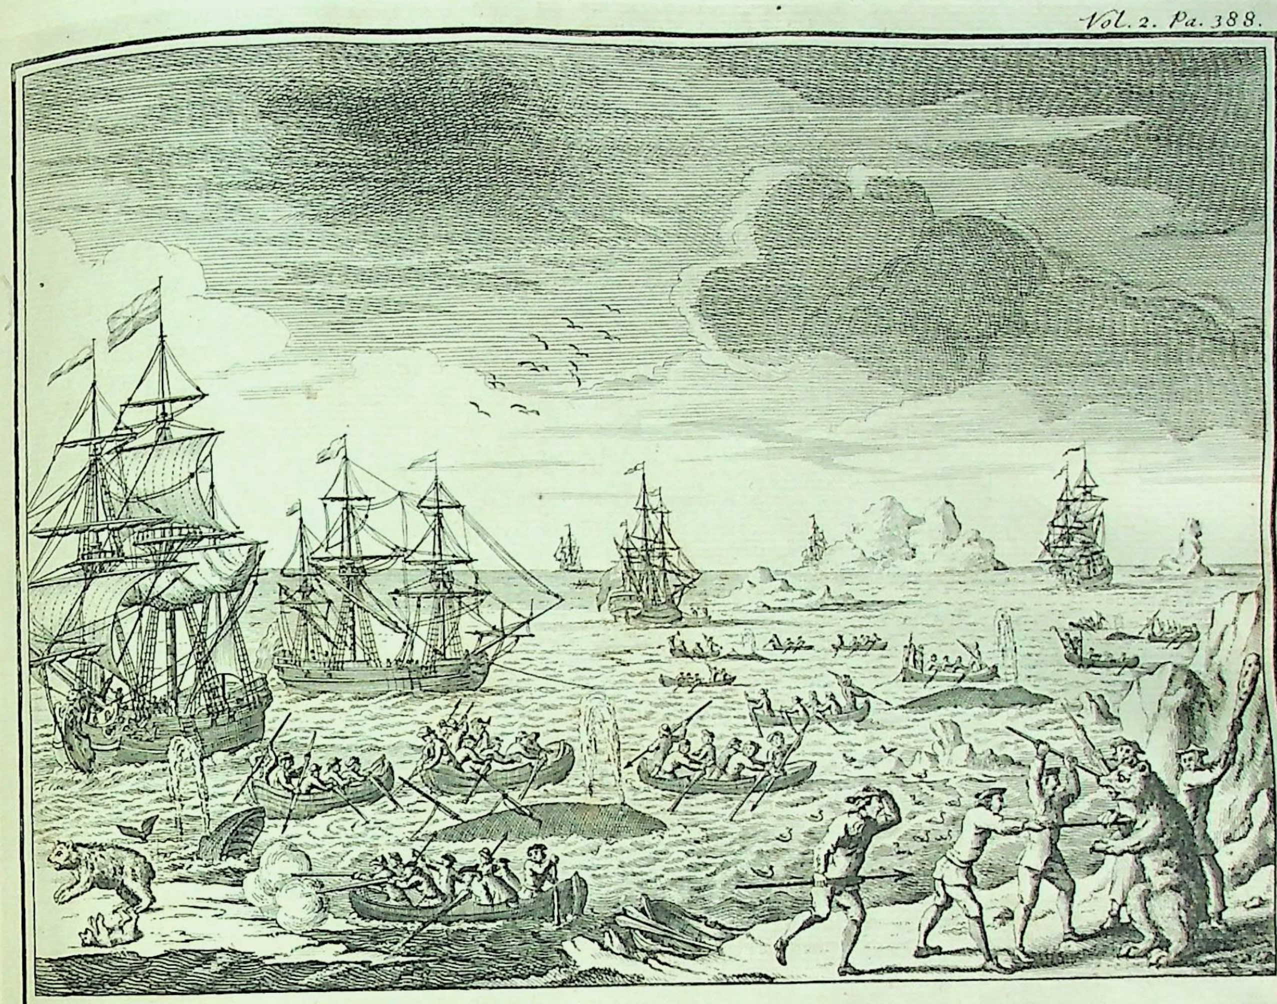
He ſwims as ſwift as a Bird flies, and makes a Track in the Sea like a large Ship under ſail: Beſides the uppermoſt thin Skin, there is another almoſt an Inch thick; but neither of them are very ſtrong, which is believed to be the Reaſon why the Whale does not exert that mighty Force that might be expected from a Fiſh of its Size. They are mightily tormented with Lice, which makes them ſometimes ſpring out of the Sea in an Agony. It is alſo believed they feel great Pains in their Bodies before a Storm, which makes them twiſt and tumble violently while the Wind blows from the Eaſt; but, notwithſtanding their violent Agitation, they are naturally very timorous. The middle Sort of them are from fifty to ſixty Feet long, and yield from ſeventy to a hundred Barrels of Blubber; though ſometimes they are much larger. *Martens* mentions one that yielded a hundred and thirty Hogſheads. This Blubber lies immediately under the Skin; they cut it into thin Slices, which are put into hot Coppers. The Oil ſoon melting out, the Skin is thrown away. The Tail ſerves for a Chopping-block, upon which they cut the Blubber before it is boiled. The manner of taking the Whale deſerves a particular Deſcription.

19. As ſoon as the Fiſhermen hear a Whale blow, they cry out, *Fall, fall!* And then every Ship gets out its Long-Boat, in each of which there are ſix or ſeven Men; they row till they come pretty near, then the Harpooneer ſtrikes him with his Harpoon, which is a ſharp Iron, reſembling the Head of an Arrow, fixed to a Stick; and this requires great Dexterity. Through the Bone of his Head there is no ſtriking; but, near his Spout, there is a ſoft Piece of Fleſh, into which the Iron ſinks with Eaſe. As ſoon as he is ſtruck, they take care to give him Rope enough; for otherwiſe, when he goes down, as he frequently does, he would inevitably ſink the Boat: and this Rope he draws ſo quick, that, if it were not well watered, it would ſet the Boat on fire. The Line faſtened to the Harpoon is ſix or ſeven Fathom long, and is called the Forerunner. It is made of the fineſt and the ſofteſt Hemp, that it may ſlip the eaſier. To this they join a Heap of Lines, of ninety or a hundred Fathom each; and, when there are not enough in one Long-Boat, they borrow from another.

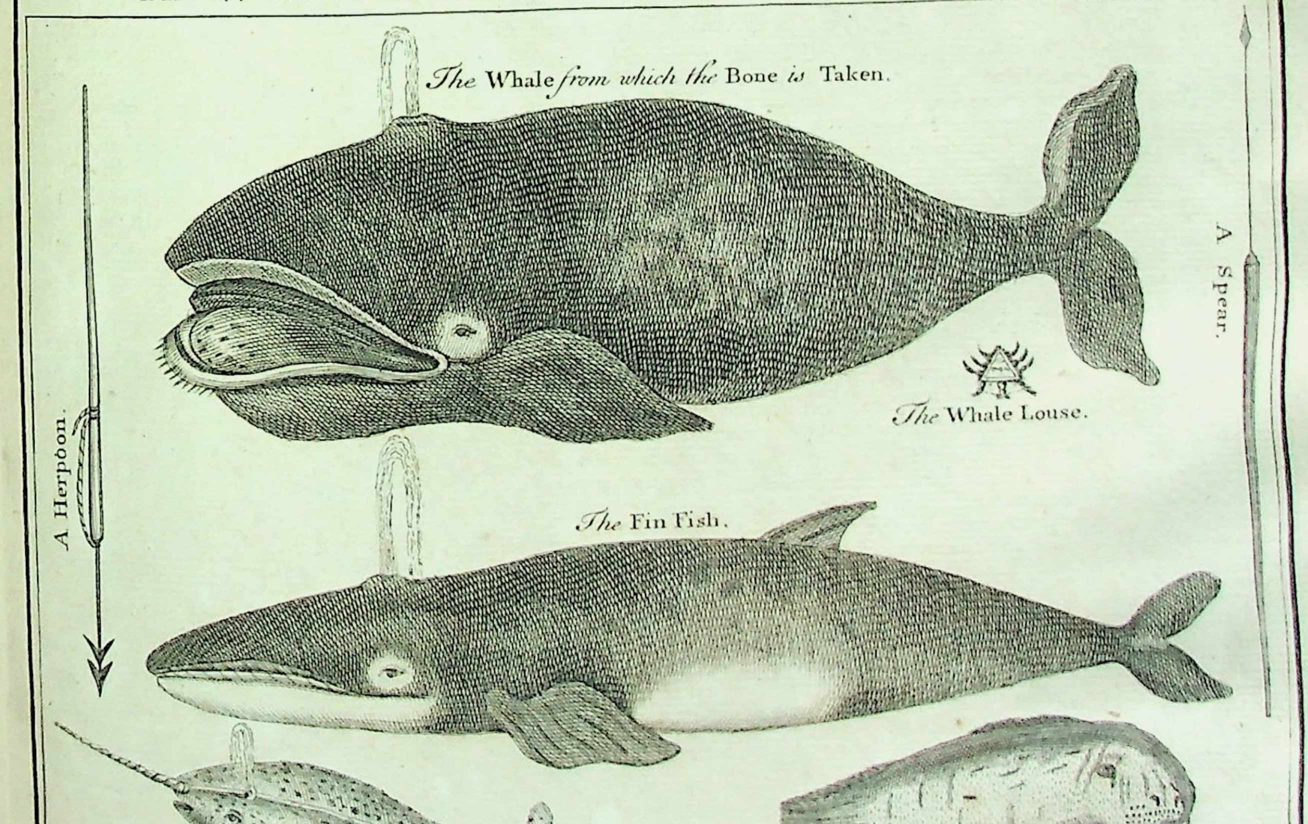
The Man at the Helm obſerves which Way the Rope goes, and ſteers the Boat accordingly, that it may run exactly out before; for the Whale runs away with the Line as faſt as the Wind, and would overturn the Boat if it were not kept ſtrait. When the Whale is ſtruck, the other Long Boats row before, and obſerve which Way the Line ſtands, and ſometimes pull it: If they feel it ſtiff, it is a Sign the Whale ſtill pulls in Strength; but if it hangs looſe, and the Boat lies equally high before and behind upon the Water, they pull it in gently, but take Care to lay it ſo that the Whale may have it eaſily again, if he recovers Strength. If he runs out one Level, as he ſometimes does, they take Care not to give him too much Line, becauſe he ſometimes intangles it about a Rock, and ſo pulls out the Harpoon. The fat Whales do not ſink as ſoon as dead, but the lean ones do, and come up ſome days afterwards. They begin to ſtink as ſoon as they expire, and their Fleſh ferments, creating ſuch a Steam as inflames weak Eyes. When they ſee him ſpout out Blood, they know that he draws towards his End, and then prepare for cutting him up. In order to this, they hawl him cloſe to the Ship-ſide, and with great Knives ſlice his Sides, raiſing the Blubber by a Hook and a Pully, which they lift up as they cut. Many of theſe great Flakes they ſtring upon a Rope, and ſo drag them on Shore, where they are heaved up by a Crane laid upon the Whale's Tail, and chopp'd into ſmall Pieces; afterwards hew'd into Pieces no bigger than Trenchers, and ſo thrown into Coppers; and as ſoon as they become brown, are called Fritters, taken out, and caſt away.

The Liquor is then laded out into a Boat half full of Water to cool and cleanſe it; and thence, by long Troughs, that it may be more cool, conveyed into Hogſheads cloſe to the Shore. In the mean time the Head is cut off, and drawn as near as can be to the Shore, and hoiſted up by a Crane till the Whale-Bone is cut out, and tied up by Fifties, and then the reſt of the Head is boiled for Oil. The Tongue, which in its Figure reſembles nearly that of a Wool-Pack, is craned up with great Care: That of a large Whale will weigh about eight Ton, and will yield from ſix to eleven Hogſheads of Oil, tho' there have been Inſtances of their yielding twenty-four Hogſheads; but this is look'd upon as a Thing very extraordinary. The Ships that uſe this Trade carry thirty or forty Men, five or ſix Sloops, and from four hundred to eight-hundred Hogſheads of Blubber. Their Arms conſiſt of ſixty Launces, ſix Sea-Horſe Launces, forty Harpoons, ten long Harpoons for ſtriking Whales under Water, ſix ſmall Sea-Horſe Harpoons, and thirty Lines of ninety or a hundred Fathom each.

20. There are in theſe Seas ſeveral other kind of valuable Fiſh, many of which are looked upon to be of the Whale-kind; of theſe the moſt remarkable is the Fin-Fiſh, which is full as long, tho' not ſo thick, as the Whale, by two Thirds: He blows Water higher than a Whale



The WHALE FISHERY and KILLING the BEARS.



The Whale from which the Bone is Taken.
A Spear.
A Herpoon.
The Whale Louse.
The Fin Fish.
The Morse.
The Sea Unicorn.

Whale of his Size, thence called the Trumpeter; his Lips are brown, and twiſted like a Rope, and the Whale-Bone hangs to his upper Lip; in Colour he reſembles a Tench; and is ſo nimble, as well as ſtrong, that the Fiſhermen dare not ſtrike him with a Harpoon near the Ice, becauſe by a ſudden Jerk he is able to pull them and the Boat under it. When theſe Fiſh come upon the Coaſt, it is a Sign that the Whales are gone. The Horſe-Whale, which is alſo called the Morſe, the Whaleruſh, or the Sea-Horſe, in Shape reſembling the Seal, but in Size is full as big as an Ox; the Head is thick, round, and exceeding ſtrong; the Neck is covered with ſhort Hair, and with a Skin near an Inch thick; upon the reſt of the Body the Hair is longer, but the Skin thicker; in their upper Jaw they have two long Teeth, from twelve to twenty-ſix Inches, which are cloſer, whiter, and keep their Colour better than any kind of Ivory. This Creature feeds upon Herbs and Fiſh, and is very bold, making toward the Boat as ſoon as he attacked, and endeavouring to overſet it, by leaping into it; and when he cannot effect this, he ſometimes beats Holes through it with his Tuſks. They are not eaſily killed either with Shot or Blows, and therefore the Seamen uſually diſpatch them with Launces.

When Whales happen to be ſcarce, the Oil and Teeth of this Creature make up the Voyage. The Dragon-Fiſh has two Fins on his Back, and two Holes in his Neck, through which he ſpouts the Water; his Body is long and thin, his Skin greyiſh, and glitters like Silver. The Butſhopf, or Place-head is another Fiſh of the Whale-kind, with a Spout-hole in his Neck, his Back brown, his Belly white; in Length from ſixteen to twenty Feet: And it is to be obſerved that they ſwim along by the Shore-ſide. The white Fiſh is as large as the Butſhopf, and is very fat. When there is Plenty of theſe Fiſh, it is a Sign of a good Whale-Seaſon. The Sea-Unicorn has no Fin upon his Back, but a Snout hole in his Neck, their Bellies are white; they are from ſixteen to twenty Feet long, and are chiefly valued for their long and wreathed Horn, which proceeds from their Snout, and is exceedingly white and firm; which Horn, when they are purſued, they ſometimes thruſt above Water. His *Daniſh* Majeſty's Throne is compoſed entirely of theſe Horns, which were formerly eſteemed as Specifics againſt Poiſon. All theſe Fiſh ſwim againſt the Wind, and are obſerved to tumble againſt Storms, which ſome attribute to their having the Cramp in their Bellies.

The Saw-fiſh, or Sword-Fiſh, is of all Sizes from two to twenty Feet long: He is ſhaped like a Man's Arm; his Eyes ſtand high out of his Head; his Sword is ſometimes ſmooth and ſometimes ribbed or indented like a Saw. This Creature is by Nature an Enemy to the Whale and Fin-Fiſh, purſuing them with the greateſt Eagerneſs. A few of them will diſpatch a great Whale, and then they eat no art Pbut the Tongue. In calm Weather the Fiſhermen are often Spectators of the Combat; and when they perceive the Whale dying, they row towards him, upon which the Sword-Fiſh retreats and leaves his Prey in their Hands. The Hay is another Enemy to the Whale, and of theſe there are ſeveral ſorts; they are generally of a grey Colour, and from one to three Fathom in Length. Of all Fiſh the Hay is the moſt voracious, for it bites great Pieces out of the Whale, as if they had been dug with Shovels, inſomuch that ſometimes Fiſhermen take Whales that have half their Blubber torn away in this Manner. The Liver of this Fiſh abounds in Oil, and is exceſſively large. The Fleſh of their Back, when dried ſome Days in the Air, is accounted tolerable Proviſion either boil'd or roaſted, and the leſs the Fiſh the better. They are caught by a large Hook baited with Fleſh, and faſtened to a ſtrong Iron Chain; and in the Sea, if Men fall over-board by Accident, the Hays in their Turn devour them.

21. There are, beſides *Spitzbergen* or *Greenland*, ſome other Iſlands in theſe Seas that deſerve our Notice, ſuch as *Cherry-Iſland*, which lies directly South of *Spitzbergen*, in the Midſt between it and the Continent of *Europe*. It was ſo called in 1603, in honour of Sir *Francis Cherry*, by a Ship's Crew which he had fitted out. There were for many Years after many profitable Voyages made to this Place, which lies in the Latitude of 74 Degrees and 5 Minutes; and where, in one Seaſon, they made twenty-two Tons of Oil out of the Fleſh, and got three Hogſheads of Morſe's Teeth. In the Year 1610, the *Ruſſian* Company took Poſſeſſion of it, and that Year they killed a thouſand Morſes, and made near fifty Tons of Oil: They likewiſe diſcovered three Lead and Coai Mines upon this and the ſmall Iſlands near it, and found the Country ſo hot towards the End of the Month of *June*, that the Pitch ran down the Side of their Ship. This Iſland alſo abounds with ſeveral ſorts of wild Fowl and Seals; and there are likewiſe in it a vaſt Number of Bears. It does not appear that for the laſt hundred Years any Ships have viſited this Coaſt.

On the South-Eaſt of *Spitzbergen* lies the great Country of *Nova Zembla*, which has been diſcovered from 58 to 68 Degrees of Latitude. It is very uncertain whether it be an Iſland, or joined to the Continent; for that which is called the Streights of *Weygatz*, and is ſuppoſed to divide this Country from *Ruſſia*, is but a freſh Water Bay. In the *Muſcovite* Tongue, *Nova Zembla*, ſignifies New Land. It is a moſt wretched Country, and yet not altogether deſtitute of Inhabitants. This Land was firſt diſcovered by the *Engliſh*, and afterwards frequented by the *Dutch*; and their famous Pilot, *William Barenz*, periſhed in a Voyage made hither in 1596. Some Maps lately publiſhed in *Ruſſia*, ſay, that this Country is joined to that of the *Sammoieds* by the *Pater-noſter* Mountains; and there are ſome Maps that join it with *Spitzbergen* or *Greenland* on the North. However, all this is very uncertain at leaſt, and I think very improbable. The *Dutch*, who winter'd therein, aſſert, that this Country produces neither Leaves nor Graſs; but Mr. *Hudſon*, who viſited it in the Summer, ſays, The High Land was very green and pleaſant, on which he ſaw large Herds of Deer grazing. Farther Diſcoveries are expected from the Induſtry of the *Ruſſians*, who have aleady made great Progreſs in their Searches on this Side.

John Mayens Iſland, as the *Dutch* call it, lies to the South-weſt of *Spitzbergen*; it lies from South-weſt to North-eaſt; the Extremity of it is in the Latitude of 71 Degrees 23 Minutes. There were formerly abundance of Whales in the Sea which waſh the Shore of this Iſland, but their being removed farther northward, is the Reaſon that this Iſland is in a Manner forſaken: There is a Mountain towards the northern Part of it, which extends quite a-croſs the Iſland: It is of a prodigious Height, and abſolutely perpendicular, being diſcernible thirty Miles off, at Sea; *Beerenbergen*, *i. e.* Bear-mountain, from the prodigious Number of thoſe Creatures that have been ſeen upon it; there are ſeveral good Bays, the Names of which I need not ſet down, becauſe they are no longer viſited. This Coaſt, though it is allowed that the Land is habitable, and abounds with Stone, Fiſh, and in all Kind of Deer, is forſaken. The greateſt Inconveniencies attending the Navigation thereabout, is the vaſt Quantities of Ice which float on all Sides, but eſpecially towards the Eaſt, where, in the Spring, it is abſolutely inacceſſible.

The many Hardſhips and Difficulties to which People are expoſed in Voyages to theſe Places, and the many Loſſes and Misfortunes that happened to ſuch as were employed in the Fiſheries upon theſe Coaſt, brought them into Diſcredit with us, and by Degrees occaſioned their being totally deſerted, notwithſtanding the great Pains that had been taken to promote theſe Diſcoveries originally; yet it is very certain, that the Confuſions which happened here, in the Time of the Civil War, contributed not a little to check Endeavours of this ſort; and one may very ſafely affirm, that thoſe unhappy Times were very prejudicial to our Navigation, by confining Mens Thoughts and Endeavours to Things of immediate Profit which are ſoon worn out, and diverting them from Diſcoveries which, how hard and difficult ſoever, in the Beginning, commonly turn in the End to the greateſt Account. Thus we were brought by Degrees to abandon theſe Northern Expeditions, as dangerous, uſeleſs, and unprofitable, though we had ſeveral Advantages over other

Nations; and from perſiſting in which the *Dutch* have actually raiſed one of the moſt conſiderable Branches of their Commerce; for ſuch, next to their Herring, the *Greenland* Fiſhery is eſteemed, and very juſtly too, as ſhall be fully ſhewn in its proper Place. This Advantage however may be ſaid to have reſulted to us from theſe Diſcoveries, that it has given us an indubitable Right to reſume and purſue them whenever it ſhall be judged neceſſary or expedient; and perhaps there may come a Time, when this will be thought an Undertaking worthy of Encouragment.

Cherry Iſland, before-mentioned, lies in the Latitude of 74 Degrees; the Weather in *June*, *July*, and *Auguſt*, is not only warm, but extreamly hot, ſo that, in 1610, the melted Pitch is ſaid to have run down the Ship-ſides. In this Iſland there are both Lead and Coal Mines, and in the Seaſon of the Year a very profitable Fiſhery might be carried on there; perhaps too, greater Advantages might be found out by leaving People to winter in that Iſland, which is very well ſeated for Diſcoveries. But it may be ſaid, that this can never be attempted, becauſe there is no Reaſon to imagine that any *Engliſh* would be prevailed upon to ſtay in ſuch a miſerable Place. But to this I anſwer, That two Things ought to be conſidered; the firſt is, that *Cherry Iſland*, in all Probability, cannot be a worſe Place than ſome of the Factories belonging to the *Hudſon*'s *Bay* Company; where ſome People actually reſide at no very conſiderable Expence; and that in the Compaſs of a Year, we have many condemned in *England* that, either from the Nature or Circumſtances of their Crimes, are very juſtly held to be no fit Objects of Royal Mercy; but if ſuch Perſons would make it their Choice to go and winter in this Iſland, in order to obtain their Pardon, in Caſe they ſurvived, it might turn to the Advantage of their Country. And I do not doubt, if the Profits that might be probably acquired by a regular Voyage thither every Year were clearly ſtated, there would be People enough found willing to furniſh the Expences neceſſary for recovering this Trade, which in a few Years would become equally beneficial to them, and to their Country in general. I hint this Matter here for the Employment of their Thoughts, who have a truly public Spirit, and would be glad to ſee any thing attempted that may encourage Induſtry, promote our Navigation and increaſe our Commerce. I ſhall add but one thing more upon this Head; which is, that ſo long ago as King *Alfred*, the Founder of our naval Force, theſe Seas were viſited, and a very profitable Fiſhery carried on; and therefore I can ſee no Reaſon why we ſhould ſuppoſe that it is impracticable now; and if not impracticable, why it may not be attempted with reaſonable Hopes of Succeſs, by the preſent Generation: We conſider ourſelves as much more knowing, and at the ſame time as much more powerful, than our Anceſtors were in thoſe Days, and therefore it ought to be thought ſcandalous in us, to fall ſhort of them in Induſtry, which every one muſt acknowledge to be the Caſe, when Branches of Commerce which were enjoyed by them are loſt to us, and that Loſs too abſolutely unregarded.

22. We are very far from having any Certainty that *Greenland* is united, on the Eaſt, to any other Country whatever: Some have imagined that it was joined to *Nova Zembla*, but the Diſcoveries made by the *Dutch* in 1670, have diſproved this; for they advanced a great way behind the laſt-mentioned Country, and found nothing but Snow and Ice. In order therefore to give ſome Account of the Arctic Regions lying next to *Greenland* on this Side, we muſt have Recourſe to the Expeditions made for Diſcovery from *Japon*. We have, in our former Volume, given ſome Account of the Land of *Yedzo*, or *Jeſſo*, which lies to the North of the great Iſland of *Niphon*, which is the largeſt of thoſe known to us by the general Name of *Japon*, and from which it is moſt probable that Word was framed. The *Japoneſe* are very bad Sailors, and conſequently have not been able to make any great Diſcoveries on that Side. Our Countryman Mr. *William Saris*, of whom I have given the beſt Account I was able, in the former Part of this Work, had a Commiſſion from the Government of *Japon* to make Diſcoveries on that Side; but it does not appear that he had any Opportunity of executing this Commiſſion; if he had we ſhould probably have had a better Account of this Country than we have at preſent, or indeed are ever like to have, in conſequence of any Diſcoveries made from *Japon* by the Natives.

This Commiſſion was granted to Mr. *Saris* in the Year 1613; and about ſeven Years after, Father *Angelis*, a *Sicilian* Jeſuit, actually went thither to plant the Chriſtian Faith, and from him we had the firſt tolerable Account of this Country. Some other Miſſionaries followed him, and from their Accounts it appeared, that *Jeſſo* was neither a very excellent nor a very deſpicable Country, in ſome things very far ſhort, in others rather better, than *Japon*. The Climate they found to be very cold, but withal very wholſome; the People leſs ſprightly, but much honeſter, than the *Japoneſe*; the Produce of the Place they found not much to be boaſted of, but as they came to be better acquainted with it, they were well informed that it was very rich in Silver Mines, and that prodigious Quantities of this precious Metal were yearly tranſported to *Japon*; notwithſtanding which the Traders from this Country brought thoſe People, annually, conſiderable Quantities of Silver Ear-rings, and other Toys; for which they paid a high Price. I mention this Circumſtance, becauſe ſome of the *Portugueze* Writers would perſuade us, that becauſe Silver Rings are brought from *Japon* to *Jeſſo*, there can be no Silver Mines in the laſt-mentioned Country; whereas, by comparing the original Authors, from whom they take their Accounts, it is very evident that the Fact is as we ſtate it; neither is there any thing ſtrange in it; for in *Mexico*, where Silver is the principal Commodity, Silver Toys, and indeed all ſorts wrought Plate, ſell very dear.

Theſe Miſſionaries however deliver it as their Opinion, that the Country of *Jeſſo* is an Iſland, which agrees very well with the *Japoneſe* Accounts; but then they diſtinguiſh better the *Upper* and *Lower Jeſſo*; the latter they make an Iſland, the former a Continent, the Northern Parts of which they ſay are not diſcovered, that is, they are not known to the *Japoneſe*; but, as we ſhall ſhew hereafter, they are not only known, but have been conquered by the *Ruſſians*, who have extended their Empire to the Frontiers of that *Japon*, if we allow the Country of *Jeſſo* to make a Part of the *Japoneſe* Dominions; and that it is really dependent upon the Empire of *Japon*, is no longer to be queſtioned.

But it is now time to ſpeak of the *Dutch* Diſcoveries on this Side; and in order to have a clear Notion of theſe it is requiſite to obſerve, that the *Dutch Eaſt-India* Company, after they had eſtabliſhed themſelves in the Iſland of *Formoſa*, and had ſettled their Commerce in *Japon*, began to think that it would contribute greatly to the Advancement of their Affairs, if they could find a nearer Paſſage into *Europe* from thoſe Countries, and therefore they determined to try whether a North-weſt Paſſage might not be found on that Side, which would have been the ſame Thing as finding a North-eaſt Paſſage from *Europe*. In 1643, the Company fitted out from *Batavia* two Sloops for this Diſcovery; the firſt was called the *Buſkins*, commanded by Capt. *Henry Cornelius Schaep*; the other, the *Caſtricoom*, under the Orders of *Martin Heritſzoom Van Uriez*. The Inſtructions that the Commanders received were, that they ſhould ſail on the moſt Northern Point of the Iſland of *Japon*, and from thence to the Height of 56 Degrees; but the former of theſe Veſſels being ſeparated from the latter in a Storm, and obliged to ſeek for Shelter in one of the Ports of *Japon*, there was an End of their Expedition, it being ſeized, and the Crew made Priſoners; but Capt. *Uriez*, in the *Caſtricoom*, continued his Voyage, and made thoſe Diſcoveries which will render his Name immortal. In the Latitude of 42 Degrees he diſcovered a Land, and ſailed to the Height of 43 Degrees, along a Coaſt which was tolerably well peopled, and landing ſeveral times, was informed by thoſe People, that there were ſeveral rich Mines in their Neighbourhood.

As he ſailed higher, he found the Country mountainous, covered with very high Trees, and, as the People informed him, abounding with Silver Mines; he called the higheſt of the Mountains *Pico Antonio*; and tells us farther, That the Country thereabouts was very like that of *England*, that is to ſay, a rich Clay, covered with Graſs and Herbs, and at a Diſtance he ſaw very wide Downs. There is no ſort of Doubt, that this was the Eaſt Coaſt of the Continent of *Jeſſo*. He proceeded from thence through a Gulph, which in the Latitude of 55 Degrees 50 Minutes, diſcovered itſelf to be a Streight about fourteen Leagues, or ſomewhat more than forty of our Miles broad, in the Midſt of which was an Iſland, and two vaſt Continents on each Side. He called the Iſland *States Land*; the new diſcovered Continent, *Company's Land*; and to the Streights he gave his own Name, which they have ever ſince borne, and theſe are the famous Streights of *Uriez*, which are ſuppoſed to divide the Continent of *Aſia* from that of *America*; the Land of *Jeſſo*, which belongs to *Aſia*, lying on the Left-hand, and *Company's Land*, which is ſuppoſed to be Part of *America*, on the Right.

If this Notion be well founded, then the Country between *California* and the Streights of *Uriez* comprehends no leſs than 80 Degrees of Longitude, and is conſequently one thouſand ſix hundred Leagues in Extent. The Account that Capt. *Uriez*, gives of *States Iſland* is, that it is full of high Mountains, the Tops of which are covered with Rocks, without Trees or Graſs: He gives us a large Deſcription of the Country on the Left-hand, which is the Land of *Jeſſo*; but I do not find that he landed upon the *Company's Land* at all, or made any farther Diſcoveries about it; we muſt therefore confine ourſelves at preſent to this Land of *Jeſſo*, with which the *Muſcovites* have brought us better acquainted; for they, by travelling from *Siberia*, have diſcovered that, in the Latitude of 59 Degrees, there is a Gulph which ſeparates the Continent of *Great Tartary* from a Peninſula, which they call the Country of *Kamtſchatcka*, which extends from the 42d Degree of Latitude, which is the moſt ſouthern Part of the Continent of *Jeſſo*, to 65 Degrees 30 Minutes, and there is bounded by the Ocean.

This Country is divided from the Peninſula of *Corea* and *Great Tartary*, by a Gulph of its own Name, and from *Company's Land* by the Streights of *Uriez*; ſo that we need be in no farther Perplexity about the Land of *Jeſſo*, ſince it appears plain to be the ſouthern Extremity of this vaſt Country, of which the *Ruſſians* are in a great meaſure Maſters, and actually navigate that great Sea which ſeparates *Aſia* from *America*, in which they have diſcovered large Iſlands, well peopled, and abounding with various rich Commodities.

All theſe Diſcoveries plainly ſhew what vaſt Advantage would accrue to the maritime Powers, if a Paſſage to the North-eaſt were practicable; and, perhaps, whoever conſiders theſe Diſcoveries attentively, will be apt to think it might be done, more eſpecially when it is remembred that the *Dutch*, who were employed in 1670, in endeavouring to find a North-weſt Paſſage, advanced within a very few Degrees of that open Sea which is commonly navigated by the *Ruſſians*, and which had infallibly brought them to the Coaſts of *Japon* and *China*; ſo that it ſeems equally ſtrange that in former Times, when there was no Sort of Knowledge in our Part of *Europe*, of the Vicinity of theſe Countries to the *Ruſſian* Dominions, ſo many Attempts ſhould be made (as will appear hereafter) to the North-eaſt, and that none at all ſhould be made now, when there is a kind of moral Certainty that ſuch a Paſſage might be diſcovered.

The only ſatisfactory Reaſon that, as I apprehend, can be given is, the *Dutch* are now of Opinion, that the Diſcovery of a North-eaſt Paſſage, or indeed of any other Paſſage to the *Indies*, except that by the *Cape of Good Hope*, would be extremely prejudicial to them, and therefore think no more of it; and as we are generally governed in our Notions of Things by what the reſt of the World thinks, we likewiſe have quitted all Thoughts of finding ſuch a Paſſage; but the Conſideration of this Matter belonging properly to another Place, we will ſay nothing more of it here, but proceed to the proper Buſineſs of this Section.

23. That there is ſome Country or other between *California* and *Japon*, is a Point I believe no reaſonable Man ever doubted, though it muſt be confeſſed, that no ſuch Country has been ever hitherto clearly diſcovered: I ſay, clearly, becauſe ſome obſcure Hints we have both of Continents and Iſlands within the Extent beforementioned. I have, in ſome *Spaniſh* Authors, met with an Account of one *Frederick de Gama*, who in paſſing from the *Philippines* to *Mexico*, diſcovered in a high Latitude a very fine Country, along which he ſailed for a few Days together, and if I am not miſtaken, there are in ſome *Spaniſh* Charts the Coaſts of this Country laid down; but as it is many Years ago ſince I ſaw theſe Charts, I cannot take upon me to ſpeak of this Matter with any Degree of Certainty. I muſt however obſerve, that there is no great Weight in the Objection commonly made to this Suppoſition, as if the *Spaniards* muſt certainly have diſcovered theſe Countries, or ſome of them at leaſt in their *Acapulco* Ships, and this for two Reaſons; firſt, becauſe it is certain they really have diſcovered ſeveral Iſlands; and next, becauſe for the ſake of an expeditious Paſſage, they ſail in too low a Latitude for making any of theſe Diſcoveries that we expect, ſince, I think, it is not probable that any Part of the Country between *Aſia* and *America* lies farther to the South than forty-five Degrees, and conſequently is not within their Rout from the *Philippines*: But we are not entirely deſtitute of Accounts relating to theſe Countries, though it muſt be confeſſed they are not ſo diſtinct and clear as we could wiſh, yet, ſuch as they are, the Reader will very probably be glad to ſee them, and it is our Buſineſs to give them.

The firſt that occurs is from the Account publiſhed by Dr. *Cox*, in his *Deſcription of the Province of* Carolana, of which he looks upon himſelf as the Proprietor, in virtue of ſeveral Grants from the Kings of *England*, the Validity of which I am ſure I ſhall not diſpute; and which takes in all, or the greateſt Part, of the *French* Settlements on the *Miſſiſſippi*. The Deſign of the Doctor's Book is to ſhew the Importance of this Country to the Crown of *Great-Britain*, which I think he has unqueſtionably made out, and in the fifth Chapter thereof he gives us a very large Account of a Part of that Country now under our Conſideration, and therefore we ſhall make no Scruple of inſerting it here for the Reader's Peruſal, who will very probably find many Things therein not eaſy to be credited, but which, notwithſtanding, deſerve to be known and examined, and which certainly ought not to be abſolutely exploded, till by ſome kind of poſitive Evidence the Facts he aſſerts are actually diſproved.

“ It will be one great Conveniency of this Country, if ever it comes to be ſettled, that there is an eaſy Communication therewith and the South-Sea, which lies between *America* and *China*, and that two Ways. By the North Branch of the great yellow River, by the Natives called the River of *Maſſorites*, which hath a Courſe of five hundred Miles, navigable to its Heads or Springs, and which proceeds from a Ridge of Hills ſomewhat North of *New Mexico*, paſſable by Horſe, Foot, or Waggon, in leſs than half a Day; on the other Side are Rivers which run into a great Lake that empties itſelf, by another great navigable River, into the South-Sea. The ſame may be ſaid of the River *Miſchaouay*, up which our People have been, but not ſo far as the Baron *le Hontain*, who paſſed on it above three hundred Miles almoſt due Weſt, and declares it comes from the ſame Ridge of Hills above-mentioned; and that divers Rivers from the other Side ſoon make a large River, which enters into a vaſt Lake, on which inhabit two or three great Nations, much more populous and civilized than other *Indians*. And out of that Lake a great River diſembogues into the South-Sea, which is, doubtleſs, the ſame with the before-mentioned, the Head of the two Rivers being little diſtant from each other.

“ About twelve or fourteen Years ſince, I had imparted unto me a Journal, from a Gentleman admirably well ſkilled in Geography, eſpecially of *America*; who had made thither divers Voyages from

“ *New England*, and all our *Engliſh* Plantations in *America*, and viſited moſt Parts of the Gulph of *Mexico*; where he became acquainted with one Captain *Coxton*, a famous Privateer, who, towards the latter End of the Reign of King *Charles* II. was entertained in his Majeſty's Service. But whether he was diſobliged, or his Genius prompted him to follow his old Trade, having with his Carpenters fitted up a Ship of twenty-ſix Guns, he ſailed to the South-Sea, with a Deſign to take the Ship which comes annually from the *Manillas*, or *Philippine Iſlands*, in the *Eaſt-Indies*, to *Acapulco*, the chief Port of *Mexico*; which Ship, as he had been well informed, uſually made that Part of the Continent that lies between *Japon* and *America*, at a famous Point in 42 Degrees; but when he came to the Head of the Iſland, or *Peninſula* of *California* (it being too ſoon, by ſome Months, for the putting in Execution his intended Deſign) rummaging the Coaſt, he diſcovered a great River in about —— Degrees North Latitude, which entered a great Lake near the Mouth, whereof he found a very convenient Iſland, where he ſtaid two or three Months to refit himſelf, happening to have a Man aboard who underſtood the Language of the Country.

“ The Natives finding he was engaged in Expeditions againſt the *Spaniards*, treated him very kindly, ſupplying him very chearfully with whatſoever he wanted, and he contracted great Friendſhip with them: He calls them the Nation *Thoya*. The *Spaniards*, as I find, in divers of their Expeditions, call it *Theyago*, ſometimes *Tejago*; they are often at War with the *Spaniards*, who have been always repulſed by them. They bring thirty or forty thouſand Men in one Body into the Field. Theſe, and two other neighbouring Nations, not much inferior unto them, are accounted the moſt ſenſible and civilized *Indians* in *America*. When the Seaſon came fit for their Expedition, they ſailed Weſt by South, and happened to ſtop, upon ſome Occaſion, at an Iſland called *Earinda*, or *Carinda*; there were five in all near each other, like the *Canary Iſlands*, but lay rounder, and were thought, one with another, about fifty or ſixty Miles in Compaſs. The Inhabitants were not ſhy of them, but ſupplied them with Proviſions, and brought them Gold to barter, for ſuch Commodities of ours as they liked, and in three or four Days they purchaſed eighty-ſix Pound Weight of that Metal. The Natives told them they were ſorry they had no more. They taking Care to provide only againſt a certain Time of the Year, for Perſons who come from the Sun-ſetting, at a particular Seaſon, and bartered divers Commodities with them for Gold.

“ Theſe Traders, or Merchants, muſt certainly be the Inhabitants of *Japon*, which I gather from a large Relation in the Hiſtory of that Iſland, publiſhed by the *Dutch*, and tranſlated into our Tongue, and makes the ſixth Volume of *Ogleby*'s Collections. They therein declare, That they ſent from *Batavia* two Ships (as they pretended) to diſcover a Paſſage for the North-eaſt Part of *Japon*, round *Tartary*, to *Europe*, though 'tis very probable they had other Views. Thoſe Ships were ſeparated a little Eaſt of *Japon*, by a Storm; the *Caſtricoom* proceeded, and found the Streight entering into the Gulph of *Tartary* or *Jeſſo*, and ſearched the Gulph on the Weſt-ſide to 49 Degrees. The other Ship, the *Bluſkins*, having ſuffered much by the Storm, put into the Port of *Nambo*, near the North-eaſt End of *Japon*, not doubting they ſhould be kindly received, being in League, and having a free Trade with their Empire; but while they were refitting, they were unexpectedly ſurprized by the *Japoneſe*, ſent to Court, and very ſtrictly examined, whether they had not been at, or went to diſcover, the Gold Iſlands, as they called them, lying to the Eaſt, of which the Emperor is ſo jealous, that it is capital for any to go thither without his Permiſſion, or to declare to others the Diſtance and Situation of them; and had not the *Dutch* given uncontroulable Evidence, that they had not been, nor were they going thither, but only upon the forementioned Diſcovery, they had been all executed.

“ There are, upon the Coaſt, between *America* and *Japon*, divers very large and ſafe Harbours, and a very good Climate; the Coaſt ſtretching South-weſt mostly from 40 to — Degrees of North Latitude. The Seas abounding with Fiſh, and the Land with Fowls and Veniſon; the Inhabitants are ſociable and hoſpitable. I have a Draught and Journals of all the Coaſts from *America*, with thoſe of diverſe Harbours, until you are within about one hundred Leagues of the Streight of *Uriez*, which the *Dutch* diſcovered about ſixty or ſeventy Years ſince; and which is the Entrance of the Sea or Gulph of *Tartary*, lying one hundred and twenty Leagues North-eaſt from *Namboe*, the moſt Northerly Haven or Promontory of *Japon*. This Streight, or rather theſe Streights (there being two made by a long Iſland) are the Inlets into a great Sea or Bay, into which diſembogues a vaſt River on the Weſt-ſide of it, between 49 and 50 Degrees of North Latitude, navigable many hundred Miles by the biggeſt Ships, and is made by the Conflux of many large Rivers, ſome of which come from the South-weſt, as *Chingola*, *Hiluras*, *Ola*, *Sungoro*, and their Fountains near the great Wall of *China*, and run through the Dominions of the Eaſtern *Tartars*, who are now Maſters of *China*. Other Rivers from the North-weſt, proceed from the Territories of the *Czar* of *Muſcovy*, who hath built divers large and well fortified Cities on the main River of *Yamour*, and ſeveral of its Branches, as *Negovim*, *Nepehou*, *Albazin*, *Argun*, *Nettinſkoy*, &c.

“ This River of *Yamour*, or *Amura*, hath a Courſe from its furtheſt Fountains above one thouſand two hundred Miles, without any Interruption by Cataracts, ſo frequent in all the other great Rivers in *Muſcovy*, as the *Oby*, *Jeneſſeg*, or *Jeneſſca*, &c. By this River you may trade with the Inhabitants of *Jedſo* for Furs, who have great Store, and thoſe very rich; they inhabit all the Coaſt on both Sides the Mouth of the River, and a conſiderable Way up it. You may likewiſe traffic with the *Muſcovites* for the ſame Commodities, who ſell them there for a fourth Part of what they yield in *Moſcow*, or *Archangel*; theſe Parts being above 40 Degrees almoſt due Eaſt from *Moſcow*, their capital City, a moſt prodigious tedious and difficult Journey, as appears by divers large and accurate Journals, which have been many Years publiſhed in Print; and by means of the Rivers which come from the South-weſt, you may correſpond with the Eaſtern *Tartars*, *Chineſe*, and the great rich Kingdom of *Tanguth*, all now united under one and the ſame Emperor, being very civilized Nations, and kind to Strangers. To ſay nothing of the great and rich *Peninſula* of *Corea*, which is contiguous to one or two Branches of this River, was once a Province of *China*, hath the ſame Manners and Language, and is now tributary to the preſent Emperor. This River, and its Branches, are in a good Climate; it never varying above two or three Degrees from a due eaſterly Courſe. Three or more Ships may be ſent every Year, who may part at the Streights of the *Tartarian Gulph*, or Sea; one for *Yedzo* and the River, another for *Japon*, and a third for *North China*, to the great City *Tunxo*, and the Port of *Pekin*, the Capital of that Kingdom, from which it is not above one Day's Journey by Land or Water; and there is not a better Commodity, or of which more Profit may be made, than of the Furs, which are ſo eaſily procured, and ſo ſoon brought into that imperial City, where, in the Court, and among the Grandees, there is a prodigious Conſumption of them, and moſt extravagant Prices given for them, eſpecially thoſe of the better Sort, though even the meaneſt come to an extraordinary good Market.”

It muſt be confeſſed, that there are ſome very ſtrange and ſingular Paſſages in this Relation, to which ſome Objections might be made; but, however, I think it better to paſs theſe by at preſent, that we may bring in all our Obſervations at once; ſo as that they may aſſiſt and give Light to each other, and render the Subject upon the whole more intelligible, I ſhall therefore proceed to another very curious and entertaining Relation, publiſhed many Years ago, and ſince reviſed; and ſome Remarks added by the ingenious Mr. *Dobbs*, to whom his Country is ſo much obliged for the Pains he has taken to revive the Concern taken for, and Endeavours to find out, a North-weſt Paſſage. This Narrative is very clear in itſelf, and there is therefore no Sort of Neceſſity that we ſhould trouble the Reader with any farther Introduction; only it may be right to obſerve, that it relates alſo to that Part of the Northern World of which we are now ſpeaking.

The Viceroys of *New Spain* and *Peru*, having Advice from the Court of *Spain*, that the Attempt for the finding a North-weſt Paſſage, which had been tried before by *Hudſon* and *James*, was again attempted in 1609, by ſome induſtrious Navigators from *Boſton* in *New England*, Admiral *de Fonte* received Orders from *Spain*, and the Viceroys, to equip four Ships of Force; and being ready to put to Sea the 3d of *April*, 1640, from *Lima*; the Admiral in the Ship *Spiritus*, the Vice-Admiral, *Don Diego Peneloſa*, in the *St. Lucia*, *Pedro de Bernarda*, in the *Reſſaria*, and *Philip de Ronquillo*, in the *King Philip*, the 7th of *April*, at five in the Evening, he got to *St. Helen*, in 2 Degrees South Latitude, where he took in a Quantity of Bitumen or Tar, by way of Medicine againſt the Scurvy and Dropſy. The 10th he paſſed the Equinox at *Cape del Paſſao*, the 11th *Cape St. Franciſco*, in 1 Degree 7 Minutes North Lattitude, and anchored at the Mouth of the River *St. Jago*, and took in there ſeveral Refreſhments. The 16th he ſailed from thence to the Port and Town of *Ralco*, three hundred and twenty Leagues Weſt-north-weſt, Weſterly about 11 Degrees 14 Minutes North Latitude. It is a ſafe Port covered from the Sea by the Iſlands *Ampallo* and *Mangreza*, both well inhabited by *Indians*. *Ralco* is but four Miles over Land to the Head of the Lake *Nicaragua*, that falls into the North Sea, in 12 Degrees North Latitude, near the *Corn* or *Pearl Iſlands*; here being Plenty of fine Timber, he bought four Shallops, built expreſly for ſailing and rowing, about twelve Tons each, and thirty-two Feet in the Keel.

The 26th he ſailed from thence to *Saragua*, within the Iſlands and Sholes of *Chamilly*, in 17 Degrees 31 Minutes North Latitude, four hundred and eighty Leagues North-weſt by Weſt from *Ralco*. From *Saragua*, and *Compoſtello*, near this Port, he took in a Maſter, and ſix Mariners uſed to trade on the Eaſt-ſide of *California* for Pearl, which the Natives catch on a Bank in Latitude 29 Degrees, North from the *Baxas St. Juan*, in 24 Degrees North Latitude, twenty Leagues North-north-eaſt from *Cape St. Lucas*, the South-eaſt Point of *California*. The Maſter the Admiral had hired, with his Veſſel and Mariners, informed him that two hundred Leagues North from *Cape St. Lucas*, a Flood from the North had met the South Flood, and he was ſure it muſt be an Iſland. *Don Diego Peneloſa* undertook with his Ship and four Shallops, to diſcover whether *California* was an Iſland or not, along with the Maſter and his Mariners, they hired at *Saragua*; but Admiral *de Fonte*, with three Ships, ſailed from them, within the Iſles of *Chamilly*, the 10th of *May* 1640; and having got the Length of *Cape Abel*, on the Weſt-ſouth-weſt of *California*, in 26 Degrees North Latitude, one hundred and ſixty Leagues North-weſt by Weſt from the Iſles of *Chamilly*, the Wind ſprung at South-ſouth-eaſt a ſteady Gale; that from the 26 of *May*, to the 14th of *June*, he had ſailed to the River of *Rays*, in 53 Degrees North Latitude, not having Occaſion to lower a Top-ſail in ſailing eight hundred and ſixty-ſix Leagues North-north-weſt, four hundred and ten Leagues from *Port Abel* to *Cape Blanco*, and four hundred and ſixty-ſix to *Rio los Reys*, and ſailed two hundred and ſixty Leagues in crooked Channels, amongſt the Iſlands, named the *Archipelago de St. Lazarus*, where the Ship's Boats always ſailed a Mile a-head, ſounding to ſee what Water, Sand, and Rocks there were.

The 22d of *June* Admiral *de Fonte* diſpatched one of his Captains to *Pedro de Bernarda*, to ſail up a fair River, a gentle Stream, and deep Water; he went firſt North-north-eaſt, and North-north-weſt, into a large Lake full of Iſlands, and one very large *Peninſula*, full of Inhabitants, a friendly honeſt People in this Lake. He named it *Velaſco*, where Captain *Bernarda* left his Ship, nor all up the River was it leſs than four, five, ſix, ſeven, and eight Fathom Water; both the Rivers and Lakes abounding with Salmon, Trouts, and Whale-Perch, very large ones, ſome two Feet long; and with three large *Indian* Boats, called *Piraguas*, made of two large Trees, fifty and ſixty Feet long, Captain *Bernarda* firſt ſailed from his Ships in the Lake *Velaſco*, one hundred and forty Leagues Weſt, and then four hundred thirty-ſix Eaſt-north-eaſt, to 77 Degrees North Latitude. Admiral *de Fonte*, after he had diſpatched Captain *Bernarda* on the Diſcovery of the North and Eaſt Part of the *Tartarian* Sea, ſailed up a very navigable River, which he named *Rio los Reys*, that ran neareſt North-eaſt, but on ſeveral Points of the Compaſs, ſixty Leagues at low Water, in a fair navigable Channel, not leſs than four or five Fathom Water; it flowed in both Rivers near the ſame Water, in the River *los Reys*, twenty-four Feet, full and change of the Moon, a South-ſouth-eaſt Moon made high Water; it flowed in the River *de Haro* twenty-two Feet and a half, full and change.

They had two Jeſuits with them, who had been on their Miſſion to 66 Degrees North Latitude, and had made curious Obſervations. The Admiral *de Fonte* received a Letter from Captain *Bernarda*, dated the 27th of *June*, 1640, that he had left his Ship in the Lake *Velaſco*, betwixt the Iſland *Bernarda*, and the Lake *Conibaſſet*, a very ſafe Port; he went down a River from the Lake, three Falls, eighty Leagues, and fell into the *Tartarian* Sea, in 61 Degrees with the Pater Jeſuits and thirty-ſix Natives, in three of his Boats, and twenty of his *Spaniſh* Seamen; that the Land trended away North-eaſt; that they ſhould want no Proviſions, the Country abounding with Veniſon of three Sorts, and the Sea and Rivers with excellent Fiſh (Bread, Salt, Oil, and Brandy, they carried with them); that he ſhould do what was poſſible. The Admiral, when he received that Letter, was arrived at an *Indian* Town called *Conaſſet*, on the South-ſide of the Lake *Belle* (where two Pater Jeſuits, on their Miſſion, had been two Years) a pleaſant Place. The Admiral, with his two Ships, entered the Lake the 22d of *June*, an Hour before high Water, and there was no Fall or Cataract, and four or five Fathom Water, and ſix and ſeven generally; in the Lake *Belle* there is a little Fall of Water till half Flood, and an Hour and a Quarter before high Water the Flood begins to ſet gently into the Lake *Belle*. The River is freſh at twenty Leagues Diſtance from the Mouth or Entrance of the River *los Reys*. The River and Lake abound with Salmon, Salmon-Trouts, Pike, Perch, and Mullets, and two other Sorts of Fiſh, peculiar to that River, admirable good; and Lake *Belle* alſo abounds with all thoſe Sorts of Fiſh, large and delicate; and Admiral *de Fonte* ſays, the Mullets, catched in *los Reys* and Lake *Belle*, are much delicater than are to be found in any other Part of the World.

The firſt of *July*, 1640, the Admiral ſailed (from the Ships in the Lake *Belle*, in a good Port, covered by a fine Iſland, before the Town *Conaſſet*) from thence to a River he named *Parmentiers*, after his Comrade Mr. *Parmentiers*, who had exactly marked every thing in and about that River, and paſſed eight Falls, in all thirty two Feet, perpendicular from its Source; out of Lake *Belle* it falls into the large Lake he called Lake *de Fonte*, at which Place he arrived the 6th of *July*. This Lake is one hundred and ſixty Leagues long, and ſixty broad; the Length is Eaſt-north-eaſt, and Weſt-ſouth-weſt, twenty, thirty, and in ſome Places ſixty, Fathom deep. The Lake abounds with excellent Cod and Ling, very large and well fed; there are ſeveral very large Iſlands, and ten ſmall ones; they are covered with ſhrubby Woods, the Moſs grows ſix or ſeven Feet long, with which the Mooſe, a very large Sort of Deer, are fat in the Winter, and other leſſer Deer, as fallow, *&c.* There are abundance of wild Cherries, Strawberries, Hurle-

Berries, and wild Currants, and alſo of wild Fowl, Heath-Cocks and Hens, likewiſe Partridges and Turkeys, and Sea-Fowl in great Plenty. On the South-ſide of the Lake is a very large, fruitful Iſland, which had a great many Inhabitants, and very excellent Timber; as Oak, Aſh, Elm, and Fig-Trees very large and tall.

The 14th of *July*, they ſailed out of the Eaſt-north-eaſt End of the Lake *de Fonte*, and paſſed a Lake he named *Eſtricho de Ronquillo*, thirty-four Leagues long, two or three broad, twenty, twenty-ſix, and twenty-eight Fathom Water: They paſſed this Streight in ten Hours, having a ſtout Gale of Wind and whole Ebb. As they ſailed more eaſterly, the Country grew very ſenſibly worſe as it is in the North and South of *America*; from thirty-ſix to the extreme Parts, North or South, the Weſt differs not only in Fertility, but in Temperature of Air, at leaſt ten Degrees; and it is warmer on the Weſt-ſide than on the Eaſt, as the beſt *Spaniſh* Diſcoverers found it, whoſe Buſineſs it was, as it is noted by *Alvarez Acoſto* and *Mariana*. The 17th they came to an *Indian* Town, and the *Indians* told their Interpreter, Mr. *Parmentiers*, that a little Way from them lay a great Ship, where there never had been one before; they ſailed to them, and found one Man advanced in Years, and a Youth: The Man was the greateſt Man in the mechanial Parts of the Mathematics he had ever met with; the Admiral's ſecond Mate was an *Engliſhman*, an excellent Seaman, as was his Gunner, who had been taken Priſoner in *Campeachy* as well as the Maſter's Son.

They told him the Ship was of *New England*, from a Town called *Boſton*, and the whole Ship's Company came on board the 30th, and the Navigator of the Ship, Capt. *Shapley*, told him his Owner was a fine Gentleman, and Major-General of the fineſt Colony in *New England*, called the *Maſſachuſets*, ſo he received him like a Gentleman, and told him his Commiſſion was to make Prize of any People ſeeking a North-weſt or Weſt Paſſage into the *South-Sea*; but he would look upon them as Merchants, trading with the Natives for Beavers, Otters, and other Furs and Skins; and ſo for a ſmall Preſent of Proviſions, he had no need of, he gave him his Diamond-Ring, which coſt him one thouſand two hundred Pieces of Eight (which the modeſt Gentleman received with Difficulty) and having given the brave Navigator Capt. *Shapley*, for his fine Charts and Journals, a thouſand Pieces of Eight, and the Owner of the Ship, *Seamor Gibbons*, a Quarter-Caſk of good *Peruvian* Wine, and the ten Seamen each twenty Pieces of Eight, the 6th of *Auguſt*, with as much Wind as they could fly before, and a Current, they arrived at the firſt Fall of the River *Parmentiers*; the 11th of *Auguſt*, eighty-ſix Leagues, and was on the South-ſide of the Lake *Belle*, on board their Ships; the 16th of *Auguſt*, before the fine Town *Conaſſet*, where they found all Things well; and the honeſt Natives of *Conaſſet* had, in his Abſence, treated his People with great Humanity; and Capt. *de Ronquillo* anſwered their Civility and Juſtice.

The 26th of *Auguſt* an *Indian* brought a Letter from *Conaſſet* on the Lake *Belle* from Capt. *Bernarda*, dated the 11th of *Auguſt*, where he ſent him word, he was returned from his cold Expedition, and did aſſure him, there was no Communication out of the *Spaniſh*, or *Atlantick*, Sea, by *Davis's Streights*, for the Natives had conducted one of his Seamen to the Head of *Davis's Streight*, which terminated in a freſh Lake about thirty Miles in Circumference, in the 80th Degree of North Latitude; and that there were prodigious Mountains North of it; beſides, North-weſt from that Lake the Ice was ſo fixed from the Shore, to a hundred Fathom Water, for aught he knew, from the Creation; for Mankind knew little of the wonderful Works of God, eſpecially near the North and South Poles: He wrote farther, that he had ſailed from *Baſſet Iſland* North-eaſt, and Eaſt-north-eaſt, and North-eaſt by Eaſt, to the 79th Degree of Latitude; and then the Land trended North, and the Ice reſted on the Land.

He received afterwards a ſecond Letter from Captain *Bernarda*, dated from *Minhanſet*, informing him he made the Port of *Arena* twenty Leagues up the River *del Roye*, the 26th of *Auguſt*, where he waited his Commands. The Admiral having good Store of ſalt Proviſions of Veniſon, and Fiſh, that Capt. *de Ronquillo* had ſalled by the Admiral's Orders in his Abſence, and an hundred Hogſheads of *Indian* Wheat, or Maize, he ſailed the 2d of *September*, 1640, accompanied with many of the honeſt Natives of *Conaſſet*; and, on the 5th of *September* in the Morning, about eight was at Anchor between *Arena* and *Minhanſet* in the River of *Reys*; after that he returned home, having found there was no Paſſage into the *South Sea* by that they call the *North-weſt Paſſage*: The Charts will make this much more demonſtrable.

“ The Style of the foregoing Piece, ſays Mr. *Dobbs*
“ very juſtly, is not polite (being wrote like a Man whoſe
“ Livelihood depended on another Way, but with
“ abundance of Experience, and like a Traveller) yet
“ there are in it ſo many curious and hitherto unknown,
“ Diſcoveries, that it was thought worthy a Place in theſe
“ Memoirs, and it is humbly preſumed, it will not be
“ unacceptable to thoſe who have either been in thoſe
“ Parts, or will give themſelves the Trouble of reviewing
“ the Charts. By this Abſtract of *de Fonte*'s Voyage,
“ which has all the Appearance of being authentic, it is
“ plain, that there is a navigable Paſſage from *Hudſon's*
“ *Bay* to *California*, and though it has not had Juſtice
“ done to it in the Tranſlation, and probably has not been
“ exactly copied, or printed; yet, making an Allowance
“ for Errors of that Kind, it has throughout the Air
“ of Truth: There may be, probably, ſome Errors in
“ the Figures relating to the Degrees of Latitude and
“ Leagues in their Courſe, for the Length of the Lake
“ *de Fonte* is ſaid to be one hundred and ſixty Leagues,
“ and the Streight *Ronquillo* thirty-four. Upon his Return
“ from the *Boſton* Ship. he is ſaid to have got again
“ to the Mouth of the River *Parmentiers* in five Days,
“ with a ſtout Gale and briſk Current, which, he ſays,
“ was eighty Leagues; which plainly ought to have
“ been one hundred and eighty, otherwiſe, with that
“ ſtout Gale and Current, it would have been but ſixteen
“ Leagues in twenty-four Hours, and the other would
“ be but thirty-ſix, which was reaſonable ſailing. As to
“ his ſaying there was no Paſſage, although he met the
“ *Boſton* Ship, I take his Meaning to be, that either
“ *Bernarda* found no Paſſage by the North-weſt of *Davis's*
“ *Streights*, the Way probably the *Spaniards* expected it,
“ or, that by his paſſing upon a River to Lake *Belle*,
“ and down another to Lake *de Fonte*, by what he called
“ Sharps or Falls, he apprehended there was no navigable
“ Paſſage for Ships the Way he went; or he deſired to
“ diſguiſe it, to prevent other *Europeans* from attempting
“ it to his Country's Prejudice; and therefore he did not
“ publiſh his Chart which he refers to in his Letter.

“ It is plain that it was an Iſland below the Lake *Belle*,
“ which divided the River *los Reys* from the River *Parmentiers*,
“ and as the Sea in Lake *de Fonte* was upon a
“ Level with the Sea at the Mouth of *Rio los Reys*, and
“ the Tide flowed up that River into the Lake *Belle*, it
“ muſt alſo flow up the River *Parmentiers*, and the Sharps
“ and Falls he obſerved in that River, were only the
“ Sharps occaſioned by the ſeveral Ebbs he had in ſailing
“ down the River, being five Days in paſſing to the Sea,
“ ſo that the great and true Paſſage was without that
“ Iſland, which the Admiral miſſed, by getting among
“ the Iſlands in the *Archipelago* of *St. Lazarus*. It is a
“ Misfortune his Chart was not publiſhed, which would
“ have given more Light as to the Lands, Lakes, and
“ Rivers he mentions, now we can only gueſs in the
“ dark, and may be miſtaken.

“ However, I ſhall venture to give my Opinion of
“ their Situation, though I may not judge right. As I
“ apprehend it the *Archipelago* of *St. Lazarus*, and *Rio*
“ *los Reys*, and Lake *Belle*, and alſo the Lake of *Velaſco*,
“ are no Part of *North America*, but a Country diſtinct
“ from it; the Paſſage lying betwixt thoſe Lands and
“ *America*; for in his Journal he ſays he ſailed eight
“ hundred and ſixty-ſix Leagues North-north-weſt from
“ *Cape Abel*, in *California*, in Latitude 26 Degrees,
“ the laſt two hundred and ſixty of which was in crooked
“ Channels, among Iſlands, until he got to *Rio los*

“ *Reys*, in Latitude 53 Degrees; ſince by all other Accounts
“ the Coaſt of *America* falls off North-eaſt from
“ *Cape Blanco*. This muſt have been a Country diſtinct
“ from *America*; here he found two Rivers, one came
“ from the North, from the Lake *Velaſco*, which *Bernarda*
“ ſailed up, and the other came from the North-eaſt,
“ from the Lake *Belle*, which lay betwixt Latitude
“ 45 and 55 Degrees. Upon what Point the *Parmentiers*
“ ran out of the Lake *Belle* is not mentioned,
“ but at *Rio los Reys* it ran South-weſt. We may
“ ſuppoſe the other ran Eaſt, or South-eaſt, and fell
“ into the Sea, which he calls the *Lake de Fonte*, in
“ near the ſame Latitude, that Lake, or Arm of the
“ Sea, ſtretching thence Eaſt-north-eaſt one hundred and
“ ſixty Leagues, if there was any Weſt Variation, as
“ there is now, the North-eaſt End of that Lake might
“ be in Latitude 57 or 58, almoſt Weſt of *Churchill*;
“ and the Streight *Ronquillo* running ſtill North-eaſt,
“ might end in Latitude 59. In two Days from thence
“ he came to an *Indian* Town, probably about Latitude
“ 60, near which the *Boſton* Ship lay; ſo that it may be
“ imagined the *Boſton* Ship had paſſed into ſome of the
“ Openings near *Whale Cove*, and got to Latitude
“ 60, or, perhaps, to 59 Degrees, and was trading
“ for Furs, and the Ship might have been afterwards
“ loſt or ſurprized by the *Eſkimaux*, upon her return,
“ having but twelve or thirteen Hands aboard, ſince no
“ Account of this Voyage was ever tranſmitted from
“ *Boſton*. Upon Enquiry, made by Order of Sir *Charles*
“ *Wager*, whether any one of the Name of *Shapley*, which
“ was the Maſter's Name, lived at that Time in *Boſton*,
“ it appeared from ſome Writings, that ſome of that
“ Name then lived in *Boſton*, which adds to the Weight
“ of *de Fonte*'s Letter, and confirms its being an authentic
“ Journal.”

24. We have now gone compleatly round the Globe, making the North Pole our Centre; and have, ſo far as the beſt Diſcoveries would enable us, given the Reader a Deſcription of the Countries which lie in theſe cold Climates; this, for any thing I know, is a Work never before performed, or at leaſt not ſo fully and circumſtantially. I muſt, however, admit there would be no great Merit in doing this, if no Uſe could be made of it; but this is very far from being the Caſe; for in the firſt Place it opens to us the entire Knowledge of the terraqueous Globe; I ſay the intire Knowledge, becauſe if we were once thoroughly acquainted with the Manner in which the Countries are diſpoſed about the North Pole, we might, from thence, gain tolerable Satisfaction with regard to the Antarctic Regions, in reſpect to which, from actual Diſcoveries, we know very little. In the next Place, we ought to conſider, that hitherto no new Countries have been found without conſiderable Advantages reſulting to thoſe who diſcovered them; and before we conclude this Section, we ſhall ſhew that the Whale-fiſhing, in theſe Northern Seas, is an abundant Recompence to ſuch as take the trouble of ſailing on them. There is yet a third Conſideration, which is the Means of finding a Paſſage this Way round the Globe, which every body knows would be not only a great, but a gainful, Diſcovery, more eſpecially to us who lie ſo conveniently for taking the Advantage of it, and to whom the bleak and barren Iſlands of the *Orkneys*, would become a kind of *Indies*, if once ſuch a Diſcovery was made. We can never, however, rationally hope for this, unleſs the Situation of all the Countries round the Globe, conſidering the Pole as the Centre of the Northern Hemiſphere, be tolerably well known.

What can be done with reſpect to this, from the Peruſal of actual Surveys has been already ſhewn; we will now therefore endeavour to carry it a little farther, by adding Reaſon to Experience, and reflecting upon the Lights we have received. It is certain, becauſe it is ſelf-evident to every Reader, that the Countries round the Pole muſt be diſpoſed in one of theſe three Manners: Firſt they may be joined together, and alſo to ſome of the great Continents already known. Or, 2dly, they may be joined together, and make a diſtinct Continent. Or, 3dly, they may be ſeparated from each other, and from all the other Continents. We muſt allow, that there are Authorities, in favour of each of the three Diſpoſitions, and therefore we will ſpeak of them ſeparately- though very briefly. Firſt then, that they are joined to,gether, and to the known Continents, there are two Matters of Fact alledged in the Nature of Proofs. The firſt is, that the People of *Groenland*, by which I mean the old Chriſtian Colonies, had a Tradition of a Harald Goat, that travelled into their Country from *Norway*, which, whether true or falſe, by the Way proves nothing, or at leaſt proves nothing to the purpoſe. If the Story of the Goat be a Fable, there is an End of it; but if it was Truth, which, however, is very improbable, then it came by Sea, that is, in the Winter-Seaſon upon the Ice; for that *Groenland* is not joined to *Norway*, is as certain as any thing can be. Tradition may probably prove ſomething, where there is no other Evidence; but Tradition againſt Evidence is Nonſenſe. The other Point of Fact is, that a Jeſuit, who had been in *California*, going afterwards to the *Philippines*, and from thence to *China*, ſays there he ſaw a Woman whom he had known in the firſt of theſe Countries, who ſaid ſhe was brought thither over Land, except one or two little Streights which ſhe paſſed in ſmall Veſſels; but this does not come up to the Point, ſince, however ſmall theſe Streights might be, they moſt certainly disjoin the Countries of each Side of them.

As to the ſecond Opinion, that theſe Lands join together, though disjoined from the great Continent, I know nothing that has been ſaid for it, except the Tradition of the *Groenlanders*, about the narrow Streight between their Country and *America*, and of there being great Countries to the Eaſt of them, of which they own they know nothing. The third Opinion, though it cannot be fully proved, ſeems to be very probable, and if it be not conſiſtent with Truth, looks, at leaſt, very like it. It is thought that *Groenland* is disjoined from *America* by *Davis*'s Streights, and that it is actually disjoined from *Groenland* we have tolerable Evidence from thoſe who have viſited the laſt mentioned Coaſt, none of them ſpeaking of any Land on the Weſt. It was formerly thought that *Groenland*, or *Spitzbergen*, and *Nova Zembla* were the ſame Continent, and that they were ſeparated from *Ruſſia*, or *Tartary*, by the Streights of *Waygatz*; but we are now ſatisfied it is not ſo, but that in all Probability *Groenland* is an Iſland, or rather a Cluſter of Iſlands, ſeparated by the Ocean, from the Land of *Yedzo*, as that Country moſt certainly is from *Companies Land*, by the Streights of *Uriez*; as on the other Hand, this Arctic Continent is thought to be ſeparated from *California*, by the Streights of *Anian*. The Truth of the Matter ſeems to be, that there are a Multitude of Iſlands of different Sizes, lying all round the North Pole, but how diſpoſed we cannot yet ſay; and it is upon this Suppoſition, that the Hopes of finding a North-eaſt, or a North-weſt, Paſſage has been built.

What Reaſons may be offered in both Caſes? what Attempts have been made? and how they have ended? the Reader will hereafter ſee. At preſent we will content ourſelves with obſerving, that ſome very great Men have been of Opinion, that the moſt probable, the moſt feaſible, and ſhorteſt Paſſage, muſt be by ſailing directly North, and under the very Pole itſelf. A bold and amazing Propoſition at firſt Sight, and which we have more than once promiſed the Reader ſhould be fairly examined; for ſtrange and ſurprizing as it ſeems, it is not all impoſſible that it may be true. It has been already obſerved, there are really ſufficient Reaſons to perſuade us, that the Countries round the Pole, are ſo many Iſlands ſeparated from the known Continents, as well as from each other, it will thence appear highly probable that there may be an open Paſſage immediately and directly under the Pole, becauſe it is plain there can be nothing but Sea there.

It may, indeed, be ſaid, that though there be Sea, there may, for all that, be no Paſſage; in Proof of which it may be alledged, that the *Dutch*, in 1679, found it impoſſible to paſs for Ice, to the Northward of *Nova Zembla*; and if the Sea be thus frozen, in 79 or 80 Degrees, what Reaſon is there to believe that it is not much more ſtrongly frozen in a higher Latitude? The Reaſon ſeems to be clearly this: That freezing does not depend ſo much upon the Latitude of Places, as upon their Situation, in other reſpects; as is very plain from hence, that the moſt intenſe Cold is felt in ſome Parts of *Hudſon's Bay*, which lies very near in the ſame Latitude with *London*. Now that under the Pole the Sea ſhould not freeze, ſome very ſtrong Reaſons may be given: Firſt, it is not known that the main Sea ever freezes. Thoſe vaſt Mountains of floating Ice, that frequently render the Coaſt of *Groenland* inacceſſible, are formed three Ways: Firſt, by the falling of vaſt Rocks of Ice, from the Mountains, into the Sea. Next by the Tides breaking up the Ice at the Mouths of great Rivers. And, laſtly, by the Addition of Snow and freſh Water to the Sea Water, which weakens its Force, and diſpoſes it to freeze. We may alſo take Notice of what we have before heard of the Froſt-Fogs or Vapours ariſing from the Sea, through the Ice, which are allowed to be warm, and from whence we may, in ſome Meaſure, diſcern the Cauſe why the Ocean does not freeze.

Secondly, under the Pole itſelf, for ſix Months, the Sun is continually above the Horizon, and conſequently muſt have a very great Effect, more eſpecially on the Sea; ſo that if we conſider this Matter attentively, we cannot but be convinced that it is abſolutely impoſſible the Sea ſhould be frozen; on the contrary, there ſeems to be more probable Grounds to ſuſpect that the Heat may be troubleſome. Thirdly, theſe Reaſons are ſupported, theſe Conjectures are verified, by daily Experience; for on the Coaſts of *Greenland*, in the Latitude of 82 Degrees, the Heat is known to melt Pitch, when great Quantities of Ice are unmelted on the Coaſt in 69 Degrees. We may, from theſe Reaſons, therefore conclude, not only with Probability, but with Certainty, that during the Summer, at leaſt, there is a clear and open Sea under the Pole, and, if ſo, the Paſſage that Way is indiſputably the ſhorteſt, the eaſieſt, and the moſt practicable, that has been hitherto thought of. This was long ago obſerved by the famous Sir *William Monſon*, as great a Seaman as this Nation could ever boaſt, who affirms that the Paſſage, this Way from *England*, to *China*, does not exceed fifteen hundred Leagues.

But we will now proceed to Matters of Fact, and ſhew that this not only may be done, but that it actually has been done; as will appear from the following Paper, communicated to the Royal Society, by Mr. *Joſeph Moxon*, one of its Members; which therefore we ſhall tranſcribe, as a Piece that cannot fail to give the Reader, on this Head, as full Satisfaction as he can deſire. Thus then it runs: “Among the many Eſſays that have been made to find a clear Paſſage to *Japon*, *China*, &c. the moſt probable and likely, hath as yet (in my Opinion) been overſeen, or, at leaſt, not attempted; and therefore I ſhall, hereby, communicate my Conception to public Approbation or Cenſure; it is, that a Paſſage may very probably be about the North Pole, and the Reaſons inducing me to conceive ſo is: That we have no Certainty, from all the Diſcoveries that have been made of any Land lying within eight Degrees about the Pole; but on the contrary, I have been credibly informed, by a Steerſman of a *Dutch Greenland* Ship, that there is a free and open Sea under the very Pole, and ſomewhat beyond it; and I, for my own Part, give Credit to his Relation, and do conceive that any ſober ingenious Man would do the like, did he know in what an honeſt Manner and by what an Accident, I happened to hear it; for thus it was:

“Being about twenty-two Years ago in *Amſterdam*, I went into a public Houſe to drink a Cup of Beer for my Thirſt; and ſitting by the public Fire, among ſeveral People, there happened a Seaman to come in, who ſeeing a Friend of his there, who he knew went in the *Greenland* Voyage, wondered to ſee him, becauſe it was not yet Time for the *Greenland* Fleet to come home, and aſked him what Accident brought him home ſo ſoon? His Friend (who was the Steerſman aforeſaid, in a *Greenland* Ship that Summer) told that their Ship went not out to fiſh as uſual, but only to take in the Lading of the whole Fleet, to bring it to an early Market, *&c.* But, ſaid he, before the Fleet had caught Fiſh enough to lade us, we, by Order of the *Greenland* Company, ſailed unto the North Pole and came back again. Whereupon I entered into Diſcourſe with him, and ſeemed to queſtion the Truth of what he ſaid; but he did aſſure me it was true, and that the Ship was then in *Amſterdam*, and many of the Seamen belong to her ready to juſtify the Truth of it; and told me, moreover, that they had ſailed two Degrees beyond the Pole. I aſked him if they found no Land or Iſlands about the Pole? He anſwered no, there was a free and open Sea. I aſked him if they did not meet with a great deal of Ice? he told me no, they ſaw no Ice. I aſked him what Weather they had there? He told me fine warm Weather, ſuch as was at *Amſterdam* in the Summer-time, and as hot. I ſhould have aſked him more Queſtions, but that he was engaged in Diſcourſe with his Friend, and I could not, in Modeſty, interrupt them longer. But I believe the Steerſman ſpoke Matter of Fact and Truth; for he ſeemed a plain, honeſt, and unaffectatious Perſon, and one who could have no Deſign upon me.

“But though I believe this Story, yet methinks I hear many object againſt it, and are apt to urge three plauſible Reaſons to prove it falſe, or, at leaſt, ſome Particulars of his Relation: And firſt, That it cannot be warm under the Pole, becauſe that about *Greenland*, and many other Parts leſs northerly, the Sea is ſo full of great Bodies of Ice that Ships can hardly ſail for it. Secondly, If warm, yetn ot ſo warm as at *Amſterdam* in the Summer-time, becauſe the farther northerly, the colder Weather. Thirdly, If they were under the Pole, they could not tell how to come back, but that they might as well go farther as return nearer to home; becauſe the Needle always pointing North, they muſt therefore loſe themſelves in the North Pole, where it muſt reſpect all Points of the Horizon alike.

“One Anſwer may ſerve to the firſt and ſecond Objection, That it cannot be warm under the North Pole, *&c.* If we conſider the Experience of Travellers and Navigators, we are told, that between the Tropicks, nay, under the Equinoctial, is generally as moderate Weather as here in *England* in Summer-time; why may it not then be as warm under the Pole as here, or at *Amſterdam*, in the Summer-time? The ſmall Height the Sun has there can be no Exception, for then we, having the Sun, in its Summer-Solſtice, in leſſer Altitude than between the Tropicks, it muſt needs be colder here; which is contradicted: But one Reaſon why it is as warm here as between the Tropicks is, becauſe between the Tropicks the Sun remains above twelve Hours of twenty-four above the Horizon, to warm it; when, as here, it remains almoſt ſeventeen Hours of twenty-four above the Horizon, and therefore leaves a greater Impreſſion of Heat upon it; and the farther northward we go, the longer it remains above the Horizon, and leſs under the Horizon every twenty-four Hours, till we come within the Arctic Circle, where the Sun remains for half a Year together; *viz.* all the Summer above the Horizon, and never ſets; and therefore, though his Beams are not ſo perpendicular, yet they muſt needs cauſe a great Degree of Heat upon the Horizon. And if it be argued, that it is ſo cold about *Greenland*, &c. and the Seas ſo full of Ice that Ships can hardly ſail for it, yet cannot that Argument prove that it is ſo about the Pole; becauſe the Ice is made about Shores of Land, but never in open Sea, and comes here only by Strength of Currents, or high Winds, which do indeed carry it ſome ſmall Diſtance from the Shore; but as this Relator ſaid, there is under the Pole a free and open Sea, *&c.* and conſequently clear of Ice, in Summer-time, at leaſt.

“Beſides, Experience tells us, that all Land-breezes

“ are colder than thoſe that come from the Sea, and therefore it may be cold about *Greenland*, becauſe of the Land, yet warmer under the Pole while the Sea is open, *&c.* The third Objection is, That if they were under the Pole they could not tell how to come back, becauſe of the Indifferency the Needle ſhould bear to every Point of the Horizon. I examined not my Relator upon this Argument, though when I was parted from him I was ſorry I did not; but it is eaſy to apprehend how to guide a Ship either forward or backward, by an Obſervation of the Sun a little before they enter the Pole; for by finding in, or near, what Meridian it is; or upon what Part of the Ship it bears, whether on the Head or Stern, or Star-board or Larboard; you may meaſure Time near enough with a Glaſs, to know ſeveral Days after, in, or near, what Meridian the Sun is, at any known or eſtimate Time, and conſequently know how to proceed, or come back with your Ship: Or, if the Moon have North Latitude, you may do the ſame by the Moon; but if the Pole were traded, in a ſhort time it might be found by Variation of the Needle; for there is doubtleſs Variation in it, and in all the Meridians about it ſeveral Variations.

“ Thus far it appears there is a free and open Sea in Summer-time (at leaſt) about the North-Pole. But I ſhall add another Relation of *James Ben*, whoſe Father lived about five Years ago in *Crown-court* in *Ruſſel-ſtreet*, *Covent-garden*, and himſelf now lives in *Wapping*: This Mr. *Ben* ſailed to *Japon* with the *Dutch*, as a Carpenter of the Ship, and he told me that that Year, *viz.* 1668, he was newly come home from *Japon.* I aſked him how long they were on there Way home from thence? He told me, he could not very well tell; becauſe when they ſailed from *Japon*, the Captain commanded the Steerſman to ſail due North, and they did ſail ſo from thence for about four hundred *Dutch* Miles, which is almoſt twenty-ſeven Degrees due North. I aſked him if they met with no Land or Iſlands, as I had done before the *Dutch Greenland* Steerſman? He told me, No, they ſaw no Land; but there was a free and open Sea; ſo far as they ſailed no Land appeared. I aſked him, why they ſailed ſo far northward? He told me he could not tell, only the Captain commanded it, *&c.* but I ſuppoſe the *Eaſt India* Company commanded the Captain either to make a Diſcovery of Land to increaſe Trade, or to ſatisfy themſelves with the Knowledge of another Sea, that when they ſaw Reaſon they might expedite their Voyages between *Holland* and thoſe Parts that Way. I was thus inquiſitive with him, becauſe ever ſince I heard the former Relation of the *Greenland* Steerſman, I harped on a Paſſage through, or about, the North-Pole to *Japon*, *China*, &c. And by theſe two Diſcoveries it appears very probable there is ſo, and that it is paſſable in Summer-time.”

It is very ſtrange, that a Paper of this Conſequence ſhould not be more conſidered; more eſpecially, as it is certain, that to this very Time the *Dutch* Men of War, when any are ſent with the *Greenland* Fleet, cruize conſtantly very far to the Northward, without meeting either with Obſtructions or Inconveniencies from Ice or Cold. And I have been informed by a Gentleman who was Surgeon to one of theſe Men of War, that in the Latitude of 82 Degrees, the Sea to the North was open, and the Weather very hot in the Month of *June.* I cannot ſay exactly what Year this was in; but by a Compariſon of Circumſtances I am led to think, that it might be in 1718 or 1719. There being an open Sea at that Seaſon very plainly ſhews it to be always open; for it is impoſſible, if it had been frozen in the Winter, that it ſhould have thawed ſo ſoon, or that there ſhould have been no Iſlands of Ice floating in it, as has been obſerved from the Latitude of 57 Degrees, or thereabouts, to 80.

The Reader will eaſily obſerve, that the Diſcoveries that have been lately made, as to the true Figure of the Earth, and its being flatted towards the Poles, favour this Opinion and account for the Sea's being always open. It may alſo deſerve ſome Notice, that perhaps there is no Occaſion for ſailing ſo high as 90 Degrees; for if a Paſſage is to be found either to the Eaſt or Weſt, and the Sea be open, a Ship might ſail either Way, perhaps in the Latitude of 85 Degrees, which would make this ſhorter and eaſier, by bringing the Veſſel ſooner upon known Coaſts. While I am upon this Subject I will take the Liberty of obſerving, that if any Attempts ſhould be made of this kind by us, the moſt probable Method of doing it would be in concert with the Court of *Ruſſia*, by procuring an Order from the Empreſs, to the Governors of the frontier Countries towards *Japon*, to give ſuch Aſſiſtance or Relief as might be neceſſary, to any Veſſel that arrived upon thoſe Coaſts; and it would be requiſite that ſuch an Order ſhould be procured, and expedited the Year before the Attempt was made from hence; and that the Commander of the Frigate employed in this Expedition, might carry with him an authentic Copy of that Order, for his own Security and Advantage.

I am very ſenſible that a Multitude of Objections may be raiſed againſt ſuch an Undertaking; but I am very confident they may be very eaſily anſwered, and whoever conſiders that ſo long ago as 1553, Sir *Hugh Willoughby* diſcovered the moſt Northern Part of *Ruſſia*; and though he periſhed in the Attempt, opened thereby that Trade which has been ſince of ſo great Advantage to this Nation, we may very well hope, that at this Diſtance of Time, and with all the great Advantages that modern Navigators have, farther and more uſeful Diſcoveries may be made, with much leſs Hazard: At leaſt, it is very right to ſuggeſt Deſigns of this Nature to the Public, whether they may, or may not, be thought practicable for the preſent; becauſe the very mentioning ſuch Things, and thereby creating Diſcourſes about them cannot but be attended with good Effects, becauſe we know that they were the very Means by which former Diſcoveries were brought about, and we cannot think ſo meanly of our Countrymen as to ſuppoſe that either their Courage, their Judgment, or their Spirit, is inferior to that of their Anceſtors, though Accidents and Circumſtances may induce ſome weak People to think or encourage ſome wicked Men to ſay ſo, in order to ſerve their own Purpoſes. But perhaps we can never entertain any probable Hopes of Succeſs in this great Affair, until we engage once again in the Whale Fiſhery; and that we may be encouraged to think ſeriouſly of that, we will conclude this Chapter with a clearer and more perfect Repreſentation of this Trade, than to our Knowledge has been hitherto publiſhed, which cannot therefore fail of giving the ingenious and inquiſitive Reader great Pleaſure and Satisfaction.

25. We are to obſerve then, that it was towards the latter End of the ſixteenth Century, that the Whale-fiſhing, on the Coaſt of *Spitzbergen*, became conſiderable, and was entirely in the Hands of the *Engliſh*, till the Year 1578. This Commerce was, by a Company, which ſent thither annually a few Ships, and they actually excluded the reſt of their Countrymen, and endeavoured to exclude Foreigners. In the Year 1613, they ſent a Squadron of ſeven Sail, which found there fifteen *Dutch*, *French*, and *Flemiſh* Ships, beſides *Engliſh* Interlopers. And the next Year, the *Dutch* ſent eighteen Sail, of which four were Men of War. And, in 1615, the King of *Denmark* ſent a Squadron of three Men of War, to aſſert his excluſive Right, but with ſuch indifferent Succeſs, that he thought fit to give up the Point. In 1617 our Company were more lucky than in any other Year, and actually made one thouſand nine hundred Ton of Oil. The *Dutch* made, for many Years after, very indifferent Voyages; and as their great Stateſman, M. *de Witte*, well obſerves, had certainly been beat out of the Trade, if it had not been laid open by the Diſſolution of their *Greenland* Company, to which he attributes their having beat the *Engliſh*, and almoſt all other Nations, out of that Trade, which they carry on to a prodigious Advantage. And as the ſame great Author obſerves, it is the beſt Nurſery of their boldeſt and moſt hardy Sailors. But as we do not affect to deal in general Terms, which never can convey any clear and diſtinct Notions of any Subject,

we ſhall endeavour to deſcend to ſuch Particulars, as may ſet this Matter in the cleareſt Light poſſible.

It is agreed by the *Dutch* Authors, who have written on Whale-fiſhing, that the moſt fortunate Seaſon they ever had, was in the Year 1697. We will therefore conſider the State of this Fiſhery, for that Year, in order to ſettle the Profits of it; and will afterwards compare it with Accounts received from *Holland*, of the Fiſhery for 1744, communicated while this Section was writing, that we may the better judge how things now ſtand. In 1697 there were one hundred and eighty-nine Veſſels, of ſeveral Nations, employed in the Fiſhery on the Coaſt of *Greenland*; of theſe the *Dutch* made one hundred and twenty-nine, but ſeven were loſt upon the Coaſt. The *Hamburghers* had fifty-one, of which they loſt four. The *Swedes* had two; the *Danes* four; the *Bremeners* twelve; the *Embdeners* two; and the *Lubeckers* one. The Number of Whales taken that Year amounted to one thouſand nine hundred and ſixty-eight, which the *Dutch*, and the Ships of other Nations before-mentioned, caught in the following Proportions, *viz.*

Nations.	N°. of Whales.	Caſks of Oil.
The *Dutch*	1255	41344
The *Hamburghers*	449½	16414
The *Swedes*	113	540
The *Danes*	52	1710
The *Bremeners*	96	3790
The *Embdeners*	2	68
The *Lubeckers*	½	17
	1968	63883

The Total Value of the Fiſhery of 1697.

The Caſk of Blubber ſold that Year for thirty Florins; the whole Number thereof came to	*f.* 1916490
The Fins, reckoning thoſe of each Whale at 2000 *l.* and the Current Price being 50 *f.* a Quintal; the whole therefore came to	*f.* 1868000
	f. 3784490
In our Money	*l.* 378449

The particular Account of the DUTCH Fiſhery ſtated.

Caſks. Their 41344 at 30 *f.* *per* Caſk, came to	*f.* 1240320
Their 25100 wt. at 50 *f.* *per* C. wt. came to	*f.* 1255000
	f. 2495320
In our Money	*l.* 249532

According to a Letter from *Amſterdam*, dated the 26th of *July*, the Whale-fiſhery, for the Year 1744, was pretty near over, and the Proportions ſtood then as follows, *viz.*

	Whales.
The *Dutch* had caught	662
The *Hamburghers*	45
Thoſe from *Altena*	20
The *Bremeners*	18
The *Embdeners*	8
In all	753

I have not been able to procure, hitherto, as clear and diſtinct an Account of the Whale-fiſhery, for the two laſt Years, as for that before given; but I am very well informed, that the Whale-fiſhery ſcarce ever anſwered better than it did in this preſent Year 1746, more eſpecially to the *Dutch*, who had more Ships, and better Luck with their Ships, than any other Nation. It is worth obſerving, that the wiſe Inhabitants of *Holland* have continually maintained and practiſed this Fiſhery, as *de Witte* adviſed them; and have thereby added immenſe Sums to the Wealth of their People, as well as to the Strength of their State, conſidered as a maritime Power. We will reflect a little upon both theſe Points, that we may be the better ſatisfied, as to the real Importance of the Whale-fiſhery. He judged it to be very beneficial to his Country, becauſe of the Eaſe and Expedition with which it was performed; for in ſix Day's Time the Ships ſailed out of Harbour, and were, actually, if the Seaſon was favourable, engaged in their Fiſhery. The whole Time it continues, does not exceed four Months, during which a great Number of Veſſels are employed, in which abundance of hardy and experienced Seamen are bred, by whom alſo the whole Buſineſs is performed abroad, and, upon their Return, a much greater Number of People find work at home; ſo that there is no great Reaſon to doubt, that *de Witte*'s Calculation, of twelve thouſand Perſons maintained by this Trade only, is very agreeable to Truth, and not at all tinctured with Partiality towards his Country. He very juſtly obſerves, that what renders this Trade ſtill more valuable, is the Exportation of the greateſt Part of its Produce; and if we conſider this attentively, and make the neceſſary Allowances in ſuch kind of Calculations, we ſhall be able to form to ourſelves a tolerable Notion of what the *Dutch* have got by the *Greenland* Fiſhery, from that Time to this.

It is now fourſcore Years ſince *de Witte* framed his Computation, and we ſhall certainly run no Hazard of over-valuing the Induſtry of our Neighbours in this Particular, if we ſuppoſe that the Whale-fiſhing has brought them in, one Year with another, in Whale-Bone and Oil, two Millions of Florins, of which we may alſo allow that they have exported, at leaſt, one Half; ſo that they have ſaved fourſcore Millions of Florins in what they have uſed themſelves in theſe Commodities, which they muſt otherwiſe have purchaſed, and have drawn beſides, from other Countries, into their own, as much in ready Money, which amounts to eight Millions Sterling. A prodigious Sum indeed, and which ought to cover us with Shame, conſidering that we have had, at leaſt, as great Opportunities as they, of making a like Advantage of this Fiſhery, of which, for many Years paſt, however, we have not made one Shilling. Whence this ariſes is very hard to ſay, and the more ſo as it is certain we were once the ſole Proprietors of the Whale-fiſhing, which we pointed out as worthy other Peoples Concern, and have ſince neglected ourſelves, though many of our beſt Writers upon Commerce, have taken Pains to expoſe the groſs Abſurdity and inexcuſable Negligence of ſuch a Conduct. At preſent, perhaps, an Opportunity might be gained of reviving this Fiſhery, if the Government ſhould think fit to erect a Fortreſs, and open a Port in the *Orkneys*, which might, in many reſpects, prove very beneficial; but more eſpecially in this, becauſe it would give us, immediately, very great Advantages over the *Dutch*, *Hamburghers*, and all other Nations that at preſent frequent the *Greenland* Seas, as we might have all kind of Utenſils neceſſary, erected in any of theſe Iſlands, which would enable us to make more, and better Oil, than any of our Neighbours, from the ſame Quantity of Fiſh; as it would alſo give us an Opportunity of viſiting the Coaſts of *Greenland* earlier, and remaining there later, than other People. There is no Doubt that, if any Attempt of this Sort was once made, at the Expence of *Engliſh* Merchants, they would be very ſoon able to raiſe a prodigious Number of ſtout and able Seamen in thoſe Parts, as capable and as enterprizing as thoſe of any other Nation whatever. It might alſo prove the Cauſe of opening to us ſome other Branches of Commerce hitherto not known, or which have been long diſuſed; and it might prove likewiſe a Means of renewing that Thirſt for Diſcoveries, for which this Nation was formerly ſo famous, and to which ſhe certainly ſtands indebted for the moſt valuable Branches of her Commerce. Theſe, I mean the *Orkney Iſlands*, are the Iſlands, *Shetland* excepted, the leaſt known, but not the leaſt valuable Part of the *Britiſh* Dominions; for beſides this *Greenland* Fiſhery, for the eſtabliſhing of which there is not in *Europe* a Place ſo proper, and a conſiderable Fiſhery round them, they might be made a general Magazine for ſuch Commodities as fell to Advantage to the

North, by which our Trade to ſeveral Parts of *Germany*, as well as to *Sweden*, *Denmark*, *Norway*, *Poland*, and *Ruſſia*, might be rendered twice as valuable to us, as it is at preſent. But it is now Time to cloſe the preſent Section, and to proceed to the Hiſtory of the Attempts made for the Diſcovery of a North-eaſt and North-weſt Paſſage into the Ocean; the latter of which, perhaps, may be diſcovered before this Volume is concluded.

SECTION II.

The rational and philoſophical MOTIVES *for ſeeking a Paſſage into the* SOUTH SEAS, *by the North-weſt, examined and explained; together with the Hiſtory of the Attempts made with that View, for the Space of one hundred and thirty Years.*

Collected from *Engliſh*, *Dutch*, and *Daniſh* Writers.

1. *An Introduction ſhewing the Nature and Deſign of this Section, and the Method purſued therein.* 2. *The Importance of a North-weſt Paſſage, if it could be found; and the Advantages that would reſult from thence to our Navigation, which fully juſtifies the Endeavours of ſuch as have laboured to find this Paſſage.* 3. *An Account of the Reaſons, Arguments, and Preſumptions in favour of ſuch a Paſſage; in which the Strength or Weakneſs of each Motive is ſhewn fairly, and in its proper Light.* 4. *The Hiſtory of the Attempts made for the Diſcovery of this Paſſage, by* John Cabot, *Sir* Martin Frobiſher, *Captain* Davis, *Mr.* Henry Hudſon, *Mr.* James Hall, *and Mr.* William Baffin, *from* Anno Domini 1497, *to* 1615. 5. *The Expedition of Sir* Thomas Button *into* Hudſon's Bay, *in* 1611, *with a ſuccinct Account of his Diſcoveries.* 6. *The Attempts made for the like Purpoſe by the* Danes; *and the unfortunate End of Captain* John Monk, *one of the ableſt Navigators ever bred in* Denmark, *occaſioned by his undertaking and failing in an Expedition for this Purpoſe.* 7. *The Expedition of Captain* Luke Fox, *in his Majeſty's Pinnace, the* Charles, *in the Year* 1630; *with the Reaſons which induced ſeveral Perſons of the firſt Diſtinction, and ſome of the greateſt Merchants in this Kingdom, to enter into an Aſſociation for the Diſcovery of the North-weſt Paſſage; and the Meaſures taken by them for carrying this Deſign into Execution.*

1. AFTER the Diſcovery of *America* by *Chriſtopher Columbus*, and the publiſhing to the World, the Reaſons which induced him to look upon this Diſcovery as a thing practicable; ſuch as were well acquainted with Coſmography, and ſuch as were practical Seamen, began to emulate his Succeſs, and to think of raiſing like Reputations to themſelves by Diſcoveries of the ſame Nature. Amongſt theſe, *John Cabot*, whom we have often had Occaſion to mention, was the firſt that ſuggeſted the Poſſibility of a Paſſage to the new found World, by the North-weſt. His Son, who lived to be a very old Man, was the moſt expert Mariner of his Time, and died Governor of our *Ruſſia* Company, always maintained this Opinion; which the more it was conſidered and examined, by Men of the brighteſt Parts and greateſt Experience, the more it grew into Credit, and the more it was generally believed. This Notion has prevailed to our Times, and if we follow the Opinion of *Cicero*, this alone is a conſiderable Argument in its Favour; for he obſerves that Truths founded in Nature, grow ſtronger in length of Time, and from a Courſe of Obſervations; whereas weak and groundleſs Opinions are ſoon deſtroyed, and become quickly out of date. There is, certainly, a great deal of good Senſe and ſound Reaſon in this Obſervation; which, I believe, will be found to have ſtood, generally ſpeaking, juſtified by Experience; and, perhaps, ſooner or later this may be ranked among the Number of Truths, that ought to give Weight and Authority to this Maxim.

At preſent it is our Buſineſs to exhibit to the Reader as full and clear an Account of this Matter as it is poſſible; the rather becauſe it is not only a Matter of great Importance in itſelf, and a Subject of general Enquiry, but alſo from a late Act of the Legiſlature, and a great Undertaking founded thereupon, become the Topic of common Diſcourſe, and of almoſt univerſal Expectation. In order therefore to diſcharge our Duty effectually, and to repreſent the Reaſon and Hiſtory of this Matter with the utmoſt Perſpicuity; we ſhall firſt of all enquire into the Nature of thoſe Advantages, that may be expected from the Diſcovery of ſuch a Paſſage, ſuppoſing it to be practicable. We ſhall next ſet forth the Reaſons that have been aſſigned in Favour of this Opinion, that ſuch a Paſſage may be found, by thoſe who have maintained it. And laſtly, we ſhall give a diſtinct hiſtorical Account of the Attempts that have been made, for the finding ſuch a Paſſage, and the Conſequences with which theſe Expeditions have been attended. We have, indeed, already had frequent Occaſions to touch this Subject, both in our former Volume, and in this; but wherever we have mentioned it, we have referred the Reader for a clearer and more particular Account to this Section; and we ſhall herein take all imaginable Care to avoid all unneceſſary Repetitions, by making the requiſite Allowances on thoſe Heads, which have been incidentally examined and explained already.

2. The Reader will perceive, from what has been laid down in the foregoing Section, that if ſuch a Paſſage could be diſcovered, it would open a Communication between the North and South Seas, infinitely ſhorter and eaſier than the only one that is at preſent known round *Cape Horne*, or through the Streights of *Magellan*. We have ſeen, in the Hiſtory of the Circum-navigators, how very tedious and troubleſome that Method of reaching the Coaſts of *Mexico* and *California* is, with how many and great Inconveniencies it muſt be always attended, and how far it lies out of our Power, all theſe Circumſtances conſidered, to make any conſiderable Uſe of it; which is the true Reaſon why the *Spaniards* enjoy, with ſo little Diſturbance, ſo many fine Countries, and hinder others from diſcovering many more, the Knowledge of which might be highly advantageous to this Northern Hemiſphere.

But if ever a Paſſage could be this Way found into the South Seas, we might, very probably, reach, in ſix Weeks, Countries that we cannot now viſit in twelve or fifteen Months; and this by an eaſy and wholſome Navigation, inſtead of thoſe dangerous and ſickly Voyages, that have hitherto rendered the Paſſage into the *South Seas* a thing ſo in frequent and ingrateful to *Britiſh* Seamen. If ſuch a Paſſage could be found, it would bring us upon the unknown Coaſts of *North America*; which we have many good Reaſons to believe are very populous, inhabited by a rich and civilized People, no Strangers to Trade, and with whom we might carry on a very great and beneficial Commerce; for this is, apparently, that Country, concerning which we have had ſome dark Hints given us by the *Savages* that come to trade at *Hudſon's Bay*, mentioned by ſeveral of the *French* Writers; from the Information of the *Indians* inhabiting about the Lakes beyond *Canada*; from Doctor *Cox*, in the Accounts cited from him in the former Section, concerning the Advantages that might be drawn from ſettling his Province of *Caroiana*; from various Paſſages in almoſt all the *Spaniſh* Hiſtorians, in reference to the Extremities of *North America*, of which they acknowledge themſelves to have very indifferent Accounts; and are, perhaps, not much inclined to gratify the reſt of the World, even with the beſt Accounts they have; from the memorable Fragment of the *Spaniſh* Admiral's Voyage, quoted in the former Section, with Mr. *Dobbs*'s judicious Remarks, and a multitude of other Paſſages, which it is needleſs to enumerate; all of which agree in this, that the Part of *America*, to which this North-weſt Paſſage would lead us, is a rich, fertile, and well inhabited Country, which would abundantly reward our Pains taken for the Diſcovery of it, even ſuppoſing this Paſſage would lead us to no other Country beſides.

Yet this is far from being the Caſe; ſince it is evident that it would likewiſe bring us to an Acquaintance with thoſe Countries that lie oppoſite to *America*, whether Continents or Iſlands, and that fill up that vaſt Space between *California* and the Land of *Yedzo*, of which, at preſent, we have heard ſo much, and yet know ſo little. But though we know ſo little of them from actual Diſcoveries, yet we may be confident from Reaſon, and the Conſideration of the Climate in which they lie, that theſe Countries abound with valuable Commodities, and that the Inhabitants living, as they do, in a cold Country, would be very glad to deal with us for Woollen-Goods, *&c.* and perhaps for Iron Ware, and many other Commodities. If to this it be objected, that in the few Accounts we have of this Country, and theſe People, it is expreſly ſaid, they are well cloathed, uſe large Ships, and have Arms, and various Utenſils of Iron, and other Metals, as well as the *Europeans*; which they barter with the Inhabitants of *North America* for Gold and other things; if I ſay this ſhould be objected, then the plain and eaſy Anſwer is, they are a mcreantile People; and conſidering the vaſt Diſtance between us and them, there is no doubt that a very great and profitable Trade may be driven between us; and this is more than ſufficient to prove the great and general Propoſition, that the Diſcovery of ſuch a Paſſage would be very profitable to this Nation, though we ſhould be ever ſo much miſtaken as to the Nature of the Commodities in which this Profit may lie. Some Benefit we ſee reſults to the *Danes*, by their Commerce with the poor barbarous *Groenlanders*, and can we doubt of bringing things to a better Market among a rich and civilized People? The former, indeed, part with what they have for a Trifle, but then they have not much to part with; the latter may not be ſo ſoon over-reached, but they have more to trade for, and conſequently more is like to be got by them.

There is ſtill another great Advantage, which would reſult from the Diſcovery of a South-weſt Paſſage; and was that originally propoſed from it, which is, the reaching *Japon*, the Land of *Yedzo*, &c. by a much eaſier and ſhorter Rout, than either that by the *Cape of Good Hope*, or round by *Cape Horn*; ſo that the finding it would give us a much more facile Paſſage to the *East-Indies*, as well as the *South Seas*, and which is more, to thoſe Parts of the *Eaſt Indies*, with which we have no Correſpondence, and conſequently would, in that reſpect, be abſolutely a new Branch of Commerce, probably of much greater Benefit to this Nation, than the whole of our *Eaſt India* Trade, as it is now carried on. All theſe Benefits are ſo far from being hazardous or uncertain, that at firſt Sight, and from the bare Inſpection of the Globe and Charts of the Northern Hemiſphere, they appear certain and indubitable; neither have they hitherto been called in queſtion, by any who have ſought to diſcredit this Paſſage, who all bend their Endeavours to prove the Diſcovery impracticable, without inſinuating any thing to the Prejudice of the Expectations raiſed from it, in caſe it could be diſcovered and ſailed through. We need not, therefore, wonder at all that ſo much has been written on this Subject, ſo many Undertakings ſet on Foot, ſuch a variety of Attempts made on all Sides, and by all means, to come at this North-weſt Paſſage; ſince, in reſpect to this Part of *Europe*, it would be a kind of maritime Philiſophers Stone; a Diſcovery every Way equal, if not ſuperior, to that of *Columbus*. I do not mean in regard to the Subject of the Diſcovery, but in reſpect to us; and what I would ſay is, that we ſhould, for our Part, owe as much Obligation to whoever ſhould find this new Paſſage, as to *Columbus*, who found out the new World; to which it is a Paſſage, and ſuch a one, as to us would double the Value of that Diſcovery. So much may ſuffice as to the firſt Point we promiſed to examine, let us now proceed to the ſecond, and ſhew why this Paſſage is thought practicable.

3. We have already obſerved that *Cabot* firſt projected this Paſſage, in the Life-time of *Columbus*; and from the ſame Motive which engaged that illuſtrious Perſon in the Diſcovery of the new World, *viz.* to find a ſhorter Way to the *Eaſt Indies*, than that practiſed by the *Portugueſe*, by the *Cape of Good Hope*; he offered many Arguments to prove this was practicable by the North-weſt; and ſince his Time, and from the mighty Improvements that have been made in Navigation, there have been added many more. That we may reduce theſe within the narroweſt Compaſs poſſible, without Prejudice to the Subject we will propoſe them ſeparately, not in the Order in which they were from Time to Time advanced, but in the Method the moſt eaſy, moſt natural, and beſt connected in our Power; ſo that the Reader may very fairly judge of the Merits of the Cauſe, though perhaps ſome frivolous or doubtful Evidence may remain unexamined, in order to ſpare Time and Trouble.

Firſt, It is thought probable there muſt be a free Circulation of the Waters at the Pole, becauſe if it were otherwiſe, it would not be eaſy to conceive how the Equilibrium of Land and Water is maintained, or that Regularity which is obſerved in the Tides, where the Shores are not covered by Iſlands, Rocks, or broken Lands. Becauſe if it was otherwiſe, there muſt fall out great Changes in the Tides, the nearer we approached the Pole, as is ſeen in the *Mediterranean* and *Baltic*, which are cloſe Seas, and therefore differ from the Ocean, there being a ſenſible Tide only in ſome Parts of the former, and that too not very conſiderable, and none at all in the latter; whereas in the moſt Northern Seas, the Tides are high and very regular, which renders it apparent there muſt be ſome Paſſage, or rather Communication with the reſt of the Ocean.

Secondly, This Argument becomes more preſſing when confined to *Hudſon's Bay*, where there are not only Tides, but ſuch irregular Tides in ſome Places, as ſeem to indicate the Reception of more Water into that Bay, than comes from *Hudſon's Streights*, or any other Paſſage into it hitherto known. But from the Nature and Height of theſe Tides, and the Situation of the Places where they are obſerved, it ſeems almoſt indiſputable that they come by the Weſt, either through ſome large and practicable, or through ſome icy and impaſſable, Channel; the former is Mr. *Dobbs*'s Sentiment, and the latter the Opinion of Captain *Chriſtopher Middleton*, a very knowing and ingenious Gentleman, who did not imbrace this Notion, however, till he made a Voyage for the Diſcovery of this Paſſage, and failed in it.

Thirdly, We may diſcern the Cogency of this Argument, from what has been actually diſcovered towards the South Pole, where the Situation of the Streights of *Magellan* agrees perfectly with this Notion, and ſuggeſts according to the Analogy of things, a like Communication between the Seas towards the North Pole. We may alſo obſerve, that thoſe Streights are through broken Lands and Iſlands, in a very cold Climate, and, in many other reſpects, agreeable, as far as hitherto has been diſcovered, to the Countries lying round the North Pole, more eſpecially under the Latitudes where of late this North-weſt Paſſage has been ſought for.

Fourthly, It has been generally believed from the great Difference between the Productions of all kinds, and even between the Animals, in *America*, and the other Parts of the World, that they are abſolutely ſeparate; and as to its Southern Extremity, Experience has juſtified the Conjecture, and ſo renders the Preſumption ſtrong, that there is a like Separation on the North, and that this Country is not contiguous to any of the other Continents.

Fifthly, The Situation of the Northern Parts of *America*, ſo far as they are yet diſcovered, afford very ſtrong Preſumptions in favour of this Opinion. The great Ridge of Mountains beyond the Lakes of *Canada*, have many Rivers running from them into thoſe Lakes, and we may from thence conclude, and the Teſtimony of the Natives ſufficiently confirm it, that there are alſo Rivers running on the oppoſite Side, and theſe muſt therefore neceſſarily fall into this Weſt Sea, or Channel, which we ſeek. Part of this Argument is real and certain, *viz.* that there are ſuch Mountains, and though we cannot affirm as much, in reſpect to the other, as no *European* has yet reached thoſe Mountains, yet there is nothing in it abſurd or improbable, but rather quite the contrary.

Sixthly, We have no Tradition, either on the *Groenland* or *American* Side, of any Communication between them; but quite the contrary: The *Groenlanders* never ſpeak of any civilized Nations near their Country diſtinct from the *Europeans*; whereas the *Americans* do, and have always perſiſted in a Story of Perſons coming in very large Canoes, or Ships, to the North-weſt Coaſt, and trading there with the People, who, according to their Accounts are alſo more civilized than any other Nation, Natives of *America*. If any Credit be due to this Account, then we muſt conceive that theſe Traders come from *Japon* (which is very improbable) or from ſome northern Country hitherto unknown, equally ſeparated from *America* and *Aſia*.

Seventhly, It is aſſerted that this Streight has been paſſed before and ſince the Diſcovery of *America*, and that various Memorials of theſe Tranſits are ſtill preſerved in authentic Hiſtories. *Gemma Friſius* reports, that it was paſſed by three Brethren, and thence received the Name of *Fretum Trium Fratrum*; but he does not tell us when or where theſe Brethren lived, whence they ſailed, or whither they returned after performing this Voyage. It is reported by an ancient *Latin* Author, that certain *Indians* being caſt on Shore in *Germany*, were preſented by a barbarous King, into whoſe Dominions they came, to *Quintus Metellus Celer*; and it is taken for granted they came through this Paſſage. It may be queſtioned whether theſe *Indians* were any other than *Groenlanders*; and if ſo, without queſtion, their being caſt upon the Coaſt of *Germany*, proves nothing. About the Year 1160, under the Reign of the Emperor *Frederic Barbaroſſa*, certain *Indians* alſo are reported to have been wrecked on the *German* Coaſt, and of theſe we may ſay the ſame thing. *William* of *Newberry* has a Story of much the ſame Nature, only accompanied with ſome very incredible, not to ſay ridiculous, Circumſtances, of two Green Children, which in the Reign of King *Stephen* came hither from the Land of *St. Martin*, which, by their Deſcription, appears to be *Iceland*: So that take them altogether theſe Stories prove little or nothing. One *Cortereal*, a *Portugueze*, is alſo ſaid to have paſſed this Streight, and to have beſtowed upon it his Name; but how, when, or where, is not to be enquired, or at leaſt not to be reſolved. One *Gomez* is ſaid to have offered the Diſcovery of this Paſſage to the Emperor *Charles* V. which muſt not be underſtood, as grounded on his own Knowledge, but from a Perſuaſion of Mind that the finding ſuch a Streight was practicable, in which however upon Trial he failed. Some flying Reports of much the ſame kind we meet with in many Writers, but though they have, without Cauſe, been urged as Proofs of ſuch a Paſſage, yet this by no Means turns againſt it; nor can it be alledged, that ſince theſe Stories are ſome of them abſurd, others dark, and the reſt incredible, therefore the North-weſt Paſſage they are brought to prove is fabulous. If Truths were to ſuffer by the bringing of improper or improbable Arguments to ſupport them, ſome even of greater Conſequence than this, of which we are at preſent ſpeaking, might run no ſmall Riſk; but as debaſing Gold or Silver does not deſtroy them, ſo the Addition of Falſhoods, though they may ſometimes diſcredit Truths, cannot change their Nature.

Eighthly, There is one Argument in favour of this Paſſage, which may be drawn even from thoſe Fables, without being at all tinctured with Fiction: It is this, that the general Opinion amongſt the Learned in favour of it was ſtrong; which induced them to refer every thing of this Nature to the North-weſt Streight: In the like manner, the Notion of the Garden of *Heſperides* made way for the Diſcovery of the *Canaries*; the Rumour of an *Atlantis*, or weſtern World, proved the Means of unfolding *America*; nay, in the preſent Caſe, though theſe Tales have not hitherto helped us to this ſo much deſired Paſſage to the North-weſt, yet they may be ſaid to have guided us to the oppoſite *Streight of Magallan*; for it was upon the Reaſons aſſigned by *Cabot*, in favour of this Way of going round the Globe, that *Magellan* formed his Project to diſcover a Paſſage into the ſame Seas, by ſailing ſouthward; which he happily effected at the firſt Trial, and by doing this, gave ſome Degree of Evidence that the original Scheme of opening a Way by the North-weſt, is neither againſt the Analogy of the Mundane Syſtem, nor in its Nature impracticable from the Difficulties to which thoſe employed to find it may be expoſed; for though it appears that many have ſuffered exceſſively in the Attempts hitherto made for that Purpoſe, yet no Account of Voyages to the North-weſt repreſents the Cold more intolerable, or the Troubles occaſioned by the Ice, greater than in going round *Cape Horn*, through the Streights of *le Maire*, or thoſe of *Magellan*. If therefore the Reaſons perſuading this Paſſage have (generally ſpeaking) appeared ſo concluſive to the Learned, as to give Credibility to ill-founded Stories; if they have actually led to the finding a Paſſage at the oppoſite Extremity of the Globe, and this Streight be practicable, notwithſtanding its being full of Ice, and the Weather rigorous beyond Deſcription, why ſhould we ſuſpect that an Opinion having ſo many Circumſtances in its Favour is notwithſtanding abſolutely groundleſs, becauſe it is as yet unſupported by Experience, as if every thing not hitherto performed muſt be in its Nature impoſſible, which though Warrant enough for a vulgar Notion, cannot be thought a fit Foundation for a philoſophical Principle; yet granting it were, even this Foundation perhaps might be ſhaken; for if nothing but Experience will prevail, there are ſome Inſtances independent of thoſe romantic Tales before-mentioned, which look very ſtrongly that way.

Ninthly, There was, ſo long ago as *A. D.* 1567, a Perſon in *Portugal* who affirmed, he had actually ſailed through this Streight into *Europe*, and publiſhed immediately, on his Return, a Relation of his Voyage, which, had it been falſe, might have been eaſily confuted; but inſtead of that, by the King of *Portugal*'s Command, the Book was called in, and very carefully ſuppreſſed. The Proof of this Fact, as it is very extraordinary and deciſive, is thus ſet down by the laborious *Purchas*, in the third Part of his *Pilgrims*, Pag. 840; *viz.* “ I *Thomas* “ *Cowles* of *Bedminſter* in the County of *Somerſet*, Mariner, “ do acknowledge, that ſix Years paſt, at my being at “ *Liſbon*, in the Kingdom of *Portugal*, I did hear one “ *Martin Chacke*, a *Portugueze* of *Liſbon*, read a Book “ of his own making, which he had ſet out ſix Years “ before that Time in Print, in the *Portugal* Tongue, “ declaring, That the ſaid *Martin Chacke* had found, “ twelves Years now paſt, a Way from the *Portugal* “ *Indies*, through a Gulph of the *Newfoundland*, which “ he thought to be in 59 Degrees of the Elevation of “ the North Pole, by Means that being in the ſaid “ *Indies* with four other Ships of great Burden, and he “ himſelf in a ſmall Ship of fourſcore Tons, was driven “ from the Company of the other four Ships, with a “ weſterly Wind; after which he paſſed along by a great “ Number of Iſlands, which were in the Gulph of the ſaid “ *Newfoundland*. And after he over-ſhot the Gulph, he “ ſaw no more of any other Iſland until he fell in with the “ North-weſt Part of *Ireland*, and from thence he took “ his Courſe homewards, and by that Means he came to “ *Liſbon*, four or five Weeks before the other four Ships “ of his Company that he was ſeparated from, as “ before-ſaid. And ſince the ſame time, I could “ never ſee any of thoſe Books, becauſe the King com-

" manded them to be called in, and no more of them " to be printed, leſt in time it would be to their Hindrance. In Witneſs whereof I ſet to my Hand and " Mark, the 9th of *April*, *Anno* 1579."

There is no doubt ſomething ſtrange enough in this Story, and one might be tempted to ſuſpect, that either the *Engliſh* Seaman had made ſome Miſtake, or that the *Portugueze* Pilot had boaſted of more than he had done, if in thoſe Days theſe kind of Points had not been much more thoroughly underſtood, as well as more narrowly enquired after than they are at preſent; ſo that if there had been any juſt Grounds for rejecting this Story, we ſhould hardly have found it mentioned by thoſe judicious Writers who ſeem to lay great Streſs upon it; but it ſo falls out, that I think I am able to join to this another Proof that has been very little taken notice of, and which notwithſtanding ſeems very ſtrongly to corroborate this Report, from which I do not at all doubt that it was derived.

The Fact upon which I depend is this, Captain *James Lancaſter*, afterwards Sir *James Lancaſter*, commanded the firſt Fleet ſent to the *Eaſt Indies* by our Company, which ſailed in the Month of *February* 1600, and a very proſperous Voyage he made: While this Gentleman was in the *Indies*, he heard a Report of another Paſſage into thoſe Parts, which, as I hinted, was probably that through which the *Portugueze* Pilot had ſailed; and this Gentleman, who was a very experienced Mariner in Theory as well as Practice, was entirely perſuaded of the Truth of it, as appears from the following remarkable Accident which will do Honour to his Memory, as long as any Records remain of our maritime Affairs. In his Return to *England*, on board the *Dragon*, a very fine large Ship, with a moſt valuable Cargo, he met with ſuch a Storm off the *Cape of Good Hope*, as tore away his Rudder, and put him in ſuch Danger, that he very much doubted the Poſſibility of his returning home; yet, inſtead of quitting his Ship in this Diſtreſs, he contented himſelf with writing a ſhort Letter to the Company; which he ſent on board the *Hector*, and to this Letter he added the following remarkable Poſtſcript: *The Paſſage to the* Eaſt Indies *lies in 62 Degrees 30 Minutes by the North-weſt, on the* American *Side.* Upon comparing this with the Map prefixed to Mr. *Dobbs*'s *Account of the Countries adjoining to* Hudſon's Bay, I find it falls in preciſely with an Opening called there by the Name of *Lovegrove.* And it agrees perfectly well with the *Portugueze* Pilot's Account; ſince he might very well ſail through broken Lands and Iſlands from thence, as he did to *Newfoundland*, or perhaps to *Labrador*, and thence to *Ireland*. I mention all theſe Facts together becauſe they ſeem to relate to the ſame Thing, and to confirm each other. I ſhall now proceed to another Inſtance.

Tenthly, Mr. *Michael Lock*, a very intelligent Perſon, who reſided at *Venice* in 1596, obtained there, by a very ſingular and extraordinary Accident, an Account of this very ſame Paſſage from a Man who had himſelf diſcovered it on the *American* Side, of which, from his own large Diſcourſe preſerved in *Purchas*'s *Pilgrims*, I ſhall give as ſhort and true an Extract as I am able. In the Month of *April*, in the Year before-mentioned, he met with *Juan de Fuca*, a Native of the Iſland of *Cephalonia*, then about threeſcore, who had long ſerved the *Spaniards* in Quality of a Pilot in the *South Seas*, and in this Station was taken in the *St. Anne*, an *Acapulco* Ship coming from the *Philippines*, in *A. D.* 1587, by Captain *Candiſh*, and by that Accident loſt ſixty thouſand Ducats. He told Mr. *Lock* that he was Pilot of three ſmall Ships ſent by the Viceroy of *Mexico* to fortify the Streights of *Anian*, to prevent the *Engliſh* from penetrating that Way into the *South Seas*, which miſcarried by the Commander's being guilty of ſome foul Practices that raiſed a Mutiny. He was afterwards employed again for the ſame Purpoſe, in 1594, with a ſmall Ship and a Pinance; and having ſailed along the Coaſts of *New Spain*, *California*, and, as he expreſly affirmed, Part of the Continent beyond, to the Height of 47 Degrees, and finding that the Land trended there North-north-eaſt, with a broad Inlet of the Sea, between 47 and 48 Degrees, he entered into this Streight, and ſailed therein more than twenty Days; and found that Land trended ſtill ſometimes North-weſt, and North-eaſt, and North and Eaſt, and South-eaſtward, the Sea growing much broader than at the Entrance, and having in it many Iſlands ſmall and great, by which he paſſed. He alſo took notice, that at the very Entrance of the Streight, there was a great Head-land, or Iſland, in which there was a prodigious large Rock, like a Pillar or Pyramid. He further affirmed, that he landed ſeveral times, and ſaw many of the Inhabitants, who were cloathed in Beaſt-ſkins, or Furs; and as to the Country, he deſcribed it as exceedingly fruitful, and rich in Gold and Silver, Pearl, and other valuable Commodities, and with every Thing that was to be found in *New Spain*.

He reported farther, that he having entered thus far into the ſaid Streight, and being come into the North Sea, and finding the Paſſage wide enough every where, and about thirty or forty Leagues wide in the Mouth of the Streights where he entered; he thought he had now well diſcharged this Office, and done the thing which he was ſent to do; and that not being armed to reſiſt the Force of the *Savage* People, he therefore ſet ſail, and returned homewards again, towards *New Spain*, where he arrived at *Acapulco*, *A. D.* 1594, hoping to be rewarded largely of the Viceroy, for the Service done in this Voyage. Alſo he ſaid, that after his coming to *Mexico*, he was welcomed by the Viceroy, and had had great Promiſes of great Reward; but that having ſued there two Years Time, and obtained nothing, the Viceroy told him that he ſhould be rewarded in *Spain* by the King himſelf, very largely; and deſired him therefore to go into *Spain*, which Voyage he performed. He added, that when he was come into *Spain*, he was well received there at the King's Court, in Words after the *Spaniſh* Manner; but after long Time of Suit there alſo, he could not get any Reward. And that therefore, at length he ſtole away out of *Spain*, and came into *Italy* to go home again, and live among his own Kindred and Countrymen in his old Age. He likewiſe owned, that he thought the Cauſe of his ill Uſage by the *Spaniards* was, becauſe they did underſtand, very well, that the *Engliſh* Nation had now given over all their Voyages for Diſcovery of the North-weſt Paſſage, wherefore they need not fear them any more to come that Way into the *South Sea*, and therefore they needed not his Service for the future.

This old *Greek* Pilot, offered Mr. *Lock* to go over to *England*; and in caſe Queen *Elizabeth* would have been pleaſed to make him Compenſation for the Loſſes ſuſtained when taken by Captain *Candiſh*, in caſe of Succeſs, he would, in her Majeſty's Service, attempt the Diſcovery of this North-weſt Paſſage from *Europe*, which, with a Veſſel of forty Tons and a Pinnace, he doubted not to perform in thirty Days. At the Time of his making this Offer, Mr. *Lock* had it not in his Power to bring him over, but he acquainted the Lord Treaſurer *Cecil*, Sir *Walter Raleigh*, and Mr. *Richard Hackluit* therewith, who approved his Deſign, but ſent him no Money. At laſt, in 1602, his own Circumſtances being mended, he reſolved to bring this Man over, with whom he had all this while kept a conſtant Correſpondence on his proper Expence; but upon his Arrival at *Zant*, to his great Grief and Diſappointment, found him dead.

Eleventhly, Yet theſe Diſcoveries by Sea are not all that is in our Power to produce on this Subject; we have likewiſe ſome Proofs that are no leſs concluſive, drawn from Diſcoveries made by Land, of which we have partly ſpoken in another Place; but which it is abſolutely neceſſary we ſhould again mention here, though in Terms as ſuccinct as it is poſſible. In the Year 1568 Sir *John Hawkins*, after an Expedition attended with indifferent Succeſs againſt the *Spaniards*, found himſelf obliged to ſet about one hundred of his Crew aſhore, about ſix Leagues Weſt of the River *la Mina*, and about one hundred and forty Leagues Weſt by North of *Cape Florida*; amongſt theſe was *David Ingram*, of *Barking* in *Eſſex*, who, with ſome of his Companions, travelled Northwards through many unknown Countries, where they ſaw vaſt Riches, as well as precious Stones, as of Gold and

Silver. In the moſt Northern Countries, through which they paſſed, the People were cloathed with Bear-Skins and fine Furs. In the Month of *May* they came into a rich and fertile Country, which is particularly deſcribed in his Travels, preſerved by *Hackluit*. And in this Country he affirms he ſaw Elephants, and other ſtrange Beaſts, not known in *America*; and after marching, according to his Computation, near two thouſand Miles, and paſſing over ſeveral large Rivers, ſome four, ſome ſix, ſome eight, and ſome ten Miles over; and one ſo large, that they were twenty-four Hours in croſſing it in a Canoe; they came to *Cape Breton*, where himſelf, and two of his Companions, embarked aboard a *French* Ship, one Mr. *Champaigne*, to whom one of *Ingram*'s Companions, *Richard Brown*, gave a very large Pearl, that he had picked up in this Journey. They landed at *New Haven* in *France*, in 1569, and ſoon found a Paſſage to *England*; where, within a Fortnight after their Arrival, they came to their old Captain *Hawkins*, to whom they related this Story, affirming that they had travelled to the North Sea, by which they meant the Sea that waſhed the Northern Part of *America*, oppoſite to the Bay of *Mexico*; and they likewiſe affirmed, that for two Days together they travelled along the Shore of this Sea, and that the Inhabitants gave them to underſtand, that they were not unacquainted with Ships, drawing the Figure of them upon the Sand, with their Maſts, Sails, and Flags.

This Account of *Ingram*'s was not digeſted into writing till ſeveral Years after, as appears by his affirming that *Richard Brown* was ſlain five Years before, in a Ship called the *Elizabeth*, belonging to one Mr *Cockins* of *London*; and that his other Companion, *Richard Twide*, died three Years before, at the Houſe of Mr. *Sheerwood*, in *Ratcliffe*; but they had all given this Account upon their firſt Arrival, to Captain *Hawkins*. It cannot be denied that there are ſome very ſtrange and improbable things in this Relation of *Ingram*; which ſhew him either a very weak and credulous Man, or one that delighted in uſing the Privilege of Travellers, of exceeding the Truth. Notwithſtanding all this, Mr. *Hackluit* was of Opinion, that his Relation amounted to a ſtrong Proof of a North-weſt Paſſage; as to which, however, it does not appear that the Man himſelf had any Notion, for otherwiſe he might have pretended, that the River he was twenty-four Hours in paſſing was it; for ſo in all probability it really was. I muſt acknowledge, that upon reading and conſidering his Narrative, I was once in very great doubt, whether it deſerved any Credit at all, or whether it ought to find a Place amongſt thoſe Matters of Fact, that deſerve to be mentioned as Proofs of the Poſſibility and Probability of there being a Paſſage to the *South Seas* by the North-weſt; but I was at laſt determined to give it a Place, by meeting accidentally with another Account no leſs ſtrange and extraordinary, and which the Reader will perceive has ſuch an Agreement therewith, that is not eaſily to be accounted for, without allowing that there is at leaſt a conſiderable Mixture of Truth in them both; for that the one ſhould be copied from the other, conſidering the Perſons by whom both Relations were made, is, in my Judgement, abſolutely impoſſible. Beſides they ſeem alſo to be confirmed, both by the moſt ancient, and by the more modern *Spaniſh* Authors, who mention the Northern Extremities of *America*. But it is Time to come to the Matter of Fact.

Twelfthly, The Author of the *French Mercury Galant*, for the Year 1712, gives us the following Relation, *viz.* "That ten *Frenchmen*, and two *Savages*, ſet out from *Montreal* in *Canada*, and having continued for ſome Time in the Country of the *Illinois*, and on the Banks of the River *Miſſiſſippi*, they reſolved to proceed farther on new Diſcoveries. They made uſe of three Canoes of Bark of Trees, to remount the *Miſſiſſippi*, and being gone up the ſame one hundred and fifty Leagues, they were ſtopped by a Fall, which obliged them to carry their Canoes over Land, and then they embarked again on the ſaid River, and went up the ſame forty Leagues more, without meeting any People; they ſpent a Month and a half in hunting, and continuing their Deſign of attempting ſome new Diſcovery, they met, fifteen Leagues from thence, with a River running to the South-ſouth-weſt, from whence they conjectured it diſcharged itſelf into the South Sea, its Courſe being oppoſite and contrary to thoſe which Fall into the North Sea. They reſolved thereupon to carry their Canoes into it, and in their Way ſaw Lions, Leopards, and Tygers, which did not offer to attack them. They fell down that River about one hundred and fifty Leagues, and met with a Nation called *Eſcaaniba*, which poſſeſs a Country of two hundred Leagues at leaſt, in which they ſaw ſeveral Forts, Towns, and Villages, whereof the Houſes are built of Timber, and Bark of Trees. They have a King who pretends to deſcend from *Motezuma*, and who is commonly cloathed with Beaſts-ſkins, which is alſo the ordinary Cloathing of the Inhabitants.

" They ſeem, in their Manner, to be under ſome Rules of Policy. They are Idolaters, and their Idols, which are in their Kings Palaces, are frightful, and of a prodigious Size. There are two amongſt others, whereof one is the Figure of a Man armed with Lances and Arrows, having one Foot upon the Ground, and the other lifted up, with a Hand on the Figure of a Horſe, as if he were going to mount it. They ſay that this is the Statue of one of their Kings, who was a great Conqueror. That Statue holds in its Mouth a large ſquare Carbuncle, which caſts a Light in the Night as Fire. The other Figure is a Woman, who was a Queen, ſetting on a Saddle, upon an Unicorn, having four great Dogs on one Side. Theſe Figures are of maſſy Gold, but very ill made. They are ſet on a raiſed Place, being a Square about thirty Feet, covered with Gold. Between thoſe two Statues is the Way into the King's Apartment; and at the Door of the ſame ſtands his Guards, conſiſting of two hundred Men. The Palace is very large, and is three Stories high The Walls are eight Feet high, and of maſſy Gold, cut in ſquare little Bricks, and laid one upon another, faſtened with Hooks and Bars of the ſame Metal. The reſt of the Building is of Timber, and covered with the ſame. Thoſe People have a great Trade for Gold, but our Diſcoverers could never gueſs with what Nation, unleſs it be with the People of *Japon*; for they carry their Gold to ſo great a Diſtance, that they told the *French*, that they ſpent ſix Months in their Journey to that Nation. Our Adventurers were preſent at the ſetting out of one of their Carravans, which conſiſted of above three hundred Oxen laden with Gold, and guarded by the like Number of Men, armed with Lances and Arrows, and with a kind of Poniard.

" They barter their Gold for Iron, Steel, Lances, &c. They are altogether Strangers to writing, but uſe a Sort of Bark dreſſed for that Purpoſe, on which they mark the Quantity of Gold intruſted to each of the Men aforeſaid, for which he muſt be accountable at his Return. The King is called *Agauzan*, which ſignifies, in their Language, the great King; and though he is at War with nobody, he keeps a ſtanding Army of one hundred thouſand Men. Their Trumpets are of Gold, and ſtrait, and they ſound the ſame, in a diſagreeable Manner. Their Drums are large Kettles of Gold, covered with Hart-Skins, and ſo large, that they muſt be carried by Oxen. Theſe Troops excerciſe once a Week in the King's Preſence. The Inhabitants are of a browniſh Complexion, and look frightful, having a long narrow Head, which they form into that Shape, by preſſing the Heads of Children between two Pieces of Board. The Women are handſome, and as white as in *Europe*: They have, as well as the Men, large Ears, which they account a great Beauty, and adorn them with Gold Rings. They let their Nails grow as long as they can, and this is, amongſt them, a Mark of Diſtinction. The moſt hairy Men, are looked upon to be the moſt handſome. Polygamy is in uſe, and they ſhew little Concern for the Conduct of their Daughters. They love Rejoicing and Dancing, and are great Eaters. They make a Sort of

“ Wine of Palm-Trees, and have ſeveral other Sorts of Liquors. They ſmoak very much, and have good Tobacco, which grows in their Country without any Culture.

“ The Climate is very temperate, and the Inhabitants live to a great Age, without being troubled with Diſeaſes. The Country affords all ſorts of Fruits both of the *Indies* and of *Europe*. They have Abundance of *Indian* Wheat, and wild Oats, which are as white and as good as Rice. They make Bread of both, but cultivate only the former. They have large Plains, which afford excellent Paſture for all ſorts of Cattle. Their Rivers are full of Fiſh, and their Woods abound with all ſorts of Birds, eſpecially Parrots. They have Monkies and Animals peculiar to that Country. Their capital City lies within ſix Leagues of the River *Miſſi*, which ſignifies the River of Gold. The *French*, upon taking their Leave of that King, promiſed to return in 36 Moons, *i. e.* in three Years, and to bring with them ſeveral Goods from *Canada*, to barter with their Gold, which they value ſo little, that the King bid them take as much as they pleaſed, which they did, and brought away each ſixty Bars, weighing about two hundred and forty Pounds. Two of the Adventurers had the Curioſity to go to the Place from whence they bring their Gold, and informed the others, that the Mines are within the hollow Parts of the Mountains, from which the Gold is carried away by Rivers, and is found on the Banks of them. Thoſe Rivers are almoſt quite dried up for four Months in the Year. Moſt of theſe Adventurers returning home, were killed at the Mouth of the River *St. Laurence*, by an *Engliſh* Pirate, and two of them only eſcaped, who, after a long Captivity, during which they had been in ſeveral Bays in the *Eaſt* and *Weſt Indies*, and in *China*, at laſt arrived at *Breſt*; and offered, upon pain of their Lives, if conducted to the *Miſſiſſippi*, eaſily to find back again from thence the Way leading to that *New Peru*.”

It would be no very difficult Matter to aſſemble other Paſſages of a like Nature from the Works of various Authors, *Engliſh*, *French*, and *Spaniſh*, all concurring in the Report, that there are very great Nations in the moſt Northern Parts of *America*, and that they trade and have Correſpondence with the Inhabitants of ſome other Country abſolutely unknown; but that this ſeems to be unneceſſary after what has been before related. One Thing however I will take the Liberty of hinting to the Reader, becauſe I think it may contribute to give ſome Light to theſe Stories of a civilized Nation in *North America*; and it is this, that the *Mexicans* themſelves always acknowledged, that they came from the *North* and were not the original Inhabitants of that Country where the *Spaniards* found them: So that if we ſuppoſe the *French* Adventurers above-mentioned ſpoke Truth, we may very well conclude that it was not the laſt *Motezuma*, but a former Prince of that Name theſe *Indians* ſpoke of; and that inſtead of being the *Mexicans* expelled by the *Spaniards*, they may be the original Nation from whom thoſe *Mexicans* were derived that contended with the *Spaniards*. This I do not pretend to lay down as a Thing certain, but as a Thing poſſible, if not probable, and therefore worthy of future Conſideration.

Thirteenthly, The laſt Argument I ſhall offer is from the conferring and comparing together thoſe that have gone before; for I think it can hardly be eſteemed poſſible, that Nature, Art and Tradition, ſhould conſpire to lead Mankind into Error in this Reſpect, by affording ſo many probable Inducements to look upon the finding ſuch a Paſſage to the North-weſt as not only probable but practicable. The wiſeſt Philoſophers, as well as Coſmographers, have admitted this Propoſition, conſidering only the Reaſon of the Thing. The moſt able Seamen have been of that Opinion, after repeated Trials and Experiments; ſuch as *Cabot*, *Davis*, *Hudſon*, *Button* and *Baffin*, not to mention others that have been employed in the *Daniſh* Service. We find the Rumour of ſuch a Paſſage ſpread every where in *Italy*, *Spain* and *Portugal*, as well as in *Great Britain*, *Denmark* and *Holland*. In the *Eaſt Indies*, and in the *Weſt*, amongſt the *Indian* Natives, as well as *European* Planters: Whence I conclude, that as no Fiction was ever ſo generally believed, this will ſooner or later be found a Truth, and then the Wonder will be that it was found no ſooner. But let us now proceed, from the Reaſon of the Thing, which I have laboured to make as clear as I could, to an Hiſtorical Account of the Expeditions which the Perſuaſion that there is ſuch a Paſſage by the North-weſt has occaſioned; in diſcourſing of which I ſhall be as conciſe as it is poſſible.

4. The firſt who attempted this Diſcovery, as has been often ſaid, was the famous *John Cabot*, towards the latter end of the fifteenth Century, but was prevented from finiſhing his Diſcovery by a Mutiny on board his Ship. He conſtantly retained his Opinion that there was a Paſſage this Way, and that he ſhould have found it if this Accident had not happened. It was however fifty Years before another Attempt was made, and then Sir *Martin Frobiſher*, in 1576, ſailed with two Barks in ſearch of this Paſſage. He diſcovered in the Height of 62 Degrees, on the Coaſt of *Groenland*, a large Inlet, to which he gave the Name of *Frobiſher's Streights*, through which he ſailed about ſixty Leagues, with main Land on both Sides, and ſaw ſome of the Inhabitants. He made a ſecond and a third Voyage, and called the Country he diſcovered *Meta Incognita*. In 1583 Sir *Humphry Gilbert* ſailed to the River of *St. Laurence*, took Poſſeſſion of that Country which the *French* call *Canada*, and ſeetled our Fiſhery upon that Coaſt. In 1585 Capt. *John Davis*, of whom we have given elſewhere a large Account, made an Attempt to find this North-weſt Paſſage, and diſcovered a Part of *Groenland*, to which he gave the Name of the *Land of Deſolation*. He ſailed afterwards as high as 64 Degrees 15 Minutes, through that which has been ſince called *Davis's Streights*, and thence to the Latitude of 66 Degrees 40 Minutes. In 1586 he made another Voyage, in which he made farther Diſcoveries, and returned full of Hopes that a third Voyage would compleat his Deſign. Accordingly in 1587 he proceeded through *Davis's Streights* to the Height of 72 Degrees 12 Minutes, and found an open Sea to the South-weſt.

In 1610 Mr. *Henry Hudſon*, after he had in vain made Trial of the North-eaſt Paſſage, attempted a Diſcovery to the North-weſt, and made a great Progreſs therein; paſſing through the Streights that have ſince bore his Name into a large open Sea, called *Hudſon's Bay*, and would have proceeded further, but was hindred by a Mutiny among his Seamen, who baſely deſerted him, as we have formerly mentioned. In 1612 *James Hall* and *William Baffin* made a like Attempt, in which the former was killed by a Savage. This Accident did not hinder Mr. *Baffin* from going thither in the Year 1615, who proceeded to the utmoſt Extremity of that Sea, which communicated with *Davis's Streights*, and found it to be no other than a large Bay, which has been ſince known by his Name. He went thither again the next Year, and diſcovered an Inlet, which he called Sir *Thomas Smith's Sound*, in the Latitude of 78 Degrees, but returned to *England* without Succeſs, though he remained firm in his Opinion of a North-weſt Paſſage to his Death, which happened in the *Eaſt Indies*, yet his Miſcarriage diſcouraged for a long Time any Attempts from hence.

5. Mr *Henry Button*, (afterwards Sir *Henry*) in the Year 1611, having been encouraged by Prince *Henry* to attempt a more perfect Knowledge of that Sea which had been found by Mr. *Hudſon*, went thither accordingly, and proceeded 200 Leagues farther to the South-weſt, coaſting along a great Continent, to which he gave the Name of *New South Wales*, and winter'd at *Port-Nelſon*; then ſailing croſs that Sea, which has ſince been called *Button's Bay*, he diſcovered another Country, to which he gave the Name of *New North Wales*, which ſeems to be only an Iſland in that great Sea, which opens into the Northern Ocean by the Paſſages of *Hudſon's Streights* and *Davis's Streights*, and of which *Hudſon's Bay*, *Button's Bay*, and *Baffin's Bay*, are only Parts, bounded by the Continents of *Groenland* and *North America*. In his wintering at *Port-Nelſon*, which is in the Latitude of 57 Degrees 10 Minutes North, he loſt the beſt Part of his Crew through extreme Cold, notwithſtanding all the Precau-

tions he could take to prevent it; but it does not appear that he was in any Degree diſtreſſed for want of Proviſions, ſince he aſſures us that beſides Deer and other wild Beaſts, there was ſuch vaſt Plenty of Partridges, and other Fowls, that they killed upwards of one thouſand eight hundred Dozen; and he likewiſe obſerves, that the Natives fiſhed in their Seal-Skin Boats, without appearing to be much incommoded by the rigorous Seaſon. He, for Cauſes elſewhere related (eſpecially the Tides) concluded a North-weſt Paſſage certain, and thereby reſtored the Hopes of it, then fallen very low.

6. The King of *Denmark*, believing that the Vicinity of his Country gave him greater Advantages than any other *European* Power, reſolved to perfect theſe Diſcoveries, which the *Engliſh* had begun; in order to which he cauſed two Ships and a Pinnace to be fitted out in 1605, under the Command of Captain *John Cunningham*, a Native of *Scotland*; with whom one *Lindenaw*, a *Daniſh* Nobleman, was joined in Commiſſion; *James Hall*, and *John Knight*, both *Engliſhmen*, were Pilots. The *Dane* very ſoon returned, but *Cunningham* proceeded a little Way through *Davis's Streights*, to a Place called *Cunningham's Ford*; from whence he brought away a kind of Stone, which he took to be Silver Ore; out of one hundred Weight of which there were extracted twenty-ſix Ounces of fine Silver. In 1607 another Ship was ſent from *Denmark*, of which *James Hall* had the Command; but before they had advanced as high as *Cunningham's Ford*, the *Daniſh* Seamen mutined, and forced them to return. His *Daniſh* Majeſty, however, perſiſted ſo obſtinately in this Deſign, that he ſent for Seamen from *Norway* and *Iceland*, ſuppoſing that they were better able to endure Cold than other People; and having fitted out two Ships for Diſcovery, gave the Command of them to one *Chriſtian Richardſon*, a Native of *Holſtein*. Theſe People, however, behaved worſe than the *Danes* had done, for they mutinied before they ſaw the Coaſt of *Groenland*, and ſo diſappointed that Voyage. In 1619 Captain *John Munk* undertook this Voyage, and arrived ſafely at *Cape Farewell*, in the Latitude of 60 Degrees thirty Minutes, where, though their Tackle was ſo frozen, and full of Iſicles, that they could not handle them; yet the next Day was ſo hot and ſultry, that they were forced to work in their Shirts. He gave here Names to ſeveral Places in *Hudſon's Bay*, but made no great Diſcoveries, though he was obliged to winter in the Latitude of 63 Degrees 20 Minutes, in a Place which has ſince retained his Name, on the Weſt-ſide of the Bay before-mentioned.

The Hardſhips this Man endured in the long Winter he paſſed there, are almoſt incredible. In the Month of *May*, 1620, he found himſelf alone in a Hut, ſcarce alive himſelf, and almoſt morally certain that all his Mariners were dead: He collected his Spirits, however, as well as he could, crawled out, and found, of all his Crew, no more than two left, and thoſe in almoſt as weak a Condition as himſelf; however, they removed the Snow in ſome Places, and finding freſh Herbs underneath, recovered from the Scurvy by eating them; and when the Seaſon permitted, and they had collected a little Proviſion, they left their Ship behind them, and ventured to return in their Pinnace, with which, after overcoming great Difficulties, they ſafely arrived in *Norway*. This Captain *Munk* was not only a great Seaman, but a very ingenious Mathematician, and ſome Years after revived this Deſign of finding a North-weſt Paſſage, of which he gave ſo good an Account to ſeveral of the *Daniſh* Nobility, and made it ſo probable to ſome of the richeſt Merchants in *Norway*, that they raiſed a joint Stock to defray the Expences of his Voyage.

When all Things were in a Manner ready, *Munk* himſelf was taken off by a very odd Accident. The King aſked him how he came not to diſcover the North-weſt Paſſage the laſt Time, upon which he gave him a large Account of his Misfortunes. The King told him that he had deſtroyed a great many Men already, to which Captain *Munk* made a quick Reply, and provoked the King to ſtrike him over the Stomach with his Cane. This Indignity had ſuch an Effect upon the Man's Spirit, that as ſoon as he came Home, he obſtinately refuſed all Refreſhment, and died in two or three Days. The unfortunate Iſſue of this Affair ſo diſcouraged the *Danes*, that we hear nothing more of their Attempts, though it is certain, that with reſpect to ſuch Expeditions, they enjoy much greater Advantages than almoſt any other Nation.

7. As long as the *Greenland* Trade was carried on with Advantage to this Nation, the Endeavours for a Diſcovery were kept up, and a ſpecial Committee was appointed by the Merchants concerned in that Trade, for drawing Inſtructions to the Commanders of ſuch Veſſels as were ſent abroad in that Service, and Sir *John Wolſtenhome* the younger was appointed their Treaſurer. We have a great many Letters and Papers tranſmitted to this Committee, in the third Part of *Purchas*'s *Pilgrims*, and of theſe there are ſome that are very well worth the reading. It appears from them, that *Thomas Marmaduke*, of *Hull*, had ſailed as far as the Latitude of 82 Degrees North, which was to the utmoſt Extent of *Greenland*; but he ſeems to have kept too near the Shore, which was the Reaſon that he found himſelf much incommoded by Ice; whereas if he had kept a little to the Weſtward, it is allowed that he would have met with an open Sea. But by this Time other Nations began to interfere in the *Greenland* Trade, and the Company found themſelves under a Neceſſity of having Recourſe to the Crown for Protection and Aſſiſtance, as well for defending their Fiſhery, as for proſecuting their Diſcoveries; and accordingly they addreſſed themſelves to King *Charles* I. upon both Heads, who very readily granted them all that they deſired, particularly a Frigate, called the *Charles*, under the Command of Captain *Luke Fox*; which, being manned and victualled for eighteen Months, ſailed in the Spring of the Year 1631, in order to make Diſcoveries towards the North-weſt; and, as he tells us himſelf, this was the ſixteenth Voyage that had been undertaken expreſly for this Purpoſe.

He traced *Frobiſher*, *Hudſon*, *Davis*, *Baffin*, and *Button*, meeting with Whales, much Ice, and foul Weather. He built a Pinnace in River *Nelſon*, where he found ſeveral Remains left there by Sir *Thomas Button*. He obſerved Abundance of ſmall Spruce Fir-Trees on both Sides the River, almoſt covered with Moſs, and other Sorts of Trees, but ſmall. The Valleys had good Graſs, Blackberries, Strawberries, Vetches, Veniſon, *&c.* but no Natives or Inhabitants to be met with in this Place; tho' in other Parts of the Sea he ſaw ſeveral *Savages*. Captain *James* departing from *England* ſoon after Captain *Fox*, upon the ſame Deſign, they both met, and careſſed each other, near *Port Nelſon*, in the Month of *Aug.* 1631. *Fox* got Home before Winter, and ſome Time afterwards publiſhed a large Account of his Voyage, under a pompous Title, which, however, was never much eſteemed; and ſunk ſtill lower, in the Opinion of Mankind, after Mr. *James*'s Voyage was made public, which every Body allowed to be an excellent Performance, and to have all the Merit that could be expected from a Work of that Kind.

It appears from hence, that there was a ſurprizing Degree of Vigilance and Steadineſs in the Conduct of the mercantile Part of the Nation at that Time. They applied themſelves to the Study of Navigation and Commerce, as to Sciences capable of raiſing their Fame and Reputation, as well as their Fortunes; and this made them jealous of ſeeing themſelves rivalled, or out-done, by any other Nation whatever. The King too had great Knowledge in theſe Matters, conferred about them with the principal Commanders in his Navy, and the moſt able Seamen throughout his Kingdom; offering freely whatever Aſſiſtance his Prerogative enabled him to give, and encouraging the wealthier Sort of Merchants to continue theſe Kinds of Expeditions, by his own Example. It was this that became a kind of Law to the Nobility and Courtiers, who, in Imitation of the King, intereſted themſelves deeply in Attempts of this Nature, as manifeſtly appears by the Names given to Roads, Sounds, Bays, Iſlands, Headlands, Promontories, and Coaſts in *Hudſon's Bay*, and other Northern Regions, by which the Titles of ſome noble Families are preſerved, which are now extinguiſhed, and their Memories alſo almoſt totally forgotten.

SECTION III.

The accurate and admirable VOYAGE *of Captain* THOMAS JAMES, *for the Diſcovery of a* PASSAGE *into the* SOUTH SEAS, *by the* North-weſt; *his wintering in* Charlton Iſland, *and wonderful Return with his Ship, and moſt of the Crew, into* England.

Extracted from his own Account, and delivered in his own Words.

1. *An Introduction containing the Reaſons of this Expedition, and the Motives and Preparations of Captain* James, *for undertaking this Voyage.* 2. *The Author departs from* Briſtol, *and arrives upon the Coaſt of* Groenland. 3. *Finds himſelf and his Crew expoſed to great Danger, and prodigious Incoveniencies, by the vaſt Quantities of Ice in thoſe Parts.* 4. *An Account of their landing at ſeveral Places, the miſerable Barrenneſs of the Country, and the Sea deſtitute of Fiſh.* 5. *They fall into new Perils from the Ice, from which they free themſelves by inceſſant Labours.* 6. *A farther Account of the Country, Coaſts, and Seas.* 7. *The Methods taken by Captain* James, *to encourage and keep up the Spirits of his Seamen, in the Midſt of ſo many Difficulties.* 8. *Their Dangers and Labours ſtill increaſe, notwithſtanding all the Precautions that could be taken to avoid them.* 9. *A Misfortune happens in the weighing of their Anchor, by which ſeveral of the ableſt Men in the Ship are miſerably hurt.* 10. *They meet with Captain* Luke Fox, *who had been ſent out the Year before upon the ſame Diſcovery; and after mutual Civilities, part from, and ſee, each other no more.* 11. *A violent Storm, by which they are in great Danger; from which they are delivered by their own Induſtry, and the Care of their Commander, with the Bleſſing of God.* 12. *The Ship run aſhore by an Accident, which put them into ſo great Danger, that they had Thoughts of quitting their Veſſel, and making their Eſcape in their Boat; but afterwards are ſo lucky as to get the Ship off.* 13. *Another Storm in which they loſt their Shallop, and were driven to ſuch Diſtreſs, that they were forced to think of wintering in thoſe Seas.* 14. *They are miſerably incommoded with Fogs, ſtrong Currents, and floating Iſlands of Ice; by which they are put in the utmoſt Danger for ſeveral Days together.* 15. *The Captain lands upon an Iſland in order to make Diſcoveries; to procure Wood, Water, and other Conveniencies, and to ſearch out a proper Place for their wintering in.* 16. *Their Houſe is ſet up, a Deer taken, and one of their Men loſt in ſeeking for Refreſhments.* 17. *An Account of their various Precautions taken to avoid ſuch Accidents for the future; their Diſtreſs from the Severity of the Weather; and the Death of their Gunner.* 18. *Captain* James *inclines to run his Ship aground; the Reaſons which induced him to think of this Expedient; and the Accidents which hindered him from putting it in Execution.* 19. *They reſolved, after mature Deliberation, to ſink the Ship, as the ſureſt Means of preſerving her; this Reſolution executed, and the Difficulties they met with in getting aſhore.* 20. *Captain* James's *Speech to his Crew, in relation to their Wintering; the Aſſurances given him by them of their Fidelity and Obedience, together with the Diſtribution made of the Men to ſeveral Employments.* 21. *Farther Precautions taken for ſecuring themſelves in this uncomfortable Country, getting their Boat aſhore, and raiſing a Storehouſe for their Proviſions.* 22. *A large and very curious Account of their Habitations in this deſert Iſland, and of the Methods taken for the Eaſe and Refreſhment of the Sick.* 23. *Obſervations on the Cold, Ice, Snows, Spring-Tides, and other Things, at the Beginning of the Year* 1632. 24. *The Miſeries endured by the whole Crew, from the diſmal Effects of the Scurvy; and the great Pains taken by their Chirurgeon to give them all the Relief in his Power.* 25. *The Difficulties that attended the getting of Wood, and various Methods practiſed to overcome thoſe Difficulties.* 26. *The Captain reſolved to dig a Paſſage through the Ice to the Ship, which, with inexpreſſible Labour, was effected, and the Veſſel found ſafe and ſound.* 27. *The Order in which their Proviſions were ſerved to them, while they continued aſhore; and the Danger their Sick were in of being ſtarved, for Want of a Power of eating.* 28. *The Death of their Carpenter; their Rudder recovered; and the Iſland named, from their wintering upon it,* Charles Town, *or* Charlton Iſland. 29. *The Ship cleared; the Men recover chiefly by the Help of Sallads; the Nature of the Spring in this Country.* 30. *The Ship begins to float; Captain* James *takes Poſſeſſion of the Iſland for King* Charles I. *and begins to think of his Departure.* 31. *The Captain in Danger of being burnt by a very ſtrange Accident; erects Tombs for his dead Men; the Nature of freezing in this Country.* 32. *The Manner of the Waters thawing deſcribed; with a View of the Country in the Spring, and other Particulars.* 33. *They labour to leave* Charlton Iſland, *but are hindered by the Ice.* 34. *Put to Sea with much Difficulty, and meet with great Tempeſts and other Misfortunes.* 35. *Undergo vaſt Varieties of Hardſhips, through Storms, Rocks, Ice, &c.* 36. *In much greater Danger than ever; ſo that not only the Crew, but the Captain himſelf, began to deſpair of the Poſſibility of returning.* 37. *He lays hold, notwithſtanding, of the firſt Opportunity that offered for proſecuting the intended Diſcovery.* 38. *Expoſed to new Difficulties and Dangers, which engage them, after mature Deliberation, to reſolve upon ſhaping their Courſe Home, which was accordingly done.* 39. *Captain* James *changes his Sentiments, with reſpect to the Poſſibility of finding a North-weſt Paſſage; Motives aſſigned by him, in Support of that Change; and his Reaſons for thinking the Paſſage uſeleſs and unprofitable, if it could be diſcovered.* 40. *His Notions upon this Subject conſidered and confuted.* 41. *Concluſion of this Voyage, with Obſervations and Remarks.*

1. AS curious and inſtructive as the Hiſtory of the Expeditions made for finding a North-weſt Paſſage, muſt certainly be eſteemed by all competent Judges of a Collection of this kind, yet it is very natural for them to expect to ſee ſome Voyage entire, by which they may judge of the Nature of ſuch an Expedition; the Method of purſuing it; the Diſcoveries that incidentally fall in; the Difficulties that occur; the Nature of the Climate and Coaſts; and other Singularities, which render ſuch kind of Pieces equally uſeful and entertaining. The Foreſight of this, and the Deſire of complying, as far as poſſible, with the Expectations of

my Readers, induced me to think of giving Place to the Voyage of Captain *Thomas James*, undertaken for the Satisfaction of King *Charles* I. at the Expence of the Merchant Adventurers of *Briſtol*. And this for various Reaſons: Firſt, Becauſe the original Edition of 1633, publiſhed by the Author himſelf, from whence this, with the Omiſſions only of ſome obſolete Phraſes, and ſome Verſes, not much to the Purpoſe, is literally taken, is become exceeding ſcarce, and, indeed, hardly to be met with. Secondly, Becauſe it is very juſtly looked upon as the very beſt Work of its kind that ever was publiſhed, and this in every reſpect; the Author being a knowing, careful, and experienced Seamen, one who wrote every thing as it occurred, and framed the Hiſtory of his Voyage while it was making, and not after his return Home, from looſe Papers, or a bare Sea Journal. Thirdly, Becauſe the giving this Voyage will ſatisfy the Reader in all the Points of Enquiry that he can poſſibly frame, and this upon the Authority of ſo judicious and candid a Writer, that the famous Mr. *Robert Boyle* chiefly depended upon the Extracts he made from his Work, in framing one of the moſt valuable Pieces that he publiſhed, I mean his Hiſtory of Cold. Fourthly, Becauſe it will free us from the Neceſſity of inſerting any more Voyages into theſe Northern Parts, as containing every thing that is worth reading in the reſt of them; digeſted clearly and plainly, ſo as to carry Conviction throughout, and leave us no room to queſtion either the Abilities or the Sincerity of its Author. And fifthly, Becauſe it affords us an Opportunity of exhibiting, at once, the Reaſons from which it was for many Years after this believed, that the finding ſuch a Paſſage was impracticable, and adding thereto the Motives that have induced able and experienced Perſons in later Times to conceive, that how formidable ſoever theſe Objections may at firſt Sight appear, they are not abſolutely concluſive, but that ſuch a Paſſage may be ſtill ſought for with rational Hopes of Succeſs.

After having given this Account of the Cauſes of inſerting this long Voyage, I ſhall next preſent the Reader with an Account from Captain *James*'s Preface, which is to be found only in his original Edition; of the Manner in which this Voyage was undertaken, containing many Particulars that are very well worth Notice, and which will not fail to convince the Reader that never any Enterprize of this kind was better concerted, or more Deliberation uſed in providing for its Succeſs. Captain *James* had been employed, as he tell us, in ſome Northern Voyages before, whence he came to be thought the fitteſt Perſon in the Kingdom, for attempting this ſo long wiſhed for Diſcovery; which, however, he was not determined to undertake, till it was ſignified to him on the Part of the King, that it would be highly ſatisfactory to his Majeſty. After he was once come to a Reſolution, he ſignified to the Merchants of *Briſtol*, in whoſe Service probably he had been formerly employed, both his own Inclination to venture on this Voyage, and the Encouragement he received from his Majeſty; upon which they very readily raiſed ſuch a Sum of Money as was requiſite, and depoſited it in the Hands of a Treaſurer, for carrying it on with the utmoſt Facility and Expedition.

Captain *James* deſired only a ſingle Ship, and that a ſmall one, of the Burden only of ſeventy Tons. She was built for this Voyage; and it will appear from what follows, that ſhe was as well and ſtrongly built as ever any Veſſel of her Size was. The Number of Perſons that he deſired for the Execution of ſo difficult and ſo dangerous a Deſign, was no more than twenty-two; and the Proviſions and other Neceſſaries that he required, was for 18 Months; and he acknowledges that they were provided for him in the full Proportions he demanded, and that in their ſeveral kinds they were as wholſome and as good as he could wiſh. He had the free Choice of the Men that were to ſerve under him, but he abſolutely refuſed all Volunteers that had never been at Sea, in which there is nothing ſtrange; but it muſt be allowed that it was ſomewhat ſurprizing, that he ſhould reject alſo ſuch as had failed in thoſe Seas before, for which he ſays he wanted not good Reaſons, though it ſeems they were ſuch as he did not think fit to diſcloſe. The Qualities he required were, that they ſhould be unmarried, approved, able, and healthy Seamen; he likewiſe took care that they ſhould not have the leaſt Knowledge or Acquaintance with each other, and, inſtead of entering them all at once, he firſt fixed upon a Boatſwain and his Crew for rigging the Ship, and put them aboard before the reſt of the Seamen; then he ſhipped the common Men, and laſtly his Officers; ſo that all things were ready at once; the Expence kept as much within Bounds as it was poſſible, and the wiſeſt Precautions taken to prevent Factions and Mutinies, with which, as we ſhall ſee, he was never troubled, notwithſtanding all the Miſeries and Misfortunes that he and his People endured.

When all things were ready he made a ſhort Journey to *London*, to receive his Majeſty's laſt Commands, and ſuch Letters and Commiſſions as he judged might be of Service to him; and, upon his Return to *Briſtol*, he went directly aboard his Ship, with a Reſolution of ſailing the firſt fair Wind. After his Return he drew up the following Hiſtory of his Voyage, for his Maſter's Satisfaction; and prefixed to it the following Dedication, which is alſo not to be met with, entire and correct, in any but the original Edition.

“ *Moſt gracious Sovereign*: That my unſkilful ſelf was made Choice of for this Employment, and my Undertaking in it encouraged by your gracious Commandment, I muſt ever account of, as the greateſt Honour ever yet befel me. Many a Storm, and Rock, and Miſt, and Wind, and Tide, and Sea, and Mount of Ice, have I in this Diſcovery encountered withal; many a Deſpair and Death had almoſt overwhelmed me; but ſtill the Remembrance of the Account I was to give of it, to ſo gracious a Majeſty, put me in Heart again, made me not to give Way to my own Fears or the Infirmities of Humanity. Your Majeſty, in my Employment (like a true Father of your Country) intended the Good of your Subjects, and who is not bound to bleſs God for your royal Care in it, had it now been my Fortune to have done my Country this Service, as to have brought home the News of this ſuppoſed and long-ſought for Paſſage; then ſhould the Merchant have enjoyed the Sweetneſs of the hoped Profit, and the Subjects have been ſenſible of the Benefit of your Majeſty's Royal Intention in it. I have done my Good-will in it, and though I have not brought home the News, yet ſhall I here divulge theſe Obſervations, which may (I hope) become ſome Way beneficial unto my Country. The Account of them I here in all Humility offer unto your moſt judicious Majeſty; your gracious Acceptance of what I had done, though I had not done what was expected emboldneth me to do ſo; and ſince your Majeſty was pleaſed to ſignify your Deſires of having a brief Account of my Voyage preſented unto you, that Word became a Command unto me, to draw this rude Abſtract of it. Your Majeſty will pleaſe to conſider, that they were rough Elements which I had to do withal, and will, with Favour, vouchſafe to pardon, if a Seaman's Stile be like what he moſt converſeth with. In the Plainneſs therefore of well-meaning, ſince your Majeſty hath been ſo gracious to me, as to appoint me your Servant, I am now bound to vow you my Service, and it ſhall be my Honour to be commanded it; and I ſhall account no Danger too great in the going through it. Theſe are the Reſolutions of your Majeſty's humbleſt Subject and Servant *Thomas James*.”

But it is now Time to proceed to the Captain's Narrative, which is delivered moſtly in his own Words, becauſe it was found impoſſible to expreſs his Senſe in Words better choſen, or that could bring the Facts he relates into a narrower Compaſs.

2. The 2d of *May* I took my Leave of the Merchant-Adventures in this Action, in the City of *Briſtol*; and being accompanied by the Reverend Mr. *Palmer*, and ſeveral of the Merchants, I repaired on board, where Mr. *Palmer* made a Sermon, exhorting us to continue bro-

therly Love, and to be bold to profeſs the Chriſtian Religion, wherever we ſhould come in this our Peregrination. After they had received ſuch Entertainment as I could afford they departed for *Briſtol*. This Afternoon I made a Review of all Cloaths, Neceſſaries, and Victuals. The 3d of *May*, after Prayer, about three in the Afternoon, we ſailed down the *Severn* to the weſtward of *Lundy*, where the Wind oppoſed us ſo ſtongly, that we were obliged to anchor in *Lundy Road*; where we remained till the 8th in the Morning, when we ſailed; but were forced to put into *Milford*, where we anchored about Midnight: Here we remained till the 17th, when, in the Morning, with the firſt fair Wind we proceeded, and doubled *Cape Clear*, off *Ireland*. The 22d we were in Latitude 51 Degrees 26 Minutes, and the *Blaſkes* bore from us North-eaſt about twelve Leagues off; which *Blaſkes* is in Latitude 52 Degrees 4 Minutes; here I ordered the Courſe that ſhould be kept, which was generally Weſt-north-weſt, as the Wind would permit, which in this Courſe and Diſtance is very variable. The 4th of *June* we made the Land of *Groenland*, ſtanding in with it, to have Knowledge of the trending of it: It proved very foul Weather, and next Day, by two in the Morning, we found ourſelves encompaſſed with Ice; and endeavouring to clear ourſelves of it we were the more engaged, and ſtruck many fearful Blows againſt it. At length we made faſt to a great Piece, and, with Poles, wrought Day and Night to keep off the Ice; in which Labour we broke all our Poles.

The 6th, about two in the Morning, we were beſet with extraordinary Pieces of Ice, that came upon us with great Violence, and doubtleſs would have cruſhed us to Pieces if we had not let fall ſome Sail, which the Ship preſently felt. In eſcaping the Danger we ran againſt another great Piece, that we doubted whether our Ship had not been ſtaved to Pieces; but by pumping we found ſhe made no Water. The former Pieces of Ice had cruſhed our Shallop all to Pieces, wherefore I cauſed our Long-boat to be had up from betwixt the Decks and put over board, by the Help whereof we recovered our broken Shallop, and ſet her upon the Deck, intending to new-build her. All this Day we beat, and were beaten amongſt the Ice, it blowing a perfect Storm. In the Evening we were encloſed among great Pieces as high as our Poop, and ſome of the ſharp blue Corners of them reached quite under us. In this Extremity I made the Men let fall, and make what ſail they could, and the Ship forced herſelf through it, though ſo toſſed and beaten as I think never Ship was. When we were clear we tried the Pumps, and found them ſtaunch; upon which we went inſtantly to Prayer, to praiſe God for his merciful Delivery of us.

The ſeventh and eighth Days we endeavoured to double about *Cape Farewell*, being ſtill peſtered with much Ice. The 9th we were in the Latitude of 59 Degrees, and we made Account the *Cape Farewell* bore off us due Eaſt, and ſome ten Leagues off. The *Blaſkes* in *Ireland* is in Latitude 52 Degrees 4 Minutes, and *Cape Farewell* in Latitude 59. The Courſe is Weſt-north-weſt, and the Diſtance about four hundred and ten Leagues: I know very well theſe Latitudes, Courſes, and Diſtance, do not agree with mathematical Concluſions; but thus we found it by Practice. The Variation of the Compaſs in Latitude 52 Degrees 30 Minutes, and thirty Leagues to the weſtward of *Ireland*, is about 3 Degrees to the eaſtward; in Latitude 57, about three hundred and ten Leagues Weſt-north-weſt from the *Blaſkes*, the Compaſs doth vary nine Degrees to the weſtward; in Latitude 59 Degrees 15 Minutes, ſome forty Leagues to the eaſtward of *Cape Farewell*, the Variation is 14 Degrees 45 Minutes. In this Courſe I have been obſervant whether there were any Current that did ſet to the North-eaſt, as ſome have written there did, and that as well in calm Weather as otherwiſe, but I could not perceive any. The Winds here are variable, and the Seas of an unſearchable Depth; we have not ſeen from *Ireland* hitherto any Whales, or other Fiſh; the Weather for the moſt part was foggy.

3. On the 10th all the Morning was very foul, and high Sea, although we had Ice about us, and ſome Pieces as high as our Topmaſt Head. Our Long-boat, which we were forced to tow a-ſtern, broke away, and put us to ſome Trouble to recover her. This we did, and brought her into the Ship, though much bruiſed, and had two Men much hurt. By eight in the Morning we were ſhot up as high as *Cape Deſolation*; for finding the Land to trend away North and by Eaſt, we certainly knew it to be the *Cape*: It ſtands in Latitude 60 Degrees, and the Land from *Cape Farewell* to it trends North-weſt the Diſtance about forty Leagues, the Courſe Weſt half a Point North. The Latitude of the South-end of the Iſland being 61 Degrees 20 Minutes, ſome twelve Leagues to the weſtward of *Cape Deſolation*, the Variation 16 Degrees. In this Courſe we were much beaten with the Ice, many Pieces being higher than our Topmaſt Head. In our Way we ſaw many Grampuſſes amongſt the Ice, and the Sea is full of them; the Weather, a ſtinking Fog, and the Sea very black; which I conceive to be occaſioned by the Fog.

The 17th, at Night, we heard the Tract of the Shore, as we thought, but it proved to be the Rutt of a Bank of Ice. It made a hollow and hideous Noiſe, like an Overfall of Water, which made us to reaſon among ourſelves concerning it, for we were not able to ſee far, it being dark Night and foggy; we ſtood off from it till break of Day, then in again; and about four in the Morning we ſaw the Land above the Fog, which we knew to be the Iſland of *Reſolution*. This Night was ſo cold that all our Rigging and Sails were frozen. We endeavoured to compaſs the ſouthern Point of the Iſland, where runs a quick Tide into the Streight; but the Ebb is as ſtrong as the Flood. The Fog was of ſuch a piercing Nature that it ſpoiled all our Compaſſes, and made them flag, and ſo heavy that they would not traverſe; wherefore I would adviſe any that ſhall ſail this Way, to provide Compaſſes of *Moſcow* Glaſs, or ſome other Matter that endures the Moiſture of the Weather. As the Fog cleared up we could ſee the Entrance of the Streight to be full of Ice cloſe wedged together; endeavouring to go forward we were faſt encloſed amongſt it; and ſo drove to and again with it, finding no Ground at two hundred and thirty Fathoms four Leagues from the Shore.

The 20th in the Morning we had got about the ſouthern Point of the Iſland; and the Wind at Weſt drove both us and the Ice upon the Shore; when we were driven within two Leagues of the Coaſt, we came among the ſtrongeſt Whirlwinds of the Sea that can be conceived. There were great Pieces of Ice aground in forty Fathoms Water, and the Ebb coming out of the broken Grounds of the Iſland among thoſe Iſles of Ice, made ſuch a Deſtruction that we were carried round ſometimes cloſe by the Rocks, and ſometimes ſo cloſe by theſe high Pieces, that we were afraid they would fall upon us. We made faſt two great Pieces of the Ice to our Side, with our Sledges and Grapnels, that drew nine or ten Fathoms; that ſo they might be on Ground before us, if we were driven on the Shore; but that Deſign failed us. And now from the Top ſeeing in among the Rocks, I ſent the Boat to ſee if ſhe could find ſome Place of Security; but ſhe was no ſooner parted but ſhe was incloſed, and driven to trail upon the Ice, or elſe ſhe had been daſhed to Pieces; they ran her over the Ice from Place to Place, and in the mean while, with the whirling of the Ice, the two Pieces broke away from our Sides, and carried away our Kedger and Grapnels: Then we made Signs to the Boat to make all the haſte ſhe could to us, which ſhe perceiving, did; the Men being with much Difficulty forced to ſlide her over many Pieces of Ice. In the mean time we made ſome ſail, and got to that Piece of Ice, which had our Grapnel on it, which we recovered.
